

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFACE.

A PREFACE to a book whose plan and pretensions may be ascertained by a single glance at its title-page and table of contents, would appear to be almost unnecessary; but as perfection is rarely attained under any circumstances, and can hardly be looked for in a work which embraces so large a body of dates and facts as will be found in the following pages, a few words in explanation of the difficulties which have attended its compilation, and the means which have been adopted to overcome them, may not be considered superfluous. Whilst, however, we desire to extenuate whatever defects the Argus eyes of contemporary criticism may discover in its pages, we are surely justified in directing attention to the vast body of useful, novel, and interesting facts that will be found in them; and the labour and cost at which they have been collected and arranged. Necrologies of eminent persons are doubtless among the most valuable and instructive products of literary industry; but the materials of which they are composed may often be ob-
g down of books." Even
unpublished documents,
a-field for his materials;
him in bulk; to be ana-
at his leisure. With the
wever, the case is widely
ccessible, and even those
print are often so highly
prejudice, that it requires

no ordinary care and discrimination to separate the grain from the chaff. Official records do not, of course, fall within this category; but such repertories supply little beyond the dry husks of biography; and after all has been gleaned that can be collected from them, much is still indispensable that can only be derived from private records. In many instances, indeed, we have had to rely altogether on such resources; for had it not been for the assistance which has thus been afforded to us in the prosecution of our task by a numerous body of private correspondents, who have either supplied us with facts themselves or have enabled us to verify those which we have obtained elsewhere, these pages could never have approached the form they have here assumed.

The present edition of "Men of the Time" will, we trust, be regarded as an earnest of the desire of its publisher to respond adequately to the favour with which its predecessors, in spite of omissions and imperfections inseparable from first appearances of so ambitious a character, were received. It is, in fact, to all intents and purposes, a new book; for not only have many hundred additional memoirs been prepared expressly for its pages, but of those which were included in former editions some have been entirely recast, and the rest more or less revised and augmented.

A feature has also been superadded which will, it is hoped, be found to have increased in no slight degree the interest and completeness of the work. We allude to the introduction of a series of biographical sketches of notable "Women of the Time," the materials for which have been derived, for the most part, from private sources. Here as elsewhere some omissions may be discovered, which have arisen, not from any indisposition to recognise the claims of the absentees; but from causes which it has not been in our power to control; whilst in some few cases the difficulty of obtaining reliable information has been the means of restricting the notice to narrower limits than could have been wished: but such exceptions have been few, and comparatively unimportant.

The plan and objects of this work are so clearly indicated in its announcement, that it becomes unnecessary to dwell upon it. It is intended to fill a place hitherto unoccupied by any of the multifarious Books of Reference which the industry and enterprise of the age have provided for almost every class of the community. We have numerous records of the aristocracy of birth, and even of wealth; we have Pedigrees, and Histories of the Landed and Commercial Gentry of the United Kingdom; we have Red Books, Court and Imperial Calendars, Parliamentary Guides, and Post-Office Directories, which leave no official dignity, no civil service, unchronicled; we have lists also of military and naval officers, and of the clergy, which set forth with laudable exactness the heroic deeds, rank, or emoluments of the members of these most important professions; lawyers and politicians have also their respective muster-rolls; but the aristocracy of genius has been left, hitherto, without any special record of its deserts. The aim of the present volume is to furnish, in as compact a form as possible, a series of biographical sketches of eminent living persons in all parts of the civilised world; one which, limited to no particular class, addresses itself to all: thus presenting the largest body of contemporary biography which has hitherto appeared in this or any other country. Among the difficulties of such an undertaking, which it has not been possible to attribute altogether, has been that of establishing such a standard of selection as would have enabled us to allocate the amount of space allotted to the respective names in more strict accordance with their relative claims. In some instances, in which more minute details would have been desirable, the means of obtaining them were not within our reach. In others the value of the materials may have tempted the respective writers to exceed their prescribed limits, whilst on more than one occasion the discrepancy has been caused by circumstances purely accidental.

In the memoirs which have been introduced of crowned heads and their ministers, an attempt has been made to

describe the policy peculiar to each court and government ; and in those of men of letters and of science, of artists, philosophers, etc., analyses have been included of their respective works and discoveries, which will enable the reader to form some notion of their real claims upon public notice : thus rendering the work a compendious Handbook of Contemporary History.

It ought, perhaps, to be mentioned, that no attempt has been made to reduce the political opinions conveyed by the respective writers of these sketches to any uniform standard. Men of all politics, whose general claims upon public attention have entitled them to honourable mention in its pages, have received their due meed of praise, without reference to their political bias. Even political acts of questionable prudence, which appear to have been dictated by conscientious and patriotic motives, have been duly respected.

As it is intended to publish, from time to time, editions of this work, with such changes and additions as the progress of events may render requisite, the Publisher will be grateful for any corrections or information that may seem likely to increase the value and interest of its pages. Such communications addressed to the Editor, to the care of Mr. David Bogue, Fleet Street, will be thankfully received, and carefully attended to.

ALPHABETICAL LIST OF CONTENTS.

- ABD-EL KADER, 1**

MEN OF THE TIME.

A.

ABD-EL-KADER. There are few names in the list of modern warriors which are better entitled to a niche among the "Men of the Time" than that of the "Arab Napoleon;" the warrior who, in defence of his native soil, successfully defied, during several campaigns, the whole power of France, and kept her armies in a state of almost unremitting warfare for more than fifteen years; at times successful, and then apparently beaten; yet ever starting up where when least expected; harassing the troops on the Algerian frontier, and compelling the commander of the Gallic colony to call out large forces, and to continue a long, galling, unsatisfactory, and often fruitless campaign, with an enemy that, like a will-o'-the-wisp, flitted about apparently only to lead his pursuers into ambushes and dangers on the hot sands and in the sickly deserts of Africa. So often was he thought to be crushed, and so often declared to be slain or captured, that the frequency and the constant repetition of the rumours on the subject passed into a common jest in Paris. This extraordinary man was born in the environs of Mascara in 1807, and was consequently only thirteen years of age when Charles X., anxious to distract the attention of the French people from domestic politics, undertook the Algerian expedition, which ultimately cost France an enormous amount of blood and

expense. The cause was that which usually causes a desire to extend the empire; the Duke of Polignac declared that the expedition was to destroy piracy, and that the evacuation of Africa would be the result. As we all know in what manner the projected conquest of a territory of many leagues along the coast, and the population of it by fierce hordes of nomads, proved to be no easy task, it demanded more space for its

details than could be afforded in a volume like the present. Marshal Clausel was instructed in the first instance, *d'agir le moins possible*, and carried out his orders to the letter. Of the three Deys, only one, the Dey of Oran, submitted; the others waged an active warfare against the invaders, and finally endeavoured to shut up the French in the town they had occupied. Marshal Clausel was, therefore, constrained to act with greater vigour. Deputing the government of Algiers to safe hands, he collected his army, and passed for the first time the celebrated defile of Teniah, overthrew the Arabs, and deposed the Bey. The result of this victory was to deliver up the country to complete anarchy. Some of the bolder tribes, determined to dispute their territory with the invader inch by inch, banded themselves under a revered Marabout chief named Sidi-el-Hadji Maheddin, and proposed to elect him their chief. This honour he declined, but offered them as his substitute the third of his four sons, of whose qualifications he gave so favourable an account that his services were unanimously accepted. This youth was the far-famed Abd-el-Kader, equally distinguished, even at this early period of his career, for his valour, his knowledge of the Koran, and his proficiency in all manly and athletic exercises. He was born and educated in the Guetno of Maheddin, a place of instruction at which young men were taught literature, theology, and jurisprudence. But besides the reputation of a thaleb (doctor, or *savant*), he soon became skilled in those corporeal exercises, equitation more especially, which form so essential a part of the education of the Arab. In the dexterous use of the yatagan and lance he is said to have been greatly practised at a very early age. With a view to the title of Hadji, he made two pilgrimages to Mecca, and on his return from the last married the daughter of an Arab chieftain, by whom he had two sons. For some time afterwards, he lived in comparative retirement; from which he only emerged on being proclaimed Emir of Mascara. He then began to preach a religious war, and being an orator of no common power, with so much success, that he soon found himself at the head of a considerable army. In 1832, having placed himself with his father at the head of ten thousand horse, he opened his first campaign by an assault on Oran. The attack was continued for three days with the most determined gallantry, but the Arabs were at length repulsed with heavy loss. In this his first battle, Abd-el-Kader is said to have performed prodigies of valour. Seeing his troops astonished and intimidated by the tremendous fire of the French artillery, he turned his horse's head directly against the grape and bomb-shells that were pouring in upon them. On his return from an expedition, having for its object to concentrate the Arab forces, and reduce certain tribes that had declared against him, he learned that his aged father had died during his absence. Finding that it would be more convenient to have the Emir as an ally than as an enemy, the French concluded a treaty with him, which constituted him sovereign of the province of Oran, with a right of monopoly of the whole commerce of the

country, similar to that exercised by Mehemet Ali in Egypt. These privileges rendered him obnoxious to his own people, and the consequence was, that many Kuids declared against him and banded themselves together for the purpose of deposing him. In the struggle arising out of these jealousies, Abd-el-Kader would have been slain but for the devotion of an Arab follower, who rescued him from a host of assailants. The French general, Desmichels, came to his aid, and supplied him with arms and ammunition; and he succeeded in recovering his position. In his ambition to extend his dominion he conceived the project, far from palatable to his French allies, of overrunning the whole of the provinces of Algiers and of Tittery; and with this view crossed the Chelif, entered into Medeah as a conqueror, and having placed followers in whom he could depend over the reduced tribes, returned in triumph to his own territory. This excited the jealousy of the French, and General Trezel, who had superseded Desmichels, marched with a considerable force to clip his wings. The two armies met at Macta on the 28th June, 1835, when the French were completely defeated. Surprised in a narrow pass at Macta, the squares were broken through, the wounded and the baggage were broken through, the wounded were put to the sword, and in accordance with the barbarous practice of Arab warfare, decapitated, and their heads, stuck upon long lances, pushed over the bayonets of the infantry into the very faces of their comrades. After leaving five hundred men in the hands of the enemy, the French general was fain to retreat as he best might. The scabbard was now thrown away by the French, and Marshal Clausel was sent to take signal vengeance on the Emir. Having marched without opposition on Mascara, the capital of Abd-el-Kader, he found it abandoned and in ruins. On his return to Oran, on the 8th January, 1836, he recommenced the campaign, burning and destroying the property of the very tribes who were friendly to them, and who had taken no part in the execution of their chief. It was on this occasion that the savage system of *razzias* was first employed with dreadful success. After one of these *promenades*, as the French were wont to term them, one of which had well-nigh exterminated the Conloulis, Abd-el-Kader hovering upon their flanks, but not daring to close with them, the French returned to Algiers in the fond belief (to judge from their bulletins) that they had entirely destroyed the power of Abd-el-Kader; but such they soon discovered, by repeated defeats and reverses, was very far from being the case. The capture of a large quantity of provisions, followed by the failure of an expedition on Constantine, added greatly to the exasperation of the French, and General Bugeaud was ordered to secure the retirement of Abd-el-Kader either by treaty or force of arms. A new expedition was accordingly sent against Constantine, which was carried by assault, at a very immense loss to the besiegers, and all pacific overtures having been refused, General Bugeaud attacked the Emir on the 12 July, 1833, in the pass of Sikak, and obtained over him a complete victory, the loss of the Arabs being from 1200 to

1500 killed and wounded. Instead of following up this advantage, General Bugeaud gave his opponent ample time to recover his position unmolested, and then entered into a most conciliatory treaty with him, by which he conceded to him three-fourths of Algeria, the provinces of Oran, Tittery, and a part of that of Algiers; affording him also a facility of purchasing arms and ammunition in France. Abd-el-Kader continued to extend his territory, and to evade anything like a direct settlement with the French. In December, 1837, he encamped near Hamzu, and demanded and received the submission of all the tribes of the adjacent countries. Upon the arrival in the neighbourhood of Marshal Vallée, a complaint having been made to him by the remnant of a tribe whose friends and relatives had been massacred for not giving in their adhesion to the Emir, the Governor-general made such remonstrances that Abd-el-Kader consented at length to name an agent to discuss the basis of a new arrangement. Moulond Ben-Arach was despatched to Paris to negotiate, and returned with a fresh convention; but Abd-el-Kader, who had profited by the interval to strengthen his power and fortify the towns under his rule, declined to complete the new arrangement, and sent a cartel of defiance to Marshal Vallée instead of the promised concessions. At Mascara he had placed in command his brother-in-law, Ben-Tamir; at Tlemsen, his trusted lieutenant, Bou Hamedi; and other strongholds in hardly less competent hands. He also made a second line of defence in the rear of the towns in the interior, on the borders of the smaller desert. South of the Medeah he formed a strong post; and south of Mostaganena, at Boghar, he established a military dépôt. His influence was thus secured as far as the Desert of Sahara, and raising the cry of a holy war, he gave the signal for a deadly struggle. The French, who had underrated their enemy, were taken by surprise; and after intimidating the colonists of Mitidja, and burning or pillaging their property, the Emir and his army penetrated as far as Algiers, having recovered from the enemy all the territory which he had not had time to enclose by strong fortifications. The news of these reverses occasioned great consternation in France, and the Duke of Orleans and the Duke d'Aumale disembarked at Algiers on the 13th April, 1840, for the purpose of taking part in the war. Hostilities on a vast scale were at once commenced, but after some twenty engagements, in which the most heroic gallantry was displayed on both sides, no decisive result was obtained. The two princes behaved throughout with the greatest coolness and intrepidity, and inspired their chivalrous opponent with a high opinion of their courage; but they managed to make no impression on the ubiquitous Abd-el-Kader, and some blame having attached to Marshal Vallée, he was recalled in December, 1840, and Marshal Bugeaud sent to replace him, with express instructions to destroy the power of Abd-el-Kader, and reduce to submission the entire territory of Algeria. With so much vigour did he obey these injunctions, that within the first few months of his arrival in the country he had

destroyed Tekendempt, Boghar, and Thaja, new fortresses erected by the Emir; had occupied Mascara, driven away the flocks, and destroyed the crops of the hostile tribes; and had, through his arms, drawn many adherents from the ranks of the enemy. Abd-el-Kader was thus reduced to a defensive position, and the French from the throne announced that Algeria was "henceforth and for ever a territory of France." From this date, the Emir was treated rather as a rebel subject of France than as an independent prince. But his energies seemed to increase with the emergency. Towards the month of July, 1842, he had, after a noble resistance, lost six-sixths of his territory, all his forts and military dépôts, nearly the whole of his regular army, and the prestige among his tribes which his former successes had obtained for him. Still undaunted, and rising superior to misfortune, he endeavoured to keep alive in their hearts the spirit of resistance and hope. "Will you abandon," said he to his wavering adherents, "the faith of your fathers, and deliver yourselves like cowards to the infidels? Resist your enemies but for a short time longer, and we shall crush the infidels that now encumber our soil. But if you are not of the true believers, if you shamefully abandon your religion, and all those rewards which the Prophet has promised to those who expect to obtain repose by this dastardly and unmanly warfare. So long as there is breath in my body I will make war on the Christians. I will follow you like a shadow. I will punish you for your cowardice, and I will break upon your warriors by the peals of my cannon, pointed against your Christian forts." Such was the rapidity of his movements, that he would almost to command the power of being in two places at the same time: appearing wherever he was least expected, and carrying off the cattle and decimating the tribes that had disregarded his warnings. Such, indeed, was the terror inspired by his presence that they seemed paralysed, and appealed to General Lamoricière for his protection. He had, however, the more important work of his hands of dispersing the remnant of the Emir's army. Then he addressed himself at Isna, in November 1842, when Abd-el-Kader was again defeated with great loss, and narrowly escaping being made prisoner; his horse falling into the hands of the French. Retiring among the Kabyles of Borgia, he was closely pursued by General Bugeaud and the Duke d'Aumale, who kept up incessant razzias on the refractory tribes, frequently inflicting injuries wholly unwarranted by the usages of civilised warfare, and which have left an indelible stain upon their arms. One of these was signalled by smothering a large party of men, women, and children, by placing lighted fagots in the opening of some of the caves of Dahra, in which they had taken refuge, and setting back the shrieking wretches who attempted to break through the flames. A fouler atrocity has never disgraced the military history of any nation. The name of the general under whose directions this act of barbarity was perpetrated was Pélissier, one of the officers who are now serving in the French army of the

East. These frightful excesses struck terror into the hearts of the insurgent tribes; and after the combat of Oned Malah, on the 11th October, 1843, in which the flower of his infantry and his bravest lieutenant, the one-eyed Sidi Embarek, were killed, Abd-el-Kader was compelled to quit the country and take refuge on the frontier of Morocco. There he managed to foment a war between that state and France; which was, however, soon brought to a close by the successes of Marshal Bugeaud at Isly, and of the Prince de Joinville by sea, at Tangier and Mogador. After the battle of Isly the French general demanded that Abd-el-Kader should be given into his hands—a requisition with which his host would willingly have complied had he dared so to do. Suspicious of the Emperor's intentions, Abd-el-Kader attempted to revolutionise his empire and place himself at the head of the Moors; but this *dernier ressort* having failed him, he had no alternative but flight, and wandered from place to place, like a lion tracked by hunters, with no seat but his saddle, no shelter but his tent, no kingdom but the desert. Helpless as he appeared to be, however, his name still inspired so much terror in the hearts of his enemies, that he compelled them to keep on foot an army of 24,000 men for the sole purpose of watching his movements. With a comparatively small band of followers he attempted a night attack upon the camp of the Emperor of Morocco, but, however gallantly conducted, it failed, and, overpowered by numbers, he was compelled to cross the river Malonina, on the banks of which the Emperor had encamped, and to seek safety with a remnant of the only tribe that remained faithful to his cause, that of Beni Snassen. After a vain attempt to gain the south he fell into the hands of General Lamoricière, who, informed of his movements, sent two detachments of picked Spahis, clothed in white bournous, who took up their position in the defile through which he was expected to pass. These precautions were successful. Abd-el-Kader, finding that escape was impossible, sent forward two of his most devoted adherents to inform the general that he would submit to him, which he did a short time afterwards. On the 23d December, the Emir personally yielded himself and family to the generosity of France. On the 24th he was received at the Marabout of Sidi Brahim by Colonel Montauban, who was soon afterwards joined by Generals Lamoricière and Cavaignac. He was then removed to Djemma-Gazouat, where he was presented to the Governor-general of Algeria, the Duke d'Aumale. The former ratified the promise of safe conduct given him by Lamoricière; a promise which provided that he should be conducted to Alexandria or St. Jean d'Acre, "with the firm hope that the French Government would sanction that promise." On the 25th April, Abd-el-Kader embarked at Oran; from that city he was with his family conveyed in a French ship of war to Toulon, where he arrived on the 29th, but was kept for some time in quarantine. When landed, he was transferred to Fort Lamalgue, whence he was sent for some time with his suite to the castle of Pau; where, notwithstanding the pledge of the Duke d'Aumale, he was confined

without hope of release. After the revolution of February he reminded the new government of the terms on which he had surrendered, but without effect. In November, 1848, he was transferred from Pau to the château d'Amboise, near Blois. His family and himself were treated with great consideration. But he was evidently sinking under his confinement, when he was released by the present Emperor of the French, on his return from a tour through France, in October 1851. The Prince had promised the ~~late~~ Lord Londonderry, who interceded with some warmth in behalf of the illustrious captive, that he would liberate him at an early period: "*Tôt ou tard je le mettrai en liberté.*" The "*Moniteur*" of August 17, 1852, mentioned, that in returning from Paris Prince Louis Napoleon stopped at the château d'Amboise, and having sent for the Emir communicated to him in kind and courteous terms that he was free; lamenting at the same time that the promise upon which he originally surrendered had not been redeemed before. "You have (he said) been the enemy of France, but I am not the less willing to do justice to your courage, your character, and to your resignation in misfortune. This is the reason why I consider it a point of honour to put an end to your captivity, having full confidence in your word." This generous address elicited from the Emir a corresponding reply. He swore on the Koran that he would never again attempt to disturb the French rule in Africa. After his release from Amboise, and pending the negotiations which were to transfer him to the country of the Sultan, Abd-el-Kader visited Paris, where his appearance created a great sensation. The ladies were enraptured with him, and sent him flowers and kisses without end. He visited the Opera, had reviews got up in his honour,—in short, was for a time the lion of all Paris. He is now forty-five years of age. His countenance is pale, but its aspect is rather melancholy than otherwise. His features are talismanic and regular. A small and thin moustache and a black beard are the ornaments of his face, which is surrounded by a black veil depending from his turban, which is composed of a black kerchief, rolled and twisted three times round his head. His outward garment is a long kaik of brown serge, which allows his bare arms to be visible. His smala (his suite) numbered ninety-three persons,—thirty-four men, thirty-two women, and thirty children. Each day at three his suite and himself perform their prayers in common; and their prayers are followed by the reading aloud of portions of the Koran. The rest of his time is spent in fasting and meditation. It seems far from improbable that Abd-el-Kader may at some future period be employed in leading the armies of the Sultan against Russia. Such an arrangement could hardly fail of being beneficial to Turkey and to her allies.

ABD-UR-RAHMAN, SULTAN OF FEZ AND MOROCCO, was born in 1778. On the death of his father, his uncle, Mulei-Suleiman, taking advantage of his youth, seized upon the throne, which he held until his death, in 1823, when he restored it to his nephew by

will. For four years after his accession to the throne he had to contend with rebellious tribes, whom he finally overcame. At this period, the maritime powers of Europe paid tribute to Morocco and the piratical states, to protect their commerce from depredation, the Venetian republic paying yearly about 4500*l*. The Emperor Francis at length refused to submit to the exaction; and in 1828, a Venetian merchantman having been plundered, and the crew imprisoned by the Moors, an Austrian squadron appeared off the coast of Morocco, and succeeded in procuring the restoration of the captured vessel, and a renunciation of all claim to the tribute on the part of the sultan. In 1844, a serious difficulty arose between the sultan and Spain, which was finally adjusted by the mediation of England. Still greater dangers threatened him from the war which was carried on in Algiers between Abd-el-Kader and the French. The fanaticism of the populace was intense, and the sultan at length saw himself forced to commence a contest with France. The savage bravery of the Moors was of but little avail against the steady discipline of an European army, and the contest was terminated on the 18th of August, 1844, by the disastrous battle of Islay, whilst a French squadron, under the Prince de Joinville, ravaged the coast. Further resistance to the power of France appeared impossible, and peace was finally concluded by the mediation of England; the territorial relations of the two countries remaining pretty much as before. The sultan is a zealous Mussulman, without sharing the wild and often frightful fanaticism of his people. He is the father of a numerous family, the eldest of whom, and heir-apparent to the throne, Sidi-Mohammed, was born in 1803.

A'BECKETT, GILBERT ABBOT, a Comic Writer and Journalist, and stipendiary Police Magistrate for Southwark, was born in 1811. In the earlier part of his career he was the editor of a comic paper of some smartness, entitled "Figaro in London;" the forerunner of a satirical journal of much wider celebrity, to which Mr. A'Beckett has also been a voluminous contributor. But Mr. A'Beckett has always been something more than a mere wit and a punster. Having been employed as an Assistant Poor-Law Commissioner, he produced a Report which proved him to be possessed of a great aptitude for official duties, and he is said to have stood indebted for his appointment to a metropolitan police magistracy to the efficiency he displayed during his connexion with the Poor-Law Board. Previous to his acceptance of the latter office he is understood to have contributed, from time to time, political articles of a humorous character to the "Times," "Morning Herald," and "Daily News." He was, indeed, on the staff of all these journals in turn, although the "Times" appears to have commanded his most successful efforts. During the whole of this period he was a frequent and effective contributor to "Punch." He now performs the kind of duties which were once performed by Fielding, with sound discretion and ability; and, like his great predecessor, employs the leisure which the comparatively light duties

of his post afford him in the exercise of his pen, and descends from his judicial dignity so far as to continue to write pleasantries for "Punch" and to indite Comic Histories and Comic Commentaries on the Laws of England, from which no one had ever attempted to extract humour before. Mr. A'Beckett was called to the bar by the Society at Lincoln's Inn, in 1841; but although the son of an attorney, in considerable practice, he does not appear to have been much encumbered with briefs. He is the author, among other works, including one or two comic periodicals, of the "Comic History of England," "Comic Blackstone," "Comic History of Rome," and a small volume ridiculing the absurdities of the modern English stage, under the title of "Quizziology of the British Drama."

ABERDEEN, GEORGE HAMILTON GORDON, FOURTH EARL OF, K.G., K.T., P.C., F.R.S., F.H.S., etc.; a liberal Conservative Statesman, who has held from time to time several of the highest offices under the Crown, was born on the 28th January, 1784; succeeded his grandfather in the Scottish honours of the family on the 13th August, 1801; and obtained the Viscounty of the United Kingdom, by creation, on the 1st June, 1814. He is the descendant of an ancient Scottish house, the common progenitors of the Gordons, earls of Aberdeen, and the Gordons, dukes of Gordon. Lord Aberdeen was educated at St. John's College, Cambridge, where he took the degree of M.A. in 1804. In that year, having resided some time in Greece, he founded the Athenian Society, of which no one might be a member who had not visited Athens. In 1813 he was sent to Vienna, as ambassador from England, and concluded at Toplitz, October 3d, 1813, the preliminary negotiations by which Austria was detached from the French alliance, and united with England against Napoleon. He subsequently brought about the alliance of Murat, king of Naples, with Austria; but in 1815 exerted himself in vain to prevent the rupture which took place between the courts of Naples and Vienna, and which resulted in the restoration of the Bourbons to the throne of the former state. In 1828 his lordship became Minister of State for Foreign Affairs under the Duke of Wellington. In that capacity he departed widely from the system which had been pursued by Mr. Canning, inasmuch as he countenanced the policy of Austria, conducted then by Metternich, his intimate friend. Thus, he disapproved of the battle of Navarino, although he had signed with France and Russia the first protocol in favour of Greece. Upon the dissolution of the Wellington administration, consequent upon the Reform agitation, he went into opposition, Jan. 16, 1830, and became the supporter of the pretensions of Dom Miguel, whom, while in power, he had ridiculed,—and of Don Carlos; both of whom he aided both in and out of Parliament. The most important act of his administration had been the recognition of Louis-Philippe, saluted King of the French after the memorable days of July. In the ministry formed by Peel and

Wellington, which endured only for the vacation of 1834–1835, Lord Aberdeen held the appointment of Colonial Secretary. When Peel took office in 1841, his lordship received once more the portfolio of Foreign Affairs, and began to abate some of his strongest prejudices, and appeared to have learned that his Tory tendencies were to be repressed rather than indulged. He supported Peel in repealing the Corn-laws, and retired with him on the ministerial changes which succeeded the enactment of that policy. He has since occasionally spoken against the Government, particularly on the affairs of Greece. During the cabinet crisis of 1851 he was sent for by the Queen, with a view to his undertaking a government in conjunction with Sir James Graham, but declined that responsibility. He had previously refused to co-operate with Lord Stanley, from whose Protectionist politics he had altogether receded in favour of the more liberal policy of Sir Robert Peel, to which he gave a general and a cordial support. As might have been expected, he shared with him for a time the obloquy to which all who were parties to the abolition of the Corn-laws were exposed. The bone of contention has now been removed, and the wisdom of that policy admitted on all hands; yet a wide gulph seems still to separate the adherents of Sir Robert Peel and Lord Derby from each other. On the downfall of the Derby-Disraeli ministry in 1852, the Earl of Aberdeen was called upon to form an administration, which he did by inducing a coalition between the Whigs and the followers of Sir Robert Peel; admitting one Radical (Sir William Molesworth) to the Cabinet, and conferring some minor offices upon one or two other members of the same section of the House. On the dissolution of Lord Aberdeen's government in February last, notwithstanding their repeatedly-recorded objections to political coalitions, nearly every member of Lord Derby's party, both his lordship and Mr. Disraeli included, expressed their willingness to co-operate with Lord Palmerston, Mr. Gladstone, and other of their party, if they might hope by the sacrifice to create a strong ministry. At the age of seventy-one years, it is little likely that Lord Aberdeen will ever again accept any official duty demanding great energy and activity. Whatever complaints may be urged against him for his short-comings as a war minister, it will not be denied that he was forced into the struggle by the unanimous voice of the nation before his preparations were sufficiently advanced to ensure success; and that he endeavoured vainly to protract the commencement of hostilities until he was in a better condition to undertake them with effect. His horror of war has never been concealed, and is said to have been deepened by his early recollection of the dreadful field of Leipsig, which he visited a few days after the battle. However this may have been, the tenor of his whole life forbids any suspicion of the loyalty of his intentions. The want of experience, arising out of a peace of forty years, during which the efficiency of our fleets and armies has been grievously impaired by the wholesale reductions of parliamentary economists, has had something to do with our failures in the Crimea. But to return to

the private life of Lord Aberdeen. He married, in 1803, Catherine Elphinstone, eldest surviving daughter of John James, first Marquis of Abercorn, who died in 1812, and by whom he had no family. In 1815 his lordship married Harriet, daughter of the Hon. John Douglas, the mother of the present Marquis of Abercorn, who died in 1843, and by whom he had four sons and one daughter. His lordship is President of the British Institution, Chancellor of King's College, Aberdeen, and Lord Lieutenant of Aberdeen. Lord Aberdeen has always been remarkable for his consummate taste in all matters connected with the fine arts, and in all parliamentary discussions on such topics has taken a prominent part. Indeed on all questions of taste his authority has been paramount. Whatever differences of opinion may exist as to his official conduct, no one has ever presumed to question for a moment the private virtues of the noble Earl, or the perfect integrity of his motives. His lordship's ministry could at no time have been said to be popular; but it enjoyed a high character for administrative ability, until the efforts of its most vaunted members were brought to the test, and they were required to carry on a war. Their failure on this emergency aroused public feeling against them, which found expression in the House of Commons; and in February the cabinet retired before the largest adverse majority which any ministry has encountered since the passing of the Reform Bill. The most important act advised by Aberdeen was the declaration of war against Russia in 1854; but the care with which he guarded himself from expressing any sympathy with the national feeling against Russia, and the expressions of friendship for him which the Czar Nicholas bestowed in the celebrated conversations with Sir H. Seymour, and, notwithstanding the hesitation and want of vigour which marked his measures, he preserved the favour of his sovereign, and upon his resignation, in February 1855, was created a Knight of the Garter.

ADAM, ADOLPHE-CHARLES, a distinguished French Composer, was born at Paris in 1804. His father, a well-known professor at the Conservatoire, finding that his son gave promise of considerable musical talent, placed him under the care of Boieldieu, under whom he commenced his career as a pianist; but soon turning his attention to musical composition, he produced a number of *opéras-comiques*, *ariettas*, etc. Encouraged by his success he tried a higher field, and in 1829 brought out his first opera, "Peter and Catherine;" in 1830, "Danilowa;" and in 1836, the "Postilion of Longjumeau." He is the author of a great number of compositions in the lighter style, of considerable merit, besides several pieces of sacred music. One of his best works is his "Giralda, ou la Nouvelle Pyramide." M. Adam is a skilful performer on the organ and piano-forte.

ADAMS, CHARLES B., an American Naturalist, was born at Amherst, Massachusetts, in 1814. He graduated at Amherst

College in 1834, and held the appointment of tutor at the same institution in the years 1836 and 1837. He early evinced a predilection for the study of nature, and in 1837 was made Professor of Natural History at Marion College, Mobile. In 1838 he accepted the chair of Geology and Natural History at Middlebury College, Vermont, where he remained until 1847, when he was called to Amherst College as Professor of Natural History. In 1845 he was selected by the legislature of Vermont to conduct the geological survey of that state, in which work he was engaged until his removal to Amherst. The results of this survey are published in four reports to the legislature of Vermont. His favourite department has been that of the study of the molluscas, and he has written and published the following conchological papers: "On the Shells of New England," in the Boston "Journal of Natural History;" "New Species of Jamaica Shells," in the "Proceedings of the Boston Natural History Society, 1845-6;" "Catalogue of Molluscas of Vermont," in the American "Journal of Science;" "Description of Molluscas of Vermont," in "Thompson's Gazetteer of Vermont;" "On Jamaica Shells," in the "Annals of the Lyceum of Natural History of New York," and in "Contributions to Conchology," Nos. 1 *et sequentes*. His papers on the shells of Jamaica, in which island he spent a part of three winters, afford a more perfect knowledge of the formation of that island than we possess of any other tropical region, and constitute material for a complete monograph, which is in contemplation.

ADAMS, JOHN COUCH, Astronomer (whose name has been identified with the discovery of the planet Neptune), and one of the most esteemed scholars in the University of Cambridge. Mr. Adams is a genius in his particular walk of science, and his present eminent position is rendered more remarkable by the fact that he is the architect of his own fortune. A journal published in the quarter of England in which Mr. Adams was born thus freely sketches his career:—"The traveller who has come into Cornwall by the north road must remember a long moorland tract between Launceston and Bodmin. If his journey were performed on the roof of a coach, against a sleety, biting south-wester, his memory will not need any refresher. The recollections of such an excursion are not to be effaced, even by the consolations of the Jamaica Inn. A more desolate spot can scarcely be found. Yet Nature sometimes produces men where she grows nothing else; and on this bleak moor she has produced, at least, one such man as, with all her tropical magnificence, she never produced within ten degrees of the equator. A few years ago a small farmer, named Adams, resident on the moor, had a boy, who, if we are correctly informed, disappointed his father's hopes of making a good agriculturist. His fits of abstraction and dreamy reverie were held to be very unpropitious. He somehow got a taste for mathematics, and this passion so grew upon him that he was at length abandoned to its impulses, and allowed to take his own way, in despair of a better.

It was clear that he would never pick up prizes at a ploughing-match or a cattle-show; that the lord of the manor or squire of the parish would never have to stand up and make a solemn oration for him, showing him to wondering spectators as the man who had improved the breed of rams, or fattened bullocks to a disgusting obesity. Yet as the path to such fame was closed, there were still some small honours awaiting him. After a school training, he entered at St. John's College, Cambridge, where at the end of his undergraduateship he became senior wrangler. He was one of the mathematical tutors of that college." The group of known planets now encircle the sun in the following order—Mercury, Venus, Mars, Flora, Iris, Vesta, Hebe, Astræa, Juno, Ceres, Pallas, Jupiter, Saturn, Uranus, Neptune. Mr. Adams has still work left for him. "There is reason to believe," says a recent writer, "that other planets may be found beyond Neptune, and that more fragments may be discovered between Mars and Jupiter; since it may be presumed that the thirteen we know of are the æolis of a large one, the more so as it is, probably, not the only instance. The myriads of meteors that the earth annually meets with on the 12th of August and the 14th of November, are, in truth, minute planetary bodies revolving round the sun, which on entering the atmosphere take fire by its sudden and violent compression." Whether the discovery of the planet Neptune was ascribed to Mr. Adams or to M. Le Verrier was a question which excited much discussion among astronomers at the period. Eventually, however, the latter gentleman obtained the credit. In 1841 Mr. Adams formed a design of investigating the irregularities in the motion of Uranus, which are yet unaccounted for, in order to determine whether they may be attributed to the action of an undiscovered planet beyond it, and, if possible, thence to determine approximately the elements of its orbit. In 1844, through Professor Challis, a correspondence was opened with the Astronomer Royal, and in October, 1845, Mr. Adams left at Greenwich Observatory a paper of results, showing that the perturbations of Uranus were produced by a planet within certain assumed limits. On the 22d of November the Astronomer Royal desired to know from him whether the perturbation would explain the error of the radius of Uranus; but, from some unexplained cause, Mr. Adams made no reply. On the 10th of the same month, a paper by M. Le Verrier was published in the "Compte Rendus" of the French Academy on the perturbations of Uranus produced by Jupiter and Saturn; and the place assigned by him to the discovered planet was the same, within one degree, as that given by Mr. Adams. Thus the honour passed from Mr. Adams through inadvertence. The Council of the Royal Astronomical Society was in contemplation to award their gold medal to M. Le Verrier for his discovery: considering, however, that it would be unjust to Mr. Adams to refuse one to him, and their laws having made no provision for two medals in one year, they ultimately decided upon presenting to each a printed Testimonial instead. Mr. Adams is of

most unassuming manners and delightful simplicity of character. Greenwich Observatory does very little in the way of discovery : to Cambridge we may now look with more confidence.

AGASSIZ, LOUIS, a distinguished Naturalist, was born in 1807, at Orbe, in Waatlande, where his father was a pastor. In 1818 he entered the gymnasium of Biel, and in 1822 he was removed to the academy of Lausanne, as a reward for his proficiency in science. He subsequently studied medicine and the experimental sciences at Zürich, Heidelberg, and Munich, at which last university he took the degree of M.D. From his earliest youth he evinced a peculiar inclination and aptitude for the cultivation of the natural sciences. In Heidelberg and Munich he occupied himself more especially with comparative anatomy. In 1826, being entrusted by Martius with the publication of an account of the one hundred and sixteen species of fishes collected by Spix in Brazil, he gave to the world that new classification of fishes to which he has subsequently remained steadfast. In 1839 he published his "Natural History of the Freshwater Fish of Europe," a subject which he treated with monographic completeness. While preparing this work he had published his "Researches on Fossil Fishes," and his "Descriptions of Echinodermes." The work, however, which contributed most liberally to his European reputation, was his "Studies of Glaciers," in which he advanced a theory, tending in great part to remodel the prevalent views of geologists as regards the incoherent and post-tertiary formations of the globe, and the dynamical causes by which those deposits have been affected. His views upon the changes in the earth's surface, ascribable to the agency of these glaciers, have not been universally admitted, but no geological work has been published since his "Etudes," in which his theory has not been treated with marked respect. M. Agassiz has for some years resided in the United States, occupying a distinguished chair in the scientific department of Harvard College; and has recently been appointed to a professorship of Comparative Anatomy in the University of Charleston. He has made numerous and valuable communications to the American Association for the Advancement of Science; and has laboured with great disinterestedness, assiduity, and success, in promoting the cause of natural science in the United States. He has also published "A Tour on Lake Superior," developing the physical character, vegetation, and animals of that region; and "The Principles of Zoology."

AINSWORTH, WILLIAM HARRISON, Novelist and Journalist, is the son of a highly respectable solicitor of Manchester, where he was born in 1805. He was originally intended for the law, but having acquired a taste for literature at a very early age, was found too frequently "penning a stanza when he should engross;" and after many vain attempts to chain him to the oar, he abandoned the study of the law for the more flowery fields of fiction. His first venture in literature was a small volume of verses, published under

the *nom de plume* of "Cheviot Tichebourne," and dedicated to Charles Lamb. These poems were not of much account, but the songs, which he has since interspersed in his various novels, afford indication of his ability to write very good verses if it so please him. His first work of fiction, "Sir John Chiverton," was published in his twenty-first year; and although crude and imperfect as a whole, was early regarded as a volume of considerable promise, and must have possessed no ordinary merit, since it was read and commended by Mr. Walter Scott. Having thus become an author, and married the daughter of a bookseller (the late Mr. Ebers of Bond Street), Mr. Ainsworth thought it might be as well to become his own publisher. Eight years after the appearance of "Sir John Chiverton" he produced a second romance, entitled "Rookwood," which was at once successful, and gained for its author a fair share of reputation. He now attempted, not without some success, to found a school of which notorious malefactors were to be the heroes, and in which, as a climax, the gallows and Tyburn were to supply the place of the old-fashioned marriage that usually wound up old-fashioned novels. Turpin the highwayman was painted in glowing colours, and the apocryphal story of the highwayman's ride from Leam to York at one heat on one horse, became, in the pages of Mr. Ainsworth's novel, a glowing literary reality. The cleverness and variety of the narrative attracted a large number of readers to the romance of Felony, and the stage reproduced the hash of false sentiment and doubtful morality which the press had given forth, and the more thoughtful portion of book-readers began to lament deeply that the talents of a writer like Mr. Ainsworth should have been employed on such subjects. "Jack Sheppard" having robbed his way through three clever volumes, and having had his criminal adventures illustrated by George Cruikshank, is hanged at Tyburn before a large and admiring crowd. This book must have been very profitable to its author's purse, whatever it may have been to his reputation; but since its publication, Mr. Ainsworth seems not to have been tempted to repeat his glorification of felons or his sanguinary paintings of thief-life. With better judgment and more wholesome taste, he has carried his admitted talents to fields equally rich in dramatic effects, and comparatively free from objection; and his later works of fiction have shown how graphically he can weave around a thread of romance a series of historical scenes and characters of real interest. Among the remaining novels from Mr. Ainsworth's pen may be mentioned "Guy Fawkes," "Crichton," "James II.," "The Miser's Daughter," "Old St. Paul's," "The Jew's," "The Tower of London," "Windsor Castle," "The Legend of the Witches," "The Star Chamber," and "The Flitch of Gold." Mr. Ainsworth has also adventured largely in periodical literature. Whilst yet a boy he published a *Journal of Literature* called "The Manchester Iris," and in 1829 edited the first volume of "The Keepsake." Besides establishing the magazine which bears his name, and purchasing of Mr. Colburn the copyright of

the "New Monthly Magazine" of which he is also the editor, he has lately added "Bentley's Miscellany" to the list.

AIRD, THOMAS, a Poet of considerable genius, born at Bowden, Roxburghshire, 28th August, 1802; educated at the schools of Bowden and Melrose, and at the University of Edinburgh; was editor for one year of the "Edinburgh Weekly Journal," after the death of Mr. James Ballautyne, the friend of Sir Walter Scott. In 1835 he was appointed editor of the "Dumfries Herald," a new journal of Conservative politics. His works are:—"Religious Characteristics," 1827; "The Old Bachelor in the Old Scottish Village," a volume of tales and sketches, 1845; "Poetical Works," a collected edition of his poems, new and old, 1848. His poem entitled "The Devil's Dream," one of the most popular of his productions and remarkable for its power, has been characterised as standing alone in modern literature, "as a wonderful piece of weird supernatural imagination." He was formerly a contributor to "Blackwood's Magazine." In 1852 Mr. Aird edited an edition of the selected poems of David Macbeth Moir (the "Delta" of "Blackwood's Magazine"), with a memoir prefixed, in two volumes, for Dr. Moir's family.

AIRY, GEORGE BIDDELL, who fills the distinguished office of Astronomer Royal with so much benefit to science and honour to his country, is a native of Alnwick, in Northumberland, and was born July 27, 1801. He was educated at private schools in Hereford and Colchester, and finally at the Grammar School in the latter town. In 1819 he commenced residence as Sizar Undergraduate of Trinity College, Cambridge; in 1822 he was elected Scholar; and in 1823 he took the University degree of Bachelor of Arts, with the honour of Senior Wrangler. Shortly afterwards he joined the Cambridge Philosophical Society, to whose Transactions he has contributed several valuable papers. In 1824 he was elected Fellow of Trinity College; in 1826 he took the degree of Master of Arts, and in the same year was elected Lucasian Professor. This office, rendered illustrious when filled by Barrow and Newton, had for many years been a sinecure; but no sooner had Professor Airy been elected, in opposition to Mr. Babbage, than he notified his intention to deliver public lectures on Experimental Philosophy. He commenced this good work in 1827 and continued it to 1836; his system of lectures is known as the first in which (among other things) the Undulatory Theory of Light was efficiently illustrated. Professor Airy was also an active member of the then existing Board of Longitude. In 1828 he was elected without opposition, to the Plumian Professorship, vacant by the decease of Mr. Robert Woodhouse. To the newly-elected Plumian Professor was entrusted the management of the Observatory of Cambridge, which had just been erected, and supplied with one of its instruments. The duties of this office requiring the undivided

of Professor Airy, his income was very justly increased
 from the funds of the University of Cambridge.
 of the new Observatory, he vigorously commenced
 observations; but his able services will be best remem-
 bered in the form which he introduced in the calculation and
 reduction of the observations, by which the utility was very
 increased: it has served as a pattern for the forms adopted
 at Greenwich, and other Observatories, to the present
 time. Professor Airy had also the satisfaction of superintending
 the Equatorial, the Meridian Circle, and the Northum-
 berland Observatory. In the autumn of 1835 the office of
 Astronomer Royal became vacant by the resignation of Mr. John
 Flamsteed. Mr. Airy was appointed to succeed him. The patronage
 of the office rests with the First Lord of the Treasury; but the
 selection was made on this occasion by Lord Auckland, then First
 Lord of the Admiralty. In the discharge of his duties, Mr. Airy
 has distinguished himself by giving great regularity to the general
 observations in the Greenwich Observatory, by maintaining with
 exactness the general outline of the plan which the require-
 ments of the Royal Observatory, and the historical associations,
 demand. The introduction of the Altazimuth and the Transit
 instruments and new modes of calculation and publication, by
 which the value of the observations has undoubtedly placed the
 Greenwich Observatory at the head of all existing Meridional
 Observatories. The Magnetic and Meteorological department of
 the Observatory is well known for its success in the practical
 application of the system of photographic self registration. Among
 Professor Airy's contributions to science may be mentioned his
 treatise on Gravitation, written by him for the "Penny
 Cyclopædia" in 1837, and extending to thirty folio pages. To prac-
 tice in correcting the Disturbance of the Compass in Iron-built
 vessels, during the year 1834. An important statement
 of the results of this investigation appeared in
 the "Quarterly Review" during the year 1834. An important statement
 has been lately communicated to the public journals by
 Professor Airy, in which he has shown in the application
 of the telegraph to astronomical observations. In 1834
 he conducted an important series of Experiments
 at the Harton Colliery, South Shields, for
 the weight of our globe—the earth—
 now this before it is possible to determine
 the sun, moon, and planets, which is of the
 practical astronomy. The size and figure of
 the earth, it only remained to deter-
 mine the average weight of say a cubic foot,
 the globe is easily calculated. The mode

in which this inquiry was conducted, and the difficulties with which so nice an investigation were surrounded, will be found fully detailed in "The Year Book of Facts" for 1855. The results may be shortly stated in the Professor's own words:—"The immediate result of the computation is this:—Supposing that a clock was adjusted to go true time at the top of the mine, it would gain two and a quarter seconds per day at the bottom. Or it may be stated thus—that gravity is greater at the bottom of the mine than at the top by 1·19190 part. To go a little further into the interpretation. If there had been no coal measure or rocks of any kind between the top and the bottom, but merely an imaginary stand to support the pendulums, the gravity at the top would have been less than that at the bottom by 1·8400 part nearly. But it is less by only 1·19200 part. And what is the cause of this difference? It is the attraction of the shell of matter, the thickness of which is included between the top and the bottom of the mine. The attraction of that shell, therefore, is the difference between the two numbers which I have given, or is 1·14900 part of gravity nearly. But if that shell had been as dense as the earth generally, its attraction would have been 1·5600 part of gravity nearly. Therefore, the earth generally is more dense in the proportion of 149 to 56 nearly. You will remark that all these numbers are rough, and that to make their results available, some small corrections are required (to which I have not alluded), and some knowledge of the density of the different beds, &c., which I do not possess at present." This, then, is one grand step towards the solution of this great scientific problem: to arrive at a final result, much has yet to be done. It will require that every description of stratum, lying between the upper and lower pendulum for these 1260 feet, should have its weight exactly found, as well as its thickness measured. In some places, near the surface, there are clay and earth; in others as you descend, sandstone, limestone, shale, and then seams of coal; some of the strata are saturated with water, others quite dry. All these varieties of deposits, in their respective conditions, must be distinctly examined and weighed. Difficult as it may appear, all this may be done: and the genius that has hitherto arranged and developed this important experiment, will doubtless find means to complete the operation. Mr. Airy is a Fellow of the Royal Society; a Vice-President of the Astronomical Society; an Honorary Member of the Institution of Civil Engineers; and has been long connected as Foreign Correspondent with the Institute of France, and with many other foreign Academies. In 1833 he received the Gold Medal of the Royal Astronomical Society "for his Discovery of the long Inequality of Venus and the Earth;" again, in 1846, "for his Reduction of the Observation of Planets made at the Royal Observatory, Greenwich, from 1750 to 1830;" and in 1848 a Testimonial "for the Lunar Reductions recently made at Greenwich."

ALBERT, FRANZ-AUGUST-KARL-EMANUEL, PRINCE CONSORT, AND DUKE OF SAXE-COBURG-GOTHA, is the

third son of Ernst Anton Karl Ludwig, duke of Saxe-Coburg, whose ancestors were Margraves of Meissen in the twelfth century electors of the Empire from 1425 to 1547, when the electoral dignity passed over to the collateral line of this house, whose present head is the King of Saxony. Prince Albert was born April 26, 1819, at the castle of Rosenau. After receiving a thorough education at the hands of private tutors, he entered the University of Bonn on the 3d of May, 1837, as a student of jurisprudence. A small house, of most simple aspect, standing behind some young trees, on one side of the cathedral at Bonn, is shown as the residence of his Royal Highness during his university course. Surrounded by the memorials of ancient Christendom, and along the historical Rhine, the Prince is said to have devoted himself to the studies of the place with an ardour which is spoken of with pride by the teachers of the university. It was his custom, he says, to rise not later than six every morning, and to pursue his studies until seven in the evening, allowing himself an interval of three hours for dinner and recreation. The labours of the day finished, he would pay visits to families of his acquaintance, or entertain students of worth at his own table. Among the professors of Bonn at this time were Dr. Walter, a jurist celebrated for his thorough mastery of the civil and Germanic law; and Dr. Loebell, remarkable for his skill in the treatment of the history of Europe. Besides these may be mentioned Professors Rönne and Perthes, colleagues of Dr. Walter. The Prince was diligent in attending their public lectures, and of afterwards receiving their more special assistance at his own residence. Having spent three academical seasons at Bonn, Prince Albert took leave of the university at the close of the summer half-year of 1840. In July of the same year, the Prince, with his father and mother, visited England to attend the coronation of her Majesty, when Victoria returned to Coburg, Prince Albert having for the first time made the acquaintance of her Majesty. After his departure, rumour was busy in England in pointing out Prince Albert as her Majesty's future consort; and although the report was contradicted by the ministerial newspapers, the belief was strengthened by a journey to England made about this time by Leopold, the King of the Belgians, and the subsequent arrival in this country of the young prince himself during the autumn of 1840. Immediately after the departure of Prince Albert, the Queen caused all the members of the Privy Council to be summoned, to meet at Buckingham Palace on November 23, and then and there communicated to the Council her royal intention to form a matrimonial alliance with the Prince Albert of Saxe-Coburg-Gotha. On the announcement to the House of Lords of her Majesty's intention, the Duke of Cambridge spoke from his personal knowledge of Prince Albert, and confidently predicted his future high popularity. The Duke of Devonshire expressed his surprise that the House had not been apprised that the Prince was a Protestant, and received the most satisfactory assurances on that head from the ministry. The

Prince is a great admirer of the arts, a ready draughtsman, has skill in music, and has written verses. His popularity in England has been greatly increased by his patronage of the Great Exhibition of 1851 in Hyde Park; and to him is due the credit of having suggested that that noble display of human skill should not, as was at first intended, be a mere exposition of British productions, but should be an Exhibition of the Industry of *All Nations*. This notice would be incomplete without a list of the dignities enjoyed by the Prince. He was naturalised on his marriage to her Majesty, Feb. 10, 1840, by Act of Parliament, and received a grant of 30,000*l.* a-year; the title of Royal Highness by patent; the right to quarter the royal arms of England; and precedence by royal warrant next to the Queen. He is a member of the Privy Council; Chief Steward of the Duchy of Cornwall, and Lord Warden of the Stannaries; Governor and Constable of Windsor Castle; Grand Ranger of Windsor, St. James's, and Hyde Parks; a Field Marshal and Colonel-in-Chief of the Rifle Brigade; Colonel of the Grenadier Guards; Captain-General and Colonel of the City of London Artillery Company; a Knight of the Garter, of the Thistle, and of St. Patrick; also G.C.B., G.C.M.G., Acting-Grand Master of the Order of the Bath, and Knight of the Order of the Golden Fleece. His scholastic dignities in England are, Chancellor of the University of Cambridge, LL.D., D.C.L., and Ph. D. He is also Master of the Trinity House, and President of the Royal Commission of the Patriotic Fund for the relief of the widows and orphans of soldiers, seamen, and marines who have fallen, or may yet fall, in the war with Russia. By her Majesty Queen Victoria he has eight children: viz. Albert Edward, Prince of Wales, born 9th November, 1841; Victoria Adelaide Mary Louisa, Princess Royal, born 21st November, 1840; Alice Maud Mary, born 25th April, 1843; Alfred Ernest Albert, born 6th August, 1844; Helena Augusta Victoria, born 25th May, 1846; Louisa Caroline Alberta, born 18th March, 1848; Arthur William Patrick Albert, born 1st May, 1850; Leopold George Duncan Albert, born 7th April, 1853.

ALFORD, REV. HENRY, B.D., Poet and Biblical Critic, was born in London in 1810. He was educated at Ilminster Grammar-school, Somerset, and Trinity College, Cambridge. We gather from a beautiful poem addressed to Mr. Alford, by Mr. Moultrie of Rugby (the friend and schoolfellow of Mackworth Praed, Sydney Walker, Hartley Coleridge, and Macaulay), that the author of the "School of the Heart, and other Poems," was born to a competency, and that he is therefore a stranger to those sordid cares which too often impair the enjoyments which the keen instinct of the poetical character is so well calculated to appreciate and enhance. Admired and esteemed by contemporary writers, whose own efforts have proved them to be no mean judges of poetic achievement, Mr. Alford's poetry is less widely known to the public at large than it deserves to be. Depending

what too forcibly of the celebrated passage respecting the great work of Gibbon, Mr. Alison's account of the first conception of his History, and the sustained and laborious industry by which it was brought to a successful conclusion, cannot be read without feelings of gratification. "Among the countless multitude," he says, "whom the extraordinary events of the period had drawn together from every part of Europe to the French capital, and the brilliancy of the spectacle [the review of the troops by the Allies in 1814] had concentrated on one spot was one young man, who had watched with intense interest the progress of the war from his earliest years, and who having hurried from his paternal roof in Edinburgh on the first cessation of hostilities, then conceived the first idea of narrating its events and amidst its wonders inhaled that ardent spirit, that devoted enthusiasm, which, sustaining him through fifteen subsequent years of travelling and study, and fifteen more of composition has at length realized itself in the present history." Mr. Alison is a high Tory, strongly opposed to all innovations, and looks upon the Reform Bill of 1832 as the commencement of the ruin of England. In this spirit he has for many years contributed articles to "Blackwood's Magazine," on most of the important events of the day. A selection of these have been published, under the title of "Essays." Besides these, he has published a work, entitled "Principles of Population," in which he combats the theory of Malthus; in 1845, "England in 1815 and 1845, or a Sufficient or Contracted Currency;" and in 1847, "The Life of the Duke of Marlborough." He is now engaged on a continuation of his History of Europe to the accession of Louis-Napoleon. He has been Lord-Rector of the University of Glasgow, and for his services to the cause of Protection the Derby-Disraeli Ministry induced her Majesty to confer a baronetcy upon him.

ALVENSLEBEN, COUNT ALBERT, a Prussian Diplomatist and Minister of State, eldest son of John Augustus Ernest, count Alvensleben, was born at Halberstadt, March 23, 1794. He studied at Berlin, and left college in 1811 to enter the Prussian cavalry guard as a volunteer. He remained in the military service until the second peace of Paris, afterwards applied himself to the study of the law, and in 1817 was made an assessor in the Kammergericht at Berlin. In 1834 he was named Prussia's second delegate to the conference of German ministers held at Vienna, and at the close of the year was entrusted with the folio of the Finance ministry. In 1837 he became also Minister of Commerce and Public Works and distinguished himself by his zeal in promoting the German Customs Union. In 1842 he resigned the Finance ministry, but was still an adviser of the Crown. More recently he came before the world for a brief period as Prussian plenipotentiary at the Dresden conferences, where his spirited and patriotic deportment promised to retrieve the honours of Prussian diplomacy; but not finding proper support at Berlin, he was unable to offer more.

and a passive resistance to the schemes of Austria. He is at present in retirement.

ANDERSEN, HANS CHRISTIAN, a popular Danish Novelist, was born at Odense, April 2, 1805, in which town his father was a shoemaker. His parents were too poor to procure for him any education than such as was to be obtained at a charity school in the place, and even from this he was taken at about nine years of age, when he could but just read. About this time the widow of a layman took him into her house to read aloud to herself and to him, and thus he first became acquainted with literature. Two years afterward he was sent to a neighbouring manufactory to earn a trifle in aid of his mother, his father being now dead. During the time that he remained here he employed all his leisure in writing plays, and so conceived a strong inclination for a player's life. Being in possession of about seven dollars, and receiving encouragement from a "wise woman" who had been consulted on the subject, he set out in September 1819, without introduction or recommendation, to obtain employment on the Copenhagen stage. His rude manners and want of education insured the rejection of his application at the theatre of the capital, and being reduced to extremity, he was glad to obtain employment with a joiner. But such of this kind also failed him; and he was one day pacing the streets with a heavy heart, when he remembered that nobody had heard his fine voice. By what seemed a happy accident, he met a man who was to sing in presence of Professor Siboni, who was so struck with his singing and modest demeanour, that he undertook to recommend Andersen's voice, and procure his *début* at the Theatre Royal. He spent a year and a half in elementary instruction, but without success in his voice, and the best counsel Siboni could give him was to turn to some handicraft trade. He was now again reduced to distress and almost to want. He wrote several tragedies, but without other fruit than some very feeble praise. At length his efforts fell under the eye of Counsellor Collin, a man of powerful intellect, who, perceiving the genius that was struggling against the chains of ignorance, went to the king, and obtained an order for his admission, without cost, to one of the government gymnasia. From this school he went to college, and soon became very widely known by his poetical works. Ingemann, Oehlenborch, and others, then obtained for him a royal stipend to enable him to travel, and he visited Germany, France, Switzerland, Italy, &c. Under the inspiration of this last beautiful country he wrote "Improvisatore;" his romance called "O. T." followed, which was a picture of the secluded life of the sober North. In "The Fairy Tale," he has given a picture of his own early struggles. Andersen visited the court of Denmark by special invitation, and in the following year received a royal annuity, which enabled him to follow freely the impulses of his genius. Since that time he has travelled much, and in 1847 visited England. Besides the works already mentioned, he has written "Fairy Tales," "Pic-

ture-book without Pictures," "Travels in the Hartz Mountains," "A Poet's Bazar," "Ahasuerus," "New Fairy Tales," "The Two Barometers," and several volumes of poems and dramas. His writings have been translated into German, and thence into English, Dutch, and even Russian: the Leipsic edition is in thirty-five volumes.

ANDERSON, ARTHUR, a man of business, and capitalist, was born 1792, and has been all his life distinguished for his active exertions in undertakings calculated to promote the public convenience as well as private emolument. Mr. Anderson is a native of Shetland, and his earliest public exertions were directed to improve the fisheries and postal communications of that and the neighbouring isles. Subsequently he became a managing director of the Peninsular and Oriental Steam Navigation Company, which has at the present time the largest fleet that any corporation not exercising sovereign prerogatives has ever owned. Mr. Anderson for some time represented the constituency of Orkney and Shetland in Parliament, and voted with the Liberal party. During the Corn-law agitation he was an active member of the League, and aided its cause with his pen as well as by his personal influence.

ANDERSON, WILLIAM, LL.D., a popular Preacher of Glasgow. He was born in 1800, at Kilsyth, in Stirlingshire, where his father is minister of the United Presbyterian Church. After acquiring distinction at the University of Glasgow, he became minister of John Street Relief Church in that city in 1822, and he has remained there ever since. He has gained a high reputation as the advocate of liberal opinions, and particularly as a controversialist both on the platform and in the pulpit. His treatises on "The Mass," on "Penance," and on "The Genius of Popery," are considered masterly productions. His work on "Regeneration" is remarkable for originality, scripturalness, and extensive information. He has also published some miscellaneous sermons, which exhibit extraordinary powers of mind.

ANDRAL, GABRIEL, a distinguished French Physician and Author, was born at Paris in 1797; studied at the college of Louis le Grand, took his degree of doctor of medicine in 1821, and established his scientific reputation by the publication of his "Clinique Médicale" (3 vols. Paris, 1824). In 1827 he was appointed Professor of Hygiène in the faculty, and one of the physicians of the hospital of La Pitié. In 1830 he was transferred to the chair of Internal Pathology, and in 1839 to that of General Pathology, and in 1842 was made a member of the Academy of Sciences. Although an extensive practice, crowded lectures, and a great variety of employments, made heavy demands upon Andral's time and activity, yet he projected and published a series of very comprehensive pathological works, the value of which has been acknowledged by the translations made of them into other languages. The most

important are—"Précis d'Anatomie pathologique," "Cours de Pathologie interne," "Essai d'Hernatologie pathologique." His lectures are distinguished for their ability.

ANSTER, JOHN, D.C.L., Regius Professor of Civil Law in the University of Dublin, and the Author of the first and best of the many translations of Goëthe's "Faust" which are now before the public, was born at Charleville, in the county of Cork, in 1793, and entered Trinity College, Dublin, in 1810, where he graduated, at the usual term of probation. In 1817, he published a prize poem on the death of the Princess Charlotte, and in 1819 "Poems, Translations, from the German." Several of the pieces of which this volume was composed appeared originally in "Blackwood's Magazine," (to which Mr. Anster had been a contributor from its commencement,) where they had attracted the attention of the late Samuel Taylor Coleridge, who was led to express, upon more than one occasion, a high opinion of their merits: this sentiment was transformed into a warmer feeling when the "old man eloquent" became acquainted with the personal qualities of the writer, and his enthusiastic reverence cherished for his works by his young disciple. The encouragement thus afforded to his earlier efforts, and the success which attended their publication, induced Mr. Anster to send his translation of "Faust" in a substantive form, (specimens of the work having been previously published in "Blackwood's Magazine") when its value as a faithful yet spirited version of a somewhat difficult original, which had already foiled the efforts of many more experienced poets, was at once recognised. Coleridge, who had shown by his noble version of "Wallenstein" that his judgment in such matters might safely be relied upon, passed, in the presence of the writer of this notice, a high eulogium upon the value of the work that had met his eye; and the "Edinburgh Review," on its publication in an integral form, pronounced it "one of the few translations which in any language held substantive rank in their own country, and are admired, cited, and imitated, in preference to their originals." Mr. Anster was called to the Irish bar in 1821, but from causes originating in all probability in his own disposition, and his distaste for the turbulent element in which he appears to "live, move, and have its being," his labours have been for the most part confined to chamber practice. He is said to have an office of small emolument under the Court of Admiralty. In 1841 a pension from the Civil List of 150*l.* was conferred upon him by Her Majesty, for the services he had rendered to literature. A list of his works is as follows: "Poems and Translations," 1819; "Faust," from the German of Goëthe (1835); "Kunilæ," 1837; "Poems and Translations" (1837); and "Introductory Lectures on the Study of the Civil Law" (1849). Dr. Anster is also reported to have contributed largely to "Blackwood's Magazine" and "Dublin University Magazine," and other leading periodical publications of our time.

ANTHON, CHARLES, LL.D., was born in the city of New York in 1797. He is the fourth of six sons, and having received the best education which the schools of that day afforded, in 1811 entered Columbia College, and graduated with distinguished honour in 1815. Immediately on leaving college he entered the law-office of his brother, Mr. John Anthon; and in 1819 was admitted to the bar of the supreme court of the state of New York. While a student of law, Mr. Anthon applied himself assiduously to the study of the classical authors, especially Greek; and the reputation thus acquired led to his appointment in the following year (1820) as adjunct Professor of Languages in Columbia College, which office he held until 1835; when, upon the resignation of Professor Moore, he was advanced to the station filled for many years by that gentleman. In 1830 Professor Anthon was appointed Rector of the College Grammar-school: and in 1831 received from his alma mater the degree of LL.D. His literary activity early displayed itself. Soon after his appointment to the adjunct professorship he undertook the preparation of a new edition of Lempriere's "Classical Dictionary," the merits of which were soon recognised by its immediate republication in England. From this time, Professor Anthon devoted himself assiduously to the preparation of a series of works, designed to improve the character of classical scholarship in his native country. In 1830 appeared the larger edition of Horace, with various readings, and a copious commentary; from this larger work Dr. Anthon prepared, in 1833, a smaller edition, for the use of schools and colleges. In 1835, in connexion with the publishing-house of the Messrs. Harper, Professor Anthon projected a classical series, which should comprise as well the text-books used in academies and schools preparatory to college, as those usually read in colleges and universities. This series includes some of the most important Greek and Latin authors. Besides these, Dr. Anthon has published larger works on ancient geography, Greek and Roman antiquities, mythology, literature, &c. &c.

ANTONELLI, CARDINAL, a Secretary of State in the Government of the Pope, was educated at the great Romish seminary founded by Gregory XVI., and was appointed a judge of the supreme criminal court. He had the cardinal's hat conferred upon him a short time previous to the election of Pius IX., who appointed him Under-secretary of State. He belongs to the reactionary party, and has exercised great influence over the conduct of Pio Nono.

ARAGO, ETIENNE, a Journalist, brother of the late celebrated astronomer, was born at Perpignan, February 7, 1803; studied at the College of Sorreze, and held, during the period of the Restoration, an appointment in the Polytechnic School, which he resigned to enter upon a literary career. He has written vaudevilles and melodramas; and established two opposition journals, "La Lor-

ette" and "Le Figaro;" the latter in conjunction with M. Maurice Elie. In 1829 he became director of the Théâtre de Vaudeville, and of which he closed on the 27th of July, 1830, the day after the publication of the ordonnances of Charles X.; thus being one of the first to give the signal of the Revolution. He subsequently took part with numbers of his friends in the insurrectionary movements of June and April; but it was his good fortune to be never noticed or forgotten, and he was not included among the number of the accused who expiated their imprudence in St. Pétersbourg. In 1840 he connected himself with the Paris press, and wrote political articles and theatrical *feuilletons* for the "Siècle" and "National." He was one of the founders of the "Réforme," and he long wrote the articles under the head of *Spectacles*.

ARGELANDER, FREDERIC-WILLIAM-AUGUSTUS, one of the most eminent of modern astronomers, was born at Memel, in Prussia, in 1799. He was educated at the University of Königsberg, and studied astronomy under Bessel, by whom he was afterwards employed as assistant in the observatory under his charge. In 1825 he undertook the supervision of the observatory at Abo, in Finland, where he remained until its destruction by fire in 1828, when the seat of the university was removed to Helsingfors, where Argelander was employed to superintend the erection of the new observatory. In 1837 he received the appointment of Professor of Astronomy in the University of Bonn. He published, about 1830, the results of his observations at Abo; viz. "A Catalogue of 560 Stars with Observations upon their Motions," a work which gave him great reputation, and gained him a prize from the St. Petersburg Academy of Sciences. This work on the alternations of light and changeable stars, upon which he has been employed for many years, is still to be published.

ARGYLL, GEORGE JOHN DOUGLAS CAMPBELL, DUKE OF ARGYLL. His grace was born 1823, the son of the seventh duke, and when but nineteen years of age, being then Marquis of Lorn, he presented a "Letter to the Peers from a Peer's Son," in which he expounded the constitutional principles involved in the celebrated Hume case, which led soon afterwards to the disruption of the church of Scotland. But although he asserted the rights of the church against the patron and the Government, he remained neutral when so many hundreds sacrificed homes and incomes in the cause for which he wrote. In 1848 he published his largest work, "The Church Examined," in which he takes a survey of the ecclesiastical history of Scotland since the Reformation, and makes good the Presbyterian form of church government against the early and more recent assaults of prelacy. The Duke is a man of considerable attainments, and takes a great interest in literature and natural science; attending and occasionally speaking at the meetings of the British Association. In 1852 he took office under the Aberdeen administration as Lord Privy Seal, and retained his

place in the cabinet after Lord Palmerston had become its head. He is a ready debater, and takes a considerable share in the proceedings of the House of Lords, which he entered in 1847, upon the death of his father. He has, however, yet to establish a reputation for statesmanship. In 1844 he married the Lady Elizabeth Georgiana Gower, eldest daughter of the second Duke of Sutherland, and niece of the present Earl of Carlisle. The Duke of Argyll has delivered several admirable lectures on literary and other topics at Mechanics' Institutes in the north of England. He has been Lord Rector of Glasgow University since 1854; and Chancellor of the University of St. Andrew's since 1851.

ARISTA, MAJOR-GENERAL DON MARIANO, President of Mexico, was born in Monterey, in 1803. His parents were natives of Spain, and his father served with considerable distinction in the Spanish army. Arista at an early age manifested a strong predilection for a military life. Entering the army when a mere boy, he rose gradually to the rank which he now holds, having served with distinction in the war with the United States. In 1848 he was appointed Minister of War; and in 1850 was elected to the presidency by a very large majority, to which office he was inaugurated in January 1851. Since his accession to the ministry and the office he now holds, President Arista has done much for the improvement and pacification of the country. It is to his judgment and discrimination that our present friendly relations with Mexico may be attributed. He is a friend to progress, and thoroughly appreciates the institutions of this country. He has likewise devoted much attention to the improvement and extension of agriculture and manufactures in Mexico, and many of the labour-saving machines and implements of this country are in use upon his estates. President Arista is distinguished from most of the leading men of Mexico by his constant and faithful support of the existing government, having been always opposed to revolutions of all kinds, and desiring peace, as the only means of developing the resources and ameliorating the condition of his country.

ARLINCOURT, VICTOR, VICOMTE D', French Poet and Novelist, was born September 10, 1789, at the castle of Merantia, near Versailles. His father, who devoted the greater part of his fortune to the cause of the Bourbons, was guillotined in the revolution. Napoleon placed the son in the service of the Empress-mother, and afterward named him Intendant of the Army of Arragon. On the return of the Bourbons he was treated with marked consideration, and appointed to the office of Maître de Requêtes, from which he was removed after the Hundred Days. He retired to Normandy, and devoted himself to literature, until he was again invited to court, and made chamberlain to Charles X. His principal novels are,—“*La Solitaire*,” which he produced in 1821; “*Le Kénégal*,” in 1822; “*L'Etrangère*,” in 1825. He has also written an epic poem, “*Charlemagne, ou la Caroleide*,” published in 1824, and various other poems

at different times. In 1842 he published his "Pèlerin," being an account of his travels in Germany and Holland. His works are characterised by a spirit of devoted loyalty; and the great popularity of his poems, both during and after the Restoration, was not so much due to their poetical merit as to their reactionary tendency. In 1850 he published "*L'Italie Rouge, ou Histoire des Révolutions de Rome, Naples, Palermo, etc., depuis l'Avénement de Pie IX.*" (Paris, 1850); in which he attempts to make the Italian revolution ridiculous.

ARNOLD, MATTHEW, Poet, son of the much-beloved Dr. Arnold of Rugby, was born on the 24th December, 1822, at Saleham near Stanes, where Dr. Arnold then resided. He was educated at Winchester, Rugby, and Oxford; at the last-mentioned place he won the Newdigate prize for English verse—the subject, Cromwell. He was elected a Fellow of Oriel College in 1845. In 1847 Lord Lansdowne nominated him his private secretary, and he remained in that situation until his marriage in 1851. He then received an appointment as one of the Lay-inspectors of Schools, under the sanction of the Council on Education, which he still retains. In 1848 appeared the "Strayed Reveller, and other Poems," signed "A." In 1853, "Empedocles on Etna, and other Poems." In 1854 he published a volume in his own name, consisting of new poems and selections from the two previous volumes. This was followed by a second series. The two first vols. are withdrawn from sale; the two last furnish the evidence on which Mr. Arnold's pretensions are to be adjudged. As a poet, his style is statuesque and Grecian: he has no affinities with the young pictorial and word-painter school. He thinks them word-painters, and demands that the poet should be an action-painter. A recent critic observes,—"He is too cold and colourless. He does not thrust his hand into the pulsing warm with human feeling. He is not sensuous enough to be widely popular. He appeals to the intellect, to the heart of passion and feeling, from which poetry still draws so much of its richest life. His muse is very pure and noble. She commands our respect and admiration, but we do not fall passionately in love with her. Reading his poems is somewhat like walking among the portraits in sculpture at the Crystal Palace, in that hall of the departed where the spirits of the past are ranged, with their white faces and serene brows, sitting in eternal calm."

ARWIDSON, ADOLF-IWAR, Librarian of the Royal Library at Stockholm, was born in 1791, at Padasjoki, in Tavastland (Finland), where his father held the office of provost. He studied at Åbo, at which place he commenced his career as a teacher of history in 1817. In 1821 he commenced a literary and political paper, called the "*Åbo Morgonblad*," which, on account of the liberality of some of its views, immediately fell under the displeasure of the Russian government, and was suppressed in September of that year. An essay written by Arwidson, and published the following

year in the "Mnemosyne," caused his removal from the university in May 1822, and his perpetual banishment from Finland; upon which he repaired to Sweden, where he has since remained. Here he published a criticism upon a work by Ruhs, "Finland and its Inhabitants;" and afterward an edition of the "Opera Omnia" of Calonius, and an excellent collection of old Swedish national songs. In 1848 he also published a catalogue of Icelandic manuscripts in the Royal Library at Stockholm. As secretary of the printers' society, he has for several years issued a bibliographic repertory, containing full and impartial notices of the literary productions of Sweden.

ASCHBACH, JOSEPH, a distinguished German Historian, was born at Höchst, in April 1801. The works by which he is best known are his "History of Spain and Portugal during the Dominion of the Almoravides and Almohades," "The History of the Omniades in Spain," "History of the Visigoths," and "History of the Hemli and Gepidæ." He holds the situation of Professor of History in the University of Bonn, to which he was appointed in 1842.

ATTERBOM, PETER-DANIEL-AMADEUS, a Swedish Poet, the son of a country clergyman, was born at Kirchsprengel Asbo, in East Gothland, January 19, 1790. He was sent to the gymnasium of Linköping, and in 1805 to the university at Upsala. Early in life he laboured to become acquainted with the German language, the knowledge of which has had an important influence upon his literary career. In 1807, in company with several of his friends, he formed a society, called the "Bund der Aurora," the object of which was to redeem the literature of his country, and especially its poetry, from the bonds of both academic formality and French affectation, and to direct attention to the original sources of national inspiration. One result of the manifold labours of the "Bund" was the establishment at Upsala, in 1810, of a journal, under the title of "Phosphorus," which was continued until 1813. Askelof and Hammarsköld had also at the same time issued a periodical, the "Polyphem," to which many of the "Phosphorists," as they were called, also contributed; but it was discontinued in 1812. The cutting and often bitter tone of the "Phosphorus," by no means contemplated in the plan of the "Bund," was occasioned by the arrogant attacks of the opposite party. The "Xenien" of Atterbom, and some of his prose essays, and especially a so-called Tungusian drama, the "Reimerbund," as well as his treatise, "Bedenken der neuen Schule über die Schwedische Akademie und den guten Geschmack," contributed greatly to the reputation of his paper, although they were also the principal cause of the bitterness of its adversaries. His "Poetisk Kalender" was published in 1812-22. Among his most important poems are "Die Blumen," a collection of musical romances; and fragments of a drama, on the legend of "Vogel Blau." In 1817 he undertook a journey through Germany to Italy. While in Germany he paid special attention to the poetry and philosophy of the country. The journey also served

to rescue him from the polemical strife which threatened to ruin his health and his talents. After his return, in the autumn of 1819, he was appointed teacher of the German language and lecturer to the Crown Prince, Oscar. The same year he accompanied the prince from Upsala to Stockholm, where he resided until 1821, when he was appointed Professor of History. In 1822 he became adjunct Professor of Philosophy in Upsala; and in 1828 Professor of Logic and Metaphysics, which appointment he exchanged in 1835, for the professorship of *Æsthetics*. Among the writings of his later years are "Essays on History and Philosophy;" "Moral Poems." His poetry has been exceedingly popular throughout Sweden. As a philosopher he is inclined to theosophic views, and is desirous of reconciling Christianity with philosophical speculation.

AUBER, DANIEL FRANCOIS-ESPRIT, Musical Composer, son of a Paris printseller, and was born at Caen, in Normandy, on the 29th January, 1784. At a very early age he acquired great facility in drawing and music, and played with considerable perfection on the piano and violin. At the age of twenty he was sent to London by his father, in order to learn something of his business; but the termination of the Peace of Amiens put an end to his residence in that capital, and he returned to Paris with a mind altogether alienated from the pursuits of business. His father finding it useless to oppose the evident bent of his inclination, and his genius, consented to his becoming a composer for the theatre; and in 1813 he produced his first opera, "*Le Séjour*" but with so little success that he resolved not to hazard a second attempt. The death of his father, however, which left him wholly dependent on his own resources, compelled him to abandon his former plan, and in 1819 his second work, "*Le Testament et les Héritiers*," made its appearance, with hardly better success. His next efforts, "*La Bergère Châtelaine*," and "*Emma*," in 1821, met with little success in his favour. "*Leicester*," in 1822, "*La Nièce*," in 1823, "*Le Concert à la Cour*," and "*Léocadie*," in 1824. "*Le Bal Masqué*," and "*Fiorella*," in 1826, fully established his reputation. It was, however, with "*La Muette de Portici*," that his genius reached its culminating point of renown. In this opera he first began to depart from the school of Rossini, in which he may be said to have been educated, and to judge altogether for himself. "*Le Franc-tireur*," in 1829, and "*Fra Diavolo*," in 1830, sustained him in this position. He has since been very industrious, and his productions, of which we may mention "*Le Cheval de Bronze*," "*Le Domino noir*," "*Les Diamants de la Couronne*," "*L'Elixir d'Amour*," "*Le Dieu et la Bayadère*," "*Gustave, ou le Bal Masqué*," "*Les Deux Mennayers*," "*Le Lac des Fées*," "*La Part du Diable*," "*Le Trompeur*," and "*Haydée*," are among the most popular operas upon the French stage. His last works are, "*L'Enfant prodigue*," which was first represented at Paris in 1851, "*La Corbeille d'Oranges*," and "*Le Vaisseau*." The most popular of Auber's operas in England

are "Masanniello," (the "Muette de Portici,") "Fra Diavolo," the "Bronze Horse," the "Crown Diamonds," "Gustavus III.," the "Syren," and "Haydée." Auber has lived nearly all his life in Paris, whence he has sent his music forth to all parts of the world. He is very prolific, and, like a true artist, has no sooner finished a work than he dismisses it entirely from his mind, and turns his attention to future plans. It is said that this composer makes no point of never hearing his operas a second time. His motive for this is stated to be a desire to avoid as much as possible all probability of repeating his ideas; but we have no doubt that the reason which we have above alleged has more to do with this determination. Auber is decidedly one of the few great musical geniuses of the age. At the time when Rossini was beginning to cease from his labours, and Meyerbeer had not yet made himself known, Auber was supplying the whole world with music, and sat unrivalled on the operatic throne.

AUERBACH, BERTHOLD, a German Writer and Poet, born of Jewish parents, at Nordstetten, in the Black Forest of Wurtemberg, February 28, 1812. It was the intention of his parents (says one of his biographers) that he should study the Jewish theology, and he commenced his education at Hechingen and Carlsruhe, and completed his course at the Gymnasium at Stuttgart, in 1832. From this period until 1835 he studied at Tübingen, Munich, and Heidelberg. He soon abandoned the Jewish theology, and devoted himself to philosophy, history, and literature. His first work, "The Jewish Nation and its recent Literature," was published at Stuttgart in 1836; and it was the intention of the author to follow it up with a series of romances from Jewish history, under the title of "The Ghetto." In 1837 and 1839 he published "Poet and Merchant," and "Spinoza," and his attachment to the doctrines of that philosopher induced him to publish a biography of him in 1841, accompanied by a translation of his complete works. But the reputation of Auerbach rose still higher when he began to treat of matters of more general interest; and his "Educated Citizens, a Book for the thinking Middle-Classes," published in 1842, and the "Village Tales from the Black Forest," in the following year, obtained great popularity, the latter being translated into English, Dutch, and Swedish. One of his most finished poems was contained in the novel, "The Professor's Wife," which first appeared in the "Urania," in 1848, and was afterward inserted in a new edition of the "Village Tales," and subsequently dramatised (against the will of the author) by Frau Birch-Pfeiffer. In 1845-6 Auerbach prepared and published an almanack, under the title of "Our God-father," which was intended to enlighten the people on the subject of public affairs. Since 1845 he has resided principally at Weimar, Leipsig, Breslau, and Dresden, where he has zealously advocated the cause of popular education. During the political commotions of 1848 Auerbach sided with the moderate Democrats; and the events of that year, and a journey to Vienna, gave birth to

the "Journal of Events in Vienna from Latour to Windischgrätz," which was translated into English; and perhaps we owe to the same events the tragedy of "Andreas Hofer" (1850). "German Legends," a collection of tales, previously written, appeared about the same time.

AUGUSTENBURG, CHRISTIAN-AUGUST, DUKE of Schleswig-Holstein-Sonderburg-Augustenburg, born July 19, 1708, is the head of the younger branch of the royal line of the house of Holstein. It is to the head of this younger branch that, according to ancient treaties, the sovereignty of the duchies of Schleswig and Holstein should fall, in case of the death of the King of Denmark without male issue. The name of this prince has thus been often before the public in connexion with the still unsettled contest between the duchy of Holstein and the Danes. Brought up under the enlightened direction of the late Duke Frederic-Christian, his father, one of the most learned and accomplished princes of his age, and afterward under that of his mother, Louis-Auguste, the Duke of Augustenburg completed his brilliant education by instructive travels, undertaken in 1818, 1819, and 1820, in Germany, Switzerland, Italy, France, and England. In 1830 he married Countess Sophie, countess of Danniskjold-Samsøe. In the proceedings of the provincial diets to which Frederick VI. committed the direction of the German states, after the French revolution of July, the Duke of Augustenburg took a prominent part, distinguishing himself especially by his zeal in the cause of liberty and progress as by his oratorical ability. The Duke is a large landed proprietor, and has spent immense sums in the improvement of the agriculture of his country. His stud at Augustenburg was one of the finest in Europe. He enjoys an unbounded popularity in both duchies, of which his inhabitants have lately given proofs, unhappily too true to the world to need recital. Since the downfall of the late dynasty of Schleswig-Holstein, the Duke's estates have been confiscated, and he has been declared a traitor. He has appealed to the German Diet for protection against the consequences of this confiscation without success. Meanwhile, earnest endeavours are being made to settle the succession to the duchies to his exclusion.

AUSTRIA, FRANCIS-JOSEPH-CHARLES, EMPEROR OF, ascended the throne of Austria December 2, 1849, on the abdication of Ferdinand I. He is the eldest son of the Archduke Francis Charles, who stood next to the late emperor in the legal order of succession, and of the Princess Sophia: he was born August 18, 1830. On ascending the throne he promised in the most emphatic manner to give freedom and a constitutional government to his country. His first proclamation contained the following passage:—"We are convinced of the necessity and value of free institutions, and enter with confidence on the path of a prosperous reformation of the monarchy. On the basis of true liberty, on the basis of the equality of the rights of all our people, and the

equality of all citizens before the law, and on the basis of their equal participation in the representation and legislation, the country will rise to its ancient grandeur, and will become a hall to shelter the many nations united under the sceptre of our fathers." The first act of the young monarch was to close the national representative assembly met at Kremsier; the second, to cancel the ancient constitution of Hungary, and promulgate a charter which no attempt was made to realise, and which, in August 1851, was withdrawn. By the aid of the Emperor of Russia he succeeded in overwhelming the resistance of the Hungarian nation, while Radetzky secured the submission of the Lombard and Venetian kingdom. Having thus gained internal peace and freedom of governmental and legislative action, he promulgated the edicts of Schonbrunn, September 26, 1851, in which he declared his ministers "responsible to no other political authority besides the throne." He added, "The cabinet must swear unconditional fidelity, as also the engagement to fulfil all my ordinances and resolutions. It will be its duty to carry out my will concerning all laws and administrative acts, whether considered necessary by the minister or originating with me." In the exercise of the autocratic power thus boldly asserted on the morning of a revolution by a prince who had barely attained his majority, edict after edict was issued and the constitution of the monarchy was entirely changed. In the name of that principle of equality before the law, which is all that remains of the Imperial promise of 1849, he smote the remaining power of the aristocracy, and at the same time propitiated as well as benefited the mass of the population. By a series of organic regulations he has centralised the government of the heterogeneous state in Vienna, and with the aid of new men, such as Dr. Bach and Herr von Bruck, carried out a series of fiscal and commercial reforms, which appeal to the interests of the middle classes. The minister under whose advice the young Emperor entered upon the bold policy of making his own party and establishing his power by consulting the equalising passions of democracy, was the late Prince Schwarzenberg. This statesman died suddenly in April 1852, in mid-career: Count Buol has since succeeded to his station, but only to a portion of his power. In boldly meeting the earlier trials of his reign, Francis Joseph has acquired the consciousness of strength, and now claims a larger and more direct participation in the government. His foreign policy has secured him a degree of consideration among the states of Europe, such as six years ago would have been deemed chimerical in the prediction. He broke up the plans of Prussia by a military demonstration, while yet the cloud of the recent Russian intervention hung over the independence of Austria, and astonished the feeble cabinet of Berlin by the apparition of an Austrian army on the Elbe. At Olmütz, in 1853, his political friendship was courted by the Czar, Nicholas I., who, four years before, had saved his empire; but in the following year, by joining the Western alliance against Russia, he displayed towards the same potentate the

"immense ingratitude," without which Prince Schwarzenberg had declared the independence of the empire could never be vindicated. Francis-Joseph was married in April, 1854, to the Princess Elizabeth of Bavaria, by whom a daughter was born to him in March 1855. An unsuccessful attempt was made to assassinate the Emperor in February 1853, and for some weeks his life was in great peril.

AYTOUN, WILLIAM EDMONDSTOUNE, Poet and Professor, was born in the year 1813, of a family that has long held patrician rank in the county of Fife, and educated at the seminaries of the Scottish capital. After being distinguished among his contemporaries at the Academy for the excellence he displayed in the composition of Latin and English, and being honoured at the University with the eulogy of no less eminent an authority than Professor Wilson, on the occasion of reciting his prize-poem, named "Judith," in the Moral Philosophy class in 1831, he gave to the public a volume of verse, entitled "Poland, and other Poems," which was not successful in attracting any very general attention. Betaking himself to legal pursuits, after a trial of the less ambitious branch of his profession, Mr. Aytoun obtained admission in 1840 to the Scottish bar, and became one of the standing wits of the Parliament House—or Edinburgh law-courts—though without acquiring forensic celebrity as an advocate, excepting as counsel in criminal cases. He had the fortune, however, to be presented in 1845 to the chair of Rhetoric and Belles Lettres in the University, where pith, energy, and literary taste characterise his lectures to the students. The Professor's politics, originally of a somewhat liberal tendency, have gradually undergone a complete change, and his talent as an essayist has long rendered him conspicuous among the contributors to "Blackwood's Magazine," in the editorship of which he is understood to have succeeded his father-in-law, the celebrated Professor Wilson. In that northern periodical, from time to time, first appeared those stirring, picturesque, and enthusiastic national ballads, now known and admired as "Lays of the Scottish Cavaliers;" among which "The Heart of Bruce," "Edinburgh after Flodden," and "The Burial March of Dundee," may be cited, as exhibiting at once their author's poetic faculty, his peculiar prejudices, and the error into which many writers fall of supposing them mere Jacobite effusions. In truth, the sentiments expressed in the "Lays" are the offspring of that Caledonian patriotism, the intensity of which has recently caused Professor Aytoun to stand forth as a champion and display his oratorical powers on behalf of the Society organised for the redress of what its members are pleased to term Scottish grievances. Besides these Lays, he is author of many pieces in the "Book of Ballads" edited by Bon Gualtier,—a name, under cover of which he and Mr. Theodore Martin contributed to various periodicals. In the summer of 1853 Professor Aytoun appeared at Willis's Rooms in the metropolis, and delivered six lectures on "Poetry and Dramatic Literature" to large and

fashionable audiences; and to his pen is ascribed the mock-heroic tragedy of "Firmilian," designed to ridicule the rising poets of the day as "The Spasmodic School," and to discredit a certain order of critics, whose eccentric praise is certainly somewhat perilous to those on whom it is bestowed. Of late years no writer on the Conservative side of politics has rendered more efficient service to his party than Professor Aytoun; and in 1852 Lord Derby and his friends recognised their obligations to their northern ally by appointing him to the offices of Sheriff and Vice-Admiral of Orkney.

B.

BABBAGE, CHARLES, a Mathematician and Philosophical Mechanist, was born in 1790, and educated at Trinity College Cambridge. Having distinguished himself at the mathematical examination he took the M.A. degree, and, possessed of a competency, prepared to apply himself to the development of his favourite science. In the course of his studies he found the logarithmic tables then in use—the Ready Reckoner, so to speak—by which the larger operations of astronomical calculation are worked out—extremely defective, and even unfaithful. The national value of tables of this description had long been recognised by every government, and large sums had been expended in preparing such as could have, after all, but a proximate accuracy because from the calculations of the astronomer are derived the data by which every seaman navigates the ocean, and every headland and island is marked in his chart. Mr. Babbage set himself to consider whether it were not possible to substitute for the perturbable processes of the intellect the unerring movements of mechanism in the preparation of logarithmic tables. The idea was not a new one: Pascal, and other eminent mathematicians, having projected similar contrivances. Hitherto, however, nothing had been accomplished; and thus the work to be achieved was one of invention, and not of improvement. As a mathematician he was intimately conversant with the fixed laws which govern the generation of a particular set of numbers from any other given combination; he, therefore, had next to qualify himself by a study of the resources of engineering, in order that he might judge how far the construction of such a machine was possible. For this purpose he visited the various centres of machine labour, as well on the Continent as in England; inspected and compared wheels, levers, valves, etc.; studied their various functions; and on his return, in 1821, undertook to direct the construction of a Calculating Machine for the Government. It may be mentioned, in passing, that the

work of inspection gave occasion for his work on the "Economy of Manufactures," a subject then new to literary treatment, in which he opened up a field of illustration which has since been explored by a multitude of writers. By 1833 a portion of the machine was put together, and it was found to perform its work with all the precision that had been predicted of it. It both calculated the results given into it, and delivered the result perfectly printed at the end of its issues. It would compute with 4000 figures, and calculate the numerical value of any algebraic function; and would, at any period previously fixed upon, contingent upon certain circumstances, cease to tabulate that function, and commence the calculation of a different one. By its aid he prepared his "Tables of Logarithms of the Natural Numbers," from 1 to 108,000, a work of facile arrangement and unparalleled accuracy was received with applause throughout Europe, into most of the languages of which it was speedily translated. Mr. Babbage was now, in 1828, called by a university to fill the chair of its Mathematical Professorship, once occupied by Sir Isaac Newton, and he continued to discharge the duties of that office for eleven years. During this time he devoted all his leisure to the perfection of his machine, and made so many improvements in it that the cost of the machine was swelled to 17,000*l.*, although the inventor received no remuneration for his own skill and services. In 1833, for some reason at present unexplained, the construction of the calculating machine was suspended, and still remains so. Mr. Babbage is a member of the chief learned societies of London and the North, and his contributions to their Transactions have been numerous. He has also published a fragment, which he calls "A North Bridgewater Treatise," a volunteer production, designed to refute the assertion made by the first writer in that work—that ardent devotion to mathematical studies is unfavourable to faith, and also to give specimens of the defensive aid which sciences of Christianity may receive from the science of numbers. The volume is not likely to become popular; but it is very curious to note how the calculating machine is made to refute the argument against miracles, which, it is known, is founded on a calculation of probabilities. He seems disposed to take a gloomy view of the state of science in England,—a state of stagnation, openly expressed in his volume called "The Decline of Science," still further disclosed in his work, "The Great Exhibition," published in 1851. In November, 1832, Mr. Babbage was a candidate for the representation of Finsbury, declaring himself to be in favour of parliamentary, financial, and fiscal reform, the abolition of sinecures, triennial parliaments, and vote by ballot.

BACK. SIR GEORGE, the distinguished Arctic Navigator, was born at Stockport, in Cheshire, on the 6th November, 1796, and entered the Royal Navy as midshipman, on board the *Arethusa*, Captain Robert Menda, in 1808. In the following year he was

present at the capture, off Cherbourg, of *Le Général Ernou*, a French privateer, of sixteen guns and fifty-eight men; and a few months afterwards assisted at the destruction of the batteries of Leyquettio, the seizure of several vessels in the river Andero; and the demolition of the guns and signal-posts of Bagnio; on which occasion he was made prisoner and sent to France, where he remained five years. On regaining his liberty he joined the *Akbar*, sixty guns, the flag-ship of Sir Thomas Byam Martin, at Flushing, and afterwards employed on the Halifax station. After passing his examination in 1817, he removed to the *Bulwar*, seventy-six, bearing the flag of Sir Charles Rowley, in the river Medway, and in the course of the ensuing year was appointed to the *Trent*, hired brig, Lieutenant Commander John Franklin. Having accompanied Captain David Buchan on a voyage of discovery, made to the neighbourhood of Spitzbergen, he was, early in 1819, selected to attend the first-mentioned officer in his overland expedition from Hudson's Bay to the Coppermine River. In this bold and hazardous undertaking, in the prosecution of which the adventurers performed their journey on foot, in the depth of winter, from Fort Enterprise to Fort Chippewyan and back, a distance of 1104 miles, Mr. Back displayed that heroic perseverance and indifference to fatigue and danger, which have been the characteristics of his gallant career as an Arctic traveller. In 1821 he was promoted to the rank of lieutenant, and appointed to the *Superb*, seventy-eight, Captain Sir Thomas Staines, destined for Gibraltar and Barbadoes. We next hear of him in 1825, after attending a public dinner given to him by his fellow-townsmen at Stockport, as the companion of Captain Franklin on another expedition to the Arctic regions, for the purpose of co-operating with Captains Beechey and Parry in their attempts to discover from opposite quarters a North-West Passage. The particulars of this remarkable mission will be found fully detailed in Captain Franklin's "Narrative of a Second Expedition to the Shores of the Polar Sea in 1825-7." In its fulfilment Lieutenant Back extended his researches to latitude $70^{\circ} 24' N.$, longitude $149^{\circ} 37' W.$ He was promoted in 1825 to the rank of commander, and when Captain Franklin, on the return of the expedition, set out in advance with five of his party from Great Bear Lake, Back was left at Fort Franklin in charge of the remaining officers and men, the boats, collections of natural history, rough notes, and astronomical and meteorological observations; with instructions to proceed on the breaking up of the ice to York Factory, and thence to England, which he reached in 1827. From that date he remained unemployed until 1833, when he was appointed to conduct an expedition fitted out for the purpose of instituting a search after Sir John Ross, who had left England in 1829, on a voyage to the Polar Seas. The history of this expedition has been related by Captain Back himself, in his interesting "Narrative of the Arctic Land Expedition to the Mouth of the Great Fish River, and along the Shores of the Arctic Ocean, in 1833-5." On his return to

Landed in 1835 he obtained his post rank, and in the ensuing year was appointed to the *Terror* bomb, in which he sailed afterwards for Papa Westra, one of the Orkney islands, in command of a new Arctic expedition, fitted out with every apparatus that seemed likely to insure success. Of this voyage we have a stirring account in his "Narrative of the Expedition in H. M. ship *Terror*, undertaken with a view to Geographical discovery on the Arctic Shores, in 1836-7." From that period William Back has been permitted to remain upon half-pay. In 1837 the Geographical Society conferred upon him its gold medal, and two years afterwards he received the honour of knighthood, and now holds a lucrative Treasury appointment. None of his rewards have in the slightest degree exceeded his deserts, but have been surpassed by those of no other Arctic navigator. Mr. Back married, in 1846, Theodosia Elizabeth, relict of George Anthony Hammond, Esq., of Savile Row.

BAILEY, PHILIP JAMES, the Author of "*Festus*," was born April 21, 1816, at Week-day Cross, Nottingham. His education was conducted at various schools in his native town; and in December, 1831, he matriculated at the University of Glasgow, where he studied two sessions under Professors Buchanan (Logic), W. D. K. Sandford (Greek), Thomson (Mathematics), Milne Edmonstone. At this early age he competed unsuccessfully for a prize upon the subject of "Creative Imagination." He was a member of several debating societies connected with the university. In autumn of 1833, having various inducements to adopt the law profession, he entered the offices of a solicitor in the Temple, where he remained two years. In 1835 he was admitted a member of Lincoln's Inn, and was called to the bar by the benchers of that honourable society in 1840, having in the interval passed a year in the chambers of an eminent conveyancer in the same inn. It was about this period, and some time previously, that he began in which a distaste for legal pursuits had rapidly manifested itself. He sought relief and compensation in an extensive and varied course of reading in the libraries of the British Museum and Lincoln's Inn. Accustomed to original composition in verse from his twelfth or thirteenth year, his genius now pursued a more sensible bent, and, having once adopted a poetical subject, he applied himself assiduously and exclusively to the development and finishment of his theme. In 1839 "*Festus*" was published by the late William Pickering, and met with a generally enthusiastic reception in this country and in America. It has since reached its fifth edition. The history of the growth of this poem is the history of his literary life; and nothing else of any great interest may be said to pertain to his biography. After visiting various provincial towns in England he returned to Nottingham, at which place he resided; his father (a gentleman of considerable literary and oratorical ability) having become proprietor of one of the local journals, the son assisted, though not

prominently, in the management of the paper, until a recent period. In 1850 he published "The Angel World," a poem which was subsequently incorporated with "Festus"—apparently destined to be the one great work of our author, as into that he pours all his thoughts, aims, and aspirations. Mr. Bailey is married and has two children.

BAILY, EDWARD HODGES, R.A., the well-known Sculptor of "Eve at the Fountain," and "Eve listening to the Voice," an artist of European reputation, was born at Bristol, on the 10th March, 1788. His father, a ship-carver, was one of the first artificers in his line who imparted anything like an artistic feeling and correctness of outline into this sort of work. So much taste, however, did he display in his figure-heads, that Flaxman is said to have remarked of one of his works, that few sculptors of his time could have surpassed it. At the age of fourteen, young Baily was taken from school, and placed in a merchant's counting-house, in the expectation that he would devote himself to commercial pursuits, to which alone his education so far had been directed. He remained with his employers two years; during which he contrived to find, or make, numerous opportunities of cultivating his natural taste for the fine arts. Having formed an acquaintance with an artist of the name of Weekes, who occupied himself in modelling portraits in wax, he conceived a desire to imitate his friend, and acquired, after very little practice, a skill and facility in modelling which has seldom been attained in so short a time. Preferring this sort of occupation to single and double entry, he left his situation at the age of sixteen years, and began the world as a wax-modeller on his own account. Having the good fortune to be successful in his likenesses, he met with full as much encouragement as he expected. His transition from wax to clay is said to have been awakened by a visit to Bristol Cathedral, where he met with Bacon's monument to the memory of Mrs. Draper (the "Eliza" of Sterne). About the same time a surgeon, of the name of Leigh, lent the young artist Flaxman's designs for Homer's "Iliad" and "Odyssey," and, what was still better, gave him a commission for two groups to be modelled from these designs. The result was so satisfactory to the worthy surgeon, that he wrote to Flaxman to urge him to take the youth into his studio as an assistant. Meanwhile, at the age of eighteen, and without any definite means of subsistence, Baily was imprudent enough to marry. Shortly afterwards, he was compelled to leave his young wife in Bristol, and repair to London, where some members of his family were settled, to seek employment. Within a few days of his arrival in town he called upon Flaxman, who, forming a high estimate of his capabilities from the specimens he had brought with him, took him at once into his studio, and his artistic education may now be said to have begun. Having sent for his wife, he applied himself to study with an assiduity that earned for him the affectionate regard of his master; who soon began to treat him more as his son than as his

ment. His progress was now exceedingly rapid. He gained the silver medal at the Society of Arts and Sciences, and the silver and gold medals, with a purse of fifty guineas, at the Royal Academy; the subjects on the latter occasion being "Hercules bearing Alceste to Admetus." An excellent judge pronounced it to be the best he had ever seen exhibited, under similar circumstances, before the Royal Academy. At the age of twenty-five Mr. Baily produced his "Eve at the Fountain;" a statue of world-wide reputation for unrivalled grace and beauty. Quitting the studio of Flaxman at the termination of his seventh year of apprenticeship, Mr. Baily accepted the post of chief-modeller to the firm of Rundell and Bridges. Gold-and-silver-smiths were accustomed, in those days, to seek for designs and models from the best sculptors and painters of their time, and did not waste, as they often do now, the precious metals upon groups and bas-reliefs from the prentice hands of unskilled and tasteless artificers. Flaxman, Baily, Stothard, and other congenial associates, were busily employed in designing for these merchant-princes, and the consequence was a proportionate increase per ounce in the value of the article. In these days the tables and sideboards of marble are little better than eyesores to the educated taste of the art-connoisseur in art. In his next work Mr. Baily tried a hand at Canova, and beat him on his own vantage ground. We have "Hercules casting Lycas into the Sea," "Apollo discharging his Arrows," executed for the late Lord Egremont, and "Marina Love," for Mr. J. Neild, M.P. for Chippenham, were successions from his hand. Mr. Baily was afterwards employed, with other sculptors, in executing the figures on the marble front of the "Triumph of Britannia," together with the statues on the front of the edifice. He likewise sculptured the *bassi-relievi* in the room and the throne-room. His other works of that period were sent to the memory of Lord Egremont, Mr. Telford the engineer, Sir Astley Cooper, Sir Richard Bourke, Governor of New South Wales, Dean Dawson, Doctor Butler, Earl Grey (fourteen feet high), at Newcastle, the Duke of Sussex (colossal), for Freeport Hall, and a design for the Nelson monument, which, for all its merits, has never been carried out. The colossal statue of Neptune which surmounts the Corinthian column in Trafalgar Square is from his hand, but might as well be in the moon. Mr. Baily was elected an Associate of the Royal Academy in 1818, and a full Academician in 1822. On leaving Flaxman, he took a small studio in Percy Street, where he remained twenty years; after which he removed to the house formerly occupied by Bacon, the monument to Mrs. Draper had given the first impulse to his career. Some of his best works were executed in this studio; among them, "Eve listening to the Voice"—a companion group to his "Eve at the Fountain"—"Preparing for the Bath," "The Graces," "The Fatigued Huntsman," and the "Sleeping Nymph," a colossal statue of Sir Robert Peel for Manchester, and an "Infant Bacchus," a portrait of the son of Mr. T. K. Hervey, the poet.

BALBO, COUNT CESARE, an Italian Romanist, Politician, Author, and Journalist, born in Piedmont in 1788. In his youth Balbo was employed in Paris by Napoleon, and held various commissions from the Emperor in Italy. After Waterloo he came to London, as Secretary of Legation for Sardinia. A few years afterwards he left office, and devoted himself to authorship. During the last thirty years he has published various works, besides writing for the "Risorgimento," a well-known Turin newspaper. His chief works are a "History of Italy," "The Hopes of Italy," and "Della Storia d'Italia dall' Origine fino al 1814." He may be regarded as one of the chiefs of the moderate Romanist party. In religion, he thinks Catholics alone can rely on salvation.

BALFE, MICHAEL WILLIAM, one of the most popular and pleasing Composers of the age, was born in Dublin in 1808, where he passed the first four years of his life, and then accompanied his father to Wexford. Before he was five years old, the child began to exhibit the enthusiastic love of music which was inherent in his nature. One day, having been taken to hear the band of an infantry regiment which was quartered in the town, he became so enamoured of its performances, that he sought and made every possible opportunity of listening to its strains. Whether missed from school or from home, he was sure to be found in the barrack-yard. The band-master, a Mr. Meadows, remarked the regular attendance of the boy, and having made his acquaintance invited him to his house, where he soon became an especial favourite. Meadows led with the clarionet, but could also play a little on the violin. On this instrument young Balfe, who had taught himself the scale, became in an almost incredible space of time a tolerable proficient. This striking precocity so interested Meadows that he called upon Balfe's father, and mentioning his son's predilection offered to teach him gratuitously,—a proposal which was gratefully accepted; and in less than three months the boy acquired so marvellous a facility of execution that his master began to feel that he could teach him but little more, and therefore waited upon his father, to induce him, if possible, to place his son under more experienced tuition. "See, sir," said he, "he has just composed a polacca for our band, every note of which he scored himself. We practised it to-day, and I had a great deal of difficulty in persuading the men that it was the work of the 'little fiddler,' as they call him." This and similar anecdotes of the *penchant* of his son led Mr. Balfe, senior, to remove to Dublin, and place the young musician under Mr. Rourke, an excellent composer, and one of the first violin-players of the day. With him he remained until he had completed his eighth year, when he made his first appearance in public at a concert in the Royal Exchange, in May 1816, playing on that occasion a concerto composed by his master. Mr. James Barton afterwards became his instructor, and from him he increased rapidly in proficiency of style and execution; whilst under the experienced guidance of Alexander Lee he was acquiring a sound

knowledge of thorough bass and composition. At nine years of age he wrote the ballad entitled "The Lover's Mistake," sung with much effect by Madame Vestris in "Paul Pry." The next six years of the young musician's life were devoted to close study, and he was acquiring considerable reputation as a violinist when a circumstance occurred that exercised a great influence on his future career. After the death of his father in 1823, young Balfe was attracted by the theatre when a play-bill attracted his attention, which contained an announcement that Mr. Charles Horn would perform that evening for the last time previous to his departure for London. As Horn had repeatedly praised his performances, it next crossed his brain that he would seek an interview with him that night, and ask of him to take him with him to London,—a request with which, on the condition that his mother's consent could be obtained, Mr. Horn complied without hesitation. All arrangements having been removed the youth was articulated to him for seven years, and before two hours had elapsed they were both on their way to London. Once settled down in the metropolis, the young musician was not long in making the acquaintance of the principal members of the profession; and in a very short time he was able enough to obtain an engagement as principal violinist at the oratorios at Drury Lane; Mori and he playing solos on alternate nights during the season. This series of oratorios enabled Mr. Horn to get him into the orchestra of Drury Lane, where he was then presided over by Mr. Thomas Cooke, who soon perceived Balfe's value, and reposed such confidence in his ability, that on several occasions he made him his *locum tenens* in leading the orchestra—a feat which he accomplished to the entire satisfaction of the more experienced of his associates. From this time Balfe's star rose rapidly into ascendancy, and in 1825 he was promoted to his post in the orchestra to go upon the stage. He had begun to cultivate his voice, which had now become a rich tenor; and the manager of the Norwich Theatre having heard him, was so pleased with the effort, that he at once offered him an engagement to play the part of Caspar in "Der Freischütz" the following year. His timidity, however, proved an obstacle to his success, and the attempt to give him courage by plying him with encouragement ended in making him feel so queer about his head, that as he went down the stage he overturned the iron pot which contained the combustibles for red and blue fire, and set the whole theatre in a blaze. The flames were, however, speedily extinguished, and he got through his part in such sort that the newspapers of the next day contained most unfavourable notices of his *début*; and he returned to London dispirited and discouraged at his want of success. Dining on one occasion with a friend, he met a wealthy Count (M. Mazzara), who, on hearing from him how he was disappointed, invited him to accompany him to Rome; adding, that he could promise him a hearty welcome from his Countess, whom he bore a remarkable resemblance to a favourite son whom she had lost a short time before. Whilst they were in the

French capital, *en route* for the Eternal City, Mazzara introduced him to Cherubini, from whom he received great encouragement. It was late in the evening when the travellers reached the Count's palace. Leading his young friend into the boudoir of the Countess M. Mazzara said, "I bring you a son." Balfe's likeness to him was so strong that she burst into tears, and received him with as much emotion as if he had really stood in that relationship to her. In this hospitable home he remained a year, studying under the best masters that money could obtain. In 1826, the Count having occasion to visit England, Balfe attended him as far as Milan where his kind patron made arrangements for having him instructed by well-known professors, and introduced him to M. Glossop, then *impresario* of the San Carlos at Naples and La Scala in Milan; and before leaving him placed a considerable sum of money in his banker's hands for his use. During his stay at Milan, Mr. Balfe composed several choruses and overtures, which were subsequently performed at La Scala. After three months' study Federici, the director-in-chief of the Conservatoire, informed Mr. Glossop that his pupil might safely be entrusted with a libretto; but the jealousies of some of his associate-performers prevented this liberal arrangement from being carried out. Mr. Glossop's scruples were, however, at last, overcome; and he confided to him the libretto of a ballet, entitled "La Pérouse," which was produced at Milan with great success: the overture, and a storm descriptive of shipwreck, being highly praised by the *habitués*. About this time Filippo Galli, the celebrated basso, for whom Rossini composed the part of Assar in "Semiramide," "the Father" in "La Gazza Ladra," and several others of equal importance, gave Balfe lessons with a view to his appearance at La Scala where Mr. Glossop had promised to bring him out. His intention was, however, frustrated, by the failure of the manager before an opportunity was offered of carrying it out. He accordingly left Rome for Paris, where he made the acquaintance of Rossini, who procured for him the offer of an engagement at the Italian Opera if he would consent to take lessons for eight or ten months of Bordogni, and assisted him to arrange the pecuniary part of the transaction. But his good fortune did not end here; a Paris banker, of the name of Gallois, offered to advance him 10,000 francs, in monthly instalments of one thousand each. Thus aided he pursued his studies with real earnestness until his *début* in 1828, when he appeared as Figaro in the "Barbier de Seville." Sontag was the Rosina, and the opera, which was powerfully cast, ran nine nights in succession. This triumph procured him an engagement from M. Laurent, the *impresario* of the Italian Opera, for three seasons, at 15,000, 20,000, and 25,000 francs respectively, during which he performed prominent parts in all the leading operas with Dandini, Malibran, and other stars of the musical world. It would be impossible within any reasonable limit to follow Mr. Balfe throughout this brilliant portion of his career. Having been introduced to the Grand Opera, he was employed to write music to a

stretto, founded on Chateaubriand's "Atala;" Malibran, Adolphe-Nicolas, Alexis, Dupont, Levasseur, and other distinguished artists having been associated with him in its production. As he was leaving Paris a letter was put into his hands, which contained a bank-note for 1000 francs, with a few lines of acknowledgment from the sender for the pleasure he had afforded him. Arrived at Milan with the best introductions, he was engaged as principal tenor for the theatre at Palermo. Before entering upon his duties he visited Bologna, where he had the pleasure to sing with Emma Grisi, then a graceful girl of seventeen. In the blaze of beauty and fashion in which he now moved he totally forgot his engagement with the Sicilian impresario, and hurried to Palermo to meet, and, if possible, to avert the impending evil. Through the interest of friends he was enabled to accommodate the matter, and a few days after his arrival he made his *début* in the part of Valdekert in Bellini's opera of "La Straniera." We cannot undertake to follow him through his various triumphs. After fulfilling his engagement at Palermo he went to Piacenza, and next to Bologna, where he was introduced to Mademoiselle Lina Rezer, prima donna of the troupe, whom he married shortly afterwards. The following anecdote is related in the "Dublin University Magazine"—"At the first rehearsal of Rossini's 'Mosè in Egitto' a accident occurred which led to an unfortunate result. Signor Rolla, rather to the celebrated Alessandro Rolla, the leader of the orchestra of La Scala at Milan, was leader of the orchestra at Pavia, and having perceived that Balfe was taking upon himself to give directions not only to the chorus, but to the musicians, became annoyed and disconcerted at his interference. At a passage for the violin, which occurs in the first act, Rolla said 'it was not written for the instrument,' and being so difficult, was almost impossible to play; to which Balfe exclaimed, 'Rossini was a violinist, and knew what he wrote. The passage is easy enough. Put your hand higher up and you will do it.' On hearing this, Signor Rolla could contain himself no longer, but bursting into a fit of passion, looked up at Balfe and exclaimed, '*Signor, lei mi rende quà suonate per me, ed io andero cantare per voi.*' The challenge was at once accepted, down Balfe jumped into the orchestra, took up a violin, and played the disputed passage in such a masterly manner that he was applauded by every one present. This triumph had such an effect on Signor Rolla, that he left the theatre at once, returned home, took to his bed, and died a few months afterwards from the effect of wounded pride. No more of this more than Balfe, who, while he resided in Pavia, refused to visit Rolla, and had the satisfaction of making his peace with him before he died. In 1835 Balfe returned to London, and made engagements to sing at the Ancient and Philharmonic Concerts, and shortly afterwards came out at Drury Lane in the "Siege of Rochelle," the "Jewess," and "Chiara de Rosenberg," successively. The "Siege of Rochelle" is one of his best and most popular compositions. It overflows with melody of the

sweetest and most touching character. Balfe's next opera was the "Maid of Artois," in which poor Malibran acquired so much celebrity. In the course of its sixteen nights' performance it realised for the treasury of the house 5690*l.* 11*s.*, giving a nightly average of 355*l.* To this opera succeeded "Catherine Grey," "Falstaff," "Joan of Arc," "Kiolanthe," "Puits d'Amour," "Quatre fils d'Aymon," all with various degrees of success. In 1839 Mr. Balfe became the lessee of the English Opera House, but the speculation proved a failure. The "Bohemian Girl" and the "Daughter of St. Mark" were both brought out at Drury Lane. The latter ran through more than one hundred consecutive nights. A piece of plate was presented to him by his friends in commemoration of its hundredth performance. The "Enchantress," the "Bondman," "L'Etoile de Seville," the "Maid of Honour," and "Elfrida," complete the list of his leading compositions. His subsequent career is well known. Besides assisting at most of the leading concerts, he was appointed Conductor of Music to Her Majesty's Theatre; since the close of which he has again visited America. In a country not fruitful in good composers, Balfe may fairly be considered to have won the highest place. Long may he retain it.

BANCROFT, GEORGE, a distinguished American Author and Historian, and a prominent member of the Democratic party of the United States, was born at Worcester, Massachusetts, in the year 1800. His father, who was himself an author and a doctor of divinity, gave to his son's mind the bent and disposition which in after-years conducted him to celebrity, position, and power. Not yet seventeen, Mr. Bancroft graduated at Harvard College, with honours, and soon entered upon a course of literary pursuits having as their ultimate end the profession of an historian. In 1818 he visited Europe, and there studied at Göttingen and Berlin enjoying the high advantages of the most thorough system of instruction and the society of distinguished and cultivated men. After an absence of four years, during which he travelled in England, Switzerland, Germany, and Italy, he returned to the United States. His first sphere of labour was naturally in accordance with his previous life, and he was appointed tutor of Greek in Harvard College. A love of intellectual independence and the desire to engraft upon the academic system in New England the German method of instruction, led him, in association with a literary friend, to separate labours in the field of instruction, which were pursued for some time in the interior of New England, but afterward abandoned for duties of a more public and permanent character. During the interval of severer exertion Mr. Bancroft furnished many contributions to American literature, especially from the stores of German thought and intellect, then comparatively sealed, even to educated men, in the United States. He early adopted decided political opinions, attaching himself to the Democratic party, in whose behalf his first vote was cast. In 1823 he published a small collection of poems, and soon afterwards a

translation of one of Heeren's Historical Treatises. But poetry and German theories afford but slender compensation to an author, and he soon devoted himself to more profitable employments. In 1830, in a public oration, which he afterwards printed, he announced his creed "universal suffrage and uncompromising democracy;" and in the ranks of the liberal party he rose to political preferment and distinction rarely attained by one whose career at the outset was so purely that of a scholar. In 1834 Mr. Bancroft published the first volume of his "History of the United States," a work to which he has ever devoted his thoughts and researches, and in which he laid the foundation of a reputation at once permanent and universal. The first and two succeeding volumes of the work, comprising the political and history of the country, were hailed with the highest satisfaction as exhibiting for the first time, in a profound and philosophical manner, not only the facts but the ideas and principles of American history. In January, 1838, Mr. Bancroft received from President Van Buren the appointment of collector of the port of New York, a post of more responsibility than profit, which he occupied until the year 1841, discharging its duties with a fidelity which proved that a man of letters may also be a man of business, in the true sense of the term. In 1844 he was the candidate of the Democracy of Massachusetts for the office of governor of that state; and though in the minority, his unusually large number of votes, even more than that which any other democratic candidate has ever received, attested his popularity. In the spring of 1845 Mr. Bancroft was called by President Polk to a seat in the cabinet, and to the administration of the navy department, over which he presided with an energy and efficiency, which, notwithstanding the temporary loss of his connexion with it, perpetuated themselves in various reforms and improvements, of lasting utility to the service. In 1846 he was appointed Minister-plenipotentiary to Great Britain, and there represented the United States, until recalled by Mr. Abbott Lawrence, in 1849. In England, the prestige of Mr. Bancroft's literary reputation and his high social position contributed to enhance the popularity and respect which had been accorded to him during his entire diplomatic career, which was one of complete satisfaction to the government which he represented, and to that to which he was accredited. On his return he fixed his residence in the city of New York, and resumed more actively the prosecution of his historical labours. The fourth volume of his History appeared early in the year 1852. It treats of the opening scenes of the great drama of American independence, and amply sustains the interest and dignity of the work with which Mr. Bancroft has inseparably linked his name with the fate and the fame of his country. Mr. Bancroft's chief historical works have been translated into several Continental languages. He is one of the leading writers in the North American Review.

BARANTE, GUILLAUME-PROSPER-BRUGIÈRE, BARON, French Author and Statesman, was born at Riom, in Auvergne,

in 1782. He is descended from one of the old noble families which enjoys a high reputation in law and literature. After attending the Polytechnic School at Paris, in 1799, he was engaged in the Ministry of the Interior; and in 1806 was appointed Judge of the Privy Council, in which character he obtained diplomatic missions to Spain, Poland, and Germany. In 1807 he was made sub-prefect of Bressuire in La Vendée, then an important office. In 1809 he obtained great reputation by his "*Tableau de la Littérature Française pendant le XVIII^e Siècle.*" Of this concise work a view of literature from a political rather than an æsthetic point Goethe has said that it contains neither a word too little nor a word too much. In 1809 Barante was named prefect of La Vendée, and on Nov. 6, 1811, his marriage-contract with the Countess d'Houdetot was signed by Napoleon himself. He afterwards became prefect of the department of the Loire Inférieure which office he retained until the first Restoration. During the Hundred Days he took his dismissal, for which he was rewarded by Louis XVIII., after the second Restoration, with the place of Secretary-general to the Ministry of the Interior. Shortly after he was made privy-councillor and director-general of indirect taxes. About the same time he was elected to the Chamber of Deputies by the department of Puy-de-Dôme. Here he connected himself with Guizot, Royer-Collard, De Broglie, and most of the moderate liberals. On the victory of the ultra-royalists, Barante saw himself obliged to withdraw entirely from public business. In 1819, however, he was promoted to the Chamber of Peers, where he sustained the opposition, in company with Talleyrand and De Broglie. In 1828 he was elected a member of the Academy. After the Revolution of 1830 he was sent by Louis-Philippe as ambassador to Turin, and afterward to St. Petersburg, whence he returned in 1840. During his prefecture in La Vendée he became acquainted with the Marchioness de la Roche-Jaquelin, whose "*Mémoires*" he afterwards published. He has also translated into French the dramas of Schiller, as well as "*Nathan der Weise*," of Lessing, and other German pieces. His "*Mélanges Historiques et Littéraires*" are composed of smaller pieces which had previously appeared in the "*Revue Française*," and the "*Biographie Universelle*." The best-received of his works was his "*Histoire des Ducs de Bourgogne de la Maison de Valois, 1364-1477*" (Paris, 1824) written in the spirit of the descriptive school, which permits nothing but simple narrative, excluding philosophical examination of history. He has succeeded in hitting the old style of the chroniclers, but he occasionally falls into wearisome prolixity. "*Des Communes et l'Aristocratie*" deserves mention among his smaller political treatises. After the Revolution of February, 1848, he published "*Questions Constitutionnelles*," a work pertaining to the late condition of France, which attracted but little attention. His last work is "*Histoire de la Convention Nationale*," four volumes (Paris, 1851).

BARING, THE RIGHT HONOURABLE SIR FRANCIS TURNHILL, BART., is the son of the late Sir Thomas Baring, second baronet of that name, who was brother to the founder of the present house of Ashburton, by the daughter of Charles Sealey, Esq. of Calcutta. He was born in 1790, and was educated at Christ Church, Oxford, where he obtained a double first class in 1817, and took the degree of M.A. in 1821. In 1823 he was called to the bar at Lincoln's Inn, and since the year 1826 has represented Yarmouth. He has had considerable official experience. He was a Lord of the Treasury from 1830 to June 1834, one of the Secretaries of the Treasury from June to November 1834, and from April 1835 to 1839. He was Chancellor of the Exchequer from 1839 to 1841, and First Lord of the Admiralty from January 1841 to March 1852. He is a Liberal in politics, but voted against the ballot. He is regarded as a Whig politician of reliable habits, rather than as a brilliant orator or politician.

BARING, THOMAS, next brother to Sir Francis, was early trained in those mercantile pursuits in which all his family have been engaged, and entered into political life in the year 1835, when he was elected to represent the constituency of Yarmouth in Parliament, and sat till 1837. In the general election of that year he retained his seat, but a petition was presented against his return, which resulted in a new contest unfavourable to him. In 1843, on the decease of Sir Matthew Wood, he became a candidate for the honour of representing the City of London, when he was his opponent Mr. Pattison. At the close of the poll Mr. Baring was in a minority of 156. On the elevation of Sir Frederick Pollock to the bench, in April 1844, Mr. Baring was elected for the county of Huntingdon, which he still represents. In politics he is a Conservative; and was thus opposed to his brother, who was the late Whig Chancellor of the Exchequer, during his parliamentary career. It is, however, as a capitalist and as a man whose house connected with some of the greatest monetary transactions of the age, that he is most widely known.

BARROT, ODILLON, an ex-Minister of State in France, was born at Calcutta, July 19th, 1790; was a barrister, practising at the Court of Cassation from 1811 to 1831. A popular journal has said that "half of his life has been spent in the arena of debate." He was a very young man when he first entered the Chamber of Deputies, in the time of Louis XVIII., having already acquired a high reputation as one of the most eloquent pleaders at the French bar. He had everything in his favour,—countenance, stature, voice, gesture, and great tact united with energy. He exercised a considerable amount of influence in the Chamber, and was at length regarded as the Demosthenes of the French Opposition. He was deeply engaged in the projects of the Restoration brought about the Revolution of July 1830, and when at that time matters were so gloomy an aspect that the deputies

who countenanced and encouraged the insurrection were reduced to eight in number, Barrot was one of those eight. When the Revolution was triumphant he was one of the three commissioners appointed by the Provisional Government to intimate that the crown-jewels would be restored to the royal family on condition of an immediate departure for Cherbourg. The proposal was accepted, and Odillon Barrot accompanied the king to the ship. Under Louis-Philippe, Odillon Barrot was amongst the first to raise his voice in the Chamber of Deputies against a reactionary policy. In 1839 he visited this country, and pushed his tour into Scotland and during his sojourn in Great Britain he frequently expressed his desire that a permanent alliance should subsist between England and France. He was foremost in getting up the agitation in favour of reform, and attended several of the provincial banquets which led to the Revolution of 1848 and the downfall of Louis Philippe: but he did not foresee the results to which the agitation partly aroused by himself, was inevitably to lead, for he stopped short in the middle, accepted the task of forming a cabinet in company with Thiers, and supported the rights of the Count of Paris to the throne, and those of the Duchess of Orleans to the Regency. Under Louis-Napoleon he was some time a minister and conducted the government of France with success until the French President's policy required other agents.

BARRY, SIR CHARLES, R.A., the Architect of the new House of Parliament, was born in May, 1795, in Westminster. At an early age he was sent to school in Leicestershire, and on his return to London made up his mind to be an architect, and accordingly was bound apprentice to Messrs. Middleton and Bailey, architects in Lambeth. It was, however, his earnest wish to study abroad. His father having died, leaving him a slender patrimony, he resolved to devote a portion of his time and money to continental travel, and left England in 1817, at the age of twenty-two. He was not long without any anxiety as to his studies. In Italy the beauty and expressive power of his drawings attracted the attention of an Englishman of fortune about to visit Egypt, who offered the young student to be him free of all expense, as his companion, if he would afford him the benefit of his pencil. The offer was accepted; and, after a considerable stay in Egypt, he returned to Rome. He then travelled in Greece, and returned to England after an absence of about three years and a half. Soon after his arrival, the design for a church at Brighton was thrown open to competition, and Mr. Barry was the successful competitor. For the Manchester Athenæum, a building in the Grecian style, he was also the successful candidate; but the most beautiful of all his works was the Grammar-school of King Edward VI. at Birmingham. His first work in London was the Travellers' Club, followed by the College of Surgeons and the Reform Club. In 1834 the old Houses of Parliament were burned and when the design for a new building was thrown open to competition, that of Mr. Barry's was adjudged the best. The work was

presented in 1840, but is not yet wholly completed. Her Majesty read the Victoria tower and royal gallery in state, on the 3d of February, 1852, when she conferred the honour of knighthood on the architect. He was chosen a Royal Academician in 1842, and at various periods been elected a member of many foreign societies. His architectural works are numerous.

BASTIAT, FREDERICK, a French Economist and Author, is well known on both sides of the Channel as a champion of the doctrine of free trade. He has for several years conducted the *Revue d'Economie Politique*; and his "Popular Fallacies Concerning General Interests" is one of the best exposures of the protectionist system ever written.

BASTIDE, JULES, the French Legislator, is fifty years of age. A Frenchman in all things, his studies in the French metropolis had completed him before he left college. But instead of embracing a career which might have led him rapidly to fortune, Bastide devoted his future to his opinions, and entered the Carbonari (*Carbonarisme*), of which he was one of the most active members. The society was dissolved, but out of its wrecks was formed the *Union*—"Aide-toi, le Ciel t'aidera," to which Bastide lost no time attaching himself. After the Revolution of July, Bastide, who had been among the bravest, opposed himself to the utmost against the tyranny of the Duke of Orleans, proposed by M. Thiers and those who had not fought at all. In 1832 Bastide was chief of a squadron of artillery. He still fought, as he had done in July, for the republic. The results of the insurrection of the 5th of June were known to all. The artillery of the National Guard was dissolved. Bastide, found guilty of contumacy, was condemned to exile and fled to England, whence he returned at the end of six months. During this time the reactionary fury had had time to cool itself, and Bastide was acquitted. Some time afterwards he started the "National." He joined Armand Carrel and others, and shared, in common with them, the management of the democratic journal. Bastide, in the "National," dealt more especially with questions of foreign policy, and all which concerned the armed force. After having directed the "National" almost exclusively for some time, he called in the aid of Armand Marrast. He soon became a less active editor of the paper. The work, doubtless, had fatigued him, and he felt the need of a temporary repose. It is said, too, that Bastide, thoroughly religious, was sometimes hurt at the wild sallies of his colleagues with regard to Catholicism. In 1847 he formed, in conjunction with Buchez, the "Ligue Nationale," to support the republican doctrines and the social system of the latter.

BAUDIN, CHARLES, a French Admiral, was born near the close of the last century, and in 1808 was a cabin-boy on board the ship *La Piemontaise*, and lost an arm during an engagement

with the English in the Indian Ocean. In 1812 he was made lieutenant in command of the brig *Rénard*. In June of the same year he received orders at Genoa to accompany an expedition of fourteen sail, provided with munitions, to Toulon. Though continually pursued on his passage by English cruisers, he conducted his convoy safely into the harbour of St. Tropez; but his flag-ship was immediately afterwards attacked by an English brig, which he disabled after a desperate conflict. For this affair he was promoted to the rank of Captain. The Restoration having thrown him out of employment, Baudin entered the merchant-service, and conceived the bold plan of freeing Napoleon from St. Helena; which, however, he was compelled to abandon. The Revolution of 1830 again called him into service. After having been named Rear-admiral in 1838, he received the chief command of the expedition against Mexico. At the head of twenty-three ships, Baudin spent a month in fruitless negotiations with the Mexican government. On November 27, 1838, he finally opened fire, with a part of his squadron, against the fortress of St. Juan d'Ulloa, which commands the port and harbour of Vera Cruz, and was held to be impregnable. The fort surrendered on the following day. In the further details of hostilities, which ended December 5, by the disarming of Vera Cruz, and the defeat of the Mexicans under Santa Anna, he displayed much ability and great personal courage. In consequence of this exploit he was promoted to the rank of Vice-admiral; and in the following year was named by Louis-Philippe Commander of the Legion of Honour. At the same time he was intrusted with a military and diplomatic mission to Buenos Ayres, and with the command of the fleet in the South American seas. Afterward, for a short time, he officiated as Minister of Marine.

BAUER, BRUNO, the boldest Biblical Critic of modern times, was born at Eisenberg, in the duchy of Sachsen-Altenburg, September 6, 1809. After acquiring his education in the schools and University of Berlin, in 1834 he received a professorship of theology. If we distinguish the period of his development from that of his public activity, we must assign to the former his review of the "Life of Jesus," of Strauss (1835); his "Journal of Speculative Theology" (1836); and his "Critical Exposition of the Religion of the Old Testament" (1838). At that time an Hegelian of the old school, he vindicated the law of self-consciousness in historical revelation, but at the same time believed himself able to defend revelation against the claims of a free self-consciousness, and to obtain a solution of this contradiction by considering revelation as the development of the universal self-consciousness. The transition to the second period was formed by the two works, "Doctor Hengstenberg" (1839); and "The Evangelical Established Church of Prussia and its Doctrine" (1840). In the former he explained his opposition to apologetic theology, and endeavoured to prove its insufficiency for the comprehension and recognition of the characteristic differences in the historical development; in the

later he endeavoured to prove that the union is the dissolution of the church in the realm of the free, universal self-consciousness. After he had thus grasped the last historical dissolution of the church, he ventured to propound the question in relation to the manner and mode in which the creation and formation of evangelical history are to be considered. In his "Review of the Gospel History of John" (1840), and "Review of the Gospel Narrative" (1840), he answers, that evangelical history is a free production of human self-consciousness, and the Gospels are a free literary production. Upon the publication of these views, permission to deliver theological lectures in Bonn, where he had been a professor since 1839, was withdrawn. From this time, Bauer took up residence at Berlin, employing himself in following out the consequences resulting from his position. In 1843 he published "The Inequality of Freedom and my peculiar Circumstances," explaining his relations to the learned societies and the universities. To this followed "Christianity Unveiled" (1843), which was denounced at Zurich before its publication. This work was a continuation of the opposition of religion to the self-consciousness, which he carried still further, in ironical style, in his "Proclamation of the Last Judgment concerning Hegel the Atheist," and in "Hegel's Doctrine of Art and Religion" (1842). The transition to the third period of his activity commences with "The Jewish Question," in which he came out for the first time against the vagueness of the professions of liberalism, and rejected Jewish emancipation. Principal work in this period is "A general Critical Review" (1844), in which he demonstrates that the German radicalism of 1842 and its resulting socialistic theories, are made up of the mere formal adoption and presupposition of vague generalities. After this he made the transition to a fourth period, in which, taking his historical labours on the eighteenth century, he represents the present flattening and levelling of all previous historical forms as the product of the enlightenment of the eighteenth century, and the failure of all the efforts of the masses in modern times as the consequence of the interior weakness of that enlightenment. During this period he also published, in connexion with Lange and his brother Edgar, "Historical Memoirs of Events of the French Revolution and the Reign of Napoleon" (1846). The political disturbances of 1848 afforded him an opportunity of putting forward his views in a last historical effort. He did this in his "The Civil Revolution in Germany," and "The Fall of the Frankfurt Parliament" (1849). With the publication of "A History of the Gospels and History of their Origin" (1850), to which "Apostolical History" is a supplement, he entered upon the career of development. In his "Review of the Epistles ascribed to St. Paul" he attempts to show that the four leading epistles, which have never before been questioned, were not written by the apostle Paul, but are the production of the second century.

BAVARIA, MAXIMILIAN-JOSEPH, the second **KING OF** born Nov. 28, 1811, took the reins of government March 21, 1848 on the abdication of his father (the patron of Lola Montes); married to a princess of Prussia, and by her has two sons, the eldest of whom, Louis, born Aug. 25, 1825, is heir to the throne. Maximilian's brother, Otho, is king of Greece.

BAZLEY, THOMAS, President of the Manchester Chamber of Commerce, was born at Gilon, near Bolton, in 1797; was educated at the Bolton Grammar-school; and was apprenticed to learn cotton-spinning in the factory of Ainsworth and Co., previously the establishment of Sir Robert Peel and Co. At the age of twenty-one, Mr. Bazley started in business at Bolton, and in 1822 removed to Manchester. He is now the head of the firm of Gardiner and Bazley, who employ many hundred hands, and have established in connexion with their factories, schools and lecture and reading rooms. Mr. Bazley was one of the earliest members of the Manchester Anti-Corn-Law Association, and of the Council of the League and in 1837, with Richard Cobden and John Brooks, he opened the Free-Trade campaign at Liverpool, on which occasion Mr. Bazley made his first public speech. In 1845 he was elected President of the Manchester Chamber of Commerce. In this capacity he received from the late Sir Robert Peel a remarkable letter, stating his satisfaction at the cessation of agitation in the manufacturing districts, and expressing a hope that Free Trade having been accomplished, all classes of industry would become united in harmonious efforts for the prosperity of all. Mr. Bazley was one of the most active of the Royal Commissioners of the Great Exhibition; and in 1850, Sir Robert Peel speaking with him of the results of Free Trade, Mr. Bazley stated that he had never known the working people of Lancashire and Yorkshire so well employed and contented; to which Sir Robert Peel replied, he was exceedingly pleased to hear it, and he hoped the people would keep what they had got.

BEECHEY, FREDERICK WILLIAM, Rear-Admiral of the Blue, the well-known Arctic Navigator, is the son of the late Sir William Beechey, the eminent portrait-painter. He was born in 1796, and entered the navy as a first-class volunteer in 1806, on board the *Hibernia*, 74, the flag-ship of Earl St. Vincent, in which he remained for two years. After a brief service in the *Minotaur* he accompanied Sir Sidney Smith in the *Foudroyant*, 80, to Rio Janeiro, returning to England in 1810 in the *Elizabeth*, 74. In 1811, when in company off Madagascar with the *Phœbe* and *Galatea* frigates, he assisted, after a long and gallant action, at the capture of the French frigates *Renommée*, *Clorinde*, and *Néréide*. On his return to England in 1812, after some Channel service, he was attached to the *Vengeur*, 74, sent with the *Tonnant* to New Orleans, and was with the boats when they crossed the Mississippi with a body of seamen and marines, to make a diversion in favour

of the general attack on the enemy's lines. In 1815 Mr. Beechey was appointed lieutenant of the *Niger*, 38, on the North American station. On the 14th of January, 1818, he accompanied Sir John Franklin and Captain Buchanan to Spitzbergen, on the first expedition of the former officer; and in 1819 was appointed to the *Hecla*, under Commander Edward Parry, in which ship he penetrated to latitude $113^{\circ} 54' 53''$ W., within the Arctic circle. Whilst on board the *Trent* he acted as artist to the expedition, and on his return home received a parliamentary grant of 200*l.* as a reward. On the 5th November, 1821, he was appointed, in conjunction with his brother, Mr. Henry H. Beechey, to co-operate with Commander William H. Smith, in the *Adventure*, on a voyage of discovery in conducting a survey of the North-coast of America. The results of his researches, which extended as far eastwards as *Barrow* and lasted until July 1822, have been fully detailed by Mr. Beechey in his "Proceedings of the Expedition to explore the Northern Coast of Africa from Tripoli." He was advanced to the rank of Commander in 1825, and received an appointment to the *Porpoise*, fitting at Woolwich for a voyage of discovery *via* Behring Strait, there to act in concert with the expedition of Captains Franklin and Parry in their efforts to ascertain the existence of a north-west passage. During the three years and months that Captain Beechey was absent from England, he took possession of the Pacific of the islands named after Admiral Gambier; he discovered others, to which he gave the names of Barrow, Cockburn, Martin, Cooper, and Melville; having passed Behring Strait and penetrated, in August 1826, to a point north of Icy Bay where the *Blossom's* barge reached latitude $71^{\circ} 23' 31''$ N., and longitude $156^{\circ} 21' 30''$ W., only 146 miles from the extreme point reached by Franklin. He afterwards examined the sea eastward of *Lo Choo*, where he discovered the *Ylas del Arzobispo*; and in exploring the frozen regions in 1827 he entered, for the first time, a spacious and important haven to the S.E. of Cape Prince of Wales, leading to a secure inner harbour, well adapted for repairing ships, to which he gave the names of Port Clarence and Grantley Harbour. After a voyage of 73,000 miles, in which she rendered essential services to science, the *Blossom* returned to Sheerness, bringing with her the ambassador for the Brazils and a great number of specie. Commander Beechey became a Post-Captain in 1827. For the next ten years he was appointed to survey the coasts of South America and Ireland. In 1854 he was appointed to the rank of Rear-Admiral.

BEHR, WILHELM-JOSEPH, one of the most distinguished German Lawyers, was born at Sultzheim in 1775, and studied law at Würzburg and Göttingen. He was admitted to practice in the Imperial tribunals of Vienna and Wetzlar, and from 1799 to 1821 he held the Professorship of Public Law in the University of Würzburg. By oral discourses and by valuable publications he laboured for the promulgation of genuine constitutional views in

Germany. In 1819 he was chosen as Deputy of the University of the Bavarian Diet, where he united with the opposition. He was afterward elected Mayor of the city of Wurzburg; and, by his activity, and especially by the publication of a periodical, he proved himself the friend and counsellor of the citizens. Being again chosen a deputy for the Diet of 1831, the royal approbation was refused him. The opposition publicly expressed their displeasure at this proceeding, and Behr himself, having taken the opportunity of the festival of the Bavarian constitution at Gaibach, in May 1832, to address some unpleasant discourse to the Government, an investigation was instituted against him, which resulted in his dismissal from the mayoralty. In January, 1833, he was arrested at Wurzburg, and after several years' imprisonment for trial, on an accusation of high treason and participation in revolutionary intrigues, in 1836 he was condemned to beg pardon before the portrait of the king, and to an indefinite imprisonment in a fortress at Passau. In 1839 he was permitted to reside at a private house at Passau. In 1842 he received permission to reside at Regensburg, but under the especial guardianship of the police, till at length the amnesty of March, 1848, restored the grey-haired veteran to perfect liberty. He received at the same time the sum of 10,000 florins as a recompense. In 1848 Behr was elected to the German National Assembly by the electoral district of Kronach. Since his release he has resided at Hamburg.

BELCHER, CAPTAIN SIR EDWARD, K.C.B., F.R.S., and F.G.S., Hydrographer, one of the most scientific naval officers of our time, was born in 1799, and is the son of Andrew Belcher Esq., and grandson of William Belcher, Esq., Chief Justice, and afterwards Governor of Halifax, whose father had been Governor of Massachusetts, New Hampshire, and New Jersey. Edward Belcher entered the navy in 1812 as first-class volunteer on board the *Abel Crombie*, 74, and was soon afterwards appointed midshipman; and after the usual routine, in the course of which he was present at the defence of Gaeta and the battle of Algiers, he was in 1819 appointed to the *Myrmidon* sloop, destined for the African station. After invaliding for a short time, he resumed his duties on board the *Salisbury*, and in 1825 was appointed to act as assistant-surveyor to Captain Beechey in the *Blossom*, then about to sail on a voyage of discovery to Behring Straits, the outlines of which expedition have been already given. In 1829 Mr. Belcher was promoted to the rank of Commander, whilst under the command of Rear-Admiral Owen; after which we find him in command of the *Ætna*, surveying vessel, on the coast of Africa; also on the river Douro, for the protection of British property during the hostilities then in activity between Dom Pedro and Dom Miguel. From November 1836, to August 1842, Commander Belcher was employed in the *Sulphur* surveying-vessel, of whose voyage round the world he has given an interesting account in his well-known "Narrative." In 1841 he performed a series of brilliant services in China, having sounded and

explored the various inlets of the Canton river, and made a reconnaissance which contributed importantly to the successes of Sir Hugh (now Lord) Gough and Sir Humphry Fleming Senhouse. On the same day he caused the enemy to destroy twenty-eight of their vessels. In recognition of these services he was appointed Post-captain, and in 1843 the honour of Knighthood was conferred upon him. He was afterwards employed in the Samarang, surveying-service in the East Indies, and was severely wounded in action with the pirates of Borneo. He commanded the expedition in search of Sir John Franklin from 1852 to 1854, and was sent to court-martial for abandoning his ships. He proved, however, to demonstration that no alternative was left to him, and was therefore acquitted.

BELGIANS. LEOPOLD, KING OF THE, Prince of Saxe-Coburg, born Dec. 16, 1790; married May 2, 1816, to the Princess Charlotte, only child of George IV. of England; elected King of the Belgians on the 4th of June, and ascended the throne of that country July 21, 1831. He married, secondly, 9th August, 1832, Louise, daughter of Louis-Philippe, then King of the French, by whom he has had three children, the eldest of whom, Leopold, born April 7, 1832, and married to an Austrian Princess, is his heir.

BELL JOHN, Sculptor, born in 1800, in Norfolk. One of the modern sculptors who have emancipated themselves from the shackles of the antique, and in place of servile repetition of a few limited themes, and of one fixed type of form and beauty, have attained excellence, independently (to a considerable extent) of precedent. Mr. Bell exhibited at the Academy, so long ago as 1824, a religious group. Subjects, classical and religious, followed, such as "Psyche borne by Zephyrus," "Psyche feeding a Swan;" now a "John the Baptist." In 1825 he exhibited the model for his finely-conceived "Eagle," a composition which was exhibited at Westminster Hall in 1844, and re-exhibited at the Crystal Palace in 1851. Several casts in bronze were subsequently executed for the Art Union. In 1841 was exhibited the beautiful figure of "Dorothea," probably the most successful realisation of a theme which has found much favour with modern artists. Several years later he executed the earliest and best executed of the porcelain statuettes now more generally known. The first statue commissioned of Mr. Bell for the New Houses of Parliament was "Lord Falkland," the working model of which was exhibited at Westminster Hall in 1847, where it excited considerable attention. Among other of Mr. Bell's works may be mentioned "The Babes in the Wood" and "Andromeda" (a bronze), which formed striking attractions in sculpture of the Great Exhibition. "The Seated Clorinda" (1841), "The Child's own Altitude" (1845). The last-mentioned figure was purchased by the Queen. His latest work is the model, exhibited in 1854, of "Sir Robert Walpole,"

commissioned for St. Stephen's Hall. At Westminster Hall, in 1844, the sculptor appeared as a draftsman with a cartoon, entitled "The Angel of the Pillar," one of a series of "Compositions from the Liturgy," which have since been published. Mr. Bell is also the author of a "Free-Hand Drawing-Book for the Use of Artisans, &c." He is not only a refined and fertile artist, but a man conversant with literature and history. We ought to add, that in his comparatively leisure moments he has devoted some of his attention to decorative art, having modelled many objects for the drawing-room table, which combine the practical with the ornamental; including some utilities for the Colebrookdale Company, which are in great request with the public at large. Mr. Bell married the only daughter of Robert Sullivan, Esq., a gentleman of fortune, albeit one of the best dramatists and novelists of the day, and a very good poet and artist to boot.

BENEDICT, JULES, is one of the most eminent foreign Musicians who have enriched by their productions the English opera stage. He was born at Stuttgart in 1805, and at an early age showed so much musical talent that his parents allowed him to devote himself to the art. After having begun his studies under Hummel, at Weimar, he was introduced to the notice of Weber, who, though he had always refused to take pupils, was induced to alter his resolution in Benedict's favour. From the beginning of 1821 till the end of 1824 he had the benefit of Weber's exclusive instruction, and was treated by him more as a son than a pupil. At the age of nineteen he was, on Weber's recommendation, engaged to conduct the German operas at Vienna, and was afterwards employed in a similar capacity at the theatre of San Carlo and theatre of the Fondo, at Naples. In 1827 his first dramatic work, an opera in two acts, called "Giacinta ed Ernesto," was produced at the Fondo, but, being essentially German in style and colour, did not please the Neapolitan public; nor was he more successful with a grand opera afterwards performed at the San Carlo. In 1830 he returned to his native city, where his opera "I Portoghesi in Goa," which had been coldly received at Naples, found a more congenial audience among his own countrymen. After a visit to Paris, and a second residence of several years at Naples, Benedict came to London, for the first time, in 1835, and from that period to the present he has resided almost entirely in this country. In 1836 he undertook the direction of the Opera Buffa, at the Lyceum—a delightful entertainment carried on for two seasons by Mr. Mitchell. Here his operetta, "Un Anno ed un Giorno," originally produced at Naples, was performed with great success. Benedict now turned his attention to the English music stage. His first English opera, "The Gipsy's Warning," was produced in 1838 with remarkable success, and became popular throughout the kingdom. In a German version, this opera has been received with great favour at several of the principal theatres in Germany. His subsequent operas, "The Brides of Venice," and

"The Crusaders," had also a large share of success: each of them having had a long run at Drury Lane, of which theatre, when under Mr. Bunn's management, he was the Musical Director. These are Benedict's principal dramatic works. He has also composed much music for the piano-forte, of which instrument he is a great master, and many orchestral and vocal pieces of distinguished excellence. For many years he has had the direction of the annual musical festival at Norwich, and of other great music meetings and concerts, both in the metropolis and the provinces. As a composer, Benedict's permanent reputation will rest on his English operas, which, besides their dramatic power and beauty, have the merit of being more truly English in style and character than the music of many of our native composers.

BENNETT, WILLIAM STERNDALÉ, Composer and Pianist, was born in 1816 at Sheffield, where his father, Robert Bennett, an excellent musician, was organist of the principal church. Having lost both his parents in his infancy, he was brought up by his grandfather, John Bennett, one of the lay-clerks of the Cambridge University Choir, by whom he was entered, when eight years old, as a chorister in King's College. In this situation he remained two years, and was then placed in the Royal Academy of Music. He began his regular studies by taking the violin as his instrument; but he abandoned it for the piano-forte, and received instructions from Mr. Holmes and Mrs. Cipriani Potter. Soon afterwards he began to turn his mind to composition, and, as a pupil of Dr. Crotch, produced his first symphony in E flat, at the Royal Academy. It was followed at short intervals by his piano-forte concertos, in D minor, E flat, C minor, and F minor, which, by invitation of the Philharmonic Society, were performed at their concerts. Having formed that intimate friendship with Mendelssohn which had so great an influence on the career of the young composer, he went, in 1834, by Mendelssohn's invitation, to Leipsic, where several of his works (particularly his overture to the "Naiades" and his concerto in C minor) were performed at the celebrated Gewandhaus concerts, under Mendelssohn's direction. During a sojourn of some length in Germany, where several of his principal works were published and received with great favour by the critics and the public, he fixed his residence in London, and here holds a most eminent position as a composer, a performer, and a teacher of music. His published works are numerous; including his overtures, the "Naiades," the "Waldnymph," "Parisina," and "The Merry Wives of Windsor;" concertos, sonatas, and studies for the piano-forte; and songs, duets, and other vocal pieces. Bennett is one of the few English composers who have gained a European reputation, and one of the performers who have most successfully maintained the honour of the English school.

BÉRANGER, PIERRE-JEAN DE, the celebrated French Lyric Poet, was born on the 17th August, 1780, at the residence of

his grandfather, a poor tailor, living at No. 50 Rue Montorgueil Paris. His father appears to have been a person of vagabond propensities; an adventurer and fortune-hunter, who cared little for his family, and was at no pains to provide for their subsistence. His favourite crotchet was, that he was the descendant of illustrious ancestors, and the greater part of his time was occupied in tracing his pedigree to noble and aristocratical sources. Of his son, from his earliest infancy, he took little heed; leaving him to grow up as might please his good or evil stars, and to wander about the streets of Paris with any associates that chance might throw in his way. The boy remained with his grandfather until he was nine years of age, when it seems to have occurred to his friends that the life of a *gamin* of Paris was not that which was likely to qualify him for becoming a respectable member of society, and he was sent to live with his maternal aunt, who kept a small inn in the suburbs of Péronne. She was a stern disciplinarian and appears to have exercised over him the sort of control which his early habits would seem to have demanded. After being permitted to visit the single lion of Péronne (an old Gothic tower, formerly inhabited by Charles the Simple), he was subjected to a course of application but little suited to his taste. His duties of tavern-boy left him but little leisure for the indulgence of his vagrant propensities; although in such brief intervals as he could snatch from his homely employment, he managed to form an acquaintance with the most popular writings of Fénélon, Voltaire, and even Racine. At the age of fourteen he was apprenticed to a printer of Péronne, of the name of Laisné, having acquired what little he knew at the "Institut Patriotique," a branch of the school founded by M. Ballue de Bellangese, upon the system of Jean Jacques Rousseau, for the dissemination of revolutionary principles. His new occupation was, doubtless, more favourable to his literary tastes than that of pot-boy; affording him, as it did, opportunities of reading, of which he was not slow to avail himself. It was while he was engaged in setting up the types for an edition of the poetry of André Chenier, that young Béranger first attempted the composition of verse; and from that day his chief ambition was to become a poet. At the age of seventeen he returned to the house of his grandfather, and tried his hand in several styles of verse: but does not appear to have satisfied himself, or those about him, that he was born to the destiny he had shaped out for himself. Sick of the poverty by which he was surrounded, and the want of sympathy for his tastes which it was his fate to encounter on all sides—for he had published a small volume of songs, entitled "The Garland of Roses," before he left Péronne—he determined to go to Egypt, then in the occupation of the French army; but the unpromising account given him by an acquaintance, who had just returned from the expedition, induced him to abandon his project. About this time he wrote a comedy, entitled "The Hermaphrodites;" but, being unable to get it accepted at any of the theatres, threw it into the fire. For more than a year he followed no settled occupation

during this interval he is said to have produced some of
 best songs. Embittered by disappointment, and almost hope-
 of success, he resolved to collect all the poems he had written,
 and send them to Lucien Bonaparte, the brother of the First
 Consul, who was known to be a liberal patron of literature. "In
 1798," says he, "without resources, tired of fallacious hopes, versing
 without aim and without encouragement, I conceived the
 idea—and how many similar ideas have remained without results!
 I conceived the idea of enclosing all my crude poems to M.
 Lucien Bonaparte, already celebrated for his great oratorical talents,
 and his love of literature and the arts. My letter accompanying
 them was worthy of a young ultra-republican brain. How well I
 remember it! It bore impress of pride wounded by the necessity
 of having recourse to a protector. Poor, unknown, so often dis-
 couraged, I could scarcely count upon the success of a step which
 I considered as a desperate one." Nor was he, on this occasion, doomed to further
 disappointment. The Prince, favourably impressed towards the
 poet, not only by the specimens he had forwarded of his
 poetry, but by the manly tone of the letter by which they were
 accompanied, relieved him almost immediately from his suspense.
 He answered his application in the kindest and most encouraging
 terms, and having sent for him to his house, advised him as to
 his future course, and promised to afford him more substantial
 aid. Before he had an opportunity of carrying out his bene-
 ficent intentions, the Prince became himself an exile. On his
 return to Rome, however, he transmitted to Béranger an order to
 receive and apply the salary coming to him as member of the
 Academy. It was not until thirty years afterwards that the poet
 ventured to acknowledge to the world his obligations to his bene-
 factor, by publicly inscribing to him any of his works. The aid
 which he received from him was most seasonable, and helped to verify in his
 case the proverb, that "money makes money." He was now able
 to find employment for his pen. For two years, 1805–6, he assisted
 M. de Landon's "Annals of the Musée Royale;" and in 1809 he
 obtained the post of copying-clerk in the office of the
 Faculty of the University, with a salary of 1200 francs. He
 was in comparatively independent circumstances. His genius
 began to attract notice in high places. Napo-
 leon, on reading, for the first time, Béranger's "Roi
 sans couronne" (a good-humoured satire on his own pretensions), is said
 to have been exuberant, and there was undoubted fame for the poet
 in the literary world; for who would not laugh with an
 emperor? In 1813 Béranger was elected a member of the Society
 of the Muses, then the resort of the most distinguished literary
 men of the time; and encouraged by the cordial reception his
 poetry met with from its frequenters, he resolved to devote himself
 entirely to that class of composition: and towards the latter
 end of the year 1815, when the first collective edition of his songs
 made its appearance, he had begun to be widely known to the
 public. "Le Requête des Chiens de Qualité," and "Le

Censeur," were by this time on the lips of all Paris. The last named song had well-nigh brought him into trouble; but Bonaparte had made his escape from Elba, and, among other changes, our poet was actually offered a post in the bureau of the *Imprimerie du Censeur*. The absurdity was too transparent. The proposal was received by Béranger and his jovial friends of the *Caveau* with shout and laughter, and he continued to retain his humble clerkship in the office of the Secretary of the University. His second series of songs, published in 1821, cost him his place (no great loss), and three months' imprisonment in the *St. Pélagie*. His third series (1828) subjected him to nine months' imprisonment in *La Force*, and a fine of 10,000 francs; for the feeble puppets of the Government of the *Drapeau Blanc* hated to be told the truth as bitterly as Napoleon himself. The fine was, however, soon paid by the poet and his admirers, and the prison in which he was confined became the rendezvous of the most distinguished men of the time. From behind his prison-bars Béranger kept up so deadly a fire upon the Government, that he contributed more effectually to destroy it than all the hard blows of the heroes of the "Three Days." After having assisted so importantly in winning the battle, however, he refused pertinaciously his share of the spoil. His friends, who were now occupying the high places, would have loaded him with titles and honours, but he declined all payment for his services, and to avoid being mixed up with the ever-variable politics of the capital, he retired first to Passy, next to Fontainebleau, and finally to Tours, where he completed what he calls his "*Mémoires chantés*," by the publication of his fourth collection of songs. In this retirement his chief amusements were the cultivation of dahlias and playing at bowls. After several changes of residence the poet returned to Passy, which he did not quit until summoned by the Revolution of 1848 to Paris. Elected to the *Assemblée Constituante*, he took his seat at once, in order to mark his sense of the honour which had been conferred upon him; but he could not be persuaded to continue his attendance at its sittings. "What should I sing there?" he said; "there is more talk than enough already." He pleaded age, and the claims of the Muse, as his grounds of exemption. In France he is the "poet of all circles and the idol of his own." He now resides altogether in Paris, enjoying a ripe old age, free from the cares of politics and the vexations of party strife; a true poet, and, like many true poets, a keen satirist. But his weapon of offence has seldom "carried a heart-stain away with its blade;" and it may with justice be averred, that no literary man of our time, or of any country, has ever been so universally beloved. "Some of my songs" (he remarks, in the preface to the last published series), "poor things! have been treated as impious by Ministers, the Attorneys-general, Solicitors-general, and their deputies — and by religious functionaries in court. I can only say here, what has been said elsewhere a hundred times, that when, as in these days, Religion is made a political tool, she is in danger of losing her sacred character. The most tolerant become intolerant of her; believe

who believe anything but what she teaches, will sometimes attack her, by way of reprisal, in her very sanctuary. And I who, having been one of these believers, have never gone thus far, have but laughed at her strange Catholic livery. Is this impiety? Many of my songs are but the inspirations of my secret feelings, or the sprices of a vagabond humour. These are my favourite children, and that is all the good I have to say of them to the public." Béranger has been compared, not inaptly, to our own Burns. The songs of both are the histories of their hearts. Some have likened Béranger to Moore; but, if less polished, he is far more vigorous and sincere. In some points their characters, and those of their respective writings, are the antipodes of each other. There is a earnestness alike in the satire and praise of the French poet that does not exist in the writings of his contemporary. Moore's lyrics captivate the fancy, but those of Béranger lay firm hold upon the heart. Béranger is said to have been engaged for several years past on a "Dictionnaire Historique;" where, under the name of each political or literary notability, young or old, he intends to class his opinions, and such judgment as he has formed or borrowed from competent authority. "Who knows (says he) that it may not be through this work of my old age that my name may survive me? It would be amusing if posterity should say, 'The *judicious*, the *grave* Béranger!' And why not?" A superb edition of his works, beautifully illustrated, was published in two volumes, 8vo. Paris, 1847.

BERGHAUS, HENRY, a distinguished German Geographer, was born at Cleves in 1797. He served as a volunteer in the French army during the campaign of 1815, and at the end of the war obtained an office of topographical engineer at Berlin, and was engaged in the trigonometrical survey of the kingdom. In 1824 he received the appointment of Professor of Applied Mathematics at the School of Civil Engineering at Berlin, which he has since held. Berghaus is the author of many valuable maps and geographical publications.

BERIOT, CHARLES-AUGUSTE DE, an eminent Violinist, was born at Louvain, in Belgium, in 1802, where he studied music until 1821, when he went to Paris, in order to enjoy the instruction of Viotti, Baillot, and other celebrated masters. He soon ventured to present himself before the public as a candidate for their favour, making his first appearance before a Parisian audience at the same time with Paganini. He met with considerable success, and on his return to his native country the King of the Netherlands bestowed on him a pension of 2000 francs, of which he was deprived after the Revolution of 1830. In March, 1836, he was married to the celebrated Madame Malibran, who died suddenly in September following at Manchester, England, whither she had returned to attend a musical festival. In his subsequent tour through Germany, he was received in all the capitals with the most unqualified applause; and in 1842 he succeeded Baillot at the Con-

servatoire of Paris. As a composer, Beriot does not rank very high.

BERLIOZ, HECTOR, Musical Composer, was born in 1803, at La Côte St. André, in France. He commenced the study of medicine at the desire of his father, but he had been seized with a passion for music, and abandoned his studies at the end of a year. Being discarded by his father, he was obliged to obtain a livelihood by singing in the chorus at the Théâtre de Nouveautés; and in the meantime he pursued his musical studies under Reicha and Lesueur at the Conservatoire. In 1830 he made a journey to Italy, where he spent two years. After his return to Paris he devoted much of his time to composition, and has produced many symphonies and operas, about the merits of which there has been much difference of opinion. Some have thought them extravagant and incoherent medleys, while Listz was of opinion that they possessed high merit, and Paganini testified his sense of the composer's genius by presenting him with an order on his banker for 20,000 francs; and it is now generally allowed, that in some branches of his art, especially in the production of grand orchestral combinations and effects, he has no superior among living musicians. Berlioz is engaged during the present season (1855) as one of the conductors of the New Philharmonic Society's Concerts.

BERRYER, M., a French Legitimist, Politician, and Advocate, began his career at the bar, where he achieved the most signal success. He has ever been a distinguished member of the Legitimist party. At the Restoration he exerted himself most energetically to moderate the rule of the Bourbons, and was one of the defenders of Marshal Ney. Neither the Monarchy of July nor the Republic saw the least wavering in his opinions. He is one of the councillors and agents of the Comte de Chambord, the Legitimist pretender to the throne of France. In February, 1855, he was elected a member of the French Academy. The speech which on this occasion he delivered, according to the custom of Academicians at their reception, contained some allusions to the degradation of the Lower Empire, and was on that account obnoxious to the Government of Napoleon III., which ordered its suppression. In less than twenty-four hours, however, the interdiction was removed. Berryer prayed the secretary of the Emperor to use his influence, and obtain that he might be excused from presenting himself at the Tuileries, according to custom, pleading his political position. The request was granted by the Emperor with equal ease and dignity.

BIARD, FRANCOIS-AUGUSTE, a popular and prolific French *genre* Painter, was born at Lyons, June 27, 1800, and studied in the Academy of Fine Arts of his native place. He then visited Spain, Greece, Syria, and Egypt; taking a great number of sketches which he completed after his return, and which rapidly found the

by into public collections and private residences. He obtained reputation in the exhibition of paintings at Paris, in 1838, by a picture of the "Arabian overtaken by the Simoom in the Desert," a magnificent and truly poetical conception. This was soon followed by the "Odalisque of Smyrna." Biard was more successful, however, in the delineation of comic and burlesque groupings; and, with a singular power of observation, he always caught the life, preserving all their character. Pictures of this description made him the favourite of the laughter-loving Parisians. Among these pieces are, "The Sequel of a Masquerade;" "A Skirmish of Masquers with the Police;" "The Family Concert," a fine picture of wonderful children and family geniuses. The element of contrast, which Biard has so fully at his command in his comic pictures is the great characteristic of his genius. His power, however, extends to the delineation of the ghastly and horrible; instance "The Slave-Market on the Gold Coast of Africa." Having roamed through the tropical regions, he was also impelled to visit Greenland and Spitzbergen. This journey he made in 1839, accompanied by a friend; and in six months he collected an incredible treasure of facts and studies of nature in these regions. His most celebrated picture of this period is the "Combat with Polar Bears." In historical pieces Biard has been less successful, his ruling passion leading him constantly to the grotesque.

BILLAULT, M., Minister of the Interior in the Government of Louis-Philippe III. (appointed 23d of June, 1854). This gentleman, formerly Advocate at Nantes, entered the French Chamber under the name of July, and at first followed M. Thiers; afterwards, following M. Dufaure, he undertook a progressive opposition, which was to be regarded at the palace as a person who must be kept in some way. The means chosen consisted of an offer of the dukedom of the Duke d'Aumale, the most wealthy prince of the empire. This connexion was accepted, to the great scandal of his political friends of the hon. member. He then consulted, however, and pursued pleasure (freely enough, it was said), but he never kept up a rash and severe warfare against the system of Guizot and his master fell. He aspired to a position in the Government when the Revolution of February 1848 broke out, and he then unhesitatingly rallied to the new Government, declaring on the first days of March that "in his opinion we must immediately endow our country with a democratic government, strong and tranquil; and to this all his efforts would be devoted." He was at one time a champion of Socialism; but when Louis-Napoleon seized the dictatorship of France, M. Billault was made President of the Corps Législatif, enjoying a large salary and a handsome hotel as his reward. The celebrated "Timon" (a Cornelian) has thus passed judgment on M. Billault:—"He is the most remarkable of all the incipient orators, and more precise in his addresses he would be, as another would be the all to the speeches of M. Guizot, the second De-

mosthenes. M. Billault has quite as much of political principle as a lawyer can well have; and much more, in any case, than is requisite for a minister in our day. As the lieutenant of M. Thiers, he loves to revel, like his general, in peregrinations of land and sea. I do not mean that M. Billault may not be some day a very useful minister, in no matter what branch of the public revenue. He is not bound by any precedent, either to the right or to the left. He has his *petites entrées* at the Louvre, without being either butler or pantler. As a speaker, he is ready for anything; rushes on, beats a retreat, and returns to the onset with the same rapidity of evolution."

BINNEY, THOMAS, a popular Nonconformist Preacher, is one of the most prominent leaders of the Independent connexion. He was born at Newcastle-upon-Tyne, was educated for the ministry at Wymondley, Hertfordshire, at the college endowed by Mr. Coward, and when he had completed his studies became minister of St. James's Street Chapel, Newport, Isle of Wight. In 1829 he removed to London, on the invitation of the congregation then meeting in a spacious hall over the Weigh House, in Little Eastcheap. In 1833 his hearers had increased to an extent which made it necessary to obtain a new place of meeting, and the foundation-stone of the new Weigh-house Chapel in Fish-street Hill was laid. The address which Mr. Binney then delivered, remarkable for the boldness and decision of its assertions, took effect in the excited state of men's minds, and its author was constituted a public man by the pointed attacks of the clergy, from the Bishop of London and Henry Melville downwards. In 1836 he assisted in founding the Colonial Missionary Society, and has subsequently been prominently engaged in all the affairs of his denomination. He has travelled in America, and written a few biographical works, besides innumerable pulpit exercises and religious *brochures*. He has, however, achieved most reputation in the pulpit, where he proves attractive, less by the charm of oratory than by the employment of clear and original thought in scriptural exposition, a breadth in the treatment of subjects, and the largeness of his sympathy with human nature.

BIRD, DR. ROBERT MONTGOMERY, an American Novelist, born in 1803, and educated in Philadelphia, began his career as a writer of tragedies, of which three were successful on the American stage. The titles were "The Gladiator," "Oraloosa," and "The Broker of Bogota." Their popularity, however, did not prevent him from turning to another literary walk, and in 1834 we find him publishing a romance, "Calavar, or the Knight of the Cross," a Mexican story. In the following year appeared "The Infidel, or the Fall of Mexico;" also a romance, forming a kind of sequel to his first production. Before many months had passed Dr. Bird came again into the literary arena with "The Hawks and the Hollow," which in its turn was followed, in 1836, by "N

of the Woods," and subsequently by "Peter Pilgrim," and in 1839 by "The Adventures of Robin Day." After the publication of this work the author seems to have given up literature for the life of an extensive farmer.

BISHOP, SIR HENRY ROWLEY, the most eminent of living British Musicians, is a native of London. In the year 1806 he began his long and brilliant career as a dramatic composer, by the music of a ballet performed at the Italian Opera House, entitled "Tamerlane and Bajazet." In 1809, his first opera, "The Circassian Bride," was produced at Drury Lane, with great success; but, on the following night (the 24th of February), the theatre was burnt to the ground, and Bishop's music perished in the flames; some fragments, however, particularly the beautiful duet, "I love thee," which have been preserved, attest the merit of the work. Soon afterwards he was engaged as composer and director of the music of Covent Garden Theatre; an employment which he held for many years, and in the course of which he produced his finest works among which were "The Maniac," "The Knight of Snowdon," "The Miller and his Men," "The Slave," "Maid Marian," "Clari" and "Native Land." Between the years 1811 and 1824 he composed for that theatre no fewer than fifty dramatic pieces, all of which were more or less successful, and all marked with marks of an original and fertile genius. But he committed the error of writing too rapidly and too much, and injured his reputation by slight and hasty productions, in which, abandoning his pure English style, which forms the charm of his best works, he imitated the foreign compositions of the day. In 1826, when Weber's "Oberon" was produced at Covent Garden, Bishop was engaged by the rival house to compose his "Aladdin," which was brought out at the same time with Weber's opera. It was not successful, and Bishop has not since composed any dramatic work of consequence. Bishop's operas are no longer performed; and, indeed, we have no longer any stage on which English operas can be performed. But his music is not on this account—nor is it likely to be forgotten. A great number of his finest songs, duets, and chamber pieces, originally written for the stage, have been transferred to the concert-room and the chamber, where they will continue to be valued so long as the people of England retain the pure and pleasant music of their country. Bishop has received the degree of Doctor of Music from the University of Oxford—a high honour, which has been rarely bestowed; and he holds the Academic Chair of Music in that university. He has also received the honour of knighthood, as a recognition of his high eminence in his art.

BLANC, LOUIS, a Political Theorist, whose writings contributed powerfully to hasten the French Revolution of February, was born at Madrid in 1813, and is of Corsican extraction, his mother being sister to the celebrated Pozzo di Borgo. Few men have become members of the press and made their way to

the front rank at so early an age as M. Louis Blanc. When nineteen years old he went to Paris, where he wrote in several daily journals. Shortly afterwards he was summoned to Arras. There he contributed to one of the most important republican papers of the department—the “*Progrès du Pas-de-Calais*.” At this time the young and intrepid writer addressed two MSS. to the Academy of Arras, both of which gained prizes. One was a poem of considerable magnitude, entitled “*Mirabeau* ;” the other was an eulogium of “*Manuel*.” In 1834 he returned to Paris. With two articles in his hand he went to the office of the journal “*Bor Sens*,” to seek admission for them into that paper. So juvenile was his appearance, so infantile his stature, the editors, M^{rs}. Rodde and Cauchois Lemarc, could scarcely credit him with the authorship of such vivid, picturesque, bold, and brilliant writing. He became a writer for their journal, and at twenty-three years of age was made its chief editor. The young soldier had become a general in the army of the press, and had reached a place beside Armand Carrel, with whom he maintained amicable and kindly relations though the one was a disciple of Voltaire, the other of Jean-Jacques Rousseau. In 1838, M. Louis Blanc, wishing to retire from the fiery contest of his daily labours, and seeking a calmer sphere in which to evolve his ideas of social polity, founded the “*Revue du Progrès*,” in which he first published “*The Organization of Labour*.” A memorable circumstance happened to him at this time. He was returning home to the street Louis-le-Grand one evening in October, 1839, when he was suddenly assailed by some unknown dastard, who stabbed him repeatedly, and left him for dead upon the pavement. The author of this cowardly attempt at assassination was never discovered. Many persons attributed this infamous act of vengeance to an article published by M. Louis Blanc in “*The Review of Progress*” on “*Les Idées Napoléoniennes*.” Happily, the intended assassination was not so nearly accomplished as was at first supposed, and he speedily recovered from his wounds. This incident was the origin of M. Dumas’ celebrated “*Corsican Brothers*,” the main subject of which is the preternatural sympathy of two brothers. M. Louis Blanc had a twin-brother, who was at that time in Spain, and who felt strange pains as if from blows in the same part of his body and at the same moment, as his brother in Paris. Before information reached him, he had already written to know if any misfortune had occurred. M. Louis Blanc’s writings powerfully contributed, there can be no question, to bring about the Revolution of 1848. The part that he performed in the stormy days of that year has become matter of history. He has been made responsible for the scheme and failure of the National Workshops, which were organised avowedly by certain members of the Provisional Government, with a view to get rid of him, and to frustrate his plans. (See the evidence of Emile Thomas, the person who was instructed and appointed to ensure failure.) He was a member of the Provisional Government from February to May. In September the Assembly ordered him to be prosecuted for

conspiracy, and M. Louis Blanc quitted France on his way to Eng-
 land. Here he has lived in retirement, actively employed in writing
 his great work, "The History of the French Revolution," of which
 he has just published the sixth volume. It is to be completed in
 six volumes. He was remarkable at college for his great natural
 talent and perseverance in study, and proposed to himself the
 diplomatic profession, in which his uncle had acquired fame. His
 form is very diminutive, and has caused him more than once to
 occupy a very ludicrous situation. Having been appointed secre-
 tary to his cousin, he first appeared on the stage of public life by
 visiting one of the parties of the famous Duchess de Bino.
 The report of his talents and pretensions had preceded him thither,
 and his appearance was looked for with curiosity. He was pre-
 sented by the veteran Pozzo himself, and on the announcement of
 the well-known name, all eyes were directed to the uncle, whose
 portly form concealed the meagre dimensions of the newcomer.
 Seated at the head of the room, the old ambassador said to the
 nephew, "Permit me to introduce to your notice my nephew."
 He slowly raised herself with a languid air from the sofa, and ex-
 pressed in a tone of sweet bewilderment, "Where is he? I should
 have liked to see him." That very evening Louis Blanc told his
 friends that he resigned all pretensions to the post which had been
 offered for him with so much difficulty, and resolved to devote
 himself to the service of those to whom they might be of value.
 The result of this unfortunate *soirée* may be traced in every line
 of his book, "The History of Ten Years," which Louis-Philippe was
 the first to declare acted as a battering-ram to the bulwarks of
 the monarchy in France. The humble employment of clerk in a notary's
 office was the first resource that offered itself to the man of genius.
 He frequently found more congenial occupation as tutor in a
 private family, and shortly afterwards made his way to eminence
 among the journalists of Paris. With the Revolution of February
 he immediately offered to put in practice the doctrines he had
 expounded in his recent work, "The Organisation of Labour." He
 procured by means of a Government loan, to create social work-
 shops in all the most important branches of national industry;
 in the workshop in which should receive equal wages, the Government
 placing at the point of honour instead of competition to secure
 labour. The gains were to form a general fund, one-fourth of
 which was to be reserved; a second portion to be given to the
 workers; a third to form a fund for the old, the wounded, and
 the infirm; and the last fourth to be applied to the liquidation of
 the national debt. The new workshops were to remain during one year
 under the control of the Government, after which they were to be
 managed by directors elected by the workmen themselves. The
 experiment was made; a number of the least efficient workmen
 employed about the *ateliers* in the day, and listened to the glowing
 explanation of Louis Blanc in the evening; but the certain ruin
 was not delayed; immense sums were sunk in the experiment,
 which ended in recrimination and general disgust. Louis Blanc

was a member of the Provisional Government from February 14 to May. On the meeting of the National Assembly the Executive Committee superseded that body, and this politician, who was not included among its members, went into opposition. He was strongly suspected of being implicated in the conspiracy which led to the attack in the Assembly, May 15. He was certainly carried in triumph on the shoulders of the insurgents, and his name was on the list of the new Government. In September the Assembly ordered the prosecution of M. Louis Blanc for conspiracy, and that gentleman immediately took the train for Ghent, on his way to England, where he has since remained. He has beguiled the years of his exile by the publication of several volumes of his opinions.

BLOMFIELD, CHARLES JAMES, BISHOP OF LONDON was born in 1786, and was educated at Trinity College, Cambridge, where he was third wrangler and senior medallist in 1808, and subsequently a Fellow. After taking orders, his promotion in the Church was unusually rapid. He became successively Archdeacon of Colchester and Rector of St. Botolph, Bishopsgate; Bishop of Chester, in succession to Doctor Law, in 1824; and Bishop of London in 1828. He is, moreover, provincial Dean of Canterbury, Dean of the Chapels Royal, Rector of Sion College, the East India College, and Harrow School. His lordship is a ripe scholar, and known to the world of letters by his editions of "Æschylus" and "Callimachus." He is also the author of a "Manual of Family Prayers," "Lectures on the Acts of the Apostles," "Sermons at St. Botolph, Bishopsgate," etc. He is one of the original supporters of the New Poor Law, and had a principal hand in establishing the Ecclesiastical Commission. He holds the patronage of ninety livings, exclusive of much of that of the newly-erected churches. The annual value of his see is estimated at from 10,000 to 12,000*l.* Bishop Blomfield is a firm supporter of High Church principles, and has, with the Bishop of Exeter, been one of the most strenuous assertors of the tenet of baptismal regeneration. He was one of the prelates who protested against the elevation to the episcopal bench of Doctor Hampden, the present Bishop of Hereford. As a member of the Privy Council, he dissented from the judgment delivered by Lord Redesdale in the Gorham case. His lordship has, however, always evinced a shrewd regard for public opinion as to the time, place, and manner of putting forth his favorite ideas.

BOETTCHER, ADOLF, a German Poet and Translator, was born at Leipsig, May 21, 1815. He received his first education there, and in 1836 entered its University, where he devoted himself to philological pursuits, particularly in the modern languages, and to the study of the German and English poets. He has since lived as a private gentleman in his native city. Among his numerous poetical productions, his translations of the English poets

occupy a conspicuous place. His first labour in this department was a translation of the complete works of Lord Byron, in which no one before him had been successful; while his German versions of Shakespeare's dramas, such as "What You Will," "Midsummer Night's Dream," and "Much Ado about Nothing," are characterised by many excellences, but cannot dispute the palm with those of Tuck and Schlegel. He has also translated the "Poems" of Goldsmith (1843); the "Poetical Works" of Pope (1842); and of Milton (1846); as well as the poems of "Ossian" (1847). Boettiger's own poetical productions are characterised for the most part by the beauties of form, with easy, euphonious, and flowing verse. His drama of "Agnes Bernauer" has been successfully represented at several theatres, without gaining a lasting reputation, and his lyrical poems have been received with great approbation. To many of them they add truth of sentiment. Among the numerous poems of Boettiger the most prominent are the "Songs of Midsummer" (1847); "On the Watch-Tower" (1847); "A Tale of Spring" (1849); "Till Eulenspiegel" (1850); and "The Pilgrimage of the Flower-Spirits" (1851). He has also published a number of smaller lyrics. His latest lyric and epic poems, under the title of "Shadows," were announced for publication in 1851.

BOETTIGER, KARL-WILHELM, Aulic Councillor and Professor of Literature and History in the University of Erlangen, was born at Budissin, August 15, 1790. He received his early education at Weimar. In 1804 he attended the gymnasium at Gotha, to prepare himself for the University, which he entered in 1808. He studied theology at Leipsig; and in 1812 went as tutor to Vienna, where he first applied himself to the study of history. In order to attend Heeren's lectures, and have the benefit of the library there, he resided a year (1815-16) in Göttingen; and in 1817 qualified himself for a professorship in the University of Leipsig, to which he succeeded in 1819. His inaugural address upon Henry the Lion afterwards enlarged into a complete biography of this celebrated German, published in 1819. At the same time he began to contribute largely to periodicals and encyclopædias. In 1821 he accepted a call to Erlangen, where, in 1822, he was appointed to the second place in the library of the University. His most important historical works, all of which are distinguished for their animated narrative, are the "Universal History" (1849); the "German History" (1848); the "History of Bavaria under its Old and New Rulers" (1837); the "History of Germany and the Germans" (1841); and the "Abridged History of the Electoral State and Kingdom of Saxony" (1836). He has also written the "History of the Electoral State and Kingdom of Saxony" for the "European Library" of Heeren and Ukert; and subsequently the "Universal Library in Biography." A "Biographical Sketch" of his father, Carl Augustus Boettiger, was followed by a work left by the latter as a manuscript, entitled "My Literary Prospects and Contemporaries" (1836).

BONAPARTE, LOUIS-NAPOLEON. *See FRANCE, EMPEROR OF.*

BONAPARTE, PRINCE NAPOLEON-JOSEPH-CHARLES. Grand-cousin to the Emperor Napoleon III., and who, in default of heirs, stands next but one in succession to the Imperial throne of France, is the son of Jérôme Bonaparte, by his second marriage with the Princess Frederika of Wurtemberg. He was born on the 9th of September, 1822, it is believed at Trieste. An elder brother, Jérôme-Napoleon, who was born in 1814, is dead. The youth of Prince Napoleon was passed at Vienna and Trieste, Florence and Rome, occasionally in Switzerland, and in America. At a later period, the Prince resided for a short time in Brussels; but he did not, until the last revolutionary period, take any active part in political affairs. On the recall of the Bonaparte family from their long exile, Prince Napoleon was elected to the Constituent Assembly, in which he became leader of the extreme Republican party known as the Mountain. He has, however, abandoned this violent course; and he now ably seconds, in every way open to him, the designs of his cousin the Emperor, while loyally and cordially supporting his authority. In 1854 he was appointed to a command in the allied English and French expedition to Sebastopol; and fought at the battle of the Alma. Prince Napoleon is reputed to have furnished the information upon which was written a pamphlet reflecting on the conduct of the war, and commenting somewhat too freely on the deliberations of the Council of War at which the Crimean expedition was determined on, which was immediately suppressed by order of the French Government. It was published at Brussels, and was immediately translated into English.

BONAPARTE, CHARLES-LUCIEN, Prince of Canino and Musignano, is the eldest son of Lucien, younger brother of Napoleon. He was born in Paris, May 24, 1803. Besides the distinction of being a member of that family whose destiny seems to be interwoven with the fortunes of France and of Europe, the Prince of Canino can lay claim to personal merit of no mean order. He is universally recognised as one of the first of living naturalists. The department of Ornithology seems, by common consent, to be conceded to him, as the great master of that branch of natural history. He has also written extensively upon quadrupeds, fishes, and reptiles, especially those of Italy. During his residence in the United States he undertook the continuation of Wilson's "Ornithology," of which he published four volumes. His "Observations on the Nomenclature of Wilson's Ornithology," in the "Journal of the Academy of Natural Sciences of Philadelphia," evince extraordinary learning and acuteness. He also contributed a "Synopsis of the Birds of the United States" for the "Annals of the Lyceum of Natural History of New York," and a "Catalogue of Birds of the United States," in the "Contributions of the MacLurian Lyceum of Philadelphia," besides numerous articles on Ornithology in the same

Iconographe. His principal work is "*Iconografia della Fauna Italica*," in three vols. folio, illustrated with excellent coloured plates, and published at Rome, between 1835 and 1845. Besides this, he has contributed numerous papers and critical essays to various scientific journals, both English and Continental. He married Zenaïde, second daughter of Joseph Bonaparte, and his first cousin, by whom he has a numerous family.

BONAPARTE, PRINCE JEROME, the youngest child of Marie and Lætitia Bonaparte, and the youngest brother of the Emperor Napoleon I., was born in 1784, at Montpellier. His father died in the following year, and the training of the child Jerome was undertaken by his mother in Corsica. When his father rose to power, he placed Jérôme and his sister Caroline at the establishment of Madame Campan, in Paris, where he remained until the return of Napoleon from his first campaign in Italy. He was then transferred to the College of Juilly; and on his father having been elevated to the First Consulship, Jérôme entered the naval profession. In 1801, when in his seventeenth year, he was appointed to the command of the corvette *l'Epervier*, in the expedition to St. Domingo under General Le Clerc, whence young Jerome brought home the despatches. Some *escapades* of his on board at Brest led to his receiving from his brother Napoleon a passionate rebuke, in which occur these words: "I am waiting with impatience to hear that you are on board your ship, studying preparation intended to be the scene of your glory. If you ever mean to disgrace your name, die young; for if you live to sixty without having served your country, you had better not have been born." Jérôme sailed soon afterwards for Martinique; and when the war broke out between France and England he sought in vain to disobey the injunctions of his brother, and after a cruise of several months he put into New York. He visited Philadelphia, and, on the 31. 1793, he married Miss Elizabeth Patterson, the daughter of a merchant of Baltimore, descended from a Scotch family settled in the north of Ireland. This marriage displeased Napoleon, and after a war passed in the United States, Jérôme was compelled by his brother to return to Europe: he landed with his wife at Lisbon, on the 1. 1795. Jérôme left for Paris, and the lady went on in the ship to Amsterdam: on arriving in the Texel, an order had been received forbidding her to land; she accordingly came to England, where she resided at Camberwell. On July 7th was born her son, Napoleon Bonaparte. Still the Emperor Napoleon would not recognize the marriage; nor was Madame Jérôme Bonaparte permitted to enter France. In the March previously, the Emperor had been, by a special decree of the Council of State, declared null and void. The Emperor next applied to the Pope for a bull annulling the marriage, which, however, his Holiness had not the power to issue; and he wrote a long letter to Jérôme, explaining the reasons. Meanwhile, Jérôme, who was deeply attached to his wife, temporised, rather than further pro-

voke his brother. He next went on a mission to Algiers, whence he returned with 250 Genoese captives, whom he landed at Genoa where he was received with great honour as "the young Napoleon of the Sea." He next took the command of the *Vétéran* line-of-battle ship, in an eight-months' cruise in the West Indies. On his return thence, he took six English merchantmen; but he was pursued by the English fleet, and his vessel was stranded off the coast of Brittany. On reaching Paris, Jérôme received the cordon of the Legion of Honour, was promoted to the rank of Admiral, and created a Prince of the Empire. Nevertheless, his predilection for the army continued, and he soon after obtained the command of a body of Bavarian and Wirtemberg troops, at the head of which he directed the blockade of Glogau, and reduced the fortresses of Silesia; services for which he was made a General of Division in the Imperial army. Jérôme, by the ambitious instigation of the Emperor, next entered into an alliance with the Princess Frederica-Caroline, daughter of the King of Wirtemberg; and immediately after the marriage Jérôme was proclaimed King of Westphalia, and the constitution of the new kingdom was published. The young king, then only twenty-two years old, was much beloved, and startled the world by his administrative skill: he replenished his exchequer by a loan from the Jews, whom he repaid by the concession of perfect religious freedom, observing that "No man ought to interfere with the exercise of the religious worship of any man. Every subject ought to be as free to observe the rules of his faith as the king himself. It is the duty of the citizens only that the laws of Government ought to regulate. I hope I shall never have cause to regret that I favour and protect the Israelites of my kingdom." With the end of the empire of Napoleon closed the reign of Jérôme, king of Westphalia. He now assisted his brother in his reverses; and after sharing in the vicissitudes of defeat at the hands of the Allies, Jérôme sought refuge with his wife at Trieste and Paris. At Waterloo he played a conspicuous part, being chosen by Napoleon to open the battle at the head of 6000 men. Jérôme now lived many years in retirement at the castle of Elvangen, in Wirtemberg, at Vienna, and at Trieste. He at length returned to France, and the Emperor Napoleon III. was nominated to the Presidency of the French Senate. He is a man of estimable character and literary tastes. His only son by the amiable Elizabeth Patterson married a lady of fortune in America. Of Jérôme's marriage with the Princess of Wirtemberg, three children were the issue: Jérôme Napoleon, born in 1814; Matilda, born 1819; and Napoleon in 1823.

BONAPARTE, LOUIS-LUCIEN, second son of Lucien Bonaparte, brother of the Emperor Napoleon I., was born at Mottingham, in Worcestershire, in 1813, during his father's sojourn in England. Louis-Lucien passed his childhood in Rome and his youth in Florence, where he devoted much time to scientific pursuits.

He has been one of the most energetic members of the Italian ~~army~~, and has written several chemical works in the French and Italian languages. He was elected a representative for Corsica at the *Assemblée Constituante* in 1848, but he did not take seat; he was afterwards returned by the department of the Seine to the *Legislative Assembly*, where he has uniformly displayed very ~~sound~~ principles. He is now a Senator, the only one among members of the civil family of the Emperor of the French, to whom he has received many proofs of consideration and sympathy. In the spring of 1854 Prince Louis-Lucien visited Paris, where he was received with distinction; he travelled *incognito*, but was soon recognised by his resemblance to Bonaparte the First Consul. The Prince expends such time as he can spare from his political duties in writing a large philological work, commenced in Florence; for which purpose he has collected a ~~small~~ library of works relating to the languages and dialects of Europe.

BORDEAUX, HENRI-CHARLES, DUC DE, Legitimist claimant of the French throne, was born 29th September, 1820, and is the son of Prince Charles-Ferdinand d'Artois, Duc de Berry. After the abdication of King Charles X. of France, his son Louis-Antoine, Duc d'Angoulême, renounced his right to the crown (2d August, 1831) in favour of the Duc de Bordeaux. The latter left France with his family in 1830, and assumed the title of Comte de Chambord, in hope of one day exchanging it for that of Henry V. In 1836 he was married to the Princess Theresa, eldest daughter of Francis V. duke of Modena. This Prince has made no attempt to ~~oppose~~ the various crises through which France has passed for his own nation; contenting himself with professing his desire to ~~serve~~ France whenever called to do so by the voice of the country. In 1830 a compact was made between the Comte de Chambord and the princes of the house of Orleans, by which the claims of the elder and younger Bourbons were fused; but the Duchess of Angoulême, mother and guardian of Louis-Philippe's direct heirs, has refused to ratify this arrangement. A French gentleman, M. P. who visited him at his residence, the castle of Frohsdorf, in Prussia in 1849, thus sums up his character:—"Either I am very much deceived, or the Duc de Bordeaux is deficient in initiative power, and ~~is~~ deficient in resolution. His mind is cultivated rather than creative, he conceives rather than creates, and takes in more than he gives out. From his education and from his nature, indolence prevails over the power of execution. In a word—perhaps it is fortunate for his repose—he appears to me more to ~~be~~ expectation than to action." He inherits the indolence, as well as the corpulence, of his race; wisely seeming to care very little for the throne he has such slight chance of attaining.

BORROW, GEORGE, Author of "The Bible in Spain," and other works, is a native of Norfolk, as we learn from his curious

book—half biography, half fiction—entitled “Lavengro.” He may be called the painter of the gipsies, and his pictures of the curious vagrant life of that strange tribe are, in their way, unequalled. His earliest production was “The Zincali; or an Account of the Gipsies in Spain,” which was very successful, and was followed by “The Bible in Spain,” and “Lavengro.”

BOSQUET, GENERAL, Commander of the First Division of the French Army of the Crimea, was born in 1810 at Pau, in the department of the Lower Pyrenees. In 1829 he entered the Polytechnic School, which he left four years after to join the Artillery as a sub-lieutenant. He passed a year in garrison at Valence, and in 1835 proceeded with his regiment to Algeria. In this new profession his career differed little from that of all the African Generals of whom he may be regarded as the type. The native population fanatical, warlike, and numberless, was only to be tamed by a series of defeats and disasters, inflicted by their new masters in a series of battles which already stretches through a quarter of a century. In this war he rose rapidly; his unfailing resources and military talents combining with great energy and valour to commend him to his superiors as often as the enemy was encountered. He became Lieutenant in 1836, Captain in 1839, Chef-de-bataillon in 1842, Lieutenant-colonel in 1845, and Colonel in 1848. He has served in or commanded corps of pontoniers, sharpshooters, Zouaves, and several regiments of the line. In 1848 he was named General of Brigade by the Republican Government, and sent to Algeria. His elevation to the rank of General of Division was the work of the Emperor, who in 1854, placed him on the staff of Marshal St. Arnaud's army, then proceeding to the Crimea. The Marshal placed great confidence in Bosquet, and at the Alma appointed him to effect a flank movement on the left wing of the Russians, and turn their batteries before action became general. In his despatch to the Emperor the Marshal says, “General Bosquet manœuvred with equal intelligence and bravery: this movement decided the success of the day.” From this time forward we find Bosquet's name mentioned wherever fighting was going forward. At Inkermann, on the memorable 5th of November, 1854, he rendered most effectual and timely aid, arriving by a hasty march and attacking the Russian army, which was overpowering our regiments by the force of numbers. Lord Raglan wrote to the War Minister on this occasion, “I am proud of the opportunity of paying a tribute of admiration to the distinguished conduct of General Bosquet.” In order to mark its service of his high merits, the British Parliament voted its thanks to General Bosquet in a special resolution.

BOTTA, PAUL-ÉMILE, a celebrated French Archæologist and Traveller, is the son of M. Botta, the historian of Assyria. Whilst yet a youth he undertook a voyage round the world. He remained for some time on the western coast of America, where he employed himself with great diligence in making collections.

-nal history. In 1830 he visited Egypt, where he entered the
 -rye of Mehemet Ali as a physician, and in this capacity accom-
 -ed the Egyptian expedition to Sennaar. Here he completed a
 -important zoological collection, with which he returned to
 -in 1831. The French Government then appointed him
 -at Alexandria, from which place he made a journey to
 -the results of which were published in his "Relation d'un
 -dans l'Yemen, entrepris 1837 pour le Muséum d'Histoire
 -de Paris" (1844). The Government then appointed him
 -Agent at Mosul, and at this place, through the suggestions
 -Mohl, a German orientalist, then resident at Paris, he
 -ed a series of the most astonishing discoveries. The
 -ribbish along the banks of the Tigris, and the local and
 -traditions, led to the conjecture that monuments of Assy-
 -would be found here. In the spring of 1843, Botta
 -excavations, at first with trifling results; yet the "Asiatic
 -for July of the same year contains a communication of
 -discoveries; and this periodical continued to furnish
 -of Botta's activity, until finally it contained accurate
 -of extremely difficult researches in the Assyrian cuneated
 -a supplement, entitled "Mémoire de l'Ecriture Cunéi-
 -Assyrienne" (1848). The French Government took a deep
 -in the enterprise. Flaudin, a practised designer, was sent
 -to sketch the crumbling sculptures in alabaster, and
 -scholars and members of the Academy, among
 -Lacépède, Letronne, Lenormant, Mohl, Burnouf,
 -Ingres, and Lebas, were commissioned to pre-
 -an elegant archæological work, under the
 -of Botta. This work, entitled "Monuments de
 -et décrit par B., mesuré et dessiné par Flaudin,"
 -published in five large folio volumes, the first two
 -the plates of architecture and sculpture, the third
 -the inscriptions, and the fifth the text. The "Inscrip-
 -à Khorsabad" (1848), are a cheaper edition of
 -contained in the larger work. Such of the crum-
 -as could be preserved were sent down the Tigris
 -and carefully shipped to Paris, where measures have been
 -to place them in the Louvre. After all the difficulties which
 -to overcome, among which the fanaticism of the Moham-
 -by no means the least, it was easy for Rouet, his suc-
 -of Mosul, to make further discoveries. In
 -of result he was far surpassed by our own country-
 -Larab, to whom he suggested the enterprise. Yet the
 -of having laid the foundation of Assyrian archæology,
 -and importance of which had only been previously con-
 -will assuredly be assigned to Botta.

BOURQUENEY, M. DE, Ambassador of France at the court
 - and Plenipotentiary at the Vienna Congress of March
 - M. de Bourqueneuy commenced his diplomatic career as

third Secretary of Embassy at Rome when Chateaubriand was ambassador there. After the Revolution of 1830 he returned to Paris and was appointed a sous-chef in the section of "La Direction Politique," in the ministry for Foreign Affairs. There he acquired a thorough knowledge of the details of diplomatic business. In 1834 he went to London with General Sebastiani, as second secretary, and subsequently succeeded M. de Bacourt as first secretary when that gentleman was appointed Minister at Washington. He remained first secretary in London under the embassies of M. Guizot and M. de St. Aulaire. When M. Guizot became Minister of Foreign Affairs, M. de Bourqueney was sent as Ambassador to Constantinople, where he remained up to the Revolution of February. He never served either under the Republic or the presidency of Louis-Napoleon. He was known for his Orleanist predilections up to the moment when, in March 1853, he was appointed Ambassador at Vienna by Napoleon III. He conducted the difficult negotiations which led through weary stages to the treaty of December 1854, by which the Emperor of Austria confirmed his alliance with the Emperor Napoleon against the Emperor of Russia, his former patron; and when, in the spring of 1855, it became necessary to empower the French ambassador at Vienna to meet MM. Gortschakoff and Titoff, the Russian envoys, Bourqueney was at first entrusted with the sole conduct of the negotiations on the part of France, every other power being represented in the Congress by two plenipotentiaries at one time. When the French Government saw reason to revise its decision, no less a person than M. Drouyn de Lhuys, Foreign Minister of the Empire, proceeded to his assistance. After 1830, and while General Sebastiani was minister, M. de Bourqueney was in the habit of writing leading articles on foreign politics in the "Journal des Débats."

BOWRING, SIR JOHN, K.B., Governor of Hong Kong, best known as an author by his political and literary writings. He was born at Exeter in 1792, and became in early life the political pupil of Jeremy Bentham, maintaining his master's principles for some years in the "Westminster Review," of which he became the editor. He also distinguished himself by an extraordinary knowledge of European literature, and gave the public a number of pleasant versions of poems, songs, and other productions, from the Russian, Servian, Polish, Magyar, Danish, Swedish, Frisian, Dutch, Esthonian, Spanish, Portuguese, and Icelandic. The University of Groningen, in Holland, conferred on him the degree of LL.D. Bowring early made the economics and literature of trade and commerce an especial study, and at various times had been commercial commissioner from this country to France, the States of the German Customs' Union, and the Levant; under Lord Grey's Government he was a Commissioner for investigating the Public Accounts. In 1849 he was appointed British Consul at Hong Kong and Superintendent of Trade in China, and subsequently acted as plenipotentiary in that country. He returned to England

and in 1833, and in the following year received the honour of Knighthood and the Governorship of Hong Kong, which he now held with the chief military and naval power. He sat in Parliament from 1835 to 1837, and again from 1841 to 1849.

BRANDE, WILLIAM THOMAS, Experimental Chemist and lecturer, and writer on chemical subjects, born 1780, was long the assistant of Sir Humphry Davy, whom he succeeded in the professorial chair at the Royal Institution. His chief works are "A Manual of Chemistry," and his "Dictionary of Literature, Science and Art;" both noticeable rather for careful statement of what has been done by others than for any display of original research or brilliant genius.

BRAVO-MURILLO, JUAN, late President of the Spanish Senate, was born at Frejunal de la Sierra, in the province of Zamora, in June 1803. "His parents (says one of his biographers) being at moderate circumstances, he was destined for the church, and studied theology at Sevilla and Salamanca. Aversion to his profession, however, induced him afterwards to apply himself to the study of law. In 1825 he entered the College of Advocates at Sevilla. A logical mind, dialectic practice, and great oratorical powers gave him celebrity among the collegians. His reputation was increased by his able defence of Colonel Bernardo Martel, who, in 1831, was involved in a conspiracy of the Liberals, and accused of high treason. This circumstance, after the death of Ferdinand VII., induced Garelly, the minister of justice, to tender him the place of Attorney-general at Cáceres, in the tribunal of Extremadura. Although his already important practice was a quicker way to fortune, he accepted the proposal, as it opened the way to a wider circle of political activity. Bravo administered his office with a view to a practical and moderate progress. When, however, the Radical Progressionist party came to the helm, in 1835, the new minister of justice, Gomez Becerra, was dissatisfied with him, and sought to remove him from his place at Cáceres to a similar one at Madrid. Bravo hereupon took his dismissal, and entered again upon the duties of an advocate. He now chose Madrid for the theatre of his activity, being led thereto by the plan of publishing, for the first time in Spain, a legal magazine. With his friend, the Marquis Pidal (prime-minister in 1847), he undertook, in 1836, the editing of the 'Boletin de Jurisprudencia.' These practical and literary labours were interrupted for a short time while Bravo was called to fill the office of Secretary in the department of State under the Isturitz ministry. In three months, however, this ministry was dissolved by the revolution of La Granja, and Bravo immediately resigned his place, with the resolution never again to be entangled with politics. Again he earnestly devoted himself to Madrid to the business of an advocate. In the meantime, his editorial engagements led him back again to the political field; and with Donoso Cortés, Gonzales Llanos, and Dionysius Galiano,

he became one of the most active co-labourers in founding and conducting the journal 'El Porvenir,' which combated the extravagances of the party at the head of the Government with great boldness and ability. In 1837 the province of Sevilla elected him to the Cortes, and he was even tendered the place of Minister of Justice in the Ofalia ministry, but declined. After the dissolution of the Cortes, which soon followed, Bravo was not again chosen as a moderate. With Donoso Cortés and Alcalá Galiano, he now published the 'Piloto' newspaper, in which they again combated the ruling party. In the meantime the Cortes was newly dissolved and in 1840 was reopened by the election of moderates, among whom Bravo was elected from the province of Avila. In this Cortes besides interesting himself in judicial matters, he also took an active part in political questions. The courage with which Bravo had advocated moderate reform procured him the confidence of the Conservative party. When the Revolution of September, 1846 broke out, Bravo was arrested, as the leader of the Moderados. He fled to the Basque provinces, and then over the Pyrenees to Bayonne, where he received the news of his banishment and his recall by the Provisional Government almost at the same time. After a short residence in Paris he returned to Madrid, in order to devote himself exclusively to his profession. In 1847 he received the office of Minister of Justice in the transition cabinet of the Duke of Sotomayor, but resigned when Pacheco took the head of the government. In November of the same year, at the formation of the new cabinet, he entered it as Minister of Trade and of Public Instruction. In 1849-50 he was Minister of Finance and in 1851, after the return of the Duke of Valencia (Narvaez), he was charged with the formation of a new cabinet, being himself at its head." In the spring of 1853 his cabinet fell, and was succeeded by that of General Lersundi.

BRAZIL, DOM PEDRO II., EMPEROR OF, is the son of Dom Pedro I., of Braganza and Bourbon, and of Leopoldine, the Archduchess of Austria. He is the legitimate descendant of the three great royal houses in Europe,—Braganza, Bourbon, and Hapsburg, and was proclaimed upon the abdication of his father at the age of five years and some months. The government was administered by a Council of Regency, and next by one regent and so truly had statesmen of every political shade the good of their country and the rights of the Prince at heart, that during this critical period from 1831 to 1835, Brazil preserved its constitution. The young Emperor was educated with great care; his two sisters—Donna Januaria, married to the Count of Aquila, brother of the King of Naples; and Donna Francisca, married to the Prince Joinville—shared with equal ardour his bright and varied studies. In July, 1840, Dom Pedro II. was, although he had not yet attained his majority, declared by the Chambers to be of age, and assumed the sovereign power when not quite fifteen. In 1843 his Imperial Majesty was married to the Princess Theresa Christina Ma

son of the King of Naples; from which union were born two sons, who died young, and two princesses. Dom Pedro is tall and stout, is an expert horseman, and delights in athletic exercises. When at Rio, he is constantly in public: he receives twice a week his subjects and foreigners; he is very courteous in his manners; and he writes and speaks fluently English, French, German, Spanish, and Italian. He is strongly attached to literature, and often presides at the sittings of the Historical and Geographical Institute of Rio. He liberally patronises industrial enterprises, by encouraging public works, and perfecting the navigation of rivers. But his great object of humanity and policy has been his bold attack on the national prejudice of the necessity of retaining black slaves, which he has entirely overcome. The traffic has been definitively suppressed in Brazil; and the people have accepted the Imperial policy, which has for its motto, "No more slaves—European colonization!" This policy of the Emperor and the Brazilian Chambers was not only to decree the suppression of the traffic, but to open up to the agriculturists the means and means by which they should dispense with black labour. This was done by attracting European colonists to Brazil; encouraging the settlement of small colonies; and the landed proprietors throughout the empire now prefer European labour. To conclude, the young Emperor is characterized by his good sense, prudence, sagacity, and firmness: no one, not even his most eminent counsellors, is more thoroughly informed of the secrets of policy in international questions, as well as in domestic party created by the constitutional mechanism. No one has studied more or knows better the working of the administration in its minutest details.

BREWSTER, SIR DAVID, LL.D. and K.H., an Experimental Physicist and Public Writer, was born at Jedburgh, December 3, 1800. He was educated for the Church of Scotland, of which he became a licentiate; and in 1800 he received the honorary degree of M.A. from the University of Edinburgh. While studying at the University, Mr. Brewster enjoyed the friendship of Robison, who held the chair of Natural Philosophy; Playfair, professor of Mathematics; and Dugald Stewart that of Moral Philosophy. In 1806 he undertook the editorship of the "Edinburgh Encyclopedia," which was only finished in 1830. In 1807 he received the honorary degree of LL.D. from the University of Aberdeen, and in 1808 was elected a Fellow of the Royal Society of Edinburgh. Between 1801 and 1812, Dr. Brewster devoted his attention chiefly to the study of Optics; and the results were published in a treatise on "New Philosophical Instruments," in 1813. In 1811, in writing the article "Burning Instruments" in the "Edinburgh Encyclopædia," he was led (from the proposal of Buffon on burning a lens of great diameter out of a single piece of glass) to the proposal, he justly observes, practicably im-

possible), to suggest the construction of a lens out of zones of glass, each of which might be built up of several circular segments and thus form an apparatus for the illumination of light-houses of unequalled power. This beautiful invention was afterwards more fully developed by him in the "Edinburgh Transactions." In 1815 Dr. Brewster received the Copley Medal of the Royal Society for one of his discoveries in optical science; and soon afterwards was admitted a Fellow of that body. In 1816 the Institute of France adjudged to him half of the physical prize of 3000 francs awarded for two of the most important discoveries made in Europe, in any branch of science, during the two preceding years; and in 1819 Dr. Brewster received from the Royal Society the Rumford gold and silver medals, for his discoveries on the polarization of light. In 1816 he invented the kaleidoscope, the patent right of which was evaded, so that the inventor gained little beyond fame, though the large sale of the instrument must have produced considerable profit. In 1819 he, in conjunction with Professor Jameson, established the "Edinburgh Philosophical Journal," and subsequently commenced the "Edinburgh Journal of Science," of which sixteen volumes appeared. In 1825 the Institute of France elected Dr. Brewster a corresponding member; and he has received the same honour from the Royal Academies of Russia, Prussia, Sweden, and Denmark. In 1831 he proposed the meeting at York, which led to the establishment of the British Association for the Advancement of Science: to this event the noble President, the Marquis of Northampton, gracefully referred at the meeting of the British Association, held at Swansea, 1848. In 1831 Dr. Brewster received the decoration of the Hanoverian Guelphic Order; and in 1832 the honour of Knighthood from William IV. Sir David Brewster has edited and written various works, besides contributing largely to the "Edinburgh Review," the "Transactions of the British Association," and other scientific societies, and the "North British Review." Among his more popular works are a "Treatise on the Kaleidoscope;" a treatise on Optics; "Letters on Natural Magic," and a "Life of Sir Isaac Newton." He has also recently published, "More Worlds than One," in reply to Professor Whewell's "Plurality of Worlds." Sir David Brewster is likewise one of the Editors of the "London and Edinburgh Philosophical Magazine." The following gratifying intelligence of an additional honorary distinction conferred upon the distinguished philosopher appeared in "La Presse"—"At the sitting of the Academy of Sciences at Paris, on the 20th January, 1849, Sir David was elected one of the eight Foreign Associate Members of the National Institute of France, vacant by the death of the celebrated chemist, M. Berzelius. This honour, conferred by the most illustrious philosophers of Europe and of the whole world, is conferred by the Academy only after a rigorous examination of the scientific claims of the candidates, who are proposed to the Institute by a commission of five members, of which Arago was on this, as on former occasions, the reporter."

friends of the other candidates withdrew their pretensions, in order to allow justice to be done to the merits of the illustrious Scotch philosopher. The eight associate members of the Institute are generally regarded as the eight greatest celebrities in the learned world." Dr. Brewster enjoys a pension of 300*l.* a-year. He was married to a daughter of the celebrated Macpherson, translator of "Ossian;" and by her, who is now dead, had several children.

BRIGHT, JOHN, who has sat in Parliament for Manchester since 1847, is the son of John Bright, Esq. of Greenbank, near Rochdale, and was born in 1811. He is largely engaged in trade, and is of the firm of John Bright and Brothers, cotton-spinners and manufacturers, of Rochdale. Mr. Bright may be said to have first distinguished himself in political life by his hostility to the Corn-Laws, the worst evils of which, it was asserted, were felt in the manufacturing districts. Hence Mr. Bright became one of the ablest members of the Anti-Corn-Law League, which sprung from an Association formed in 1838 to obtain the repeal of the obnoxious statutes. It was not, however, until the League visited London, and began its system of "Tours" into the agricultural districts, that Mr. Bright became extensively identified with the proceedings of the body: his speeches at the Drury Lane Theatre meetings were circulated all over the kingdom, and insured him great attention at the provincial gatherings of farmers; and his earnest and impassioned manner of dealing with facts and figures told well with such audiences. He also greatly distinguished himself by his activity in organising the bazaars held in aid of the League; at Manchester in 1842, and in Covent Garden Theatre in 1845. Nearly two years previously, in April 1843, he unsuccessfully contested the representation of the city of Durham, for which he again stood in July following, and was returned; and he continued to sit for Conservative Durham until 1847, when he was first returned for Manchester. His contests for Durham were costly, but his expenses were defrayed by subscription among the friends of the Anti-Corn-Law League; in his speech on his return he professed to throw aside party considerations altogether, and to support measures of improvement from whatever party they might come. He made his maiden speech in Parliament on the motion of Mr. Ewart for extending the principles of Free Trade, August 7th, 1843; and in the same month he opposed the Slave-Trade-Suppression Bill, as calculated to inflict a serious injury on the commerce of the country connected with the regions to which the bill applied. Mr. Bright speaks well: his voice is good, his enunciation distinct, and his delivery is free from any unpleasant peculiarity or mannerism; and it tells something of his cast of mind to find him occasionally in his speeches quoting from Shelley and Wordsworth. He is unquestionably a powerful supporter of all measures for the enlightenment of the people, and a staunch advocate of the reform of administrative abuses; but his hard-hitting assertions of

his views are sometimes dealt forth somewhat indiscreetly, so as to damage the cause they are intended to support. Mr. Bright has intrepidly opposed the policy of the war with Russia, and was one of "the meeting representing the Religious Society of Friends, commonly called Quakers," by whom a deputation was despatched to the Emperor Nicholas in 1854, to urge upon him "the maintenance of peace as the true policy, as well as the manifest duty of a Christian government." By thus upholding a testimony against all war, Mr. Bright has incurred the violent censure of a numerous body of his constituents at Manchester, whilst he is supported in his views by a large number of the most influential leaders of "the Manchester party." Among the measures of improvement not yet effected is the Ballot, of which he is an able advocate. Mr. Bright married the daughter of Jonathan Priestman Esq., of Newcastle-upon-Tyne; she died in 1841. In 1847 he married, secondly, the eldest daughter of W. Leatham, Esq. of Wakefield, York.

BRODIE, SIR BENJAMIN COLLINS, BART., Surgeon and Surgical Writer, son of a Wiltshire clergyman, was born 1783, and studying under Sir Everard Home, worked hard, and became the surgeon's successor at St. George's Hospital, and ultimately at the College of Surgeons. Sir B. Brodie is Serjeant-Surgeon to the Queen; he held a like appointment under two previous monarchs. His profession is said to produce him 10,000*l.* a-year; but he has found time to contribute one or two practical books to the literature of his profession.

BROOKE, SIR JAMES, Rajah of Sarawak and Governor of Labuan, was born in 1803, at Coombe Grove, near Bath. He descended from a highly-respectable Somersetshire family, one of whose members was Lord Mayor of London in the reign of Charles II. His father held a civil appointment in the service of the East India Company, and so soon as his son was of an age to enter upon the business of life procured for him a cadetship in India. He had hardly arrived at his post when he was despatched to take part in the Burmese War, and whilst assisting at the storming of a stockade received a severe gun-shot wound in his chest. The casualty was of so serious a character as to render his return home on furlough indispensable. So soon as he was comparatively convalescent, he set out on a tour through France, Switzerland, and Italy. Imbued from his youth with the spirit of adventure, he was little likely to linger for any undue period from his duty. As soon as therefore, as his health permitted, he set sail for India; but the vessel in which he embarked having been wrecked on the coast of the Isle of Wight, he was compelled to return, and seek fresh means of conveyance to his destination. On reaching India in 1830, Mr. Brooke discovered that, owing to the delay occasioned by his shipwreck, his leave of absence had expired; and that he had consequently, according to the strict regulations of the service

and his appointment. Rather than go through the complicated
 matters by which alone he might have secured his reinstatement,
 he chose the alternative of resigning the post, and in 1830
 sailed from Calcutta to China. "In this voyage," says Capt.
 Brooke, in his "Expedition to Borneo," "while going up the
 coast, he saw for the first time the islands of the Asiatic
 Archipelago—lands of vast importance and unparalleled beauty
 neglected and almost unknown. He inquired and read,
 and became convinced that Borneo and the Eastern Isles afforded
 a field for enterprise and research. To carry to the Malay
 Archipelago the terror of the European merchant-vessel, the
 voice of civilisation; to suppress piracy, and extirpate the slave-
 trade, became his humane and generous objects; and from that
 time the energies of his powerful mind were devoted to this one
 end. Often foiled, often disappointed, with a perseverance
 which defied all obstacle, he was not until 1838
 able to set sail from England on his darling project. On
 the death of his father, Mr. Brooke succeeded to a handsome
 inheritance, and was thus enabled to attempt at once the realisa-
 tion of his project. His first care was to purchase a yacht from
 the Royal Squadron, enjoying the same privileges, as to flags
 and treatment, as a man-of-war. The *Royalist* was a fast sailer,
 every respect capacitated for her voyage. To test her sea
 worth, and make experiments on the hardihood of his men,
 he first commenced a trip through the waters of the Medi-
 terranean, and visited many of those shores that are populous
 with historical associations. He coasted Spain, passed Malta and
 the lovely islands of the blue *Ægean* Sea—the oases
 of the East—and reached the mouth of the Dardanelles, with the
 intention of visiting Constantinople. But the plague had closed
 the city against him, and he leisurely made his voyage home-
 ward. Having tested the power of his yacht and the capabilities of
 his crew, some twenty in number, he conceived the apparently
 wild idea of attempting the extirpation of the formidable
 scourge of piracy which existed in the Indian Archipelago, and
 devoted himself to this difficult task with all the energy of which
 he was capable. On the 27th of October, 1838, the *Royalist*
 sailed from England, and reached Singapore after a protracted but
 successful voyage, when he soon afterwards sailed for Sarawak.
 On his arrival in that country he found its ruler, Muda Hassim,
 engaged in the suppression of one of the rebellions which are of
 frequent occurrence in uncivilised countries. Well disposed
 towards the English, and not unwilling to profit by any casual aid
 in the emergency in which he found himself, Muda appealed to
 Brooke for his co-operation,—a request with which he complied
 cheerfully; and, turning "what some deem danger to delight," he
 set to work, after his return from a visit to the Island of Celebes,
 with his characteristic zeal and activity. The whole province was
 in a state of insurrection. Tribe after tribe was gathering in quick
 numbers from the interior. The return of Mr. Brooke at this crisis

was hailed with satisfaction by Muda Hassim and his adherents and, as a compensation for his aid, the Rajah, who was about to proceed to Borneo as the Sultan's ameer, or first minister, offered to appoint him as his successor. We shall not enter in this place upon the controversy which has arisen as to the means by which this cession was obtained. Some aver that it was altogether enforced; others, that it was entirely voluntary; the politic office of a man who bestows that upon another which he does not possess the power to retain himself. The friends of Mr. Brooke declare that the proposal was perfectly spontaneous, "and was pressed with constant solicitation, and in spite of repeated objections." However this may have been, the proposal seems to have been accepted with but little hesitation, and the assistance, and that of a very active kind, afforded. The belligerents were soon arrayed against each other, the rebels holding the upper part of the river, and closing the interior against all attempts to enter it. Mr. Brooke, with his little band of followers, after stipulating for mercy to the captured rebels, placed himself in command of the expedition, and succeeded in leading the Rajah's army to the attack. A few volleys from the European guns settled the fate of the day, and the insurgents surrendered at discretion. Muda and his master acted with good faith, and Mr. Brooke was duly installed in the promised rank. The newly-acquired territory was swampy, and ill cultivated by the native Dyaks, who varied their occupations as tillers of the land by excursions among neighbouring villages in search of heads. To rob the native of a neighbouring town of his cranium was regarded in much the same light as the capture of a scalp would be amongst North American savages. Brooke saw at once that no improvement could arise whilst murder was regarded not only as a pleasant amusement, but to some extent as a religious duty. He declared head-hunting a crime punishable by death to the offender. With some trouble and much risk he succeeded to a great extent in effecting a reform. Attacking at the same time another custom of the country—that of piracy—he acted with such vigour, that a class of well-meaning people at home, stimulated to some extent by the private enemies of Brooke, accused him of wholesale butchery. The fact that the destruction of pirates was rewarded by the English executive by the payment of what was called "head-money," justly increased the outcry. To kill one pirate entitled the crew of a ship-of-war to a certain prize in money—kill a thousand entitled them to a thousand times the amount. This premium on blood was wrong in principle, and the result was a wholesale slaughter of Eastern pirates by order of Brooke led to the very proper abolition of the custom of paying this "head-money." The men who are entitled to the praise of securing the amelioration of our naval system were not, however, content with the triumph of the just portion of their case; they sought to brand the Rajah as a cruel and greedy adventurer: in which attempt they fortunately failed. It is surely unjust to test the acts of a man living and ruling amongst savages by the strict usages

him acknowledged and found most proper for guidance in civilised communities. When, after his first appointment, Rajah Brooke returned to see his friends, and to take counsel in England, he was welcomed very warmly. He was made Knight of the Bath; invited to dine with the Queen; found his portrait in the print-shops, and his biography in the magazines and newspapers. The Government raised his position; ordered a man-of-war to take him to the seat of his new settlement; gave him the title of Governor of Sabah, with a salary of 1500*l.* a-year, with an extra 500*l.* a-year as a regular agent, and afforded him the services of a deputy-governor, also on a good salary; the hope being, that the result of all this would be the opening of a new emporium for British trade. Like most conquerors, the new Rajah had gone much further than he had originally intended to go; but whatever may be thought of his grand *battle* of pirates, it can hardly be denied that he has proved on the whole a benefactor to the unfortunate race over which he presides. He compiled a code of laws, secured trade to be free, all roads to be open, all property inviolate, instituted a current coinage, and explained his plan of revenue. The antimony ore he reserved to himself, but compelled none to work the mines against their will. At once entering on a regular mode of life, he freely admitted the people into his presence at all hours of the day. Rising early, it was his practice to quit his private residence for the public walk on the opposite bank of the river, where he held his *darbar*, receiving all who chose to make complaints or offer suggestions. Here he remained till mid-day, when he returned to his bungalow, and passed several hours in his library, enjoying the company of his old friends of classic Greece and Rome, and retired early to rest. The people soon became deeply attached to their new ruler, who at once showed himself to be merciful where mercy would not outrage justice; and he rigorously suppressed head-hunting and marauding expeditions, which gradually became extinct in the province. The Rajah is said to enjoy, in addition to his pay, a source of income arising from the sale of the antimony found in his new dominions. In 1882, the question of the slaughter of the pirates was again brought prominently under public notice, and the subject was much debated whether Sir J. Brooke could properly be at the same time the Governor of an English Colony—a partner in trading concerns in that colony—and a Rajah under the rule of an Eastern semi-hereditary potentate.

BROOKS, SHIRLEY, Dramatic Author, and contributor to newspapers and magazines, was born in 1816, and originally intended for the profession of the law; which, however, he soon gave up for that of literature and journalism. It is as a dramatist that Mr. Brooks is best known. He began during the Keeley management of the Lyceum with a little piece called "The Lowther Arcade;" which followed "Our New Governess," an amusing three-act comedy, distinct with fun and character, and which has frequently

been revived; "Honours and Riches," also a lively three-act piece and "The Creole," an interesting serious drama. Mr. Brooks was the "Commissioner" despatched to Southern Russia, Turkey, and Egypt, by the "Morning Chronicle," in the prosecution of its inquiry into foreign as well as British "Labour and the Poor." A condensation of his contributions has recently been published in "The Russians of the South." Mr. Brooks has also published a novel, entitled "Aspen Court," which originally appeared in "Bentley's Miscellany."

BROUGHAM, HENRY, LORD, Lawyer, Philosopher, Statesman, and Critic, was born in Sept. 1778, in a house at the north-west corner of St. Andrew Square, Edinburgh (not in the East of Buchan's house). His father was residing in Edinburgh when he became acquainted with Eleanor Syme, daughter of a deceased clergyman of the Church of Scotland, and niece of Robertson the historian. The elder Brougham was rather a weak man, but the mother was a woman of talent and delightful character. Henry Brougham, the future Chancellor, received his preliminary education at the High School of his native city, and at the early age of fifteen entered its University. He devoted himself with great ardour to the study of mathematics, and in about a year after his matriculation transmitted to the Royal Society a paper on an optical subject, which that learned body adjudged worthy of a place in its "Transactions." This paper was succeeded by others, the originality of which touched the sensibilities of some foreign professors with whom Brougham was speedily involved in a Latin correspondence. After leaving the University he made a tour in Holland and Prussia, and on his return settled down for a time in Edinburgh, practising till 1807 at the Scottish bar, and enlivening his leisure by debating at the Speculative Society. In Edinburgh, in his early life, Brougham was the companion of Jeffrey, Murray, Cockburn, Thomas Thompson, and other young men of talent; but it is said that all of these men, though admiring his abilities and singular acquirements, made the remark among themselves, that there was something erratic about him—he was not to be trusted. He wrote in the "Edinburgh Review" from the beginning; but the other contributors did not at first take him into their secrets, from dread of his indiscretion. When that work had been published about five years, Brougham wrote to Mr. Constable for a thousand pounds, telling him he would quickly clear it off by writing for the "Review." In making good this promise, he actually wrote all excepting two articles of a particular number in vol. xvii. The papers included many subjects, one of them treating on the *operation of lithotomy*. Brougham, like two other Lords Chancellor, made a runaway marriage. His nuptials were solemnised in the inn at Coldstream. While thus nerving himself for greater efforts, he was called to appear before the House of Lords as one of the counsel for Lady Essex Ker, whose family laid claim to the dukedom of Roxburghe. In 1807 he permanently left his native city, was shortly called to

by the Society of Lincoln's Inn, and soon acquired a considerable practice. In 1810 he addressed the House of Lords for many days as counsel for a body of English merchants, who were distressed by the orders in council issued in retaliation of Napoleon's Berlin and Milan decrees. The damage done to commerce by insisting upon the validity of a mere paper blockade, which only the Emperor resented, was insisted on with all the force of Mr. Brougham's eloquent oratory, but the orders were not rescinded until after the death of the minister, Mr. Perceval. In 1810 he entered Parliament for the borough of Camelford, then under the influence of the Earl of Darlington, and attached himself to the Whig opposition. Here his energies were directed chiefly to the Slavery question, in concert with Clarkson, Wilberforce, and Grenville Sharpe. In 1812 Parliament was dissolved, and on contesting Liverpool with Mr. Canning he lost the election; an event which excluded him from Parliament for four years, during which the lately-repealed laws were enacted. In 1816 the Earl of Darlington's influence was employed to procure him a seat in Parliament; this time for the borough of Winchelsea. It has been remarked that the effect of this mode of translation to the legislature, compared with the difficulties and uncertainties of popular contests, made Brougham anxious to retain a few rotten parliamentary boroughs. He now boldly opposed the dragooning policy pursued by ministers towards the thousands of hungry men and women who met at Manchester and elsewhere to protest against the starvation-laws lately enacted; but the Six Acts passed, and the voice of discontent was for the moment stifled. In 1820 an event took place which was to place Mr. Brougham in a position more conspicuous, and by far more important, than any he had yet occupied. The arrival in England of the Duke of Brunswick to claim the crown which was the right of the King of England's wife, led to the well-known proceedings before the House of Lords. During the troubles which befell this person, the Princess of Wales, Mr. Brougham had been her advocate, and now, appointed her majesty's attorney-general, it was for him to vindicate her before the highest court of the realm. The result was of the highest degree favourable to his audacious advocacy. In the end the object of the king was defeated, and Mr. Brougham became a popular idol. In 1820 he introduced a bill to provide gratuitous education for the poor of England and Wales, the provisions of which have not yet ceased to excite discussion. From the general power they were designed to give to the vestrymen of every parish in the direction of free education. Mr. Brougham's relations with the clergy assumed a very different aspect the following year, when he was called to defend Ambrose St. John, proprietor of the "Durham Chronicle," in an action of libel brought by the ministers of the Established Church in that city on their refusal to allow the church bells to be tolled on the death of Caroline. In his memorable speech on that occasion he brought the bitterest irony, and the most cutting gibes, to the aid of aggravating the luxury, profusion, and worldliness of the

hierarchy. If Williams had been innocent of the libel, to have procured the delivery of this terrible speech in a snug cathedral town would have been enough to secure his condemnation: the verdict went against him, but he was never called up to receive judgment. Two years later, the facility of language and power of invective which had so often won him plaudits, was near bringing him into position personally and extremely unpleasant. Believing when Mr. Canning took office, in the spring of 1823, that he had resolved to sacrifice the cause of Catholic Emancipation, which he had always maintained in words, Mr. Brougham accused him in the House, on the 17th of April, of the "most monstrous truckling office that the whole history of political tergiversation could present." At the sound of these words, Canning started to his feet, and cried, "It is false!" A dead calm ensued, which lasted some seconds. The Speaker interposed his authority, the words were retracted, and the quarrel was accommodated, and both gentlemen were declared to have acted magnanimously, and they shortly after shook hands in the House. From this period until the Reform crisis of 1830, Mr. Brougham laboured energetically and fearlessly in the cause of freedom and the rights of conscience; whether these were represented for the hour by the case of Smith of Demerara, the disfranchised Catholics of Ireland, or the victims of the Holy Alliance. In the struggle of 1829, which ended in the Emancipation Act, he bore an honourable part; and in supporting the Wellington and Peel cabinet on this question increased still more his popularity. He was member for Knaresborough when the death of George IV. occasioned a general election, and he had sufficient confidence in public opinion to offer himself to the constituency of the great county of York, a body whose favours it had been the custom to believe were not to be accorded to any candidate not boasting high birth or splendid connexions. He was triumphantly returned to Parliament, and took his seat the acknowledged chief of the Liberal party in the House of Commons. Flushed with success, he vigorously attacked the Cabinet, and while indignantly alluding to the Duke of Wellington's imprudent declaration against all reform, he exclaimed, pointing to Sir Robert Peel, "Him, we scorn not—it is you we scorn; you, his mean, base, fawning parasite!" The calm and ordinarily imperturbable baronet leaped from his seat, and in his most contemptuous manner angrily declared that he was the parasite of no man living. The scene which followed was terminated in the usual parliamentary manner. The Tory ministry was very shortly compelled to resign. In the new Whig cabinet which was to succeed, it was naturally expected that Brougham would find a place; the country was, therefore, somewhat mystified by several eager and uncalled-for declarations on his part, that under no circumstances would he take office, and particularly by his notice in the House, that he would bring on the Reform motion whoever might be in power. It was asserted by his enemies that he was standing out for terms. His name, however, appeared duly in the ministerial list, and great was the astonishment.

of Whigs and Tories that the Tribune of the people had
 become at once a lord and a chancellor. The appointment was
 carried with vigour by Mr. Croker, and as heartily defended by Sir
 James Macintosh and Mr. Macaulay. In the Upper House his
 appearance was dreaded as the spectre of revolution. For a long
 time his lordship took no pains to conciliate these fears, but rather
 seemed to wanton in the indulgence of an oratory so strange as his
 in that of the House of Lords. In the debates on the Reform
 Bill found many opportunities of inveighing against prescription
 in a sentence every member of which sat in his place by heredi-
 tary privilege; and it was with peculiar unction he told them more
 than once that the aristocracy, with all their castles, manors, rights
 of common and rights of chase, and their broad acres, reckoned at
 their purchase, "were not for a moment to be weighed against
 the life classes of England." This declaration is the key to his
 career; it was the power of the middle classes rather than
 the aristocracy that he sought to raise. During and after the passing
 of the Reform Bill he exerted himself to realise a favourite idea of
 law reform, which has since found its nearest expression in the
 Courts now established. In June, 1830, he introduced a
 bill, the declared object of which was to bring justice home to
 every man's door at all times of the year, by the establishment of
 courts. By this bill the law of arbitration was to be extended,
 a general local jurisdiction established, and courts of reconciliation
 were to be introduced. A succession of bills for reforming pro-
 cedure in bankruptcy were afterwards introduced by Brougham,
 and from his accession to the House of Lords to the last session of
 parliament he has laboured for the improvement of the law with a zeal
 and working enthusiasm. From 1830 to 1834 he shared the early
 popularity and subsequent discredit of the Whig cabinet, but in
 the Poor-Law debate drew upon himself a peculiar measure of
 notoriety by a frequent, minute, and evidently complacent itera-
 tion of the Malthusian doctrines embodied in the new bill, and was
 assailed with vigour and virulence by "The Times." He denounced
 in the most explicit terms all establishments offering a refuge and
 shelter to old age, because that is before all men; he thought
 of workhouses very well; dispensaries, perhaps, might be tolerable;
 but all hospitals were decidedly bad institutions. The energetic,
 aggressive policy pursued towards Ireland, and the prosecution
 and transportation of the Dorchester labourers, were defended by
 Brougham, and drew down much unpopularity upon the Whigs; and
 on the 12th of November, 1834, upon the death of Earl Spencer, the
 opportunity of the altered public feeling to dismiss the
 Whig cabinet. On the construction of the Melbourne cabinet
 Brougham was left out of the ministerial combination, and has never
 since served the Crown in the capacity of an adviser. His parlia-
 mentary career was henceforth one of desultory warfare; at one
 moment he was carrying confusion into the ranks of his old friends,
 the Whigs,—at another, attacking the close phalanx of the Tories.
 He several times brought forward the subject of the Corn-Laws, whose

iniquity he exposed with great power and fervency, and fought the battle of repeal with eagerness and irregularity to the last. The session of 1850 exhibited his lordship as the same eccentric, inscrutable speaker as ever. He both supported and attacked the Exhibition, deprecated the Commission of Inquiry into the state of the Universities of Oxford and Cambridge, and attacked with almost wild fury those who were seeking to abolish expensive sinecure appointments. Inconsistency is the first feature in the statesman's character, which the brilliancy of his talents only makes more apparent. He has written to depreciate the negro's capacity of civilisation, and yet toiled for years to procure his freedom. In 1816 he endorsed the Protectionist fallacy, and wailed over the ruin resulting to agriculture from an abundant harvest; in 1835 he was opposing the Corn-Laws, and in 1845 again inveighing against the League, and calling for the prosecution of its chief members. In 1823 he hurled the thunder of his eloquence upon Austria and Russia, "the eternal and implacable enemies of freedom," and in 1850 was praising their clemency, and even urging an alliance with the Czar. He is now the champion of aristocracies, but in 1830 sought to become a citizen of republican France. His literary and scientific labours can only be lightly sketched. Having, as we have seen, in boyhood enrolled his name with the *élite* of scientific writers, in 1802 he became a contributor to the "Edinburgh Review," then just started by Jeffrey and Sydney Smith, and contributed for many years some of the most pungent criticisms that have appeared in the renowned publication. In 1803 he published his treatise on the Colonial Policy of the European Powers, a brilliant performance, to which the progress of events has left but one utility, that of a waymark in the development of Brougham's opinions. In 1821 he took a very prominent part in the movement originated by Dr. Birkbeck for naturalising the Mechanics' Institutes in England, speaking and writing in their favour. He was the principal founder of the Society for the Diffusion of Useful Knowledge, and composed several of the treatises in the series, as well as articles for its "Penny Magazine," with a special view to the wants of the million. On his leaving office in 1834, he bethought himself of making a reputation in metaphysical as well as natural science, and undertook to illustrate and expand Paley's great work on Natural Theology, with less success than his talents had justified the world in expecting. He has further published "Lives of the Statesmen of the Reign of George III.," in which the affected dignity of the style is not sustained by the excellence of the matter; and also three or four volumes called "Political Philosophy," now generally forgotten. A volume called "Speeches at the Bar and in the Senate," belongs rather to oratory than literature. His lordship has also published a novel, which was suppressed after a few copies had been disposed of. His lordship, except during the sitting of Parliament, resides chiefly at Cannes, in the South of France, where he has a château.

BROWN, LIEUTENANT-GENERAL SIR GEORGE, K.C.

commanding the Light Division of the Eastern Army in the
 Peninsula, the third son of George Brown, Esq., of Linkwood,
 near Elgin, Scotland, was born in August 1790. He was edu-
 cated at the Royal Military College, at Great Marlow, and at
 Eton, entered the army as ensign in the 43d Foot,
 on the 23d January 1806, became lieutenant of that regiment on
 the 14th September following, and was present at the capture of
 Ciudad Rodrigo, in 1807. He served in the Peninsula from August
 1808 to 20th June, 1811, when he was promoted to a Captaincy of
 the 43d, in which regiment he continued to serve from that date
 till May 1814. He assisted at the passage of the Douro and the
 capture of Oporto, and at Talavera was severely wounded through
 the thighs. He was also in the action of the Light Division at
 the siege of Almeida, in that of Sabugal, and at the investment of
 Ciudad Rodrigo; and has a silver medal for Vimiera, Talavera, Busaco,
 Ciudad Rodrigo, San Sebastian, Nivelle, and Nive. At Busaco
 Sir George Brown was engaged in a hand-to-hand encounter with one
 of the enemy's staffs, whom, after a desperate conflict, he disabled by a
 cut-throat. He was at the storming of Badajoz, and accom-
 panied Sir De Lacy Evans in the forlorn hope of that siege. He
 took an active part in storming the heights of Castrillias, and
 at the latter affairs of Salamanca, Subjena de Morillo, Vittoria, the
 Nivelle, and Toulouze. He obtained his majority on
 the 20th May, 1814, and on the 29th September ensuing was breveted
 Lieutenant-Colonel, when he embarked in the expedition under
 Major-General Ross, and was present at the battle of Bladensburg,
 on the 24th August; in that battle he was slightly wounded in the
 head and severely in the groin. The Americans were, however,
 defeated with heavy loss. He was also present at the capture of Wash-
 ington. He became Lieutenant-Colonel of the Rifle Brigade on the
 1st February, 1824, full Colonel on the 6th May, 1831, and Major-
 General on the 23d November, 1841. In the same year he was ap-
 pointed Deputy-Adjutant-General, and in 1851, Adjutant-General
 of the Forces, an office which he resigned in consequence of a cabal
 appointment on the 12th December, 1853. From 1815 to 1854 General
 Brown's services were of the ordinary routine character. His ap-
 pointment to the post of Deputy-Adjutant-General by Lord Hill,
 and Adjutant-General by the Duke of Wellington, show that he
 enjoyed the confidence of those commanders, as his resignation of
 the latter appointment soon after Lord Hardinge had become
 Commander-in-Chief tends to show that his lordship had not the
 confidence of the General. When the British military expedition
 to the East was resolved on, Sir George, who three years before
 had become a Lieutenant-General, received the command of the
 Light Division of the Army, and in the spring of 1854 proceeded
 to Gallipoli, the first point in the Sultan's dominions occupied by
 the British, whence his corps subsequently removed to the neigh-
 bourhood of Varna. During the stay of the army in Turkey,
 Sir George's ability and zeal justified the reputation he had long
 enjoyed, and who could recall the scenes of the Peninsular

campaign ; but the attention of the public was chiefly struck by the rigour of certain regulations for the men about shaving which he at this time issued. Brown, who was a well-known disciplinarian, was at once set down as a mere martinet, and his appointment regarded by many as one more illustration of the unhappy indulgence of Peninsular preferences at the Horse Guards. In his sixty-sixth year, however, he was daily giving an example of energy to his younger comrades. The correspondents of the daily journals were unanimous in describing his great activity ; he was one of the earliest on horseback, often riding, through the heat and dust, forty miles a-day, and constantly caring for the welfare of his troops. While the Light Division was at Varna, complaints neither few nor weak were sent to England, that " Sir George Brown had stopped the porter ordered for the men by Lord Raglan." It has since been proved that Brown did no such thing, and that his men were porterless because the beverage was not on the spot, and supplies of more urgent necessity engrossed all the means of conveyance. A terrific encounter with the enemy was soon to place Brown's military qualities above cavil. The Light Division having left Turkey in the beginning of September, was called to take front rank in the attack of the Russian position on the heights behind the Alma. The general character of that battle is well known, and its leading features are presented in our sketch of Lord Raglan. The Light Division formed the British left ; on its right was the Second Division, led by General Evans, the old comrade of Brown in many an attack in the Peninsula ; and the First Division under the Duke of Cambridge, was assigned for its support. On the heights occupied by the Russians were crowned with redoubts and formidable batteries. The Light Division advanced to the passage of the river, which it effected in the immediate front of the enemy. The banks of the river itself were, from their rugged and broken nature, most serious obstacles ; and the vineyards, through which the troops had to pass, created additional impediments rendering every species of formation, under a galling fire, nearly impossibility. The division, however, advanced ; Sir George Brown conspicuous on a grey horse, rode in front of his division, urging them with voice and gesture. The struggle became terrific, and even critical, when Sir George suddenly disappeared, his horse having been shot under him. In a moment afterwards his troops saw him in front of a Russian battery, enveloped in a cloud of dust, and heard him shout, " Twenty-third, I'm right ! Be sure I'll remember you for this day." The division again resolutely advanced in face of a tornado of round and grape shot and musketry, and suffered immense loss. This, and the momentary paralysis caused by the fall of their commander, placed success for a moment in doubt. At this juncture the Duke of Cambridge brought his division, composed of Guards and Highlanders, into action ; the regiments of the Light Division gained time to reform ; the 33d time to claim with the Guards the capture of a gun ; and in a few minutes after were on the heights of Alma.

staying the flight of the Russian army. In this sanguinary encounter Brown's horse was pierced by eleven bullets—its rider was unscathed. Lord Raglan, in his despatch describing this day, said,—"The mode in which Lieutenant-General Sir George Brown started his division, under the most trying circumstances, demands my warmest approbation. The fire to which his division was subjected, and the difficulties he had to contend against, afford small proof that his best energies were applied to the successful discharge of his duties." The battle of Inkermann, fought Nov. 5th, has been called with propriety "a soldier's battle;" darkness and mist rendered impossible those combinations of movements by which military success is so greatly influenced, and made the fortune of the day to depend in an especial manner upon individual courage. At Inkermann, however, as the returns show, our generals bore their share of danger, and probably were more exposed than they would have been in a regular action. The Light Division was posted to the front of our position upon the first attack of the Russians. An eye-witness of the fighting has thus written,—"The day was uncertain and bloody. In the Light Division the 86th rushed into the front that they were surrounded and put into a state of confusion, when four companies of the 77th charged the Russians and relieved their comrades. The fight had not long continued ere it was evident that the Russians had received a severe loss to fire on all mounted officers. Sir George Brown was struck by a shot, which went through his arm and struck his side. He was regret his pale and sternly-composed face, as his body was borne by me on a litter, his white hair fluttering in the breeze, that I knew we had lost the services of a good soldier that day." His long and the strain of fatigue and privation on his constitution, rendered his temporary retirement from the camp a necessity, and he embarked for Malta. Early in 1855, however, he returned to command in the Crimea. Lieutenant-General Brown looks younger than he is. His physiognomy is studious and careful. He appears to be vigorous beyond his years. An officer of judgment or more chivalrous gallantry is not to be found in the British Army.

BROWN, HENRY KIRKE, an American Sculptor, was born in North Massachusetts, in 1814. He is the son of a farmer, and received the education of a farmer's boy, working in summer and studying in winter. At eighteen he went to Boston, and studied sculpture. It was by chance only that he became a sculptor. He modelled the head of a lady, merely for amusement, and was quite successful. The approbation it met with determined him to pursue that branch of art. To obtain means to visit Italy, he became a railroad engineer in the state of Illinois, but he gained no money, and suffered in health. By the aid of friends, inherent energy, and the success of his works in sculpture, he was able to pass several years in Italy. He studied there faithfully and profitably, and with the conviction that the true place for an artist is in his own

country, he left the conveniences of Italian artist-life, to find his subjects and to perfect them in the world of art at home. He settled at Brooklyn, where, having many commissions for monumental art, he perfected the casting of bronze, as a material better adapted to exposure than marble. To him is due the credit of having produced the first bronze statue ever made in America. Among his principal works in marble are the statue of "Hope," and the bas-reliefs of the "Hyades," and "Pleiades," and "The Four Seasons," besides busts of Bryant, Spenser, Nott, and other distinguished Americans. He has likewise produced in bronze a colossal statue of Dewitt Clinton, "The Angel of Retribution," etc.

BROWN, JOHN, D.D., an eminent Divine of the United Presbyterian Church of Scotland, and an admirable Biblical Critic, was born at Whitburn, Linlithgowshire, in 1785. His father was long minister of the church of Langrig, in that neighbourhood, and his grandfather was the celebrated John Brown of Haddington, author of "The Self-Interpreting Bible." After his university and other studies he was ordained, in 1806, to a church at Biggar, and while residing there he acquired the principal portion of the ample literary and theological knowledge for which he is so much distinguished. In 1821 he was translated, as successor to the Rev. Dr. Hall, to Rose Street Church, Edinburgh, where he attained great popularity; and on the death of that venerable clergyman, in November 1826, he succeeded him in Broughton Place Church, in the same city. In 1835 he became Professor of Exegetical Theology in connexion with the United Associate Synod, now the United Presbyterian Church, in which no one holds a higher position than Dr. Brown, either as pastor, professor, presbyter, critic, or author. He has published a great variety of religious and controversial works, among which his "Expository Discourses on the First Epistle of the Apostle Peter," 3 vols. 8vo. Edinburgh, are entitled to particular notice. On the Voluntary Church question he has issued a half-guinea volume, entitled "The Law of Christ respecting Civil Obedience, especially in the Payment of Tribute," with an Appendix and Notes.

BROWN, WILLIAM, M.P. for South Lancashire, is a native of Ballymena, county Antrim, and was born in 1784. He was educated at Catterick, near Richmond, Yorkshire. At about the age of sixteen he sailed with his parents for the United States of America; and began his commercial career in the counting-house of his father, in the linen-trade, at Baltimore. In a few years he became a partner with his father and brother. In 1809 he returned to England, and established a branch of the firm at Liverpool, now become a general merchant, and subsequently engaged in banking transactions of great extent. In 1825 Mr. Brown took an active part with Mr. Huskisson in reforming the management of the Liverpool Docks Estate. In 1844 he became a candidate for the representation of South Lancashire, upon the Anti-Corn-Law

League interest, when he was defeated by Mr. Entwistle, the reactionist candidate. This brought about the forty-shilling rebold agitation of the League. He was returned for South Lancashire in 1846, and again at the general election in 1847: he first spoke in Parliament on Lord John Russell's motion for the continued temporary suspension of the Corn and Navigation Laws. In 1850 Mr. Brown wrote in the "Pennsylvanian," Boston newspaper, a series of letters in defence of Free Trade, which attracted much attention. He is also an able advocate of the adoption of decimal coinage; reasoning upon its advantages in America in keeping accounts, making calculations, and the prevention of mistakes.

BROWNING, ROBERT, Poet, and the husband of a Poetess, was born at Camberwell in 1812, and was educated at the London University. He belongs to a class of writers who, with unquestioned powers of a high order, have never been popular with any considerable body of readers; for the very simple reason that they are seldom deemed it worth while to render themselves intelligible. His poems have been much praised by the "Examiner" and one or two other newspapers; but have been little read, and still less frequently understood. With a "select few," who take "*omne tuum pro magnifico*" for their motto, he is held in the highest estimation; but to many of the vulgar herd, who can understand neither, feel Shakspeare, and appreciate Milton, his poems are, comparatively speaking, a sealed book. Yet do they contain the strongest evidence of genius, and abound in conceptions which, had they been conveyed in the language of common sense, would long have produced a vivid impression on the public mind. His best acknowledged work, "Paracelsus," was published in 1836, and gained some eulogists, if but few readers. His "Pippa Passes" obtained more favour with the public. In 1837 Mr. Browning produced his "Strafford;" and everything that the genius of Macready could achieve to render it popular was done by his impersonation, in verse, of the hero. It was, nevertheless, a dead failure. "Sordello" was not more successful. Mr. Browning's next poem was somewhat better received, and deserved to be so. "The Blot in the Scutcheon" was brought out in 1843, at Drury Lane Theatre, but with no greater success than some of its predecessors. So much for his more ambitious poems. Some of his occasional pieces are not liable to the objection which attaches to his more elaborate writings, and he would, perhaps, scarcely thank us for enumerating them. Mr. Browning has published, in addition to the works already referred to, "King Viator and King Charles," "Dramatic Lyrics," "Return of the Druses," "Columbe's Birthday," "Dramatic Sketches," "The Soul Errand," etc.

BRUAT, VICE-ADMIRAL, Commander-in-Chief of the French Mediterranean squadron employed in the Black Sea, has held a succession of important employments. He has been governor of

two colonies, maritime prefect, chef-de-station, and commander-in-chief of the Ocean squadron. In 1854 he was appointed Commander of the second, called the Atlantic squadron, destined to act in the Black Sea, the waters of Gallipoli, and in the Levantine Archipelago; and had under him three ships of war of the first rank, five mixed of the third rank, and two steam corvettes. With these he joined Admiral Hamelin, as second in command. In December he succeeded his chief, to the great satisfaction of the entire squadron. In March, 1855, he received the military medal as a testimony of the approbation of his sovereign.

BRUCK, CHARLES-LOUIS, BARON VON, one of the most eminent of the modern school of Austrian statesmen, was born October 18, 1798, in the duchy of Berg, on the Rhine. The early youth of Bruck was spent in the army of his country. He made the campaign of 1814-15 in the Prussian service; and on the restoration of peace visited London, to seek a position in the army of the Hon. East India Company, but was not successful. In the year 1821, weary of the monotony of garrison life, he set out for the south of Europe, intending to join the Greek insurgents, subjects of the Sultan. Arrived at Trieste, he found some difficulty in procuring a passage to the scene of his expectations, and improved the interval of delay by making the acquaintance of several persons of considerable local influence, to whom he was recommended in his letters. Before he could perfect the arrangements for his departure he received intelligence from Greece which convinced him of the hopelessness of his projected journey. While uncertain as to his future course of life, overtures were made to him by Trieste merchants, who had remarked the energy and practical turn of his character. He resolved to accept the appointment of Secretary of the Trieste "Azienda Assicuratrice," a Maritime Assurance Company, which was obtained for him through the friendly zeal of Herr von Reyer; and having married the daughter of Herr Buschek, another merchant of the same city, thenceforward regarded Trieste as his home. The Assurance Company failed, and it was Bruck's business to liquidate its affairs. The skill with which he accomplished this task so increased his reputation, that when, in 1830, he came forward with a plan of fusing all the small Maritime Assurance Societies of Trieste, and consolidating them into one powerful association, he found the commercial community prepared to receive his proposition with a readiness that revealed the extent of the reputation which, in a short time, he had acquired. Difficulties presented themselves on every hand; established interests, private influence, and the power of custom, had to be struggled with,—and this by a young man, and a stranger. But all these Bruck's energy proved itself superior, and in 1833 he saw his scheme in operation. This important association, which was first announced as the Trieste Lloyds, but has long been known as the Austrian Lloyds, originally confined itself to the business of maritime insurance, like our own great society of underwriters.

from which it borrowed its name. In 1836, however, it extended its operations, and sought further to facilitate the commerce of the Mediterranean and Levant by the establishment of a system of steam-packet communication, which has obtained a world-wide repute, and is the greatest achievement of unaided commercial enterprise an Austrian can boast. The Lloyds packets at first made only the passage between Trieste and Venice; they now afford the traveller the means of conveniently visiting all the principal seaports of the Adriatic, the Mediterranean, and the Black Sea. Until 1848 Bruck was the Chief Director of the Austrian Lloyds. Intent upon founding a powerful maritime corporation, capable not only of insuring a mercantile predominance, with which large returns would be inevitably connected, but also of determining an immense flux of business to the port of Trieste, and of raising the consideration of Austria throughout the East, Bruck prevailed on the shareholders to forego a dividend during the early years of the association, and apply the profits as new capital for the extension of their undertaking. At the end of the year 1846, even before Bruck resigned the active direction of the Lloyds, the company had a capital of 3,000,000 florins, and a surplus income, available for dividends, of 195,000 florins. It has since developed its resources to a much greater extent; and although, whether as an Insurance or Navigation Society, it is immensely inferior to our English companies, it is an institution which every Austrian must regard with national pride. It has contributed immensely to augment Austrian influence in the East; it has trebled the population of Trieste, and caused it to become an important centre of Mediterranean trade; it has made possible the existence of an Austrian navy; and it has done this, doubtless, under the smile, but without the aid of a government. The year 1848 saw Bruck called to a new and more prominent scene of activity. The grave occurrences which at that period shook the foundations of every state in Germany are well known. In the midst of these, Trieste received a summons to send its best representative to a national assembly, to meet at Frankfort, and deliberate on the affairs of the entire German nation. Bruck was elected by his fellow-citizens, and was proceeding to the Maine, when the Imperial Austrian Government appointed him its Plenipotentiary to the Lieutenant of the Germanic Empire, the Archduke John. The Vienna cabinet saw that it was necessary to introduce new, courageous, and practical men to the service of the state, and as such Bruck, who, in his character of member of the Bourse Committee, had long been in intercourse with the Government, was recognised and employed. What fair opportunities were lost by the representatives of Germany at Frankfort is too well known. Bruck strove for the unity of Germany, and strove in vain. During his residence at Frankfort, however, he immensely increased his knowledge of state affairs, and made the acquaintance of distinguished political men from all parts of Germany. Upon his return from the Maine he was nominated Minister of Trade, and a member of the Committee for elabo-

rating the Austrian Constitution of March 1849, since abandoned. The Committee had scarcely completed its work when Bruck was selected to negotiate with Sardinia. It was the first time that, in Austria, a merchant had been nominated Ambassador-Plenipotentiary, and the employment was one which the first diplomatists of the empire would have accepted with pride. He concluded with Count Revel and General Dabormida, against the protests of Austrian soldiers and diplomatists of the old school, such a peace as Sardinia could observe without degradation; and he, at the same time, improved the opportunity to adjust a frontier question, and some fiscal difficulties connected with the wine and salt trade, which a more accomplished negotiator might have thought beneath his notice or unworthy of the occasion. The two commercial treaties with Parma and Modena,—the latter of which secured the free navigation of the Po, and prepared the way for a subsequent postal and customs union with Austria,—were about this time brought into a very advanced state by the efforts of Bruck. Upon his return from Italy he devoted himself to the Ministry of Trade, a department new to the state system of Austria, and which he had to organise from its elements. He set resolutely to work; deposed the incompetent, encouraged the deserving, and gave scope for latent talent, until his ministry became a model of order and an example of efficiency. He established a statistical bureau, and introduced a system of monthly returns; reformed chambers of commerce; concluded postal treaties with Bavaria, Prussia, and Saxony; reconstructed the postal administration of Hungary; multiplied post-offices throughout the monarchy; gave an extension of one thousand miles to the electric telegraph; and crowned his work by abolishing the interior customs line, which had separated the kingdom of Hungary from Austria, and by a revision of the Imperial tariff. He would have gone further in the work of reform, but every step he took was against the passive resistance of a jealous bureaucracy and the active opposition of a half-enlightened commercial community attached to the prohibitive system. Within the cabinet he had his opponents, whom, even with the powerful aid of Prince Schwarzenberg, his firm friend, he could not always overcome. He laboured for the emancipation of trade, and contended at the council board that a true system of finance must admit and favour the rapid development of all the resources of the state. These opinions, and a strong conviction of the necessity of reducing the outgoings of the Imperial exchequer, brought him into collision with the Finance Minister, and in May 1851 he resigned, receiving the dignity of a Baron of the Austrian Empire. After his release from the cares of office, Bruck visited London during the season of the Great Exhibition, and spent the remainder of the year in Trieste, where he was received with the warmest demonstrations of regard. In December 1852 he was recalled to Vienna and sent to Berlin, where he negotiated with the Prussian plenipotentiary, Von Pommeresche, a commercial treaty between Austria and the Zollverein. Bruck had returned to Trieste and was occupied in his favourite

permits, when, in 1853, he was appointed to the most important post to which an Austrian diplomatist could be called—he was named Internuncio at Constantinople. His work was, first, to restore those earlier friendly relations of Austria with the Porte which had been so rudely displaced by Count Leiningen on a special mission from Vienna, and afterwards to maintain the influence of Austria against that of Russia, France, and England. It will be admitted that this was no light task, seeing that the great powers were respectively making armed demonstrations, and Austria professed no more than a neutrality friendly to the Porte. Whatever opinion may be formed of the policy of the Austrian Cabinet, there can be no doubt that it has been worthily represented at Constantinople by Baron Bruck. From the departure of Prince Menschikoff from Constantinople (May 18) to the time of his recall, he was the appointed protector of the Czar's subjects in Turkey, and at the same time one of the chief foreign advisers of the Porte. His efforts have always been directed to the maintenance of the restoration of peace. Thus he opposed the declaration of war by the Sultan in 1853, advised the acceptance of the Vienna note, and opposed, as far as he could, the passage of the British fleet through the Dardanelles. The treaty which his name is most permanently identified is the Convention of June 1854, by which Austria gained a splendid military position on the Danube as far as to the Pruth, without incurring any greater obligation than that of defending the same. At the commencement of 1855 Bruck was recalled to Vienna, to take the place of the Ministry of Finance, vacant by the resignation of Herr von Baumgarten. On the 3d of January, at a fête given at the palace of the embassy, the Baron, when proposing the health of the Sultan as a toast, expressed his aspirations for the East in words which have produced a great effect both at Constantinople and at Petersburg. He said: "Come peace when it may—before the struggle—the pride of Russia will have been subdued. The Ottoman Turkey enter upon a new era; the prejudices of race will be removed, all religions will be freely exercised, right will triumph over wrong, and the great resources of commerce and industry be developed. That the Sultan is resolute upon all these important matters is well known. Aided by a devoted and able body of ministers, his will be the privilege of fixing his mighty empire upon a sound basis of a wise and liberal administration. Such a solution of the Eastern question will be in accordance with the civilisation of our day."

BRUNNOW, BARON, the celebrated Russian Diplomatist, is a Prussian by birth, and his connexion with the Court of Russia was originally formed at the period of the Congress of Aix-la-Chapelle, 1818. He was subsequently attached to the Foreign-office at Petersburg, and was next appointed Minister at the Grand Ducal Court of Darmstadt. In 1839 Baron Brunnow arrived in Constantinople, on a special mission relative to the contest between the

Sultan and his Egyptian subjects. He then represented Russia at the Court of Wurtemberg, and was next appointed Russian Ambassador in London, which office he filled until the rupture between Great Britain and Russia in 1854. Through five administrations Baron Brunnow was respected by the statesmen of every party. The late Sir Robert Peel has left the following tribute to the Baron's high official character:—"There never was a foreign minister more zealous for the promotion of the interests of his own country, or more unwilling to make any compromise of its honour or of anything that could qualify his obligations to watch over the interests of which he is the representative; but, rising above all the petty arts of intrigue, and by the suavity and simplicity of his own conduct, his Excellency has gained the confidence of every minister with which he has been called upon to act, and, without sacrificing the interests of his own country, has secured the personal goodwill and esteem of all those with whom it has been his lot to act. Baron Brunnow left England in February 8, 1854, for a temporary sojourn at Darmstadt; and he has since lived in retirement.

BRUNSWICK - WOLFENBUTTEL, AUGUSTUS LOUIS-WILLIAM, DUKE OF, born 26th of April, 1806, took the reins of government April 25th, 1831, on the flight of his elder brother, the previous Duke, since sufficiently known in London.

BRYANT, WILLIAM CULLEN, an American Poet and Journalist, is the son of an eminent physician of Cummington, Massachusetts, in which place he was born on the 3d November, 1796. His forefathers, for three generations, had been medical men; but family bias towards the healing profession did not exist in young Bryant, who appears to have determined, at an early age, to become a barrister. His elementary education was superintended by his father, a gentleman of considerable literary talent; and he exhibited, whilst yet a child, a taste for poetry exceedingly remarkable in one so young. At ten years of age he began to write verse, and at thirteen published a small volume of poems, of which "The Embargo" and "The Spanish Revolution" attracted considerable notice; so much so, indeed, that a second edition was called for soon after the publication of the first. In 1810 he entered Williams College, where, after two or three years of no very arduous study, he distinguished himself by his proficiency in languages and polite letters. When he left school he was placed as student in the law office of Mr. Justice Howe, and afterwards in that of the Honourable William Baylies. In 1815 he was admitted to the bar at Plymouth, Massachusetts, and in 1825 he removed to New York, having previously published (in 1821) some of his most successful writings, "The Ægis," "Thanatopsis," "Stanzas to a Waterfowl," and other lyrics of a similar character. In 1821 he associated himself for the first time, with the periodical press, as one of the Editors of the "United States Review and Literary Gazette." In 1825 Mr. Bryant married and settled in New York, where he has ever since

ended. In 1828 he became co-editor with Mr. Leggen of the "New York Evening Post," one of the oldest and most influential of the American newspapers. In 1827, 1828, and 1829, he brought out, in conjunction with several of his friends, an Annual, entitled "The Talisman." In 1832 he published the first collective edition of his poetry, and a copy having been forwarded to Washington, he caused it to be reprinted in this country. This book has since passed through several editions in both hemispheres. In the summer of 1834 Mr. Bryant visited England with his family, with the intention of devoting a few years to literary pursuits and the education of his children. In the interval between 1834 and 1836 he travelled through France, Germany, and Italy, and resided for several months in each of the cities of Florence, Pisa, Munich, and Salzburg. The illness of his partner on the "Evening Post," in 1832, compelled him to return home and resume his editorial duties. The poetry of Bryant has enjoyed considerable popularity in this country. His "Indian at the Burying-place of his Fathers," "The Flowers," "The Prairies," "Hymn of the City," and "The Field," have often been reprinted in volumes of "Select Poetry," and are, perhaps, better known in England than his more recent works. Mr. Bryant belongs to the good old school of poets who considered common sense and intelligible language the acceptable elements of all good poetry, how lofty soever the subject with which it abounds. With much of the vigour and energy of Byron and Campbell, and the philosophic and reflective characteristics of Wordsworth, Mr. Bryant's poetry is altogether free from either obscurity or affectation in either sentiment or style.

BUCHANAN, HON. JAMES, Statesman and ex-Secretary of State of the United States, was born on the 13th of April, 1791, in the county of Franklin, state of Pennsylvania. After having passed through a regular classical and academical course of instruction, he studied and adopted the law as a profession. Having inherited a passion for politics, he was nominated in 1814 for the House of Representatives of the legislature of his native state, and was elected. He was re-elected in the year 1815. After having served two terms, he declined another re-election. In 1820 he was elected to Congress, and took his seat in that body in December 1821. He remained a member of the house till March 4, 1831. Immediately after his fifth election he declined further service, and retired into private life. In May, 1831, he was offered the mission to Russia by General Jackson, and accepted the proffered honour. In the year 1834, immediately after his return from Russia, Mr. Buchanan was elected to the Senate of the United States, to fill the unexpired term, rendered vacant by the resignation of Mr. Calhoun. In December, 1836, he was elected for a full term; and in 1843 was re-elected. In March, 1845, he was appointed Secretary of State by President Polk, which office he held till the close of the administration of that gentleman. In 1854 he accepted the

London embassy, which he resigned in the following year. Mr. Buchanan, as a politician, ranks with the Democratic party, by whom he is highly respected. He has probably had less censure cast upon him than is the usual lot of the prominent politician, and is respected by all parties in private and domestic circles.

BUCKINGHAM, JAMES SILK, Traveller, Public Lecturer and Author, was born at Truro, in Cornwall, in 1784, and began life as a printer, but soon afterwards turned sailor, and commanded several vessels, but left the sea to become proprietor and editor of a newspaper in Calcutta. Having criticised very freely some acts of the authorities in the columns of his journal, the Indian Government arbitrarily and abruptly stopped his paper, and ordered him to quit the country. This harsh measure brought with it its own punishment, for Buckingham came to Europe, and began an agitation against the Indian authorities and their system, which lasted for many years, and hastened the growth of an opinion in England on Indian subjects which has resulted in a great diminution of the powers of the magnates of Leadenhall Street. Mr. Buckingham is a dexterous speaker, and a voluminous, if not very amusing author. He travelled in the East, and gave the results to the world in several volumes, entitled "Travels in Palestine," "Travels among the Arab Tribes," and "Travels in Mesopotamia;" the latter published in 1827. A subsequent tour in America resulted in the completion and issue of some five or six volumes of "Travels in America," which met with but little success. He was elected M.P. for Sheffield after the passing of the Reform Bill. Among Mr. Buckingham's early speculations were the "Sphynx," and the "Athenæum." The "Sphynx" was incorporated with the "Spectator," and the "Athenæum" was not successful while in the hands of its originator, nor subsequently under the control of Mr. Stirling (son of Captain Stirling, the "Thunderer" of "The Times." After it became the property of its present proprietors, its fortunes soon changed. Mr. Buckingham was for a time lecturer for the Anti-Corn-Law League. The East India Company have in some degree atoned for former harshness by giving him a pension, which, after a life of struggles, he now enjoys. Lord John Russell, also, was pleased to recommend him to Majesty to confer a pension upon him on the Civil List of 200*l.* per annum. He has just published his Autobiography, or, to describe it more correctly, his apology for his life.

BUCKLAND, THE REV. DOCTOR WILLIAM, Geologist, was born about 1790, and educated at Corpus Christi College, Oxford, of which he became a Fellow. In 1813 he was nominated Reader in Mineralogy; and on the establishment three years afterwards, at his own instance, of a Readership of Geology, he received the appointment. His profound acquaintance with the subject conferred a lustre on the new chair, and was the means of recommending the study to the higher classes, when his "Bridgewater Treatise

and its appearance, investing it with all the charms of eloquence, and extracting from the dry bones of antediluvian antiquity additional proofs of the wisdom and beneficence of the Deity. To Doctor Buckland Oxford is indebted for the geological objects now stored in the Radcliffe Library; and he had a large share in the establishment of the Museum in Jermyn Street, of which Professor Huxley is the Curator. Doctor Buckland's "*Reliquiæ Diluvianæ*," one of his works which displayed his profound researches in geology, had its origin in the discovery of the oolitic caves in Feltwell, which are supposed to have been a den of hyenas, at a word when elephants and hippopotami, of a species which has ceased to exist, inhabited the northern regions of the globe, and craved into it for food the bodies of the various animals which frequented its neighbourhood. Doctor Buckland's work on geology and mineralogy has proved the most popular of the "*Bulwer Treatises*;" and in his valuable contributions to the knowledge of his times he has paid especial attention to the practical application of geology to useful purposes connected with mining, building, &c. In 1845 Doctor Buckland was promoted to the Deanery of Westminster, vacant by the elevation of Samuel Wilberforce to the episcopal bench. In this office he honourably distinguished himself by the example he set in the heads of cathedral bodies, in facilitating the admission of the public to view the ancient monuments of the English Church, and in encouraging attendance on cathedral worship by liberal regulations than had heretofore existed. He has also exerted himself strenuously to secure a supply of good water to the metropolis; preaching, writing, and lecturing incessantly of the importance, in a sanitary point of view, of securing so desirable a convenience. We lament to add that the Doctor's multifarious labours have so deeply affected his mental health, that in July, 1846, it was deemed prudent that he should retire for a time from his active duties and studies which have earned for him such a high name. Beside sermons, and his account of the Yorkshire and Lancashire geology, Doctor Buckland has published "*A Treatise on Geology and Mineralogy*" (Bridgewater Treatise), 2 vols. 8vo., and "*Geological Evidence of the Deluge*," 4to.

BULWER, SIR EDWARD LYTTON. *See* LYTTON.

BULWER, THE RT. HON. SIR HENRY LYTTON EARLE, K.C.B. and Privy Councillor, Diplomatist, and Author, was born in 1804, and is an elder brother of Sir E. Bulwer Lytton. Henry was early prepared to devote himself to the active business of life. His numerous accomplishments and aptitude for business recommended him to the notice of the Government, he was introduced to the diplomatic service in 1829, and attached successively to the British embassy at Berlin, Brussels, and the Hague. In 1830 he was sent on a special mission to Brussels, to observe the course of the Belgian revolution. In the same year he

entered Parliament as representative of Wilton. He was member for Coventry in 1831 and 1832, and for Marylebone from 1834 to 1837. In 1835 he was made Secretary of Legation and Chargé d'Affaires at Brussels; in 1837 he became Secretary of Embassy at Constantinople, and negotiated there the commercial treaty between England and the Porte. He was appointed Secretary of Embassy in Paris in 1839, and in the course of that and the following year was thrice gazetted as interim minister at the court of France during the absence of the ambassador. In 1843 he was made Minister Plenipotentiary at the court of Madrid, and concluded the peace between Spain and Morocco in the following year. During the troubles of the Spanish capital in 1848, Mr. Bulwer was frequently the medium of the remonstrances of his Government upon the arbitrary and unconstitutional system followed by Narvaez. As his firmness and candour were found exceedingly inconvenient, the soldier-minister determined upon his removal, and after having in vain sought to discredit him with the British cabinet, pretended to have discovered his complicity in plots laid against the Spanish Government, and upon this pretext suddenly ordered him to leave Madrid. The English Government marked its sense of this indignity by declining to name his successor, and for two years the court of Spain received no British minister. Both parties in the House of Commons approved Mr. Bulwer's conduct, and her Majesty named him a Knight Grand Cross of the Bath. The hasty Spaniard has since made the *amende honorable* in a note on the subject, the terms of which were dictated by Lord Palmerston. Sir Henry Bulwer afterward proceeded to Washington as British minister, and enjoyed considerable popularity in the United States, where he learned how to conciliate the temper of a sensitive people while maintaining the interests of his country. He was sent in 1852 to Tuscany as Envoy Extraordinary, and held that appointment until January 1855. Like his brother, Sir Edward Bulwer Lytton, he is an author as well as a politician. He published "An Autumn in Greece;" "France, Social and Literary;" "The Monarchy of the Middle Classes;" and a "Life of Lord Byron," prefixed to a Paris edition of the poet's works. He married in 1848 the Hon. Georgiana Charlotte Mary, youngest daughter of the first Lord Cowley.

BUNSEN, CHRISTIAN-CHARLES-JOSIAS, CHEVALIER DE, lately Prussian Ambassador in London, was born in 1790 at Corbach, in Germany. He was educated at the University of Göttingen, where he applied himself chiefly to the study of the classics under the direction of the celebrated Heyne, and made such rapid progress as to give promise of a high degree of eminence. Leaving the university he travelled over Europe. At Rome he had the good fortune to make the acquaintance of Niebuhr, at that time the Prussian ambassador to the Pope; and the advantage he derived from a familiar intercourse with the great historian induced him to reside at Rome as his private secretary. He afterward

ained the appointment of Secretary of Legation ; and on Niebuhr's
 departure he was appointed his successor, and resided in Rome as
ministre d'Affaires, and afterwards as minister, until some eccle-
 siastical differences which arose between the King and the Pope
 brought him to his recall. In 1839 he was appointed Ambassador to the
 Prussian Confederacy ; and in 1841 he was removed to London, as the
 representative of his sovereign at the English court. He resigned
 the London embassy early in 1854, when the Prussian court began
 to show the world that its policy in the European crisis would be
 governed by its Russian sympathies. He was found too inde-
 pendent, and, for all the arts of diplomatic dissimulation, too
 noble, to be permitted to continue to represent the interests
 of Prussia in this country. He was, in fact, too much disposed to
 take a liberal view of the consequences of the position into which
 Prussia had allowed herself to be driven, to be trusted any longer
 with the knowledge of the discreditable intrigues of his Government.
 Frederick Bunsen, however, probably owes his reputation in
 Germany rather to his literary than to his diplomatic labours,
 and especially to his learned and admirable work on Egypt.
 His principal works are, "Egypt's Place in Universal History," 1848 ;
 "The Birth of the Future," 1848 ; "Memoir on the Schleswig-
 Holstein Question ;" and "Hippolytus and his Age," 4 vols. 1851.
 When the Chevalier left this country a few months ago he had, it
 appeared, little hope of returning, or he would scarcely have
 parted with his library, and all his objects of art and *vertu*. He
 had resided on the Rhine, occupying himself with learned
 studies.

BUNTING, JABEZ, D.D., who has been described as the Her-
 bert of Modern Methodism, is a native of Manchester, and has
 attained his present position in the ranks of his sect by the force of
 his talent and assiduous self-cultivation. He was some time
 a member of the Wesleyan Conference, and is influential in
 carrying any opinion that is cheered loudly at the May
 meeting at Exeter Hall. He was educated by Dr. Percival of
 Manchester, and numbered among his early religious friends
 Mr. Clarke and Dr. Coke. He is now regarded by his sup-
 porters as a man of business views and habits, a good debater,
 a powerful preacher, and one thoroughly aware of the political as well as
 the religious bearings of the large and influential body to which he is
 attached. As a preacher, his reputation stands high. "His pulpit
 discourses," says an admirer, "are generally long, but never tedious
 or redundant ; luminous, but without glare : it is a kind of sober,
 steady cathedral light, in its general effect, with the addition of
 a central stream reflected on different portions of the subject, as
 if concentrated rays had found their way through a solitary
 pane of uncoloured glass, and passed between some of the prin-
 cipal pillars in the interior of St. Paul's or Westminster Abbey. If
 anyone were to be asked whether a sermon should be cur-
 tailed, the majority would decide in favour of the affirmative, which

shows a fault somewhere; but if the same assembly were requested to select the part or parts to be omitted, the general voice would be in favour of preserving it like 'Barclay's—Entire,' which argues perfection in the artist."

BUOL-SCHAUENSTEIN, COUNT, Chief Minister of the Austrian Emperor, with the titles of Minister of the Imperial House, Minister of Foreign Affairs, and President of the Council of Ministers. Count Buol, whose name has become familiar in England through his participation in the negotiations connected with the affairs of the East, is the son of an Austrian diplomatist, who filled some important posts before the dissolution of the German Empire, and was subsequently plenipotentiary of Austria at the Frankfort Diet. He was subsequently Austrian Minister in Switzerland, in which country, in the canton of the Grisons, Count Buol was born. The present minister represented his sovereign at the court of Turin in 1847, during the revival of the national feeling which led to the Italian war of 1848. He had not long been Ambassador at the Court of St. James's, when, in April 1852, he was summoned in haste to Vienna upon the sudden death of Prince Schwarzenberg, on the 5th of that month, and at once appointed to the offices which he at present holds. Although M. de Buol is not like his distinguished colleagues, Dr. Alexander Bach and Baron Bruck, one of those new men by whom Prince Schwarzenberg sought to regenerate the Austrian monarchy, he is believed to inherit the views of that able minister, by whom he was also often recommended to his sovereign. The internal policy of M. de Buol has been to cultivate the good will of the middle classes by administrative reforms; to keep in check the influence and abate the power of the aristocracy; to centralise the administration of the extensive and heterogeneous monarchy; and during the dangers of this transitional state to rely on an army raised to unusual strength. The foreign policy of Count Buol has been directed to the emancipation of the country from the tutelage of the Czar, the substitution of Austria for Russia as protector of Moldo-Wallachia, and to securing the freedom of the navigation of the Danube, on which depends the extension of German commerce in the East. In February 1854 the Emperor Nicholas boasted to Sir Hamilton Seymour that he had no concern on account of Austria's opinion as to his policy in the East: in April 1854, the head of the Austrian cabinet signed a protocol pledging the four great powers of Europe to procure the evacuation of the principalities of the Danube which Russia had invaded, and to maintain the territorial entirety of Turkey. A powerful military demonstration by Austria caused the Czar to announce a few months later that he withdrew his troops from Moldo-Wallachia, "for strategical reasons." In December, 1854, Buol signed a treaty of alliance with England and France, and immediately thereupon the four guarantees demanded by the Allies were in principle conceded by Russia. Since the peace Austria has not stood so high among the powers of Europe as at the

opening of the Vienna Congress of 1855, nor has any Austrian emperor ruled more absolutely in his own dominions than the Emperor Francis-Joseph.

BURGOYNE. SIR JOHN FOX, G.C.B., Lieutenant-General, and Inspector-General of Fortifications. This officer, who was ordered to conduct the engineering operations rendered necessary by an expedition to the East, entered the corps of Royal Engineers as a lieutenant in the year 1798. He served in the Mediterranean and Levant from 1800 to 1807; took part in the blockade of Malta and the operations which led to the surrender of Valetta; served with the army in Sicily; and was also present at the capture of Aspromonte and the attack on Rosetta. He afterwards proceeded with Sir John Moore's army to Sweden, and again to Portugal. In 1808 he joined Wellington's (then Wellesley's) army in the Peninsula, and from that time until the conclusion of the campaign in 1814 was present at all the sieges, two of which, those of Burgos and St. Sebastian, he conducted, the latter after his superior officer had been killed in the trenches. Throughout the campaigns in France and Spain Burgoyne was attached to the third division, so distinguished by the prominent part it took in the war, and was in all of the general actions, in which he was twice wounded. In 1814 he was appointed commanding engineer of the expedition to Bayona, and was present at the attack on the town and the siege of Fort Bowyer. He has received the gold cross and one star for Burgos, Salamanca, Vittoria, San Sebastian, and Nive; and the silver medal with three clasps for Busaco, Ciudad Rodrigo, and St. Sebastian. In 1826 Burgoyne accompanied the expedition to France as commanding officer of Engineers. In 1830 he was appointed Chairman of the Irish Board of Public Works, and in 1834 Inspector-General of Fortifications. It was in this capacity he received from the Duke of Wellington that remarkable report on the defenceless state of the country,—a communication published in the journals, produced a great sensation in the country, and no doubt enabled the Executive to stay the prodigious retrenchment in the naval and military services, and to have power to raise a new militia. In 1847, the famine he was appointed to conduct the commission for the relief of Ireland; and four years afterwards was nominated to a post connected with one of the Metropolitan Sewers' Commissions, to undertake the construction of an important system of sewers. In 1854 he was sent to Turkey, to devise measures for the defence of Constantinople, and securing the free passage of the Sea of Marmora, and the Bosphorus, against an advance of the Russians. He returned to England, and afterwards again proceeded to the East, and directed the works intended to reduce Sebastopol. He was present at the battle of the Alma, the affair of Balaklava, and the battle of the Tchernaya. In 1855, in consideration of his age and long services, he was recalled, and replaced by General Sir H. Jones.

He, however, remained with the army three months after, at the especial request of Lord Raglan; and upon leaving the camp was highly complimented by the commander-in-chief in a general order. Sir John was made a Knight-Commander of the Bath in 1837, upon attaining the rank of major-general, and received the Grand Cross of the Order in 1852. He was made a Lieutenant-General in the brevet of the previous year. The following are the dates:—Entered the army, 29th of August, 1798; lieutenant, 1st of July, 1800; captain, 1st of March, 1805; major, 6th February, 1812; lieutenant-colonel, 27th of April, 1812; colonel, 2nd of July, 1830; major-general, 28th of June, 1838, and lieutenant-general, 11th of November, 1851.

BURNET, JOHN, Painter of *tableaux de genre*, Engraver and Art-Critic, was born at Fisher-Row, near Edinburgh, on the 20th March, 1784. His father was a native of Borrowstoness, near Edinburgh, and was descended from a brother of the Bishop of that name. Young Burnet was educated by Mr. Leeshman, the schoolmaster of Sir Walter Scott; but his passion for drawing derived from both his parents, at a very early period so entirely absorbed his thoughts and occupied every moment that he could steal from his studies, that his scholastic progress was not so rapid as might have been expected. This induced his father to place him with Mr. Robert Scott, a landscape engraver of Edinburgh, from whom he learned the practical part of etching and engraving. Whilst under his tuition he also attended the Trustees' Academy under Mr. John Graham, where he acquired, along with William Allen, who were his fellow-students, a tolerable knowledge of drawing from the study of the antique. During his service with Mr. Scott, to whom he had been apprenticed for seven years, he was chiefly engaged in engraving; and the hours of labour being from seven in the morning until eight in the evening, there was little time for the cultivation of the art of design beyond those hours during which he was engaged in the Trustees' Academy. But more devoted to figure than landscape engraving, his style was formed chiefly on small prints from the burin of James Heath, whose book illustrations were then held (as they well deserved to be) in great estimation. In all works of a larger size his favourite master was Cornelius Vetscher. Wilkie having preceded him in visiting London by twelve months, "The Village Politicians" had created such a sensation, that the young engraver grew impatient for a similar chance, and having completed every engagement, set sail for the southern metropolis in a Leith and Berwick smack, and arrived at Miller's Wharf with only a few shillings in his pocket and a single impression from a plate for Cook's Novels, as a specimen of his art. Having sought out Wilkie, who was then engaged on "The Blind Fiddler," he was received with great cordiality, and his friend and schoolfellow gave him every encouragement in his power. His first engravings were for books, but longing to try his hand upon a plate of large

occasions, he asked Wilkie to allow him to engrave "The Jew's Shop," which he executed the same size as the painting. This was the first of the long series of prints engraved from Wilkie's works by various eminent engravers. The plate of "The Jew's Shop" introduced young Burnet to William Sharp, the celebrated engraver, and created an unwonted sensation among the pupils of his late master, Mr. Graham. It was published at a price of twenty guineas. In his plate after "The Blind Fiddler" he copied the style of Cornelius Vetscher. The plate was admitted by all hands to have been an unrivalled performance for so young an artist. Mr. Charles Heath was so pleased with its execution that he bought a proof for the use of his assistants. The success attending the publication of this print led Burnet to make an attempt for "The Village Politicians;" but as Wilkie required of him to engrave it gratuitously, and look for contingent profits in a share of the copyright, he resigned it to Raimbach, who engraved the plate under that arrangement. After "The Blind Fiddler," Mr. Burnet's other plates from Wilkie were,—"Reading the Gazette," the "Chelsea Pensioners reading the Gazette of the 10th of Waterloo," the "Rabbit on the Wall," the "Letter of the Day," the "Death of Tippoo Saib," and the "Village School." After the peace of 1815 Mr. Burnet visited Paris, for the purpose of studying in the Louvre. The best educated by far of engravers of his time, he wrote and published about this period his "Practical Hints on Painting," and other elementary works of great value to the young artist. A member of the body of artists who produced the well-known collection of prints from the National Gallery, Mr. Burnet engraved the "Jew," the "Nativity," and the "Crucifixion," all after Rembrandt, for that work. He also produced several plates for Forster's "British Gallery." Many of Mr. Burnet's engravings were from his own pictures, of these the principal were,—"The Greenwich Pensioners," of which, painted by himself, was purchased by the Duke of Wellington; "Feeding the Young Bird;" the "Draught Board;" and the "Mouse." He has also published "Hints on Portrait Painting," "Landscape Painting in Oil," "Lives of Rembrandt and Turner," and other works.

BURNET, THE REV. JOHN, a favourite Orator at Exeter Hall, and Minister of an Independent congregation at Camberwell. As a public man his fame is limited, but as a platform speaker he enjoys considerable popularity, especially in connexion with the Peace Society, the Liberation-of-Religion-from-State-Control Society, the Society for the Abolition of Capital Punishments, etc. In the days of the Anti-Corn-Law and Anti-Slavery agitations he was an active agent on the Liberal side, and did good service. He was born at Exeter, enlisted for a common soldier, then settled as pastor of an Independent congregation in Cork, from which place he removed to Camberwell about twenty years ago. It is said to have been in the

contemplation of the Dissenters to obtain for Mr. Burnet a seat in Parliament, in order that their interests might be forwarded by his oratory; but if such an idea were entertained, it has never been carried out.

BURRITT, ELIHU, an American Lecturer, Scholar, Journalist, and Blacksmith, has, by dint of talent, industry, and the constant following out of one leading idea, managed to obtain considerable celebrity both in England and France, as well as America. He was born in Connecticut in 1811, and received an ordinary school education till he was sixteen, when, his father dying, he was apprenticed to a blacksmith. Being always fond of reading, he had a tolerably good knowledge of English literature during his apprenticeship; but when it expired he seems to have entertained even wider scholarly ambitions, and at the age of twenty-one set to work to study mathematics. During spring and summer he spent a large portion of his time at the anvil, alternately forging and reading, and thus earned enough to enable him to devote a good part of the winter to his studies. These, by dint of great perseverance, appear to have thriven apace; and he successively gained a considerable mastery of Latin, French, Spanish, Greek, and Hebrew. German and other European languages appear to have been subsequently added to his stock of lore; and by the time he had made progress thus far, he thought his pen as a translator might be made to relieve the weariness of his labour at the forge. He does not seem at this time to have succeeded in this, but the effort gained him some friends, and he was induced to try, in succession, scholarship and trade; but in neither made any success, and went on again with his studies and his hammer. Speaking of himself, Burritt remarks:—"All that I have accomplished, or expect or hope to accomplish, has been, and will be, by that plodding, patient, persevering process of accretion which builds the ant-heap—particle by particle, thought by thought, fact by fact. And if I ever was actuated by ambition, its highest and farthest aspiration reached no farther than the hope to set before the young men of my country an example in employing those fragments of time called 'idle moments.' And I should esteem it an honour of costlier water than the tiara encircling a monarch's brow, if my future attainments should encourage American working-men to be proud and jealous of the credentials which God has given them to eminence and immunity in the empire of mind. These are the views and sentiments with which I have sat down night by night for years, with blistered hands and brightening hope, to study which I hoped might be serviceable to that class of the community to which I am proud to belong. This is my ambition,—this is the goal of my aspirations. But not only the prize, but the whole course lies before me—perhaps beyond my reach. 'I count myself not yet to have attained' to anything worthy of public notice or private mention, what I *may* do is for Providence to determine. With regard to my attention to the languages (a study of which

as fond as of mathematics), I have tried, by a kind of practical philosophical process, to contract such a familiar acquaintance with the head of a family of languages, as to introduce me to the members of the same family. Thus, studying the Hebrew critically, I became readily acquainted with its cognate languages, among the principal of which are the Syriac, Chaldaic, Samaritan, Ethiopic, &c. The languages of Europe occupied my attention immediately after I had finished my classics; and I learned French, Spanish, Italian, and German, under native teachers. Afterwards I pursued the Portuguese, Flemish, Danish, Swedish, Norwegian, Icelandic, Welsh, Gaelic, Celtic. I then ventured further east, into the Russian empire, and the Slavonic world to me about a dozen of the languages spoken in that vast region, between which the affinity is as marked as that between Spanish and Portuguese. Besides those, I have attended to the different European dialects still in vogue. I am now trying to push eastward as far as my means will permit, hoping to discover still farther analogies among the Oriental languages, which will aid my progress." In June, 1846, Burritt left America for Europe. For a year or two he had been agitating in his mind the idea of a Peace League; and, however utopian we may consider the work to which he has applied himself, we cannot but admire the undoubted zeal with which he has since laboured in and upon the Continent, to induce, if possible, the European nations to enrol themselves as members of the bond of universal Brotherhood. The meetings in Paris, Brussels, Frankfurt, and London, have since given great publicity to the plans of the League to which Burritt has devoted himself. He has given no adequate proof of the vast scholarship which his friends claim for him; but all men can estimate the value of his continued exertions in the cause of peace. This brief notice may be closed by a copy of the pledge which was issued as the basis of the League of Universal Brotherhood:—"Believing all war to be inconsistent with the spirit of humanity, and destructive of the best interests of mankind, I hereby pledge myself never to enlist or enter any army or navy, to lend my voluntary support or sanction to the preparation for, or participation of, any war, by whomsoever or for whatsoever purpose declared or waged. And I do hereby associate myself with all persons of whatever country, condition, or colour, who have signed this pledge, in a 'LEAGUE OF UNIVERSAL PEACE'; whose object shall be to employ all legitimate and lawful means for the abolition of all war, and all the spirit and all the animations of war, throughout the world; for the abolition of restrictions upon international correspondence and friendly intercourse, and of whatever else tends to make enemies of nations, to prevent their fusion into one peaceful brotherhood; for the reformation of all institutions and customs which do not recognise and reflect the image of God and a human brother in every man, of every clime, colour, or condition of humanity."

BURTON, JOHN HILL, Historian and Biographer, son of the late Lieutenant William Kinninmound Burton, of the 9th Regiment of Foot, was educated for the Scottish Bar, and passed advocate in 1831. In 1854 he was appointed Secretary to the Prison Board of Scotland. He is the author of "Life and Correspondence of David Hume," 2 vols. 8vo., Edinburgh, 1847; "Lives of Simon Lord Lovat, and Duncan Forbes of Cullochy," 2 vols. 8vo., London, 1847; "Political and Social Economy," 16mo., Edinburgh, 1849; "History of Scotland, from the Revolution to the Extinction of the last Jacobite Insurrection," 2 vols. 8vo., London, 1853; "Narratives from Criminal Trials in Scotland," 2 vols. 8vo., London, 1852; "A Manual of the Law of Scotland;" and "A Treatise on the Law of Bankruptcy" in that country.

BYSTROM, JOHANN-NIKOLAUS, an eminent Swedish Sculptor, was born at Philippstadt, in the province of Wermeland, December 18, 1783. He was designed for the mercantile profession, but the death of his parents left him free to follow his inclination for art. In his twentieth year he became a pupil of Sergell, at Stockholm; in 1809 he gained the Academy's prize, and in the following year was enabled to go to Rome. He was sent back to his country, as his first work, a "Bacchante" lying intoxicated, of half the size of life. This work gained the most undivided favour, more especially that of Sergell, and at once established the artist's reputation. He has produced several colossal statues of the Swedish kings in marble, but he succeeds best in the representation of females and children, his male figures wanting force and character. His creations are truthful, and free from affected simplicity; his grouping is original and pleasing; his execution fine and clear. Among the works of Byström are: "Cupid surprised with the Stolen Attributes of Bacchus;" "Nymph going to the Bath;" a "Sucking Hercules;" a "Pandora combing her Hair," a statue of Linnæus, for the students at Upsala; a "Christ, with Love and Religion," for the cathedral at Linköping; and the colossal statues of Charles XIII., Gustav Adolphus, and Charles-John (Bernadotte).

C.

CABRERA, DON RAMON, Count of Morella, one of the most distinguished of the Carlist generals in Spain, was born at Tortosa, in Catalonia, in August 1810. His father dying when he was quite young, he was wholly abandoned to his own inclinations, became addicted to vicious habits and low company, and led a very disorderly life. Through the influence of an aunt he obtained the reversion of a chaplaincy, but the bishop refused to consecrate him to the office on account of the irregularities of his life.

the death of Ferdinand VII., and the breaking out of the civil war in Spain, Cabrera joined a small body of Guerillas, under the command of Camicer, who had espoused the cause of Don Carlos. The commander was not slow to appreciate his abilities, and soon promoted him to the rank of captain. During the whole course of the war he was noted for his bloodthirsty and vindictive disposition; incensed to fury by the execution of his mother by General Espartero, he wreaked his vengeance upon all the Christinos who fell into his hands. In 1838 he was promoted to the rank of Lieutenant-General, and created Count of Morella, by Don Carlos, to commemorate the capture of the fortress of that name, and in recognition of his services in the expedition to Madrid. He pretended to be the champion of the Church still more and the partisan of Don Carlos, and continued the contest after Espartero had quitted Spain, until, in 1840, he was compelled to take refuge in France. There he was at first arrested and imprisoned at Ham, but was soon set at liberty; and in 1841 he took up his residence at Lyons. He strongly opposed the abandoning of Don Carlos of his pretensions in favour of his son, the Conde de Montemolin, in 1845; and in the latter part of 1846 came to Lyons with the hope of doing something for the Carlist cause. He attempted to effect a rising in Catalonia, Valencia, and Aragon, without success. After the Revolution of February 1848, thinking it a favourable time to advance the interests of Montemolin, he returned to Spain in June, raised the Carlist standard, and, with but few followers, fought a battle at Pasteral, January 27, 1849, where he was badly wounded, and was obliged again to take refuge in France: whence he passed to London, and married a wealthy Englishman, with whom he visited Naples with the view of promoting the cause to which he has devoted himself, and at which he still remains.

CAILLIAUD, FREDERIC, a distinguished French Traveller, was born at Nantes, March 10, 1797. He studied mineralogy at Nantes, and prepared himself for his extensive journeys of discovery. Having visited Holland, Italy, Sicily, and Greece, he went to Alexandria in 1815. Here he received a commission to explore the interior of Egypt. In his journey from Edfou, in Upper Egypt, to the Red Sea, he discovered those enormous emerald mines which had been previously known to the ancients. In 1819 he returned to France, and published his "*Recherches sur les Oases, les Mines d'Émeraude, et sur l'Ancien Route du Commerce entre le Nil et la Mer Rouge*," which appeared in Jomard's "*Voyage à l'Oasis de Thèbes*" (1822). But before this work made appearance he was encouraged to undertake a new journey to Egypt. Here the Pacha induced him to penetrate, in search of mineral mines, as far as Nubia. In these unknown regions he made many valuable observations in astronomy, archæology, and natural history. In 1822 he returned to Paris, arranged his mineral collections, which he presented to the Museum, and pub-

lished, in four volumes, his "*Voyage à Méroé, au Fleuve Blanc, et fait pendant les années 1819-22.*" This work, which was completed in 1827, forms the continuation to the "*Description de l'Égypte*" published by the Institute. As a reward for his important scientific discoveries he was, in 1827, appointed Conservator of the Museum of Natural History at Nantes. Since that time he has published the "*Recherches sur les Arts et Métiers, les Usages de la Vie civile et domestique des Anciens Peuples de l'Égypte, de la Nubie, et de l'Éthiopie.*"

CAIRD, THE REV. JOHN, M.A., a popular and eloquent Preacher of the Church of Scotland, was born in 1823 at Greenock where his father was an engineer. He studied at the University of Glasgow, and in 1844 was licensed to preach the Gospel. In 1845 he was ordained Minister of Newton-on-Ayr, and the same year removed to Lady Yester's Church, Edinburgh; having been elected by the town council of that city Minister of that charge. In 1850 he accepted of the church of Errol, in Perthshire, where he has ever since remained. His pulpit discourses are marked by an earnest and fervid strain of oratory, which has given him a high place among modern preachers, and wherever he officiates he is sure to attract a crowded congregation.

CAMBRIDGE, H. R. H. GEORGE WILLIAM FREDERICK CHARLES, DUKE OF, is the son of Adolphus Frederick, first Duke, a grandson of King George III., and first cousin of Majesty Queen Victoria. His Royal Highness was born at Hanover, 26th March, 1819, and succeeded his father 8th July, 1837. He became Colonel in the army 3d November, 1837; has been Colonel of the 17th Light Dragoons; and is now Colonel of Scots Fusilier Guards. In 1845 he was advanced to the rank of Major-General, and in 1854, to that of Lieutenant-General; when he was appointed to command the two brigades of Highlanders, Guards, united to form the first division of the army sent into Turkey. At the battle of the Alma His Royal Highness led these troops into action, in a manner to win the confidence of the men and the respect of the veteran officers with whom he served. At Inkermann he was again actively engaged, and had a horse shot under him. After this battle he was ordered by the medical authorities to retire from the camp, the dangers and privations which he had shared with his men, in order to recruit his health at Pera. After a short stay in Turkey he was directed to return to England, and has since given the results of his camp experience in evidence before the Committee of the House of Commons appointed to investigate the manner in which the war had been conducted.

CAMPBELL, JOHN, BARON, Judge, and Biographer, son of a Scotch clergyman of ancient lineage, was born in 1781, and educated, with a view to clerical pursuits, at the University of

law's: one of his contemporaries at that northern seat of learning in after years known to fame as Dr. Chalmers. Resolving as time progressed, to seek fame and fortune at the English bar, Mr. Campbell, while pursuing his legal studies, exercised his literary skill as reporter and theatrical critic to the "Morning Chronicle." Being called to the bar in 1806 by the Society of Lincoln's Inn, his talents, ere long, won him a prominent place among the advocates; but his politics not being of a colour particularly grateful to Lord Eldon, he was not, until 1827, invested with the silk of a king's counsel, and admitted within the bar. Obtaining a seat in the House of Commons in 1830, he was in 1832 appointed Solicitor-General, and in 1834, Attorney-General, in Lord Melbourne's Ministry. In the latter year he had the distinction of being elected member for the city of Edinburgh, and continued to represent the Scottish metropolis until June, 1841, when he relinquished the offices of Attorney-General to accept the Chancellorship of the Exchequer and a place among the peers of England; his wife, a daughter of Lord Abinger, having previously been created a peeress in her own right, with the title of Baroness Stratheden. In the year 1841, however, the Melbourne Cabinet was under the necessity of resigning, and the exertions of Lord Campbell in his capacity were limited to his judicial functions as a member of the Privy Council and the House of Lords. Entertaining a boundless respect for Bacon's maxim, in regard to every man being a lawyer to his profession, Lord Campbell employed his learned leisure in writing "The Lives of the Lord Chancellors and Keepers of the Great Seal;" a work which was hailed by all parties as an addition to biographic literature, which he still further enriched by presenting to the public his "Chief Justices of England." The return of the Whig party to power in 1846 restored Lord Campbell to the office of Chancellor of the Duchy of Lancaster, and as a member of the Russell Cabinet he took a leading part in the business and management of the Upper House. In 1850, on the retirement of Lord Campbell from the bench, he was installed as Lord Chief Justice of the Queen's Bench.

CAMPBELL MAJOR-GENERAL SIR COLIN, K.C.B., Commander of a brigade in the Eastern army, was born at Glasgow, and entered the service in May, 1808, joining the 9th Foot. His services are thus dated:—Ensign, 26th May, 1808; Lieutenant, 1st June, 1809; Captain, 9th November, 1813; Major, 1st November, 1825; Lieutenant-Colonel, 26th October, 1832; Colonel, 2nd December, 1842. Sir Colin Campbell served with distinction in the expedition to Portugal and at Walcheren, and was again in the Peninsula, sharing the misfortunes of the army under Sir John Moore. His services at Vimeira, Coa, Bussaco, Vittoria, and San Sebastian, at the siege of which he was of the storming party, obtained for him the silver medal. At the place last mentioned, and again at the passage of the Tago, he was severely wounded. In 1814 and 1815 he took

part in the expedition to the United States. In 1842 he commanded the 98th Regiment in the expedition to China, and was honourably mentioned in the Gazette for the part he took in the attack on Chusan. The Punjaub campaign of 1848-49 brought him into prominence as a General of Brigade. As commander of the advanced force, he defeated the Sikhs in the action near Ramnuggur, 22d November, 1848, having under his orders an infantry brigade, a cavalry division, and three troops of horse artillery. He also took a leading part under Sir Joseph Thackeray at the passage of the Chenab, on the 3d December, 1848, and received high praise from that general. He commanded the third infantry division, which formed the left of the army at Chillianwallah. Lord Gough, who commanded in chief, wrote to the Governor-General, after the victory, "Brigadier-General Campbell, with that steady coolness and military precision for which he is so remarkable, carried everything before him." At Chillianwallah he was wounded, but recovered in time to take part in the great battle of Goojerat, which closed the campaign. His services in this severe struggle, where Sikh and Afghan, for the first time banded together against British forces, were signally defeated, are recorded in the despatch of Lord Gough, and in the general orders of the Governor-General of India. When reading in official despatches the dry record of these great battles, one is struck with the consideration of how much deserved reputation the officers engaged therein have missed, through the absence from the field of those chroniclers whose spirited narratives have reflected so much lustre on the exploits of Alma, Inkermann, and Balaklava. In 1851 and 1852, Campbell commanded the Peshawar district, then in a very unsettled state. Lord Gough had been replaced by Sir Charles Napier, under whose command Campbell was employed at the forcing of the Kohat Pass. In 1852 he was constantly engaged in encounters with the hill tribes, which he uniformly defeated, and always with a greatly inferior force. At the close of the Punjaub campaign he received the Cross of a Commander of the Order of the Bath. In 1854 he was appointed to the command of the Highland Brigade, which, with the Brigade of Guards, formed the division of the Duke of Cambridge in the Army of the East. In the first encounter of the enemy, the "steadiness and military precision," which had commended themselves to the soldierly judgment of Lord Gough, were again conspicuous. In combination with that impulsive enthusiasm which is yet more calculated to strike the unprofessional observer. At Alma (Sept. 25) it was the duty of the Guards and Highlanders to advance at the very crisis of the battle, to support the Light Division, just as it was being rent and broken by a terrific storm of grape, round shot, shell, canister, and musketry, from the Russian batteries and the dense masses of their infantry. This fire the First Division was ordered (it would be more correct to say, was permitted) to enter; the word was no sooner given than it was an up-hill race between the Highlanders and Guards to the Russian columns and batteries.

"Highlanders!" exclaimed Sir Colin, as they came to the charge, "grant me a favour. Let me have to ask the Queen's permission for me to wear a bonnet! Don't pull a trigger until you get within a yard of the Russians!" As the Highlanders advanced they met a regiment of the Light Division, which, having in the most gallant manner captured a Russian battery, had been compelled to yield to overwhelming numbers, and were being pursued by Russians down the hill. Sir Colin was at the head of his men, who, religiously obeying the wish of their chief, fired not a shot until close upon the Russian column, when they delivered a volley and charged. The enemy fell back, but at a little distance rallied, and lowering their bayonets, advanced a few steps, as if to charge. The Scots accepted the challenge with a cheer, and charged at them; but their numbers were not enough, and the Russians, throwing off their packs, fled. When the siege of Sebastopol was commenced, Campbell was taken to the First Division and placed by Lord Raglan at Balaklava, in command of a miscellaneous force, composed of the 93d Highlanders, a battalion of detachments formed of weakly men, and a company of Artillery belonging to the Third Division, the Marines, a few British, and a few Turkish troops. On the 25th of October the Russians presented themselves in great force, overcame the brief defence of the Turks in the advanced redoubts, and advanced upon the main position. The principal force upon which Campbell had to rely was the 93d Highlanders. Against these the Russian commander brought his hundred cavalry, who doubtless expected to be received by the Highlanders in a square, according to military usage. Campbell formed his line, and, in spite of the estimate of the enemy, deliberately rejected the precaution, and prepared to receive the Russian attack in line. That line the Russians could not reach; two discharges, the second reserved until the Russian cavalry were within short range, relieved the Highlanders from further molestation that day, and Balaklava, with all its stores and shipping, was preserved, as the position of the Highlanders closed the access to the harbour. In the camp no officer is so popular as Sir Colin Campbell. His coolness under every emergency, the buoyancy of his spirits in the midst of danger, and his constant care for his troops, have gained for him not only the respect of his superiors, but the admiration and affection of the many corps to which he has served in three quarters of the globe. In 1854, Sir Colin Campbell was promoted to the rank of Major-General, and in October of the same year was nominated to the command of the 67th Foot.

CAMPBELL, THE REV. JOHN, D.D., an Independent Minister and Editor of "The British Banner," and "The Christian Banner." He drew considerable attention to himself some years ago by pointing out in the newspapers the gross typographical and printing errors of those editions of the Bible which are printed "by authority," and caused an agitation against the monopoly created by the appointment of Queen's Printer, which was productive of beneficial results. If he did not succeed in his leading object, his

interference led to a more careful correction of subsequent editions. As a preacher, Dr. Campbell is not held in high repute; but as an uncompromising reformer, in his capacity of journalist, he holds a high place. His origin is said to have been not dissimilar to that of Elihu Burritt, and, like him, he appears to exercise considerable influence over the body to which he belongs.

CANDLISH, THE REV. R., D.D., a popular Scotch preacher and one of the leaders of the "Non-Intrusion" party during the troubles which finally led to the separation of the Scottish Church into two distinct sections, and the establishment of the Free Kirk. Dr. Candlish is regarded as a better debater than preacher; his voice is shrill; his ideas follow each other with great rapidity, but are more remarkable for ingenuity than breadth of thought. He is the author of an "Exposition of the Book of Genesis," and an "Examination of Mr. Maurice's Theological Essays."

CANROBERT, FRANCOIS-CERTAIN DE, Commander-in-Chief of the French Army of the East, was born in 1809, of a good family, in Brittany, where he has a small patrimony of about 500 francs a-year. He entered the military school of Saint Cyr in 1826, and having distinguished himself there, entered the army as a private soldier, but was soon made sub-lieutenant of the 47th Regiment of the line. He became Lieutenant in 1832, and in 1835 embarked for Africa, and took part in the expedition to Mascara. His services in the provinces of Oran were rewarded with a captaincy. He was by the side of Colonel Courbes in the breach during the attack on Constantine, saw that officer fall mortally wounded, and was himself wounded in the leg. The decoration of the Legion of Honour was given to him about this time. In 1839 he was ordered to France, and entrusted with the organisation of the corps which the French Government was forming, of the disbanded and fugitive Spaniards who had been serving the Pretender Don Carlos. Passing by a number of severe encounters with the Arabs, in which Canrobert commended himself to his superiors by his courage and skill, we find him in 1842 with the rank of Chief of Battalion, and appointed to command the 5th Battalion of Chasseurs. In 1846 he became Lieutenant-Colonel, and commanded the 64th Regiment of the line, which was charged to act against the formidable Bou Maza. He obtained very important successes over the tribes of the Lower Dhara, especially at the action of Sidi Kalifa. In 1847 he was made Colonel of the 3d Regiment of Light Infantry, and in 1848 was entrusted with the command of the expedition against Ahmed-Sghir, who had rallied the tribes of the Bouaoun in insurrection. Canrobert pushed forward as far as the pass of Djerma, defeated the Arabs there, took two Sheikh prisoners, and then returned to Bathna. He now left the 3d Regiment, and took command of a regiment of Zouaves, with whom he marched against the Kabyles, and was again victorious. He was now promoted to the rank of General of Brigade, and at the commence-

ment of the year 1850 led an expedition against Narah. The Arabs here, eagle-like, had their nests among the rocks. They had built villages upon heights accessible only by narrow paths, overhanging fearful precipices, and from their abodes descended upon every inviting occasion to harass the French, relying on a retreat under any reverses. Canrobert advanced three columns to attack the enemy in this retreat, and so skilfully combined their efforts that in seven hours the Arab stronghold was destroyed. Prince Louis-Napoleon Bonaparte, desirous of attaching to his interests as many as possible of the so-called African Generals, on account of their reputation with the soldiery, made Canrobert one of his aides-de-camp. Shortly after the wholesale proscriptions and imprisonments which followed the *coup d'état* of the 2d December, 1852, the Prince gave Canrobert a commission, and very extensive powers, to visit the prisons, and select objects for the clemency of the President. On the 14th of January, 1853, Canrobert was made General of Division, and in May received the command of a division of the camp at Helfault. Upon the formation of the Army of the East he was appointed to the command of the First Division. His troops took part in the battle of Alma, and he was himself wounded by a splinter of a shell, which struck him on the breast and hand; but the post of honour Marshal St. Arnaud had assigned to General Bosquet. The Marshal resigned his command six days after the first battle of the Crimea. Prince Napoleon-Bonaparte has thus described the circumstances under which the command of the Army of the East was transferred to Canrobert:—"Marshal St. Arnaud summoned the generals of divisions and of brigades, and endeavoured to make them a last address, but his feebleness did not permit him to proceed. He made a final effort, and said that he thought he could not be departing from the wishes of the Emperor in assigning the command to the general who appeared to have been designated by the unanimous voice of the army. 'I have selected Canrobert,' he said, 'to replace me, pending the confirmation of the appointment by his Majesty.' The Marshal made a sign with his hand to General Martimprey, who advanced to General Canrobert, and presented to him the paper which contained his provisional commission. Instead of taking the paper, General Canrobert drew from his pocket a letter, bearing the arms of the Emperor. Marshal St. Arnaud opened his eyes, but expressed no surprise. His head fell back on his pillow, and he uttered faintly these words, 'It is done.' On the 5th of November, at Inkermann, Canrobert, although commander-in-chief, was again in the thickest of the fight, and whilst heading the impetuous charge of Zouaves was slightly wounded, and had a horse killed under him. General Canrobert is a great favourite with the French and English armies; the soldiers which admire his blitheness, activity, and enthusiasm in battle. He is only in a secondary degree responsible for the general conduct of affairs before Sebastopol; Lord Raglan, his senior, having precedence in council. In an Imperial decree published in the

"Moniteur," of the 13th January, 1855, by which the military medal was conferred on the General, it was said, "This general officer counts twenty-eight years' service, seventeen campaigns, and three wounds; two of the latter having been received in the Crimea."

CANTERBURY, JOHN BIRD SUMNER, ARCHBISHOP OF, the legal Head of the Church and chief of the "Low Church or Evangelical party. As a clerical dignitary, Dr. Sumner has been truly described as the very opposite of Dr. Phillpotts, bishop of Exeter; and they may be regarded as examples of the two extreme parties, between which the clergy of the Church of England are just now divided. Dr. Sumner was formerly Bishop of Chester, and is elder brother to Dr. C. R. Sumner, bishop of Winchester. Archbishop Sumner is a Liberal in politics, and his character is conciliatory, laborious, and high-principled. He is the inflexible opponent of the Romanising-Tractarian-Puseyite clergy. He is Primate of all England and Metropolitan, and Doctor in Divinity; was translated in 1848. He is the eldest son of the Rev. Robert Sumner, M.A.; grandson of Dr. John Sumner, Provost of King's College, 1756-72; was born, 1780; married, 1823, daughter of Capt. George Robertson, R.N. He was educated at King's College, Cambridge. His University honours are: Browne's Medallist (Latin) 1800; Hulse's Prizeman, 1802; B.A. 1803; M.A. 1807; D.D. 1821. Former preferments: Canon of Durham, 1820; consecrated Bishop of Chester, 1828. Patronage: Archdeaconries of Canterbury and Maidstone; two canonries; six preacherships in Canterbury Cathedral: 168 benefices; the total annual value of which is 61,973*l.* Diocese: the county of Kent (excepting the city and deanery of Rochester), and some parishes in the diocese of London; number of benefices, 346. His published works are: "Apostolical Preaching considered;" "Charges at Chester;" "Evidences of Christianity;" "Exposition of the Acts of the Apostles,"—"of St. James, St. Peter &c.,"—"of St. John,"—"of St. Luke,"—"of St. Matthew and St. Mark,"—"of the Romans and 1st Corinthians,"—"of the 2d Corinthians;" "Four Sermons on Christian Ministry;" "Sermon on Christian Charity;" "Sermons on the Christian Faith;" "Sermons on the Festivals;" "Treatise on the Records of the Creation," etc.

CAPEFIGUE, BAPTISTE-HONORE-RAYMOND, a voluminous French historian, was born at Marseilles in 1799, and after studying law at Aix he set out, nearly at the same time with Thiers and Mignet, for Paris, in order to complete his studies. Soon after his arrival, however, abandoning the law, he turned his attention to politics, connected himself with the Legitimist party, and became one of the editors of the "Quotidienne." His contributions to the journal, and his work entitled "Recueil des Opérations de l'Armée Française en Espagne," attracted the attention of the Government, and he was appointed to an office in the Foreign department, which

held until the Revolution of July. Since that period he has devoted himself wholly to literature. During the interval from 1823 to 1826 he had obtained three prizes from the Academy of Inscriptions and Belles-Lettres, for essays on historical subjects. His connexion with the department of foreign affairs had afforded him opportunities for examining the original sources of French history, and collecting materials for historical works, which he soon turned to good account. In 1823 he published his "Essai sur les Invasions des Normands," and has since produced a great number of historical works in rapid succession, many of them very voluminous. The principal of these are the "Histoire de Philippe-Auguste," (4 vols. 1827-29); "Histoire de la Réforme, de la Ligue, et du Règne de Henri Quatre," (4 vols. 1834); "Richelieu, Mazarin et la Fronde," (4 vols. 1835); "Louis XIV." (6 vols. 1837); "Europe pendant le Consulat et l'Empire de Napoleon," (12 vols. 1839-41). These, however, form little more than a tenth part of his historical works. He is also the author of a historical novel, entitled "Jacques II. à St. Germain," and a life of St. Vincent de Paul.

CARDIGAN, JAMES THOMAS BRUDENELL, EARL OF, a Major-General, lately second in command of the Light Cavalry in the Crimea, and its leader in the glorious charge at Balaklava. His lordship, who is the son of the sixth earl by the daughter of George John Cooke, Esq., of Harefield Park, was born in 1797, and entered the army as cornet in the 8th Hussars, 6th May, 1824. His promotion was rapid, and by the 3d December, 1830, he had become Lieutenant-Colonel. In June, 1826, he married Elizabeth Jane Henrietta, daughter of Admiral Tollemache, and in 1837 succeeded his father. As Lord Brudenell and Earl of Cardigan his lordship has, at various times, occupied a considerable share of public attention, not always so much to his advantage as he does at the present moment. The feelings of the writers of this notice would lead them to pass by the unpleasant occurrences under which this took place, and so bring their narrative more into harmony with the dominant sentiment of the hour; but they believe that the public, and Lord Cardigan with it, will be disposed to do justice to their endeavours faithfully to fulfil the first duty of a biographer, by a strict adherence to historic truth. To persons otherwise minded, if such there be, it is enough to observe, that events which within these fifteen years have occupied our public courts, and on account of which the highest court in this realm was reconstructed, are not subjects which it is in the power of the contemporary memorialist to cast into oblivion at pleasure. In March, 1832, Lord Brudenell was promoted from the half-pay to the Lieut.-Colonelcy of the 15th Hussars. His lordship, who had always been distinguished for devotedness to his profession, applied himself at once to increase the efficiency and promote the comfort of his corps. From whatever cause, he failed to secure the cordial concurrence of the officers under him, and a

series of disputes arose, which ultimately came before the public in the report of a court-martial held on Captain Wathen, at Cork, in December 1833. Lord Brudenell had issued an unusual number of stable-jackets to the regiment, apparently without consulting his officers, and a difference of opinion ensued. Lord Brudenell charged Capt. Wathen with insubordination, and conduct unbecoming the character of an officer and a gentleman, for having made a representation on the subject to the Major-General who inspected the regiment; and for having, when commissioned to convey to his own assembled troop the Major-General's approbation of their appearance, gone further, and added his own opinion and that of strangers as to its efficiency, notwithstanding that the troop had lately been censured by Lord Brudenell, their colonel. The court-martial honorably acquitted Capt. Wathen on all these charges, and added the following remarks to their verdict:—"Bearing in mind the whole process and tendency of this trial, the court cannot refrain from animadverting on the peculiar and extraordinary measures which have been resorted to by the prosecutor. Whatever may have been his motives for instituting charges of so serious a nature against Capt. Wathen,—and they cannot ascribe them solely to a wish to uphold the honour and interests of the army,—his conduct has been reprehensible, in advancing such various and weighty assertions, to be submitted before a public tribunal, without some strong grounds of establishing the facts. It appears on the recorded minutes of these proceedings, that a junior officer was listened to and non-commissioned officers and soldiers were examined, with a view of finding out from them how, in particular instances, the officers had executed their respective duties; a practice in every respect most dangerous to the discipline and subordination of the corps, and highly detrimental to that harmony and good feeling which ought to exist between officers. Another practice has been introduced into the 15th Hussars, which calls imperatively for the notice and animadversion of the court,—the system of having the conversation of officers taken down in the orderly-room without their knowledge; a practice which cannot be considered otherwise than as revolting to every feeling of a gentleman, and as being certain to create disunion, and to be most injurious to his majesty's service." In consequence of these proceedings his lordship withdrew from the command of the 15th Hussars. In 1836, however, he was appointed to command the 11th Hussars, his connexion with which terminated only upon his nomination to a staff command in the Army of the East. He succeeded immediately afterwards to the Earldom and a large fortune, and spent exceedingly large sums on his regiment; as an example of which may be mentioned the fact, that he added 2500*l.* to the regulation price of the horses at the remount of the 11th, ordered by the Horse Guards. In 1841 Lord Cardigan's name again became prominent, in connexion with

to the level of a pothouse, because he had caused Moselle wine to be placed on the table in a black bottle. The message, a verbal one, was delivered at Lord Cardigan's request by Capt. Jones. Reynolds first complained to Lord Cardigan, who gave him no satisfaction, and next warned Jones to bring no more offensive remarks. For this conversation Lord Cardigan summoned Reynolds into his presence, upbraided him, and upon his silence ordered him into arrest. Reynolds remained under arrest three days and demanded a court-martial. Lord Hill, Commander-in-Chief, approved all that Lord Cardigan had done, and sent General Reynolds to Canterbury, to call the officers of the 11th before him; censured Capt. Reynolds for vindictiveness, and refused him a court-martial, on the pretext that it would bring many things to light which would not be for the good of the service. Reynolds then asked to be brought to trial for the offences of which the general had newly accused him. This request was denied, and Lord Hill accompanied the refusal with the harshest denunciation. About the same time a misunderstanding arose between Lord Cardigan and Capt. R. A. Reynolds, also of the 11th Hussars. Lord Cardigan was reported in the regiment to have employed an unbecomingly expressive expression in speaking of Capt. Reynolds before command. The Captain wrote a polite note to Lord Cardigan, begging permission to contradict the rumour. Lord Cardigan left this unanswered. A second, couched in the language of exasperation, followed, and was interpreted as a challenge. Lord Cardigan referred both to Prince Albert, colonel of the regiment, who referred them to Lord Hill, who in turn ordered that they should stand before a court-martial. The court found that the second note was couched in language so insubordinate, ungentlemanlike, and insolent as to afford the writer no sort of excuse or palliation for his conduct on the alleged grounds of previous provocation, and ordered Reynolds to be cashiered. While the last affair was yet pending, and before it had been brought before the court-martial, Sir Harry Garnett Phipps Tuckett received from Lord Cardigan a challenge, on account of some letters which the first-mentioned gentleman had sent to the "Morning Chronicle" newspaper, and in which the noble Earl's character was freely discussed. The duel took place on 15th September, 1840, on Wimbledon Common. The first fire was ineffectual on both sides, but on the second fire, Capt. Tuckett received his adversary's ball in the back part of the lower back. The ball traversed round to the spine, but was extracted, and Capt. Tuckett recovered. Warrants were subsequently issued, and Lord Cardigan was finally committed to take his trial under the Vic. cap. 85, for feloniously shooting. In the exercise of his right as a peer of the realm, Lord Cardigan demanded to be tried before the House of Lords, which accordingly sat on the 16th January, 1841, as a criminal court, for the first time after an interval of sixty-four years. The late Lord Denman was the presiding judge, under the title of Lord High Steward. The prosecution was conducted in the tenderest spirit by Sir John Campbell,

the present Lord Chief Justice of the Queen's Bench. Lord Cardigan was brought to the bar by the Yeoman Usher, and on approaching made three reverences, and knelt till directed by the Lord High Steward to rise. Then he made three reverences, one to the Lord High Steward, and one to the Peers on either side, who returned the same. His lordship was then conducted to the stool provided for him within the bar, near to his counsel. Having been arraigned by the Deputy Clerk of the Crown in the usual manner and pleaded not guilty, he was asked by the same officer, "How will your lordship be tried?" to which he replied, "By my peers." The trial then proceeded. Sir John Campbell commenced his address by comforting their lordships and the noble prisoner with the reflection that the charge against the latter "did not imply any degree of moral turpitude," although if it were sustained a breach of the statute law would have been proved. Three indictments were laid; the first charging that the noble lord shot at Capt. Tuckett with intent to murder; the second charged the same act with intent to maim and disable; and the third with intent to do some grievous bodily harm. Having in the prosecution of his duty set out these serious charges, the learned counsel hastened to disavow the belief that Lord Cardigan had any grudge, personal animosity, rancour, or malignity, in fighting this duel, or that he had any other object than to preserve his reputation and to maintain his station in society as an officer and a gentleman. "Under these circumstances," he said, "if death had occurred in the opinion of mankind it would have been regarded rather as a great calamity than as a great crime." From the first, no doubt could have existed in any mind as to the termination of a case so opened; but the prosecutors conducted their business so remissly that Sir William Follett showed, as soon as Sir John Campbell had concluded his case, that on an essential point no evidence whatever had been adduced. The prosecutors had failed to establish the fact, than which nothing was easier of proof,—namely, that the person engaged with the noble prisoner in a duel was named Harvey Garnett Phipps Tuckett, as alleged in the indictment, or that Capt. Harvey Garnett Phipps Tuckett was on Wimbledon Common at all on the day of the duel. The result of this failure was that Lord Cardigan was not required to make any defence. The court proceeded to give its opinion without hearing counsel on the merits, and the spiritual peers having first withdrawn, the house unanimously declared Lord Cardigan "not guilty," the Lord High Steward broke his staff of office, and the proceedings were at an end. From this time little was heard of Lord Cardigan outside military circles, in which, however, he acquired a high reputation, as a thoroughly accomplished cavalry officer and a commander jealous of the reputation of his corps. In 1848 he received, through the commander of the district, an official letter from the Horse Guards by which he was informed that the Duke of Wellington, the Commander-in-Chief, had expressed the great satisfaction with which he had remarked the discipline and efficiency of the 11th Hussars.

and that his grace had desired that Lord Cardigan might be informed that he considered the state of that regiment highly valuable to its commanding officer. On the formation of the Army of the East, Lord Cardigan was appointed to command the 5th Cavalry. In June he was made a Major-General, and thus his connection with the 11th was severed. Whilst the British army was camped near Varna he was sent forward by Lord Raglan towards the enemy's outposts with the light cavalry, as it was not well known what position the Russians were. He set out, and traversed a great country for about 300 miles; proceeding first 120 miles in the direction of Trajan's Wall, and then along the banks of the Danube between Ezerluk and Silistria, returning by Shumla. On the first day in the Crimea, he was employed within two hours afterwards in endeavouring to cut off some Russian cavalry, supposed to be en route to Simpheropol: but the Russians were not to be found. At the battle of the Alma the light cavalry were not employed. At the attack upon Balaklava, on the 25th October, 1854, at last he applied the long-wished-for opportunity, in which the Army of England might show its mettle. The morning found him at his post, mounted on a fine chestnut horse, at the head of the 5th Cavalry. Suddenly an order reached him from Lord Lucan, Lieutenant-General commanding the entire cavalry; he was to advance and rescue the guns which the Turks had abandoned, and which the enemy was preparing to take away. To advance with the 5th Cavalry into the cross-fire of two Russian batteries, and a rolling fire of artillery, was to advance to all but inevitable death; but the order came from two superior authorities, and was imperative: it was obeyed. An eye-witness writes:—"No one was prepared for the manoeuvre of the light cavalry. It is easy to imagine the effect. The four regiments, dashing on at headlong speed, were exposed to the enemy's fire, and fearful was the havoc. After the charge, horses were seen reeling and rearing, and riders falling in every direction. Still that gallant troop dashed on, braved the discharge of grape and shot from the central battery, drove the enemy's gunners out, and then—stood still, their swords reeking with blood; and then, for the first time, did they look back to see their fallen comrades. They had gained the battery, killed the enemy's gunners, and destroyed its cavalry support. They had done all they could do, and nothing remained but to go—through the fire of the flanking batteries—back again, pursued by the fire from the battery they had just taken; for they could not take the guns, nor, for want of implements, could they spike them. On their return they were charged by Russian lancers. Lord Cardigan was attacked by two Cossacks, who with their lances gave him several pricks, and rather staggered him in his saddle; but he was well mounted and a good cross-country rider, and, more-so than any brave men ever are in real danger, he parried their attacks, and escaped with the lance-pricks in his leg." His lordship described this terrible death-ride with so much modesty, and with such simplicity, that the reader will be pleased to have his

own account of the matter. In the course of a speech made at Northampton, in reply to an address presented to him by the corporation of that town, Lord Cardigan said :—" I never can allude to the subject without the deepest feelings of regret. At the same time, though I do not pretend to more sentimentality than other men, it seemed to me then, and still seems, that the loss was certain and serious, and the advantage to be gained by the attack so slight, as to make it matter of deep regret that the order should have been given. I received the order to attack, and although I should not have thought of making such an attack without order and although I differed in opinion as to the propriety of the order I promptly obeyed it. I placed myself at the head of my brigade and gave the word of command. We advanced ; but before we had gone twenty yards a shell burst between me and the staff-officer who had brought the order, and was riding within thirty yards of me on the inside, killing him and leaving me untouched. From that moment there was nothing to be done but to obey the order, and attack the battery in the valley. We proceeded—we advanced down and along a gradual descent of more than three-quarters of a mile, with one of the batteries opposed to us vomiting forth shells, round shot and grape—with a battery on the right flank, a battery on the left and a distant battery which had been lost by the Turks, and all the intermediate ground covered with Russian riflemen ; so that when we came down within the distance of thirty yards to their artillery which had been firing at us, we were in fact surrounded and encircled by a blaze of fire, and raked by the riflemen, who fired upon us in flank. As we passed, the oblique fire of the artillery was brought upon our rear. Thus we had a strong fire on the front, in the rear, and on both our flanks. We entered the battery—we went through the battery—the two leading regiments cutting down a great number of the Russian gunners. In the two regiments which I had the honour to lead, every officer was either killed or wounded, or had his horse shot under him, except one. Those regiments having proceeded on, were followed by the second line, consisting of two more cavalry regiments, which continued to cut down the Russian gunners. Then came the third line, comprising two other regiments, who also nobly performed their duty. The result was, that this body of about 600 cavalry succeeded in passing through a body of, as we have since learnt, 5600 Russian cavalry. I know the number of the Russian regiments, and the number of the general officer who commanded the brigade. We did as much execution as we could, and suffered an immense loss of life on our selves. After riding through the Russian cavalry we came up to the Tchernaya river. There we were stopped, and we had to retreat by the same route by which we came, destroying as many of the enemy as we could. I believe we succeeded in destroying the greater part of the Russian gunners, and in doing great execution amongst the Russian cavalry. The scene on retiring was lamentable in the extreme ; still, nothing could be accomplished more regularly, or with greater order ; there was no confusion, no hur-

galloping about, no desire to retreat too hastily, but the whole was conducted as coolly and as systematically as upon parade. We returned up the hill we had descended, we had to run the gauntlet, and incur the same risk from the flank fire of the Russian riflemen. Numbers of men and horses were shot down, many soldiers who had lost their chargers were killed whilst endeavouring to escape on foot. The consequence was, that when we reached the top of the hill, there was but about one-third of the brigade left. I think, when I went round to count them, not more than one hundred and ninety five only remained. The rest were gone—lost in that charge. I will only say further with regard to that charge, that, highly as you approve of it,—and I will not conceal my pride and gratification at receiving your approbation and approval of the gallantry then displayed—I feel that, whatever glory you may attribute to me, was equalled by every man in the brigade. I led—they followed—there was no hesitation—I was so ready, so cheerful a body of men in my life. I never saw anything done with more spirit or with lighter hearts; and to such an extent was this evidenced, that, when the remnant of the brigade returned to position, the men were so elated at what they considered so creditable to themselves and to the British arms, that they gave three cheers of rejoicing at having attacked the Russian batteries, and at having ridden through and through so many a body of Russian cavalry." In another part of his speech Lord Cardigan said,—“In that attack four hundred horses were rendered unserviceable; three hundred and seventy were killed in action, and the remainder were in such a sad state from their wounds, that they were obliged to be destroyed the next morning. But in connexion with that charge I have to mention a much more serious circumstance—I mean the sad loss of human life that then occurred. No fewer than twenty-six colonels and two hundred and seventy-six non-commissioned officers and private soldiers, making a total of three hundred, were killed in that action. This, then, will thoroughly explain the loss of the Light Brigade.” With reference to his present position Lord Cardigan said,—“Had it not been for circumstances, arising from my ill health, over which I had no control, I should not have been under my duty to leave the seat of war at this time, although, had I remained there would have been almost useless, as there was nothing left to command. I think that, unless some such circumstance as I am about to assign can be urged—incapacity arising from ill health amongst the number—every general officer is bound to remain with the army as long as there is an army to command; I am prepared to say further, that if my services are again required they shall be perfectly available. In the mean time I have been promoted to a situation—Inspector-General of Cavalry—in which I hope to be able to render considerable service to the army, by saving the losses and restoring the dilapidated condition of the cavalry; being, in short, entrusted with the preparation of all new recruits for the army. But I have said, that had I remained

in the Crimea, I could not have been usefully employed, as there was so little remaining for me to command. That is, unfortunately the case; for, in addition to other special reasons for losses incurred, hundreds of cavalry horses died through the commissariat failing to provide provisions or forage for them. Before I left the army, which was early in December, the horses of the brigade which had the honour to command had been eighteen days without hay and but a very small portion of barley had been given them to keep them alive." His lordship has received a medal for the Crimea.

CARLETON, WILLIAM, Irish Novelist, born at Clogh Tyrone, in 1798. His father was a peasant, but has been described as a man remarkable for his knowledge of the traditions of the country, and from him the future author appears to have early imbibed the characteristic prejudices, feelings, and superstitions of the country. Carleton displayed an early taste for reading, and became what is usually characterised in Ireland as "a poor scholar"—a character he has himself described in one of his most popular fictions. When old enough, he became a tutor in a village school; but, wandering off to Dublin in search of fortune, a publisher was induced to speculate upon two anonymous volumes from his pen, entitled "Traits and Stories of the Irish Peasantry." These appeared in 1830, and decided his fate: he was henceforth to be an author, and in that character has since wrought, sometimes with more, sometimes with less, success. His productions include a second series of "Traits and Stories," "Fardorougha the Miser," "The Fall of Spring Vale," and numerous other tales. Mr. Carleton is now in the enjoyment of a pension of 200*l.* a-year. He has lately emigrated to America, having taken leave of his "ungrateful country" with a fierce poetical denunciation, which he published in an Irish newspaper. He has, nevertheless, been far better treated by the same country than a much better writer—Gerald Griffin, the author of "The Collegians;" who obtained no pension for the great service he had rendered to literature and public morals by his admirable novels. Mr. Carleton has also been much more fortunate than many of his more deserving contemporaries. Before he joins John Mitchell, therefore, as the bitter assailant of the Saxon, he should resign his pension.

CARLISLE, GEORGE WILLIAM FREDERICK HOWARD, EARL OF, K.G., known until his recent accession to the earldom of Lord Morpeth, was born April 18, 1802. He entered the public service at an early age, and was for a long time attaché to the embassy at St. Petersburg. He was afterwards elected to parliament from Yorkshire, and up to 1841, under the Melbourne ministry, was Secretary of State for Ireland, where he was universally beloved. When the Whigs came again into power in 1846, he was appointed Commissioner of Woods and Forests, and succeeded Lord Campbell as Chancellor of the Duchy of Lancaster. He has acquired an honourable reputation as a man of letters and culture. He

and in America a few years ago, and shortly after his return to England, in the autumn of 1850, delivered a lecture upon science before the Mechanics' Institute at Leeds, and another on the "Life and Writings of Pope," which attracted no small attention, partly from the intrinsic value of the lectures themselves, and partly from the novelty of a lord's lecturing to a society of mechanics. He has recently visited the East, and has published impressions of his tour under the title of "Diary in Turkish and Greek Waters." His family-seat, Castle Howard, in Yorkshire, contains an excellent collection of ancient and modern pictures, and is especially rich in works of English art. On the recent accession of Lord Palmerston to the premiership, the Earl of Carlisle was created by her Majesty Lord Lieutenant of Ireland.

CARLYLE, THOMAS, the great "Censor of the Age," as his attacks are wont to entitle him, and, in truth, one of the most powerful thinkers of his time, was born in 1795, at Ecclefechan, a small place in Dumfriesshire, where his father, a man of intellect and earnest religious feeling, held a small farm. He received the rudiments of his education at Annan. At the age of fourteen he entered the University of Edinburgh, passing through a regular curriculum, and studying mathematics with no ordinary zeal under Thomas Leslie. He would seem to have been originally inclined to the Church; but this was rather the choice of his parents than his own. He appears to have remained at the University for seven years, spending his vacations among the hills and the rivers of Dumfriesshire. Of his college life little is known, but the fact that his habits were rather meditative than active; "shunning the crowd," "pleased rather with the joy of lone thoughts." After teaching mathematics at a school in Edinburgh for about two years, he determined to devote himself to literature. "Of all priesthoods," says he, "aristocracies, governing men at present extant in the world, there is no class comparable in influence to that priesthood of the writers of books." "The world of newspapers, pamphlets, books," he adds, "these are the real, effective Church of a modern country. The writer of a treatise is he a preacher?—preaching not in this parish or in that, but to all men, in all times and places?" In consequence, therefore, Mr. Carlyle resolved to devote himself, and accordingly, in 1823, commenced his literary career by several contributions in Brewster's "Edinburgh Encyclopedia," on "Montaigne," "Montaigne," "Nelson," and the "Two Pitts." He also furnished literary notices to the "New Edinburgh Review." In the same year he completed a translation of Legendre's "Geometry," to which he prefixed an "Essay on Proportion," and also published a translation of Goethe's "Wilhelm Meister," a work which marked a direction of reading destined to influence materially his career. On the completion of this translation he commenced "Life of Schiller," which was published by instalments in the "London Magazine," then sustained by the talents of Lamb,

Hazlitt, Hood, John Scott, and Allan Cunningham. For Goethe and Schiller, two of the "true sovereign souls of German literature," his admiration has ever been unbounded. His letters to Goethe have appeared in the poet's published correspondence. In one of them we find a graphic description of Carlyle's local habitation and mode of life at that period. Having fallen in with the richest of prizes in the lottery of human life, a good wife, (about 1822), he married, and resided alternately at Arneley Bank and Craigenputtock, a little estate in Dumfriesshire. "Our residence," says he, in one of the letters above referred to, "is not the town of Dumfries itself, but fifteen miles to the north-west of it, among the granite hills and the black morasses which stretch westwards through Galloway almost to the Irish Sea. In the wilderness of heath and rock, our estate stands forth a green oasis—a tract of ploughed, partly enclosed, and planted ground where corn ripens and trees afford a shade, although surrounded by sea-mews and rough-woolled sheep. Here, with no small effort, have we built and furnished a neat, substantial mansion; here, in the absence of a professorial or other office, we live to cultivate literature with diligence, and in our own peculiar way. We wish joyful growth to the roses and flowers of our garden; we hope for health and peaceful thoughts to further our aims. The roses, indeed, are still in part to be planted, but they blossom already in anticipation. Two ponies, which carry us everywhere, and the mountain air, are the best medicines for weak nerves. This daily exercise, to which I am much devoted, is my only dissipation; for this nook of ours is the loneliest in Britain—six miles removed from every one who in any case might visit me. Here Rousseau would have been as happy as on his island of St. Pierre." In this secluded spot, with a moderate store of books at his command, an occasional contributor to the foreign and other reviews of the day, he remained until about 1830, when he took up his abode in London, and commenced the publication, in "Fraser's Magazine," of his "Sartor Resartus." In this work Mr. Carlyle gave evidence of much of the power, in its abuse, which characterises his more recent works. We have in it also the piebald style, the causticity and trenchant spirit in which he still delights to "run-a-muck" at men and things; and the dogmatism and self-complacency which enable the philosopher to consider himself hundreds of years in advance of his age, when he is only "vehiculating" in a style interlarded with the most extravagantly far-fetched phrases, self-evident truths which have been universally conceded hundreds of years ago. He calls middle class gentility "*gigmanry*," because Probert, the accomplice of Thurtell in the murder of Mr. Weare, was characterised by one of the witnesses as "respectable," on the score of his having kept a gig! We must recognise all his extravagant and adopt his ever-varying creed, and bow down in adoration before the "Baals" of his hero-worship, or we incur the risk of being denounced as "solemn human shams," "phantasm captains," "premeditated quacks," "dull and dreary humbugs." The first experimen-

baseness, and unverity." Under the head of the "hero as king" we have the portrait of Mr. Carlyle's idol, Cromwell, who never was king; and of Napoleon. The whole essay is an extravaganza. In 1850 Mr. Carlyle favoured the world with his "Latter-day Pamphlets," essays suggested by the convulsions of 1848,—an era which he describes as "one of the most singular, disastrous, amazing, and on the whole, humiliating years the European world ever saw." He has no more sympathy with the "immeasurable democracy" which then "rose, monstrous, loud, blatant, inarticulate, as the voice of Chaos, than with the reigning persons who stared at the sudden horror, the voice of the whole world bellowing in their ears—"Begone, ye imbecile hypocrites!—dastards not heroes; off with you, off!" And it is rant like this, passion torn to tatters, and truth inflated till they burst, that some persons are fain to mistake for lofty and fervent philosophy! Mr. Carlyle's latest work is a "Life of John Sterling," which, indeed, was not wanted, and which leaves the amiable character and mediocre intellect of its subject pretty much where he found it. Sterling was one of Mr. Carlyle's most enthusiastic admirers, a transcendentalist, and hater of "shams" and "phantasm captains and gigmanry;" and he has attempted, not very successfully, to make a hero of him. Mr. Carlyle's characteristic, says one of his admirers, is a rugged earnestness of expression, and a range of thought widened and deepened by acquaintance with the writings of the great German thinkers. Shallowness, insincerity, and pretension, have never had a more formidable enemy than they encounter in him. In the midst of anger, however, he gives so many proofs of a humble, truth-loving, and even kind spirit, that he is allowed to speak severe truths with a freedom which the age would scarcely permit in any other person.

CARNOT, HIPPOLYTE, Minister of Public Instruction in France under the Republic of 1848, was born in 1801, the son of the old Conventionalist, studied the law, and became an advocate. Later in life he ranked as a *homme de lettres*, and edited the "Revue Encyclopédique." He was formerly a disciple of St. Simon. His ministry under the Republic was rendered remarkable by a circular addressed to the departments, counselling them to send unlettered rustics to represent the nation in the Assembly.

CARRERA, RAFAEL, President of the Republic of Guatemala, was born of obscure parents in the city of that name, in 1814. He passed his early life as a drummer-boy and cattle-driver, enjoying none of the advantages of education. A popular movement against the established government, which took place in one of the mountain districts of the state of Guatemala, in 1837, brought him to notice for the first time, and he soon became the leader of the revolution. The appearance of the cholera in the country, which the ignorant classes ascribed in some way to the influence of the Government, was the immediate cause of the revolt, which soon took the character of a declared opposition to the existing administration.

with Governor Porter of Pennsylvania, and that portion of the Locofoco party who had a leaning to those measures. He was afterwards elected to the Senate of the United States. Being not in a position of influence, he commenced bidding for the Presidency. Accordingly, a public meeting in Kentucky was got up in 1843, where he was recommended for President, and Governor Porter for Vice-president. With this endorsement, the two entered the Baltimore Convention of 1844, and there succeeded in defeating Van Buren by the introduction of the two-thirds rule, but were themselves defeated in getting the nomination. He never espoused the annexation of Texas, the extension and propagation of slavery, and the war with Mexico for additional territory to promote slavery. But in these, as in some former measures, he soon became perplexed. Wilmot of Pennsylvania introduced his celebrated proviso against the extension of slavery in a free territory. This was a democratic measure, popular in the free States and odious in the South. The course pursued by Cass was to make a speech for the proviso and to vote against it. Then came the repeal of the protective tariff of 1842, which he had approved and recommended. This also was a democratic measure: he dealt with it after the same fashion. He made a speech in favour of the tariff and voted to repeal it. During the late session of Congress he made a speech against slavery as a moral evil, and published a letter approving of it in free territory. His general declarations have been of the most ultra character; and amongst them may be noticed his cry for war with England when the Oregon dispute was in course of settlement. His political character may be summed up by the remark that he is in favour of the retention of slavery and of the extension of territory: thus flattering the two most dangerous popular errors of his countrymen. General Cass is a Teetotaller, having never, say the advocates of water-drinking, tasted spirituous liquors in his life.

CASTIGLIONE, COUNT CARLO OTTAVIO, a distinguished Italian Philologist, was born in 1795 at Milan. He early devoted himself to studies which have hitherto found few prosecutors in Italy. He gave proof of his acquaintance with Oriental languages and history as early as 1819, when he put forth his description of the Cufic coins in the Cabinet of Brera, at Milan, under the title "Monete Cufiche dell' Museo di Milano." His principal work in the department of Oriental literature is the "*Mémoire Géographique et Numismatique sur la Partie Orientale de la Barbarie appelée Afrikiah par les Arabes*," etc., published in 1826, in which he attempts, with the most thorough accuracy, to work out the origin and history of those cities of Barbary, of which the names occur upon Arabic coins. Out of Italy, Castiglione is best known by his publication of the fragments of the Gothic translation of the Bible by Ulphilas, which Mai had discovered among the palimpsests in the Ambrosian library. He first, in conjunction with Mai, put forth, in 1819, in the "*Ulphilæ partium ineditarum*

"Ambrosianis Palimpsestis repertarum Editio," specimens of parts of the Old Testament, of some of the Pauline epistles, a fragment of a Gothic calendar, and a homily. This was followed in 1829 by the independent works, "Ulphilæ Gothica Versio Epistolæ Pauli ad Corinthios Secundæ;" in 1834, by the "Gothicæ Versionis Epistolarum divi Pauli ad Romanos, ad Corinthios Primæ, ad Ephesios, quæ supersunt;" in 1835, by the "Gothicæ Versionis Epistolæ Pauli ad Galatas, ad Philippenses, ad Colossenses, ad Thessalonicenses Primæ, quæ supersunt;" and in 1839, by the "Gothicæ Versionis Epistolarum Pauli ad Thessalonicenses Secundæ, ad Timotheum, ad Titum, ad Philemonem, quæ supersunt." These works are all of great value, on account of the excursuses, remarks, and glossaries which accompany them.

CATTERMOLE, GEORGE, Painter, born at the village of Littleburgh, near Diss, Norfolk, in 1800. No one can have examined Mr. Cattermole's works upon the walls of the Watercolour Exhibition, which they have adorned for some twenty years, without having been struck, not merely with the admirable harmony of colour and tone—a tone and colour quite original—which pervades them, but with the profound knowledge of chiaroscuro which they exhibit. Monks, cavaliers, battles, banditti, knightly halls, and awful enchanted forests, in which knights and distressed maidens wander—the pomp and circumstance of feudal times—are subjects in which Mr. Cattermole chiefly delights. Six-and-twenty years back, some of the most elaborate architectural drawings in Wilson's "Cathedrals" were to be found with the signature of the young student, who afterwards applied the knowledge, of which he had laid the ground-work, in the execution of the thousand brilliant and beautiful works which we owe to his abundant genius. Among the finest of his drawings, as everybody who saw it will remember, is the "Skirmish on the Bridges;" and his Scottish designs, illustrating the life of Queen Mary, are as remarkable for their beauty of design and colour as for their poetry, which is gloomy and grand. Some fine delineations of his favourite Cavaliers and Roundheads are also to be found ornamenting his brother's volumes of the "History of the Civil Wars." Some of the most powerful of his latest performances are suggestions from the Histories and Legends of Shakespeare.

CAVAIGNAC, EUGÈNE, a French General and Politician, in his youth a steady and consistent Republican, but for a while, during the convulsions that followed the Revolution of 1848, the Dictator of France. He was born in Paris, December 15, 1802, his father being the old Conventionalist of the same name. An elder brother, Godefroy Cavaignac, studied the law, and being also a Republican in opinion, became an active and influential agent in promoting the Revolution of 1830; but the government of Louis-Philippe not satisfying Godefroy's ideas, he attacked it, and suffered prosecution and imprisonment in consequence. At a later period he

became, at the suggestion of Ledru Rollin, the editor of "*Réforme*," a Paris paper of some importance, which died in 1827. Whilst his brother was thus occupied in the arena of practical politics, the future general was serving in the French army, which he had gained a commission after a course of successful study at the Polytechnic School. In 1828 he held a command in the French expedition in the Morea. He afterwards returned to his native country, and at the time of the Revolution of July, 1830, was in garrison at Arras; at which place, and afterwards at Metz, he openly avowed his revolutionary principles. While in garrison in the latter town, he was asked by his colonel if he would obey orders to fire on the populace in case of an insurrection. He answered by a decided refusal. In consequence of this conduct he was sent by the Government to Africa, where he distinguished himself greatly in the Algerine war, and rose in his profession notwithstanding his well-known political opinions. After the capture of Tlemcen, in 1836, Marshal Clausel, who had commanded the expedition, left as garrison in the citadel of that place a company of volunteers under the command of Cavaignac. He showed great bravery in this perilous charge; again and again repelled the attacks of the Arabs; and when hard pressed by Abd-el-Kader, inspired all around him with the same courageous spirit by which he was himself animated. From this period he was actively engaged in the Algerine war, and gradually rising in service; at one time guarding the interview of the French emissaries and the delegates of Morocco, to settle the western boundary of Algiers; at another busied in defeating the machinations of the prophet Mohammed Ben-Abdallah, who, in the desert, endeavoured to excite the people, by appealing to their religious prejudices. In 1847 he took the place of Lamoricière, in the command of the province of Oran, which he retained until raised by a decree of the Provisional Government (Feb. 24, 1848) to the Government generalship of Algeria. In the government of Algeria, Cavaignac distinguished himself by firmness, prudence, and judgment, and he was chosen a delegate to the National Assembly, at the same time for the departments of Lot and Seine, and decided upon sitting for the former, as being the native place of his family. A decree of the Provisional Government (Feb. 24) had made him General of Division, and a second decree named him Minister of War; but he refused to accept the office, because he was not allowed to concentrate a large military force in Paris. By a third decree he was, at his own request, recalled to the metropolis, in order to take part in the proceedings of the National Assembly. On the 12th of May he left Algiers, and arrived in Paris just at the disturbances of the 15th of that month. On the 17th he was appointed Minister of War, events having shown the necessity of concentrating the military power in one person; and on the 21st the President of the National Assembly delivered to him the command of all the troops appointed to guard the Chamber. On the 8th of June, Lamartine pointed out in the council the signs of

ricades, ten or twelve feet high, and of great strength, crossed streets at every dozen paces; the houses too were, for the most part, in the possession of the insurgents, and covered with trusses, bags of sand, and other protections against musketry, behind which showers of missiles were poured down on the assailants. At eleven o'clock the National Assembly passed a resolution declaring Paris in a state of siege, and appointed General Cavaignac Dictator, with unlimited powers, civil and military. The Executive Committee instantly resigned. Orders were then issued that the National Guard should occupy the streets, prevent assemblage of crowds, and watch over the safety of private property. The rest of the inhabitants were to remain at home, keep their windows closed, as a security to the soldiers in the streets that they should not be fired on from the houses. Every person out of uniform who was found abroad without a written pass was searched, and either taken prisoner or led by a National Guard to his own door. In pursuance of this judicious policy many persons were arrested in the act of conveying ammunition and other aid to the insurgents. At noon Cavaignac sent a flag of truce to the insurgents, offering a general amnesty if they would yield before two o'clock. The offer was rejected without hesitation or a moment's interruption of the firing. During the earlier part of the day, the fight raged chiefly in the city and on the southern bank of the river. To obtain possession of the Hôtel de Ville and the Préfecture of Police was a cardinal point with the insurgents. In Parisian warfare the loss of the Hôtel de Ville is what the loss of its colours is to a regiment in the field; it was therefore a matter of primary importance to the Government to pierce the enemy's lines at that central point, towards which all his efforts converged. The church of St. Gervais was taken after a heavy cannonade; next the bridges were carried with great slaughter, and thus the means of communication between the insurgents of the two banks were completely cut off. Pursuing their success, the troops possessed themselves of the church of St. Séverin, the head-quarters of the insurgents on that side. Their stronghold, the Panthéon, was carried at one o'clock at the point of the bayonet, after the great iron doors and railings had been broken by cannon. By four o'clock the Government was master of the whole left bank of the river. For four days altogether the fight continued to rage with furious bravery. The number of killed and wounded on both sides, as ascertained by actual reckoning, exceeded 8000; besides these, many perished of whom no accurate account could be taken. Multitudes of dead bodies were cast into the Seine before they were yet cold. The remains of others were found by the reapers in the fields around Paris. Nearly 14,000 prisoners were made by the Government, and of these more than a thousand died of gaol-fever. Of eleven generals who commanded, two, Generals Négrier and Bréa, were killed; and six were wounded, five of them mortally; whilst the Archbishop of Paris, Affré, was also amongst the victims of the barricades. At the end of four

CAVOUR.

as Cavaignac had triumphed, and was absolute in Paris and France. Had he been capable of ambition, he might doubtless have secured for himself at any rate, the possession of unlimited authority. However, to his republican principles, and laid down his office immediately after he had pacified the capital. The Assembly aware of the importance of retaining him, elected him President of the Council, with power to form a ministry. Meanwhile that body debated month after month of the Constitution, and finally decided that it should be elected by universal suffrage. Cavaignac's proposals were put forward by moderate and sincere Republicans as follows:—Louis Napoleon Bonaparte, 1,444,302; Ledru Rollin, 371,431; Lamarque, 17,911; General Changarnier, 4087. The number of votes actually given was 7,265,219. The number of voters in the eighty-six departments of France was 17,219,000. When Cavaignac received the news of his great powers, Cavaignac received the congratulations and the compliments of his successor. When Louis Napoleon executed the *coup d'état* of December 2nd, 1851, his first precaution was to arrest Cavaignac in his bed. He was, however, released after a brief detention, and retired to his estate in the Dictatorship or the Empire, but never returned to France ever since.

CAVOUR, COUNT CAMILLE, President of the Council and Minister for Foreign Affairs in the Government of Sardinia. Count Cavour became the chief of the liberal party in the Chamber of Deputies on the 4th of November, 1852, replacing M. de Montebello. He retired before a parliamentary demonstration in favour of liberalisation than he could accept. He is a moderate and statesmanlike views, eloquent in Parliament. He is imbued with the principles of constitutional government. He enjoys the friendship of the English Government, with some of whom he was in 1852, his presence and services were required. The principal objects of his government were to secure constitutional monarchy in Piedmont; to secure the independence of the State against Rome; and to increase the power of the country. The most important act of his government was the annexation of Sardinia, on the 17th of March, 1852, to the treaty of offensive alliance between France and Russia; an act which Cavour eloquently defended in a manifesto, dated on the 4th of March following. Cavour resigned the premiership, in order to negotiate with Rome, then believed possible, the return of the monasteries to the State; but the failure of this negotiation returned to office only a few days later.

CHADWICK, EDWIN, C.B., a Social Economist, distinguished by his labours on the Poor Law and Public Health Boards, was born in 1802, and was called to the bar in 1830. His first public writing was an article in the "Westminster Review," in 1828, on Life Assurances. He soon attracted the notice of Mr. Jeremy Bentham, who bequeathed to him part of his library, and a small legacy. When Lord Grey's Government issued the Commission of Inquiry into the Administration of the Poor-Law, Mr. Chadwick was appointed Assistant-Commissioner, and his investigations in rural districts attracted much attention. He was likewise engaged on the Commission of Inquiry into the Labour of Young Persons in Factories; and although its object was defeated, the foundation was then laid for the system of local inspection, since extended to the labour in mines and other branches of industry. Mr. Chadwick was next appointed one of the chief Commissioners for preparing the Report on the Administration of the Poor-Law: the measures adopted were chiefly remedial, and for the direct repression of abuses; but Mr. Chadwick urged also, as a preventive, industrial training, district schools, and the entire abolition of the law of settlement. In 1838 he obtained the consent of the Poor-Law Commissioners to a special inquiry into the physical causes of fever in the metropolis, which might be removed by proper sanitary measures. This inquiry was extended to the whole of England and Wales, and taken charge of by Mr. Chadwick, in addition to his laborious duties as Secretary to the Poor-Law Commission. From the former investigations proceeded the sanitary Report proposing a venous and arterial system for the improvement of towns. In 1839 Mr. Chadwick was appointed on the Constabulary Force Commission for the Prevention of Offences, the Detection of Offenders, etc. In 1848 he was appointed a Commissioner of the General Board of Health for improving the supplies of water and the sewage, drainage, cleansing, and paving of towns. Until the reconstruction of this Board in 1854, Mr. Chadwick was not included in the commission, but retired with a pension, well merited by his long and laborious services in the promotion of sanitary measures. In 1848 he was honoured with a Civil Companionship of the Bath. In 1854 Mr. Chadwick was applied to by the Government for his assistance in framing measures for the improvement of the Civil Service, and he has since published a paper on its reorganisation, more especially on the results of competitive examinations for appointments, and on the necessity of further securities to insure promotion for merit in the public service.

CHAMBERS, MONTAGU, Barrister-at-Law, the grandson of the well-known architect, Sir William Chambers, and on his mother's side grandson of the great Lord Rodney, was born at Holford, Huntingdonshire, in 1800. He was educated at the Mill College, Sandhurst, and entered the army as Ensign and Lieutenant of the Grenadier Guards in 1815. He was placed upon half

of that part of the United Kingdom: the social system of Scotland, its courts, and laws of marriage and divorce, its schools, and religious and municipal organisation, are described in a vivid style and with all the *amor patriæ* of a true Scot. In 1829 the brothers for the first time, united in a joint enterprise, well suited to their peculiar talents, viz. the production of a "Gazetteer of Scotland." The work was completed and published in 1832, having been, it is said, written for the most part on the counter in the momentary intervals of retail business. In 1832 the famous "Edinburgh Journal" was projected by the elder brother, to "supply," in the words of the first number, "intellectual food of the best kind, and in such a form and at such a price as must suit the convenience of every man in the British dominions." On the 4th of February, six weeks before the appearance of the "Penny Magazine"—the "Journal" was in the hands of the public, whose appreciation and favour gave it an immediate circulation of 50,000. It gradually increased to 72,000, when, its Scottish peculiarities having been gradually toned down to adapt it to the taste of a wider public, the "Journal" underwent a change of form, and the folio was, in 1834, exchanged for the octavo sheet. The circulation again rose. At the beginning of the year 1854 Messrs. Chambers altered slightly the title of the "Journal," omitting the word Edinburgh, and thus giving it a less exclusive name. This change has since been attended by a large increase of its circulation. The success of the "Journal" induced the Messrs. Chambers to join in partnership. For some time their premises were in Waterloo Place, Edinburgh; but in the end they fixed upon High Street as a place of business, where their handsome printing-office and warehouse now stands; one of the best-visited sights of the northern capital. Still aiming at the objects for which the "Journal" had been projected, the brothers commenced, in 1834, the publication of "Information for the People," a series of popular, scientific, and historic treatises. On a similar plan they published the "Encyclopædia of English Literature," a valuable work to the class for whose use it was designed, combining a survey of our literature from the earliest times to the present day, with biographical notices of authors, and extracts from their works. "The People's Edition of Standard English Works," "The Educational Course," Chambers' "Miscellany," and, lastly, Chambers' "Papers for the People" and Chambers' "Tracts," have since borne witness to the boldness, shrewd intelligence, and liberal aims of these remarkable men. At the present time, the establishment at Edinburgh employs nearly two hundred hands. Mr. Robert Chambers usually resides there, enjoying, in comparative wealth, the esteem of his fellow-citizens. The elder brother recently purchased a small estate in his native county, and there he spends a considerable part of his time. The perseverance of these brothers is well illustrated by the energy with which they have, amidst innumerable difficulties, brought their "Educational Course" to its present state of completeness. It began about eighteen years ago, with a sixpenny

finished, he dedicated it—the first volume to Mr. Sharpe, the second to Sir Walter. A new edition of the “Traditions” has lately been published in an improved form, as one of the volumes of the author’s re-issue of his select writings. The cheap publications of Messrs. Chambers and Mr. Charles Knight formed a striking contrast to the unwholesome cheap rubbish which issued from the press in other quarters, and have done, and are still doing, a vast amount of public good. It would occupy more space than could be devoted to the gentlemen, on an occasion like the present, to enumerate the many valuable and instructive volumes that have issued from their press, ably and carefully edited by a *littérateur* of talent and good taste, and fully experienced in his vocation. There is, indeed, hardly one of them which any rational objection can be alleged. Possibly the lesson taught by the Messrs. Chambers is capable of an application to the business of authorship, not yet fully appreciated. Although concerned only with the printing and publishing of their own works, the plant of the Messrs. Chambers at their establishment in Edinburgh, and the number of hands they employ, are necessarily considerable. The depth of their premises in the High Street (in which all the branches of their business except paper-making are carried on) is about 268 feet from front to back; and the general breadth is 10 feet. Their chief printing-room, a spacious hall lighted from the roof, gives accommodation to ten printing-machines, with a high-pressure steam-engine of ten-horse power. The number of sheets printed in this apartment during a month does not fall short of 700,000; the number of sheets printed annually averages ten millions, paying about 3000*l.* of excise duty. The number of persons at present employed on the premises, including principal literary assistants, is 180—a change, truly, from the times when the elder brother toiled half the night at his hand-press, and doubtless but a feeble hope of ever becoming known beyond a limited sphere of operation. The success of the “Journal” is not temporary. Gradually the circulation rose from 50,000 copies, which was the rate of sale during the first year or two of its existence, to 60,000; thence, during the year 1838, to 68,000; thence in the following years to 70,000 and 72,000. This was the rate of what may be called the direct or home circulation, reckoning the American reprints, which began to be issued almost as soon as the “Journal” had appeared. Of the home-copies, thousands were despatched to India and the Colonies; so that long the “Journal” counted its readers in all parts of the globe where the English language was spoken. At the close of the twelfth year, the editors resolved on a change in the form of the sheet; and accordingly, since the beginning of 1844, the “Journal” has been issued, not in the large folio size which prevailed through the first twelve volumes (and which was itself a reduction from the unwieldy newspaper dimensions of the first few numbers), but in the convenient form of an octavo sheet fit for preservation in book-binding. As it is not safe to make innovations of this kind without the public has long been accustomed to a particular form, the e

time considered the chief supporter of the same Louis-Napoleon who subsequently, December 2, 1851, sent him to gaol. The narrative of the General's military career is that of the operations of the French army in Algiers, as he has won every successful promotion from the lowest station on the field of battle. His political consideration dates from 1848, when he was made Governor-General of Algiers by the Provisional Government, and immediately afterwards elected a member of the Constituent Assembly by the department of the Loire. He held his governorship but for a brief period, recognising in the disquieted capital the true field for a man of ability and energy. He was at Paris during the terrible scenes of June 1848, and took part in the suppression of the insurrection which led to Cavaignac's dictatorship. On the election of Louis-Napoleon as President, Changarnier was appointed Commander of the First Military Division, and, owing to the minister's apprehensions of insurrection, the command of the entire armed force of Paris, civic as well as military, was concentrated in his hands. With these ample powers he crushed most completely the attempted insurrection of June 1849, and by the excellence of his dispositions accomplished this object almost without bloodshed. On the disappearance of imminent danger, his large powers and the prominence of his personal influence excited the jealousy of the President and his ministry; a feeling which, long denied but ill-concealed, betrayed itself in the resolve of the Government to displace General Neumayer, a personal friend and nominee of Changarnier, from the command of the First Military Division of Paris. Changarnier resisted, but was compelled to yield; he complied, however, by issuing to the soldiery an order forbidding them to indulge in party cries while under arms,—an injunction obviously levelled at the cheers of "Vive l'Empereur!" "Vive Napoléon!" which had been raised at several reviews in the presence of Louis-Napoleon. These contentions were prolonged until the President summoned courage to remove the General by withdrawing his command, and Changarnier became once more a simple representative of the people. He spoke occasionally from the tribune, and was several times put forward by the Conservative Paris press as a desirable candidate for the Presidential election of 1852. M. Changarnier is a man whose favourite idea is, perhaps, that he could win immortality by invading England and destroying London. Under the second Presidency and Empire of Louis-Napoleon Bonaparte he has been an exile. He is (1855) about forty-six years of age.

CHAPLIN, WILLIAM JAMES, M.P., Railway Chairman and Capitalist, is a native of Rochester in Kent, and was born in 1787. His history affords a remarkable example of a man rising from the humblest ranks, by talent and energy, to a position amongst the most wealthy and influential men of his day. Before railways were in operation, Mr. Chaplin had succeeded in becoming one of the largest coach-proprietors in the kingdom.

and Charlet looked not a little chapfallen." From the artist's studio to the shop of M. Durand, the dealer, was little more than a street. On his arrival, M. Nolté asked news of Charlet. "I have not seen him for a week," was the reply. Nolté told him that he was engaged upon a drawing for which he would not mind giving him 200 francs. Away vanished M. Durand, and in two hours afterwards offered the drawing to Nolté for 250 francs, he having given 200 for it. Delaroche's case (says Nolté) was the exception, but the means of rising upon his customers was Charlet's rule. There is something irresistibly comic in many of Charlet's designs, but these are those of the caricaturist rather than of the painter of real life. His impersonations of that stolid simplicity which is the characteristic of the Paris gamin, and which loves eating and drinking a great deal more than work, are irresistibly comic. Charlet is a good and rapid draughtsman, enjoys life in his own way, and is always profitably employed. In some military groups he has shown a higher power, which it is to be lamented he has not more frequently exercised.

CHESNEY, COLONEL FRANCIS RAWDON, Royal Artillery, was the Pioneer of the Overland Route to India, one of the most intelligent and energetic of modern explorators, was born at Ballyvaughan, Ireland, in 1789, and was christened after his sponsor, the Marquis of Hastings. He commenced his military education in the Woolwich Academy in 1804; passed his first examination for a commission in November of the same year, and obtained a lieutenantancy in the Royal Artillery in November, 1805. He remained in garrison until 1808, when his company formed part of the reinforcements sent to protect the important harbours in the Channel Islands, where the force to which he was attached numbered some 8000 bayonets. Employed a considerable part of his time on the staff, he devoted a large portion of each day to military studies, and thus acquired some of that knowledge which he has since turned to such excellent account. In 1814, during a terrible storm, Lieutenant Chesney (then on a visit to his family) fearlessly ventured through a raging sea, and succeeded in rescuing from the waves one of the perishing fishermen whose boats had been wrecked during the gale; and on the following morning he had the satisfaction of leading the way through the breakers to a ledge of rocks, where a line was propelled into a stranded ship, which, by means of a grapple met along her cable, landed in safety the whole of the crew, although the storm was beating violently at the time on a lee-shore. For this gallant act Lieutenant Chesney was elected an honorary member of the Humane Society. It was not until 1815 that the tardy promotion by seniority in the Royal Artillery raised him to the rank of second captain, from which he was reduced by the peace establishment of 1819 to half-pay. He was, however, brought back, on rotation, to full pay in 1821, when he sailed for Gibraltar, shortly after his marriage to Georgette, daughter of the late John Fox Esq., of Bordeaux. Whilst on "the Rock" he had the misfor-

sions. The result of this expedition was a large map and memo forwarded to Sir R. Gordon from Shaster, in June 1831, describing about 800 miles of the river Euphrates. Captain Chesney proceeded afterwards, through Persia and Asia Minor, to make another examination, and was enabled to forward, through Stratford Canning, another paper, describing the Upper Euphrates and the routes through the intervening country. On his return to England he found every one absorbed in the Reform question, and it became necessary to print the information collected for the purpose of explaining the comparative advantages of the two routes. These documents attracted the attention not only of the ministers but of the king, William IV., himself, who, after commanding the presence of Captain Chesney, with his maps and papers, gave him the degree of support which led to a Committee of the House of Commons in 1834, and the grant of 20,000*l.* for an expedition. The preparations were on a scale of completeness worthy of the objects of the expedition. Whilst two iron steamers (on the principles then known) were being constructed by Mr. John Laird, a selection of smiths, carpenters, etc., was made from volunteers of the Artillery and Sappers, who, after being exercised in the movement of heavy weights, were employed in other operations of less importance to his success. Some were practised in mining and water at Chatham; others in working the engines of passage-boats, whilst the remainder were rivetting in Mr. Laird's yard at Liverpool; and, finally, the *personnel* was gradually completed by a careful selection of naval and other officers, in addition to a proportion of boiler-makers, engineers, and experienced seamen. The rank of Colonel on particular service was then conferred upon the commander, and as the officers had no additional pay, a minute was made at the India Board, holding out a step of promotion (if they gave satisfaction), also the permanent rank of Lieutenant-Colonel to the commander (from the date of the higher commission, 27 November, 1834), with the reimbursement of his previous expenses whilst exploring and mapping the river. So soon as the preliminaries had been arranged, Colonel Chesney was again summoned to the royal presence, when his majesty called his attention to the importance of new openings for our commerce, which, he observed emphatically, was the sheet-anchor of the prosperity of Great Britain. Before his departure, the Colonel submitted to the Government his plan for a simultaneous expedition of eighteen months alternately by the Red Sea and the Euphrates, in order to determine the relative speed and expense of the two routes. The expedition sailed from Liverpool on the 10th February, 1835, under the instructions of the Duke of Wellington and the President of the India Board, Lord Ellenborough. After remaining nine days at Malta, for the purpose of completing the equipment in flat-bottomed boats, the *George Canning* reached the coast of Syria, in company with the *Columbine* sloop-of-war, on the 3d of April. In spite of many difficulties, arising from the obstructions thrown in the way by Ibrahim Pacha and the native authorities of Syria, and

of, the East India Company. Double pay and a gratuity were awarded to all the men who returned with Major Estcourt, and the officers were promoted. The question of the practicability of the navigation for the transport of mails and merchandise has not been fully decided, and Colonel Chesney has had the honour not only of opening another route to India, but of introducing commerce (and may we add, Christianity?) and civilisation into regions which they have never before penetrated. In 1850 Colonel Chesney published his "Survey of the Euphrates and Tigris," in two volumes, royal 8vo., containing the fullest details of his expedition. He has already contributed an abridged account to the seventh volume of the "Journal of the Geographical Society." From this work we derive the following summary of his labours and proceedings: namely, the collection of materials for a correct map of northern Syria and the establishment of a line of levels across from Iskender on the Mediterranean to Birehjik on the Euphrates, and thence to the Persian Gulf; the exploration of northern Mesopotamia; the ascents of the Karun and two descents of the Bahamishir, with the examination of the country intervening between the Jeráhi and the Euphrates, as well as the great Delta of Susiana; the river Tigris twice ascended to upwards of four hundred miles beyond its junction with the Euphrates; a second line of levels carried between the Euphrates and Tigris; and a geological section of the Taurus of several hundred miles in extent, completed. In 1852 Colonel Chesney published his "Observations on the Past and Present State of Firearms, and on the probable Effects in War of the New Musket," in which a subject of great importance at the present juncture is treated in a highly scientific manner. The dates of Colonel Chesney's commissions are as follow:—Ensign, Nov. 9th, 1800; Lieutenant, 20th Sept. 1805; Captain, 20th June, 1815; Major, Dec. 1836; Lieutenant-Colonel, 27th April of the same year; Colonel, 11th Nov. 1851.

CHODZKO, JACQUES-LEONARD, a Polish Historian, was born at Oborek, in the palatinate of Wilna, November 6, 1800. In Wilna he pursued the study of history, mainly under Lelewel. In 1819 he accompanied Prince Michael Oginski, in the capacity of secretary, in his travels through Russia, Germany, England, and France. In 1826 he took up his residence in Paris, where, in the following year, he published the "Memoirs of Oginski," to which, as an introduction, he furnished "Observations sur la Pologne et les Polonais." He then began to make collections for a history of Poland, from the time of Augustus III.; as a precursor to which he published, in 1829, a history of the Polish legions in Italy under the command of General Dembrowski. Though the work of a diligent collector, rather than of a historian, this gained him a considerable reputation in Poland and France. At the Revolution of July, Chodzko was appointed by Lafayette as his adjutant; and upon the breaking out of the Polish Revolution the general Government clothed him with full powers to watch and further

volume of Poems by subscription, and having saved a pound to pay for three hundred prospectuses, he set about obtaining subscribers. The volume was eventually brought out by Messrs. Taylor and Hessey, and so promptly was the benevolence of the public exercised in his favour, that, before the expiration of a month, Clarendon was in the possession of a little fortune. Lord Milton gave him ten pounds, and the Marquis of Exeter undertook to give him an annuity of fifteen guineas. From these various benefactors he became possessed of an income of forty-five pounds, besides a house free of rent. In the spring of 1820 he married Patty, and took his infirm father and mother to live with him. No soon, however, had the Northamptonshire peasant ceased to be an object of wonder, raised above his condition, and his usefulness as a day-labourer very much impaired, than his fashionable friends fell off, and some of their volunteer aid was withdrawn, just when the cares of a family were springing up around him, and he most needed assistance. For some years past Clarendon has been living in a state of mild lunacy, his chief delusion being that all the best poetry of Byron, Wordsworth, Campbell, and others, was written by him ! He is allowed to wander about at will although perfectly unconscious. For many years he has been wholly lost to the world, without any hope of his restoration. The last volume published by him, in 1836, previous to his illness, "The Rural Muse," presents a vast improvement on its predecessors, and contains many poems of great simplicity and beauty. Without being chargeable with want of originality, moreover, they display an acquaintance with the great poets of his country, which is exceedingly remarkable.

CLARENDON, GEORGE WILLIAM FREDERICK VIL-
LIERS, EARL OF, Secretary of State for Foreign Affairs. Lord Clarendon was born Jan. 26, 1800, his father being brother to the second earl: he succeeded to the title (two uncles having died without children) in 1838. His first prominent public post was that of Minister Plenipotentiary to Madrid, which he held from 1833 to 1839. In 1840 he was sworn of the Privy Council. He has been Chancellor of the Duchy of Lancaster and Lord Privy Seal; and in 1846 was appointed President of the Board of Trade. The latter office he left (on the death of Lord Bessborough in 1847) to assume the more dignified one of Lord-Lieutenant of Ireland, which he held until 1852. He was appointed Secretary of Foreign Affairs in February 1853, and found the country already committed to a contest with Russia respecting the affairs of the East. He has since directed the difficult negotiations with France, Austria, Prussia and Turkey, which have been rendered necessary by the persistence of Russia in her policy of aggression. When Lord Aberdeen's ministry fell, in February 1855, the Earl of Derby, who was sent for by the Queen, expressed his desire to retain Lord Clarendon in the direction of Foreign affairs; and when, shortly afterwards, Lord Palmerston formed his administration, the new Premier expressed

in the repeal of the Corn-Laws. The first great practical blow struck at the tax upon food was levelled by General T. Peyronnet Thompson, in his "Catechism of the Corn-Laws," published originally in the "Westminster Review;" the final *coup* to the tax was given by Peel; the intermediate fight between these two extremes was mainly led by Cobden, as the chief of the Manchester Anti-Corn-Law League. The first town that sent Mr. Cobden to Parliament was Stockport, for which place he was returned in 1841, having four years before unsuccessfully contested that borough. His straightforward business-like way of dealing with facts in his speeches, and the courage with which he stated his views, quickly gained for him the "ear of the House," which he has ever since retained. From the small borough of Stockport he has made the wide leap to the large and independent constituency of the West Riding, whose selection of him as the member gave a very significant indication of what England really thought about free trade. After the struggle was over, his political friends rewarded him by promoting a public subscription in his behalf, by which upwards of 70,000*l.* was raised and handed over to him. On this being done, Mr. Cobden gave up business as a cotton-printer, and devoted himself exclusively to politics. The Corn-Laws being repealed, he now devotes a large share of his support to the party who are promoting what is called the Peace League, and whose efforts are addressed to the suppression of war. He advocates, also, the ballot, extension of the suffrage, shorter parliaments, financial reform, and the repeal of the taxes on knowledge. He has lost much of his popularity by opposing the plan for national defence, and by his opposition to the war with Russia. In January, 1855, Mr. Cobden convened a great meeting at Leeds to address the constituency on the subject of the war. Upon this occasion his supporters met him in the most friendly manner, expressed their confidence in his public character, but at the same time protested against his peculiar views, by passing a resolution demanding the vigorous prosecution of the war. In the same month the "Times" wrote,—“Turkey, says M. de Lamartine, is fast dying out for want of Turks. Republicanism in France is extinguished for want of Republicans; and now, it would appear, the Manchester School, whose mission a few years ago seemed to be to represent, to form, and fashion the mind of England, and stamp an indelible impress on our history and institutions, is very likely to die out for want of scholars.”

COCKERELL, CHARLES ROBERT, R.A., Architect, was born in London, April 27, 1788. Early in life Mr. Cockerell spent several years of careful study among the existing remains of classic architecture, in Asia Minor, Sicily, Athens, Rome, Pompeii, and elsewhere. In 1811–12 the ruins of the Temple of Jupiter at Ægina, and of Apollo at Phygaleia, were excavated by Mr. Cockerell and others. The collection of remains from the former edifice is in the Museum at Munich: that of the latter in the British Museum. Subsequent

COLERIDGE, THE REV. DERWENT, Principal of Mark's College, Chelsea, the son of Samuel Taylor Coleridge the poet, was born at Keswick, in the house then occupied by his father, but afterwards by Robert Southey, on the 14th of September, 1800, and received his early education, with his brother, at a small private school near Ambleside. For about two years he was engaged as a private tutor, at the expiration of which he entered St. John's College, Cambridge, where he formed an intimacy with some of the "choice spirits" of the "Etonian" and "Knickerbocker Quarterly Magazine." Under the *nom de plume* of "Davenant Cresswell" he became a contributor to the last-mentioned periodical. From the date of his departure from college he has been chiefly engaged in the business of tuition at Plymouth; at Helston, in Cornwall, and as Principal of St. Mark's College, Chelsea. Mr. Coleridge was ordained in 1826, and married in 1827. He is now a Prebendary of St. Paul's Cathedral. As a writer, he is chiefly known by his touching memoir of his brother prefixed to Hartley Coleridge's "Poetical Remains;" one of the most graceful pieces of biography of our time. He is now engaged in a similar labour of love (which he has succeeded his late accomplished sister and her husband), the collection of the scattered writings and correspondence of his distinguished father, Samuel Taylor Coleridge. Five volumes of notes and marginalia have already issued from the press. "Remains" of the poet, edited by his nephew, have been long out of print. A complete edition of his Works and Correspondence is therefore, a great desideratum. Mr. Coleridge's autobiography, valuable as it is in a literary point of view, is little more than a history of his opinions; and Mr. Gilman's affectionate memoir, excellent so far as it goes, was left, like the story of the "Cambuscaun," only "half told." With a large body of fresh materials at his disposal, some of them of a highly important character, Mr. Derwent Coleridge can hardly fail of producing an interesting and instructive biography. He is also the author of a work entitled "The Scriptural Character of the English Church," published in 1839. He has edited the prose as well as the poetical "Remains" of his father, Hartley Coleridge, and the "Lay Sermons" of his father-in-law, Mackworth Praed, to be prefixed to his "Poetical Remains," which is also announced as forthcoming from his pen.

COLLIER, JOHN PAYNE, Philologist and Commentator on Shakspeare, was born in London in 1789. His father, originally engaged in other pursuits, eventually entered the bookselling trade and was the publisher among other works of the "Monthly Repository." He afterwards became connected with the "Times," a circumstance which led, in all probability, to his son's long association with newspapers. At the age of twenty years young Collier began the study of the law, and entered as a student of the Inner Temple, and a very early period of his career became a parliamentary reporter on the "Morning Chronicle." The corps to which he attached himself was much more limited at that time than it has been since.

greater part of the documents of which he has availed himself in his "New Facts regarding the Life of Shakspeare," a work which he followed up in 1836 by "New Particulars," and in 1839 by "Further Particulars," concerning the biography of our great dramatist. He has also edited several works, more or less connected with the same subject, for the Camden and Shakspeare Societies, of both of which he is an officer. He was engaged for more than twenty years in making collections of materials for a new Life of Shakspeare, published in 1842-44. The Royal Commission, established for the purpose of inquiring into the condition and management of the British Museum, evinced the sense of his qualifications by electing him their Secretary. He was, however, unable to carry out his plan for the speedy preparation of a catalogue. Meanwhile a pension on the civil list 100*l.* per annum was conferred upon him, as a recognition of the services he has rendered to literature; and we may aver with truth that there is no name upon that list better entitled to this mark of esteem than he is. In 1850 Mr. Collier was chosen Vice-President of the Society of Antiquaries, to whose Transactions he has been a frequent and valuable contributor. Among his remaining publications may be mentioned "A Book of Roxburgh Ballads," "Extracts from the Registers of the Stationers' Company of Books entered for publication 1557-70," (1848); and "Memoirs of the Principal Actors in the Plays of Shakspeare," (1846).

COLLINS, WILKIE, Biographer and Novelist, the eldest son of the late William Collins, R.A., the well-known painter of *tableaux de genre*, was born in London in 1825. His mother was a daughter of the late Mr. Geddes the painter, and is sister to Mrs. Carpenter the best female portrait-painter of our time. Wilkie Collins was educated at a private school, and is chiefly known to the public by an admirable biography of his father, and a novel entitled "Antonina." He is also the author of a novel called "Basil," and a volume of prose sketches bearing the title of "Rambles beyond Railways." He is a member of the Guild of Literature and Art, and took a prominent part in the amateur performances which were gotten up for its benefit. Mr. Wilkie Collins is a good judge and critic of art. His last work does not support the reputation which attended the publication of "Antonina," still less that which he achieved in the excellent memoir of his father, which proceeded from his pen in 1848. He is, however, not dependent on literature for support, and can consequently afford, if it so likes him, to make hazardous experiments on the public taste.

COMBE, GEORGE, the great champion of Philosophical Psychology, was born in Edinburgh in 1788. Mr. Combe was educated for the law; became a Writer to the Signet, as the Scottish attorneys are called, and practised for twenty-five years. The opinions of Gall and Spurzheim attracting his notice, he studied them, and being convinced that they had a basis in nature, he pursued

cludes that he has also eliminated him from the domain of life. Because God is not a sensible fact, he infers that he is also a rational falsity." An epitome of his "Positive Philosophy" has been published in this country by Miss Harriet Martineau, as well as a more elaborate analysis by Mr. G. H. Lewes; but his doctrines, happily, make no progress here.

CONDER, JOSIAH, Author and Journalist; born in London, September 17, 1789; son of Mr. Thomas Conder, bookseller, and grandson of Dr. John Conder, President of the Old College, Homerton. Mr. Conder's juvenile poetical contributions to the "Athenæum" (Dr. Aikin's) and to other publications having attracted favourable notice, he published in 1810 a small volume, entitled "The Associate Minstrels," as being the joint production of several friends, and it passed through two editions. In 1814 he became proprietor of the "Eclectic Review," being at that time a publisher and bookseller in London. In 1819 he disposed of his business to his successor, Mr. B. Holdsworth; and for many subsequent years resided at Watford in Hertfordshire, retaining in his own hands the management of the "Eclectic Review" till 1837, when he transferred the proprietorship to Dr. Thomas Price. During the three-and-twenty years of Mr. Conder's editorship of this monthly journal he enjoyed the assistance, as regular or occasional contributors, of John Foster, Robert Hall, James Montgomery, Dr. Pye Smith, Dr. Chalmers, Isaac Taylor, Z. Uwins, D.D., Dr. Vaughan, Charles Marsh, etc. In 1818 Mr. Conder published his work "Protestant Nonconformity," 2 vols. 8vo. In 1824 he entered into an engagement with Mr. James Duncan, Paternoster Row, to edit the series entitled "The Modern Traveller," undertaking, in the first instance, to furnish the volume on Palestine. Ultimately, however, after several unsuccessful attempts to divide the labour, he found himself compelled to carry on the entire series, of which in four or five volumes alone he had any literary assistance. The series of thirty volumes was completed in 1830, but "Italy," 8 vols., was subsequently added in 1831. In 1833 Mr. Conder was induced, on the application of the gentlemen who had recently established the "Patriot" newspaper as the organ of the Evangelical Nonconformists, to become the editor of that journal, an office which he has continued to sustain for two-and-twenty years. Since the "Patriot" has become a bi-weekly journal and considerably enlarged, he has had associated with him in the editorship his friend J. M. Hare, Esq., formerly editor of the "Christian Advocate," which was merged in the "Patriot." Mr. Conder has many years taken an active part in most of the public movements of the Protestant Dissenters of the metropolis, without renouncing his attachment to literature. His other publications are, "The Village Lecturer" (1822); "The Star in the East, and other Poems" (1824); "Dictionary of Geography" (1834); "A Translation of the Epistle to the Hebrews" (1834); "The Church and Oratory: Sacred Poems" (1837); "Memoir of Bunyan" (1837).

other, renew the oath of fidelity to the Emperor after the Emperor's death. Constance, adding, that the latter might be a circumstance.

ER, THOMAS SIDNEY, A.R.A. Canterbury. His parents were inclined to apprentice him to some trade, but when he became an artist he objected, and refused. He sketched long without pay, and he built up the buildings of his native city, gaining a precarious income by

Accident gained him an introduction to the Canterbury Theatre, then the artist dying soon afterwards, Cooper, only seventeen; and for the next few years, at times scene-painting, and at times sketching. He had for some time studied at the Angerstein Gallery, and at the Royal Academy; but at neither would his circle be long as his artistic need required him to Calais, to seek fortune. He found his way "from the French port to Calais, to seek fortune, and to seek fortune by likenesses of his talents secured him patronage. When he was settled, he married and entered into the ranks of the Flemish artists. There, too, his study of landscape and the branch of painting subsequently secured him his present position, and profitable employment.

He had him and his family into dis-England. He first exhibited in 1831. This picture attracted attention from Mr. Vernon for the gallery. But it was not until a picture of a group of cattle; "Watering at Evening," or of a summer afternoon, attracted the Academy. In 1845 he was elected. A few years Mr. Lee and himself by concert: the effect of many a picture being not a little enhanced by a pencil from the pencil of Mr. Cooper.

CORNELIUS, PETER VON, one of th
 the modern German Artists, was born at Di
 1787. He received his first instruction

the great Ludwig's church, built & carried on, in profound symbol of Christ" to the "Judgment Day" a fine composition, but is also for Michael Angelo's "Judgment" as extent. Some of the cartoons were in Rome, where Cornelius was, he furnished the designs for Pinothek, of which the subject is the revival in the middle ages up to the chief representatives of the . In 1841 Cornelius was invited to Munich a considerable artistic spirit, and partly developing itself in him was, by this invitation, placed to art, and to found a school in Munich. "Christ in Hades" did not meet the favour which was subsequently given to the design was pronounced a masterpiece at Berlin is the designer's wonderful acquaintance with creating religious subjects, has a vast profusion of figures from the antique mythology, with hints from the antique mythology engraved in eleven sheets (1842) et, is added the admirable cartoon of the Apocalypse. Contemporaneous with the painter executed with all the art, and of which some of the cartoons, Cornelius furnished the material, which the King of Prussia and Wales. He also bore a leading part in the plan for the decoration of the Berlin, and, moreover, furnished the designs and other similar works. Cornelius has a poetic amplitude; an inexhaustible ability to give full expression to the elaborated principles of style and boundaries of art.

Distinguished German Geologist, born April 24, 1808. His father directed the natural sciences, and decided that he should make mineralogy his study. In 1831 he studied at the Academy of Sciences in Berlin, and was appointed Professor of Mineralogy (1832), gained his doctorate. From 1832 to 1842 Cornelius was in the preparation of the "Geology of Saxony," in twelve volumes.

his part was undertaken by Cotta alone; and on the remaining part of the work he was assisted by a *collaborateur*. During this time he published "Geognostic Wanderings" (1836-38), the well-known "Introduction to the Study of Geognosy and Geology" (1839-49), besides several minor essays. He also published four issues of the "Year-Book for Forest and Agricultural Affairs of the Academy at Tharandt" (1842-47), and his intimacy with Noel led him to the study of phrenology, he translated Chevenix's "Theory and Nature of Phrenology." At the conclusion of the "War of Saxony," he undertook a similar one of Thuringia, which he finished in 1847. In 1843 and 1849 he travelled among the mountains in Upper Italy, and the results of his observations are given in his "Geological Letters from the Alps" (1850). In 1850 Cotta follows, especially in the small treatise on the "Internal Structure of Mountains" (1851), in general, the Plutonic theory. He advocates a progressive development of terrestrial nature in accordance with the natural laws, from an original state, by a slow process of cooling, with the co-operation of inorganic and organic life. In his "Letters on Humboldt's Theory" (1848-51), he extends this theory into the organised world. According to this theory the higher is developed from the lower, and human beings are the ultimate and highest development which we know anything. This idea of nature Cotta denotes by the empirical idea. He has written many treatises in addition to those above cited, with the design of popularising, as far as possible, the results of his investigations.

SEAN VICTOR, the most eminent of living French Metaphysical Philosophers, was born in Paris in 1791. He was for some time a tutor at the Ecole Normale, where he subsequently held the professorship of Philosophy. In 1812 he published his French translation of Plato, and in 1815 was appointed to deliver lectures on the History of Philosophy at the "Ecole des Lettres" of the University. On the return from Elba he enrolled himself in the Royalist party, but the misuse of restored power disgusted him with monarchy, and he was often heard to lament from the professor's platform the lost freedom of his nation. This conduct, and the applause it called forth from his hearers, drew the attention of the Government, and in 1820 he received compulsory orders to discontinue his lectures. Restored to freedom, he applied himself to philosophical researches, and afterwards published the inedited writings of Proclus, and the (and the best) edition of the works of Descartes. He also conducted the education of the son of the Duke of Mantua, with whom, in 1834, he travelled in Germany. His manner of speech made him there an object of suspicion, and in consequence of the Prussian Government he was arrested at Frankfurt and carried to Berlin. After a brief imprisonment he was permitted to depart for Paris. In 1828 he was permitted to

resume his lectures, and continued to deliver them until Louis Philippe made Guizot a minister, when Cousin, his friend, became Inspector-general of Education. In 1831 he visited Germany at the request of the Government, and next year published his celebrated report on the state of education among the population of that country. Under the brief administration of M. Thiers he was six months Minister of Public Instruction. The philosophical career of Cousin exhibits a singular progress through almost every leading metaphysical system. He started by teaching the existence of the *Ideas* of his favourite Plato, and then became the approving expositor of Scotch philosophy. Presently he was enthusiastic for Kant and the critical philosophy, which he abandoned for the Alexandrian Proclus, who, in turn, was forsaken for Hegel and Schelling. In his later works, M. Cousin justifies himself by professing an impartial and universal eclecticism, which seeks truth wherever it is to be found, and regards all good as but truth in an incomplete form. His published works, besides those already mentioned, are, "Philosophical Fragments," 1826; "New Fragments" 1829; "Cours de Philosophie Morale," of 1815-20, 6 vols. (including the "History of Modern Philosophy," the "Sources of Ideas and the Sensational, the Scotch, and the Critical Schools"), and the "Cours de Philosophie" of 1828-29, in three volumes. Cousin is also the translator of Tenneman's "History of Philosophy," (the abridgment), and editor of the complete works of Abelard.

CRAIK, GEORGE LILLIE, a Literary Writer, and Editor of the "Pictorial History of England," is the son of a schoolmaster and was born in Fife in 1799. He was educated for the Church of Scotland at the University of St. Andrew, but did not take license as a preacher. After lecturing on poetry in Scotland, in 1824 he went to London, and devoted himself to literature. He was long employed by the Society for the Diffusion of Useful Knowledge under Mr. Charles Knight. The work by which he was first favourably known, the "Pursuit of Knowledge under Difficulties," written for the "Library of Entertaining Knowledge," and published anonymously, the "Pictorial History of England," and other works were produced under his superintendence. In 1849 he was appointed Professor of History and English Literature in Queen's College, Belfast. He is author, besides the works mentioned, "Sketches of the History of Literature and Learning in England from the Norman Conquest to the Accession of Elizabeth," 6 vols.; the "History of British Commerce from the Earliest Times," 8 vols.; "Spenser and His Poetry," 3 vols.; "Outlines of the History of the English Language," and the "Romance of the Peerage," 4 vols.

CRANWORTH, ROBERT MONSEY ROLFE, BARON, Lord High Chancellor of England, stands indebted for a niche among the "men of our time" rather to the notability of his position in the State than to any of those dazzling qualifications which have rendered

one of his predecessors the observed of all observers. A sound constitutional lawyer, of moderate politics, and consistent public and private life, his fitness for the eminent office to which he has been raised has never been questioned. He is the eldest son of the late Rev. Edmund Rolfe, of Cranworth, by a daughter of William Alexander, brother to the Earl of Caledon, and was born in 1800. He was educated, first, at Bury St. Edmunds, afterwards at Manchester, and subsequently at Trinity College, Cambridge. In 1812 he was elected a Fellow of Downing College, took his degree of B.A. in the same year, and became M.A. in 1815. In 1818 he was called to the Bar, where his perseverance and the soundness of his judgment soon secured for him considerable success. As a calm, dispassionate adviser and advocate, he commanded, not only the support of the public, but the respect of the Bar. In 1832 he was appointed Queen's Counsel, and in 1834 Solicitor-General. Resigning in consequence of a change of Ministers in that year, he was reappointed in 1835, and continued in that office until 1839, when he was made one of the Barons of the Exchequer. His lordship was one of the Commissioners adding the Great Seal after the resignation of Lord Cottenham; was appointed Vice-Chancellor in succession to Sir Launcelot Killyburne in 1850; raised to the Peerage by the title of Baron Cranworth in December of the same year; and named one of the Justices of the Court of Appeal in Chancery in 1851. In 1852 his lordship was appointed by Lord Aberdeen Lord High Chancellor of England. Thus, with no very remarkable talents, and with no very memorable opportunity of displaying that legal genius for which the world has given him credit, his lordship has risen in rapid succession to the highest honours of his profession. Lord Cranworth is an earnest Whig, but has never taken an active part in politics. He speaks with some pride of having blood of Nelson in his veins—his grandfather, the Rev. Robert Rolfe, of Hillborough, having married Alice Nelson, the aunt of the great Admiral Nelson. Of this lady Lord Cranworth's father was the eldest son. His motto, "*Post Nebula Phœbus*"—After the sunshine—has been more than realised by his career, which has been one of uninterrupted prosperity—unbroken sunshine.

CRAWFORD, THOMAS, Sculptor, one of the most eminent of modern artists, was born at New York in 1814. Early showing a taste for art, he placed himself under a wood-carver; in 1834 he went to Italy. After studying under Thorwaldsen, he, in 1839, executed his "*Orpheus*," which introduced him to general notice. Since he has remained, forming one in the little commonwealth of sculptors of all nations, who, tempted by its facilities for study, its show-room, and its supply of cheap marble, have made that their adopted home. His works are characterised by *naïveté* of conception and finished execution. One of his most celebrated is "*Babes in the Wood*." At the New Crystal Palace there are

specimens of this artist,—“Flora,” and the “Dancers;” two figures of children,—one gay, the other sorrowful. Crawford is at present engaged on a colossal monument to Washington, to be erected in America; an equestrian figure of the great American, with four figures of fellow-patriots around the pedestal.

CREASY, EDWARD SHEPHERD, M.A., Barrister-at-Law, Professor of History in the University of London, and Author of several popular Historical Works, is the son of Edward H. Creasy, the well-known auctioneer of Brighton, and proprietor of the “Brighton Gazette.” He was born at Bexley in Kent, in 1814, and was educated at Eton, and St. John's College, Cambridge. In the former he obtained, in 1831, the Newcastle Scholarship; and in the latter was elected Scholar of King's in 1832, and Fellow of the same college in 1834. He was called to the bar by the Honourable Society of Lincoln's Inn in 1837, and has been for several years a member of the Home Circuit. Mr. Creasy was appointed Professor of Modern and Ancient History in the University of London in 1850. Of his principal work, the “Fifteen Decisive Battles of the World,” first published in 1851, there have been several editions, the last of which was called for in 1854. The “Rise and Progress of the British Constitution” was first published in 1841, and the second edition in 1855; of his “History of the Ottoman Turks,” 2 vols., only one has yet been published. We think we also remember a book on the celebrities of Eton, which bears Mr. Creasy's name. The “Fifteen Decisive Battles of the World,” written in a popular and attractive style, is peculiarly acceptable at the present moment, as it brings into juxtaposition all the greatest conflicts throughout the range of ancient and modern history. Mr. Creasy has, however, selected some of his battles rather with a view to their results than to the quantity of troops engaged in them, or to the precise number of the slain; and in this governing principle of selection he is fully borne out by the paragraph which he quotes from Hallam's excellent history, and which suggests that the relative importance of a battle must not be inferred from the number of troops engaged in it so much as from its ultimate consequences to mankind. Professor Creasy married, in 1841, Mary, the second daughter of G. Cottam, Esq., civil engineer, to whom he has five children.

CRÉMIEUX, A., a French Legislator and ex-Minister of Justice under the Provisional Government of France in 1848. Crémieux is a Jew, but has always advocated perfect freedom of conscience. He was for years a member of the Chamber of Deputies before the Revolution overturned Louis-Philippe, and always voted with the Reform party against Guizot. He was an energetic supporter of M. Duvergier d'Hauranne's annual motion for the exclusion of paid functionaries (the Ministers excepted) from the Chamber; and he advocated the most comprehensive principles of free trade. When the Game-law, initiated in the Chamber of Peers

02, and in 1807, having been retained townpatrick, was eventually returned out; and from that date until 1832 he moon, for the last five years as the ersity. Rector of St. Stephen's with Benets, Walbrook, and has the reputation of being an eloquent and impressive preacher. He stands indebted for his present living to Lord Brougham, to whose opinion he had always been strongly opposed. The Derby-Distracti par in whose defence his powerful pen had been so long and so earnestly employed, conferred no favour upon him of any kind whatever when they had the means of doing so within their grasp. He owes the little reward which his great talents have obtained him wholly to the Whigs. Dr. Croly has been throughout life earnest, zealous, and consistent Conservative. Had he been a recent convert to those principles, a renegade from Whiggism, which everyone appears to be abjuring, he would doubtless have been taken care of. Among the voluminous writings of Dr. Croly may be enumerated, "Cataline," a tragedy; "Pride shall have a Fall," a comedy; a piquant "Life of Edmund Burke;" and a volume on the Apocalypse. The Doctor is a ripe scholar, and was in his early days an excellent musician. One of Dr. Croly's sons, a young gentleman of remarkable promise (an officer in the East India Company's service), fell gloriously in battle in the campaign against the Sikhs. A collected edition of Doctor Croly's poetry was published by Blackwood and Sons several years ago.

CRUIKSHANK, GEORGE, a popular Artist, whose works have afforded boundless amusement, was born in London about the year 1794. His father was an artist of ability, who sometimes etched caricatures, and a taste for the humorous was early developed in the son. His first desultory practice was without any intention of becoming an artist, his wish being to go to sea; but after the death of his father, being unwilling to leave his mother and sister, he thought of the stage,—and about this time he played at the Haymarket for the benefit of a friend,—but some sketches coming under the notice of a publisher, he engaged in the illustration of children's books, song-books, and cheap drolleries, which led to political and other caricatures. He was admitted to the Royal Academy as a student, but at that time it was much crowded, and Fuseli told him he must "fight for a place," and finding also that the illustrative figures were ill-placed for a somewhat short time, he attended only one course, making, we believe, not one drawing. He now made caricatures for "The Scourge," and before he had twenty published, in conjunction with a literary man named F. a half-crown periodical called "The Meteor." This failed after a few months, from his coadjutor's negligent habits. On his own account, we believe, no publication was ever delayed for want of punctuality. From this time he was engaged in producing caricatures, published by Humphrey of St. James's Street, Sidebotham of the Strand, Johnson of Cheapside, Fores of Piccadilly, and others; and in a later period formed a connexion with Mr. Hone, whose political squibs he illustrated with a force and spirit that drew crowds round every window in which they were exhibited. "The House that Jack built," "The Man in the Moon," "The Politician,"

"Showman at Home," "The Queen's Matrimonial Ladder," "Non Ricordo," "A Slap at Slop," were among them, and are still fondly remembered by the elder half of the present generation; the leading plans and ideas, as well as the illustrations, often originating with himself. He had at an early period contemplated a series of pictures to show the evil, and sometimes fatal, consequences to young men of what is called "seeing life;" but not being sufficiently familiar with oil-painting, he used his designs, assisted by his brother Robert, in telling a story in a series of plates, each were written to by Pierce Egan, under the title of "Life in London." The book obtained great popularity, but the moral of his tales was so much lost sight of, that before the work was finished he left it in disgust. "Life in Paris" followed this, and a series of plates in a collection of facetiæ called the "Humourist." He was then engaged in executing etchings for a series of volumes of popular German stories, which contributed considerably to his reputation for humour. The "Points of Humour" followed these, and became the occasion of a favourable eulogium on his talents in "Blackwood's Magazine." His fame as an illustrator of books was now complete, and his assistance came to be considered indispensable to every work pretending to humour. Among those for which he furnished designs may be mentioned Grimm's "German Popular Stories," "Mornings at Bow Street," "Peter Schlemihl," "Italian Tales," "Hans of Iceland," "Tales of Irish Life," "Punch and Judy," "Tom Thumb," "John Gilpin," "The Epping Hunt," "Three Courses and a Dessert," etc.; in all of which the ludicrous was irresistibly apparent. To these may be added "Illustrations of Phrenology," "Illustrations of Time," "Scraps and Sketches," "My Sketch-Book," the plates to the original editions of "Sketches of a Boy," "Oliver Twist," "The Tower of London," etc. Nor must we omit of humour, the "Comic Almanack," which for so many years added fresh enjoyment to the festivities of the Christmas season. But it is impossible to enumerate all his works, and equally impossible to obtain a collection of them. A few years before Laman Blanchard's death, Cruikshank embarked with him in a periodical entitled "The Omnibus;" and his illustrations of "The Old Sailors," "Greenwich Hospital," are among the happiest of his attempts. No one could sketch "a Jack" of the old school, so well and all, like George Cruikshank. Some of them date far back, and he may justly be considered the originator of the style of illustration prevailing at the present day. A vein of moral reproof, directed against excess in drinking, is early traceable in his works; in "Sunday in London," "The Gin Shop," "The Juggernaut," "The Upas Tree," "The Pillars of a Gin Shop," &c. But among his latest works, eight prints, representing the effects of drunkenness in all their hideousness, and published under the title of "The Bottle," have been most successful. This work drew him among the Teetotallers, whose arguments completed a conviction that the plan of total abstinence from all intoxicating drinks is the only means for effecting a thorough reformation in

society; and he is now amongst the most earnest, frequent, and devoted advocates of "Teetotalism," his speeches invariably tinged with happy and amusing observations. He has latterly turned his attention to oil-painting, and contributed to the Exhibitions of the British Institution and the Royal Academy; among which are "Disturbing a Congregation," "A New Situation," "Dressing for the Day," possessing much humour; two illustrations of "Tom o'Shanter," "Titania and Bottom the Weaver," "Grimaldi being Shaved," "Cinderella," "A Runaway Knock," "A Fairy Ring," etc., showing that in an extended practice of this branch of art he would have had as much success as has attended his other exertions. He possesses considerable dramatic versatility, and was associated with Mr. Charles Dickens in amateur performances for organising the Guild of Literature and Art for benevolent and other purposes. It need only be added, in the words of the late Samuel Phillips, that "George is popular amongst his associates. His life is an index of his mind. There is nothing anomalous about him and his doings. His appearance, his illustrations, his speeches, all alike—all picturesque, artistic, full of fun, feeling, geniality, and quaintness. His seriousness is grotesque, and his drollery is profound. He is the prince of living caricaturists, and one of the best of men."

CUBITT, SIR WILLIAM, Engineer (knighted for his share in the construction of the Crystal Palace), was born in Norfolk 1785. At a very early period he was practically occupied in the working of his father's flour-mill. He was then apprenticed to a joiner, and becoming a very superior handicraftsman, rapidly took a good position as a maker of agricultural implements. Within a short time he became a millwright, not only being engaged practically in the erection of machinery, but being much consulted on the subject. About this period (1807) he invented the regulating windmill-sails, now so generally used. He ultimately became connected with Messrs. Ransome and Son, of Ipswich, whose agricultural implements are so well known. The transition from his usual occupation with that firm to the practice of general engineering was natural. Accordingly he was extensively engaged in all description of works, among which may be mentioned the erection of gas-works at the earliest period of the introduction of the system, and the invention of the treadmill for prisons and houses of correction. His reputation increasing with engagements, it became necessary for him to remove to the metropolis, which he did in 1826, and since that period there is scarcely a port, harbour, dock, navigable river, or canal in the United Kingdom, with which he has not been in some way connected. The South Eastern Railway from London to Dover was designed and executed by him, and many improvements which he introduced into this work have since been generally adopted. He there entertained the bold project of blowing away the face of the Ramsgate Down cliff, which he successfully executed by exploding 18,000

gunpowder in one blast, precipitating nearly a million tons of iron into the sea. The great landing-stage at Liverpool, the area of which is nearly one acre in extent, is a unique example of his works. As Consulting Engineer to the Great Northern Railway he has materially contributed to the production of one of the great lines in England. One of his last public works was the superintendence of the construction of the Crystal Palace in Hyde Park, which he undertook at the pressing instance of his coadjutors the Royal Commission, and his valuable services have been rewarded in a marked manner by the Queen and Prince Albert.

CULLEN, PAUL, Roman Catholic Archbishop of Armagh, is an Irishman, but left his native country at an early age to study in Rome, where he remained thirty years, during a considerable portion of which he was Director of the Irish department of the Papal Government. The death of Dr. Crolly, titular Archbishop of Armagh, which took place in 1849, was followed by a difference of opinion amongst the Irish suffragans as to the nomination of his successor. This want of harmony gave Pío Nono an opportunity of appointing a tried Ultramontanist in the room of the elect of the National Church; and Paul Cullen was consecrated Roman Catholic Primate of all Ireland on February 24, 1850. The prelate has been busy in making good his authority in the national affairs, and his "pastoral" condemned the mixed system of education introduced by the government schools and newly-founded colleges; supporting his denunciations by appeals to the supreme and inflexible dicta of the Pope. Passive and implicit obedience to the see of Rome has been the key-note of all the publications of this priest, who has as yet failed to take the usual oath of allegiance to the sovereign of these realms. Dr. Cullen is not only a scientific as well as an ecclesiastical authority, having published a work affirming the immobility of the earth, on the ground of the interpretation of theological records! If confidence be an element of success, the Pope must be held happy in having an ally who expects to refute the demonstrations of Copernicus and Galileo by such evidence.

CUMMING, THE REV. JOHN, D.D., Minister of the Scotch Church, St. Martin's Court, Covent Garden, a most voluminous and able author of devotional and controversial works, and, as a preacher, enjoying perhaps greater popularity than any other pulpit orator in London in the present day, is a native of Scotland, born in Perthshire, of a Highland family, Nov. 10, 1810. Dr. Cumming came to London in 1833, and has been preaching in the Scotch Church to an increasing and now fashionable congregation, which is so numerous that it is impossible for a stray hearer to obtain accommodation, and even the passages are always crowded with eager listeners. The same popularity follows the Doctor on his foreign appearances, where he is distinguished for his determination to the Papacy—a subject on which he never tires of

expatiating. Dr. Cumming had the distinction of preaching before Her Majesty at Balmoral, and the sermon was afterwards published under the title of "Salvation." His publications are much too numerous to be separately mentioned in this place. Amongst the most popular are,—*"Apocalyptic Sketches, Lectures on the Book of Revelation," "Daily Life," "Voices of the Night," "Voices of the Day,"* etc. Dr. Cumming belongs to the Church of Scotland, and opposed alike the principle and policy of those who felt it their duty to secede in 1843 and form a denomination of Presbyterian Dissenters in that part of the island.

CUNNINGHAM, PETER, Author and Critic, the eldest son of Allan Cunningham the poet—"Honest Allan," as the late Sir Walter Scott loved to designate him—was born in Pimlico, on the 7th April, 1816, and was educated at a private school. He is the author of that most useful and instructive publication, *"The Handbook of London,"* the largest and most important of the series of Handbooks to which the enterprise of Mr. Murray has given birth. He is also the editor of the new editions of the works of Goldsmith and Johnson's *"Lives of the Poets,"* which have issued from the same press. Mr. Cunningham was appointed by the late Robert Peel, as a mark of his esteem for the talents of his father, to a clerkship in the Audit Office in 1834, and in 1854 was made a chief clerk of that department of the public service. He is now engaged with Mr. John Wilson Croker on a new edition of Pope. He forms part of that *really* cheap edition of the British standard authors which was projected by Mr. Murray, and of which Johnson's *"Lives"* and the *"Works"* of Goldsmith form such important instalments. Mr. Cunningham is chiefly known to the public by his *"Handbook of London;"* but is the author or editor of several other works, of which the following is the order of publication: *"The Life of Drummond of Hawthornden,"* with large selections from his poetical works (1838); *"Songs of England and Scotland,"* 2 vols. 1835;—this has often been ascribed (erroneously, of course) to Allan Cunningham, who had published a collection of *"Songs of Scotland,"* in 4 vols.;—the single-volume editions of Campbell's *"Specimens of the British Poets,"* with additional lives and specimens, 1841; *"The Handbook to Westminster Abbey,"* 1842; *"The Life of Inigo Jones,"* for the Shakespeare Society, 1848; *"The Handbook of London,"* 2 vols. 1849; second edition in 1 vol. 1850; *"Modern London,"* 1851; Prefatory Memoir of J. M. W. Turner to John Burnet's *"Turner and his Works,"* 1852; *"The Story of Nell Gwynn,"* 1852; *"The Works of Oliver Goldsmith,"* for Murray's *"Library of British Classics,"* 4 vols. 1854; and Johnson's *"Lives of the Poets,"* for the same works, 8 vols. 1854. Mr. Cunningham has also been a large contributor to periodical literature, to *"Fraser's Magazine,"* the *"Athenaeum,"* *"Household Words,"* *"Notes and Queries,"* etc.

CUNNINGHAM, WILLIAM, D.D., Principal of the New College

here, Edinburgh, was born at Dunse, Berwickshire, in October 1795, and was educated at the University of Edinburgh for the ministry in connexion with the Church of Scotland. He greatly distinguished himself as a student, and shortly after receiving license to preach was, in 1830, ordained assistant and successor to the Rev. Dr. Scott at Greenock. His highly intellectual powers were soon recognised, and he received an invitation from the Town Council of Glasgow, the patrons, to become minister of one of the churches in that city; which, however, he declined. He was afterwards translated to Trinity College Church, Edinburgh, where he remained till the disruption of the Church of Scotland in 1843. He took a prominent part in the discussions and controversies which led to that event, so memorable in the ecclesiastical annals of Scotland; and after the death of Dr. Chalmers, in 1847, he was appointed to succeed him as Principal of the New College, instituted at Edinburgh in connexion with the Free Church of Scotland, in which he has from the first been one of the leading members. Mr. Cunningham has a highly logical mind, and is a most effective platform speaker. His popularity among those who attend his sermons is unbounded, whilst his influence in the Church of which he is so distinguished an ornament is, from his position, attainments, and character, naturally very great.

CUSTINE, ARISTOLPHE, MARQUIS DE, a French Novelist, Writer, and Traveller, was born in Paris in 1793. His first work appeared anonymously in 1828, then followed "*Mémoires et Voyages*" (1830); letters descriptive of travels in Switzerland, Calabria, England, and Scotland; a tragedy in verse, "*Beatrice Cenci*" (1833), which was acted but a single time; a romance, "*Le Monde comme il est*" (1835), "*L'Espagne sous Ferdinand VII.*" (1838), "*Ethel*," a romance (1839), and "*Romuald, ou la Vocation*" (1848). His chief work, however, is "*La Russie en 1839*" (1843, third edition in 1846), which has also called forth a number of works in reply to its representations.

CZARTORYSKI, ADAM, PRINCE, a distinguished Polish Nobleman, was born January 14, 1770. He took an active part in the efforts of his country as early as the period of Kosciusko's attempt to liberate her from Russian domination. After the partition of Poland in 1795, he and his brother were sent to St. Petersburg, by command of Catherine II., as hostages. Here Alexander was so charmed with the noble and manly character of the young Pole, that he became his intimate friend, and upon his accession to the throne appointed him Minister of Foreign Affairs, in which post Czartoryski conducted himself with so much prudence, that the fury which was at first excited soon gave way. In 1805 he subscribed, in the name of Russia, the treaty with Great Britain. He then demanded his dismissal, but nevertheless accompanied Alexander in the campaign of 1807, having previously assisted at the battle of Ansterlitz. After the peace of Tilsit he retired

arrangements of the compositions of the great masters. A majority of his pieces having been written for music-dealers, he was obliged to follow the taste of the musical world, and write in that brilliant style which insured them a wide popularity. Czerny has written a "Sketch of a Complete Musical History," and a theoretical work, entitled "Practical School of Composition."

D.

DALE, THE REV. THOMAS, M.A., Canon of St. Paul's Cathedral and Vicar of St. Pancras, a Poet, and the author of numerous popular and valuable works, has, on several grounds, a peculiar claim to an honourable mention in these pages. He was born at Pentonville, London, on the 22d of August, 1797. Three years afterwards he had the misfortune to be deprived of his father, and his father having contracted a second marriage, went out to the West Indies as editor of a public journal, where he soon fell a victim to the climate, leaving his son at a very early age to battle with the world as best he might. The watchful Eye that letteth not a sparrow fall to the ground unnoted, however, appears to have protected him. In 1805, through the kindness of friends, a presentation was obtained for him to Christ's Hospital, where he acquired, under the late Dr. Trollope, an excellent classical education, and was treated with especial kindness by the head-master. Many of the most eminent men of our time—Coleridge, Charles Lamb, Richards, Scholefield, and Middleton, among others—have been delighted to acknowledge a similar obligation to this institution, and to refer their success in life to the opportunities of acquiring knowledge which they improved under its roof. To the category of its "worthies" must now be added the name of Dale, who, under peculiar disadvantages in the outset of his career, has won his way to a position to which no aristocratical influence, however powerful, could have elevated him. In 1817 Mr. Dale entered himself of Corpus Christi College, Cambridge; and in the autumn of the subsequent year published his "Widow of Wain." This volume was followed at brief intervals by "The Bull of Taurus" and "Irak and Adah, a Tale of the Flood." It is a gratifying circumstance that to the success of his first literary venture (which passed through six editions in a very short time) Mr. Dale was indebted for the means of prosecuting his studies at Cambridge; whilst it introduced him to the notice of several influential persons, afterwards his firmest friends, to some of whom he was indebted for much of the success which attended his subsequent efforts in tuition. The popular verdict was in this instance fully ratified by the periodical critics of the day, who were unanimous in its praise. Two of the prime

DALE.

ong poet's aspirations were to enter the Church and himself by his pen. One of these desires has been accomplished, and the achievement of the other was accomplished. Mr. Dale was ordained in 1822, and obtained

in 1823 from the late Archbishop of Canterbury the degree of Bishop of London. In 1822 he took his degree of B.A. In 1819 Mr. Dale married the accomplished daughter of the late Mr. J. M. Richardson, a respected bookseller and publisher of Cornhill; and was more than seventeen years of age. Soon after Mr. Dale opened an academy for a select number of students at Greenwich, and subsequently removed to a commodious house at Beckenham which was the residence of Lady Byron; where his success soon exceeded his sanguine anticipations. It was a beautiful specimen of the affectionate reverence of these children—some of whom were thousands of miles from their parents—for the mother and her loving anxiety in turn to promote the success of the business. Mr. Dale's first curacy was that of St. Andrew's, which he held for nearly three years; and which was in the shape of a handsome piece of plate, and

on his removal to the assistant preachingship of St. Michael's. The congregation of St. Michael's had increased from thirty to three hundred persons; and, consequently, the number of communicants on his removal was the same as that which attended him at his first curacy. Mr. Dale was Assistant Preacher of St. Bride's in 1826; and Lecturer of St. Sepulchre's in 1828; Minister of St. Andrew's Chapel, Denmark Hill, in 1830; and Vicar of St. Andrew's in 1835. In 1828 he accepted a Professorship of Divinity and Literature at the London University, which he held for three years, but resigned in 1830; and from 1830 to 1835 he held a similar office in King's College. The omission of his name from the plan of the London University was a great loss to the cause which had something to do with Mr. Dale's resignation. The circumstances which attended his appointment to St. Paul's in 1843 to a canonry of St. Paul's, reflect

the great statesman whose calamitous loss has been so universally deplored. In the early part of the reign of St. Bride's having become vacant, the following letter from Robert Peel, then First Lord of the Treasury, was received, January 24, 1835. Sir,—Being desirous of appointing to the parish of St. Bride's a resident clergyman of high talents and eminent as a preacher, I beg leave to trouble you with the living. I know not whether the appointment will be made to you or not; but it will be gratifying to receive an offer dictated solely by consideration of the public interest and general character. I have the honour to be, Sir, your obedient servant, ROBERT PEEL."—What a contrast

of the recommendation. I am, Sir, your faithful servant, ROBERT PEEL."—Mr. Dale's appointment to St. Pancras took place in July 1846, and in 1849 he resigned the Lectureship of St. Margaret, Lothbury. His poems, originally published in three successive volumes in 1819, 1820, and 1822, all of which passed through several editions in the form in which they first appeared were collected in 1836 into a single volume. His other publications were—"A Translation of Sophocles," in 1824; "Sermons preached at St. Bride's, 1830;" "Sermons preached before the University of Cambridge as one of the Select Preachers, 1832, 1835, 1836;" "The Sabbath Companion," 1844; "The Good Shepherd, a Commentary on the Twenty-third Psalm," 1845; "The Domestic Liturgy and Family Chaplain," 1846; "The Golden Psalm," 1847; together with many sermons preached on the occasion of visitations, consecrations of churches, and anniversaries of public charities; and an edition of Cowper, with biographical and critical remarks.

DALHOUSIE, JAMES ANDREW BROWN RAMSAY, MARQUIS OF, (styled Lord Ramsay in the lifetime of his father, the ninth Earl of Dalhousie,) was born in 1812, and graduated at Christ Church, Oxford, where he was fourth class in classics in 1831. At the death of his father, in 1838, he became tenth Earl of Dalhousie in the Scottish peerage, and in 1843 was appointed Vice-President of the Board of Trade, and sworn a Privy Councillor. In December 1845, he was named Lord Clerk Register of Scotland, and in 1848 was appointed Governor-General of India. His administration there has been most auspicious to the interests of our vast empire in the East. Besides the annexation of the Punjab, he has had an embassy from the Burmese monarch attending his court at Calcutta, the Ameer of Cabul suing for British friendship, and the Khan of Khokan soliciting soldiers from him to drill his troops. In 1848 he was named a Knight of the Thistle. The following year he was created Marquis of Dalhousie, of Dalhousie Castle and of the Punjab, in the peerage of Great Britain, and received the thanks of Parliament and of the East India Company "for the zeal and ability" displayed in administering the resources of British India in the last successful contest with the Sikhs. He is Constable of Dover Castle, and Warden and Keeper and Admiral of the Cinque Ports. He is a widower, with two daughters, and his cousin, Lord Panmure, is heir-presumptive to his Scottish titles.

DANA, RICHARD HENRY, Poet and Novelist, is the son of Francis Dana, minister to Russia, member of Congress, and chief justice of the commonwealth of Massachusetts. He was born in Cambridge on the 15th of November, 1787. Between the ages of nine and ten he went to Newport, Rhode Island, where he remained until he entered Harvard College, at which institution he passed three years; he then became a member of the bar, but was eventually obliged to abandon that profession on account of feeble health.

health. His first literary production was a Fourth-of-July oration, delivered in 1814. In 1817 he became a contributor to the "North American Review," his first article being an essay entitled "Old Times," and when Edward T. Channing became editor of the "Review," Mr. Dana took a part in the management of that periodical. His connexion with the "North American" continued until Channing became professor in Harvard College in 1820, and most of his contributions to the "Review" have been reprinted in an edition of his works published in 1850. In 1821 he began the "Idle Man," which, however, was soon suspended, the undertaking not having been pecuniarily successful. In this publication first appeared "Tom Thornton," one of the best of his tales, and many of his shorter stories. Bryant, too, contributed poems, and Allston's "Monaldi" was written for it, and would have appeared in the second volume had the work been continued. Dana's first poem, the "Dying Raven," was published in the "New York Review" in 1825. In 1827 appeared the "Buccaneer," and other poems, which met with a very favourable reception from the public, and on which his reputation mainly rests. In 1833 he published a collection of his previous writings, together with some new poems; but since that period, if we except some articles contributed to literary journals, and his lectures on Shakspeare, he has not appeared before the public as an author. Whether in verse or prose, Mr. Dana addresses himself to men, and in a style that is complimentary to his audience. His eldest son, Mr. Richard H. Dana, jun., who now occupies a high position at the Boston bar, is also favourably known to the public as an author, by his popular and entertaining work, "Two Years before the Mast." One of Mr. Dana's ancestors was sheriff of Middlesex in the reign of Queen Elizabeth. In 1839 Mr. Dana delivered in Boston and New York a series of lectures on English Poetry.

DANBY, FRANCIS, A.R.A., the most original Painter of what is technically called the Historical Landscape of our time—an artist who to highly imaginative power superadds a dexterity of handling which has rarely been surpassed, and not often equalled—was born about six miles from Wexford, on the 16th November, 1793. To those who may happen to be aware that Mr. Danby was elected an Associate of the Royal Academy of Painting nearly thirty years ago, and that he has not yet achieved the full honours of that institution, our description of his art may appear in some degree hyperbolic; but it is nevertheless warranted, not only by the verdict of the public at large, but by that of some of the most eminent painters and connoisseurs of his time. Romney in former days, and John Martin in our own, succeeded in acquiring a European reputation, but failed to attain to even the probationary honours of the Academy. A mob of seal-engravers, miniature-painters, architectural draughtsmen, and book-illustrators, unacquainted with the first principles of art, have found the road to whatever fame or profit it has had the opportunity of conferring,

easy enough of access; whilst the painters of the "Birth of Shakspeare" and "Belshazzar's Feast" have been shamefully and invidiously excluded, not merely from the temple itself, but even from its vestibule. Various pretexts have been assigned for this injustice of which Mr. Danby has been the victim, but none of them are in the slightest degree tenable, had they any foundation in fact: Mr. Danby may, however, console himself with the conviction that his art will be remembered and prized when that of a large majority of his oppressors has been forgotten. The father of the painter was a small landed proprietor, living upon his patrimony in the neighbourhood of Wexford, until the Rebellion of 1798, when with other loyal subjects, he was induced to remove for greater security to Dublin. It was in the school of the Society of Artists in that city, having given early indications of his tastes, that young Danby received his first instruction in drawing. He had, however, the misfortune to lose his father soon after the removal of the family from Wexford; and his mother, who had uniformly countenanced the pursuit of art as a profession, finding no other path open to him, was fain at length to consent, when he had attained the age of nineteen years, that he should follow the bent of his own inclinations, and become a painter. His first attempts were exhibited in the Dublin Exhibition so far back, I believe, as 1812; but after a few years' study in that city he determined to seek a wider sphere for the exercise of his talents. Having visited the exhibition of the English Royal Academy in 1820, was "so struck with its wonders" that he resolved to become, to all intents and purposes, an English artist; and taking up his residence at Bristol, opened his campaign in the gallery of the Royal Academy with a picture entitled "Disappointed Love." In 1823 he tried his hand at an historical landscape, "Warriors of Olden Time listening to the Song of their Minstrel;" and in 1824, springing like Pallas from the head of Jupiter completely armed for the battle for fame, produced his "Sunset at Sea after a Storm;" one of the most remarkable pictures of the English school. There is scarcely an instance in the history of modern art of so great a stride having been made in so short time. The marvellous effect—a blood-red setting sun over a weltering sea whose solitude is only broken by the straining raft of a shipwrecked crew clinging convulsively to its timbers, at once established Danby's position as a painter. Sir Thomas Lawrence, the generous and discriminating patron of his meritorious but less fortunate brother-artists, was so charmed with the picture that he purchased it at a liberal price; one more in accordance with his own sense of its value than the modest expectations of the artist, and encouraged by every means in his power his truly poetical literary art. This work has been finely engraved in Finden's "Picture Gallery of British Art," but as much of its beauty depends upon its colour—a colour, too, which is but feebly represented by the burin—the engraving affords but a very imperfect notion of the magical variety of hues which glorify the original. Of the painter's

it might truly be said, that "going to bed one evening with moderate anticipations of success, he awoke the next morning to find himself famous." Reveling in the fulness of his power, and determined to display its versatility to the utmost, he produced, next year, "The Delivery of Israel out of Egypt"—one of the grandest conceptions of his genius; a picture depending for its success not so much on the highly imaginative qualities it displayed, but remarkable for a dexterity of manipulation, and a perfection of finish in all its details, of which there are few modern examples. Some of our critics have been wont to refer the notion so admirably carried out by Danby in this and several of his subsequent pictures, the immensity of space and multitude of form, to John Martin; but we have to learn, that if there be any extraordinary merit in the fertility of the idea, it belongs to Mr. Danby, or, more properly, perhaps, to that exquisite picture of Allston in the Egremont Gallery at New York, "Jacob's Dream." The popular qualities of Martin's pictures multitudes originated in his perfect knowledge of aerial perspective; but whilst Danby had thoroughly mastered this arrangement of his art, his groups of figures were more artistic, his drawing of the human form more correct, and his colour far purer. Both repaired to the same Hippocrene, but not always with equal success; and both of them have produced works, the reputation of which will outlast half the Academical pictures of the last century. Yielding to the out-door pressure, and the unqualified opinion of their President, the Royal Academy elected Mr. Danby, in 1825, an Associate of their body, and thus placed him on a level, at least, with Elias Martin, (a painter who had not exhibited for half a century, but was kept upon the list, to the exclusion of a better man, because it could not be legally proved that he was a dauber) and those obscure and wretched daubers, Theophilus Carter, A. J. Oliver, Samuel Drummond, and Co. In 1826 followed Mr. Danby's "Christ Walking on the Sea;" and in 1827 that magnificent picture, "The Embarkation of Cleopatra on the Cydnus, when she first met Mark Antony in Cilicia." Never was the promise of a picture more fully redeemed than by these pictures—in that of the latter more especially. Deriving some of its inspiration from the charming illustration of a noble passage in the works of the immortal Shakspeare is one of the most exquisitely poetical pictures in the whole range of British Art. The Egyptian Queen is seen to set sail in her galley, which, "like a burnished throne," floats on the water." The sun tinges the rippling river; and the distant Needles in the distance, and the splendid massive Egyptian columns in the foreground, complete a scene such as no painter could have equalled. The copyright of this picture was purchased of the painter by Mr. Alaric Watts, and admirably engraved by Goodall for the "Literary Souvenir;" a worthy pendant to the "Ehrenbreitstein," rendered by John Pye in the same year. A fine mezzotint appeared about the same time of another picture of the painter, "The Fairy Island." In 1828 Mr. Danby fully sustained his reputation by two pictures of widely

different character, but corresponding excellence: "An Attempt to illustrate the Opening of the Seventh Seal," and "A Scene from the Merchant of Venice" (Lorenzo and Jessica in the garden now in the Soane Museum. In the former, the painter did all that could be done for so inscrutable a subject, and the result was a conception of great sublimity, with an effect of chiaroscuro which has seldom been surpassed. It was purchased by the great connoisseur of his day, Mr. Beckford of Fonthill, who was so well pleased with his bargain that he gave Mr. Danby other commissions for similar subjects. This work, "The Passage of the Red Sea" and "The Deluge," are known widely by large mezzotint prints which, however, do but slender justice to the originals. This may be said to have been the culminating period of Mr. Danby's career as a painter. An unhappy marriage and its concomitants shivered his household gods; and pecuniary difficulties, originating in the erection of a studio, but increased by other circumstances which the painter was unable to control, forced him to quit England at a moment when his anticipations of prosperity seemed bright. In 1829 he repaired to Switzerland, and so soon as he was enabled to settle sent for his sons. During his absence, which was of several years' duration, he maintained himself chiefly by the sale of his drawings in England, through the kind and zealous agency of Dominic Colnaghi and the well-known water-colour painter, George Robson. The Countess Demidoff in Paris, and a lady of the name Haldimand in England, had set a fashion for albums of a kind which had never before been seen, either in this country or France. The collections of these ladies were composed of one or two specimens of every artist of mark who would condescend to make a water-colour drawing. Although liberal prices were paid by Mrs. Haldimand, in the first instance, for her drawings, they produced, on their dispersion some years afterwards, more than treble their original value. Whilst the graceful whim lasted, it furnished employment for the leisure hours of some of our most eminent painters, and a sensible aid to Mr. Danby, who, travelling from one place to another, was seldom able to set up an atelier for oil-painting. Some of these drawings partook of all the fancy and careful finish of the more important pictures. Two—"The Old English Garden," and "Fairies on the Seashore"—were engraved by Miller of Edinburgh for Mr. Alaric Watts's "Cabinet of Modern Art." Several exquisitely poetical sketches in France, Norway, and Greece, found their way into the portfolios of his admirers. From this date, if we remember aright (1829), Mr. Danby exhibited little or nothing beyond "The Golden Age" (1831), a Claude-like landscape with figures. "Rich and Rare were the Gems she wore"—a young girl in a magnificent costume, adorned with jewels, illustrative of the well-known Irish melody. In 1841 Mr. Danby threw off his lethargy, and appeared in the Exhibition of the Royal Academy with several pictures worthy of his earlier days,—"A Morning at Rhodé," "The Sculptor's Triumph when his Statue of Venus is about to be placed in the Temple," in which the colossal statue in the go-

DANTAN—DARGAN.

, he again repaired to the West of England; he has lived ever since. Two of his miserable promise, and bid fair to prove themselves their father. We have thus endeavoured to give a notion of the genius of a painter of the day, with its Pre-Raphaelites, its stenciller, its seal-engravers, its architects and painters, to the delight to honour.

DANTAN-PIERRE, a French Sculptor, was born in 1800. He studied first at Paris, then at Rome, where he turned his attention to portraiture. His bust of Pope Pius VI at Rome was the bust of Pope Pius VI in 1829 by that of Boieldieu. Whilst in Rome he made ice statuettes, in which anything laughable was exaggerated; not to such a degree as to be ridiculous, but rather to make it more striking. He was called by the name of *charges*, gave him great credit upon his return in 1830. But he by no means neglected serious sculpture. He produced small busts of all the notabilities of France, besides the busts for the Museum of the Marine; that of the Museum at Versailles; and a second one of the bust of Rouen. Among his numerous *charges*, the busts of Wellington, O'Connell, Brougham, D'Orsay, the Duke of Cambridge, Victor Hugo, Soult, Rogers, Coste, and so on. Dantan may claim the merit of having his unique and dangerous talent to any man who has always exercised it with the utmost care, by avoiding all political caricature.

WILLIAM, Capitalist and Railway Contractor, is a striking instance of a man raising himself from a native of Ireland, born at the beginning of the century. His father was what is called a gentleman-farmer, who possessed an extensive tract of land in the county of Cork. He received a good education, and after leaving the office of a surveyor's office. With little beyond this training, and the strictest integrity, he left Ireland to pursue his employment was under Telford, who was engaged in constructing the Holyhead Road. When this was completed, he returned to Ireland and embarked in several other enterprises, in which he was fortunate enough to gain success. He is of that princely fortune, which now entitles him to be called a millionaire. Advancing step by step in his important undertakings, he at length obtained the contract for the Great Southern Railway; and on the projection of the Great Southern Railway—the first in Ireland—he became the principal contractor, and scarcely a public work in Ireland has

his time in that city, from 1815 to 1830. In the summer of 1815, M. Merle returned to his native city, where, upon the foundation of the new theological school by the "Evangelical Society of Geneva," he was appointed Professor of Church History, a post which he since held and adorned. Professor Merle (for such is his name, that of D'Aubigné, which belonged to his grandmothers, being added in accordance with a Swiss custom, *pro honore*) attained a world-wide reputation as a professor and preacher, especially as an author. His first publication consisted of a volume of sermons, printed at Hamburg. He next entered upon his great work, the "History of the Reformation of the Sixteenth Century," of which five volumes have appeared. His work has had immense circulation, especially in Great Britain and the United States. It is chiefly remarkable for vivacity, for vigour, and for other qualities of an eloquent style. M. Merle is also the author of several volumes of less importance, a "Life of Cromwell," "Germany, Scotland, and England," and many sermons and addresses.

DAVID, FÉLICIEN, Musical Composer, was born at Carpentras in the department of Vaucluse, on the 8th of March, 1810. He was left an orphan at the age of five years, and was brought up by his sisters. His love for music manifested itself at a very early age, and according to M. Eugène de Mirecourt, who is fond of stating improbabilities, the future composer understood the notes before the alphabet. For his first instruction in music he was entirely indebted to his sister, who taught him a number of songs and romances, with which he used afterwards to delight the neighbourhood. When Félicien was in his eighth year he went to Aix, where he studied under the chapel-master, and with the additional advantage of singing in the choir of the cathedral, where his voice soon caused itself to be remarked by its extraordinary power and sweetness. Before he had learned even the rules of harmony, the young composer wrote out the notes of an original *morceau*, which threw his professor into ecstasies, and which was executed on the following Sunday in the cathedral. Félicien's talent continued to develop itself, until at length his friends urged him to go to Paris to complete his studies. After much trouble, his uncle was prevailed upon to make him the magnificent allowance of fifty francs per month. The young man was at that time twenty. He was at once admitted to Cherubini, then director of the Conservatoire, to all the classes of that institution; but, not contented with his regular lessons in harmony, and determined to make as much progress as possible in the shortest time, he saved twenty francs per month out of his fifty, to enable himself to study harmony and composition under Reber. After the first six months, Félicien was left by himself to his own resources, and he lived by giving music lessons until the formation of the St. Simonian sect, of which the young composer became one of the most enthusiastic members. V

ions of the "Désert" appear to us the best. In English David is only known by the "Désert," which was executed at Her Majesty's Theatre soon after its production in Paris; and several romances, of which the one known as "Les Hirondelles" is the most popular. In Paris the "Désert" was followed by "Moïse," which had a partial success, but which was never popular in the literal sense of the word. Felicien David abandoned Moses and sacred subjects, and soon afterwards produced "Christus Rex," which was more successful than "Moïse," but which does not possess the freshness and charm of the "Désert." "Christus Rex" was played at the Tuileries before Louis-Philippe, and the composer to his box and decorated him with the Cross of the Legion of Honour. The "Garden of Eden" ("L'Eden") was brought out during the affairs of 1848, and of course attracted much attention. Felicien David's last work is the "Perle du Bréviaire," which was produced a short time since at the Théâtre Lyrique, and met with great success. He is at present understood to be engaged on a grand five-act opera, called "The End of the World" ("La Fin du Monde") the *libretto* of which has been written by Victor Massé.

DAWSON, GEORGE, a popular Lecturer, was born in 1823 in the parish of St. Pancras, London. After receiving his education at his father's school, he proceeded to the University of Glasgow; and after the usual study, took the degree of M.A. He was introduced into the ministry of the Baptist Nonconformists, and having remained some time, an opening occurred at Birmingham in 1843, where he became the minister of Mount Zion Chapel in that city. One of the peculiarities of his ministrations, and chiefly a studied departure from the merely conventional usages of the sacred office, alienated from him a portion of the congregation of Mount Zion Chapel, but the independence of character in which these traits had their origin gained for him a large circle of adherents. A separate place in the congregation, when the majority seceded without notice. A subscription was immediately commenced for the erection of a new chapel, and in August, 1847, the edifice was opened, named as "The Church of the Saviour." Mr. Dawson has no peculiarities of doctrine, but rather makes an earnest appeal for truth the great test of a Christian spirit. Mr. Dawson is, however, more widely known as a literary lecturer than as a minister, and in this capacity has attained a very high popularity. His subjects are of the most varied character, his scope of illustration wide as nature, his language the best Saxon, and his manner unobtrusive in humour. No man has studied the intellectual capabilities of the middle classes of this country to more advantage than George Dawson, and to this must be ascribed his present success. He has written little, but has for some years won the credit, such as it is, of writing a series of articles which appeared in the "Birmingham Mercury," an unsuccessful attempt.

D'HILLIERS, BARAGUAY, Marshal of France, born in 1
the son of one of Napoleon's generals of the same n
he Marshal is at once a soldier of the Empire and one of
African Generals" who now figure so conspicuously in the Fr
my. He began his career in 1806, by entering, nominally
irst Regiment of Dragoons, but actually proceeding to the *Pry
filsaire*. In 1812 he left the *Prytanée*, joined the First Regi
f Chasseurs, accompanied his corps in the expedition ag
nasia, and was present at the terrible battle of La Moskowa.
1813 he was sent to Prussia, and in an engagement there rece
sabre-cut on the head. He became side-de-camp of the Du
agusa, and with him made the campaign of Germany, fightin
ll the great battles until that of Leipzig, where he received a w
which cost him his left arm. He was by this accident depriv
urther opportunity of disjunction, and had only attained the
'captain, when his career was, by the fall of Napoleon, sudd
tested, and he himself was committed to the appreciation of
ntered Bourbons, never too well disposed to the soldiers of
mpire. In the struggle of 1815 Baraguay d'Hilliers for

turnful a scene. The success of this effort encouraged M. Delaroche to paint other subjects from English history. In 1830 he exhibited his "Princes in the Tower" (also in the Luxembourg); but a too close adherence to the absurd costume of the time impairs materially the sentiment of the picture. In 1831 he produced "Cromwell contemplating the Corpse of Charles I.," now in the gallery of the Earl of Ellesmere, one of the most munificent patrons of art of our time. In the same year he produced his "Cardinal Richelieu ascending the Throne," and the "Death of Mazarin." About the same time the Académie des Beaux Arts, in spite of their repeatedly-recorded objections to the theories of Gros and Géricault, and their avowed reverence for the memory of David, elected Delaroche one of their members in succession to Meynier. He now opened a large atelier and became a teacher, and from that time he appears to have exercised a considerable influence, and that an official one, over the artist-mind of France. His succeeding pictures fully supported the position to which he had attained. "The Death of Lady Jane Grey," "The Assassination of the Duke de Guise," "Saint Cecilia," "Charles I. insulted by the Soldiers of Cromwell" (in the Bridgewater gallery), and "Strafford led to Execution," are among the finest historical pictures of our time. In 1853 one of these subjects, "The Assassination of the Duke de Guise," formerly the property of the Duke of Orleans, was purchased by the Duc d'Aumale for 52,000 francs (2000 guineas). For some years M. Delaroche ceased almost entirely to send his works to public exhibitions. For a considerable time, indeed, he was occupied with the vast and elaborate scene painted by him for the Ecole des Beaux Arts, which he commenced in 1837 and did not finish until 1841. This, his *chef d'œuvre*, has been thus correctly described by a contemporary art-critic in "The Artist:"—"It is a sort of ideal Last Supper, an imaginary Academy, where are assembled almost all the illustrious masters of the past. Three noble representatives of the arts in Greece—Apelles, Ictinus, and Phidias—are solemnly seated upon a marble bench, which forms the lowest step of an ancient temple. At their feet four female figures stand in a row; these, differing in costume and expression, symbolise respectively the arts of Greece, of Rome, of the Middle Ages, and of the Renaissance. Finally, in the foreground, quite close to the spectator, a young girl grasps crowns of laurel, and seems to be throwing them into the hall. The group that we have just described forms the centre of the composition, and, with its majestic serenity, and the awkwardness of being but imperfectly connected with the other figures which are spread over the wall. On one side are the sculptors, a glorious family, amongst whom may be recognised Donatello and Ghiberti, John of Bologna and Benvenuto Cellini, Jean Pilon and Puget. Opposite appear the architects, a more sparse and less numerous assemblage: here are found those who were 'past masters' in the art of building—such as Bramante, Palladio, Erwin of Steinbach, and others; finally, at the two extremities of this extended frieze, the princes of the palette and the pencil

DELAROCHE.

the landscape and animal painters, and Paul Potter; there those constant study; a luminous group, Paul Veronese, and Murillo. Opposite, a dignified and serious conclusion of the Florentine and Roman schools, Leonardo da Vinci and Michael Angelo.

Each has selected a brother, and to the affinities of their genius. Others calmly discoursing, the young of the masters, but all, whatever their country, have but one aim: all are occupied with the perpetuation of Art." Its chief defect is a want of unity. It is, nevertheless, a picture which could have painted. Among the works he has executed during the last ten years, "Randola," "Napoleon at Fontainebleau," "Bonaparte crossing the Alps at Rome," "Buonaparte crossing the Alps," "The Happy Mother," and "Benvenuto Cellini."

He has many large works still in the hands of his commissions. M. Delaroche married Elizabeth-Louise Vernet, the daughter of the painter, for love of whom Léopold Delaroche himself. She has been dead some years.

Delaroche's survivors. The real Christian name of Delaroche, but his schoolfellows, with reference to him, are accustomed to call him "Little Delaroche." He has adopted as his own. His autobiography, describes the progress of his career for raising the prices of the pictures. He has in the Barnum line to be accepted. It appears that a Madame de Montaut, who was a friend of Prince Demidoff, resorted to a trick of inducing her friend to offer to purchase the picture of the Execution of Lady Jane Grey for more than had been given for his picture of the Pope carried to St. Peter's by Michael Angelo, and Raphael.

As the picture advanced to the sale, the buyers began to fancy that it ought to be sold for a high price, but the bargain had (unhappily) been made. The services of Madame Montaut were called into requisition. She was, however, aided by Peter Nolte, contrived to purchase the picture for a sum of 15,000 francs, which having been paid to Prince Demidoff by his *chère amie*, he gave her 8000 francs instead of 8000! "From the works of Delaroche rose considerable sums of money."

for a brief space in consequence. Lord Palmerston, then at the Foreign Office, made some concessions, and the good relations between the two great countries were re-established. M. Drouyn De Lhuys was the first, one might say the only statesman, who lent his aid to the Government of Louis-Napoleon Bonaparte after the *coup d'état*. As Minister under the Empire, he upheld the foreign policy of his country with an ability which is universally acknowledged. His despatches on the Russian question were models of dramatic composition, and for clearness and force have never been surpassed. In May, 1855, M. Drouyn De Lhuys resigned the portfolio of foreign affairs, and was succeeded by Count Walewski.

DE MORGAN, AUGUSTUS, a Writer on and Teacher of Mathematics, was born at Madura, in the East Indies, in 1806. In a casual remark in one of his works, it appears that he is a great-grandson of the mathematician James Dodson, the author of the "Anti-Logarithmic Canon." He was educated at Trinity College, Cambridge, and took the B.A. degree in 1827, as fourth class. He never proceeded to the degree of M.A., we understand, from an objection to the subscriptions required: his name appears at the head of the B.A. list in his College. On leaving Cambridge he entered at Lincoln's Inn, and commenced his studies at the bar; but abandoned them on obtaining, in 1828, the Professorship of Mathematics in the newly-founded University of London, known, to those who can contrive to understand the distinction, as University College. It is not even yet generally understood that the Government, in 1837, founded what is *now* the University of London, the institution in Gower Street, till then so called, agreed to give up its name, and to become one of the affiliated colleges of the New University of London, under the name of University College. In some essays recently published at Oxford, an assailant of the system of the University of London transfers both the system and the locality of the University to the College in Gower Street, which had nothing whatever to do with the formation of the system, in which we believe that some parts of the attack would meet official support. Mr. De Morgan resigned his post in 1831, and returned to it in 1836, on the death of his successor. He is a voluminous writer on the principles and history of mathematics, on points connected with the profession of an actuary, which he has practised for many years, although not attached to any office. He has published works on arithmetic, algebra, trigonometry, double algebra, the differential calculus, the calculus of functions, the theory of probabilities, life contingencies, the gnomonic projection, the use of the globes, formal logic, arithmetical books (bibliographical), and a book called the "Book of Almanacs," by which the almanac of any year, past, present, or future, may be turned out at once, in either style. He has also written the articles on mathematics and astronomy in the "Penny Cyclopædia," many biographies in that work, in the "Gallery of Portraits," and in the completed Biographical Dictionary of the Useful Knowledge

and a certain liberty of the press enjoyed. The attempts of the radical party to extend and confirm the privileges of the people led to the Revolution of Copenhagen in 1848, and the resolution of Holstein and Schleswig to secure themselves in their comparative independence, to knit closer their connexion with Germany, and to assert the rights of the Duke of Augustenburg, led to the disastrous Schleswig-Holstein war. The question of succession was settled favourably to Russia in 1852, and immediately thereupon a struggle, respecting the internal constitution of the monarchy, began between crown and nation. Three times the King dissolved the Parliament which opposed his pretensions to *octroyer* a constitution. At length, in the autumn of 1854, the nation having returned to Parliament members almost entirely belonging to the Opposition party, the King gave way and chose a ministry representing the wishes of the people. The King of Denmark has maintained, since the declaration of war of the Western Powers, a dignified neutrality, although his subjects do not disguise their hopes that the despotism of Russia will receive a further and more effectual check than it has yet been called upon to endure before the war which he is now waging with the allied powers is brought to an end.

DE QUINCEY, THOMAS, a Philosophical Writer. In the celebrated "Confessions of an Opium-Eater," originally published in the "London Magazine," Mr. De Quincey has treated the events of his early life in a manner which makes that subject never his own. His literary character and career are far less striking and amusing. He has a most extensive knowledge of German literature, which he preceded Carlyle in introducing to English readers. He has written some excellent translations from Goethe, Paul Richter and Lessing, which appeared respectively in the "London Magazine," and in "Blackwood." A paper on "The Portent in Macbeth" is greatly admired, as well as a "Lecture on Sculpture, considered as one of the Fine Arts." He wrote many literary articles in the "Encyclopædia Britannica," and papers numerous in the magazines already mentioned, and in "Tait." His subjects, in philosophical discussion, philosophical criticism, and biography, are the classes of subjects in which Mr. De Quincey excels, and in which his masculine, clear, and logical style, is eminently adapted. He has lately published his literary recollections. In the contributions some years ago to "Tait's Magazine," he does not appear to have treated some of his distinguished contemporaries with the delicacy or generosity that might have been expected from his hands.

DERBY, EDWARD GEOFFREY STANLEY, EARL OF, a statesman and Orator, was born in the year 1799. Having signified his talents whilst at Christ Church, Oxford, of which University he is now Chancellor, Mr. Stanley, in 1821, became a member of the Assembly in which, for the next twenty years, he

DERBY.

a part. He seems to have been in no position of the House of Commons; but in 1824, his maiden speech, though on a minor subject, elicited a high eulogium from Sir J. Mackintosh. At the same session his second oration on the Irish Church, exhibited the readiness of an experienced debater. Mr. Macaulay acknowledged the science of parliamentary government, and that it would be difficult to find a man who has not made himself a master of his science. During the brief Canning and Godolphin ministries, as Under Secretary for the Colonies, he was concerned with the colonial mysteries, and on the formation of the new Government he was nominated to the then arduous post of Under Secretary for the Colonies. But although the young nobleman was not the most popular colour, the constituent body of the House of Commons, the claims of Henry Hunt; and the hearers of the young nobleman, whose lineage was illustrious, received a wholesome lesson from a demagogue of the hour. However, he entered into the political arena through the house of Commons, where he long engaged in those single-handed combats with Mr. St. John and Mr. Shiel which for years excited Parliamentary curiosity. While the Reform Bill was under discussion, his great talent for debate was often exercised on the various provisions; and about the same time he was concerned in the National Education in Ireland. In the session of 1833 that Mr. Stanley's ability was made manifest, his voice most potent in the battle of democracy, he overpowered the Irish Representative; and, combining the pride of patrician with the intellectual prowess, it would indeed be a miracle in human nature if he had not manifested a tendency to his adversaries. This tendency soon raised a storm, but he neither asked nor received any aid of hauteur, however, became so frequent to the rescue. "I have often," said the nobleman, "been taunted with my demeanour. I rather think I should be at a loss if he were a less powerful opponent." Mr. Stanley carried the Church Temporalities Bill for emancipating the West India Colonies, and became Colonial Secretary and a member of the Government. In 1834, alarmed at the ministerial project to disestablish the Irish Church Establishment, Lord Stanley, accompanied by Sir J. Graham, Lord Ripon, and others, went to Derby. He declined to take part in the debate on Lord Grey's resignation, but in concert with the Conservative opposition he secured the seals of the Colonial Office in

and occupied that post for more than four years, in the course of which he was removed to the House of Peers. But at the close of 1846, when Sir R. Peel arrived at the resolution of abandoning the system of Protection, Lord Stanley, rather than desert his expressed opinions, retired from the Cabinet, and next year, though with some reluctance, appeared as head of the Protectionist opposition for which the industry of Lord George Bentinck and the efforts of Mr. Disraeli gradually secured public recognition. Their struggle, if power was the object in view, at first appeared hopeless; but at length, in 1851, the resignation of Lord J. Russell brought the Protectionists to the very gates of Downing Street; and after Mr. Whig had retained their offices for a year longer, in February, 1852, the Conservative chief, who meanwhile had succeeded his father as fourteenth Earl of Derby, accepted the responsibilities of office, and constructed a cabinet. His colleagues certainly made the most of their brief term of power, having, besides other achievements, carried measures of Chancery Reform, passed the Militia Bill, and formed with the Emperor of the French that alliance the circumstances have since rendered so popular. But after a general election Lord Derby, in deference to that vote of the House of Commons hostile to the financial schemes of the Chancellor of the Exchequer, promptly tendered to Her Majesty the resignation of his Cabinet, and resumed his former functions as leader of the Opposition. On the fall of the Coalition in 1855 Lord Derby declined to undertake the duties of Government, on the ground that the only ministry he could have formed would have been dependent for existence on the forbearance of foes.

DESCHENES. ADMIRAL PARCEVAL, Commander of the French Baltic Fleet in the naval campaign of 1854, was born in 1790. He entered the naval service of his country at an early age, under the patronage of Admiral Latouche-Tréville, and fought on board the ship *Bucentaure* at the battle of Trafalgar. In 1809 he fought at the combat of Sablonnes-d'Olonne, and next year was *Esquadrille de vaisseau*. In 1814 he served with the flotilla of the *Volonté*. In 1815 he was chosen by the Government of the Provisional Government to announce to the Barbary States the return of the *Bourbon*, and subsequently to command the naval station of Algiers. He was shipwrecked on the coast of Dutch Guiana, and again on the coast of Cuba. In 1824, after the capture of Barcelona, where he had distinguished himself, he received the decoration of the Legion of Honour. In 1830 he commanded the *Euryale* at the expedition to Algiers, with the rank of Captain; and in 1833 the *Victoire* at the siege of Bougie. He commanded a frigate of the squadron under Rear-Admiral Bugeaud, which was sent to the Plate river to demand satisfaction from the President of the Argentine Confederation. In the expedition against Mexico which soon followed, Parceval Deschenes commanded the *Iphigénie*, 60-gun frigate, which took part in the capture of Uluca. In the embarkation which took place he led a

forming column to the attack of Vera Cruz, and took a battery of 18 guns. He was most honourably mentioned in the despatches of Admiral Bauden reporting on these operations. He was promoted to the rank of Vice-Admiral in 1846, and was a member of the Council of Admiralty when appointed to the command of the *Invincible* in 1854. This force was composed of twenty-two vessels carrying 1200 guns. The tactics of the Russians, it is well known, gave no opportunities for fair and open sea-fighting; but Bauden was reduced with the co-operation of a division of troops, Parceval Deschênes seconding the attack in the land. The Emperor marked his approbation of the Admiral's services by raising him to the dignity of Grand Cross of the Légion d'honneur.

DICK, THOMAS, LL.D., an eminent Scotch writer on Philosophy and Science, was born in 1772. He was originally educated with a view to the Secession Church, but being more earnestly devoted to scientific pursuits than becomed a minister of so proverbially narrow a sect, he relinquished all idea of becoming a clergyman, and identified himself exclusively with scientific studies. Although the scientific world is not indebted to him for any brilliant discoveries, he has done more than any living man to render science popular and attractive to the masses. His numerous and valuable works breathe a kindly and healthful spirit, and may well occupy a place in the library of the Christian family, or on the shelves of the man of science. Dr. Dick enjoys a small pension from the Queen, more as a recognition of his deserts than a substantial remuneration, and lives in tranquil retirement in the beautiful village of Broughty Ferry, on the banks of the river Tay. His works are as follow:—"Celestial Scenery;" "Christianity and Science contrasted with Covetousness;" "The Christian Philosophy;" "Improvement of Society by Diffusion of Knowledge;" "Mental Illumination of Mankind;" "Philosophy of Religion;" "Philosophy of a Future State;" "Practical Astronomy;" "Natural Heavens;" "Treatise on the Solar System," etc.

DICKENS, CHARLES, the most popular Writer of his age, was born in February 1812, at Landport, Portsmouth. His father was the late Mr. John Dickens, in the earlier part of his life employed in the Navy Pay Department, the duties of which required that he should reside from time to time in different naval stations—now at Plymouth, now at Portsmouth, and then at Sheerness. His home was at Rotherhithe. "In the glorious days" of the war with France, his days were full of life, bustle, and character; and the father of "Dickens" was at times fond of dilating upon the strange scenes he had witnessed. One of his stories described a sitting-room he had enjoyed at Blue Town, Sheerness, abutting on the theatre. In the evening he used to sit in this room, and could hear what was passing on the stage, and join in the chorus of "God save the King," and "Britannia rules the Waves,"—then the favourite

Englishmen. The war being at an end, amongst those who left public service with a pension was the father of our novelist. Returning to London, he subsequently found lucrative employment in his talents on the press as a reporter of parliamentary debates. As Dickens may, therefore, be said to have been in his youth acquainted with "copy," and when his father, with parental anxiety for his future career, took the preliminary steps for making his son a lawyer, the dreariness of the proposed occupation fell so early upon the mind of the future author, that he induced his father to permit him to resign the law and join the parliamentary staff of a daily newspaper. His first engagement was on "The Sun," an ultra-Liberal paper, then carrying on a fierce struggle for existence, from the staff of which he afterwards passed into the more congenial ranks of the "Morning Chronicle." On that paper he gained reputation as a first-rate man—his reports being exceedingly rapid, and no less correct. In the columns of the "Chronicle" he soon gave proofs of other talents than those of a reporter; and in the evening edition of that journal appeared the "Sketches of English Life and Character," afterwards collected to form the well-known volumes of "Sketches by Boz," published respectively in 1836 and 1837. The first of these sketches were published in the "Old Monthly Magazine." A passenger by the same ship says, "Having crossed the Atlantic in the Britannia with Mr. Dickens, I recollect a few of his observations made to me on passage. I asked him the origin of the signature 'Boz.' He said that he had a little brother, who resembled so much the Moses of the 'Vicar of Wakefield,' that he used to call him Moses also; and a younger girl, who could not then articulate plainly, was in the habit of calling him Bozie or Boz. This simple or natural circumstance made him assume that name in the first article he sent to the public, and therefore he continued the same, as the effort was approved of." The "Sketches by Boz" at once attracted considerable notice, and obtained great success. Another arrangement came to an arrangement with Mr. Dickens and Seymour, a draughtsman, the one to write and the other to illustrate a work which should exhibit the adventures of a party of sportsmen. Hence the appearance of "Pickwick," a book which made its author's reputation and the publisher's fortune. As the work had commenced poor Seymour committed suicide, and Mr. Hablot K. Browne was selected to continue the illustrations which he did under the signature of "Phiz." Meanwhile Dickens had married the daughter of Mr. George Hogarth, and now—a musical writer, a man of considerable attainments, and who, in his earlier days, whilst a writer to the signet in Edinburgh, enjoyed the intimate friendship of Sir Walter Scott (as law agent he was), Jeffrey, and the other literary notables of that day adorning the Modern Athens. The great success of "Pickwick" brought down upon its author demands from all sides for further work, and "Boz" agreed to write "Nicholas Nickleby," published in monthly parts. In the prefatory notices, which

give additional value to the cheap and elegant reprints of the works of Dickens, we are indulged with slight glimpses of his own recollections, personal and literary. Thus, in the introduction to "Nicholas Nickleby," when alluding to the portrait of Squeers, he says, "I cannot call to mind, now, how I came to hear about Yorkshire schools when I was not a very robust child, sitting in bye-places near Rochester Castle, with a head full of Partridge, Strap, Tom Pipes, and Sancho Panza; but I know that my first impressions of them were picked up at that time, and that they were somehow or another connected with a suppurated abscess that some boy had come home with, in consequence of his Yorkshire 'guide, philosopher, and friend,' having ripped it open with an ink-penknife. The impression made upon me, however made, never left me. I was always curious about them—fell, long afterwards, and at sundry times, into the way of hearing more about them—last, having an audience, resolved to write about them. With this intent I went down into Yorkshire before I began this book, in a severe winter time, which is pretty faithfully described herein. I wanted to see a schoolmaster or two, and was forewarned that those gentlemen might, in their modesty, be shy of receiving a visit from the author of the 'Pickwick Papers,' I consulted with a professional friend here, who had a Yorkshire connexion, and with whom I conceived a pious fraud. He gave me some letters of introduction, in the name, I think, of my travelling companion; they bore reference to a supposititious little boy, who had been left with a widowed mother, who didn't know what to do with him. The poor lady had thought, as a means of thawing the tardy compassion of her relations in his behalf, of sending him to a Yorkshire school: I was the poor lady's friend travelling that way; and the recipient of the letter could inform me of a school in his neighbourhood, the writer would be very much obliged. I went to several places in that part of the country where I understood these schools to be most plentifully sprinkled, and had no occasion to deliver my letter until I came to a certain town which shall be nameless. The person to whom it was addressed was not at home; but he came down at night, through the snow, to the inn where I was staying. It was after dinner; and he needed little persuasion to sit down by the fire in a warm corner, and take his share of the wine that was on the table. I am afraid he is dead now. I recollect he was a jovial, ruddy, broad-faced man; that we got acquainted directly, and that we talked on all kinds of subjects except the school, which he showed a great anxiety to avoid. 'Was there any large school near?' I asked him, in reference to the letter. 'Oh, yes,' he said, 'there was a pratty big 'un.' 'Was it a good one?' I asked. 'Fine,' he said, 'it was as good as anooother—that was a matter of opinion;' and fell to looking at the fire, staring round the room, and whistling a little. On my reverting to some other topic that had been discussing, he recovered immediately; but, though I urged him again and again, I never approached the question of the school, even if he were in the middle of a laugh, without observ-

his countenance fell, and that he became uncomfortable. At a when we had passed a couple of hours or so very agreeably, suddenly took up his hat, and leaning over the table and looking full in the face, said, in a low voice, 'Weel, Mither, we've been pleasant together, and ar'll spak' my moind tiv'ee. Dinnot the weedur send her lattle boy to yan o' our school-measthers, as there's a harse to hoold in a' Lunnon, or a gootther to lie up in. Ar wouldn't mak' ill words amang my neeburs, and ar a tiv'ee quiet loike. But I'm dom'd if ar can gang to bed and wudee, for weedur's sak', to keep the lattle boy from a' sike stels while there's a harse to hoold in a' Lunnon, or a gootther to lie up in!' Repeating these words with great heartiness, with a solemnity on his jolly face that made it look twice as before, he shook hands and went away. I never saw him again, but I sometimes imagine that I descry a faint recollection of him in John Browdie." "Nicholas Nickleby" was followed by "Oliver Twist," which originally appeared in "Bentley's Miscellany," of which Dickens undertook the editorship, and which, under his hands, rose to a large circulation. The publisher taking the opinion usual amongst his class as to the minor details which the author ought to receive in such cases, Dickens eventually gave up his editorship of a magazine whose chief aim must ever be that "Boz" was once its conductor. In "Oliver Twist," Dickens gave tokens of other talents than that of a novelist. He painted scenes of deep pathos, and evinced strong sympathy for the poor, the suffering, and the oppressed, and he was the world a literary champion in the field ready to do battle for the cause of virtue and humanity. The pen of "Boz," urged by his sympathies, has exposed many a phase of cruelty and wrong, and has excited the desires of good men to lessen the amount of evil and suffering existing in society. He has been, indeed, the author of many social ameliorations and reforms. Whilst he has not improved us. After "Nickleby" came "Master Humphrey's Clock," in which Dickens endeavoured to realise a grand plan of supplying the public with the best writing at the lowest possible price; and the new work was accordingly published in weekly numbers of low cost, as well as in monthly parts. "Master Humphrey's Clock" was the general title of a collection of tales and a connecting narrative. In the first of these, called "The Chimes," Dickens introduced the character of "Little Topsy," perhaps one of the most perfect he has ever drawn; and the simplicity of which has made it a universal favourite. "Barnaby Rudge" was the second of the same work, and it is a vivid picture of the Lord George Gordon riots. In the third, a new and cheap edition of "Barnaby Rudge," the author lets us have a glimpse of his own life. "The raven" in this story is a compound of two great originals, of which I have been, at different times, the proud possessor. The raven in the bloom of his youth when he was discovered in a

ident retirement in London, by a friend of mine, and given to him. He had from the first, as Sir Hugh Evans says of Ann and gifts, which he improved by study and attention in a exemplary manner. He slept in a stable—generally on horse and so terrified a Newfoundland dog by his preternatural g, that he has been known, by the mere superiority of his, to walk off unmolested with the dog's dinner, from his face. He was rapidly rising in acquirements and virtues,

an evil hour, his stable was newly painted. He observed the men closely, saw that they were careful of the paint, and immediately burned to possess it. On their going to dinner he

they had left behind, consisting of a pound or two of white and this youthful indiscretion terminated in death. While it was so, it was so, another friend of mine in Torrington recovered an older and more gifted raven at a village public-house, such he prevailed upon the landlord to part with for a considerable sum, and sent up to me. The first act of this sage was to minister to the effects of his predecessor, by disinterring a shilling and half pence he had buried in the garden—a work of some labour and research, to which he devoted all the of his mind. When he had achieved this task, he applied

it to the acquisition of stable language, in which he soon became an adept, that he would perch outside my window and talk of imaginary horses with great skill all day. Perhaps even I was wiser than him at his best, for his former master sent his duty with me, and if I wished the bird to come out very strong, would I be so

to show him a drunken man'—which I never did, having (naturally) none but sober people at hand. But I could not respect him more, whatever the stimulating influence of his might might have been. He had not the least respect for me, or for any, for me in return, or for anybody but the common he was attached—but only, I fear, as a policeman. He was so. Once I met him unexpectedly, about half-a-mile from the middle of a public street, attended by a large crowd, and spontaneously exhibiting the whole of his attainments. His gravity under these trying circumstances I never forget, nor the extraordinary gallantry with which, refused

brought home, he defended himself behind a pump, until overpowered by numbers. It may have been that he was too busy to live long, or it may have been that he took some poisonous substance into his bill, and thence into his maw—not improbable, seeing that he new pointed the greater part of the garden wall by digging out the mortar, broke countless of glass by scraping away the putty all around the frames, and up, and swallowed in splinters, the greater part of a window of six steps and a landing—but, after some three days, too, was taken ill and died before the kitchen fire. He lay on the last upon the mantel as it roasted, and suddenly turned on his back with a sepulchral cry of 'Cuckoo!' Since then have been ravens." On the completion of "Hump

Clock," Dickens set sail for America, where he accumulated materials for his "American Notes for General Circulation," published on his return in 1842. In the course of the year 1843 he commenced his "Martin Chuzzlewit," which appeared, like his earlier works, in monthly parts. In the middle of 1844 he went to Italy, where he spent about a year. In 1845 he proposed to found a new morning newspaper, the "Daily News," of which he was to be the editor. He organised a large literary staff, and surrounded himself with the most popular writers of the day. Money was abundant, the project was warmly applauded, and on the 21st of January, 1846, the first number of the new journal appeared. In it Dickens commenced his sketches, entitled "Pictures of Italy." Expectation had been so highly excited, that the first number of the newspaper—(though probably full fifty times as good as any first number of a daily newspaper that ever before appeared)—and because in its very first infancy it did not utterly eclipse its rivals that had been organised for half a century—many people professed to be disappointed. This public disregard for the new journal, and the constant heavy labour of editing a morning newspaper, combined, probably, to induce Dickens to withdraw from so troublesome a task. Since then he has delighted the world in his own peculiar fashion with his "Dombey and Son," and "David Copperfield;" has written several Christmas books, and has established the weekly paper called "Household Words," to which he and other writers have attracted a host of supporters, numbering, it is understood, somewhere about sixty thousand per week. Mr. Dickens was one of the founders of the Guild of Literature and Art; if, indeed, a project which has failed so unequivocally can be said to have been founded at all. Fully recognising the benevolent intentions of the promoters, we must be content to take little more than the will for the deed.

DILKE, CHARLES WENTWORTH, Principal Proprietor and for many years Editor of the "Athenæum," was born December 8, 1790, and began his career in the Navy Pay Office. Some thirty or thirty-five years since, Mr. Dilke was an extensive contributor to our leading reviews and magazines, then in their palmy days—to the "Westminster Review," and the "Retrospective," when under the editorship of Mr. Southern, our late minister at La Plata; he also published several works connected with our early drama and literary history. On the consolidation of offices, which occurred some years since, Mr. Dilke took the opportunity of withdrawing from official duties; he did not, however, "retire" into the easy enjoyment of well-earned leisure, but undertook the heavy and too often thankless task of conducting a critical journal, in which the truth, as far as he could find it, should be honestly told. He bought the "Athenæum," which under its originator, Mr. J. S. Buckingham, and afterwards under John Stirling (son of "The Thunderer" of "the Times"), had been unsuccessful; and laid himself out deliberately to build it up into a powerful and profitable

literary paper. The prime feature of his plan was to reduce its price from a shilling to fourpence, and include an even larger quantity of matter. The experiment, although regarded with apprehension by many of his friends, was triumphantly successful. His journal is now to literary journals what the "Times" is to newspapers. No reader can be kept *au courant* with the literature of the age who does not see the "Athenæum." After testing the capabilities of more than one editor, the "Athenæum" was placed in 1846 in the hands of Mr. T. K. Hervey, the poet, under whose literary direction it remained for eight years. Within the last year it has once more changed hands, and is now under the superintendence of Mr. Hepworth Dixon. Up to 1846 Mr. Dilke had taken an active part in the editorship of his paper. In that year, however, he became manager of the "Daily News," and tried a similar experiment to that on which he had ventured with such unqualified success in the "Athenæum." Under his control the price of that daily paper was reduced to 2½d., when it obtained a very large circulation, but not large enough to justify (under the other circumstances of the journal) persistence in so low a price. Since his retirement from the "Daily News," Mr. Dilke appears to have indulged himself with more repose than his tendency to hard work ever before permitted him to enjoy. Now and then he may be seen in the Reading Room of the British Museum (of which, by the way, he was one of the very earliest frequenters in the days of D'Israeli the elder) poring over some rare *brochure*, printed perhaps, by a flying press during the turmoil of the Civil War, or, it may be, in the less sanguinary but scarcely less exciting days of "Wilkes and '45," when lord mayors and sheriffs bearded parliaments and ministers, and the press was struggling to be free. In a number of the "Athenæum" thereafter may sometimes be detected a paper evidently written by a man who had gone *con amore* to his task—who had looked at it, turned it about, examined every passage of its history, connexions and relations—had tested it by the standards of logic and of strong common sense—and then wound up, pen in hand, by pouring out the whole results in some fluent columns of type deserving a more distinct existence than generally attaches to articles in a weekly journal. "Junius" is one of the questions which Mr. Dilke has investigated, and his papers on the subject present a very remarkable marshalling of evidence upon a vexed and probably never-to-be-settled literary question. Mr. Dilke's son—also Charles Wentworth Dilke—was one of the earliest promoters of the Great Exhibition of 1851, and acted as the leading member of the Executive Committee. When rewards were conferred on various members of that body for their valuable services, Mr. Wentworth Dilke, jun., was offered a knighthood—which he had the good sense to decline. He also refused all pecuniary reward for his assistance, wishing his public services to be purely honorary. Her Majesty, who entirely appreciated the services rendered by Mr. Dilke, sent a handsome souvenir to Mrs. Dilke, in the shape of a diamond

revel of considerable value, which will no doubt become an heirloom in his family.

DISRAELI, THE RIGHT HON. BENJAMIN, Novelist, Biographer, and Statesman, son of the well-known author of the "Curiosities of Literature," was born in London about 1805. "Disraeli the Younger" having been educated at a suburban academy, where he is said to have expressed his determination of arriving at editorial distinction, and having been placed for some time in the office of a metropolitan attorney,—a dull prelude to a career so negated,—is understood to have essayed his literary prowess in the columns of the "Representative." That Tory journal, after enjoying a brief existence during the year 1826, went to Limbo; but long, Mr. Disraeli took the novel-reading public by surprise with "Vivian Grey," followed, at intervals, by "The Young Duke," "Henrietta Temple," "Contarini Fleming," "Venetia," "The Wondrous Tale of Alroy," and other brilliant works of imagination. While Mr. Disraeli, while pursuing his success as a writer of fiction, did not neglect to struggle for the great object of his ambition—a seat in Parliament. As the descendant of a Hebrew family, whose members, though flourishing for centuries on European soil—first in Spain and afterwards in Italy—had fondly cherished the traditions of their fathers, it was natural that a youth whose aspiring vein should manifest some sympathy with Eastern lore; and, faring forth in the year 1829, he gratified his curiosity, regard to scenes of Oriental life, by spending the winter at Constantinople, and travelling in the spring through Syria, Egypt, and Arabia. Mr. Disraeli returned to his native shores in 1831, and found the English people violently excited on the question of Parliamentary Reform. The youthful novelist's sympathy with the localities was not quite absorbing; and in 1832, the ambition of enacting a part in English politics prompted him to offer as a candidate for the borough of Chipping Wycombe, lying snugly in a valley among the beech-clad hills of Bucks, a few miles from his father's residence at Bradenham. Mr. Disraeli neither called himself Whig nor Tory; indeed his views were so peculiar, that he appeared one day to belong to one party, and the next he seemed an adherent of the other. Graciously, however, he threw himself on the people; declared for Universal Parliaments and Vote by Ballot; got into the good graces of the multitude, and was claimed by the Radicals as their own. After losing three electioneering battles in this little town, and defeated on each occasion, Mr. Disraeli left the constituency open to the Smiths and Greys, and turning his eyes to the contested that borough as a Conservative of the Lyndhurst family. He again failed in his object; and some remarks which he made complimentary to O'Connell led to the memorable incident of an Irish Liberator's coarse allusion to his Hebrew extraction; which sent to the Agitator's son; and the epistle addressed by Disraeli to O'Connell, concluding with the flourish,—“We

"I meet at Philippi!" A perilous prophecy, assuredly, after many disappointments; but fortune at length dignified to smile on the political aspirant, and, under favourable auspices, the son of "Vivian Grey" found his way into the House of Commons, as member for Maidstone. Having at length attained the position so resolutely sought, Mr. Disraeli, with indiscreet haste, won the ear of the House; but his style proving utterly at variance with the ideas of oratory entertained by noble lords and honourable gentlemen, the display was treated with derision, and the baffled senator was under the necessity of resuming his silence. Even at that moment, with characteristic confidence in his own power, he exclaimed,—"The time will come when you will be ashamed of me;" and though the vaccination was certainly held to be a failure, many of the laughers have lived to witness and applaud its fulfilment. In the meantime, admonished by this repulse the House was not to be taken by fireworks, Mr. Disraeli, after trying for a season the "talent of silence," learned to treat eloquence within bounds, and to speak like a man who comprehended the temper of the assembly with which he had to deal, and made considerable progress in the art of debate ere the government of 1841 placed in power a Conservative ministry, presided over by Sir R. Peel, fortified by the accession of Lord Stanley and his political associates, commanding an overwhelming majority in both Houses, and enjoying the confidence of the Church, the landed gentry, and the Colonial interest. In that Parliament Mr. Disraeli appeared as member for Shrewsbury, and for some time figured as an adherent of the ministry. But in 1844, the year when "Coningsby," which was followed by "Sybil," and "Tancred,"—works curiously compounded of politics and fiction,—came into the hands of the public, St. Stephen's was a different sight, and during two sessions a succession of speeches, etc. with caustic ridicule and withering sarcasm, proclaimed the brilliant periods to the British public that the all-powerful premier was a very pompous, common place, and treacherous person, the head of an "organised hypocrisy;"—"a great middle-class man who bamboozled one party and plundered the other." Much alarmed with some degree of alarm; officials indignantly denounced the assailant of their patron; and the country was rather divided, otherwise at the great Sir Robert Peel being boarded up by a clever novelist. The conflict seemed so utterly unequal that any man who had foretold its issue would have been regarded as fit only for a lunatic asylum; but when the memorable session of 1846 commenced, and the premier avowed his conversion to free Trade doctrines, Mr. Disraeli, girding on his armour for a fiercer encounter, began a war of words, in which it was feared there was to be no discharge. Never, perhaps, since the days of Walpole, had the weapons of parliamentary warfare been wielded with such merciless effect. The minister, though perplexed and extreme, did, indeed, with the aid of the Liberal party, carry his measures; but no sooner was he left to his own resources

in a hostile majority compelled him to surrender the reins of
 government; and Mr. Disraeli proceeded to organise, under the
 leadership of Lord George Bentinck, an opposition to the Whig
 ministry, who had succeeded to power. The dispirited party, of
 which Mr. Disraeli now became the guiding spirit, was exposed to
 the rudest shocks. Their bill for the encouragement of Irish
 agriculture was rejected; the general election of 1847, though giving
 Disraeli a seat for the county of Buckingham, was, on the
 whole, adverse to their pretensions; and their votes on the Jew
 question caused such internal dissensions that the aristocratical leader
 resigned from his responsible post. But amid all disasters and
 misunderstandings, night after night, from among the Chartists
 and Peights who jostled him on the front Opposition bench,
 Disraeli, with thoughts for partisans, rose to ridicule the
 errors of the Whig ministry, or to denounce the politics of
 the "Manchester school," and resumed his inconvenient seat,
 long plans, pondering combinations, and anticipating events,
 while the dry bones of Protection live; to give a new creed
 to desponding adherents of the lost cause, and to swell their
 ranks into a firm and formidable phalanx. In the autumn
 of 1847, just as matters were beginning to brighten, death sud-
 denly carried his patrician coadjutor to an untimely grave; and
 during the session Mr. Disraeli signalled his accession to the
 leadership by proposing a reduction of the burdens on land, and
 an inquiry into the state of the nation. After the voice
 of Robert Peel was mute for ever, the course pursued by his
 successor on the question of Papal Aggression enabled the member
 to assume a more influential position; and in February
 1848, after the appearance of the political biography of Lord
 Bentinck, the auspicious day when Mr. Disraeli was to be
 clothed with the insignia of office at length arrived. The Russell
 ministry had ceased to exist; and Lord Derby being en-
 gaged in the construction of a cabinet, Mr. Disraeli under-
 took to lead the House of Commons and manage the national
 business. The spectacle of a novelist figuring as Chancellor of the
 Exchequer at first made the wise and prudent shake their heads,
 and the silly and stupid an opportunity for a sneer. On
 1st April, however, Mr. Disraeli dissipated all murmurs by
 a statement which elicited tremendous cheers from a hos-
 tile House of Commons, and extracted compliments from his rivals.
 The error as to a man of genius being incapable of dealing
 with the public seemed to be refuted for ever, and Parliament was
 carried with the public under that impression. When the au-
 gust session was held, and the mortal remains of the Warrior-
 King had been consigned with funereal pomp to St. Paul's, and the
 idle motion of Mr. Villiers had been disposed of, the financial
 measures that had for months been "looming in the future" were
 presented by the Chancellor of the Exchequer in a speech of five
 hours. It must, in justice, be admitted, that at first the
 session was not stinted; the praises of the budget were sung by

in one year. This work was followed by biographies of Pennal Blake, in 1851 and 1852. In 1850 Mr. Dixon was elected Deputy-Commissioner to the Royal Commission for organising the Crystal Palace. Few people are aware how great a work had to be accomplished in preparing the mind of the country, and ensuring the success of that grand and novel experiment. Mr. Dixon had to perform a curious duty in proselytising among classes of the community ranging from Oxford "Dons" to Lancashire "roughs." He was successful in organising one hundred committees out of the one hundred that were organised; a labour which justly deserved a public and private recognition it received. At the time of the railway panic in 1852, Mr. Dixon wrote an anonymous pamphlet, called the "French in England," which furnished a very conclusive demonstration that if the first Napoleon could not succeed in carrying out his intention, the third Napoleon would not. It is interesting to know that this terse, vigorous, and brilliant piece of writing, was penned at a single sitting. Our author's career had a narrow chance of being suddenly cut short in the troublous times of 1848. On his way to Vienna he was attacked by robbers, and they well cleared out. They took all he had about him, including a passport. On arriving at Vienna without a passport, he was taken to be a political suspect, and some energetic official was for sending him led out on to the glacis and immediately despatched by the aid of soldiers. To any such termination of his excursion, Mr. Dixon naturally enough strenuously objected, and the catastrophe was happily averted. When Mr. Madden projected his "Prize Magazine," Mr. Dixon contributed the essays which won the two highest prizes. These essays attracted the attention of the proprietor of the "Athenæum," and led to their author's engagement with the staff of that paper. In 1853 he became its editor.

DOBELL, SYDNEY (*nom de plume*, "Sydney Yendys"), Poet, was born in 1824, at Peckham Rye, where his childhood was spent. In 1835 his father removed his business, that of a wine-merchant, from London to Cheltenham, at which place, or at a country-house in the valley of Charlton Kings, four miles from the town, the poet resided until he was married. Thus he passed the sweetest and most enjoyable period of his life in one of the loveliest of our English valleys; a defile opening out of the rich vast "Vale of Gloucester," between undulating hills of wood, pasture, and orchard, where the great ocean of summer that fills the plain runs and ripples, curls and breaks into every exquisite spray of wealth and beauty. Midway in this sequestered bay, embowered in orchards, and shaded from the white winding road by tall evergreens, stands "Coxhorne House," once the residence of the family to whom the chief portion of the hills and valleys around belong, and here the greater portion of the poet's married life has been passed. He was never sent to a school, either public or private; his father having strong prejudices in favour of home education; and with the aid of their mother and a tutor, he educated his ten children himself, and

ze of the Dobell seats, Streat Place, in Sussex, long since in ruins, is a library covered with unusual and curiously chosen Latin inscriptions in the carved oak of the time; a time when country gentlemen were not remarkable for learning, and ordinarily loved to adorn their walls with ruder things than lines from Latin poets. Mr. Dobell's latest appearance in print was in companionship with Alexander Smith. A common residence in Edinburgh seems to have brought them together, and their public poetic partnership in "Sonnets of the War," presents to us an interesting memento of their private friendship.

DOO, GEORGE T., Engraver, a worthy successor of Strange and Sharp; of a period when engraving was an art, not a manufacture, and England stood unrivalled in that department; of an era when the printseller deserved the title of a merchant-venturer, and the public knew how to appreciate and reward enterprise. Among the very few first-class line-engravers of the present day who devote themselves to figure subjects and drawings of what is technically termed an historical size, who have remained constant to the good old traditions of their art, Mr. Doo is pre-eminent for the preservation of expression, and for the union of boldness, vigour, and breadth, with conscientious and artistic, not mechanical, finish and delicacy. Of all the arts, engraving is the slowest and most painful in its processes. A line-drawing by such a man as Strange or Doo requires long years of its accomplishment. Amid the prevailing demand for lithographic, mezzotint, "mixed," and mechanical styles, Mr. Doo has, at much personal sacrifice, and to his lasting honour, refused to lend to "manufacture" (in fact, to employ an engraver's shibboleth, "scamp") his work. To the later Exhibitions of the Academy, occasionally before, he contributed several small, carefully-executed portraits, being without a single commission in his own branch of art! Mr. Doo, like many other eminent engravers, has often been engaged in translating the works of men whose lease of life will prove a short one; but his masterly transcripts of Raphael's "Infant Christ," and Correggio's "Ecce Homo," in the National Gallery, which occupied him, at intervals, during twenty years, of Lawrence's "Calmeady's Children," and of Etty's "Combat," will be as much prized two hundred years hence as they are now. His "Knox Preaching," after Wilkie, is the plate which has perhaps gained him most fame. Those after Lawrence and Newton, artists—more especially the former—gaining, rather than losing, in the hands of an engraver such as Doo, are among the most popular works. "Pilgrims in sight of the Holy City," after Eastlake is also a fine example of his art.

DOYLE, RICHARD, Artist, born in London in 1826, is son of the reputed author of the celebrated "HB" sketches. He first attracted attention by his sportive and graceful designs from the life and manners of the day, in "Punch;" and was

complement of 860 picked men, of whom 120 were killed or wounded, the loss on our side being less than half that number. For his gallant behaviour on that occasion he was promoted to the rank of lieutenant, and reappointed to the *Eurotas*; from which, however, he invalided in 1815. In 1818 Lieutenant Drew was appointed to the *Wye*, and in 1824 had the satisfaction to rejoin his old captain (Phillimore) in the *Thetis*, as his first lieutenant. His vessel was ordered to the coast of Africa, to take part in the antislavery hostilities at Cape Coast Castle. In this service Lieutenant Drew landed in command of the seamen and marines, and assisted at the final dispersion of the enemy. He was next employed, in 1837, in Canada, where he materially assisted in putting down the rebellion, and punishing the sympathisers of Navy and Land. The cutting out and destruction of the *Caroline* was one of the most daring exploits in our naval records. The vessel was hoisted from under Fort Schlosser, and having been fired by her guns, was sent blazing over the Falls. For this service Captain Drew received the thanks of the two Houses of Parliament of Great Britain and Ireland, and was appointed Commodore of the Provincial Marine. In this capacity, and in a hired armed steamer, he maintained for some time the chief command of Lake Erie. His last appointment was to the *Wasp*, 16, on the coast of Africa. For his gallantry whilst on that station he received the thanks of his Commander-in-Chief, Sir Charles Adam, who thus recognised the service he had rendered by his careful survey of a dangerous shoal, now shown upon the Admiralty's charts as Drew's Rock. Since his promotion in 1843, Captain Drew has been appointed Naval Storekeeper at the Cape of Good Hope.

DUCHATEL, M., ex-Minister of France under Louis-Philippe, son of an humble *employé* of the Enregistrement of Domains at Bordeaux, was born in 1805. During the Revolution and the Empire, the father advanced step by step in the administrative hierarchy, till he arrived at the Director-generalship of Domains, and received the titles of Count and Councillor of State. The late minister being an advocate without causes, sought to make himself a reputation as a man of letters, and became one of the editors and proprietors of the "*Globe*," about the year 1827. After the Revolution of 1830 he was named Councillor of State, and in 1832 elected Deputy. In 1833 he was appointed Secretary-general of the Minister of Finance. In 1834 he became Minister of Commerce. In 1836 he brought forward the question of the Spanish funds, and introduced some reforms into the French administrative system. In the last seven years of the monarchy of 1830 he was Minister of the Interior. In the Chamber he was very popular with the members of the Centre, and having a good house, a good cook, and being a safe and discreet man, and *tant soit peu gourmand*, he was influential, and in a sense popular. Duchâtel possesses some of the qualities and some of the defects of Guizot. He is not so good a scholar, and possesses not his powers of speech and exposition;

destitution. This gentleman procured him a clerkship in the office of the secretary of the Duke of Orleans (late King of the French). He devoted all his leisure to supplying the defects of his education, and soon acquired a taste for literature and a desire to excel as an author. A representation of "Hamlet" by an English company, which he witnessed, aided in stimulating his ambition, and he resolved to produce a tragedy after the model of the great English dramatist. The consequence of this resolution was the appearance of "Henri III. et sa Cour," which obtained unbounded applause, and spread the fame of the author far and wide. Many other dramatic productions followed in rapid succession. In France, and even in his own country, M. Dumas is probably better known as a novelist than a dramatist, and more especially by his "Monte Christo," which has been served up in England in several forms. As a dramatic author he has been a bold innovator upon the old established manner of the French stage, and his writings have perhaps been of some service to French literature, in assisting to free his countrymen from subjection to arbitrary rules of composition. He came into some difficulty with M. Guillaudet in relation to the authorship of the "Tour de Nesle;" but as M. G. was never known as the author of anything else, his claim was discredited. The mere titles of Dumas's novels would fill some pages of this work. They have mostly been contributed piecemeal to the *feuilletons* of the various Parisian newspapers, more for profit than reputation. It would be curious, as showing how much one man can accomplish, were it not notorious that M. Dumas employs a corps of writers, who work out his ideas, and whose labours he simply retouches. A recent writer has given us the following truthful sketch of Alexandre Dumas:—"He is a fine specimen of the Negro blood, and exhibits, in an almost equal degree, the qualities of the indefatigable slave and the brilliant Frenchman. With an insatiable lust for notoriety, he contrives that his sayings and doings shall occupy the gossip of France. He is not only as a writer—not simply as *le roi du feuilleton*, the *fardeur* of the circulating library, but also as a *gentilhomme*, a *grand seigneur*, and as a man, must he always astonish the public. If not himself, he at least assumes his grandfather's name, Marquis de la Pailletterie, and talks with easy familiarity of his friends the Princes. If not an accomplished duellist, he is, at least, very conversant on the theory of duelling. His pen is the inheritance which enables him to give banquets rivaling in splendour the Oriental lavishness of his own Monte Christo. He has not 'smelt powder' but to see him on a grand review-day, at the head of a company of national guards, you would fancy him the very Cæsar, Alexander, Attila, Napoleon, or Wellington of private life—his breast is covered with blazes of orders. The objects of his existence seem to be, first, to make enormous sums of money to spend with great prodigality; secondly, incessantly to astonish the world. Above all things, he courts notoriety, scandal, and the power to amuse and wonder. He began life as a daring innovator and romantic innovator, and the whole of the traditional style of French literature

tempted to replace by effective melodramas, which he impudently asserted were modelled after Shakspeare; his audacity was crowned with a loud but fugitive success. Since then his restless activity exhibited itself in many ways, and of late the author has almost been eclipsed by the *éclat* attached to the man. A celebrated trial enabled him to gratify his craving for notoriety in a very striking manner. One of these was that strange revelation of corruption—the trial of Beauvallon for killing Dujarrier in a duel—a trial which, by its details scandalised all Europe, and showed them that the fearful pictures of French life painted by Balzac in his ‘*Grandes Ammes de Province à Paris*,’ were not exaggerations, also enabled Dumas, who was called as a witness, to display his science in the lawyer’s code, his delicate sense of *gentilhommerie*, and his unextinguishable love of display. There was a buffoonery about his manner during this very serious trial of one man for the murder of another which called forth general indignation. Aping the orators of the Chamber of Deputies, he said once or twice, ‘*M. le Président, je prends la parole* ;’ and with a beautiful touch of French bombast, during modesty, when asked his profession, he said, ‘*Monsieur, écrivain dramatique, si je n’étais dans la patrie de Corneille*.’ Upon the President, a man of true French wit, replied, ‘*Mais, Monsieur, il y a des degrés*.’” The general personal appearance of Dumas indicates his origin. He has the negro physiognomy and air, and is altogether, in spite of his splendid exterior, an unprepossessing-looking person.

DUMAS, JEAN-BAPTISTE, the first Practical Chemist of France, late Minister of Agriculture and Commerce, Professor of Chemistry at the Sorbonne, in the School of Medicine, Member of the Institute, was born at Alais, July 1800. When fourteen, Dumas went to Geneva to study chemistry, botany, and medicine, and his first publication was an essay in connexion with De Candolle, then professor in the Swiss city. The attention of scientific men was attracted to him by his researches in animal physiology, in which he was associated with M. Prévost. In 1821 he was appointed Teacher of Chemistry in the Ecole Polytechnique, Paris. In 1826 Dumas published a memoir on the relations existing between specific weights of solid bodies and their atomic weight; and from that time to the present has been constantly adding to our stock of knowledge of organic chemistry. Dumas’s theory of substitution is one of the most important works of this chemist, and his treatise on chemistry as applied to the arts is another valuable contribution to practical science. His “*Leçons sur la Philosophie Chimique*” are popular. As a lecturer, Dumas is one of the most distinguished in Paris. In May, 1849, Dumas was elected to the National Assembly; and the President of the Republic called him, on the 31st of October, to join the administration, and intrusted him with the post of Minister of Agriculture and Commerce, where his chemical knowledge enabled him to render public service. He originated annual meetings bearing on agriculture, commerce,

DUNDAS, VICE-ADMIRAL.

1. Dundas was Chairman of the Jury, Class 2, Exhibition of 1861, in London.

R JAMES WHITLEY DEANS, K.C.B., Vice-Admiral, and late naval Commander-in-chief in the Black Sea, died on 12th December, 1785; he is the son of James Deans of Edinburgh, and assumed the names of Whitley and Deans. He was born on 2d April, 1809, his first cousin, Janet, only daughter of James Deans of Jamesbury. He was educated at the High School of Edinburgh, and entered the navy 19th March, 1799, as first-class boy on board the Kent, 74. In the following August he attended the expedition to Holland. In 1801, the ship to which he belonged was sent to the coast of Alexandria, having in the previous December captured the French frigate *Abercromby* to Egypt. In November 1802, he was present in a spirited skirmish with the French frigate *Trouin*; also at the capture of *Le Vantour*, a French frigate, and at the blockade of Rochefort. He was promoted to the rank of lieutenant of the *Cambrian*, 40 guns, May 2nd 1803. In the same year assisted at the capture of three French frigates; in all 40 guns and 225 men. In command of the *Albatross*, 18, he was employed in attendance on the Swedish King, pending the conclusion of the peace, and in 1807, a few nights after the surrender of the city, was injured by the bursting of a shell, while endeavouring to extinguish a fire in the dockyard of that city. He was promoted to the rank of captain 13th October, 1807, and in command of the *Albatross* captured the privateer *Zébra*, of 10 guns, 20th April 1808; also the privateer *l'Orion*, 18th February 1809. He was nominated naval aide-de-camp to King William IV. He was elected to Greenwich in the Parliament of 1832, and re-elected in February 1836 to 1838; Commander of the *Albatross* 1839; a Lord of the Admiralty under the V. 23d June, 1841; and again in July 1846; Rear-Admiral, 23d November, 1841; Vice-Admiral, 1846. He commanded in the Black Sea at the commencement of the Crimean war, and assisted in the disembarking of the troops, and the early operations against Sebastopol. He retired from command of the Black Sea in 1855, his term of service having expired; Rear-Admiral Lyons being appointed in his stead. Admiral Dundas is a deputy-lieutenant for the county of Devon. He has been an object of severe criticism; first, for not having reduced the town of Odessa, when he might with ease have done so; and secondly, for not having taken the town, at an earlier period, some dashing and decisive operations on the seaward forts of Sebastopol: but if his operations are compared with those of Sir Charles Napier's magnificent operations with the granite walls of the strongest fort in the world, it is not at least indulged in no unseemly pretensions to the proposed to achieve. His tenderness to the lives of his men, however ill deserved, could but have originated in a noble and generous spirit.

one motive, and that an honourable one. It is generally understood, however, that the forbearance he exhibited on that occasion was dictated to him by instructions of a very positive character; that the reception he met with on his return from the naval annals of the kingdom, and above all from Her Majesty, (by whom he was entertained at dinner a few days after he struck his flag), makes it impossible to believe that any ground of complaint against him can exist on the part of those who must possess the means of estimating his conduct throughout the affair. For services in the Black Sea Admiral Dundas has been created K.C.B.; has also received the Crimean medal; and from the Sultan the Order of the Medjidie of the first class.

DUNDAS, REAR-ADMIRAL THE HON. RICHARD SAUNDERS, C.B., the successor of Admiral Sir Charles Napier in the command of the Baltic fleet, was born on the 11th April, 1802, and is the second son of Viscount Melville, K.T., for many years First Lord of Admiralty, by Anne, daughter and co-heiress of Richard Saunders, Esq., M.D., the grand-niece of Admiral Sir Charles Saunders. This officer entered the naval service on the 15th June, 1817, as a volunteer on board the *Ganymede*, 26 guns, Capt. the late Robert Cavendish Spencer, with whom as midshipman of that ship and of the *Owen Glendower*, he remained until December 1818, on the Mediterranean and South American stations. He succeeded in succession the *Creole*, 42, and *Superb*, 78, both commanded by Capt. Adam Mackenzie; the *Alacrity* and *Icarus* sloops, Capt. Stanhope and Henry Algernon Elliott, commanders; and the *Ganges*, 50, Capt. Bentinck Cavendish Doyle. Promoted to command on the 18th June, 1821, he appears to have served in the *Alacrity*, 46, Capt. Andrew King; the *Owen Glendower*, 42, Capt. John R. C. Spencer; and the *Sparrowhawk*, Capt. Edward Boscawen. On the 23d June he was advanced to the rank of Commander of the last-mentioned vessel, on the Halifax station; and on the Mediterranean, he continued to serve until he had obtained the rank, to which he was appointed on the 17th July, 1824. His commands were in the *Volage*, 28, fitting for South America and the *Warspite*, 76, in which ship (the first of her class to have circumnavigated the globe) he returned to England from the South Wales, in October 1828. He was subsequently sent to the *Belvidera*, 42, employed in the Mediterranean, and on his return home in 1837 to the *Melville*, 72, in which ship he took part in the campaign in China. During this campaign he received the warm thanks of Sir Gordon Bremer for his services at the capture of Ty-cock-tow, as well as at that of the forts of the *Broca Tigris*. In 1845, Capt. Dundas, who had filled the office under his father in 1828-29-30, was appointed Private Secretary to the Earl of Haddington, the First Lord of that period, to whom he remained until his secession from office in 1846. In 1846 the Military Companionship of the Bath was conferred upon him for his services in China. He was promoted to the rank of

year Admiral of the Blue in 1853; and succeeded to that of Admiral of the White in 1855. In 1851 he was appointed Superintendent of Deptford Dockyard; and held a seat as one of the Lords of the Admiralty from 1852 to 1855. Admiral Dundas commanded at the bombardment of Swensborg on the 9th of August 1811.

DUNDONALD, THOMAS COCHRANE, TENTH EARL OF better known as Lord Cochrane, was born 14th December, 1773, and when only five years of age was entered on the books of the *Amurra*, bomb, commanded by his uncle, Capt. Cochrane, and transferred it successively to the *Carolina* and the *Sophia*. He did not go to sea until the 27th June, 1793, when he embarked with his relative in the *Hind*, of 28 guns. Previously to this he had been gazetted to a Captaincy in the 70th Foot, but had not joined his regiment. On 17th May, 1795, when acting-lieutenant of the *Thetis*, 42, commanded by his uncle, he contributed, with the *Junar* of 24 guns, to the defeat, on the coast of North America, of a French squadron of five sail, two of which were captured. His confirmation to the *Thetis* took place 24th May, 1796, and he subsequently joined, after serving in various ships, the *Queen Charlotte* flagship in the Mediterranean of Admiral Lord Keith. On 21st December, 1799, he was sent from Gibraltar Bay, in command of the boats of the *Queen Charlotte* and the *Emerald* frigate, to relieve *Lady Nelson* cutter, then surrounded and attacked off Cabrera by several French privateers and Spanish gunboats, some of which he pursued and boarded with the most undaunted gallantry, others under the very cannon of the harbour. On the capture, 27th February 1800, of the French 74, *Le Généreux*, he was appointed acting captain; but on 28th March following he was promoted to be Master and Commander of the *Speedy* sloop of war, of 14 guns and 54 men, and in the ten succeeding months he took thirty vessels, carrying in all 124 guns and 533 men, besides a number of the capture of many others. For one of these, the seizure and boarding of the Spanish frigate *El Gambo*, 32 guns, off Barbary on 6th May, 1801, he received his commission as Post Captain dated 24th August following. He also succeeded in cutting a Spanish convoy at Oroposo, lying under the protection of a battery and numerous gunboats. On the 2d July, however, the *Speedy* was herself captured by the French squadron under Admiral Lacaze. On this occasion Lord Cochrane's courage had been so conspicuous, that on presenting his sword to the captain of the French 74, *Dessaix*, it was returned to him, with the request that he would continue to wear what he had so nobly used. On the 1st of the same month he was on board the French squadron when it was attacked by Sir James Saumarez in Algeiras Bay, and being afterwards exchanged, he returned to England and went on shore. On 5th October, 1803, he was appointed to the *Arcturion*, from which ship, after serving at the blockade of Boulogne, he was removed, 3d December, 1804, to the *Palles* frigate, 32, in com-

the following year he was sent out with despatches to his uncle, Admiral Sir Alexander Cochrane, at that time employed in the blockade of Ferrol. Whilst cruising off the Spanish coast, in March 1806, he made a considerable number of prizes; amongst which was the *Fortuna*, from Rio de la Plata to Coruña, with specie to the amount of 150,000*l.*, besides a considerable quantity of merchandise; but he generously returned 10,000 crowns to the Spanish captain and supercargo. Early in April, 1806, the *Pallas* was employed in the Gironde—a river very difficult of navigation; and on service he succeeded in cutting out the Tapagense corvette, of twenty-two pounders and 95 men, notwithstanding she lay very near above the Cordovan shoal, under the protection of two batteries. In the following month, with the marines and his crews, he destroyed the semaphores along the French coast, tore off the signal flags. The battery at Pointe l'Equilon he took by storm and laid in ruins; spiking the guns, burning the magazines, blowing up the barrack and magazine, and throwing all the shells into the sea. On 23d August he assumed the command of the *Impetieuse*, 44 guns, and between 13th December, 1806, and January, 1807, some days short of a month, he took and destroyed fifteen of the enemy's ships, chiefly laden with wine and brandy. He was afterwards sent to co-operate with the patriots on the coast of Catalonia, and on 21st July, 1808, he compelled the surrender of the castle of Mongat, by which the road to Gerona, then occupied by the French, had been completely commanded. In January he renewed his operations against the semaphores on the coast of Languedoc, and blew up the newly-constructed marine telegraph at Bourdique, La Pinede, St. Maguire, Lézignan, Canet, and Foy, with the houses attached to them, four barracks of the *gens d'armes*, a battery, and the strong tower on the lake of Frontignan. In 1809 he volunteered for the defence of Trinidad Castle, attached to the fortress of Rosas on the coast of Catalonia, then besieged by the French. At the head of 100 of his own men, and about an equal number of Spaniards, he repulsed a thousand of the enemy in an assault made by them on the castle. He protracted the siege for twelve days, but on the citadel being blown up he blew up the magazine of Trinidad Castle and burnt his ship. In April, 1809, he was selected by the first Lord of Admiralty, from his daring intrepidity, to command a fleet of 100 ships intended for the destruction of the French fleet, then at anchor and blockaded by Lord Gambier in the Basque Roads. On the night of the 11th of that month he went on board the explosion-ships, containing 1500 barrels of gunpowder, and performed the hazardous service confided to him most bravely. For his signal gallantry on this occasion he received the Bath. He had been chosen M.P., first for Devon, and afterwards, in 1807, for Westminster; and as he declared his intention to oppose the vote of thanks proposed by the House of Commons to Lord Gambier, who had had the chief command in the Basque Roads affair, that nobleman was subjected to a court-

DUNDONALD.

ed. His own prospects of promotion were ruined by his position to the ministry, and by the stock jobbing. Early in that year a false report was spread of the fall of Wallen, on which the funds suddenly rose, and Lord Dundonald of his friends sold out to a large amount. The Government was concerned in propagating the report, a charge of fraud, and his lordship was, on the 5th July, fined, a year's imprisonment, and to stand also deprived of the Order of the Bath, of which he was also expelled from the House of Commons. The fine (the pillory) was remitted. The electors of the county chose him for their representative, and on the 12th of January, 1818, he broke out of prison to take his place in Parliament. In 1818 Lord Dundonald was appointed to the command of the fleet of the South American station, and for his services in the cause of the South American States, and for the success of the cause, particularly by the capture of the last stronghold left to the Spaniards, the *Esmeralda*, a large 40-gun frigate, on 5th November, 1820, he was made one of the most celebrated of his exploits. In 1821 he was appointed by the Emperor Dom Pedro to the command of the Brazilian fleet, and in 1823 was by that monarch created Baron of Marenham. His lordship next gave his services to the Government of the United Kingdom, and was employed in that country from 1827 to 1831. In 1831 he was re-elected to office under King George IV. In 1831 he was reinstated in his rank in the British Navy, and that he had been made the victim of political intrigue. In 1831, the Order of the Bath was restored to him, and he was created Earl Dundonald in 1831, and became a Peer of the Realm. On 23d November, 1841. He was appointed to the command of the North American and West Indian Station. In 1851 he became Vice-Admiral of the Fleet, and in 1851 he became Admiral of the United Kingdom. Besides his titles, he is a Baronet of Scotland and Nova Scotia, and a Knight of the Royal Order of the Redeemer, and a Knight of the Order of Merit of Chili. He enjoys a high reputation for his scientific attainments, and is author of a paper on the subject of Naval Affairs and on some of the improvements which he has inserted a summary of his views on the subject of the improvement of our steam navy. He has also written several acts of injustice which he has performed in the course of his duty. He long ago invented a system of building up and annihilating fleets, which was adopted by the Government; and it is said that it is so effective, that at the personal request of George IV. he refused to use it, but pledged his honour that he would never use it without the sanction of the Government. His lordship is understood to have suggested the improvement of our steam navy.

Dundonald has lately written to various members of the Government, offering to destroy Sebastopol in a few hours, with perfect safety to our own forces; but his plans, after examination by Committee, have been rejected by the Government. He is understood to have asked a million sterling for their realisation, excepted; and as that is a large sum of money, it was important that it should not be thrown away. Those who know Dundonald, however, have faith in his anticipations of success.

DUNFERMLINE, JAMES ABERCROMBY, LORD, formerly Member of the House of Commons, third son of the celebrated Sir James Abercromby, was born in 1776, and was called to the bar in the Inner Temple, 1800. In 1812 he was elected M.P. for Calne, and in 1817 appointed Judge-Advocate-General, and sworn a Privy Counsellor. For several years he was auditor to the Duke of Devonshire's estates, and for some time a Commissioner in Bankruptcy. In 1830 he was appointed Chief Baron of the Exchequer in Ireland. In 1832 he was chosen M.P. for Edinburgh, and in 1833 became Master of the Mint. The following year he was elected Speaker of the House of Commons; and on retiring from that office in 1839 was created Baron Dunfermline, in the peerage of the United Kingdom, with a pension of 4000*l.* per annum. His reputation was one of the most eloquent and efficient members of the House of Commons. Thirty years ago, before he was Speaker of the House, he attacked in his place in Parliament, for a breach of privilege, the Earl of Eldon, then Lord Chancellor, and but for the opposition of Mr. Canning would have carried his motion.

DUPIN, ANDRÉ - MARIE - JEAN - JACQUES, French Politician and President of the National Assembly, was born at Varzy, Burgundy, 1794. He was educated by his father in the institute as to the rudiments of law. He was, with M. Berryer, the chief opponent of Marshal Ney in 1815; and as the steadfast enemy of Napoleon enjoyed a large popularity under the Restoration. He published two works on the productive powers of France. He was elected, in May 1815, a member of the Representative Chamber by the Electoral College of Nièvre, and opposed the reactionary government of the various cabinets until 1830. In 1830 the Chamber became President and Speaker, and exercised great tact in directing the debates to a practical conclusion. He was the impersonation of the French bourgeoisie, and has often been accused of adjusting his views that they shall not mar his fortune. He was President of the French Commission of the International Exhibition of 1851. He made a show of moral opposition to the coup d'état when the Assembly was dispersed; but since then on good terms with the government of Louis Napoleon, now Emperor. His only public appearance under the Second Empire took place at the inauguration of Ney's statue, when he delivered an address.

DUPONT, PIERRE, a Poet of France, was born at Lyons April 21st, 1821. He is the son of hard-working people, whose ancient and honourable pedigree was that of toil. His mother was a Lyonnaise, his father a native of Provens. His mother died when he was but four years of age, and the young Dupont was left to the care of an old priest, who was his godfather. It was in the priest's study that the future poet obtained his introduction to literature, and here he read with the greatest avidity. He had only a sister, for whom his affection was very great, and he has immortalized her in one of the most beautiful of his songs. On leaving his godfather he returned to Lyons, and was placed as clerk in a bank. It was his custom to wander along the shores of the Rhone at an evening, indulging in poetic reverie, and forgetting the cares of the day. M. Lebrun first recognized him as a poet, and obtained for him subscribers for his first volume of poems, entitled "The Angels," which was published in 1846. This gentleman also freed him from the necessity of entering the military service, to which he was on the point of subjecting himself. He next obtained an appointment in the bureau of the Institute, but the influence of poetry beginning to stir like wings within him, he at length broke away from his laborious occupation. He had a great ambition to become an actor, and was still seeking an opening to the theatre when the wonderful success of his song entitled "The Rose" opened up a fairy like future to his astonished eyes. He became famous, and he was famous in a day. He now felt his power had found his *forte*, and he continued to sing of the country, many a fine rural melody, that carried the freshness of green fields and their pastoral simplicity, into the feverish heart of Paris. He is the Burns of France, even more than is the poet Heranger. His songs of love, his affection for the country, his power of depicting rural life and sentiment, and in his honest, sturdy nature is akin to the inspired Scottish ploughman. But he has a strength, which has found expression in political poetry; and at a time of revolution the critic St. Beuve said of him, "He is the poet of the moment, he sings the song of the hour, all listen, and applaud him." In coming to Paris, he could not get aloof from the questions of the time, and before the Revolution of 1848 he had written his celebrated "Song of Bread," one day bread was very dear, also, his noble "Song of the Workers." In the Revolution of February his voice was heard ringing out, above the din of conflict, in triumphant peans and words of cheer. At the time of the coup d'Etat Louis Napoleon had him arrested and sentenced to transportation to Cayenne, but such earnest representations were made to him, that he ordered his release. Withstanding the power and success of Dupont's political songs and republican lyrics, we think him greatest in his love-songs and strains. He sets his songs to music of his own composing, and sings them to assemblages of his fellow workmen. He does not understand music as a science, neither do the birds, yet both sing an exquisite melody; and few who have ever had the good fortune

But to his singing will ever forget the electrical effect he produces.

DURHAM. EDWARD MALTBY, D.D., BISHOP OF, was created Bishop of Chichester in 1831, and translated to Durham in 1836. Dr. Maltby holds the patronage of forty-seven livings. The annual value of his see is estimated at 8000*l.*, but is said to realise a great deal more. University honours,—Pembroke College; Browne's (Greek and Epigrams) Medallist, 1790; James's (Greek) Medallist, 1791; Craven Scholar, 8th Wrangler at Senior Chancellor's Medallist, 1792; M.A. (by royal mandate) 1794; B.D. 1801; D.D. 1806. His former preferments were,—Rector of Buckden, Hunts; Chaplaincy to the Bishop of Lincoln; Secretary of Lincoln; Preacher at Lincoln's Inn; consecrated Bishop of Chichester, 1831. His published works are,—*"Truth in the Christian Religion," "Sermons," "Sermons at Lincoln's Inn," "Psalms and Hymns,"* Editor of Morell's *"Lexicon Græco-Latinum,"* etc.

NOTE. THE REV. ALEXANDER, Author, Editor of early English Literature, and Poetical Critic, the son of a general officer in the East India Company's service, was born in Edinburgh in 1782. His education was commenced at the High School of that city, and was completed at Exeter College, Oxford. Having entered the Church, he served as curate of Lantegloss, in Cornwall, afterwards of Nayland, in Suffolk; and in 1827 took up his permanent residence in London. His earliest publications were, *"Translations from Quintus Smyrnæus,"* an edition of the *"Poems,"* and *"Specimens of British Poetesses."* He subsequently edited, with notes and biographies, the dramatic and poetical works of Peele, 3 vols.; of Greene, 3 vols.; of Webster, 3 vols.; of Middleton, 5 vols.; of Beaumont and Fletcher, 11 vols.; of Masson, 3 vols.; and he completed in 6 vols. the edition of the works of Gifford had left unfinished. He has also published *"The Poetical and theological works of Bentley,"* 3 vols.; the poetical works of Kebleton, with a biography and copious annotations, 2 vols.; *"Remarks on British Sonnets;" "Remarks on Collier's and Bentley's editions of Shakespere;"* and *"A Few Notes on Shakespere."* In Pickering's *"Aldine Poets"* he contributed the Lives of Pope, Akenside, and Beattie; and for the Shakespere and Camden Societies, he has edited a variety of pieces. He is at present engaged on an edition of Shakespere (to be completed in 6 vols.), in which the text will be carefully collated with the original MSS., the punctuation amended, and a few critical notes on the text added. He has also for some years past been occasionally occupied by translating *"Athenæus;"* and when this work is finished, such a close, and at the same time poetical, version of the historical and other fragments preserved by Athenæus may be expected, as none of the attempts hitherto made have at all approached. Most of the standard editions of our early English

fourteenth century," was an earnest of his knowledge in the department of decorative art. "Titian and Irene da Spilembergo" followed. For a few years, however, his duties at the School of Design interfered with the progress of his art. Disagreements between the learned master and the amateurs who formed the more active and influential section of the Council led to their leaving company in 1842. During the study of fresco, which, and the movement for adorning the new Houses of Parliament, attracted so much of the attention of artists and royal commissioners, Mr. Dyce displayed a perfect acquaintance with the theory and practice of that long obsolete process. In 1844 the sample of fresco manipulation sent by him to Westminster Hall—"Two Angels," part of a larger composition, the "Consecration of Archbishop Parker in Lambeth Chapel, A.D. 1559"—obtained for him a commission for further specimens. During the summer of the same year he was appointed by Prince Albert to take the place of Mr. Wallis, as one of the select decorators of the summer-house in Buckingham Palace gardens. In 1845 his cartoon, fresco, and coloured sketch for the "Baptism of Ethelbert" were approved and accepted. The subject was soon afterwards executed on the walls of the House of Lords. This fresco displayed a knowledge—historic, antiquarian, and technical—that has given him a decided preference over his fellow-artists in this branch of art. Since that period Mr. Dyce has continued to receive the patronage of Prince Albert in private, and of the Royal Commission in public. In 1845 he was elected Associate of the Academy, and in 1848, R.A. To the exhibitions of the Royal Academy his contributions during this period have been comparatively few: "Madonna and Child," in 1846; "Omnia Vanitas," in 1849; "The Meeting of Jacob and Rachel," 1850; and "Jesus in the Storm," 1851. Mr. Dyce is the author of an admirable pamphlet on the vexed subject of the future management of the National Gallery, and would doubtless have made a skilled and successful director, had not a more powerful influence than it was possible for him to overcome stood in his way.

E.

EASTLAKE, SIR CHARLES LOCK, Painter, and President of the Royal Academy, is the son of a solicitor of Plymouth, where he was born about 1796. He was educated at the Charter House, which he quitted, at a comparatively early age, for the purpose of pursuing those studies to which the greater part of his life has been devoted. After the usual probation at the Royal Academy, under Mr. West, he painted a picture of "The Raising of Jairus' Daughter," which was purchased by the late Mr. Jeremiah Harman, one of the

similar category may be classed several of his scenes of the
 Greek war; his "Arab selling his Captives;" his "Gaston de
 Foix" and other works of the same class. About this period he
 devoted himself more especially to religious subjects, and
 "Christ blessing the little Children," "Christ weeping over
 Jerusalem," "Hazar and Ishmael," remind us in sentiment of some
 of the best works of Ary Scheffer, and are more agreeable in
 their tone. One of the most striking of his poetical pictures is his
 illustration of a passage in Lord Byron's "Dream," advantageously
 sent to the public through Willmore's beautiful engraving. Now
 after the "bull head," as it is termed, of the great room of the
 Royal Academy is occupied by one of those elaborately-finished
 pictures, sometimes ideal, which call to mind, by the purity and
 beauty of their tone and the exquisiteness of their finish, the
 work of Leonardo da Vinci. On the death of Sir Martin Archer
 Shee in 1840, Mr. Eastlake was elected President of the Royal
 Academy, on which occasion the honour of knighthood was conferred
 on him by Her Majesty. He thus attained the post and rank
 which were understood to have been the great objects of his ambition.
 He was the fêted of the nobility, the guest of royalty, and the ac-
 cepted *admirer elegantiarum* of his time. As the paid Director of
 the National Gallery, the Secretary to the Fine Arts Commission,
 the art adviser of Her Majesty and her Royal Consort, he may
 be said to have reached the culminating point of his career. His
 duties, however, appear to leave him little leisure for art, and we
 accordingly had but few pictures from his easel for some time.
 We ought to add, that Sir Charles Eastlake has made several
 contributions to the literature of the Fine Arts, among
 which may be mentioned with honour his translation of "Goethe's
 Essay on Criticism," "Notes to Kugler's Hand-book of Painting," "Contri-
 butions towards a History of Oil-Painting." Sir Charles married,
 late in life, Miss Elizabeth Rigby, a lady who had al-
 ready distinguished herself by her writings. Lady Eastlake is the
 authoress of "Letters from the Baltic," and is said to have been a
 contributor to the "Quarterly Review." In 1843 Sir Charles East-
 lake was appointed Keeper of the National Gallery, but resigned
 the office in order, it would seem, to qualify himself for becoming
 a peer under the new arrangement at 1000*l.* per annum,
 a step, however, in the shape of a secretary or curator, at 800*l.*
 a year, which was formerly only 200*l.* a-year, and that without
 a peerage. The appointment of Sir Charles Eastlake and Mr.
 Russell to their respective offices as Director, and Secretary and
 Keeper of the National Gallery, is understood to have been dictated
 by Lord Albert.

EBRINGTON, VISCOUNT, M.P. for Marylebone, has already
 distinguished himself in the public service. He was born
 in 1818, and is the son of the second Earl Fortescue,
 the two years Lord-Lieutenant of Ireland. Viscount Ebring-
 ton was elected for Plymouth in 1841, when he gave the Whig

of the Trans-Sutlej territory; and in January, 1847, first assistant to the resident at Lahore. It was not, however, till April, 1848, that he commenced those independent operations which have attracted the attention of his countrymen, and won for him the marked favour of his sovereign. Messrs. Agnew and Anderson were assassinated at Mooltan on the 18th April. Lieutenant Edwardes was then at Derah Futteh Khan, on the Indus, with one regiment of the Lahore troops and three hundred horse. His first movement was for the rescue of the British envoys; but on ascertaining they were murdered, he resolved upon raising levies from the border tribes of the Sooleiman mountains, and occupying as much of the rebel provinces as possible; and to collect the revenues and pay his troops from the enemy's resources. Volunteers flocking to his standard in large numbers, he determined to endeavour to shut up the rebel Moolraj in the fortress of Mooltan till a British force arrived. The Nawab of Bhawalpore, who tendered his aid, was requested to cross the Sutlej and threaten Mooltan from the east, while Edwardes advanced with his levies from the west. Thus he covered and occupied a territory producing an annual revenue of eight lacs of rupees. On the 20th of May Colonel Cortlandt, an officer in the Sikh service, came up with the Sikh garrison of Derah Ismail Khan, about 4000 men, and some guns; and the Bhawalpore troops having been attacked by the rebel Moolraj on the 15th of June, at Keneyree, Edwardes hastened to his assistance with his raw levies, being the only European amongst them. He might, however, have fared ill had he not been efficiently aided by a portion of Cortlandt's force, with some guns. The victory was complete; and undoubtedly much is due to the exertions of Lieutenant Edwardes, who observed in a letter to a friend that "No Englishman could be beaten on the 18th of June!" The British force (British only in its leaders) then advanced upon Mooltan, driving the Dewan before them. On the 1st of July, however, another battle took place at Sadoosam, when the enemy was again defeated, and lost four guns. From this date till the 18th of August, Edwardes remained before Mooltan, keeping Moolraj a prisoner. The troops under General Whish then arrived; and Lieutenant Edwardes, being of inferior rank to that officer, took only a subordinate part in the subsequent operations. He received the brevet rank of Major for his conduct in his affair, and was created an extra member, by special statute, of the Order of the Bath. On the restoration of peace he came to England, married, spent a few months in Wales, and returned to India. Major Edwardes lost his right hand by an accident, but the privation not having occurred in action, no compensation could be awarded him consistently with the usages of the service. The Company has, however, voted him an annuity of 100*l.*, and the Court of Directors have commemorated his services by striking a medal in gold.

EGG, AUGUSTUS, A.R.A., Painter, was born in London. First exhibited at the Academy in 1838; elected Associate in 1848.

or painter of scenic and humorous subjects. Shakspeare's later scenes and the memoir-writers of the seventeenth century have furnished materials for many of his pictures. His best efforts, however, for character and expression, have been exertions of Le Sage, an author within the scope, and well adapted to a special bent. The example from his hand in the Venetian scene from "Le Diable Boiteux"—"The Victim,"—a man against the bill he has to defray for his fair comrades submitting to be fleeced,—is a case in point, and a fine instance of the artist's style. It was executed in 1844. The same year also, "Gil Blas exchanging Rings with Catherine,"—probably his best picture is "Peter the Great sees Catherine the Empress, for the first time," (1850),—a more picturesque incident than some of the clever quasi-historical pictures he could boast, which preceded it, pictures such as "Catherine discovers she is no longer Young" (1848), or "Maria rescued by Cardinal De Retz" (1849). As it manifested, both in technical power and higher artistic—character, ease of action, and *vraisemblance*, the crowning difficult attainment, with the painter of *genre*.

LINTON AND WINTON, ARCHIBALD WILLIAM MONTGOMERIE, FIFTEENTH EARL OF, and K.T., late Viscount of Ireland, the only son of Archibald, Lord Eglinton, was born at Palermo, in Sicily, in 1812. His maternal uncle, Henry Montgomerie, was his father's cousin, and the brother of the late Earl of Eglinton, the eleventh earl. His lordship has at various times held the appointments of Lord Lieutenant and Sheriff Principal of the County of Ayr, is Colonel of the Ayrshire Militia, Lord Rector of the University of Glasgow, and Dean of the Faculty of the University of Glasgow. Lord Eglinton is well known on the turf as an ardent patron and supporter of field sports, and in 1840 revived, at Eglinton Castle, with all the splendour, if deficient in detail, of the olden time. Indeed, so far as the eye was concerned, we doubt very much if any tournament in any age has ever been put before the spectator in so magnificent and tasteful a manner. The Queen of Beauty on the occasion was Lady Seymour, who sustained her part most admirably; and the now celebrated Emperor, Napoleon III., was one of the most distinguished guests. In 1841 Lord Eglinton married Theresa, daughter of Charles Esq., and widow of Capt. Howe Cockerell, R.N. On the death of Lord John Russell's administration his lordship was appointed to succeed Lord Clarendon as Lord-Lieutenant of Ireland, where he was received on the 9th of March, with a demonstration of esteem. In this high position he remained until the resignation to the Government of Lord Aberdeen. He was Lord Rector of Glasgow University in November 1851. As a landlord, the earl has been distinguished by his earnest endeavours to promote agricultural improvement.

and his tenantry, and general education among the people of the neighbourhood.

EGYPT. SAID PACHA, VICEROY OF, is the eldest living son of the renowned Mehemet Ali, whose rebellion against the Ottomans occupies so important a place in the modern history of the East. When the derangement of the Ottoman empire was terminated by the intervention of four of the great powers of Europe, the government of Egypt was made hereditary in the family of Mehemet Ali, a peculiar law of succession was established. In order to avoid the evils to which the rule of a minor exposes an aged and turbulent country, it was agreed by all the powers that the eldest male for the time being of Mehemet Ali's family should exercise the vice-royalty. Abbas Pacha, the late Viceroy, was the grandson, was older than Said Pacha, the son of Mehemet Ali, and accordingly became ruler of Egypt; but when Mehemet Ali, as is generally believed, removed Abbas Pacha from the scene, on July 14, 1854, the direct line of succession no longer coincided with the public law of the country, and Said Pacha, in 1822, was preferred to the viceregal throne before the son of the late ruler. Abbas Pacha was tyrannical towards his own subjects and exclusive towards foreigners; sordid in his administration and degraded personal habits. Said Pacha is a man of enlarged ability, with a mind enlarged by Western experience, thoroughly inclined to European manners and principles of administration. The court of Her Majesty the Queen is often visited by Eastern celebrities, sometimes with no higher object than that of ostentatious display; but Said Pacha, when in England, has evinced a liberal spirit of inquiry, displayed great interest in mechanical inventions and engineering works, and especially has occupied himself with all that related to our shipping and docks; he has been himself by profession a sailor, and having held the rank of Admiral of the Egyptian fleet. The brief space which has elapsed since his accession to the throne has been marked by important reforms. One of these is the interdiction of the importation into any of the provinces placed under his dominion. Its most formal orders have been given on the subject in the ports of the Red Sea, and in all parts of the southern frontier where the importation of negroes or Abyssinians took place. Those who are at present in Egypt remain provisionally in the same situation, as a change in this respect would have too probably overturned the Mussulman family arrangements; but the practice is laid down, and a hope is afforded that slavery will at no distant day entirely disappear from Egypt. Again, what are called *habs*, paid at Suez and Kosseir, have been suppressed. This measure secures the real and complete liberty of commerce in the Red Sea, and puts an end to a tax of which merchants and sailors had reason to complain. Further, any article on which duties may have been already paid is not for the future to be subjected to any other duty, whatever transformation it may have

ELLESMERE, THE RIGHT HON. THE EARL OF, K.G., F.R.S., Statesman and Poet, was born on the 1st of January, 1790, and was educated at Eton, and finally at Oxford, where he took a second class. He is the second son of the first and second Duke of Sutherland, and brother of the present head of that house. His first essay in Parliament was in 1822, where, as Lord Ellesmere, he commenced his political career as a Liberal conservative of the Canning school; a cautious reformer of abuses, decidedly opposed to organic change. In 1828 he was sworn in as Privy Councillor. On most of the great questions of the time Lord Ellesmere has shown himself a far-seeing politician, although he carefully abstained from identifying himself with any faction. He spoke eloquently in behalf of Free Trade more than twenty years before Sir Robert Peel had embraced that policy; carried in the House of Commons a motion for the endowment of the secular clergy; and warmly supported the project of the London University. At a very early age Lord Ellesmere is said to have displayed a highly cultivated taste for literature and the fine arts; and before he had risked the broad glare of publication, he had written, for private circulation, poems which entitled him to an honorable place among the living poets of England. He first attracted attention in the world of letters by the publication, in two volumes, of a translation of "Faust," accompanied by free and varied versions of popular lyrics selected from the works of Schiller, Burger, Salis, and Körner. This work, which has been out of print many years, passed through several editions, and the author decided on withholding it from further circulation. In the interim between its publication and the appearance of "Mediterranean Sketches," several poems from his pen, of which several were printed for private circulation. In 1839 he was induced, partly by medical advice, to undertake a voyage to the East in his own yacht. His lordship was enabled, after stopping at Lisbon, to visit Cadiz, Gibraltar, and Malaga; from the last of which he travelled inland to Seville and thence to Madrid. After wintering at Rome, his lordship set sail on the 1st of April 1840, from Civita Vecchia for Malta, which he quitted on the 24th for Palestine. After his return home, Lord Ellesmere published an interesting account of his travels in the form of notes, and a very graceful poem entitled "The Pilgrimage," in which, having adopted the staff and sandal shoon of the palmer, he gives a very poetical picture of the various scenes comprehended in the journey. This volume, more than once reprinted, has also been withdrawn from general circulation for several years. We gather, however, from the literary gossip of the public prints, that his lordship is about to collect his poetical "waifs and strays" in a form which will render them accessible to the public at large. Among the poems printed for private circulation which have from time to time come under our eye, are several dramatic pieces: "The Siege of Donna Charritea," "Blue Beard, a Parody;" "The Siege of Donna Charritea," "The 18th November, a Monody on the Death of the

the Assistant-Physician to the latter institution, he was elected
 one of its Physicians. In 1831 he was appointed Professor of
 Practice of Medicine in the University of London, a post in
 which he commanded not only the respect of his pupils for the
 soundness of his acquirements and his great practical experience,
 but also their affectionate regard by the kindness and suavity
 of his personal demeanour. This urbanity of manner, combined
 with an inflexible energy of purpose, rendered him one of the most
 successful as well as popular medical instructors of his time. When
 Dr. Keble, Assistant-Physician to Guy's Hospital, was elected
 Physician, Dr. Laird and Dr. E. offered themselves for the vacant
 office, and Dr. Laird succeeded. When Dr. G. Currey, Assistant-
 Physician to St. Thomas's Hospital, was elected Physician in 1816,
 Dr. Williams and Dr. E. offered themselves for the vacant
 office, and Dr. Williams, who had not studied at either hospital,
 was elected. In 1817 one Physician, Dr. Wells, died, and another,
 Dr. Keble, resigned. Dr. Williams was chosen Physician, and Dr.
 E. and Dr. E. offered themselves for the vacant offices of
 Assistant-Physician and Assistant-Physician. Dr. Scott was chosen Phy-
 sician and Dr. E. Assistant-Physician. In 1822 Dr. Currey died,
 and Dr. E., after five years of gratuitous service, expected to be
 elected Physician, according to established custom. But a cabal,
 common to medical establishments, was got up to prevent this.
 St. Thomas's and Guy's Hospitals are separate foundations; but
 the Governors of Guy's pay nothing to become Governors, whereas
 the Governors of St. Thomas's do; and by the will of Guy the Governors of
 St. Thomas's are chosen from the Governors of the Royal Hospital
 St. Thomas. The Treasurer of Guy's, a Mr. Benj. Harrison,
 was elected to his Hospital as he pleased,—the Governors leaving all to
 him, and the Committee leaving all to him, and meeting
 only on his bidding. He made the Governors and the Commit-
 tee and thus had immense power over the Committee of St.
 Thomas's, also, of which he was always a member, and among
 his aims was a high ambition to become a Governor of Guy's, and
 this was increased by the circumstance of the Treasurer of
 St. Thomas's, a Mr. Abel Chapman, being a very weak man and
 easily influenced. The schools of the two hospitals were one as re-
 garding the surgery, the students walking the wards of both in common,
 as the surgical practice, and the fees being shared equally by
 the students of both. But the physicians of the two hospitals were
 separate: the students who paid to witness the practice of the
 one hospital had no right to witness that of the
 other. The anatomical and surgical lectures
 were given at St. Thomas's by a surgeon of each hospital: all
 medical lectures were given at Guy's, in which there was a
 medical school; and the physicians of St. Thomas's were
 not to lecture there, *nor even in St. Thomas's*,—not even to
 give a lecture on their own hospital cases to the students
 attending their practice, lest this should interfere with the
 practice of Guy's. Dr. E., now become Assistant-Physician,

t ones in auscultation and percussion, which include the varying effects of posture during the auscultation of the heart, and the advantage of removing the stethoscope when examining the sounds of that organ; removal materially magnifies, and showed that the sounds may differ in different parts of the heart's region.

He published his "Lumleyan Lectures on the recent progress in the Art of distinguishing the various Diseases of the Heart," which he had delivered before the Royal College of Physicians in 1820, at the request of the President. These lectures are three in number:—1. On Diseases of the Exterior of the Heart. 2. On those of the Internal Membranes of the Heart. 3. On those of the Substance of the Heart.

To these important labours may be added various papers of interesting pathological facts, and his translation of Eberle's "Physiology," with notes more bulky than the original, and now in its fifth edition. He was, moreover, elected President of the Phrenological Society, and President of the Royal Medical and Chirurgical Society of London.

He was F.R.S., and Fellow of the Royal College of Physicians, and of the Society of Aesculapian, Phrenology, Quinine, Hydrophobia, &c. His assertion that glanders will attack man, and his discovery of the importance of medical discoveries, now universally acknowledged, drew down upon him a storm of ridicule; yet has he since

in his turn at his bigoted and narrow-minded assailants, and has afforded an opportunity for fresh ridicule and fresh denunciations, ever, at hand. In 1837 the attention of Dr. E. was directed to certain wonderful phenomena, and certain morbid states of the mind, and of removing diseases ill understood, which were vouched for by men of the highest standing and the soundest judgment, he found that the substratum of truth in what he had heard and read was not so trifling as he had supposed; that an agent or agency existed which had been overlooked; and his inquiries were soon attended with striking results that a considerable body of medical men, and of the nobles, nay, royalty itself, members of the Royal Society, some of the first men of science in the kingdom, of Oxford and Cambridge, presidents of societies and teachers of the various hospitals, flocked to witness his experiments. In fact, Dr. E. managed to make innumerable converts from among the educated classes, not only to the external results of mesmerism, but to his sincere belief in its curative powers. The worldly-wise among the medical friends, foreseeing the hostility to which his early declaration of this novel system would expose him, counselled him to be cautious of such a declaration of faith; but, notwithstanding the avowal of his genuine convictions, he incurred the consequences as it regarded his private interests, which have been even more serious than they have proved to be to his earlier discoveries, remedies formerly deemed

to scorn, but now part and parcel of modern medical practice, I will," he avers, with a heroism worthy of a martyr, "stand to ridicule, with the same firmness and the same silent pity or contempt which I have always felt for my opponents, until I see, I shall see, the truth of mesmerism fully established." Dr. E. has now prescribed mesmerism for many years, and not only avows his firm conviction of its truth, but the truth of many things connected with it on which he formerly gave no opinion at all.

The production of a peculiar coma by mesmerism is now no longer denied. We are not, however, disposed in this place to enter upon an exposition of its marvels. We have seen many men yield to irresistible proofs, and not a few who would not believe the evidence of their own eyes and ears. A cruel and, as it might be called, futile attempt, was made by the "Lancet" to impair the credit of Dr. E. by charging him with simulating the most skilful histrionic performer would have been unable to represent. The facts repudiated in 1838 have been repeated thousands of times since, and have now become circumstances of universal notoriety. Limbs have been amputated, and operations of the most agonising description have been performed all parts of the world, whilst the patient has been under the influence of this agency, without, on his part, the slightest indication of pain; raving maniacs have been soothed to almost infantine calm; cripples have thrown away their crutches; and disease of every kind has been cured after the failure of all other means. Unless, therefore, one-half the world is in a conspiracy to lie, and we are to disregard the evidence of touch, sight, and hearing, the proofs of such phenomena are irresistible. In 1849 a Mesmeric Hospital was established, at the instance of Dr. E., at which numerous cures, which would seem all but miraculous, have been performed. "We are truly and wonderfully made." It is not, therefore, for us to question the facts that appeal for their existences to our ordinary senses.

How such an anomaly as a medical man capable of thinking for himself, and courageous enough to abide by his convictions, should have entered the conception of College or Hospital Boards is a mystery: so, his medical colleagues and the Council of University College, London, having insulted their distinguished officer, resigned in disdain in the month of December, 1838, presenting a address to his pupils explanatory of his resignation, and proposing most liberally to return them the whole of their fees for the year. But the Doctor's devotion to mesmeric agencies was but the strong-horse of his opponents. His heterodoxy on other professional questions was hardly less distasteful to them. He had the temerity to declare in public, that the College had not been established for the Professors, but for the diffusion of medical knowledge, and that the fees of the Professors were altogether a second consideration. The pretext, that any damage to the interests of the College would accrue from an occasional mesmeric demonstration, was a pure figment. They knew perfectly well that Dr. Lindley and Mr. Cooper had both recognised Dr. E.'s undoubted right to

ELMORE.

magnetism as a remedial agent in the wards of what as to such experiments—or, as they called them—they could not be so entirely out of place as *dangiamela*, the calculating-boy, in their theatre head! There was nothing in the inquiries inconsistent with established physiological and pathological, however, that one of his patients had been in hospital without any communication with him, he was on the Council, conveying his resignation in the following terms: "As a gentleman in the first place, and as a physician, I am myself compelled at once to resign my office of Professor of Principles and Practice of Medicine and of Clinical Medicine at the College, and of Physician to the Hospital; and I will never enter either building again." As a made Professor I received a class of 90 pupils; at the present moment of 1877, being 13 more at year; and as there were 24 entries after Christmas the number of the present session would no doubt be 20. I have not received my fees, and it is my intention to have all refunded to the young gentlemen." As some of the medical school fell, as that of St. Thomas's, and as the school left it, and neither school has yet recovered. I have seen of Rochefoucault, that we hate those whom we hate. I have seen E.'s persecutors omitted, accordingly, no opportunity was offered itself of following up their unjust and ungrateful course, by injuring him in his private practice; and my exertions were very successful. But he left behind him former useful labours accompanied by the esteem of a host of men whose good opinion would have been sufficient of itself to confer fame upon the most ordinary assiduity, notwithstanding the efforts that were made to discredit him, with one of those exceptions to honour which most bodies of young men can hardly be withheld from him with feelings of affection and sympathy. E. has lost a large sum of money in the private purposes, of the science in whose behalf he has made such extensive sacrifices, and has now the satisfaction of seeing that it has been cultivated and practised with beneficial effects in all parts of the world. "Evil or deserved," says Southey, "we soon live down," and many examples of the truth of the remark could be found in the relative positions at the present day of E. and his oppressors. "The Zoist," a medical journal, established by him, and now in its 10th year, is the result of all his labours in mesmerism.

ALFRED, A.R.A., Painter, born at Clonakill, near New York, in 1816. A painter of ability in a kind of style not common at the present day. First exhibited at the Academy in 1840, with one exception, for nine years. The two

of his earlier pictures evidence aspirations within the range of the "high historic:"—a "Crucifixion," at the British Institution in 1838; the "Martyrdom of à Becket," at the Academy in 1839; later painted for Mr. O'Connell; both now in a Roman Catholic church in Dublin. He next visited Italy, and on his return painted "Rienzi in the Forum," in 1844. One or two pictures of other pretension at the British Institution, the gleanings of his travel, were selected by Art-Union prizeholders. His tales of semi-historical incidents, treated in the spirit of the story painters, proved even more successful. The "Origin of Grief and Ghibelline Quarrel," of 1845, gained a purchase in the bolder of the Art-Union's highest prize—300*l*. In the same year he was elected Associate of the Academy. The "Landing of Hero," from "Much Ado about Nothing," in the next year, again seduced the choice of the Art-Union's leading buyers. It was not the last of his pictures to please fortunate buyers. Mr. Elmore has been especially prosperous in that respect. Of the Exhibition of 1847, the "Invention of the Stocking" was a popular feature,—a clever rendering of an anecdote principally pictorial. Amid the quest for novel and attractive tales, the byways of history have been eagerly ransacked by the art competitors among our painters for notice. Some of Mr. Elmore's chief pictures subsequently have been the "Death-bed of a King of Naples, Wise and Good" (1848); "Religious Convulsion in the time of Louis XIV." (1849); "Griselda" (1850); "The Pur and the Fop" (1851); "A Subject from Pepys' Diary—Hals began my wife's portrait," &c. (1852).

EMERSON, RALPH WALDO, an American Metaphysician, son of a Unitarian clergyman at Boston, and graduated at Harvard College in 1821, being then but about eighteen. Having turned his attention to theology, he was ordained minister of one of the congregations of his native city; but embracing soon after peculiar views in regard to forms of worship, he abandoned his position, and, retiring to the quiet village of Concord, devoted himself to his favourite study—the nature of man, and his relation to the universe. He delivered an oration called "Man-thinking" before the Phi Beta-Kappa Society, in 1837; and an address to the class of the Divinity College, Cambridge, in the following year. He did not pretend to reason, but to discover; he announced, not to teach. In 1838 Mr. Emerson published "Literary Ethics, an Essay," and in the following year, "Nature, an Essay." In 1840 he founded the "Dial," a magazine of literature, philosophy, and science, which was continued four years. In 1841 he published "The Method of Nature," and "Man the Reformer;" three years on the times; and the first series of his "Essays." In 1844 he published the second series of his "Essays." In 1846 he published a volume of poems. In 1849 he visited England, and delivered the lectures which now form the volume called "Representative Men." In 1852, in connexion with Mr. W. H.

anning, he published the "Memoire of Margaret Fuller, M. Jean d'Osoli."

ENCKE, JOHANN FRANZ, Director of the Royal Observatory and Secretary of the Academy of Sciences at Berlin, was born at Hamburg, September 28, 1791. He studied at Göttingen, Munich, and afterwards entered the Prussian artillery service. At Seeburg, where he was stationed as Lieutenant, he became known to Von Lindenau, the Saxon Minister of State, who procured him an appointment in the observatory at Seeburg, near Gotha. In 1825 he was appointed Director of the Observatory at Berlin, and also became Secretary to the Mathematical Class in the Academy. He was the first to recognise the comet discovered by Pons, on the 26th of November, 1818, as having a very short period of revolution; on which account that comet has been called the name of Encke. He published, in 1831-32, the investigations he had made in two treatises, bearing the title "Concerning the Comet of Pons," in these he called attention to the retardation which cometary bodies apparently experience from the ether passing through space. In his work, "The Distance of the Stars" (two vols. 1822-24), he calculated the entire series of observations upon the transit of Venus. The first volume of his "Astronomical Observations at the Royal Observatory at Berlin," appeared in 1840. He has also published treatises "De Formulis Dioptricis" (1843), and "On the Relation of Astronomy to the other Sciences" (1846). Since 1830, Encke has edited the "Astronomischen Jahrbuch," formerly conducted by Bode. In 1840 he was created knight of the class of Peace, of the order Pour le Mérite.

ENGLAND, VICTORIA, QUEEN OF, only child of the Duke of Kent and of the Princess Louise-Victoria of Saxe-Coburg, who at the date of her marriage with his royal highness (now Prince of the Hereditary Prince of Leiningen), was born at Kensington, London, June 24, 1819. Her general education was directed by the Dowress of Northumberland, then wife of the third Duke. By the influence of William IV., Lord Melbourne furnished her mind with the leading principles of constitutional government, and it is therefore no wonder that,—finding that nobleman at the head of affairs when she came to the throne, June 20, 1837,—she retained him in that position without hesitation. Her Majesty's coronation took place June 28, 1838, with great pomp. She was married to Prince Albert, of Saxe-Coburg Gotha, on the 10th of February, 1840. Happily, the political constitution under which we live, and the high discretion which has marked Her Majesty's government, render unnecessary in this notice such an enumeration of personal government as those which are given in this volume of the biographies of some other living sovereigns.

ERICSSON, JOHN, a distinguished Mechanician, was born in the province of Varmeland, Sweden, in 1800. He showed a dis-

and for mechanics when quite young, and at the age of eleven started the attention of Count Platen, who procured him the appointment of cadet in a corps of engineers; and in 1816 he was sent abroad on the grand ship canal between the Baltic and the North Sea. From his associations with military men he acquired a taste for military life, and entered the Swedish army as an ensign, a step which lost him the favour of his patron, Count Platen. In the army he rose to the rank of lieutenant, and shortly after his promotion he was employed for some time in the survey of Northern Sweden. In the meanwhile he devoted much of his time to his favourite speculations in mechanics, and projected his *flame* engine, one of the earliest of his inventions—an engine intended to work independently of steam, by condensing flame. In 1826 he obtained permission to visit England, where he hoped to bring his invention into public notice, but he soon discovered that, when the engine was worked by mineral fuel, the experiment was a total failure. He was not discouraged, however, and in 1829 he competed for the prize offered by the Liverpool and Manchester Railway for the best locomotive, and produced an engine that attained the then incredible speed of fifty miles an hour. He subsequently returned to the United States, where he has been the author of many inventions which have made his name familiar to the public. Amongst a propeller, semi-cylindrical engine, centrifugal blowers, and some improvements in managing guns, were applied to the *Ram* at Princeton with successful results. In the American department of the Great Exhibition of 1851 he exhibited a distance measuring instrument for measuring distances at sea; the hydrostatic gauge, for measuring the volume of fluids under pressure; the reciprocating fuel-meter, the alarm-barometer, the pyrometer, the rotary fuel-meter, and the sea-lead: of all which instruments he has given a "brief explanation," in a pamphlet published the same year. His invention, however, which has lately attracted most attention, is the caloric engine, intended to supersede the use of steam. Ericsson first brought this remarkable invention before the world in London in 1833, when he constructed an engine to produce power, and exhibited it to a number of scientific gentlemen of the metropolis. But although it met with the approbation of many distinguished men, Brunel and Faraday pronounced against the feasibility of the scheme, and the English Government, which had seemed inclined to give the matter their attention, immediately let it drop. The subject was, however, subsequently revived in the United States, and a ship named the *Ericsson*, of 2200 tons displacement, was built and fitted with a caloric engine; and "a complete revolution in steam navigation" was somewhat sanguinely predicted as "clearly evident." On her trial-trip she gradually attained a speed of twelve miles an hour. But on her return "she was unfortunately struck by a severe squall, which careening the starboard ports under water, she gradually filled, and then sank in six fathoms of water within 300 yards of Jersey city." The ship was subsequently raised and taken into dock, and her "caloric"

-rable battles, in Asia, Europe, and America. His earliest services
 -r rendered in India (1807-1810), where he took part in the opera-
 -s against Ameer Khan and the Pindarries. He was also at the
 -r of the Mauritius. In 1810 he joined the Peninsular army
 -r Wellington, and accompanied it in its retreat from Burgos.
 -r took part in nearly all the principal battles in Spain and Por-
 -r, and after its advance into France fought at Toulouse. At the
 -r on the Hornaza he was wounded; at Toulouse, as previously
 -r the investment of Bayonne, he had a horse shot under him. He
 -r and considerable distinction by volunteering for storming parties
 -r and enterprises where honour was to be gained at great risk by
 -r display of military qualities. Besides the war medal with three
 -r for Vittoria, Pyrenees, and Toulouse, he received his company
 -r January, majority in May, and lieutenant-colonelcy on June 18,
 -r for services performed against the enemy. In the spring of
 -r he left Wellington's army, being ordered to the United States,
 -r which Great Britain was then at war. At the battle of Bladens-
 -r he had two horses shot under him; at Washington, with a
 -r light infantry, he forced the Congress-house, and took part
 -r the attack on Baltimore. He was the only volunteer of the
 -r who accompanied the boats' crews of the English fleet, which
 -r and captured the strongly-armed American sloops-of-war
 -r for the defence of Lake Borgne before New Orleans. In
 -r 1814, and again in January 1815, he was severely
 -r in the action before and unsuccessful assault on that
 -r. Returning to Europe, he joined the army assembled to meet
 -r Napoleon, and was engaged at Quatre Bras, the retreat
 -r Brussels on the 17th, and at the battle of Waterloo, where
 -r two horses killed under him. He advanced with the army
 -r and remained on the staff during the occupation. Upon
 -r of the English regiments to England, Evans reposed in
 -r of his well-earned honours. The political agitation
 -r of which William IV. commenced his reign drew Evans
 -r retirement, and he came before the world in the popular
 -r of a Radical Reformer. He sat for Rye in the parliament of
 -r unsuccessfully contested that borough as well as Westminster
 -r, but succeeded and was returned by the constituency of the
 -r city in May 1833, defeating Sir John Cam Hobhouse, who
 -r accepted the Chiltern Hundreds in order to give his consti-
 -r an opportunity of expressing their sentiments upon his
 -r. Evans was member for Westminster when, in May 1835,
 -r Alava, Minister of the Queen of Spain at the Court of St.
 -r, solicited of the British Government leave to raise a military
 -r in this country, to be auxiliary to the Queen's army. The
 -r of the child, now Isabella II., and of her mother the Queen
 -r Christina, was generally identified at that time with that
 -r and constitutional government in Spain; the more
 -r perhaps, because of the ultra-absolutist character of Don
 -r, the rival Pretender. The Liberal Ministry of that day
 -r the ambassador's request, and an order in council, dated

June 10, 1835, appeared in the Gazette, authorising the levy of 10,000 men, and expressing the King's desire that his subjects should take part with the Queen of Spain, his ally, by entering the new corps. The command of this force, which became known as the British Legion, was offered to Evans, who consulted with his constituents, and accepted it with their consent. He had no soon done so than he discovered that he should have to contend, not only with the influence of that powerful party in England who sympathised most with the cause of absolute government all over the world, but with that of the Court, the chief military authorities, and even of the King, in obedience to whose call the enterprise was undertaken. The first consequence of this hostile combination was the extreme difficulty of obtaining the services of British officers for the new corps. The enlistment of privates was effected by Spanish authorities at London, Manchester, and Glasgow, but with so much irregularity and want of care, that when the men were successively mustered at Santander and St. Sebastian, the Spanish ports of debarkation, it was found that as many as 2000 were so crippled by disease, or otherwise, that they could not bear arms, and were only permitted to remain because there were at hand no means of transporting them back to England. Two thirds of these men died in hospital, not having performed a day's duty. In other respects the recruiting had been most unfortunate, and Evans, at a later period, declared in parliament, that of the entire force of 9600 men, of which the Legion was at various times composed, there were not more than 100 who were not too young or too old for service. Such were the men with whom Evans aided by officers drawn for the most part from South America, Greece, Portugal, and other foreign countries, was to justify the Peninsular reputation of the English, and march in the footsteps of the greatest captain of the age. By the urgent desire of the Spanish Government Evans hastened his departure; the Ministers at Madrid expecting political advantages from the presence of an English force on Spanish soil. Its expectation was fulfilled. Evans left England in August to assume his command, and immediately afterwards a desire was expressed at Paris and Lisbon to furnish French and Portuguese Legions. The English recruits arrived at Santander and St. Sebastian by successive detachments in the course of July, August, September, and October, 1835, were drilled there; the law of England not permitting the training in this country of troops so raised. Their first services to the crown of Spain were rendered at Bilboa, then menaced by the Carlists, where the Legionaries, in number about 3000, arrived in time to save, almost by their mere presence, the corps under General Espaletta from destruction. For a long time, however, the troops of the Legion were employed in harassing outposts in service in the field, sterile in military event, but extremely trying to a corps prematurely called into service. On the 16th and 17th of January, 1836, the auxiliaries co-operated with a corps under Generals Cordova and Espartero in an attack on Arlaban. E.

intended in driving the Carlists from the village he had been
 ordered to attack, but the Spanish generals not being equally suc-
 cessful he was compelled to fall back, in order not to remain in an
 exposed position without support. On the 5th of May, Evans led
 his corps, about 4500, together with 1500 Spaniards, against the
 main force investing St. Sebastian. The Carlists were about
 12,000 strong, under Segastibelsa. Their right rested on a river then
 fordable, their left on a swamp, equally impracticable from recent
 heavy rains. The same cause rendered the ascent of the heights
 especially difficult to Evans's troops. Ayet , containing several
 strong buildings, fortified and supported by some pieces of heavy
 artillery, formed their centre. After a fierce contest of five or six
 days, during which the Carlist general was killed by a musket shot,
 Evans's first and second lines of entrenchment were carried by
 assault; their third and last still remaining to them. On this,
 however, they made a firm stand, successively repelling several
 attempts to penetrate. Towards noon the British Commodore,
 Sir John Hay, came up with the steamer Phoenix, and with large
 shot opened a fire from a 68-pounder gun, at the distance of
 1/2 mile against the last redoubt held by the Carlists, and which the
 British troops were just about to assault. A thousand infantry of
 the Legion at this juncture arrived from Santander; the Carlists
 were routed, with the loss of their artillery and positions. This
 success was purchased with a loss of 97 officers and 900 men.
 Sir (afterward Marshal) Harispe, an old general of the French
 army, upon this occasion wrote to Evans: "I have known for a
 long time the position you have carried; whatever may be the
 cost you have sustained, the results of this combat reflect the
 greatest honour on the English soldiers, and above all on the
 Legion, who have given such brilliant proofs of devotion and in-
 fatigability." On the 28th of May the Legion moved from St. Sebas-
 tian, passed the Uromea river, and in conjunction with the English
 troops and gunboats attacked the enemy, and got possession of
 several strong and fortified passages, also capturing some stores and
 20 guns. On the 31st May, and 6th and 9th of June, the
 Carlists attacked the position of the English troops on various
 occasions, and were every time completely repulsed, with a loss of 1400
 men, the Legion suffering considerably less. In the September
 campaign, Evans was engaged in an operation which resulted less
 successfully. He had received an intimation from the General-in-
 chief of the Queen's forces on the Ebro that a diversion was
 to be made, in order to facilitate a movement projected by the
 British. Evans advanced accordingly on Fontarabia, but the
 Carlist general was led to abandon his first intention, and Evans
 had to retire, with a loss of ninety men killed and wounded. On
 the 1st of October, the Legion was engaged for twelve hours
 against an attacking force of 10,000 men, including armed pea-
 sants; the Carlists were repulsed with the loss of 1200, that
 of the Legion being under 500. In this affair Evans was wounded.
 Fortunately the Spanish Government was just now overthrown,

Evans was able to boast that "no prisoners had been taken from the Legion in action, nor any part of its artillery or equipage captured by the Carlists. The Legion, however, had taken twenty-seven pieces of artillery from the enemy, and made 1100 prisoners, whose lives were spared." In explanation of this last remark it must be stated, that forty-seven soldiers of the Legion, who casually fell into the hands of the Carlists, were all put to death. In justice must be said, that many of the Queen's generals had rivalled the Carlists in inhumanity. Evans having vindicated his conduct in Portugal, where the results of Spanish injustice had been imputed to him, received from his Sovereign the Cross of Commander of the Bath, and from the Spanish Government the Grand Crosses of St. Ferdinand and Charles. His parliamentary career was interrupted by the dissolution in 1841, but he was again returned for Somerset in 1846, and in 1852. While in Spain he attained the rank of Colonel in the English army, and in 1846 became a Major-General. Upon the formation of the Eastern army Evans was appointed to command the Second Division, with the rank of Lieutenant-General. At the battle of the Alma his was one of the leading divisions, and was led across the river in most dashing style, under a murderous fire of grape, round-shot, canister, case-shot, and musketry. His troops suffered terribly in that glorious day, and Evans received a severe contusion of the right shoulder. On the 26th of October, during the siege of Sebastopol, Evans's division was attacked by a force of Russians, which moved out of the town for that purpose, amounting to 6000 men. The army advanced with masses of infantry supported by artillery, and covered by large bodies of skirmishers. Such was the character of the reception, that in less than half-an-hour the Russian artillery was compelled to quit the field. The Russian columns exposed to the fire of the English advanced infantry were soon thrown into disorder. The English then literally chased the Russians over the top, and down towards the head of the bay of Sebastopol. The English loss was eighty killed and wounded; eighty was also the number of the Russian prisoners taken; but the total loss of the army was about 800. Lord Raglan, in reporting on this affair, stated, that he could not too highly praise the manner in which Evans met this attack, and that nothing could have been better arranged. On the morning of November 5th, the Russians attacked the position which was held by the Second Division, and the battle of Inkermann began. Evans, worn down by illness and age, had gone on board a vessel at Balaklava, and General Pennycuik was commanding his division. Upon hearing that the army was fighting before Sebastopol, Evans rose from his bed, and joined his division, not to take the honours of the day from General Pennycuik, but to assist him with his advice. Having rendered this valuable assistance during the hotly-contested day, he again returned to his ship, and shortly afterwards sailed for England. His noble conduct on this trying occasion was emphatically commended in the despatch by which the Minister-of-

was to vindicate American principles and institutions against a
 word of British travellers and authors who were endeavouring, by
 flippant writing, to bring them into contempt. Besides conducting
 the "North American," and discharging the duties of his profes-
 sorship, Everett popularised a portion of his university lectures
 for the purpose of delivering them to large general audiences in
 the city, the first attempt of the kind which had until that time
 been made. In 1824 Mr. Everett delivered the annual oration
 before the Phi-Beta-Kappa Society at Cambridge. The occasion
 was signalised by the presence of Lafayette. The entire discourse
 was favourably received; but the peroration—being an apostrophe
 to Lafayette—touched a chord of sympathy in an immense au-
 dience, already excited by the unusual circumstances of the oration.
 It was the first of a series of orations and addresses, delivered
 by Everett on public occasions of almost every kind during a quarter
 of a century. They probably constitute that portion of his literary
 data by which he is best known to the world, and have contributed,
 when published in form, to elevate the standard of productions of
 the class. Up to 1824 he had taken no active interest in politics,
 though his articles in the Review had demonstrated his acquaint-
 ance with the wants and spirit of the nation, and his recent oration
 had just brought him prominently before the public. The consti-
 tuency of Middlesex, without any solicitation on his part, returned
 him to Congress by a great majority over the mere party and poli-
 tical candidate. For ten years he sat in the national parliament,
 and proved himself a working member. His speeches were short,
 plain and business-like. He opposed General Jackson's Indian
 policy, that of removing the Indians without their consent, and
 advocated free-trade principles. In 1835 he retired from Congress,
 and was next year chosen Governor of Massachusetts. In 1839 he
 was again a candidate for the same honour, but was defeated on
 all questions by a majority of one out of a constituency of
 4000. In 1841 he was selected by President General Harrison
 to represent the United States at the Court of St. James, a position
 to which he was peculiarly qualified by acquaintance with European
 affairs, his familiarity with the civil law, and the experience in
 connection with the then mooted Boundary question which he had
 gained as Governor of Massachusetts. Although the secretary-
 ship of state at Washington was held by four different statesmen,
 on domestic politics, during Everett's mission, he enjoyed the con-
 fidence and approbation of all. His firmness, high intelligence,
 and sedulous habits, won him great respect in this country; and
 his scholarship was recognised in the bestowal of the degree of
 D. L. by the University of Oxford during his visit to that city.
 He returned to America in 1845, and was chosen President of
 Harvard College, which office he resigned in 1849. Mr. Everett
 has considerable reputation, in America, as a poet. His "Dirge
 to the Visigoth" first appeared in this country, and was highly
 praised by the poet Campbell.

TER, HENRY PHILLIPS, the extreme High-Church of Durham, Canon and Tre journalist says, "It is cur e celebrated preacher, wh uly history of Methodism, n, Gloucester, in which his eyes upon this world ers and characters of the t er's son, haranguing with House of Lords,—George the fury of twenty thou tide, and charming their loquence! Which was th f the future bishop were: , 1795; M.A. 1798; B. :—the Rectory of Stanb . The list of his publishe Coronation Oath," "Lette d to an indefinite length pamphlets were given. F since 1830.

F

D, THOMAS, Painter, Mill, in that district of Se bright. The spot where picturesque to delight th from the first no relish fo sketch from Nature. In : standing, and when the was in the habit of conve to a studio, and there, with painted assiduously fro the rustic locality. His fat ile the incipient painter w d by his surviving parent : of his brother, who was t in Edinburgh, Mr. Faed and in 1843 repaired to capital. While pursuing where for a brief period ed Sir W. Allan, the you remitting industry, and tion for prizes in various

as he ventured to exhibit in public was a drawing in water-colours from the "Old English Baron;" but ere long he dedicated his talents to oil-painting, exercised his brush on draught-players and shepherd boys, and even essayed the "grand historic" style. At length, after becoming an Associate of the Royal Scottish Academy in 1849, and executing, among other approved works of art, the admirable and popular picture of "Scott and his Friends at Stirling," Mr. Faed, acting on the advice of metropolitan artists, turned his face southward, and in 1852 settled himself permanently in London. For five years his cabinet pictures have been conspicuous for their merit among those exhibited on the walls of the Royal Academy; and his latest work, "The Mitherless Man," a charming rustic scene, in which an orphan boy is representing his father in a cottage, and experiencing the kindness and sympathy of the frugal and prosperous inmates, has attracted much notice, and has elicited from critics the praise of being "the work of the season," and of leaving little to desire either in design or execution.

FARADAY, MICHAEL, LL.D., England's most eminent Chemist, born 1794, the son of a poor blacksmith. He was early apprenticed to one Riebau, a bookbinder, in Blandford Street, and worked at the craft until he was twenty-two years of age.

Whilst an apprentice, his master called the attention of one of his customers (Mr. Dance, of Manchester Street) to an electrical machine and other things which the young man had made; Mr. Dance, who was one of the old members of the Royal Institution, took him to hear the four last lectures which Sir Humphry Davy gave them as Professor. Faraday thus relates the circumstance in a letter to Dr. Paris, which was afterwards published in his "Life of Davy:"—"My dear Sir,—You asked me to give you an account of my first introduction to Sir H. Davy, and I am very happy to do, as I think the circumstance will bear witness to his goodness of heart. When I was a bookseller's apprentice, I was very fond of experiment, and very averse to trade. I heard that a gentleman, a member of the Royal Institution, was to hear some of Sir H. Davy's last lectures in Albemarle Street. I took notes, and afterwards wrote them out more fairly in a volume. My desire to escape from trade, which I thought of as very selfish, and to enter into the service of Science, which I had made its pursuers amiable and liberal, induced me at last to take the bold and simple step of writing to Sir H. Davy, expressing my wishes, and a hope that, if an opportunity came in his way, he would favour my views; at the same time, I sent the notes I had taken at his lectures. The answer, which makes all the value of my communication, I send you in the original, requesting you to take great care of it, and to let me have it back, for you may see how much I value it. You will observe that this took place at the end of the year 1812, and early in 1813 he requested to see me, and told me of the situation of Assistant in the Laboratory

labour, not to speak of expense, provided they will bring him certainty of knowledge, even though it be but the certainty of error. His aim is a decided Yes or a decided No; or the attainment of the certainty that the problem is one which man cannot answer either way. The cheerful acknowledgment of the errors of others, the patient study of all reasonable objections to his own most cherished views, the frank confession of change of opinion, where that has occurred, the lowly estimate of himself, the lofty, nay solemn estimate of the dignity of his vocation as a follower of the works of God, make us love as much as we love our great Electrician, and should prompt our younger men to imitate his spirit, which they may all do, as well as rival him in his career, in which they may be less successful."

FAUCHER, LÉON, an ex-Minister of France, one of the new men whom the Republic has brought into prominence, has spent the greater portion of his life as a journalist. From 1830 he was connected with several Paris papers; devoting his talents to the elucidation of the statistics and economy of his country. In 1836 to 1843 he was a contributor to the "Courrier Français," and a leading writer in the "Revue des Deux Mondes." He sat ten years in the old Chamber, for the department of the Marne, when he was again elected under the new state of things in 1848. As an active member of Louis-Napoleon's Republican cabinet, he distinguished himself for a preference of strong repressive measures in dealing with the ultra party.

FERGUSSON, JAMES, Architect. A vigorous and original man of Art, and an accomplished Archæologist, whose literary labours are characterised by independence of thought, and clear, manly force of expression. He was born at Ayr, in Scotland, 1764. His early education and subsequent pursuits were little available to the acquisition of varied knowledge in science and art. In school," says Mr. Fergusson, "I passed to the counting-house; from that to an indigo factory;" thence, "to become an apprentice partner in a large mercantile establishment,"—in which he remained. While engaged on more than one treatise demanding elaborate study and thought, he has "written, perhaps also written more about the state of the money-market, indigo, sugar, than regarding architecture, painting, or sculpture." In youth, sentenced to the desk, his relaxations had been self-tuition, almost universal course of reading in the sciences, buying "any book in science his limited means would allow, and more with regard to the price than the contents." A great traveller, and he has passed the best years of his life in the East, "where Art, though old and decrepit, is not insane," he has seen much of the monuments he has elucidated, and reflected more; for months together living beside an important architectural landmark, and looking at it long and steadfastly, until he could read in the chisel-marks on the stone the idea that guided the artist in his design." His

during the progress of his studies. Mr. Fillmore accepted the proposal but that he might not incur too large a debt to his benefactor, he devoted a portion of his time to teaching a school. His political life commenced with his election to the State Assembly, in which body he took his seat in 1829, as a representative of the county of Erie. Being a member of the Whig party, he was at that time in opposition, and had little opportunity of distinguishing himself; but he took a prominent part in assisting to abolish imprisonment for debt in the state. In 1832 he was elected to Congress, and took his seat the following year. In 1835, at the close of his term of office, he resumed the practice of the law, until he once more consented to be a candidate for Congress, and took his seat again in 1837. He was successively re-elected in the two following Congresses, and in both distinguished himself as a man of talents and great business capacity. At the close of the first session of the 27th Congress he signified to his constituents his intention not to be a candidate for re-election; returned to Buffalo, and again devoted himself to his profession, of which he had become one of the most distinguished members in the state. In 1847 he was prevailed upon to accept the nomination by the Whig party for Governor of the state of New York, but was unsuccessful. In 1847, however, he was consoled for his defeat by his election to the office of Comptroller of the State, by an exceedingly large majority. In 1848 he was nominated by the Whigs as their candidate for Vice-President, and elected to that office in the fall of the same year. In March, 1849, he resigned his office of Comptroller, to assume the duties of his new position; and in the discharge of these high and delicate duties he acquitted himself with courtesy, energy and ability, until the death of General Taylor, in July 1850, elevated him to the presidential chair. His term of office expired on the 4th of March, 1853. Mr. Fillmore was married in 1840 to Abigail Powers, the youngest child of the late Rev. Lemuel Powers, by whom he has a son and a daughter.

FLOCON, FERDINAND, one of the ex-members of the Provisional Government of France, is the son of the director of the State Archives. He was born in 1803, and in 1820 became a reporter for the "Courrier Français," of which he was afterwards one of the editors. He fought at the barricades in the Revolution of 1830, and the dissensions which terminated in the settlement of the Republic. Louis-Philippe maintained Republican principles. Leaving the "Courrier" he attached himself to the "Tribune," and afterwards to the "National," which he quitted to become, with others, one of the founders of the "Réforme." On the outbreak of the Revolution he associated himself with Louis Blanc, and Albert, installed himself at the Hôtel de Ville, and of the authority proclaimed himself member of the new Government. Since the advent of Louis-Napoleon, Flocon has ceased to be politically important.

the four ages of life—infancy, youth, virility, and old age. These subdivisions are re-subdivided into first and second infancy, first and second youth, first and second virile age, and first and second old age. Infancy extends to ten years, because it is at the end of from nine to ten that second dentition takes place. Second infancy, or adolescence, commences at the tenth year, and continues until the twentieth, because it is only in the twentieth year that the development of the bones is terminated, and with it the growth of the body in length. The first extends from twenty to thirty, and the second from thirty to forty, because it is only at that age that the increase of the body in bulk terminates. After the development in length, and after that in bulk, I find a change," says M. Flourens; "I mean the internal and profound renovation, which acts in the most secret tissues of our parts, and in rendering these parts more firm and perfect, renders all parts more assured, and the entire organism more complete. It is this invigoration, and it takes place from forty to fifty years. After that, it maintains itself to the age of sixty-five or seventy. After that, old age commences. . . . In youth there is a great reserve of force in reserve, and it is the progressive diminution of that which constitutes the physiological character of old age. As long as the old man only employs his active forces he does not perceive that he has sustained any loss; but when he somewhat exceeds the limits of these usual and acting forces he feels himself exhausted; he feels that he has no longer the hidden forces, the reserved and superabundant forces of youth." Flourens considers, then, that, physiologically speaking, the life of man is of a hundred years' duration, but that, to have any chance of attaining the limit of the allotted period, it is necessary, above all, to lead a "sober life;" by which he means "good conduct, an active life always occupied, labour, study, moderation, sobriety in all things."

FOLEY, JOHN HENRY, Sculptor: an artist who while yet a young man, and unaided by the (fancied) requisite of Italian travel, achieved success in one of the most difficult of the arts. He was born in Dublin, in 1818. Under the encouragement of his grandfather, a sculptor in that city, he, at the age of thirteen, commenced drawing and modelling in the schools of the Royal Dublin Academy. Drawing from the human form, from landscape, animals, architecture, and executing ornamental designs, he gained prizes in all of these classes. In 1834 he came to London, and for the first time devoted himself to sculpture exclusively. The following year he became a student of the Royal Academy. The first works which appeared at the Exhibitions of the latter were the "Death of Socrates" and the model of "Innocence," in 1839. In 1840, when he was but twenty-two, followed the model for his "Ino and Infant Icarus," a group which in its refined beauty of form and of sentiment struck lovers of art by surprise, and made a previously unknown name famous. It has been since executed in marble for

of Ellesmere, has been and has taken its enduring successful achievements; produced the "Household Competition of 1844," "The Stream," gained him John Hampden for St. to the present House and in a genuine historical Bell's "Falkland." In 18 ring the last few years, no and Bacchus," no power and unmistakable element for bust and monument in marble of earlier conce

LANQUE, ALBANY, Johnblanque, Esq., an eminent was born in 1797. He with that view became the leader. From the acuteness of the points of a case gained of the success of his respect disappointed. His power of writing on the to devote himself to politics of his most ardent admirer. Totally neglecting the "discovery" of Mr. Chitty's on the discussion, in a list of questions of the day, when well as talk; and after a time came the leading contributor, "the leading Examiner," the leading London style and previous education qualified him to write politics with effect. Polished of the finished epigrammatist, the finishing of Cobbett, his attacks, quotations and the perfecting of the leading articles of the day without a parallel among his satires on bygone men at the seasoning of Mr. them so much of their own and with amusement and success from his editorial contributions of "England who would study the political form, cannot do better than

ribbed prose satires. Their chief fault—and it is not one which men of mark are likely to quarrel with—is, that they are almost too thickly studded with good things. Every other sentence is an epigram in prose; whilst his antitheses, sometimes a little too diffuse, act as so many clinches to bind the political maxim he associates on the memory. Those who would converse with him at his more serious moments should refer to his papers entitled “Capital Punishment,” and “Justice and Mercy,” written at a period when “the unavailing slaughter of our fellow-creatures” was in fashion—almost a furor. “We foresee,” says Mr. Fonblanque, “that Lord Brougham and Vaux will be a prodigious favourite with the Church. His observation that there is nothing in the Bible prohibitory of the punishment of death for other crimes than murder, reminds us of the reason which the Newgate ordinary, in the case of *Nathan Wild*, assigns for his choice of punch—that it is a liquor nowhere spoken against in scripture.” A few years since, the Government of Lord John Russell enlisted Mr. Fonblanque’s services in the public service, and thus withdrew him in some measure from his editorial avocations. He is now the chief of the Statistical Department of the Board of Trade; dry work, and, therefore, we should think, but few opportunities for the gratification of his early predilections. “A little pay” is,—he has himself told us,—like “a little learning,” “a dangerous thing.” “Drink deep or taste not the ‘Exchequer’ spring.” We hope and believe that he may be ranked in the category of lucky wits who have no power to apprehend from not drinking sufficiently deep of that beneficent fountain. On assuming his new duties at the Board of Trade, Mr. Fonblanque resigned the active editorship of the “*Examiner*” into the hands of Mr. Forster, who had for many years taken a leading part in its management, and who had been the chief writer of its dramatic and literary criticisms.

FORBES, SIR JOHN, M.D., D.C.L., and F.R.S., an eminent Physician and Medical Writer, fourth son of Mr. Alexander Forbes, of the Enzie, Banffshire, was born at Cuttlebrae, in that county, in 1777. He acquired the rudiments of his education at Fordyce Academy, where Sir James Clark, Physician to the Queen, was also educated. The close intimacy between them which began at school has been maintained throughout their lives. They prosecuted their studies together at the Grammar-School and Marischal University of Aberdeen, and went the round of the medical schools at Edinburgh, at the University of which city both took their degrees as M.D. with high honours, in 1817. They had both served for several years in the medical department of the navy, and left it at the same time. In 1814–15 Sir John Forbes was Flag-surgeon to the Commander-in-chief in the West Indies, and was present at several naval engagements, for which he received the war-medal. After leaving the navy, he practised his profession, first at Penzance, next at Chichester, whence he removed to London. In

FORREST.

is introduced to English practitioners the great discovery, by translating Laennec's treatise, and following it up by an original work of his own in 1824. As a writer of medical science he has acquired the very highest fame. "No man," says the "Medical Times," "of the present day has done so much for medical literature as Dr. Forbes. He was the first to bring the profession in this country fully acquainted, by his translations and notes, with the works of Avenbrugger and others—works which may be said to form a great era in the history of medical science. Dr. Forbes was also the active editor of the 'Cyclopædia of Practical Medicine,' one of the most valuable works of the kind in our language. But it was as editor of the 'British and Foreign Medical Review' that the labours of the Dr. attracted the peculiar notice. He conducted that Review for twelve years [1836 to 1848], with an ability, honesty, and independence of opinion, it would be difficult to find a parallel. His other literary works are 'The Physician's Holiday, or a Month in Switzerland,' published in 1848, and Memoranda made by him in Ireland in 1852, will show that he was qualified to shine as well in general as in medical literature." Besides the works above mentioned, he is also the author of "Happiness in its Relation to Work and Knowledge." In 1830 Dr. Forbes was appointed Physician to the late Duke of Cambridge, to Prince Albert in 1837, and Physician to the Royal Household the same year. In 1853, the Queen conferred on him the honour of a Knight of the Order of St. Michael. He is a Fellow of the Royal College of Physicians, Consulting-Physician to the Consumption Hospital, London; and an Honorary Member of the principal Medical Societies of Europe and America.

FORREST, EDWIN, an American Actor, was born in Philadelphia, March 9, 1806. Mr. Forrest very early manifested a strong disposition for the stage, and performed female parts at the South Street Theatre as early as 1816, and young Norval at the 'Nivoli Gardens a year after, being then thirteen years of age. In his character he made his debut at the Walnut Street Theatre, on September 27, 1820. Shortly afterwards he proceeded to the city of New York, in company with Messrs. Jones and Collins, managers of the Theatre. After an absence of several years, Mr. Forrest returned to the north, and effected a successful engagement at the Theatre, New York, then under the management of Mr. Charles Kean. In the summer of 1826 he visited his native city, where he effected a successful engagement. He shortly after visited New York, where he performed Othello for the benefit of Mr. Woodhull. From 1826 to 1834 may be dated the rise of Mr. Forrest's popularity. He visited Europe in 1834, and met with considerable success in England, where he expressed himself obliged to the kindness and attention of Mr. Macready. On a second visit to Europe he married, in 1835, the daughter of Mr. Sinclair, the singer, with whom

returned to America in 1838. Mr. Forrest continued playing successful engagements in different parts of America until 1844, when he again visited Europe, in company with his wife, where he remained two years; his success having been seriously impeded by capriciousness of his temper and the arrogance of his manners. In 1849 Mr. Forrest separated from his wife, with whom he had lived happily for many years. His charges against her, which were held to be unfounded, led to her applying for a divorce, on the ground of infidelity on his part. This she obtained in January, 1850, the jury awarding her, in consideration of his wealth, \$3000 for alimony. Mr. Forrest has since resided at Philadelphia, stopping when engaged in the pursuit of his calling. He is a man who has attracted attention to himself by disputes that do him no credit. As an actor, he does not deserve the popularity he is said to be able to command in America.

FORSTER, JOHN, Biographer, Critic, and Journalist, the proprietor of the "Examiner" newspaper, and the author of an admirable life of Goldsmith, was born at Newcastle in 1812, and is indebted for the enviable position he has attained in the republic of letters wholly to his own genius and perseverance, unaided by any adventitious circumstances which have assisted the progress of many less-gifted aspirants. The "Examiner" owes much of its esteem in which it is held by intellectual men of all parties to the happy union of genius and common sense which characterises its editorial articles, literary and political; its *curiosa felicitas* of observation; and the remarkable astuteness it displays in unken-ning and exposing to the glare of public observation all denunciations of humbugs. More polished in style and happy in reason than Cobbett, it displays much of that facile but trenchant power which can deal overwhelming blows with the least appearance of exertion; and which never fails to hit the nail on the head. Mr. Forster has been an extensive contributor to the columns of the "Examiner" for more than twenty years, and for the last seven has been its only editor. Notwithstanding this unremitting literary occupation, however, he has managed to find leisure for the production of a series of "Lives of the great men of the Commonwealth," for "Lardner's Cyclopædia," &c.; and the best, indeed the only, "Life of Goldsmith and his times," which is at all worthy of the subject; besides many articles in the "Edinburgh Review," the "Foreign Quarterly Review" (of which he was for several years the editor), and other periodicals. A lover of literature for its own sake, an able and uncompromising advocate of its interests, and a kind and friendly friend of such members of the literary profession, less fortunate than himself, as seem entitled to consideration, he has done more to raise the literary character than any living journalist. On the retirement of Mr. Dickens from the editorship of the "Daily Telegraph," Mr. Forster succeeded for a time to his post, but these

his scientific researches. Occasional glimpses of him may be had meantime in his too unfrequent communications to "The Athenæum."

FOX, SIR CHARLES, is the senior partner in the eminent firm of Fox, Henderson, and Co., contractors of the Great Exhibition Building in Hyde Park, and the Crystal Palace at Sydenham. Charles is a son of the late Francis Fox, Esq., of Derby, and at an early age was articled to his brother for the medical profession; but a taste for engineering leading him to devote to mechanical science every leisure moment, his indentures were cancelled, and the impression produced upon his mind by the opening of the Liverpool and Manchester Railway induced him to become an engineer. His first employer was Capt. Ericsson. Mr. Fox then struggled on as a lecturer, as a scientific assistant, and occasionally as a practical draftsman. At length he was appointed by Mr. Robert Stephenson as Assistant-Engineer to the London and Birmingham Railway, and remained with the Company until a year after the opening of the line, when he joined the late Mr. Bramah in establishing the firm of Fox, Henderson, and Co. His greatest triumph was the construction of the vast building for the Great Exhibition in Hyde Park, in 1851. The drawings for this edifice occupied Mr. Fox sixteen hours each day for seven weeks; and the engineer, though completed his great work, notwithstanding a legion of obstacles of his failure, he received the honour of knighthood in recognition of his genius and skill. He has since constructed the Crystal Palace at Sydenham, partly with the materials of the building in Hyde Park; and has also executed many extensive railway and other engineering works.

FOX, W. J., a Politician and Lecturer, the son of a small farmer, was born at Uggheshall Farm, near Wrentham, Suffolk, in 1786. His father, becoming afterwards a weaver at Norwich, young Fox was brought thither, and in youth giving promise of the talents which distinguished him, he was dedicated to the Christian ministry among the Congregational Nonconformists. With this view he was sent to Homerton College, then under the direction of Dr. Pye, but afterwards embracing tenets allied to Socinianism, he became a preacher of the Unitarian body, and eventually taking issue independent of all sectarian denominations, he for many years preached at the Unitarian chapel in South Street, Norwich. Mr. Fox has taken an active part in the politics of the day, employing both his pen and voice in supporting the extreme Liberal party. During the Anti-Corn-Law agitation he was a zealous and able speaker at the meetings of the League, and wrote "Letters of a Norwich Weaver-boy," which appeared in its various papers. He has also published "Lectures to the Working Classes," and a philosophical work on "Religious Ideas." Mr. Fox was elected M.P. for Oldham in 1847, which borough he unsuc-

assed entire days in

and rocks, and from the mountain-tops he looked yearningly
 on to the Senne and to the unknown world of distance behind it.
 When he was ten years old, his father having married a second
 time, he was sent to the local Gymnasium (College), where, under
 the direction of excellent masters, he made rapid progress in litera-
 ture. It was intended that he should follow the common university
 course on leaving the Gymnasium, but the plan was given up
 in 1825 when a brother of his late mother (then living at Edinburgh)
 offered that he wished to adopt his young nephew, provided that he
 did not make up his mind to become a merchant. He did not much
 like the thought of entering a counting-house, but out of regard
 for his father, who was far from rich, and enchanted with the
 thought of seeing Scotland, a country which Scott's poems and
 which had made him love and long for, he consented. He left
 Germany and was bound apprentice to a merchant at Loest, in West-
 phalia. He now understood that he was not to go to Scotland
 after some years. Here he devoted his leisure hours to
 reading and making verses, and for the first time saw himself in
 print. In the mean time, however, his uncle in Edinburgh failed in
 business, and was unable to carry out his intention towards the
 nephew. In 1829 his father died, and, finding circumstances
 unfavourable to a literary career, he left Germany and went to Amsterdam,
 where he obtained a situation at the office of a foreign banker.
 There he remained for about six years, keeping books, writing
 letters, and making for himself a name rather than a competence.
 It was here that he wrote those poems about the sea and foreign
 lands, which the waves and the ships seemed to bring to him as
 if they were rolling in, and which poems have become known through-
 out the world. While at Amsterdam his friends, the late Adelbert
 von Schlegel and Gustav Schwab, introduced him to literature at
 home. When he returned to Germany he found himself famous in
 his country. Nevertheless, he became once more a merchant's
 clerk at Barmen, in Rhenish Prussia, and he did not desert com-
 pletely until his poems had passed through several
 editions. In 1841 he married at Unkel on the Rhine. After his
 marriage he spent a year at Darmstadt and two years at St. Goar.
 At this time the King of Prussia (at the instigation of Chan-
 cellor von Muller of Weimar and of Alexander von Humboldt)
 offered him a small pension, which he accepted at the time
 when he considered the king a liberal and a man of progress.
 He was afterwards on this point a year or two after, he resigned the
 pension, publishing at the same time a volume of political poems,
 in which he stated openly and honestly his reasons for so doing.
 This created a great sensation, and made its author the subject
 of royal prosecution. He was compelled to fly from Germany in
 the autumn of 1844. He and his wife and family lived for some
 time in Belgium and Switzerland. They came to England in
 1845, when the poet returned once more to his former occupation
 as a merchant's clerk in the city of London. He had arranged for
 himself to go to the United States, where he thought to settle, when

of the South Pass, deflected to the Great Salt Lake, and
 made examinations right and left along his entire course. He
 connected his survey with that of Wilkes's exploring expedition,
 and his orders were fulfilled. But he had opened one route to
 California, and he wished to find another. There was a vast region
 of this line invested with a fabulous interest, to which he
 wished to apply the test of exact science. It was the beginning of
 winter. Without resources, adequate supplies, or so much as a
 trail, and with only twenty-five companions, he made towards the
 Rocky Mountains. Then began that wonderful expedition, filled
 with romance, daring, and suffering, in which, lost to the world for
 six months, he traversed 3500 miles in sight of eternal snows,
 exploring the grand features of Alta California, its great basin,
 Sierra Nevada, the valleys of San Joaquin and Sacramento,
 establishing the geography of the western portion of the con-
 tinent. In August, 1844, he was again in Washington, planning a
 second expedition, and whilst writing the history of the second, and
 its publication in 1845, was again on his way to the Pacific.
 In the conquest of California, in which he bore a part, he was
 the victim of a quarrel between two American commanders,
 stripped of his commission by court-martial. The President
 pardoned him, but Fremont, who would not accept mercy,
 demanded justice. His connexion with the Government now
 ended. He was a private citizen and a poor man. He had been
 taken a prisoner from California, where he had been explorer,
 warrior, peace-maker, and governor. He determined to retrieve
 his honour on the field where he had been robbed of it. One line
 he would complete his survey, the route for a great road from
 Mississippi to San Francisco. Again he appeared in the Far
 West. His old mountaineers flocked about him, and with thirty-
 seven men and one hundred and thirty-three mules he started for
 the Pacific. On the Sierra San Juan all his mules and one-third
 of his men perished in a more than Russian cold; and Fremont
 was on foot at Santa Fé, bereft of all but life. The men of the
 expedition knew him well; they refitted his expedition: he started
 and pierced the country of the fierce and remorseless Apaches;
 he won, or defeated savage tribes; and in a hundred days from
 Santa Fé stood on the banks of the Sacramento. The men of
 the expedition reversed the judgment of the court-martial, and Fremont
 became the first senator of the Golden State.

FRENCH, LOUIS-NAPOLEON BONAPARTE, EMPEROR
 OF THE FRENCH, claims to be the legal representative, and head of the family
 of Emperor Napoleon. The present relations of the Bonaparte
 family are interesting, and have been thus stated:—Napoleon Bo-
 naparte (as is well known) was the second son of C. M. Bonaparte,
 who married, first, Josephine, by whom he had no issue; second,
 Marie-Louise of Austria, whose only child, the Duc de Reichstadt,
 died in 1812, at Vienna, when the right line of the Imperial family
 became extinct. Napoleon had four brothers: Joseph, his elder,

is, and Jérôme; and Joseph, king of Spain at no sons. Lucien, children, five sons and one daughter and he is: Louis-Lucien, Prince (Prince Gabrielli), Lucien, Minister-plénipotentiaire (Count Valentini), Count the Marquis Honoré de Hortense, had one son Louis-Napoleon; the only one of the French. Jérôme-Napoleon and Napoleon Bonaparte Demidoff. Of the brothers: Félix Bacchiocchi, and (Emmerata); Pauline Leclerc of Naples, and brother Louis Murat, of Lætitia married to Count Rapp. Of the brothers remains. Of the sisters there are fourteen; and a considerable number. Anne, Louis-Napoleon's daughter. By right of primogeniture. By right of primogeniture should take precedence of the one who was in disgrace when the empire was passed on to the empire. How far this law is in force at the present, is a question frequently discussed. Louis-Napoleon, the Prince of Canino is the only one of the family who remains in France, Pierre, brother to Louis-Napoleon, ambassador to Madrid; and Louis-Napoleon, French Chamberlain. Louis-Napoleon, is the third son of Hortense, her mother being Hortense by her first marriage. Louis-Napoleon was born April 20th, 1808, and was educated in Holland, by the Emperor. He is one of the princes in the empire, victoriously held by the Emperor. He is the only two princes in the empire, shadow of the Empire. Louis-Napoleon was born 4th of November, 1808.

tered by Cardinal Fesch; the Emperor and the Empress Maria-Louise being his sponsors. After Napoleon's return from Elba, his nephew accompanied him to the Champ de Mai, and was presented to the deputies of the people and the army. The view of this scene left, as it was likely to do, a deep impression on the mind of the boy, then only seven years old. When Napoleon died him for the last time at Malmaison, he was much agitated: he wished to follow his uncle, and was with difficulty pacified by his mother. Then commenced the banishment of the family. Louis and his mother first lived at Augsburg, and afterwards in England; the latter state admitting the young exile to the rights of citizenship, and permitting his service in its small army. For a while he studied gunnery at the military academy on the shores of beautiful Lake of Thun; and during his stay amongst the Alps made excursions over the passes, knapsack on back and alpenstock in hand. While engaged on a trip of this kind, the news of the Revolution in Paris reached him; and when it was known that Philippe had become king, he and his family at once applied to be permitted to return to France, but were refused. Louis then applied to the new King of the French, and begged for permission to serve as a common soldier in the French army. The French government answered his petition by a renewal of the decree of his banishment. Disappointed in his expectations, and a second time Louis entertained hopes of another revolution in France. His brother and the King of Rome were both still living, and the elder brother of twenty-two had formed no definite plan of preferring his opposition to those of the younger branch of the Bourbon family. In the beginning of 1831 the two brothers left Switzerland and settled in Tuscany. They both took part in the insurrection at Rome. The elder brother died at Forli, March 17, 1831. Louis accomplished a dangerous flight through Italy and France, and spent some time where he remained a short time, and then retired to the castle of Arenenberg, in Thurgau. A part of his leisure in the years 1832-35 was devoted to the publication of several books. The first appeared under the title of "Réveries Politiques," in which he declares his belief that France can be regenerated only by the return of one of Napoleon's descendants, as they alone can reconcile republican principles with the demands of the military glory of the nation. Within a year or two after the publication of this he issued two others: "Considérations Politiques et militaires sur la Suisse," and "Manuel sur l'Artillerie." The last work of considerable size, containing five hundred pages, many lithographs. It was favourably reviewed in the military journals of the day. In the years 1831-32, when the throne of Philippe was still unsteady, a party in France had their eyes on the Duc de Reichstadt. According to French statements, a portion of the army was, in 1832, ready to acknowledge Louis as King so soon as he should reach the frontier. A whole host of generals and colonels included, expected him; and they had determined, if the ex-King of Rome did not appear himself,

raised my hand, signifying my desire to speak. Breathless silence
 reigned. 'Soldiers,' I said, 'it was in your regiment the Emperor
 Napoleon, my uncle, first saw service; with you he distinguished
 himself at Toulon; it was your brave regiment that opened the
 gates of Grenoble to him, on his return from the Isle of Elba.
 Now, new destinies are reserved to you. Here,' I continued,
 taking the standard of the eagle from an officer near me—'here is
 the symbol of French glory; it must become henceforth the symbol
 of liberty.' The effect of these simple words was indescribable;
 the time for action had come. I gave the word to fall into
 ranks; the music struck up; and putting myself at their head,
 I marched followed me to a man. Meanwhile my adherents had
 been active elsewhere, and uniformly successful. Lieutenant Laity,
 presenting himself, was immediately joined by the corps of
 volunteers. The telegraph was seized without a struggle. The
 volunteers commanded by M. Parquin had arrested the prefect.
 At that moment fresh tidings reached me of the success of the dif-
 ferent movements that had been previously concerted. I kept
 marching on my way at the head of the 4th Regiment to the Finkmatt
 barracks, where I hoped to find the infantry ready to welcome me.
 I arrived by the head-quarters, where the commander-in-chief of the
 department of the Bas Rhin, Lieutenant-general Voirol, resided,
 who, I heard, and was enthusiastically saluted by his guard with the cry
 'Vive l'Empereur!' I made my way to the apartments of the
 general, where a brief interview took place. On leaving, I thought
 it necessary to give him notice that he was my prisoner, and a
 detachment was assigned to this duty. From his quarters
 I proceeded rapidly to the Finkmatt barracks, and although it was
 late in the morning, the populace were drawn out by the noise,
 joining their acclamations with those of the soldiers, they
 surrounded our cortège in crowds. An unlooked-for error here occurred
 which had a most deplorable effect on the whole enterprise, which
 up to this far gone on so swimmingly. We had reached the Fau-
 bourg de Pierre, when, being on foot, the head of the column lost
 sight of me, and instead of following the route agreed on, and
 marching at once to the ramparts, they entered a narrow lane
 which led direct to the barracks. Amid the noise and confusion it
 was impossible to retrieve this mischance, and I took hurriedly
 the measures I could to provide against its worst consequences.
 Fearing a possible attack on my rear, I was compelled to leave one
 company of the regiment in the main street we had left, and hastening
 forward, I entered the court-yard of the infantry barracks with my
 men and some four hundred men. I expected to find the re-
 giment assembled, but the messenger entrusted with the news of
 my approach was prevented by some accident from meeting me in
 time, and I found all the soldiers in their rooms occupied in pre-
 paring themselves for the Sunday's inspection. Attracted, however,
 by my name, they ran to the windows, where I harangued them;
 on hearing the name of Napoleon pronounced they rushed
 flying down, thronged around me, and testified by a thousand

ks of devotion their enthusiasm for
pontonniers and the 3d Regiment of
 Conard and a great number of off

ceased, and in a few minutes I was a prisoner." Such is the story of Louis-Napoleon himself. He was detained a prisoner in Strasbourg, from October 30th till November 9th. He was then conducted to Paris, where he saw only the prefect of police, who informed him, that on the first intelligence of his capture his father had come into the vicinity of Paris, to try to obtain his freedom and save his life, or to excite sympathy for him. His life was spared, but he was told at the same time that he was to be sent to the United States. He protested against this, but in vain; and he was accordingly landed in that country. Here, however, he did not remain, but returned to Switzerland, where he found his mother in her death-bed. In 1838, Lieut. Laity published, with the sanction of Louis-Napoleon, a favourable account of the affair at Strasbourg, and was, in consequence, sentenced to five years' imprisonment, and to pay a fine of 10,000 francs. These circumstances, which were regarded by the government as the commencement of a new conspiracy at Arenenberg, induced them to demand that Louis should be banished from Switzerland. Some of the cantons seemed wroth to maintain their independence and Louis's rights as a son of Thurgau. On this France sent an army to the frontier, and threatened to support her demands, if necessary, by force. The ambassadors of the principal European powers signified their disapproval in the proceedings of the French government, and under these circumstances Louis-Napoleon thought it advisable to leave Switzerland, and take refuge in England. At the end of the year 1838 he took up his residence in London, and in 1839 he published a work entitled "Des Idées Napoléoniennes." In 1840 he resolved on a new attempt on the French crown. He hired an English steamer, called the City of Edinburgh, in London, and starting with Count Montholon, General Voision, and fifty-three other persons, on board, besides a tame eagle, they, on Thursday, the 6th of August, landed near Boulogne. They marched into the town about five o'clock in the morning, and traversed the streets, crying "Vive l'Empereur!" The first attempt they made was at a guard-house, where they summoned the troops to surrender, and refused them. The only man who did so was a young lieutenant of the 42d, who tried to induce the soldiers to accompany him. He, however, failed in the attempt; and as the National Guard soon beat to arms, and began to muster in force, Louis retreated with his followers out of the town, towards a pillar on the height above Boulogne, and there he planted a flag with a golden eagle at the top of the staff. Finding, however, that he was hard pressed with unequal numbers, he retreated to the beach, and was captured in attempting to escape to the steamer. His followers were then taken; but one unfortunate man was shot while struggling in the waves. Prince Louis, with Count Montholon, General Voision, and others, were soon conveyed prisoners to London, where they were tried before the Chamber of Peers, on the charge of high treason. When the Prince landed, he had immediately scattered printed papers, addressed to the French nation, in

state of things lasted but a year. In the autumn of 1852 he made
 tours through several of the departments of France; and on his
 return, his most devoted adherents in the Senate represented that
 the cries of "Vive l'Empereur!" with which the President had
 been greeted during his progress, unmistakeably indicated the will
 of France, and proposed that the question of restoring the Empire
 should be formally submitted to the nation. The proposal was, of
 course, accepted. France, alarmed at the prospect of any serious
 change in the government, and knowing that no substitution of
 rule could give his rule more power, at once voted the restoration
 of the Empire, which was accordingly proclaimed December 2,
 1852. The Prince then assumed the style and title of "Napoleon
 III., Emperor of the French by the grace of God and the will of
 the People." He was at once recognised by the Government of
 his country; but only after considerable delay by the Emperor of
 Austria and the German sovereigns, who received the *mot d'ordre*
 from St. Petersburg. The new Emperor showed a disposition to
 throw very light of the recognition which he desired so ardently;
 but he was, at the same time, preparing to compel the acknowledg-
 ment of his power in a more effectual and less formal manner.
 Already his Ambassador was asserting at Constantinople those
 claims which brought him into direct collision with the Czar, then
 the real ruler of Eastern and Central Europe. In 1853, when the
 conflict seemed imminent, Napoleon III. abandoned so much of
 his claims as might fairly give cause of complaint to Nicholas, as
 protector of the Greek Church; and thus he prepared the way for
 an alliance of the two Western powers which the late Czar could
 never believe possible. This union with England at once raised
 the position of the French Emperor among the sovereigns of the
 continent; it has been followed by an alliance between Austria
 and France, and by the establishment of a closer intimacy between
 the two courts than existed in the time of Louis-Philippe. While
 the new empire stands high in Europe, there is abundant proof of
 the hold which the Emperor has upon the people he governs. He
 who had obtained the crown by universal suffrage, resolved, when
 money was wanted for the war, to obtain it by the same means.
 In 1854, requiring a loan of 10,000,000*l.*, he applied to no great
 agent, but to the people of France, and he obtained the money
 without delay. In 1855 the experiment was repeated, with the
 most striking results. A law was passed on the 31st December,
 1854, providing that a loan of 500,000,000 francs (20,000,000*l.* ster-
 ling) should be opened to public subscription, in two stocks, the
 one at 4*½* per cent. the other of 3 per cent. The price of the former stock
 was fixed at 92 francs, that of the latter at 65*fr.* 25*c.* This rate
 was somewhat below the current price of the market, and, more-
 over, a period of eighteen months was granted to pay up the loan
 in instalments; so that the whole advantage afforded by the opera-
 tion to the original subscribers amounted to 3*·*43, or nearly 3*½* per
 cent. No subscription was to be received for less than 10 francs
 of rentes; and the subscriptions under 500 francs of rentes were

aken integrally in preference to conditions of the loan. The rate in France in nine days, from 100 to 2 milliards 175 millions sterling, on the whole of which 100%, was immediately paid. Of 100,000,000 francs were taken at 3 per cent, and the number of persons subscribing was 1,000,000 in the departments for 777,000,000 francs for 1,398,000,000 of capital. 1,000,000, and the Continental States

As the sum subscribed was not of the loan, it became necessary to demand, and it was found that an 500 francs rentes amount was, therefore, still to be made. The subscribers were altogether excluded, and, out of 100,000fr. received, 50,000fr. were made in old French and disappeared from circulation, in many years. A more striking proof on the part of the lower class is, a countryman presented him with a bag containing 1000 fr., "That is for the Emperor." "Nourry. "Not at all," replied the Emperor; I wish to assist him in his affairs. I lend him my money, and safely." "Will you have 3 per cent. To which the answer was I tell you it is for the Emperor's profit, and that is enough." This was the case; a great number of the eastern and western departments of France had the idea that they were lending money, and not to the State. On the 10th of March, 1871, the Emperor was married to Eugénie-Maria, born 5th May, 1826. On the 10th of May, 1871, by the Empress, he once more visited the British court; when the Queen, invested his Imperial Majesty with the Garter. Shortly after his return, he was assassinated by an Italian.

ITH, WILLIAM POWELL, gate, in Yorkshire, in 1820, an town. One of the most able *ex de genre* of the English Sc le, the "Spectator," Goldsmith, drawn his subjects:—sources

But where the latter tends to poetry and subtilty, the latter painter is characterised by humour and vigour; although, his art does not lack refinement. Mr. Frith's progress to fame and prosperity has been rapid. In 1840 he first exhibited a picture at the Royal Academy—one which gave earnest of skill and power—"John before the Countess Olivia." Others followed of steadily increasing merit: "The Parting Interview of Leicester and his Mistress Amy" (1841); scene from the "Vicar of Wakefield,"—"The Wife would bid both stand up to see which was the tallest" (1842); scene from the "Merry Wives of Windsor,"—"Mistress Ford, Page, Slender, and Falstaff" (1843); "John and Mary Queen of Scots" (1844); from the "Vicar of Wakefield,"—"The Squire describing some passages in his Town" (1845). In 1845 his "Village Pastor," from Goldsmith, attracted great notice to his name. It became a favourite, and won for him membership from the Academy. To it succeeded, in 1846, a picture, "The Return from Labour," and a scene from "Le Bourgeois Gentilhomme." In the Exhibition of 1847, one to the excellence of which the then "rising men" were noticed as coming in so marked a manner, his "English Merry-making thirty Years Ago" won golden opinions from all who saw, placing him far higher in repute than he had stood before. The succeeding year, at the Academy, his chief picture has been one of the leading features of the Exhibition: that of 1848, "An Old Maid accused of having Bewitched a Peasant-Girl, in the time of Elizabeth"; the "Coming of Age" (1849); "Sancho tells a Tale to the Duke and Duchess to prove Don Quixote at the bottom of the well" (1850); "Hogarth at Calais" (1851); "Pope makes Love to Mary Wortley Montagu" (1852). In 1853 Mr. Frith was elected R.A. Some of the subjects which accompanied the above, illustrating the life and manners of bygone generations, marked by claims even more genuine in some respects,—by truth and reality, unforced humour. Among these may be instanced a valuable and simple piece of dramatic action, "Sir Roger de Coverley and the Spectator" (1848); a "Stage-coach Adventure in the Forest,"—"The Soldier and afeard!" exhibited in 1849; "Honey-suckle induces the Bailiffs as his Friends" (1850). Very genuine talent and art is also apparent in Mr. Frith's occasional small portraits. In nearly all the pictures here enumerated, the painter shrinks from the real life of his own day; from that which Hogarth has done so well, and what in a far humbler way, within narrower limits, Webster, and Collins, have done in theirs. The willingness is not so much the ability, to cope with every-day subjects; to wrest the banal and commonplace to a painter's purpose. Enamoured of the picturesque, on his canvas, costume and "effect" dispute the place with reality and nature. In the popular favourite of the year of 1854, "Life at the Seaside," an attempt was made, manifestly, in a more legitimate and fruitful field:—to go with the antiquary, to hold the mirror up to nature, to borrow disguises from the masquerade.

ON, JOHN, Sculptor. One of the most successful of purely classic models, and within that limited class the most original of his order in his conceptions; for it was a strength of feeling, united to delicacy of execution, which was a pupil successively of Canova and of Thorwaldsen. He resided at Rome throughout his professional career, and in 1790, at Gyffyn, near Conway, North Wales; was a native of Anglesey, exercised the calling of a lawyer.

When he was about nine years old, his parents sent him to school. At the age of fourteen, — commencing his education as that to which Chantrey had been destined, — he was apprenticed to Messrs. Southwell and Co., cabinet maker; then, at his urgent entreaty, as a journeyman. After a few years' steady drudgery in carving seats and tables for furniture, — occasionally developing his natural talent in modelling small figures, — a visit to the works of the great statuaries, awakened his ambition to be a sculptor. He was then an industrious, promising apprentice, into a respectable art-student, to the great disappointment of his parents.

In his eighteenth year, a small figure which he had modelled in wax, first drew public attention. Messrs. Francis came to the youth's rescue, and purchased it for 70*l.*; themselves becoming his employers. With them he attracted the friendly interest of Lord Roscoe, a celebrity (Roscoe), who gave him a general welcome, and introduced him to an influential circle of well-to-do men, good models in art. At this time, more than one of the great powers, from Milton and Dante, were produced under the influence of Michael Angelo; an influence speedily followed by Roscoe's advice, as likely to seduce the imagination and exaggeration! In 1810, while yet with them, he executed a model of the "Seasons," and the first of his "id," now in the possession of Mr. John Gladstone. He preserved of models executed by him for the purpose of his pieces: a little "Cupid," in bas-relief, a recumbent figure of a woman.

At the expiration of his apprenticeship, a subscription was raised by several gentlemen of Liverpool, and sufficient to send the young sculptor to Rome, and to support him for two years. On his way thither, he made some commissions, and several commissions for portrait-busts were sent him by Mr. Michael Angelo Taylor, to whom Roscoe had introduced him. Flaxman praised his attempts, and encouraged him to a pilgrimage to Rome. By General D'Alembert, he was already provided with one letter of introduction.

Lord Castlereagh added another. Mr. Gibson arrived in Rome in 1820. Canova welcomed him; offered him a pension, which he declined; admitted him gratis to his studio; and subsequently recommended him to the Duke of Devonshire. From the Duke, Gibson

ed once more to his constituency for some time out of Parliament the borough of Cambridge. One of his parliamentary career was the great movement which had to do with food, and became one of the great issues of the day. In 1841 he was invited to contest with Sir George Grey the constituency. In 1846, at the time of the Corn Law agitation, when Lord John Russell's general policy was to carry out the principles of free trade embodied in the Corn Law, the minister sought to strengthen his position by associating with it some of the leading men of the country. Giffard's practical skill, business habits, and energy, marked him for selection; and he was appointed a member of the Board of Trade, and continued to serve until it was thought that his position might embarrass him in his re-

GIFFARD, STANLEY LEES
 "The Standard," evening newspaper, is a member of the Council of Dublin, John Giffard was prominent in Irish politics at the latter part of the present century. Dr. Giffard was educated at Trinity College, Dublin. After he came to London, for the purpose of studying the law. After some practice, he became the editor of the "Standard," the editor of the "Standard." At the present moment has been threatened by him for the purpose of that time with a daily paper left in the press by the destruction of the Standard. The Standard adopted a new creed, and was left in the lurch. Never was the Standard so completely successful. The Standard made himself felt through the influence of the ablest political writer of the time, and was considered as a great advantage to the Standard. It fully proved to be. A Christian Standard abated by his example. The Standard hitherto helped in no small degree as a profession, and introduced a more tentative and scholar-like tone to the Standard. Party spirit ran high, and was established, and a good deal of the Standard was devoted into political controversy. The Standard that the new evening journal, on rare occasions, and under the Standard, led to the kind of personalit

 politics in Paris. After ti

of a difference of opinion from the Government to be adopted in regard to the Maynooth in favour of the grant, then against it, and the Government announced its intention to vote again in its favour. Neither was the subject of the Jew Bill, for he opposed Mr. Stowe's silent support to a similar measure carried by the Government in 1845, and his election for the University of Oxford, by Sir Robert Inglis, to speak in favour of the measure. Inconsistencies wear the aspect of inconsistencies may have been, and doubtless were, in his principles. Your ordinary man of letters, however, would not notice such inconsistencies, because he never notices himself wholly to the service of his country, but the text with which he set out. In the introduction published his "Remarks on the Bill of 1842." Here again was a sacrifice, which was only equalled by that which was made by Sir Robert Peel. Not only were the thorough-paced Protectionists, but the Disraelis further access to his pocket-book, and Robert Peel of his ablest adjutant in the bitter parliamentary struggle of 1846. In 1847, however, Mr. Gladstone was for a temporary exclusion from the House of Commons, he succeeded Canning and Peel as the agent of the University of Oxford. How his honor may be judged from his dedication of his most important work, in the following inscription to the University of Oxford, T. Inglis, through the vicissitudes of a thousand years, he is providentially designed to be a spiritual, social, and intellectual, to this and to future times, and in the hope that his name may be found not alien from his own chance of remaining unbroken; anti-Tractarianism, inspired by several centuries of University, vehemently opposed Mr. Gladstone's opinions enunciated in this very work, in conjunction with Sir R. H. Inglis, to supply, however, beat the Low Church candidate in the Parliament to which he was elected, extreme conscientiousness, to displease all his supporters—the Liberals, by his inform, and his speech on Mr. Disraeli's agricultural distress; and the Conservatives with Lord Derby in February, 1847, government the only material defeat they

GOODALL, EDWARD, Engraver, born in London, 1785. He never studied under any master. In his early life he associated with the best of artists, devoting himself to the study of drawing, and also of painting. He created an original engraver, opening up a new and manifest new merits and capabilities in the art. Witness Sir Joshua and his portrait of M^r. Ardell; Wilkie and his,—Burnet and his day a numerous band of good engravers, and the fame by Turner. Of this number Goodall is the foremost. His small engravings in "Literary Souvenir" are unequalled in the art, combined with the utmost refinement. His engraving of Turner's "South Coast" are in a nobler style: bold, spirited, vigorous. Witness especially those of "Boscombe." Mr. Goodall has also executed engravings from Turner's "Cologne" which affords an instance of the encouragement given to the amateur in our day. It was executed at the request of an amateur, Mr. Allnutt, who was a loss of much as four hundred guineas. Several of the engravings from Turner have proved equal failures. Goodall from Turner, "Caligula's Bath," which he himself considers his best (large) plate.

GOODALL, FREDERICK, Painter, born in London, 1782. He commenced his study of painting at the age of thirteen, under the direction of his father, who was the eminent engraver. At the age of 18 he received a medal of the Society of Arts for a drawing of a Miner by Torchlight. He then commenced his first oil-painting, "A Miner by Torchlight," for which he received the large silver medal. In September 1800 he visited France. Of this visit he reports, in a sketch of his "Art-Journal," "My father accompanied me. On arriving at Rouen I was so enchanted with the city, that I did not wish to go on. My father, after some hesitation, for I was not of age, gave me ten pounds, telling me to go on as I could, saying at the same time, 'Be sure to come home again.' This was my first journey, staying there a fortnight, and going

circumstances of the army and country warrant the measure. The most surprising appears to have been the leniency with which he was treated by the victors. He went to Klagenfurt, his residence, but he was afterwards allowed to pursue his favourite study of chemistry. He published a narrative of his connexion with the war, under the title of "My Life and Acts in Hungary," in which he minutely detailed the events in which he was engaged, from the execution of Count Zichy to the capture of the Russians on the field of Arad. His own conduct, the work contains (as was to be expected) flattering statements with regard to his administration, and the leniency with which he was treated, and much, perhaps unmerited, scorn. The Committee of Public Safety, which, in Hungary, as it were, for the highest of all countries, will be received with due allowance, that one great cause of the difference in the objects for which the Hungarian and the Russian armies fought, almost the commencement of the war, the vindication of the right of the Hungarian Constitution guaranteed to them by Austria, and his party were entirely republican, and apprehend that much of the vituperation lavished on his conduct—especially his conduct at Arad—is due. What other could be expected of him, borne down by the overwhelming Russian and Austrian armies, deserted by the Hungarian army, without any prospect of external assistance, and had from time to time vainly tried to induce a disinterested spectator to conceive.

GORTSCHAKOFF, PRINCE ALEXANDER, Ambassador at Vienna, is the younger brother of the late General, and was born in the year 1806. He studied the study of public law, and at the age of 25 entered the diplomatic service as Secretary to the Russian Legation at Vienna. In 1830 he became Chargé d'Affaires at the Russian Legation at Westminister (then Lord Burghersh), and in 1831 he was sent to the court of Queen Victoria, at that time also resident at the court of Tuscany. In 1832 the Prince was appointed Minister of Embassy. In 1842 he was advanced to the rank of Plenipotentiary, and accredited to the Russian Legation at Stuttgart. He negotiated the marriage of the Princess of Saxe-Coburg with a daughter of the Czar. In 1843 he was appointed Envoy Extraordinary from the court of the Emperor of Austria to the Diet at Frankfort, retaining his post as Minister of Embassy at Vienna. In 1844 he was appointed Count Orloff's special mission to the

was but a pretext for obtaining an audience. Gortschakoff might ascertain how far they went up to the spirit of the treaty. To himself on this head, telegraphed to St. Petersburg, and two days after announced to Count Schuvaloff the Czar, he accepted purely and simply, and interpreted in the protocol of December 1854, the basis of this declaration that the conference opened March 15th, 1855. Gortschakoff was the agent in carrying out the policy of Russia, amongst the diplomatists of Russia, for the astuteness and tact of its negotiators. He was of the old Moscow party, and is decided against the influences which have been imported in the influence of the German party in Russia.

GORTSCHAKOFF, PRINCE MICHAEL, of the Russian Army of the South, was the second son of Prince Alexander, one of the Princes of the family of the Princes Gortschakoff in Russia, and reckons many saints and warriors. It has been said with much plausibility that he was more than to any striking military position, was the prominent position assigned to him, prompted by fanaticism and old Muscovite ideas. He entered the Imperial army at an early age, as an officer of the Artillery of the Turkish Army in 1828-29, during a part of which he was on the staff of General Krassowski. Here he was with the fortifications of Silistria, destined to be the power of Russia to the utmost. Silistria was a fortress, and the ramparts were in a corner. The Russians hoped to be able to enter the city, but the Turks, however, tried their patience throughout seven and twenty days after the opening of the siege. "whilst," remarks General Valentini, "while the military calculation for the defence of the fortress was subjected to a regular and energetic attack, the Russians made a sortie on the night of the 15th, and made themselves masters of the third day; but the Russian General, foreseeing the result, ordered for them; a hand-to-hand conflict, the Russian reserves attacked the Turks, and routed them, and made it impossible for them to retreat without great loss. Silistria fell into the hands of the Russians, who had waited for the event, proclaimed. It was the duty of the corps attached to occupy the attention of the Turkish army, and remained with Krassowski's army.

against Poland, when he served for a short time as chief of the staff to General Pahlen, at the same time commanding the column of artillery. Perhaps artillery has never performed a more noble part than in the battle of Ostrolenka, where Gortschakoff, under his orders seventy guns. Ten times the Poles rushed forward to drive the Russian Grenadiers into the Narew and storm the bridge, and every time Gortschakoff shattered their attacking columns with grape and canister-shot. At Grochow he had, in the same campaign, previously rendered a similar service to his master; and at the last struggle for Polish independence, that of Warsaw, he played an important, although less decisive, part. During the Polish campaign he had been promoted to the rank of Lieutenant-General, and upon the disgrace of Count Solli he was placed on the general staff of the active army. In 1843 he became General of Artillery, and in 1846 was named Military Governor of the Caucasus. He accompanied the Russians upon that mission of expedition which terminated the struggle for Hungarian independence, but achieved no new distinction on that occasion. In 1847 Gortschakoff visited London to represent the Russian army at the funeral of the Duke of Wellington, who had held the rank of a Marshal in the Imperial service. In the summer of 1853, when the Emperor of Russia had resolved to take possession of the Turkish Principalities, Gortschakoff was appointed to the command of the army of occupation, at first numbering about 40,000 men, and arrived at Jassy, July 1st. The service was of the most arduous kind until, in October, Omer Pasha sent him a polite note, inviting him to recross the Pruth, with the alternative of being expelled from his usurped position. Immediately afterwards, he saw the fortress occupied by the Ottomans, and fortified to resist a force of 100,000 assailants. At Oltenitza, on the 4th of November, he was completely defeated. At Citatë on the 6th, his lieutenant, Aurep, who had been sent to attack Kalafat, was attacked and defeated with great loss. Finally, in April, Gortschakoff commenced the siege of Silistria with at least 60,000 men, and a corps posted so as to cut off the communications of the fortress with Omer Pasha's army. Here, finding the Turks just as brave, but more skillful than in 1829, he wasted two months; attacks with heavy columns, incessant cannonading, and all the scientific aid of the day, the chief engineer of the Russian army, proving vain in a work which, if somewhat stronger than the Silistria of 1829, was one to which military men reluctantly conferred the name of a fortress. Schilders and five other Russian vessels, with at least 10,000 men, perished in this unsuccessful attempt; and probably no one was more relieved than Gortschakoff, when orders were sent from St. Petersburg ordering the withdrawal of the Russian army from the Principalities. In justice to Prince it should be stated that when, in April 1854, the unexpected energy and valour of the Turks had given the war on the Danube a seriousness probably unexpected by the Czar, Gortschakoff's responsibility was diminished by an arrangement under

which his movements were to be subject, who also visited the Principality, and as the greatest military officer, temporarily assumed the honor. On the 28th July, Gortschakoff, who had been officially proclaimed "Death to the inhabitants of Bucharest that the Emperor quit the unhealthy regions of the Danube," was soon afterwards with his entourage in the frontier. The army of the Danube, consisting of the army of the South, and Gortschakoff, with all the powers proper to a Russian army corps. His headquarters in 1854 were at Kiachbeneff, and he was in position to oppose either the Austro-French force from the Principality, or the maritime allies. Gortschakoff's operations in the Danubian Principalities have been severely criticised, according to Russian official documents, during the year of occupation, of a force of 40,000 men, wherewith to guard a frontier. In a letter to Omer Pasha, to be criticised with apparent reason, that the Turks should never have been allowed to occupy the peninsula, and still less to construct a railway completely cut the Russians from the Danube in Servia. To this his spokesman is not made for the character of the operation and devoted on the soil of Hungary. The power of numbers in foreign operations were delayed until large masses were discouraged; that the losses from the unhealthyness of the locality, not to dwell on desertions, chiefly among the Polish, and finally, that the passive resistance embarrassed his position and narrowed his operations. In 1855, Gortschakoff was appointed to the command of the Russian forces in the Crimea. Oster-Sacken conducted the demoralising operations. Read and Liprandi commanded the operations on the Mackenzie plateau, the north of the Caucasus. The Prince allowed the summer to pass without risking an action. On the 18th of August he sent forward the two divisions to attack and on the 20th he moved on the Sebastopol side, he was successful. The operation much resembled the French undertaking at the Alma, in 1854, inasmuch as the parts were inverted and

crossed the river, and even ascended the steep on the opposite side, under a terrific fire from the Piedmontese artillery. "Carried away by their own ardour," as Prince Gortschakoff says, they reached the crest of the heights broken and shattered, and became an easy prey to the French, who, with extraordinary patience, allowed them to assemble there, opened on them with a terrible musketry fire, and next charged them with the bayonet. The French made 400 and the Piedmontese 200 prisoners: the Russian loss can hardly have been less than 5000. General Dier has stated that their killed alone numbered 3400; but, as to the murderous fire of the Piedmontese artillery, the very proportion between killed and wounded was not maintained in the battle. This unexpected sally would appear to have been rather more nor less than a last effort of courage and despair—indeed, it is understood, from St. Petersburg—seeing that within a month the Russians had evacuated their stronghold, and the ranks of the allies were flying over Sebastopol. Of the personal appearance of the Prince, a German gentleman, who travelled in the Principalities in 1854, has given the following account:—The Prince has a tall, commanding figure, thin, but strong. His head and the upper part of his body incline forwards, but this appears to be more from the effect of custom than old age, for at 63 years of age, he is hale and healthy. His eyes, which in a looking position frequently shoot over his spectacles, have a penetrating and scrutinising look; his voice is deep but not sonorous, and his whole appearance impresses one with that decision and energy peculiarly belong to a good military commander. He appears to have little concern for the future, but rather to be impelled by the force of circumstances, waiting with patience for the moment to strike, and then developing his resources. He is a Russian in his habits, but his pedantry is of the most original sort. His operations in Wallachia were of the most old-fashioned character; it was always as if he expected the Turks to cross the Danube and attack him just at the point most desirable to him. Though his outward appearance is cold and repulsive, he is said to be very kind and warm-hearted. It is always with sorrow that he signs orders for the punishment of his soldiers. The Prince was not one of the Wallachian boyards or nobles, who expected to find in a ruler the winning manners of a courtier and diplomatist, and was struck by the plain and straightforward nonchalance of the Emperor.

GOSSE, PHILIP HENRY, Zoologist, was born at Worcester, on the 6th of 1810, but was removed in infancy to Poole, in Dorsetshire, where he early imbibed a love of natural history. In 1827 he went to Newfoundland in a mercantile capacity, and here he occupied his time by collecting insects, and making coloured drawings of them and their transformations. After a residence in that colony of five years he visited Lower Canada, pursuing zoology, but especially entomology, with avidity for three years; after which he

travelled through the United nearly a year, making there insects, especially the fine leg returned to England, and in 1 "Canadian Naturalist." In 18 spent eighteen months in the that magnificent island; published researches in "The Birds of Jamaica." The composition for the Society for Promoting several years, during which he to the microscope, by the aid seven years have been chiefly have constituted his favourite collected an immense number with a view to a monograph driving him to the sea-shore investigations which were given to on the Devonshire Coast." In the formation of those published marine animals which are now published "The Aquarium." "A Manual of Marine Zoology" still engaged.

GOUGH, HUGH, VISCOUNT in 1779, the son of George G Limerick. He entered the service of the Cape of Good Hope in 1795, and afterwards in the service of Porto Rico, the brigand war in He proceeded to the Peninsula at the battles of Talavera, Barossa, engagements he received a wound in the head. At Barossa, his 8th French regiment, and at V At Nivelle he was again served land force at Canton, for which nearly the whole of the operation was made a baronet. On the wing of the army of Gwalior Maharajpore, and captured 50 army under his personal command Moodkee, Ferozeshah, and Sol the thanks of both Houses of peerage. During the last decade 1848-49, Gough displayed his subdued the proud enemy, the life. The next year he received

of the peerage; from the East India Company a pension of 2000*l.*; and a similar sum from Parliament for himself and his next two successors.

GOUGH, JOHN B., Lecturer. There is no class of public instructors whose admonitions carry with them so much weight as that of the reformer who warns us of the rock on which he has himself been shattered. It is for this reason that, in the eyes of a large body of well-meaning people, the axiom of "the greater the sinner the greater the saint" has met with ready acceptance; and the moralist whose warnings are most earnestly listened to, is usually the man who denounces the most loudly the vices of which he has himself been the slave. The only drawback on the usefulness of such moralists is the temptation which is thus presented to them, and against which they are not always proof, to exaggerate their own evil habits in order to obtain increased credit for the energy and resolution which have enabled them to overcome them. The lower the condition of abasement to which they have come to have descended, the greater the credit they expect to win for having lifted themselves above it. Mr. Gough is one of the self-accusing order of monitors, and has found his account in the vicissitudes from which he has had enough of firmness of character to emerge. Were this his only claim as a public lecturer, we should have felt ourselves called upon to discuss his performances in that place. He has, however, other and more remarkable qualifications for a class leader. He is one of the most eloquent and vigorous orators we ever remember to have met with in his sphere of life; and with few of the higher attributes of sterling eloquence he managed to make himself felt to an extent which is almost without a parallel among self-educated speakers. That there may be no mistake about him and his antecedents, he has written and published his autobiography; and if we except a too-obvious anxiety to deepen the shadows of his former life and habits, in order to contrast them with the brightness of his present position, his book is an unexceptionable one, and is calculated to make a salutary impression on the minds of the class of people to whom it is chiefly addressed. Mr. Gough was born in 1817, at Maidstone in Kent, where his father, a "broken soldier," who had served during the Peninsular War in the 40th and 52d Regiments and had settled down with a wife and two children upon a pension of twenty pounds a-year. He had seen Sir John Moore led off the field at Corunna, and had taken part in several of the battles of the Peninsula. He was a soldier, and a bit of a disciplinarian, but nothing more. "My mother," says Gough, "was set in a gentler mould. Her heart was a fountain whence the waters of affection never ceased to flow." She was, moreover, superior to most of the people around her in her little acquirements, having been the village-schoolmistress for twenty years. Under her influences the boy increased in years, and, so far as circumstances would permit, in knowledge also. In one important branch

of village learning he had attained, the proficiency. He was a good reader; were often put in requisition by his then picked up shillings and sixpence, by reading the newspapers of ticians who frequented the Sandgate tion, when his poor mother had tramped scholastic labours of the day, to d manufactured, without success, he w shillings towards the domestic expen years of age, a person about to emigr him over with him, teach him a trade, was twenty-one years of age, for the 1 the nail. To this tempting proposal 1 10th of June, everything having been the Thames in the ship *Helen*, suppl including a few religious publications to command. He remained only two; he had been consigned; during which either a Sabbath or day-school; with little chance of his being taught any the purpose of paying the postage of; he solicited his permission to go to Ne of learning a trade. The reply having out, on the 31st of November, 1831, struggle for the means of ordinary n acts of friendship from strangers, he binding business, with such assiduity t workman, with prospects that seemed father, mother, and sister, to join him the Peninsular veteran could not hav York, or, indeed, in any other than without forfeiting his hard-earned per however, determined on accepting th crosses, arrived in safety at young Go ther died in less than a year afterwar health rapidly declined. Gifted with able to sing a good song, he soon got bad to worse, until he became a fre former at theatres, and finally a conf of the lowest public-houses in New ' confessions that Mr. Gough's mora sents from the beginning; for, accord self, he was a liar and a dissimulator; he expected that a youth of such hab no business of any kind. He did not situation with the recommendation, an excellent workman when he pleased wholly to theatres, and dissipation, i ment in them for subsistence, he was

care of one of his new patrons, and thrown altogether on his
 own resources. He next obtained a situation as journeyman to a
 shoemaker at six dollars a-week; but, owing to his profligate habits,
 did not retain it long; and his arrangement with the captain of a vessel
 bound to Chaleur Bay does not appear to have been more durable.
 He had become, in short, an habitual drunkard. Having made
 new resolutions, obtained a new situation in a bindery, and united
 himself in marriage with that of a respectable young woman of New
 Brunswick, he commenced housekeeping, and was for a time not wholly
 forgetful of his social and moral duties. He, however, soon re-
 turned into his previous habits of dissipation, and sank at length
 into such a state of poverty and degradation that he began to be
 despised by his own boon companions; as, of course, he had long
 been by his more reputable acquaintances. Whenever his fortunes
 were at their lowest ebb he made fresh resolutions, and kept them
 a few weeks; but he seems to have returned invariably to his
 former practices. He says little or nothing about his poor wife,
 who continued to support herself by straw-bonnet making; but
 her unhappy condition may fairly be inferred from what he has
 said of himself. After exposing himself to positive want, a kind
 friend was induced to furnish him with money enough to pur-
 chase tools; and having the reputation of being a skilful workman,
 he was again reinstated in a situation, with the same result. He
 was at this time to have carried spirits about his person, and
 was supplied all day long. Wherever he was, he had his
 stock of spirits of one kind or other. "Such a slave was I to the
 bottle," says he, "that I resorted to it continually, and vain were
 the efforts I occasionally made to conquer the debasing habit." He
 was now a father, but his moral perceptions had become so com-
 pletely blunted that this addition to his responsibilities appears to
 have had but little effect upon him. About this time an impression
 had been made upon his mind by a lecture against intem-
 perance, delivered by a reformed drunkard who visited his neigh-
 bourhood, but it was soon effaced. His constitution now began to
 grow much impaired that he was unable to perform the more
 laborious operations of his business—the finishing, gilding, and letter-
 ing—and thus became reduced to the greatest penury. The accounts
 he gives of his delinquencies are of so extreme a character
 as to stagger belief. He tells us, among other marvellous
 tales of his drunkenness, for example, that he drank the greater
 part of a gallon of rum in three days! Where he obtained the
 means of purchasing such inordinate quantities—his health broken
 and his means of livelihood impaired—he does not condescend to
 say. Five dollars a-week, the amount of his wages when in
 work, would assuredly not have supplied them. Delirium
 tremens, with all its horrors, furnishes stirring materials for the
 chapter of his revelations, and is wrought up with no ordinary
 effect. All his furniture, and portable property of every kind, had been
 sacrificed to his pernicious propensity. His wife and child, wanting
 almost the commonest necessities of life—for he does not

pace with which he detailed all, and, perhaps, something more than
 the iniquities of his earlier career, and denounced them in others,
 was at once recognised, and produced, it cannot be doubted, the
 most beneficial consequences. In an unhappy hour he was led to
 take the pledge some five months after he had taken it. Supping
 at a restaurant with some acquaintance, he was induced, without thought,
 to take a glass of wine or brandy which some one had offered to
 him, and drink it off. When suddenly the terrible thought flashed
 across his brain. The single glass "roused his powerful and now
 his deadly enemy," and on the principle, we presume, of "in for
 penny, in for a pound," he "swallowed three or four more pota-
 toes" before he went to bed. On his return to Worcester, (the
 temptation had overtaken him at Boston,) he drank again. Having
 consulted some temperance leaders, and made a clean breast of it, he
 was recommended to make his confession at a public meeting;
 there, "with an utterance half choked with the intensity of his
 remorse," he acknowledged his error to crowds of admiring auditors,
 with so much success that he had to go over the same ground again
 and again. In short, his *lâches* supplied him with a new weapon
 with which to combat King Alcohol, and a new and salient topic
 for his eloquence. Meetings were got up to "sympathise with him in
 his misfortune," and thousands who had been to see one of the
 worst drunkards of his time, now flocked to hear Mr. Gough's
 strong denunciation of his error. With this striking *drop* scene
 concludes the second act of his truly melodramatic history!
 In the year 1843, Mr. Gough has laboured incessantly, and with
 great ability, in behalf of the temperance cause; with such success,
 that his progress appears to have borne the appearance of a tri-
 umphal march. In September of that year he visited Boston,
 where he delivered several addresses to crowded audiences. In
 the ensuing November he married a second wife, who thenceforward
 participated in his triumphs. He seems to have had no further
 pity for the poor young woman and her child, whose sufferings
 at their death must have been so grievously aggravated by his
 sin. After his second marriage, he visited, by invitation, Phila-
 delphia, New York, Richmond, Charleston, Cincinnati, and other
 large cities of the United States, where he lectured to large
 numbers of people of all orders. He entered Boston in a barouche,
 drawn by four white horses, and so dense was the crowd assembled
 round him, that it was with the greatest difficulty that he pene-
 trated to the State House. The shops were closed, and the city
 laid out as if for a *fête*. A large body of ladies were in attend-
 ance, and formed part of the procession. Bands of music and
 temperance banners preceded their approach, and great numbers of
 temperance societies from various parts of the State helped to
 form the cold-water army. Numerous handsome testimonials were
 presented to Mr. Gough. The ladies of Boston gave him an Ame-
 rican "Annual," in a silver basket, and a gold pencil-case. In
 other places his female admirers presented him with medals,
 richly-bound Bibles, and silver cups. It would be idle to

to follow him in his va States. "I find," says he, May, 1843, to the 1st of Jan elve thousand miles by land and five addresses in cl e hundred and ten of which l thirty-one thousand seven ice pledge." LD, JOHN, the well-kno a Dorsetshire, September 14 a strong desire for the study en his fourteenth and twent Townsend Aiton, Esq., at taste for botany and florical zoology. Shortly afterwar ly to afford a wider and

ches. In 1830 a fine series of birds from the hill countries of Asia came into his possession, and as this was the first collection (any extent which had reached England from the great Himalaya range, Mr. Gould was prevailed upon to attempt a description of a hundred species, which was published under the title of "A History of Birds from the Himalaya Mountains." This work appeared in January, 1831, and its success was so great as to induce the author to commence another of a more extensive character, on the birds of Europe. This was followed by a monograph of the "Lamprolaimæ," and a monograph of the "Trogonidæ," on the completion of which Mr. Gould left England for Australia, in the month of 1838, for the purpose of studying the natural productions of that country. The result of this visit was "The Birds of Australia," a work in seven folio volumes, containing figures and descriptions of upward of six hundred species; and the author has in preparation a work on the "Mammals of Australia." Mr. Gould has devoted much attention to the group of Trochilidæ, or humming-birds, and formed the unrivalled collection lately exhibited in the gardens of the Zoological Society in the Regent's Park, and now in the Crystal Palace at Sydenham.

GRAHAM, RIGHT HON. SIR JAMES ROBERT GEORGE, Bt., several times a Minister of the Crown, was born June 1792. When Earl Grey was called into power, Sir James was appointed Lord of the Admiralty, and a member of the Cabinet, which he held till 1834, when he retired on account of the extent to which his colleagues contemplated carrying out the principles of a measure of reform! At the head of the Admiralty, Sir James effected improvements in the civil administration of the navy and in the estimates to nearly the amount of a million. He committed blunders in ship-building, by which a much larger amount of the public treasure was hopelessly and recklessly expended. There is little doubt that he possesses considerable talents as an official and a debater. His forcible and eloquent denunciation of the emoluments of privy councillors, the salaries of officers, and the cost of foreign missions, greatly contributed to draw public attention on the lavish expenditure of Government. His political history exhibits him in every phase of opinion. In 1815 he wrote a pamphlet in favour of the Corn-laws, and advocated some bold measure for getting rid of the national debt. In 1825 he was sworn in as a Privy Councillor. In 1832 he assisted to bring in the Reform Bill. From 1841 to 1846 he was Secretary for the Home Department, and incurred much odium by opening the doors of Mazzini, and betraying their contents. In his address to the electors on the dissolution of 1841 he stated, that "he regarded every personal sacrifice light in comparison with the sacred duty of defending the Protestant Church, of combining education and religion, and of defending the monarchy against the inroad of democratical principles inconsistent with its safety; he was the champion of election by ballot; opposed to a further extension of

and the command of a detachment of soldiers, from Tilbury Fort, Essex, on board the transport brig Admiral Lake. They landed in Newfoundland, after narrowly escaping shipwreck during a fog, the rapid currents of Cape Race. He was at St. John's during the riots in that colony; and when the town was destroyed by fire, assisting to suppress the riots his father greatly distinguished himself, and was thanked by the Governor. The younger Grant spent several years with the troops in America, and his education was principally received in barracks. To this military training may be traced the style and character of the works which he has given to the world. He returned home in a transport with other soldiers in his father's charge, in October, 1839, when he was gazetted by Lord Hill to an ensigncy in the 62d, or Wiltshire Regiment. He joined the provisional battalion at Chatham, and in 1840 had charge of the dépôt. He left the army soon afterwards, and devoted himself to literature and the study of Scottish antiquities. He was an expert draughtsman, and had always a taste for books. His first work, "The Romance of War, or Highlanders in Spain," was published in 1846. It was followed by an additional volume in 1847, being a sequel to it, with the secondary title of "Highlanders in Belgium." His next work was "Adventures of an Artillery Camp, or a Campaign in Calabria," 3 vols., London, 1848. This was followed by "Memoirs of Kirkcaldy of Grange," 1 vol., Edinburgh, 1849; "Walter Fenton, or the Scottish Cavalier," 3 vols., London, 1850; "Memorials of Edinburgh Castle," illustrated by drawings of the author, 1 vol., Edinburgh, 1850; "Bothwell, or the Days of Queen of Scots," 3 vols., London, 1851; "Memoirs of Sir James Hayburn, Marshal of France, and Colonel of the Scots Greys," 1 vol., Edinburgh, 1851; "Jane Seton, or the King's Mistress," 2 vols., 1853; and, "Philip Rollo, or the Scottish Artillery," 2 vols., 1854. Of several of these volumes cheap editions have appeared with great success. Of that of "Bothwell," which cost only a florin, ten thousand copies were sold in a month. In the "Dublin University Magazine" Mr. Grant has been a constant contributor of memoirs, such as "General Count Lally," "The Duke of Albany," &c.; also to "Tait's Magazine" of the memoir of "Sir James Wood of Largo," etc. With his brother, John Grant, he took an active part in the Scottish Rights movement. Mr. Grant's style is very graphic, and he is a complete master of all the details and descriptions of scenes and incidents. As he is not yet a young man, the reading public may expect many more productions from his fertile pen.

GRANVILLE, GRANVILLE GEORGE LEVESON GOWER, EARL, is the eldest son of the first earl, by the second daughter of the fifth Duke of Devonshire. He was born May 11, 1815, and was educated at Eton and Christchurch, where he took his degree in 1834. The following year he became, under his father, attaché to the embassy at Paris; and in 1836, being just of age, he was elected Member of Parliament for the borough of Morpeth. He was again returned

at the same borough in 1881 retired from parliament, and Secretary of State for Foreign Affairs when he once more took his seat in parliament he always remained a able and consistent advocate of the cause. He was appointed Deputy-Lieutenant of the County of Devon and succeeded to the peerage in 1885 under the Government, and was a member of the Royal Commission for the Grievances of the most diligent working member of the House. He was called to a seat in the House of Commons after he had delivered to him the office of the successor of Lord Palmerston but for a short time, as he died afterwards. Besides the post of Lord of the Manor of Cranville has held those of Master of the Buckhounds, Peer of the Duchy of Lancaster and was appointed President of the Board of Railway Commissioners of Railroads.

GRATTAN, THOMAS

Thomas Grattan, "Highways and Byeways," was the son of an old and distinguished family. His mother, whose maiden name was Colley, was of the family of the Colleys of the name of Wellesley, and were of Wellington. His father, Thomas Grattan, of the Queen's County, was an advocate of his profession, received through his mother Carberry, in the county of Wick, his father's house, where he rebelled, and as often galloped servants, was, in the memory of the removal of the family to the care of the Rev. Henry Grattan received such portion of his education. In an early age he was removed to a boarding-school with a view to his being brought up as a friend was a man of moderate means and that he had an excellent free access. The consequences were anticipated. Young Grattan studied the law, and his appetite for the law, and his appetite for the law, and his appetite for the law, contracted a positive aversion to the law, and nothing would induce him to enter the army. He had an uncle, an officer, whom, Lieutenant-colonel (

I had served in China and the East Indies with considerable
 notoriety: whilst his brother William, the author of the "Adven-
 tures of a Connaught Ranger," was present at nearly all our Penin-
 sular battles. Thomas's ambition was accordingly respected, and a
 commission in a regiment of militia secured for him, as the readiest
 mode of getting him without purchase into the line. When the
 opportunity occurred, however, his father, one of whose sons had been
 killed at the head of his company in Java, and another severely
 wounded at Badajoz, was unwilling that the young militiaman
 should engage in similar perils: and his entreaties, supported by
 the wishes of his family, induced him to abandon his intention. When,
 however, he had overcome the scruples of his friends, and had left
 home for the purpose of joining his regiment, he was met at
 Calcutta by the news of the battle of Waterloo, and the ter-
 mination of the European war. After a few months' recreation
 at home, an opportunity presented itself to him of taking service in
 the South American army in the War of Independence then
 raging against the Spanish yoke; but here again his destiny
 interfered with his plans. In the small brig which was to convey
 him to a French vessel about to sail from Bourdeaux to Venezuela
 it was his good fortune to meet with a family of the name of
 Grattan, who were on their way to the south of France, and with
 whose members he fell in love so "intirely," that in less
 than two months they had become one flesh and blood. Thomas
 became a delighted husband, abandoned altogether his dreams of
 martial glory, and left the patriots of Spanish America to settle
 their quarrels without him as they best might. No sooner had he
 settled down in the south of France than his old tastes returned,
 and he decided on engaging in the perilous and ill-rewarded pro-
 fession of authorship. He made his *début* with a poetical romance
 in imitation of Scott, entitled "Philibert,"—which, however, met
 with a very limited degree of success, and hardly deserved more.
 Determined to seek a wider field for his exertions, Grattan removed
 to Paris, where he had the good fortune to become acquainted with
 literary celebrities; among them, Moore, Washington Irving,
 Casimir de Lavigne, and Lamartine, by whom his aspira-
 tions for literary fame were cordially encouraged, and his means of
 attaining it greatly promoted. Introduced to the "New Monthly
 Magazine," when it was edited by the poet Campbell, he soon
 became a frequent contributor to its pages; and the success of
 his papers in that publication, and in the Edinburgh and West-
 minster Reviews, induced him to venture on an independent work
 on his own account. Hence the first series of his "Highways and
 Byways." It was not, however, until his manuscript had been
 offered by four different bookselling firms that he succeeded in
 finding a publisher for it. He had, indeed, laid it aside as worth-
 less, and turned to other avocations, when he received an inti-
 mation from Messrs. Whittaker and Co. that they were willing to
 undertake the work. It was published by them accordingly, and
 with unequivocal favour. Offers poured in from several other

led him, in 1837, to resign his post before the fleet had yet reached the American waters. In 1842 he accepted the post he now occupies at Cambridge. Besides his lectures at New York, Dr. Gray has delivered two courses of Lowell lectures in Boston. He has twice visited Europe, for purposes connected with American botany; having been absent more than a year each time. The first of these visits was in 1838-39, the second in 1850-51. Dr. Gray published, in 1836, his "Elements of Botany," which he subsequently enlarged into the "Botanical Text Book." This work has four editions have been issued. In 1838 he commenced, with Dr. Torrey, "The Flora of North America." The immense amount of materials from Texas, Oregon, and California, have occupied the authors, that for some time past they have been unable to more than keep pace with the discoverers of new plants, and carrying their work further towards completion. In 1848 Gray gave to the world another valuable book, the "Manual Botany for the Northern United States," a work long needed, and of the highest authority with botanists in the region to which it is adapted. In the same year appeared the first volume of the "Flora Boreali Americana Illustrata," a work in which one species of each genus, within the bounds of the then organised states of the Union, is to be figured and described. The drawings are by Isaac Hays, an artist unequalled in botanical delineation since the time of the first volume. The second volume has since appeared, and other parts are in progress, but the work must of necessity occupy many years. Besides these separate publications, the contributions of Dr. Gray to the "Annals of the Lyceum of Natural History of New York," "The Transactions of the American Philosophical Society," "The Smithsonian Contributions to Knowledge," and other similar publications, are too numerous to be enumerated singly, and their influence on the advancement of American Botany, the design of his life, is widely known and highly appreciated.

GREECE, OTHO I., KING OF, and brother to Maximilian II., of Bavaria, was born at Salzburg, 1st June, 1815, and received his education from Councillor Oettl, Schelling, Thiersch, and other eminent men, whom it was the delight of his brother, the King Louis, to gather around his court. At the age of seventeen he was elected to the throne of the newly-constituted kingdom of Greece, in virtue of the authority given by the nation to France, Great Britain, and Russia. The convention between the three powers and the King of Bavaria, acting for his son, stipulated that Greece should form an independent state, and that the powers, by treaty with the Porte, should fix the limits of the kingdom, then to be perfectly defined; that the majority of the young king, then a minor, should be fixed at 1st of June, 1835, when he would have completed his twentieth year; that during his minority the King of Bavaria should give his son three councillors as a regency; that a sum of sixty million francs should be guaranteed by the three powers, the interest constituting a first mortgage on the public

rennes; and that a corps equipped by Greece, should be the new state until the organ accepted the crown 5th October 1832 acknowledged its king, and new dominions with the regency February, 1833. The power foundations of the state had been weak and poor, and by the time the loan had disappeared from petty civil war, and was frequently held in check whatever possible. In 1837, the king, or had sought their name so unpopular that Otto and with them the little Cyprian guarded the throne. In 1837 he soon fell a victim to the few years afterwards, the throne King Otto a collective note, from the public service; to payment of the interest of the assembly. Upon this the Revolution, in which the army Athens. The king was considered, to dismiss his ministers, voted Russian partisan, M. M. not at all originate in a desecration of the national spirit system, which was being forever, made in an afterthought. Under the new system for its president M. Mavromichis, and succeeded by French and Russian parties, enjoyed comparative tranquillity and enthusiasm. In 1836 he married the Grand Duke of Oldenburg and bold, has, to some extent she has studied the tastes, and the aspirations of the people prominent part. Her majesty's hands which left Athens to the neighbouring provinces of the ministers who aided the insurrection and arsenal. When by this the troops of France and England neutrality on the part of King longer existence of his throne since the declaration and the

the observance of international duties, the queen has omitted no means of encouraging the party at Athens, which at the commencement of the war in 1854 prematurely saluted her as the future saviour of the East. The great struggle by which the independence of Greece was won has not borne its expected fruits. Agriculture everywhere exists in its veriest infancy; trade and manufacture nowhere; it may almost be said that Greece is still a pasture-land for sheep and goats. The only roads on which carriages can travel are between Athens and the Piræus, Nauplia and Argos, and Athens and Thebes. In Athens the population has increased considerably since the war of independence, but there is little or no difference in the rest of Greece. With a superficial area of 22,500 square miles, Greece has not yet a million of inhabitants. The country appears, physically, to have degenerated. Homer and Hesiod make mention of extensive forests, but there are now scarcely any woods in any districts of Greece which are of easy access. The continually melting desert-climate has forced the wood in all quarters back to the highest mountain ranges. It is to the poverty of Greece that may be ascribed in great part that constant uneasiness which is a national malady of the population.

GREELEY, HORACE, Editor of the "New York Tribune," born at Amherst, in New Hampshire, February 3, 1811. Until the age of fourteen he attended a common school in his native place. About that time, his parents having removed to the state of Vermont, Horace, who had early shown a fondness for reading, especially newspapers, and had resolved to be a printer, endeavoured to find employment as an apprentice in a printing-office in Whitehall, but without success. He afterwards applied at the office of the "Northern Spectator," in Pultney, Vt., where his services were accepted, and where he remained until 1830, when the paper was discontinued, and he returned to work on his father's farm. In the next of the following year he arrived in the city of New York, where, after persevering efforts, he obtained work as a journeyman printer, and was employed in various offices, with occasional intermissions, for the next eighteen months. In 1834, in connexion with William Winchester, he started "The New-Yorker," a weekly journal of literature and general intelligence, which for some time had been an unfinished project, and became its editor. After struggling on for several years, the journal was found to yield but little profit to its proprietors, and was finally abandoned. During its existence, Mr. Greeley published several political campaign papers,—"The Commonwealth," "The Jeffersonian," and the "Log Cabin." In 1841 he commenced the publication of the "New York Tribune," which has been eminently successful. In 1848 Mr. Greeley was chosen to fill the vacancy in the thirtieth Congress, and served through the short session preceding General Taylor's inauguration. In 1851 he visited Europe, and was chosen chairman of one of the juries at the World's Fair. He gave an account of his travels in a series of articles to the "Tribune," which were afterwards collected into a

me. He has also published
ys, etc., under the title of "Hint

others Grimm," whose names he
ciated with the popular literature
ary 4, 1785. He was trained at
l commenced the study of law at
he accepted an invitation of his

to Paris, to aid him in his literary labours. In the following year he returned to Germany, where he received an appointment in a university college. He employed the leisure left him by his official duties in the study of the literature and poetry of the middle ages, which his attention had been directed while in Paris. After the cession of the kingdom of Westphalia he obtained, in 1808, the post of Librarian to the royal private library in the castle of Cassel; a civil appointment was afterwards added to this, yet he still found leisure for literary pursuits. After the death of the Elector of Hesse he accompanied the Hessian ambassador, as his secretary, to the allied camp, and subsequently to Paris, where he was instructed to demand the restoration of the library treasures carried from Hesse by the French. In the following year he executed a similar commission in behalf of the Prussian government; and upon his return, in 1816, he was appointed Chief Librarian at Cassel, where he continued to prosecute his literary studies. In 1829 the first librarian, Völkel, died, whereupon his post was bestowed upon Rommel, the electoral historiographer and director of the archives. Grimm, feeling himself aggrieved, accepted in 1830 an invitation to Göttingen, as Professor of Librarianship. On account of his protest against the abrogation of the continental law in Hanover, upon the accession of the late king, he was deprived of his office, and banished from the kingdom. He published a statement of the transaction, under the title, "Jakob Grimm upon his Dismissal." He returned to Cassel, whence, in 1835, he was called to Berlin, where he has since been active as a member of the Academy of Sciences, and in connexion with the University. The philosophical investigations of Grimm have been directed to setting forth the intellectual life of the German people, manifested in their language, their mediæval laws and beliefs, customs and poetry, both in themselves and in their relations to other nations. The works which he has put forth show great learning, and judgment, a true perception of the course of national development, and a poetical feeling as fresh and vigorous as it is tender. His "German Grammar," of which the first edition appeared in 1819, and the fourth in 1837, lays the foundation of an historical investigation respecting language in general. His other works are "German Legal Antiquities" (1828); "A Collection of German 'Weisthümer'" (1840-42); "German Fairy Tales" (1855); "Geschichte der Deutschen Sprache," 2 vols.; a work on German manners and customs. He has also edited a collection of Spanish romances, and a number of the productions of the middle ages; and has published "Reinhart Fuchs," with an introduction on the animal fables of the Middle Ages.

GRIMM, WILHELM KARL, the younger of the "Brothers Grimm," was born at Hanau, February 24, 1786. He was trained by his brother at the Lyceum at Cassel, and in 1804 went to the University of Marburg to study law. His early years were darkened by illness, from which he did not recover till 1809. In 1814

was appointed Secretary at the li
 mpanied his brother to Göttingen,
 rarian; and in 1835, Professor Extr

Parliament he was considered to have in especial charge the care of the ballot, a question upon which he made an annual law. He has for some time retired from active participation in politics, and has thus recently been able to devote his entire attention to the production of his admirable "History of Greece," of which a considerable portion is already in the hands of the public.

GUIZOT, FRANCOIS-PIERRE-GUILLAUME, an Historian and Minister of France, was born in October, 1787, and was the son of an advocate at Nismes, who perished on the scaffold during the Revolution. Guizot was educated at Geneva, and at the age of 16 made himself master of the learned languages. German became to him a second mother-tongue, and English and French completely familiar. He left Geneva in 1805, and after passing some time in Languedoc proceeded to Paris, with a view of being called to the bar—an intention which he does not seem to have prosecuted with seriousness. About this time Madame de Meulan was editing a magazine, called "Le Publiciste," which enjoyed a considerable reputation. The lady having been suddenly attacked by illness, the work was threatened with a fatal interruption. M. Guizot made an anonymous offer to carry it, which was accepted. He thenceforward became its contributor, and the friend of the editor, and so began his literary career. In 1809, M. Guizot published his first regular work, a translation of Gerard's "French Synonyms," with a dissertation on the language. His "Lives of the French Poets," translation of Boileau's "Decline and Fall," "The State of the Fine Arts in France," "Annals of Education," and smaller works, soon followed. In the course of the winter of 1812 he married the lady whose assistance he had made under such romantic circumstances. The same year he obtained the chair of Modern History at the University of Paris. The exalted idea of his talents, which was held among the old aristocracy of France, made it easy for him to obtain important posts under both the restorations of Bourbon. He was successively Secretary-general of the Ministry of the Interior and of that of Justice, and Director-general of the Administration for settling claims of indemnity. He belonged to the Liberal school under the Restoration, and fell with Malabrou, M. Decazes, M. Royer-Collard, and M. Camille de Jordan, in 1820, when the assassination of the Duc de Berri turned the scale in favour of the counter-revolutionary party. The severe measures of M. Villele's administration called forth those political pamphlets from Guizot, which created a great sensation at the time, and their author was suspended in 1820 from his lectureship. In retirement he renewed his studies and literary activity. His productions were "Memoirs relative to the English Revolution," in 25 vols. 8vo., followed by a "History of the English Revolution," in 2 vols.; "Memoirs relative to the History of France," "Critical Notices and Essays upon Shakspeare." He likewise wrote largely in the "Revue Française," and in the "Globe." At

eriod his house in the Rue Sost distinguished men of the . In 1828 the interdiction on his ministry, and he delivered "course of Modern History," and so on." At the age of forty two M. Guizot was elected to the Chamber of Deputies, and took part in the memorable session of 1830, on which he delivered an address which provoked the revolution of July 25th, 1830.

After the revolution he was named Minister of Education, an important post in the government of Louis-Philippe only lasted three months, and he came again into power until the Revolution of 1848. In 1831 he was named Minister of Foreign Affairs, and led over by Marshal Soult, (1831-1832), and from that period, until 1840, he may be said to have directed every administration. It is, therefore, from the 29th October, 1840—when he was named ambassador to London—that he has become the most powerful man in France. He has secured the longest lease of power since the Revolution. After he held the portfolio of Foreign Affairs for a longer tenure of office than any other man in France. On power in 1840, the task was to bring England and France into a closer union of M. Thiers, and it was to be done by the dissolution of the League of Nations, and to dissipate the doubts of *La Paix partout, la Paix partout*, till the affairs of Tahiti again came before the question of the Spanish question, which was finished with equal ill-faith, and which roused the suspicions of the French people in this matter was tricky.

The only merit which can be said to be his is, that under his government France has been preserved. But this merit belongs to a great degree, to him, for the world has been made to be peaceable. He was, in fact, the French *bourgeoisie*; but in the French classes in France, M. Guizot was the enemy of their vices. The inglorious revolution of February 1848, and his fall from power. It is only matter of justice that as an author he has secured eminence to his name, adding zest to faithfulness in his exposition of an excellent judgment. Nor is he less entitled to the

terminating mind as the originator of an extensive improvement in the literature of his country, and on the method of inculcating the most beneficial lessons of historical knowledge. Since his death he has published two more volumes of his admirable "History of the English Revolution," embracing the period of the Commonwealth; as well as "Richard Cromwell and the Dawn of the Restoration," 2 vols. (1855); and two semi-political pamphlets, "On Tyranny in France" (1849), and an "Enquiry into the Causes of Success of the English Revolution" (1850). The chief works that have been translated into English are, "History of the English Revolution of 1640," 6 vols. (1826-55); "Life of Monk;" "Lectures on the History of Civilisation," 3 vols. (1846); "Corneille in his Times" (1852); "Shakspeare and his Times" (1852); and "Lectures on the Fine Arts" (1854).

GURNEY, SAMUEL, Capitalist, born near Norwich, Oct. 18th, 1794. He came to London as an apprentice in 1802, entered business on his own account in 1807, and married the daughter James Shepherd, of Ham House, Essex, in 1808, in which town he now resides. He is a member of the Society of Friends, brother of the late philanthropic John Joseph Gurney, of Norwich, and of the late Mrs. Fry, and brother-in-law to the late John Fowell Buxton. He is one of the greatest living operators in the discount market, and his money transactions and influence in monetary affairs are very important.

GUTHRIE, THOMAS, D.D., an eminent Scottish Preacher and Philanthropist, the son of an influential merchant and banker in Perth, Forfarshire, was born there in 1800. He studied for the Church of Scotland at the University of Edinburgh, and after being licensed to preach by the Presbytery of Brechin proceeded to Paris, where he acquired a knowledge of medicine, with a view of being able to assist the poor medically, when engaged in his pastoral duties. On his return to Scotland he went for a time to his father's banking-house, and in 1830 was ordained minister of the parish of Arbinlot, in his native county. He was afterwards translated to the collegiate church of old Greyfriars, Perth, and in 1840 to St. John's, a new church and parish in Edinburgh, erected chiefly in consequence of his popularity. He took a prominent part in the Non-intrusion Controversy, as it was called; the object of which was that ministers should not be intruded on parishes unwilling to receive them, and other ecclesiastical questions, which ended in the disruption of the Established Church of Scotland in 1843, and the institution of the Free Church of that country. He was one of the four leading men of that important movement, the other three being Drs. Chalmers, Cunningham, and Guthrie. In 1847, his fervent and heart-stirring appeals to the Government, on behalf of the destitute and homeless children of the Edinburgh slum capital, led to the establishment of the Edinburgh original Free or Industrial School, which has been productive of incalculable benefit to the poorer classes of that city.

GUYON, GENERAL, Hungarian Army, was born in the British navy. In 1848 he led a Hungarian regiment which became attached to the command of the Hungarians. In this amiable lady he found a cheerful, happy companion. The general esteem of his needs of Jellachich were called the whole nation roughly sympathising a volunteer. He was in an ill-armed battalion.

He contributed to the death of October he accordingly was engaged in the first rencontre took place.

The Viennese did not surprise them by a sally, the Hungarians beat a retreat. It was a rout, and without molestation. The moral impetus was depressing for the Hungarians; but the gallant general tried the village of Mautsried in the Hungarian ranks.

At the head of his battalion Jellachich; his horse was killed, he led his men to the field, with the muskets which many of the Hungarians had on the field its fighting campaign. On the 1st of November, at the head of his division, which is an open place, at Mautsried, determined upon to defend it with unabated courage on this desperate service, in which he was raised to the rank of general.

By Gorge's friends necessary qualifications everything to lion-like, general's plans. He assisted, especially by his victory at Mautsried, stormed Tarczal, one of the most important defended by 15,000 picked men. Guyon had done another hour under silence, and appointed

rather invested by the enemy, but he succeeded in entering at the
 head of twenty horsemen after some remarkable adventures. His
 men loved him enthusiastically, because, though he could only
 speak to them in broken Hungarian, he cheerfully shared with
 them in all the fatigues of the war, and was invariably to be found
 at the head of an assaulting column. The Hungarians took an
 unusual pleasure in looking upon General Richard Guyon as the
 representative, among themselves, of English valour. When the
 invasion of Görgei threw Hungary helpless into the hands of
 the enemies, Guyon shared the exile of Kossuth in Turkey, where,
 however, he evinced his hatred for Russia by taking arms under
 Sultan. He has since been Pacha of Damascus, and for a time
 was chief of the staff of an incompetent pacha commanding the
 Turkish army in Asia. A recent traveller in the East, Mr. Charles
 Smith, who resided at Kars in 1854, says of him,—“An erroneous
 opinion ruled in Europe, to the effect that the command of the
 army of Anatolia was entirely in the hands of General Guyon;
 but on the contrary, his power was utterly restricted to offering
 advice that was rarely accepted. The personal appearance of
 General Guyon, as it first struck me, was prepossessing. His
 robust muscular frame betrayed great strength and activity.
 His face expressed resolution and courage, and was soldier-like,
 but bearing the aspect of semi-ferocity which our historical
 heroes delight to bestow on the lineaments of their martial heroes.
 His unburnt complexion, lighted up by piercing blue eyes, and
 framed by a curling chestnut-coloured beard, presented a strange
 contrast to the dark, melancholic features of the Ottoman com-
 manders who surrounded him. General Guyon was in the prime of
 manhood, being forty-two years of age; but premature wrinkles
 were strongly across the forehead bore witness to a past existence
 of care and anxiety. A fine swordsman, a splendid and graceful
 cavalier, Guyon was intended by Nature for a cavalry general; and if
 his talents as a commander are contested, none can deny his
 personal qualities or his brilliant courage. Guyon appeared in-
 fatigable. His habits at Kars astonished the calm, indo-
 lent Turkish pachas, and not a little annoyed the officers imme-
 diately connected with him, who were totally unaccustomed to such
 activity. He rose at daybreak, mounted with his aides-de-camp,
 either visited the fortifications that were being constructed
 round the town, or inspected the troops. At nine he breakfasted,
 and then visited the small Anglo-Saxon colony with the army had
 no invitations. At eleven Guyon again commenced his in-
 stantaneous and his whole day thus passed on horseback. At sunset
 he dined with the Muchir Zarif Mustafa Pacha, and then plans
 were formed that were never doomed to be realised. These
 conversations commenced with compliments, and concluded in
 mutual recriminations. The evening was passed by Guyon at his
 labours in addressing communications or remonstrances to the
 Sultan at Constantinople on the deplorable condition of the
 army, that were destined to be totally unheeded. Later in the

IALEVY, FROMENTHAL, an
in Paris at the commenceme
r was a German and his mot
ig exhibited great precocity of

usually early age, and was placed in the Conservatoire when only five years old. In his twelfth year he bore off the grand prize for melody against all his seniors, and also studied the principles of composition under Cherubini. Only two years afterwards, on the death of that great artist to London, he deputed him to take the direction of his class at the Conservatoire. In 1819 he gained the prize of composition at the Institute, and was sent by the French Academy to study in Italy, where his first opera, "Pygmalion," was accepted by the Grande Académie de Musique. In 1827 he produced his first comique of "Phidias," which having proved eminently successful, was succeeded by the "Artisan." His subsequent productions were "Il Dilettante," performed for two consecutive seasons at Milan; a ballet, "Manon l'Escaut;" and in 1831, a ballet in three acts, "La Tentation." In 1832, Herold having suddenly died in the flush of his triumphs, leaving his score of "Ludovic" incomplete, Halévy undertook the duty of finishing and producing it on the same day. In 1835 he produced, at the Académie de Musique, the opera "La Juive," which was immediately brought out in every theatre in Europe. As if to show the versatility of his genius, he next produced, at the Opéra Comique, "L'Eclair." His grand opera, "Guido et Ginevra," followed. In 1838 he brought out a successful piece at the Opéra Comique; in 1842, "La Reine de Chypre," at the Académie; in 1843, "Charles VI." at the same theatre. In 1844 he produced the "Guitarero;" and in 1846, "Les Acrobates de la Reine," at the Opéra Comique. In 1848 he brought out "Le Val d'Andorre," which was performed 165 nights, and restored at once, in spite of every inauspicious circumstance, the vogue and fortunes of the Opéra Comique. "La Fée aux fées" was his next effort, of which a translation was performed in London. Halévy has long since received the most signal reward his country could confer on him. At the court of Louis-Philippe he enjoyed the highest favour. The unfortunate Duke of Orleans and his noble-minded widow, the Duchess of Orleans, had him at the head of their chapelle. The Conservatoire conferred on him the title of Professeur de Haute Composition. He was a member of the Legion of Honour, and a number of foreign honours have been conferred on him by the different sovereigns who have turned to his compositions. He now enjoys the highest title and reward exalted merit in France, that of Member of the Académie.

HALIBURTON, T. C., Judge, a humorous Author, popularly known by his *nom de plume* of "Sam Slick," is a judge of Nova Scotia. His earliest literary undertaking was a series of letters signed, in 1835, to a weekly newspaper of Nova Scotia, and intended to exhibit the most peculiar features of the Yankee character. The letters attracted so much attention that they were bound into a duodecimo volume, and had an immense circulation, both in England, where they were reprinted, as in the United States. In 1842 he came to England as an attaché of the American

and his observations shed soon afterwards, in England." Sam- nation of humour wit it exists in a free, un- pulses, untrammelled ves full play to its e- k of considerable his- and.

HALLECK, FITZ-GREENE, a distinguished American Poet, born at Guilford, Connecticut, in August, 1795. In 1813 he opened a banking-house in New York, and remained in that city engaged in mercantile pursuits until 1849, when he returned to Guilford, where he now resides. At a very early period he had poetical ability, and had written verses; but the earliest of his productions in print were the various humorous and satirical sketches and lyrics contributed to the "Evening Post," in 1819, in association with his friend J. R. Drake, under the signature of "Peter." Toward the close of the same year he published his longest satirical poem, which passed through several editions, although for a long time unacknowledged by the author. In 1827 Mr. Halleck visited England and the Continent. In 1827 he published a small volume, containing "Alnwick Castle," "Marco Polo," and some other pieces, which had appeared in different periodicals, were collected and published in 1835. It has been a source of regret that one who writes so well should write little.

HAMELIN, FERDINAND-ALPHONSE, Vice-Admiral, lately commanding the naval forces of France in the Black Sea, was born in 1792, and commenced his career in his eleventh year, under the command of his uncle, then captain of the frigate *Vénus*, and afterwards Admiral Baron Hamelin. He was present at the battle of Port in the island of Réunion, and a subsequent close action, in which the *Vénus* was totally destroyed. Hamelin then entered the navy immediately after this affair, as naval lieutenant, in 1813 he became lieutenant, and sailed a year later as adjutant under his uncle, appointed to command the squadron off the Scheldt. He rendered valuable services to commerce in an expedition against the Algerian pirates, who then infested the Mediterranean; he was compensated for this service with the rank of captain. He then sailed on a cruise to the South Atlantic, and returned in time to command the corvette *Actéon*, one of the vessels employed in the expedition against Algiers. Under the Government of July he became Rear-Admiral and Vice-Admiral, and was appointed commander of the naval forces of France in the Pacific, and subsequently maritime prefect at Toulon. In 1853 he was appointed by the Emperor to command the French squadron, then at anchor in Besika Bay, under Admiral La Susse; and on the 17th of October the combined squadrons of France and England passed the Dardanelles. It was not until the 3d of January, 1854, that they entered the Black Sea. The combined squadrons rendered the Turks a defensive battle, enabling them to victual Batoum and Fort St. Nicholas,

which they had taken from the 1 when war was declared against Shortly afterwards, a partial attack military stores were destroyed. Kalé bombarded, and the mouth state of blockade. In September Crimea was undertaken, and the army commenced. On the 17th the allied armies having opened fleets assailed the forts, the Fre Quarantine forts to the south of the Russians had not closed the two ships of the line and two vessels of the two squadrons, able to enter the port successful munication with the army; but taken forced us to confine ourselves of Sebastopol for five hours, with or less, of occupying a great man and of thus giving our army mate The fire of the fleet did little damage received serious injury. The Admiral was without being hurt. After having one of whom was cut in two, away, and a third was slightly 'Poor fellows!' and resumed the as before." In December, Admiral expired, he returned to France. his reputation during the term of remembered that the policy of the attack on Sebastopol, was repugnant the enemy has testified his respect France by sinking his ships at Sebastopol; thus proclaiming, that even his Black Sea navy was not able was appointed Minister of Marine decree conferring the appointment visit to England, and bears date,

HAMILTON, THE REV. J and Author, Minister of the English Square, London, was born in 18 which parish his father, who occupied ranks of the Evangelical party

minister. Dr. Hamilton commenced his career as assistant-minister of a small and secluded parish in Perthshire. He was thence removed to the pastorate of a chapel-of-ease in Edinburgh, and on the translation of the successor of the celebrated Rev. Edward Irving was chosen minister of the large and influential congregation assembling in what was then called the *National Scotch Church*, Regent Square. As a preacher, Dr. Hamilton is distinguished by a rich and imaginative style of pulpit oratory, rising occasionally to high flights of eloquence. Besides numerous tracts, he has published several small volumes, mostly adaptations of his sermons, which have had a very extensive circulation both in this country and in America. Amongst these may be mentioned, "Life in Earnest," "The Mount of Olives," and "The Happy Home." He has also published, "Memoirs of Lady Colquhoun," and "The Royal Preacher," and is Editor of "Excelsior," a cheap and regular monthly miscellany established in 1854.

HAMILTON, SIR WILLIAM, BART., an eminent Metaphysician, was educated at Oxford, where he obtained first-class honours. He was called to the Scottish Bar in 1813, and was for some time Professor of Universal History in the University of Edinburgh. In 1836 he was appointed Professor of Logic and Metaphysics in the same University. He is also Her Majesty's Advocate for Teinds in Scotland; a Corresponding Member of the Académie of France; and an Associate of many literary societies. His contributions to the "Edinburgh Review" were published in a collected form, in 1 vol. 8vo., at London, in 1852, under the title of "Essays in Philosophy and Literature, Education, and Universal Reform." He has edited Dr. Thomas Reid's works, with additions from his unpublished letters. He is now engaged upon the works of Dugald Stewart.

HANNAY, JAMES, Author and Journalist, was born at Dumfries in the year 1827, and derives his descent from a territorial family of the name "designed of Sorbie," which flourished for many centuries in the ancient province of Galloway. Mr. Hannay, after having been educated at schools in Westmoreland and in Surrey, entered the royal navy, and while in H.M.S. Cambridge took part in Syrian operations in the latter part of 1840. After serving in several ships till the autumn of 1845 he left the navy, and dedicated his time and talents entirely to literature. Since that date he has constantly exercised his pen in many distinguished journals and periodicals, including "Punch;" and contributed, in no small measure, to the instruction and amusement of the reading public. Hannay, besides signalling his prowess as a journalist, has, as author of letters, produced several independent works, among which that of "Singleton Fontenoy" may be mentioned as occupying an important place. In the summer of 1853 he delivered in London a series of lectures on "Satire and Satirists," which have since been issued in a volume, displaying extensive information, profound

hip, and clear perception.

ists can boast. Some of his lithographic sketches of forest scenery, published in elementary books, strike upon the eye as pictures. The completed works of no artist can, perhaps, be compared by his sketches; but it may be said of Mr. Harding, as a landscape-painter, that his sketches are among the very finest that any artist has ever produced. Like other of his fortunate brethren, he has pursued his art into a hundred countries, and that home delightful reminiscences of Alps and Tyrolean mountains, Italian lakes, and quaint Norman cities, in his rich portfolio. It was in 1820, just as the art of lithography began to make some name in this country, that Harding's attention was drawn to it, seeing its capabilities, not only for the production of works of art, but that it would also be, as it has proved, an extraordinary aid for the dissemination of instruction by good examples, he devoted himself very much to its study and the unfolding of its uses. With what result the various lithographic drawing-books and other works he has published enable us to judge. His success has led other men of talent into the same field, but more remarkable since the production of his "Sketches at Home and Abroad," 1830, wherein he for the first time showed those atmospheric effects by the printing of a tint, which have added so much to the glory of the art. He has published four other works worth notice, viz. "Lessons on Art," "Lessons on Trees," "Elementary Treatise on the Principles and Practice of Art." In these his great object has been to communicate a knowledge of art as well with the pencil as with the pencil, and he has aimed rather to rank as an instructor than as a painter. In 1830 he went to Rome and Naples, and brought back his sketches on coloured paper. These had such an effect on the artists that this system of sketching has been generally adopted, and has led to very pleasing results. It may be added that, against the prejudices of the veterans in water-colours, Robert Barrett, Dewint, etc., Harding broke away from the ancient mode, and introduced the use of opaque colours among the transparencies. How far this has contributed to the advance of the art may be understood from the works of Cattermole, Nash, Lewis, and others. Harding was long a leading member of the Old Society of Painters in Water-colours. During the last twelve years he has contributed to the Academy exhibitions many able pictures in oil, which have been systematically slighted by Hanging Committees. He has been a candidate for what are called academic honours, and has been disgraced by the Academy, unsuccessfully. He is a man of letters and of varied acquirements, and his name is one of the widely known of English artists, abroad as well as at home.

HARDINGE, HENRY, VISCOUNT, a veteran British General, son of the Rev. Henry Hardinge of Stanhope, and was born in 1785. He was gazetted as an ensign as early as 1798, and rapidly rose in rank. He served throughout the Peninsular war, and the whole time as Deputy Quartermaster-General of the Portuguese army, and was present at the battles of Roleia and Vi-

HARE, ROBERT, M.D., M.A., P.S., an eminent Chemist, Member of the Academy of Natural Sciences, Philadelphia; of the Academy of Sciences, Boston; Associate of the Smithsonian Institution; Emeritus Professor of Chemistry in the University of Pennsylvania; was born in 1781. He entered the chemical class in that University in the year 1801. Before the end of 1802 he contrived a greater heat than had ever been known before, by means of the compound or hydro-oxygen blow-pipe, producing also the lime-light, afterwards used under the name of the Drummond light, for which he received the Rumford premium, a gold and silver medal. In 1810 he published a pamphlet, entitled "Brief View of the History and Resources of the United States." He is also the author more than one hundred and fifty communications of a scientific nature to various periodicals and journals, and has contributed moral essays to "The Portfolio." Besides lime and magnesia Dr. Hare was the first to fuse iridium, rhodium, and platinum, masses from one to twenty-eight ounces; and he is the only person who ever obtained calcium in the pure metallic state, or strontium and strontium free from mercury. He also obtained by a process pure hyponitric ether, boiling at 65° Fahrenheit, and associatedly therewith a gaseous ether, supposed isomeric; and was the first to discover that when gases or vapours, consisting in or less of carbon, are united with the gaseous elements of air, in due proportion, the latter, combining with the carbon, are condensed. Franklin verified by experiment the conjecture previously entertained, that lightning was a gigantic electric spark. Hare believes the tornado, represented as a whirlwind by sailors, to be a gigantic convective discharge, of the same nature as that of air from electrified points. Dr. Hare has advanced a theory, agreeably to which opposite polarities are substituted for two supposititious fluids of Dufay, and waves for currents, supported by Henry's observations. Besides the works already mentioned he is the author of a compendium of Chemistry, and of various financial and political pamphlets.

HARGRAVES, EDMUND HAMMOND, the Discoverer of Gold Fields in Australia, is a man of extraordinary energy of character, whose success is associated with a very important period in the history of the colony. He is the third son of John Edwards Hargraves, and was born at the close of the last war, at Gosport. His father was then a lieutenant in the Sussex militia. His regiment was on the march, and the child followed his father's command at the age of six weeks. At the age of fourteen he was launched on the world on the deck of a merchant ship; and he toiled at sea three years, during which he visited most parts of the world. When he was eighteen years old he became a settler, or "squatter," in Australia, and was a proprietor of cows and bullocks. He was unmarried; but his means consisted merely of such stock and labour as he could raise. In 1840 he sailed from Port Jackson for San Francisco, journeyed to the gold diggings, and while working

his proceedings, by his not seeking to enrich himself, but to share the benefits of his discovery to his fellow-colonists, is entitled to the highest commendation. There are few men who, under similar circumstances, would have shown so remarkable an exercise of self-denial and regard for the common good.

HARING, WILHELM, a German Novelist, known under the pseudonym of "Wilibald Alexis," was born at Breslau in June, 1798. He descended from a refugee family from Bretagne, who changed their original name into the corresponding German word. His education was commenced at Berlin, where his mother took up her residence after the death of his father. He made the campaign of 1815, and was present at the sieges of the fortresses of Antwerp and Namur as a volunteer. In 1817 he resumed his studies at Breslau, and embraced the legal profession, which, being possessed of an adequate estate, he abandoned to follow a literary career. His first work was an hexameter poem, entitled "Die Walladmor." A result of his close study of Sir Walter Scott was a novel of "Walladmor," a bad imitation of a great original. Under a similar disguise appeared the "Castle Avalon." He had thus made himself known under his assumed name, and gradually formed a style compounded of Tieck's irony and Scott's narrative power, mingled with minute reflections, and a precise array of details. Of his minor tales two collections have been published under the titles of "Gesammelte Novellen," and "Neue Novellen," some of which are masterpieces of invention and execution. Among his larger novels are "Cabanis;" "Haus Dusterweg," somewhat unsatisfactory as a whole, but with many striking features; "Nacht und Tag," containing admirable descriptions, but dry and barren in its speculations. The historical novels, "Roland of England" and "The Pseudo-Waldemar," are among the best of their class which have recently been produced. "Urban Graudier" is a romance rather than a gloomy picture of delirious fanaticism and atrocious villainy, yet possessing great interest.

HARISPE, MARSHAL, a Soldier of the French Empire, raised to the highest military dignity by the Emperor Louis-Napoleon, and one of the oldest and most distinguished survivors of the Imperial army, is now in his eighty-third year. So far back as 1792 he held the rank of captain of a company of volunteers raised by himself in his native country, where he was born, and in the following year commanded a battalion of that force. He was during that year engaged in the affairs between the Spanish and French armies on the frontier, and having driven the Spanish from the Bidasoa (which has been so long a disputed territory), and won the battle of Bularitz, he was, with the rapidity of promotion then in vogue, raised to the rank of General of Brigade—his brigade being composed of Basque Chasseurs. In 1800 he was attached to the division of General Moncey in Italy, and with him he afterwards became allied by the closest ties of friendship.

General, now Marshal Haris
f life, in all the vigour of a gr

JRIS, THE REV. JOHN,
St. John's Wood, one of the

members among the Nonconformist clergy, and the author of
 "Mammon," of which, since its publication, from 40,000 to 50,000
 copies have been sold in this country, and as many more in America,
 was born at Ugborough, in Devonshire, in 1804, and entered Hoxton
 College as a Student of Divinity in 1823. Having completed his
 academic course, he began his ministerial duties at Epsom in 1827.
 For some years his labours were chiefly limited to the duties of his
 parochial office; but as a preacher he evinced, even at this early period
 of his career, many of the qualifications which are now so generally
 related in his discourses. Before he left Epsom, his reputation
 as a preacher may be said to have been fully established. Soon
 after the publication of his first work, the "Great Teacher," Dr.
 Pye, the well-known physician, offered a prize of one hundred
 guineas for the best essay on the sin of covetousness; and ap-
 pointed the Rev. Dr. Pye Smith and the Rev. Baptist Noel to
 be the adjudicators on the occasion. Mr. Harris carried off the
 prize from some one hundred and fifty competitors, and the
 subsequent reception of his "Mammon" by the public at large
 abundantly confirmed the propriety of the decision. The
 success of this admirable little work upon the Christian world
 of all denominations is known to have been considerable, and to
 have had the practically useful effect of increasing the funds of
 various institutions in all parts of the kingdom. Shortly after
 the publication of "Mammon," the Committee of the British and
 Foreign Sailor's Society offered a prize for the best essay on the
 duty of seamen to the regard of the Christian world; when Mr.
 Harris became once more the successful competitor. This essay,
 published originally under the title of "Britannia," was inscribed
 appropriately enough to our Sailor King, William IV., who not only
 received its dedication to himself, but expressed his warm appro-
 priation of the work. It is no slight test of Mr. Harris's usefulness
 as a minister, that he could achieve a reputation in the pulpit that
 compares with the expectations created by these popular volumes.
 His first published sermon was the "Christian Citizen," delivered
 at the half of that admirable institution, the City Mission. His
 "Brethren's Church," his "Union," and other of his public ad-
 dresses, having more special objects, have helped to place him in
 the first rank of theological authors. This position appears to
 have been accorded to him on all hands; for in 1835 he received
 from Drs. Welsh, Wardlaw, Bunting, and other eminent divines,
 a prize of two hundred guineas for his essay on Christian missions,
 published under the title of "The Great Commission." The theo-
 logical chair at Cheshunt College having become vacant by the death
 of the Rev. W. Broadfoot in 1837, the Trustees of that institution
 unanimously offered it to Mr. Harris, who, having accepted
 the appointment, entered upon his duties in the early part of 1838.
 The day following the anniversary of this institution he married
 Miss Wrangham, a niece of the accomplished Archdeacon of that
 diocese; a lady admirably qualified to be his coadjutor in every good
 work. In 1838 Mr. Harris received from America his diploma of

doctor of Divinity. In this country seldom followed in such matters as helped to Christianise thousands worthy of any honorary distinction. A complete list of Dr. Harris's published many sermons, most of circulation. On the occasion of the Independent Colleges of Highbury, College, St. John's Wood, Dr. Harris institution, and its Professor of publications are "The Preadamite Patriarchy, or the Family, its Constitution," and an article on "Modern Masterpiece" of the Rev. George Gilfillan, reserved testimony to the merits of Gospel, in which Mr. Gilfillan assigned pulpit oratory to his earlier efforts, and entitled the "Great Teacher," the noblest effusions of pulpit eloquence. He said, "Dr. Harris has sought primarily to diffuse a more genial and humane theology; and secondly, to urge Christ to practice. Both objects, it is to seek to make the one Christianity live. The book of Dr. Harris, is every way his best work, and to establish a reputation. It is not so smart as 'Mammon,' so calm and unassuming, or so laboured and systematic as 'Preadamite Earth,' and 'Man Primeval' because it seems a more natural outgrowth of an act of genuine hero-worship." "Herm."

HART, SOLOMON ALEXANDER Much of his well-merited success to his native tendency to the picturesque choice of subject, was born at Plymouth of Mr. Samuel Hart of that town from the latter, who, while apprentice of Bath---Abraham Daniell, noted architect---had studied both arts under him and painted under Northcote. In Braddish Hart's name appears. In 1818 London, proposing to place the language engraver. In August 1823, however, the Royal Academy as student of painting exhibitor at the Academy in 1826, and thereafter. Miniature he continued as the limited dimensions prescribed

and recently-introduced facilities extended them), he soon turned to oil. His first exhibited oil-picture—at the British Institution in 1828—"Instruction," was immediately sold, and confirmed the artist in his choice. "The Elevation of the Law," exhibited at the Pall Mall Street Gallery in 1830, was at once purchased by Mr. Peel. The painter now obtained a regular footing among the exhibitors to our exhibitions; and soon, a fair share of public notice by his striking and cleverly-treated subject-pictures from the dramatic and the romantic side of history:—"Isaac of York in the Prison of Front de Boeuf," (1830); "English Nobility privately taking the Catholic Communion early in the Sixteenth Century," (1831); "Giacopo Querini refusing to enter into the Compact between Bertram and Theopolo to put to death the Doge Gradenigo," (1832); "Wolsey and Buckingham," (1834, purchased by Lord Derby); "Cœur de Lion and the Soldan Saladin," (1835). The latter pictures increased his professional reputation, and gave him a footing on the Academy, which led, in 1835, to his election as an Associate. After this period his pictures became more numerous and various; embracing history, religion, *genre*. Under the two last heads may be cited, "Sir Thomas More receiving the Benediction of his Father" (1836), "Hannah the Mother of Samuel, and the High Priest," "Eleanor sucking the Poison from Edward's Wound," "Henry I. receiving the intelligence of his Son's shipwreck." In 1841 he became R.A., and varied his part as exhibitor by a return to those scenes of Jewish ceremonial which, in 1830, made his name known, and with which he has identified it,—as in "A Polish Synagogue." His most celebrated works in this class are the two treatments of "Simchath Torah," or, "The Feast of the Law," (1845 and 1850); of which the background obtained from the celebrated synagogue in Leghorn. Profane subjects from Romanist ceremonial have also been favoured by Mr. Hart throughout. During his visit to Italy in 1841-2 he made an elaborate series of drawings—originally intended for a book—of architectural interiors, and of sites famous in history. Of the abundant material then gathered we have results in the subsequent picture:—"Dinner-time in the Refectory of the Convent of the Ognessanti, Florence;" "Interior of the Cathedral at Modena;" of the "Cathedral at Pisa;" "An Offering to the Virgin," &c. One of the very numerous styles in which Mr. Hart has competed for fame has been what may be termed the *historico-dramatic*:—"Milton visiting Galileo in Prison" (1847); "The three Inventors of Printing" (1852); "Columbus when a prisoner receives the idea of the New World" (1854). During the year Mr. Hart succeeded Mr. Leslie as Professor of Painting at the Royal Academy; and at the commencement of the present year delivered his first course of lectures.

TI, FAUSTIN SOULOU
 n a slave on the propert
 ty. At the period of th
 he entered as a soldier t
 up to step he rose to the ra
 the period of the fall of t
 ty—a quality which among
 most approved wisdom a
 secret of the several con
 m 1843 to 1847. Having
 er Richer, he owed his el
 of his name having been

ment when the votes were divided between two candidates, either of whom had a sufficient majority. He then became the agent of a reconciliation between the parties. The blacks voted for him on account of his ebony skin, the mulattos because they thought he had no reason to fear the ambition of one who had till then been quite unknown. But the latter were not long in discovering that they had given to themselves a master, and not a flexible instrument. Hence eventuated the sanguinary events of the month April, 1848. Soulouque triumphed in consequence of his displaying a terrible energy of character. His victory was disgraced by frightful executions. Perfidious counsellors drove him to a course of vengeance, having for its object nothing less than the extermination of the whole coloured race, who form the fifth of the population of Hayti. Soulouque was after this chief principally occupied in re-conquering the Spanish part of the island, erected into the Dominican Republic, when he was proclaimed Emperor. The constitution was immediately put into conformity with the new order of things. Such as it is at present, it secures the essential rights of citizens, and leaves, in appearance, at least, latitude to arbitrary proceedings. Unfortunately here, as elsewhere, practice continually contradicts theory. The ordinary value of Hayti is valued at about 1,070,000 dollars; official salaries are paid accordingly. The emperor receives about 15,000 dollars a-year; the empress from 4500 to 5000 dollars; the three princes have each a little less than 600 dollars a-year as their salary. The French indemnity weighs heavily on the budget. Religion costs very little; for there are not more than forty-eight churches in the whole bounds of the empire. The name of Emperor expresses nothing Napoleon-like at Hayti; it supposes only a ruler better respected than that of president, and recalls to the Haytian the popular recollection of Dessalines, who, in reward for the services rendered to his country, had been proclaimed emperor. Louis XIV., in the midst of his splendours, did not perhaps imagine as many honorary changes as the Emperor. Amongst his household, figure a grand almoner, a grand master of the pantry, a grand marshal of the palace, a quarter-master, gentlemen of honour, governors of the royal palaces and the pages, masters of ceremonies, librarians, heralds-at-arms, etc. The Empress Adelina has likewise her household, which is composed of a grand almoner, two ladies of honour, two tirewomen, fifty-six ladies of the palace, twenty-two ladies of the chapel, duchesses, countesses, baronesses, ladies of knights, or marquesses, chamberlains, grooms, pages, etc. The Imperial Concubine, Madame Olivia Faustin, possesses an equally brilliant household. The Haytian territory is closed against all monastic orders. Faustin Soulouque is completely black, and though upwards of sixty-five years of age, he does not appear to be more than a young man. His coronation as emperor was solemnized with great pomp April, 1852.

! and Heine was pleased to call himself an Atheist; what may now
his creed we are unable to explain. He is, however, engaged in
writing his autobiography in the "Revue des Deux Mondes,"
and will, doubtless, enlighten us on the subject.

HERBERT, HENRY WILLIAM, a well-known and popular
writer, was born in London, April 7, 1807. He is the eldest
son of the Honourable and Reverend William Herbert, eminent
as a man of science, a poet, and a liberal politician, and is
directly descended from the noble houses of Pembroke and
York. He was sent to Eton College at the age of thirteen, and
graduated at Caius College, Cambridge, in 1829. In the spring of
1830 Mr. Herbert met with a severe pecuniary reverse, which sud-
denly reduced him from affluence to poverty, and he resolved to try
his fortune in the United States. He arrived in that country in
November 1831, and for eight years thereafter, until July 1839, he
served as principal Greek teacher in Mr. Huddart's large classical
school. During this period, in addition to his classical studies, he
had already begun to turn his attention to authorship; and from
1832 to 1836 edited the "American Monthly Magazine," besides
writing largely for various illustrated periodicals. In 1835 he
published "The Brothers, a Tale of the Fronde;" and in 1837,
"Under Cromwell." In 1839 he quitted the profession of teaching,
and devoted himself wholly to literature. In 1842 Mr. Herbert
published a third historical novel, "Marmaduke Wyvil, or the
Satan's Revenge;" and in 1846, "The Roman Traitor," a romance
based on Catiline's conspiracy. Besides these, he is the author
of two text-books of sporting and natural history, "The Field
Sports" and the "Fish and Fishing," of North America, by "Frank
Herbert," besides many sporting sketches under the same *nom de*
plume. Several translations from the French, and a number of con-
tributions to different magazines. In 1848 he published a poetical
translation of the "Prometheus" and "Agamemnon" of Æschylus.

HERBERT, JOHN ROGERS, R.A., Painter, one of the most
important of the artists employed on the decoration of the New
House of Parliament; a painter remarkable for refinement of feel-
ing, and conscientious perfecting of his conceptions, and studied finish
of execution, was born at Maldon, in Essex (the ancient Camaldon-
um of the Romans), on the 23d of January, 1810. His father,
an intelligent person, was comptroller of customs in the reigns
of George III. and George IV., and observing in his son a very
early inclination for the arts when quite a child, determined to
give him every advantage in the way of study. With this view
sent him to London when between fifteen and sixteen years
of age. He soon became a student of the Royal Academy, but
after his father two years after, was obliged to abandon his course
of study. He then directed his attention to portraiture, and before
he was twenty-four had received sittings from many remarkable
persons; among others, the Princess Victoria. Mr. Herbert has

In 1841, "Pirates of Istria bearing off the riches of Venice." In this year he was elected Associate of the Academy. The picture of 1842, "The first Introduction of Christianity to Britain," commenced that series from religious subjects by which the artist's best fame has been attained. At the exhibition he now yearly took a higher standing. His principal subsequent works have been, "Christ and the Woman of Samaria" (1843); "Sir Thomas More and his Daughter witnessing four knights going to Execution" (now in the Vernon Gallery), and the "Trial of the Seven Bishops," both 1844. It was at this time that he turned his attention entirely to religious subjects, and those which appear never to have been illustrated, paying the greatest attention to the realisation of his subjects by studiously adhering to faithful representations of the country in which his scene occurs, as well as to the costume of the people. "St. Gregory teaching the English Boys the Chant" (1845); "Our Saviour subject to his parents at Nazareth," (1847); a subject from the hidden life of our Lord at Nazareth; wherein the Saviour, then a youth of about sixteen, while serving St. Joseph, sees in the chips which he has swept up the accidental cross, the sight of which causes him to shudder at his future suffering which he was to endure at Golgotha. His mother witnesses his emotion, and pondering in her heart on the words which were uttered in the Temple, endeavours to discover the cause of his sorrow. St. John, with the dust of the desert upon his feet, in the marble palace of Herod, reproves the king, saying, "It is not lawful for thee to have thy brother's wife." The tyrant trembles, and the fate of the Precursor may be seen in the stifled fury of the king of Herodias. The Outcast of the people, our Lord asleep in the wilderness; day-break. Of the few modern pictures in which the religious element plays a signal part, Mr. Herbert's have the reality and depth of feeling—painted as conscientiously as they are executed with thought and care. There is something of the earnest, but not of the ascetic, in his art. In 1846 he was elected Member, and in 1848 invited to join the ranks of those engaged in decorating the New Houses of Parliament. The subject allotted him for the illustration of Shakspeare's *Lear*, in the Poets' Hall. His first, "*Lear disinherits Cordelia*," an oil-painting, appeared at the Academy in 1849. Since that date Mr. Herbert has put in no other appearances at the Academy. The tendency of his art leads him to produce with extreme slowness, to make careful finished studies for every part of his compositions, and to sacrifice many a day's work with which less scrupulous manipulators would be content. During the progress of "*Lear and Cordelia*," the artist cut out portions of his fresco five or six times before he could satisfy himself. Much is gained on this system, and something more. The work in question is one of great excellence, possessing the character of a finer, higher kind, than do any of its companions; it has a more profound dramatic reality, correlative purity of feeling

technically; with little that is original or execution. To the mature decoration of the Peers' and Testament. It is intended for Justice to Judges, and to witnesses. They are somewhat large, and are bringing down the Tablet of Sinai, Judgment of Solomon, the Queen of Sheba to the condemnation of the false Elders. Herbert's acquaintance with the law, where he has diligently sought, lead us to expect that the symbolic abstractions, but as for the small minority among the art extends beyond their circle. Dyce, Eastlake, Redgrave, Herbert is also one. His symbols, etc., are all with the school and.

HERBERT, RIGHT HONORABLE which he has represented since the Peel party, and held the Aberdeen ministry. Mr. Sidney Herbert, Earl of Pembroke by his second marriage to Woronzow; and is half-brother to the Earl of Pembroke. He was educated at Harrow, and was in the fourth class in the Royal Naval Academy from 1841 to 1844. He was reappointed in 1852 and 1855, upon the demand for peace with Russia. Mr. Sidney Herbert in 1846 supported the repeal of the Corn Laws. He is the daughter of Major-General Sir John Herbert, who has greatly distinguished himself by his exertions in providing succour during the war in the East. Mr. Sidney Herbert is his active philanthropy in the East, and by means of emigration has accomplished scholar, a man of letters, and near the end of the arts; and near the end of the arts, in 1843, at his residence in Lombardic church, the finest in England.

HEREFORD, RENN DICKINSON, born in Barbadoes in 1795, the family of the celebrated John

died in the year 1810 as a commoner of Oriel College, and passed
 examination for the degree of B.A. At the same time with his
 predecessor in the chair of Moral Philosophy, Mr. Mill, of Magdalen
 College. Dr. Hampden's name appears in the first class of "*Literæ
 maniores*," in 1813. Dr. Hampden subsequently obtained the
 prize for the Latin essay in 1814, and was successively fellow and
 student of Oriel College. In 1829, and again in 1831, he filled the
 office of Public Examiner in Classics; in 1832 he was Bampton
 lecturer; in 1833 he was appointed by Lord Grenville Principal
 of Mary's Hall; and in 1834 he was elected White's Professor
 of Moral Philosophy. In 1836 he was nominated Regius Pro-
 fessor of Divinity by Lord Melbourne, then premier. At this juncture
 charges of heresy were brought against the future bishop, in
 form of "*Elucidations of the Bampton Lectures*," by the Rev.
 H. Newman, then Fellow of Oriel College, who subsequently
 joined the Church of Rome; and party spirit running high at the
 time, a motley coalition of Tractarians and political Churchmen
 formed, who procured what amounted to a vote of censure on
 his nomination to the principal chair in Divinity in the University
 of Oxford. Amongst the leading opponents of Dr. Hampden on
 this occasion occur the names of Dr. Pusey; the present Bishop of
 Hereford; his two brothers, Archdeacon Robert and Mr. Henry
 Merforce; Archdeacon Manning; the present Bishop of Exeter;
 and others. It was remarked at the time, that the very work which
 occasioned the ground of attack on the prerogative of the Crown in
 the appointment of the Bishop to the chair of Moral Philosophy, on the
 recommendation of Bishop Coppleston of Llandaff, at the hands of
 Lord Melbourne. In 1842 the vote of censure, though formally remain-
 ing in the Statute-book of the University, was in reality repealed by
 his nomination, in virtue of his office, to a seat at the new Theological
 Commission Board, under a statute which passed Convocation with-
 out opposition. It may be stated as still further remarkable, that the
 vote of censure passed on the Professor took the form of an exclusion
 from the trial of heresy, instituted by Archbishop Laud, of
 which the Queen's Professor of Divinity is an *ex-officio* member, and
 which after having been dormant for more than a century, revived its
 action in the condemnation of a leading opponent of the Divinity
 lecturer, Dr. Pusey, for false doctrine, a few years after it was
 enacted. In December, 1847, he was appointed to the see of
 Hereford, when a violent, but of course fruitless, opposition was
 made to his consecration by the High-Church party. Dr. Hampden
 contributed articles both to the "*Encyclopædia Metropolitana*"
 and the "*Encyclopædia Britannica*." In the latter, the articles
 on Plato, and Aristotle are by him. He is also the author of
 several volumes of sermons, one preached before the University of
 Oxford; and of a work on "*The Philosophical Evidence of Christ-
 ianity*," of no ordinary merit. In politics, Dr. Hampden usually
 went with the Whigs, to whom he owes his elevation; and in
 ecclesiastical matters is what may be called a Moderate Churchman.
 His great work, the Bampton Lectures, Mr. Hallam, in his

HERSCHEL, SIR JOHN FREDERICK WILLIAM, BART., astronomer, born in 1790, at Slough, near Windsor, is the only son of the great astronomer, Sir Frederick William Herschel. He was educated at St. John's College, Cambridge, where he became first wrangler and Smith's prizeman in 1813, and subsequently devoted himself to the pursuits which had already made the name Herschel illustrious. His earliest mathematical researches are found in his reconstruction of Lacroix's treatise "On the Differential Calculus," undertaken in conjunction with Peacock. Sometimes alone, and sometimes in conjunction with South, he devoted a considerable portion of the year 1816 to observations on the variable stars, for which the Royal Astronomical Society voted him their gold medal each on February 7, 1826. As the first fruit of these observations, ten thousand in number, he presented to the Royal Society of London in 1823 a Catalogue of three hundred and eighty double and triple stars, whose positions and true distances had never until then been fixed. In 1827 he published a second Catalogue of two hundred and ninety-five stars of this kind; and in 1828 another, in which three hundred and sixty-four more were set down. In 1830 he published important measurements of twelve hundred and thirty-six stars, which he had made with his twenty-foot reflecting telescope. In the same year he published, in the "Transactions of the Astronomical Society," a paper which contained the exact measurements of three hundred and sixty-four stars, and a great number of observations on the movements of double stars. At the same time he was occupied with the investigation of a number of questions on physics, the results of which appear in his "Treatise on Sound," published in the "Encyclopædia Metropolitana;" a "Treatise on the Theory of Heat;" a "Preliminary Discourse on the Study of Natural Philosophy," in Lardner's "Cyclopædia;" and his "Treatise on Astronomy," forming part of the same series. On January 8, 1836, the Royal Society again voted him their gold medal for his discovery of Nebulæ. Herschel's last great enterprise is his sojourn of seven years at the Cape of Good Hope, from February 1834 to February 1841, where he examined, in the exactest manner and under circumstances the most favourable, the whole southern celestial hemisphere. He suggested at the Cape the idea of making exact astronomical observations on given days, and simultaneously, at different places. The expedition to the Cape was undertaken at his expense, and he declined to accept the indemnity afterwards granted to him by the Government. The lively interest which was taken in Herschel's expedition by the educated classes beyond the ranks of astronomers, was manifested in the honours showered upon him on his return. A considerable number of the members of the Royal Society offered their suffrages for his election to the presidency of that body, vacant by the resignation of the Duke of Sussex—an honour, however, which he did not seek. In 1838 he was made a member; in 1839 created a D.C.L. of Oxford; and in 1842 elected Lord Rector of Marischal College, Aberdeen. In 1848

stronomical Society voted his

mselves have invested Mr.

take rank as a poet, and many of his subsequent effusions are fully confirmed his title so to do. Some of his most successful efforts of this class, which were first published in the "Literary Souvenir" and "The Friendship's Offering," have since gained a very wide circulation in volumes of selected poetry, published in this country and in America; and of the lyrics so distinguished none have been more generally read and admired than "The Convict Ship," "Cleopatra on the Cydnus," (a poetical illustration of Danby's celebrated picture,) and his "Illustrations of Modern Sculpture." Indeed, of those elegant and polished lyrics, which have been preserved in modern anthologies, and are still cherished by many a tasteful reader, he may be said to have supplied more than an average number. In 1843 Mr. Hervey married Miss Louisa Montagu, (herself a poet of no mean order,) by whom he has a son, his only child. We are not able to assign their precise dates to Mr. Hervey's publications, but their order of succession was as follows: "Australia and other Poems," "Illustrations of Modern Sculpture," "The Poetical Sketch-Book," "The Book of Thomas," and a clever little satirical poem entitled "The Devil's Tail," suggested, in all probability, by the well-known partnership of Coleridge and Southey. Mr. Hervey is said to be engaged in bringing his poetical writings, including such of his "waifs and strays" as he deems worthy of the association, for publication in integral form. He was for some time the editor of the "Friendship's Offering," in which, as well as in the "Literary Souvenir," he has written some very striking novelettes.

HERWEGH, GEORGE, a German Poet, was born at Stuttgart in 1816, studied till 1837 at Tübingen, and subsequently took part in editing Lewald's periodical, the "Europa." He then joined the army of the kingdom of Wurtemberg. In consequence of having insulted an officer, and through fear of a trial, he deserted. He then went to Constance, where he aided in the "Volkshalle," a society created by the landlord of the hotel at that place. He returned, however, to Germany, as moderate tendencies did not suit his views. When the King of Prussia ascended the throne in 1840, France assumed a hostile attitude, the poetry of Herwegh adopted itself in a Radical and Republican form; and the applause which he enjoyed in the southern portion of Germany made him a national phenomenon, which could not have happened had he adhered with the tone of a considerable portion of his contemporaries. After this he visited Paris, and in 1842 he travelled through Longberg and Berlin. The king invited him, through Schönhausen, to see him, and in the conversation which took place said to him, "Let us be honourable foes." The prohibition of a journal contemplated by Herwegh did not appear to correspond with this. He wrote a letter to the king, which was published without any alteration of his, and led to his expulsion from Prussia. The press, under the direction of a censorship, was not slow in reviling the poet. Switzerland offered him an asylum, and one of its can-

citizenship. Herwegh at the revolution in Fe publican movement in rive; but, according to the affair, he showed l e Swiss frontier conceal ks are, "Poems of a L. (1841); "Translations c

note in disguise. Many of his works could not be read without a veil, which was passed from one to the other of his readers. In all that he wrote more was meant than was intended for the ear of either monarch or his censor. With the quick stern eye of that subtle and powerful tyranny fixed upon him, he still contrived to convey a contraband meaning. He has published treatises on "Dilettantism in Science," "Letters on the Study of Nature," "On the Historical Development of the Notion of Honour," "Tales and Novels," "Whose Fault is it?" "Memoirs of a Physician," "The Magpie," "Journal of a Young Man," etc., most of which were pregnant with moral signification. Among other meannesses characterising the government he experienced from the Czar, we may mention that the mother of Herzen had a considerable sum of money deposited in the bank of Moscow. After the departure of Herzen for exile, Nicholas forbade the bank to give it up to her, and it was only restituted under the pressure and menaces of the house of Rothschild. In revenge, Nicholas seized ten thousand francs that were on their way to Herzen from his brother! Herzen published books in both the French and German languages. The principal of these are: "Letters from Italy and France," "From the Other Shore," and "Prison and Exile." But he found himself followed in Germany and gagged in France, until the breaking out of the present war, when he came to England. Here he published "My Exile in Siberia," 2 vols., and established a printing-press, and many thousand copies of books, calculated to enlighten the Russian people and to destroy that terrible empire, have been printed and smuggled into that country.

HESSIE, FREDERICK-WILLIAM IV., ELECTOR OF, born at Hanau, August 20, 1802, is the son of the Elector Frederick-William III. and Auguste-Frederike-Christine, daughter of Frederick-William II. of Prussia. From his earliest years he was idle, idle, and vicious. His father placed him under the tutelage of the now well-known Baron Radowitz, then a captain in the Prussian service, and already distinguished by his mental attainments. The scenes of the court, then the most profligate in Germany, were not calculated to correct the tendencies of the young prince's nature. Breaches of the seventh commandment have been common in the electoral house since the days of Philip the Magnanimous, who had two wives; and a great proportion of the Hessian princes owe their origin to the Oriental morals of the rulers of the land. The Haynaus and Hessensteins, sons of Frederick-William IV. may be mentioned as instances. The Countess of Hessenstein, his mistress, bore him twenty-three children. The most scandalous of the immoralities of the family was that which led to the early accession of the present elector to the throne. Frederick-William II. found a girl named Ortlepp, daughter of a mechanic at Berlin, and conferred on her the title of Countess Reichard. For a long period this woman reigned absolute in Hesse, and the impudence to demand, and the success to obtain, equal

 reament of the federal treasu

called in his friends to make it impossible for his subjects to pay taxes for the government. At the close of the year 1851 he remained in prison the mayor of Hanau, M. Henkel, condemned to imprisonment for having peacefully and legally resisted unconstitutional acts of M. Hassenpflug. The elector found great pleasure in taking this gentleman under his charge, and intending personally his treatment in prison. Henkel was sick, was deprived of the advice of his physician; his wife and children not allowed to see him or send letters to him; he is a man of science, and therefore was deprived of all books, as well as pens and paper; a religious man, and so his Bible was taken away. Such is the government of this ruler, the favourite of the plenipotentiaries of Frankfurt, one who is especially fond of military spectacles, and who in reviews and similar demonstrations of force; yet even in matters is grossly ignorant, as the following authentic anecdote will prove. When Radetzky's famous quartermaster-general, Count Hess, was introduced to the elector, he was asked if he had served in the Italian campaign. The feldzeugmeister, who is chief of the general staff and of the emperor's military chancellery, having answered in the affirmative, the royal interlocutor desired to know whether he had "commanded a corps?" He has lately visited his wife in order to seek for his children by the woman Schaumbourg, whom he calls as "*ebenburtig*" (of equal, that is, of royal birth on both sides). This would, on his decease or abdication, enable his eldest son to succeed him. It is understood that the Austrian government declined to interfere in so delicate a manner.

HILL, DAVID OCTAVIUS, R.S.A., Painter, and Secretary to the Royal Scottish Academy, a post he has filled for many years with popularity; the Landscape Painter of Scotland, and the biographer of Scotland's greatest poet. The "*Land of Burns*," devoted to those localities on which the inspired peasant poet had conferred undying interest, was a scheme originating with Hill himself: a labour of love on his part, and on that of his publishers, the Messrs. Blackie of Glasgow, a spirited and heroic enterprise. The noblest of Scottish scenes—mountain, romantic glen, and rocky waterfall—have been rendered by Hill with heartfelt sympathy, with truth and genuine feeling. A description from the hand of De Quincey, in an article on his "*Modern Painters*," in the "*North British Review*," (vol. 1) characteristically suggests the quality of Mr. Hill's art: though a particular specimen—exhibited at Edinburgh in 1846—be a comparatively unimportant one. "It is a view from his own window at Laverleith Row, and was dashed off in a fine frenzy of an evening. It has exquisite colour, and is sweet and deep in its tones. There is nothing of earth to be seen but the tops of some great trees among them an old fir with its cones of last year. Lying among them, and giving them power, and getting for itself distance and freedom, is a long line of evening sky: under it and above it are of unimaginable colours. The broad sun is sinking, all but

HINTON, THE REV
 Baptist Congregation, De
 well known as an independ
 was located in the outset
 moved to London. He ha

etary principle in religion and education, and is a most voluminous and versatile author, as the following titles of some of his various publications will show :—"Memoirs of William Knibb," "History of the United States of North America," "Theology, or Attempt towards a Consistent View of the Whole Counsel of God," "Elements of Natural History," etc.

HITCHCOCK, EDWARD, D.D., LL.D., Geologist, and Professor of Amherst College, Massachusetts, was born at Deerfield, Mass., May 24, 1793. General ill health, and an affection of the eyes, prevented him from completing his collegiate studies. In 1816 he became Principal of the Academy in his native place, and in 1818 the faculty of Yale College conferred upon him the honorary degree of Master of Arts. In the following year he resigned his position in the Deerfield Academy, and in 1821 settled as minister over the Congregational church in Concord, Massachusetts, where he remained until he was appointed Professor of Chemistry and Natural History in Amherst College, Mass. In 1830 he was selected by the State to make a geological survey of Massachusetts, and seven years afterwards was re-elected for the same purpose. In 1844 he was promoted to the position now holds, together with the chair of Natural Theology and Geology. In 1850 he was nominated by the state of Massachusetts Agricultural Commissioner, to visit the various agricultural exhibitions in Europe. Professor Hitchcock has published, "Geology of the Connecticut Valley," 1823; "Catalogue of Plants within Fifty Miles of Amherst," 1829; "Dyspepsia Forestalled and Reverted," 1830; "An Argument for Early Temperance" (reprinted 1840); "Religious Lectures on the peculiar Phenomena of the Four Seasons;" "First Report on the Economic Geology of Massachusetts," 1832; "Report on the Geology, Zoology, and Botany of Massachusetts," plates, 1833; "Report on a re-Examination of the Geology of Massachusetts," 1838; "A Wreath of Fossils," 1839; "Elementary Geology," 1840; "Final Report on the Geology of Massachusetts," 2 vols. 4to. plates, 1841; "Fossil Fishes in the United States," 1848; "History of Zoological Science Convention in Central Africa," 1850; "Report on the Natural Schools of Europe," 1851; "Mémorial of Mary Lyon;" "Religion of Geology and its connected Sciences," 1851; and various scientific papers in the "American Journal of Science," and other periodicals.

HOGAN, JOHN, a Sculptor of originality and power, whom the Exhibition introduced to the English public, but already well known in Ireland, was born at Tallow, county of Waterford, October, 1798. He is the son of a builder, but maternally descended from Sir Arthur Cox, lord chancellor of Ireland in the reigns of William III. and George I. At fourteen he was placed in the office of a solicitor in which he displayed tastes so opposite to those connected with writs, summonses, precedents and parchments, that his friends were

1830 was elected a Director of the East India Company. In 1844 he was appointed Chairman of the Board of Directors, and was elected to the same office in 1852. He sits in Parliament for Honiton, and in politics is a Free-trade Conservative.

HOLLAND, WILLIAM III., KING OF, eldest son of William II., was born February 19, 1817. In 1839 he married the Princess Victoria-Frederica-Matilda. In March, 1849, whilst paying a visit to Queen Victoria, he was informed of the death of his royal parent, and hastened home to receive the hereditary crown. In a proclamation issued on the 21st of March, immediately after his landing, he expressed his ideas of his duties:—"William I. accepted sovereign power, which was to be carried out according to a constitution. William II., in concert with the national representatives, modified the fundamental law according to the requirements of the times. It is my mission, in the same spirit, to give the fundamental law its full force. Men of the Netherlands, remain faithful to the motto of your ancestors, 'Union is strength,' and come with me for liberty, by submission to the laws."

HOLMES, OLIVER WENDELL, M.D., an American Physician and Poet, was born at Cambridge, Massachusetts, August 29, 1809. He was educated principally at Cambridge. Having completed his medical studies he visited Europe; in 1835 returned to America; in the following year commenced practice in his profession at Boston. In 1838 he was elected Professor of Anatomy and Physiology in Dartmouth College, an office which he subsequently resigned, and in 1847 he was appointed to a similar office in Harvard University, which he still holds. Dr. Holmes has published several professional works, but he is better known by his poems, of which several editions have been published. In his poems, says *Blackwood*, "Mr. Holmes portrays himself to us as a companion,—a physician by profession, and one to whom poetry has been only an occasional amusement,—one of those spirits who can set the table in a roar, and who can sing the good song that he indites." Dr. Holmes's productions are a certain local popularity, for which they are as much indebted to the social position and hearty good-fellowship of their author as to any high degree of poetical merit which they possess.

HOOK, WALTER FARQUHAR, D.D., Vicar of Leeds and Ecclesiastical Writer, is the son of the Rev. Dr. James Hook, Dean of Worcester; was educated at Winchester College; proceeded as B.A. to Christ's Church, Oxford, where he graduated in 1821; was then curate to Whippingham, Isle of Wight; in 1827 was appointed Lecturer at St. Philip's, Birmingham; and in 1829 Vicar of Trinity Church, Coventry, where he remained till 1837, and was then elected to the Vicarage of Leeds, vacant by the death of the Rev. Mr. Fawcett. Dr. Hook early gave his support to the party at Leeds which distinguished itself by the publication of the "Tracts

price placed upon it as a sarcasm upon the low estimation into which epic poetry has fallen. He is also the author of the text of a illustrated life of Napoleon the Great, and has been a frequent contributor to Dickens's "Household Words." In 1852 he went to seek his fortune in the gold-fields of Australia. Meeting with no success in his explorations, he was fain to content himself with the post of Chief of the Mounted Police, from which he has since been promoted to be a "Gold Commissioner."

HORSLEY, JOHN CALLCOTT, Painter, was born in London, January 19, 1817. The first picture exhibited by Mr. Horsley, some twenty years ago, painted while he was still a youth—"Rent-day at Haddon Hall in the Sixteenth Century," was a singularly successful one. It was praised by critics, mentioned by Wilkie in one of his private letters, and purchased by Mr. Cartwright, a well-known name among painters. This, and others which followed—"The Chess-Players," "The Rival Musicians," "Waiting for an Answer," etc.—were first seen in the British Institution. Some years ago Mr. Horsley exhibited for the first time at the Academy the "Pride of the Village;" a work which attracted the notice of Mr. Vernon, and now forms a striking feature in the Vernon Gallery. Notwithstanding a tendency to the sentimental in the theme, the treatment escapes that commonplace error, and is as touching as it is able. The subjects which followed had a similar advantage, if also the similar difficulty, of having been selected from every-day life,—the sentimental side of it: "The Transition—Youth and Age" (1840); "Leaving the Ball," another success,—gay pleasure-seekers on one hand, the homeless outcasts on the other; "The Pedlar" (both 1841); "Winning Gloves" (1842); "The Father's Grave" (1843). In the latter year, that of the (first) Westminster Hall competition, the painter was seduced from the path he had thus far followed with success, to that of a "high historic,"—not, however, to encounter the fate which fell to many of his fellows. His cartoon of "St. Augustine Preaching," gained one of the three prizes in the second rank, of 200*l*. During the ensuing years his ambition was concentrated on efforts directed within the same arena. In the trial of skill of 1844, two small frescos obtained him a place among the six painters commissioned to execute further samples. That of 1845 for "Reverence," was approved of; and the subject subsequently executed at the House of Lords. In 1847, his colossal oil-painting, "Henry V., believing the King dead, assumes the Crown," secured him a premium of the third class. Another fresco which he was then employed to execute, "Satan surprised at the Ear of Man," is now to be seen in the Poets' Hall,—a portion of the New Hall, of which the decoration has been entrusted to an assemblage of painters, whose various styles of execution are in little harmony with each other: Herbert, Cope, Tenniel, Armitage, Watts. Of late years, Mr. Horsley has returned to that range of quiet sentiment in which the promised rewards of national patronage had tempted

underwent the usual struggles of talent and poverty. In 1836 he made his *début* in the literary world by the publication of the "Couronne de Bluets," a romance. This was followed by others, since collected, in two volumes, under the title of "Tales and Journeys." In 1838 he became connected with the "Revue de Paris," in which he commenced the publication of his "Men and Women of the Eighteenth Century," afterwards collected in 6 volumes. In 1844 he became chief editor of the "Artiste," and in 1846 he published his "History of Dutch and Flemish Painting." In addition to these works he has published several poems. At the accession of Louis-Napoleon Houssaye was appointed to the direction of the Théâtre Français, then at a very low ebb, which he has infused new life. His latest publications are "Philosophers and Actresses," in 2 vols., "Complete Poetical Works," and the "Daughters of Eve."

HOUSTON, GENERAL SAMUEL, United States Senator from 1845, was born in Rockbridge county, Virginia, March 2, 1793. He lost his father when quite young, and his mother removed with her family to the banks of the Tennessee, at that time the western limit of civilization. Here the future senator received but a scanty education; he passed several years among the Cherokee Indians, and yet, through all his life, seems to have sympathised in opinion with the savages, and to have retained a predilection for the savage mode of life. After serving for a time as clerk to a country trader, and keeping school, he became tired of peaceful pursuits; in 1813 he enlisted in the army, and served under General Jackson in the war with the Creek Indians. He distinguished himself highly on several occasions, and at the conclusion of the war he had risen to the rank of lieutenant, but resigned his commission and commenced the study of the law at Nashville. About this time he began his political life. While holding several minor offices in Tennessee, he was, in 1823, elected to Congress, and continued a member of that body until, in 1827, he became Governor of the state of Tennessee. In 1829, at the expiration of his gubernatorial term, he resigned his office, and went to take up his abode among the Cherokees in Arkansas. During his residence among the Indians he became acquainted with the frauds practised upon them by the government agents, and undertook a mission to Washington for the purpose of exposing them. In the execution of this philanthropic project he was to have met with little success; and becoming involved in several lawsuits, returned in disgust to his savage friends. During a visit to Texas he was requested to allow his name to be used in the name for a convention which was to meet, to form a constitution for Texas prior to its admission into the Mexican union. He consented, and was unanimously elected. The constitution drawn up by the convention was rejected by Santa Anna, at that time in power, and the disaffection of the Texans caused thereby was still further heightened by a demand upon them to give up their arms. They determined upon resistance; a militia was organised, and

stin, the founder of the color which office he was succeeded inducted the war with vigour : successful termination by the night in April, 1836. The Mexicans of several hundred men, with thirty wounded. Santa Anna, and it was with great in taking summary vengeance a treaty acknowledging the independence of the same year was signed. At the end of his term he could not constitutionally be elected, but became a member of the Congress, and was elevated to the presidency. At the end of his term he held that office, it was the annexation of Texas to the United States. Before he saw the consummation of his wish, he became one of the States of the Union, and was admitted to the Senate, of which

HOWITT, WILLIAM, Poet, was born in 1795, at Heanor, in Derbyshire, an extensive landed proprietor. After having married a lady, his friends became one also, and his principles. William Howitt is in the earlier part of his education (along with others) connected with the study of genius, however, he was long out of sight the practical part of what he attained with several moderate success, which form no part of his education whose tenets he was brought to bear on chemistry, natural and the best authors of England, and a great part of his life became an avowedly versed in the literature of that contemplative nation. His marked predilection for rural pursuits, and fishing; and to his great taste that must have astonished the strait-laced of his order. "The New Spirit of the Age," "he has his pursuits, together with a keen perception of the beauties of the haunts, recesses, products of botany and natural history, and practical knowledge in early life

to have been fostered and augmented by the habits and occupations of his youth; which were, as we have seen, chiefly of a kind to create or develop the poetical faculty. This tendency was confirmed and deepened by his marriage, at the age of twenty-four years, to Miss Mary Botham, of Uttoxeter, a member of his community, and a lady whose genius and predilections were very congenial to his own. Their names have, indeed, been so closely and so intimately associated in the minds of all lovers of healthy and genuine English literature, that it becomes difficult to think or speak of them apart. After their marriage, the couple took up their residence in Staffordshire, where they resided about a year. Their first work, "The Forest Minstrel," published in 1823, and bore their joint names upon its title. It was warmly welcomed by the critical press, and by many established poets of the day more especially; and we have met with a book which more perfectly and pleasantly suited the habits and enjoyments of its authors. They soon became known to a wider circle by their contributions to annuals,—to the "Literary Souvenir" and "Amulet," in particular,—in which volumes some of their sweetest lyrics first found their way to public favour. It may seem strange to those modern readers who are acquainted with the "Annals" of that day only to the report of flippant newspaper critics, to be told, that a proportion of the best lyrical poems of Coleridge, Thomas Macaulay, Campbell, Hemans, Bowles, James Montgomery, Howitt, Praed, W. B. Procter, Croly, Landon, Moultrie, Hervey, Caroline Bowles, Alaric Watts, etc., made their first appearance in publications of this class;—to which, indeed, many of the more of our living authors owed their introduction to the public. It is, nevertheless, the fact: much of the best poetry of the time was originally contributed to such works; and it is no more upon their genius to assert, that they owe much of their present popularity to the wide circulation of their writings in such publications; little Montgolfiers, that tested the buoyancy of their sphere before they ventured, ambitious of a loftier and more range, to launch forth their great Nassaus. Soon after the publication of the "Forest Minstrel," Mr. and Mrs. Howitt undertook a pedestrian tour in Scotland, in the course of which they travelled more than five hundred miles over mountain and moorland, and drew in the poetry of Nature at every step of their way, and laid up a store of pleasant memories for future use. They crossed Ben Lomond without a guide, and after enjoying the magnificent view from its summit were enveloped by a dense cloud, and effected their descent with difficulty and no slight peril. They visited Kilmorie, Stirling, Edinburgh, and the beautiful scenery for many miles around it; traversed Fifeshire, and then, taking Aberdeen in their route, walked through the more southern parts to Aberdeen Green, where the old Blacksmith fancied they had arrived to do the business of matrimony, and was greatly disappointed to find that the knot had been already tied. They returned home by way

however, for his own fame and for the interests of literature, he
 ought no such honour, and would not consent that it should
 be "thrust upon him." The publication of the "History of Priest-
 craft" may be said to have driven Mr. Howitt from Nottingham.
 He had until then pursued his literary avocations in complete
 privacy; but having written himself down a champion of popular
 rights, he awoke one morning to find himself a public man at
 every one's beck; one who was expected to make stirring speeches,
 and take every antagonistic bull by the horns: but the accept-
 ance of such responsibilities, however, would have left him no
 time for more congenial occupations. He thought it better,
 therefore, to leave the field to some wealthier and less-occupied
 man. Before he quitted Nottingham his fellow-townsmen
 rewarded him with a piece of plate, as a mark of their affec-
 tion and esteem. The "History of Priestcraft" has passed through
 more or ten large editions, and continues to be in demand.
 The prose style of Mr. Howitt is simple, vigorous, and trench-
 ant, and is well adapted for onslaughts of this description. He
 will remind us of Cobbett, but that there is more of refine-
 ment, and of that appropriation of poetical language which may
 be called poetical learning, in his works than is to be met with
 in the ordinary style of that vigorous but truculent politician.
 One of the best samples of Mr. Howitt's prose will be found
 in his very remarkable and original "Tales of the Pantika, or
 Legends of the most Ancient Times," published in 1835. This
 work has never obtained the reputation to which it is entitled.
 It contains some really grand conceptions, most poetically devel-
 oped. In 1837 Mr. Howitt took up his residence in the beautiful
 village of Esher, where, with his mind undistracted by politics, and
 not disturbed by polemics when the parson sent to him for his
 aid, he produced one of the most popular of his works, "The
 Good Life of England," in 2 vols.; a graphic and graceful descrip-
 tion of the pleasures, amusements, habits, and employments of
 country life in "Merry England." There is an odour of hawthorn-
 blossoms and new-mown hay about it which is calculated to lead the
 town of Cockaigne from his "wilderness of brick" into the waving
 meadows and verdant slopes of country life; and to leave indelibly
 impressed upon his heart Cowper's memorable aphorism, "God
 made the country and man made the town." During his sojourn
 at Esher, Mr. Howitt published a work entitled "Colonisation
 and Christianity," a history of the treatment of aboriginals by
 European nations in all their colonies; "The Boy's Country-Book,"
 a genuine life of a country boy; and two series of "Visits to
 Remarkable Places, Old Halls, and Battle-Fields, and Scenes
 Illustrative of striking Passages in English History." Although
 expensive work, the last-mentioned volumes had a large sale,
 and have been more than once reprinted. After a residence of
 more than three years at Esher, Mr. and Mrs. Howitt took up their
 abode at Heidelberg, with a view to the education of their children.
 They availed themselves of the opportunity to perfect their know-

April, 1846, Mr. Howitt became a co-proprietor and one of the managers of "The People's Journal." Literary partnerships are rarely productive of either harmony or profit. Between parties so circumstanced there is usually a contest for the management; and the person who has the least claim to the preference is commonly the most pertinacious in asserting what he considers to be his right. Mr. Howitt's position in the literary world, and the acceptance in which his writings had been held by the public, would seem to have pointed him out as the fittest person to undertake the chief literary direction and control of such a publication; and it cannot be doubted, that had he been so placed it would have attained to a very considerable degree of success. Setting his talents and experience wholly out of the question, he was held in high esteem by the working classes, for his many able and disinterested attempts to promote their improvement. They had confidence alike in his power and his inclination to do them service, and we firmly believe that "The People's Journal" would, had it been left wholly in his hands, have proved a profitable and profitable concern. Dissensions, however, arose, of which we cannot enter in detail in this place; suffice it to remark, that they ended in the separation of the parties at the end of the year, under circumstances which entailed a very heavy loss on Mr. Howitt. We are little disposed to play the umpire in the matter; for although we entertain a vivid recollection of the impressions created in our mind by the controversy, we cannot at this distance of time recall the facts with sufficient distinctness to be able to describe the real points at issue. Many friends of Mr. Howitt, however, who had known him from twenty to thirty years, and who had had frequent transactions with him in business, will readily attest that a more upright and conscientious man, or one on whom more could be more implicitly relied upon, they have seldom had to deal with. His imprudence in retiring practically from the management, and establishing a similar journal, before he had withdrawn, in a business sense, from its proprietary, and without having his affairs fully wound up, can scarcely be doubted. The result, too, of attempting to establish another journal, whose success could only be founded upon the destruction of a property in which he was still commercially interested, was even more questionable. As it was, Mr. Howitt lost a large sum of money by it. The number of "Howitt's Journal" appeared in 1847, and, so far as proving unsuccessful, it had reached at one period a circulation of twenty-five thousand copies. The impossibility, however, of withdrawing his capital from "The People's Journal," and the pressure of mind and demands upon his time of the litigation arising from his dispute with his former partner, made it impossible to render that success available. The result might easily have been anticipated. Both journals are now extinct, and the working classes have no longer any publication—although they have good, cheap newspapers—which can be said to supply their place. Some of the volumes of "Howitt's Journal" were published, when the

mark; but their efforts were attended with very slender success, though a good deal of gold had been found from time to time in the neighbourhood; to which the wonderful accounts which had been fabricated at Melbourne had attracted great numbers of adventurers from various countries. It was in vain that they searched their ground; no treasure trove, beyond a few ounces' weight, gladdened their eyes; and, after several experiments, they passed on to what they imagined would prove a more propitious spot. On their way to Albury, in the Sydney or New South Wales colony, they encountered a formidable gang of bushrangers, who showed so bold a face with their revolvers, guns, and pistols, that they were allowed to remain unmolested. The account which Howitt gives of the difficulties with which they had to contend is so romantic;—one day having to beard a gang of bushrangers; another brought up by a broken axle, which it cost them four or five pounds to repair; now dining with "his Excellency;" and anon picking a scanty meal on the borders of some primeval forest. In all circumstances, however, Mr. Howitt seems to have displayed the hopeful and cheerful spirit. The steppes of the Crimea, under the bad weather has set in, can hardly rival the wretchedness of South Australia. The travellers had also to encounter a variety of climate within a few hours. At the M'Ivor diggings they tried their luck again; but disappointed in their quest of gold, they decided on going on to Bendigo. They found this, like other stations of the kind, a complete Balaklava for confusion and misrule; and having been refused the ground they occupied three months before, they struck their tents on the banks of the Bendigo and sought fresh fields and pastures new from the diggings. On their way thither one of their companions, alarmed by the difficulties which presented themselves at every step, withdrew from their little band, and returned to Melbourne. Having returned to the Ovens' diggings, they once more set to work, but the only thing they met with in any bulk was materials for pens and pencil; nuggets of character susceptible of being converted thereafter into gold. Mr. Howitt attributes all the evil which the adventurer is called upon to encounter in Australia to the pernicious policy of the Government in withholding the bounty of the diggers and other birds of passage under the pretence that they would settle if they could procure moderate allowance of land. Never, he tells us truly, whilst the United States is 3,000 miles from England, and sell land at 5s. an acre, and while 13,000 miles from England, and will not sell any land for agricultural purposes at any price, will you get a fine, full immigration in Australia, such as is continually pouring into the United States. An animated correspondence on this subject has been maintained, since the publication of his book in 1854, between Mr. Howitt and the advocates of the present system, in which Mr. Howitt has by far the best of the argument. In a case in his book in which a squatter on Charlotte's Creek was asked to pay 10l. for his station, and lets to his landlord, the

re the family had taken up its residence. He here received benefit of classical instruction from an old general, whom his father was then concealing from the Imperial police. At the close of 1811, his father, then a general and major-domo of Joseph Bonaparte's palace at Madrid, sent for his family to join him in that city, and Victor accompanied his mother to Spain. He remained in Madrid about a year, and did not return to the old convent until the restoration in 1814. This event, by exciting in his mother and father the opposite feelings of joy and indignant grief, led to their separation. Victor was placed by his father in a private academy, where he studied mathematics, it is said with great success, previous to his intended removal to the Polytechnic School. In 1816 he published his parable of "The Rich and Poor," and an elegy on the "Canadian." In 1817 he was a competitor for a prize on the "Advantages of Study," offered by the Academy; his poem was honourably mentioned, and would, it is said, have won the prize, but that he intimated at the close of his lines that the writer was but fifteen years of age. As the serious, meditative tone of the poem seemed to betoken a much older author, the Academy fancied he was trifling with them, and refused the prize. In 1819, having committed himself to a literary career without his father's consent, he wrote two odes, entitled "The Virgins of Jordan," and "The Restoration of the Statue of Henri IV.," and sent them to the Academy of Floral Fêtes at Toulouse, by which they were both crowned. In 1820 he published his "Infant on the Nile." In 1822 appeared the first volume of his "Odes and Ballads;" a collection of occasional pieces, all breathing a liberal spirit. His "Hans of Iceland," and "Bug-Jargal," which were not published until some years later, were written about the same time. Before the close of the same year the young poet married Mlle. Foucher, and rising into distinction as a Royalist, he received a pension from Louis XVIII. In 1826 he published a second volume of "Odes and Ballads," which betrayed an entire revolution in his political and literary opinions. In the same year he composed a drama called "Cromwell," intended to assert the freedom of the Christian and Romantic drama against the theory of Aristotle's unity, as understood and practised by Racine. He prefaced it with a dramatic theory of his own, to which, however, he hardly gave a fair chance of success, since its accompanying illustration contained scarcely a feature of merit. In 1828 he published his "Orientals," a poem of finished versification, but wanting in force or spirit. In 1830, Victor Hugo published his "Days of a Condemned Criminal," and so vividly depicted the supposed tortures of a man left for execution, that the terrific interest of the work gave it an immense success. Hugo now prepared to make a second attack on the stiff and unnatural dramatic form prevalent in his country. On the 26th February, 1830, his drama "Ernani" was played at the Théâtre Français. The indignation of the old party, and the enthusiasm of the new party knew no bounds. The first performance of "Ernani" was a scene of riotous confu-

needed to condense and arrange his scientific ideas, and test them comparatively before applying them in countries yet unexplored. His next care was to look round for a country whose unexplored natural riches might open to the industrious inquirer a prospect of numerous and valuable discoveries. Meanwhile he made a journey with Haüy to North Italy, to study the volcanic history of rocks in the mountains of that district, and in 1797 started for Naples, for a similar purpose, with Bach. Compelled to suspend this plan by the events of war, he turned his steps to Paris, where with a most friendly reception from the savans of that capital, he made the acquaintance of Bonpland, just appointed naturalist on Baudin's expedition. Humboldt had only time to arrange to accompany his newly-acquired friend when the war compelled the abandonment of the entire project. Upon this he resolved to travel to North Africa, and with Bonpland had reached Marseilles for embarkation, when the events of the times again thwarted his intention. The travellers now turned towards Spain, where Humboldt, whose great merits were made known by Baron von Forell, the Spanish minister, was encouraged by the Government to undertake an exploration of Spanish America, and received promises of assistance in his investigations. On the 4th of June, 1799, Humboldt and Bonpland sailed from Corunna, and happily escaped the British cruisers; and on the 19th landed in the haven of Santa Cruz de Tenerife. They ascended the Peak, and in the course of the few days of their stay collected a number of new observations on the natural history of the island. They then crossed the ocean without accident, and landed on American ground, near Cumana, on the 16th of July. They employed eighteen months in examining the territory which now forms the free state of Venezuela; arrived at Caracas in February 1800, and left the sea-coast anew near Puerto Cabello, in order to reach the Orinoco by crossing the grassy plains of Calabozo. They embarked on the Orinoco in canoes and proceeded to the extreme Spanish post, Fort San Carlos, on the Rio Apure, two degrees from the equator, and returned to Cumana, having travelled thousands of miles through an uninhabited wilderness. They left the continent for the Havannah and stayed there some months, until, receiving a false report that Baudin was waiting them, according to appointment, on the coast of South America, they sailed from Cuba in March, 1801, for Carthagena, intending to proceed thence to Panama. The season being unfavourable to a farther advance, they settled for a time at Bogota; but in October, 1801, set out for the south, despite the rains, crossed the Cordillera di Quindin, followed the valley of Cauca, and by the greatest exertions reached Quito, January 6, 1802. Eight months were spent in exploring the valley of Quito and the volcanic mountains which enclose it. Favoured by circumstances, they ascended several of these, surmounting heights previously unattempted. On the 23d June, 1802, they climbed Chimborazzo, and reached a height of 19,300 feet,—a point of the earth higher than which had hitherto been attained. Humboldt next travelled

of man. This latter new and practical aspect of the natural sciences was first presented by Humboldt, and gives to such studies an interest for thousands who have no taste for the mere enumeration of rocks, plants, and animals. The sciences which deal with the laws governing the geographical distribution of plants, animals, and men, had their origin in the observations and generalisations of Humboldt, who may be justly regarded as the founder of the new school of physical inquiry. In addition to the general and ultimate advantage to humanity of such an advance in science as Humboldt has effected, is to be reckoned the immediate partial benefit of his observations, according to which charts have been constructed, commerce extended, and territories peopled. Humboldt is most generally known by his "Kosmos," a work written in the evening of his life, in which he contemplates all created things as linked together and forming one whole, animated by internal forces; and as a monument at which succeeding generations will gaze in amazement. Of this noble work a recent critic says, "Who else could have achieved—who but he could have attempted—the gigantic service? . . . Spread his 'Kosmos' before a young and robust intelligence, which has just then accomplished its regular moral nurture, and say, 'Read and comprehend.' The comprehension exacted will, when acquitted, have added an education."

HUNT, LEIGH. Poet, Essayist, and writer in several other departments of the Belles Lettres, is the son of a clergyman of the Church of England, and was born at Southgate in Middlesex, about the 19th, 1784. His father was a West Indian, and his mother a Philadelphian; but at the period of the American Revolution, his father, who was then in the law, took the British side in war, and manifested his loyalty to the Crown so warmly that he was forced to fly to England. Having taken orders, he was for a time tutor to Mr. Leigh, the nephew of the Duke of Chandos, and had a seat at Southgate. Leigh Hunt received his education at Christ Hospital, like his friends Coleridge and Lamb. About the time of his coming of age he assisted his brother John in the establishment of a Sunday paper, the "News," to which he contributed theatrical criticisms that brought a new tone of writing and independence into that department of the press. He had previously been employed in the office of his brother Stephen, an attorney, but had relinquished that employment for a situation in the War Office, which he gave up on becoming, in 1808, founder and proprietor of the "Examiner." This journal he edited for many subsequent years, and rendered exceedingly popular. His fortunes, however, ultimately fell into reverse, partly owing to his unacquaintance with matters of business, for which an omission in his education had singularly unfitted him, and partly to the then triumphant state of the Tories, who, from the first establishment of the "Examiner," had done their utmost to bear down their antagonist. The eye of the Attorney-General, in particular, had long been upon him, and the following passage from one of his political

r in those of the late Charles Hennell and of W. J. Fox. His
 writings, notwithstanding the strong experience of melancholy
 variable in some of them, are remarkable for their prevailing
 terrorfulness, and as if, in reward of this tendency from the Spirit
 of Nature which he worships, he has had the singular good fortune
 of success accompanied with so much pain can be so called) of
 having outlived, both early and late in life, a series of the most
 extraordinary misrepresentations of him, political and personal,
 some of them amounting to the tragical, some to the ludicrous, and
 some attributing to him phases of character absolutely intended by
 his writers for the reverse of his own! Leigh Hunt, it is true, in
 his own writings (vide "Autobiography" and "Religion of the
 Heart"), confesses to a plentiful participation in the faults of his
 low creatures, but the want of common honesty, feeling, grati-
 tude and interest in the welfare of his fellow-creatures, were most
 rarely never among them; and, to use his own words, "a
 Nathan Wild might as well have been made to stand for Field-
 ing himself, or the Vicar of Wakefield's Jenkinson for his Moses."
 See the dedication of his "Cenci"), in the enthusiasm of
 regard, spoke of him in terms that might have become a Berkley
 or a Sidney; and in a recent number of the "Household Words,"
 his friend Dickens describes him as one "beloved of all mankind."
 Leigh Hunt's rank among the poets of his country is now generally
 conceded. We regard his principal poem, the "Story of Rimini,"
 among the finest narrative poem which has appeared in the English
 language since the time of Dryden. Among the more important
 of his poetical works are his "Captain Sword and Captain Pen;"
 "The Paltrey;" the collection of his narrative poems entitled
 "Stories in Verse;" and his "Legend of Florence," a play in five
 acts, which we may mention as being a favourite with Her Majesty,
 who went several times to see it performed at Covent Garden, and
 who had it played before her at Windsor. First on the list of
 prose works we may place his "Sir Ralph Esher," a novel, or,
 rather, fictitious autobiography of a gentleman of the court of
 Charles the Second. Then follows a long list of volumes, some of
 which take their place in the standard literature of the country;—
 "The Indicator," the "Companion," the "Seer," "Men, Women
 and Beasts," (the latter including articles from the Edinburgh and
 other Reviews;) "Stories from the Italian Poets, with Critical
 notes of them;" "Table-Talk;" the *mélange* of criticism and story,
 called "A Jar of Honey from Mount Hybla;" the critical essays
 and selections entitled "Imagination and Fancy," and "Wit and
 Humour;" three volumes of Autobiography, comprising a corrected
 and final account of his relations with Lord Byron; the "Religion
 of the Heart," a manual of Faith and Duty, according to the author's
 views on those subjects; the "Town, its Memorable Characters
 and Events;" (two volumes of metropolitan anecdote and survey);
 and other two volumes of a like nature, under the title of "The
 Court Suburb." Leigh Hunt has no equal as a translator of
 Italian poetry. Among the long list of his translations may be

and morning paper, the "Constitutional," of the political department of which the illness of the editors and other contingencies left him for a time sole conductor. Meanwhile he had become thoroughly acquainted with the views of Edward Gibbon Wakefield and of Colonel Torrens, on subjects of colonization and political economy, which powerfully modified his course of action. Through him he has had the aid and political confidence of some of the most eminent men of the present day, and it is, we believe, especially so at the present moment. On the break-down of the "Constitutional" he became editor of the "North Cheshire Reformer," and then of the "Glasgow Argus;" and, with considerable additions to his experience of the local workings of our institutions, of trade, and condition of the people, he returned to town in 1840, and formed a permanent connexion among journals of a high class, which has since been extended. The guiding principle of his politics has been the British Constitution as set forth in its great standards, the Great Charter, the Petition of Rights, and the Bill of Rights,—principles which have taught him, in seeking to sustain, if not to extend the influence of the monarchy, and to help the peers to avert the influence of the monarchy, and to help the peers to avert the influence of the monarchy, to extend the franchise to every man born Englishman paying taxes. He has supported every statesman who was superior to party; was among the very earliest Liberal supporters of Peel; and argued for a restoration of our military system before the present war became fashionable. But all his best work has been executed under that anonymous system which he fully advocates as being, save in exceptional cases, the best for journalism. Besides a few passing pamphlets, therefore, chiefly on political subjects, such as colonisation and railway business, he has done no work under his own name, except the "Foster-Brother" (1841), an historical romance of the fourteenth century, suggested by his early residence in Italy, his political studies, and his unbounded admiration for its hero, the great, patriotic, military statesman Carlo Zeno.

HUNT, WILLIAM, Painter in Water-Colour, was born at 14 Belton Street (since re-christened Endell Street), Long Street, in 1790. He first exhibited, as a member of the (Old) Society of Painters in Water Colours, in 1824. A great and original artist. Of the multitude who, from this painter's modest works of nature and truth scattered through each exhibition of the Water-Colour Society, have received annually fresh enjoyment. A comparatively few, perhaps, have suspected that those delicate and unpretending little bits of paper contained truer art, showed an eye for nature rarer and more penetrating,—nay, more technical gifts of immeasurably finer quality,—than are shown in acres of ambitious and clever oil-paintings at Trafalgar Square,—pictures commanding prices ten times higher than a water-colour drawing can ever challenge. Who shall explain the secret of these magical effects of colour, light and shade, and composition? Why do those modest groups of "primrose pale," or

doors which seem to reproduce his effects so well, only *seem* to do so. The difference is subtle, but complete. Mechanism cannot give the results of a hand such as his.

HUNT, WILLIAM HOLMAN, Painter, born at London in 1827. One of the most prominent members of that movement (self-styled Pre-Raphaelite) among our young painters which has excited so much discussion, so much notice to its originators, and—despite some adverse criticism—not disadvantageously to the cause. Merit has generally had to wait longer for any kind of recognition. In 1846 was exhibited Mr. Hunt's first picture at the Academy. By 1850 he was already the possessor of a fair position at the Academy's walls, and the subject of general notice. His earlier efforts were adopted from novel and poem:—"Dr. Rochefort performing Divine Service in the Cottage of Joceline Joliffe at Stockport," (1847); "The Flight of Madeline and Porphyro," from Mrs. St. Agnes," (1848); "Rienzi vowing to obtain Justice for the death of his young Brother," from Bulwer, (1849). The last-named was purchased by Mr. Gibbons, the well-known collector. In 1850, he commenced the new style of treatment; and, on Mr. Hunt's part, a change of religious and gradually more mystical subject, whereby he has since made himself best known: "A Converted British Family sheltering a Christian Missionary from the Persecution of the Druids," followed by the symbolical "Hireling Shepherd" of 1852. Of 1851 his picture was in a different class of sentiment, "Valentine receiving Sylvia from Proteus;" of 1853, "Candido and Isabella," and "Our English Coasts,"—a beautiful view of the Downs at Hastings. Three of these pictures were awarded 50*l.* and 60*l.* prizes at Liverpool and Birmingham. The chief meanings of his "Light of the World" (purchased by Mr. Cole of Oxford, who had also purchased the "Converted British Family,") and of the "Awakening Conscience" of 1854, were at the time expounded with due emphasis in the letters to the "Times" of the powerful with the public,—Mr. Ruskin. Perhaps that complimentary criticism tended to prove even too much: for the appropriate language of one art cannot be translated by that of another. The meaning we can put into words is not the highest or most legitimate a picture can express. A plainer critic gives a credible account of the "Light of the World,"—"as a beautiful symbolic figure of the Saviour standing at a closed door, in a kind of garden or yard. Glow-worms shine about the ground; the sky is full of stars; but the effect of moon or starlight is overpowered by the flood of light from a lantern the Redeemer bears." Even those who detected *interpretation* of this mystical subject could not but admire the "depth of sentiment displayed," as far as they could understand and feel it, and the "consummate execution of the minutest detail."

HURLSTONE, FREDERICK YEATES, Painter, born at London in 1801—an artist whose merits are less widely known than

and he was not long constant to the artistical dogmas of his violent and imperious master. In 1800 Ingres obtained the second prize from the Académie des Beaux Arts; whilst for another, a picture entitled "The Embassy to the Tent of Achilles," he succeeded in carrying off the first. This picture is, or was, a very few years ago, in the Museum of the Fine Arts in Paris. Encouraged by this success, he set out for Italy; and in 1808 painted the portrait of Napoleon, which is now in the Hôtel des Invalides. In the course of the ensuing five years were exhibited in succession his "Œdipus and the Sphinx," "Jupiter and Thetis," "A Woman in the Bath," "Woman's Sleep," "The Sistine Chapel," etc. The *chef-d'œuvre* of Ingres since that date is "The Vow of Louis XIII.," exhibited in Paris in 1824. This picture was produced at a favourable juncture, and raised at once the reputation of the artist to its culminating point. In the course of that year he returned to France. "The Apotheosis of Homer," painted in 1827 for one of the ceilings of the Louvre, assisted to sustain his reputation; and in 1829 he was appointed to supply the place of M. Horace Vernet as Director of the French Academy at Rome. No better instructor of the young painters of his time could have been selected; and it is, therefore, not surprising that he should have given full satisfaction alike to his pupils and his employers. Whilst in the occupation of this post he painted his "Stratonice" (a Madonna for the Grand Duke of Russia), "The Duke of Orleans" (the eldest son of Louis-Philippe), and the composer Cherubini. His portraits, a common case with most painters of whatever rank, were inferior to his historical pictures; so that in this branch of art, at least, he acquired no special reputation. As to the general character of M. Ingres' style, it is altogether original; whilst for purity of outline and the grace in conception he is without a rival among his countrymen. He can be ranked with neither the *classiques* nor the *romantics*; but is rather an eclectic, holding a middle station between them. A French critic of discriminating taste has declared that the great difference between Ingres and the school of David is, that David sought to copy the antique in order to realise the beautiful; whilst Ingres copies nature in order to realise the beautiful and the antique: for him the ideal did not consist in a creation apart from nature; the ideal was the beautiful in the true acceptation of the word, elevated to its highest power. Ingres was appointed in 1844, Chevalier of the Legion of Honour; and in 1845, Commander. During his long sojourn in Italy he devoted himself almost exclusively to the study of Raffaele. His "Christ and St. Peter" and the exquisite cartoons, after which the stained-glass windows of the Chapels of Dreux and St. Ferdinand were executed in the Luxembourg, are among the noblest specimens of French art. His "Odalisque" is known and admired throughout Europe.

IRVING, WASHINGTON, one of the most graceful Writers in America has hitherto produced, was born in New York, April

education at a school at Greenwich, kept by a French emigrant, and was afterwards placed under the tuition of the Rev. William Hall, with whom he remained until he was nearly fifteen years of age, shortly after which he went to France. The death of his father about this period considerably changed his prospects of life, and he became almost his own master from that time forward. He remained several years in France. He very early formed literary tastes, and from time to time wrote small pieces, which were sent anonymously to the journals and reviews. He also wrote a number of short tales for the amusement of himself and friends, which were never published. Mr. Washington Irving, however, having seen one of them, strongly advised the author to attempt something more important. The result of this encouragement was the novel of "Richelieu," which was completed in the year 1825. The death of Lord Liverpool, who was a friend of his father, and on whom Mr. James's prospects greatly depended, induced him to make an attempt to open a way for himself. The manuscript of "Richelieu" was shown to Sir Walter Scott, and met with the approbation of the great novelist and poet, who strongly urged the publication of the work. It appeared accordingly about 1826, and met with great success. This decided Mr. James's literary career, and since that time he has written a great number of novels and a few histories, all of which have attained to a high degree of popularity on both sides of the Atlantic. Mr. James is undoubtedly the most voluminous novel-writer of the day, or perhaps of any day, the mere enumeration of the titles of his various productions — Novels, Romances, Historical Biographies, etc. — occupying seventy lines in the latest "London Catalogue;" and in that list we miss some of his acknowledged works. During the reign of King William IV. he received the appointment of Historiographer for Great Britain, but circumstances having rendered this office (an honorary one) undesirable, he resigned it. About a year since he was appointed British Consul for the State of Massachusetts, whither he removed soon afterwards with his family. He is residing in Berkshire county, Massachusetts.

JANIN, JULES, "le Roi du Feuilleton," as he is styled, from his unparalleled excellence in that class of French writing, is, probably, the most popular author in France. As a theatrical critic he also occupies a very prominent position on the French press; and his rapid literary sketches, grave and gay, fantastic and severe, evince a marvellous command of the very plastic resources of the language of France. Jules Janin was born in 1804, at St. Etienne, on the right bank of the Rhône, about thirty miles from Lyons; his father was a provincial barrister, and a man of talent and imagination. In 1815 the young Janin was sent to school at home, but he soon left the Rhône, and was entered as a student in the college of Louis le Grand, at Paris. Here he acquired a liberal education, and first imbibed that strong love of classical literature in which he has ever delighted to indulge. His college

-trumpant march of song about his poems, which carry you away in
 -perusal of them as they carried away the author in writing them.
 -peak of course from the French translations, and I can well con-
 -ce that they give but a comparatively faint transcript of the pith
 -power of the originals. The *patois* in which these poems are
 -written is the common peasant language of the south-west. It
 -exists in some slight degree in different districts; but not more than
 -the broad Scotch of Forfarshire differs from that of Ayrshire. As
 -the dialect itself, it seems in the main to be a species of cross
 -between old French and Spanish; leaning, however, rather to
 -the latter tongue than to the former, and constituting a bold, copi-
 -ous and vigorous style, very rich in its colouring, full of quaint
 -and expressive phrases, and especially strong in all that
 -relates to the language of the passions and affections." The same
 -author continues:—"One of my objects in stopping at Agen was,
 -to pay a literary visit to Jasmin, the "Last of the Troubadours,"
 -with more truth than is generally to be found in *ad captandum*
 -recitations, he terms himself, and is termed by the wide circle of
 -admirers; for Jasmin's songs and rural epics are written in the
 -tongue of the people, and that *patois* is the still almost unaltered
 -*provençal*—the tongue of the chivalric minstrelsy of yore. But
 -Jasmin is a Troubadour in another sense than that of merely avail-
 -ing himself of the tongue of the *menestrels*. He publishes, cer-
 -tainly, conforming so far to the usages of our degenerate modern
 -times; but his great triumphs are his popular recitations of his
 -poems. Standing bravely up before an expectant assembly of per-
 -haps a couple of thousand persons—the hot-blooded and quick-
 -witted children of the South—the modern Troubadour plunges
 -his head and ears into his lays, working both himself and his
 -listening audiences into fits of enthusiasm and excitement, which,
 -however may be the excellence of the poetry, an Englishman finds
 -difficult to conceive or account for. At a recitation given shortly
 -after my visit to Auch, the ladies present actually tore the flowers
 -from their bonnets, wove them into extempore gar-
 -lands, and flung them in showers upon the panting minstrel; while
 -editors of the local papers next morning assured him, in floods
 -of flattering epigrams, that, humble as he was now, future ages
 -would acknowledge the "divinity" of a Jasmin! There is a feature
 -peculiar, about these recitations, which is still more extraordinary
 -than the uncontrollable fits of popular enthusiasm which they pro-
 -duce. His last entertainment before I met him was given in one
 -of the Pyrenean cities (I forget which), and produced 2000 francs.
 -Every sou of this went to the public charities; Jasmin will not
 -keep a stiver of money so earned. With a species of perhaps
 -restrained, but certainly exalted and chivalric feeling, he declines
 -to appear before an audience to exhibit for money the gifts with which
 -nature has endowed him. After, perhaps, a brilliant tour through
 -the South of France, delighting vast audiences in every city, and
 -winning many thousands of francs into every poor-box which he
 -visits, the poet contentedly returns to his humble occupation, and

nt Lilienberg, then Governor of Dalmatia. On the death of
 berg, Jellachich was made lieutenant-colonel in the first
 a border regiment; and in 1842 its colonelcy and full com-
 d was given him. In this capacity he took frequent part in
 ontests with the Bosnians, and exhibited considerable bravery
 skill at the battle of Pasvid. During this time the Ban had
 no stranger to the political movements of his own country,
 one of the empire. The people of Croatia (formerly an
 ndent kingdom, but united to the crown of Hungary upon
 decrease of the late king) had from time immemorial cherished
 nationality even more than liberty itself. Inhabiting a
 ry well defined by natural limits,—one in race, language, and
 on, they had borne with impatience the ascendancy of the
 ars in the administration of the Hungarian kingdom, with
 they were now incorporated. When, therefore, in 1848, the
 arians sought to detach themselves still more completely from
 ra, by demanding a national administration untrammelled by
 called Hungarian chancery at Vienna, Jellachich saw an
 unity most favourable to his ambition. He represented to
 countrymen that if the supervision of the Imperial government
 the dealings of Magyars with Croats, Serbs, and Wallachians
 decrease, the smaller races would lie at the mercy of the domi-
 nationality; and his argument so far prevailed, that the
 sent an embassy to Vienna to declare their readiness to pour
 their blood in defending the integrity of the empire. To
 for they joined the prayer that Jellachich might be appointed
 Ban. The court at Vienna was but too glad to find any one
 Austrian peoples speaking of the “integrity of the empire,”
 the prayer of the Croats was granted. Jellachich returned to
 with, Ban of the three kingdoms, privy-councillor, field-
 al, and commander-in-chief of the Banat and the Warasdin
 arstadt districts. His first care was to confirm his new
 ty. He appeared wherever his presence was required,
 ly suddenly and unannounced; harangued the masses;
 ished officials; adjured the clergy to support him from pulpit
 ar; rewarded, punished, arranged, abolished, just as cir-
 cstances required. Once, hearing that an assembly was sitting
 his government, he entered it unexpectedly, when his ap-
 pe was the signal for a general murmur. A vice-gespan
 and indignantly assured him that “if his object was intimid-
 he had mistaken his men: not if he came with ten thousand
 ts at his back would he make them afraid.” Jellachich took
 sword, threw it on the ground, and with clenched fist knocked
 eaker flat on the floor; then, with glittering eye and thunder-
 ce, he bid him know that the Ban needed not arms to
 order and quiet in the land. The braggarts, who had just
 murmured, struck now with astonishment and admiration,
 out into equally contemptible expressions of applause. His
 nce with the southern Slaves, meanwhile, increased, and
 seemed dangerous to the court itself. It was known that

been in communication with the emperor, and

had been victorious in Italy. The house of Lorraine-Hapsburg, reared to confidence by that victory, thought the time had arrived to throw off the mask, and to involve Hungary, still bleeding from its wounds, in the horrors of a fresh war of oppression. The emperor from that moment began openly to address the man whom he himself had branded as a rebel as "dear and loyal," praised him for his revolt, and encouraged him to proceed in the same path. Jellachich now began the campaign. He assembled an army, crossed the Drave, and even advanced as far as Stuhl-Weissenberg, being joined by the Austrian troops on his way. The Hungarian ministry, although unprepared for this invasion, sent troops and beat the Ban, who obtained a truce only to expire in the night. The defeated troops fled in the direction of Vienna, and joined Windischgrätz's forces. The united army again entered Hungary, and then began the war, which continued through so bloody campaigns, and completed only by the aid of the French, reflected eternal glory on the Hungarian nation and shame on its oppressors. Had Jellachich been anything more than a soldier, swayed by a blind attachment to the reigning house, he would in the end have been profoundly afflicted by the fruits of his mischievous valour. He has not only done more than any man to bring the ancient and free Hungarian nation into the dust, but he has ruined the liberties of his own Croatia. His countrymen now perceive that they have been the blind instruments of Austrian tyranny at the sacrifice of their own rights. But the rise of the Austrian court are to Jellachich a sufficient solace for his own and such reflections. When, in 1853, the Montenegrins rebelled against the Turks, Jellachich led a strong force into Bosnia, with a view of aiding Austrian influence there.

JERDAN, WILLIAM, M.R.S.L., for thirty-four years Editor of the "Literary Gazette," was born at Kelso, Roxburghshire, on 16th April, 1782. He is the third son and seventh child of John Jerdan, proprietor of a small landed estate, and baron bailie, under the Duke of Roxburgh, of the township of Kelso and neighbourhood. He was educated at the school of his native place, and being intended for the legal profession, was for some time in the office of a writer to the signet, the Scottish name for attorney. In 1801 he migrated to London, where he was engaged as a clerk in the counting-house of Messrs. Turner, West India merchants. He subsequently returned to Scotland, and for the purpose of studying the Scottish law was sent to Edinburgh, and placed in the office of a Mr. Elliott, a writer to the signet. In 1804 he again came to London, and through the influence of an uncle, surgeon of the *Gladiator*, guardship in the Southampton harbour, was entered as temporary surgeon's clerk on board that vessel, in which capacity he served from October, 1805, to 28th February, 1806. Returning to London he became a writer on the "Aurora," a short-lived morning paper, started under the auspices of the hotel-keepers of the west end. He afterwards joined the "Pilot," evening newspaper, established in January, 1807.

and compensations for the hard labour, hard living, and hard age the young "mid" had to endure; and at the end of a year or so his affection for salt water had changed into a longing for the quiet of home. He quitted the service, and being once questioned by his parents as to "what he would like to be," chose the calling of a printer, and was at once bound apprentice to that trade. Some time subsequently he came up to London, and gained employment as a compositor. One of his fellow-apprentices was a lad of about his own years and disposition, and between them a close friendship sprang up. It was thus that he and Laman Richards became inseparable companions. They worked at the same frame, they shared each other's good and bad fortune, and passed their evenings and spare time in each other's society, discussing the beauties of Shakespeare and other poets. After enduring years of drudgery at the mechanical duties of a compositor, which to one of so imaginative and powerful a mind must have been almost unbearable, Mr. Jerrold determined upon making a first essay as an author. The opera of "Der Frieschütz" was produced for the first time in London, and the two friends went to witness the performance. The grand and mysterious scene which illustrates the wild German story made so deep an impression on Jerrold's mind, that on reaching his humble abode he sat up half the night writing an essay on the opera. In the morning was breaking he stepped out and dropped his first article into the editor's box of the newspaper on which he was engaged as workman. In the morning, as he was wondering over the fate of his anonymous composition, he was joyfully surprised to find his own writing placed in his hands to be set up for the next number. The essay soon caused a sensation, but amidst the praise the young author preserved his incognito; until, finding himself earnestly inquired after in the "Notices to Correspondents," he presented himself to the editor, who instantly employed him upon work more suited to his abilities and more congenial to his taste than that of setting up type. A writer who has ventured upon a sketch of Jerrold says:—"Let it not be supposed by sonnet-writing young men that he achieved this distinction easily; no one leap into the seat of honour was his; but a steady, heart-breaking, toiling up that hill, which always reminds us of the labour of Sisyphus: how often, when we believe we have rolled the stone to the top, does it slip from us, and roll down clattering to the base!" So with Jerrold: dread was his fight, but his heart held out, and he triumphed. The well-known nautical scene of "Black-eyed Susan" was produced at the Surrey Theatre when Jerrold had attained his twenty-first year. Its success was tremendous, and Elliston, the manager, reaped a great harvest. So repeatedly was it performed, that new scenes had to replace the old ones. The company, after enacting it on the Surrey side of the water, were dispatched in cabs and carriages to the Middlesex Theatre, where it is said to have saved the lessee of Drury Lane from bankruptcy by filling that house to the ceiling for night after night.

of "Punch" Mr. Jerrold commenced a monthly review, called the "Illuminated Magazine;" in this first appeared his "Clovernook," one of the best written of his works. After a year or so this publication was discontinued, and he started another, called "Douglas Jerrold's Shilling Magazine." In this periodical the tale of "St. George and St. James's" was first published. In July, 1846, he commenced a weekly newspaper, which, as he was disappointed in its sale, he afterwards sold; and now devotes himself to "Punch," dramatic authorship, and to the editorship of a cheap weekly newspaper of very large circulation—"Lloyd's Weekly Newspaper." Besides domestic dramas, satires, and fictions, Mr. Jerrold has produced some dramatic works of a high order of merit; amongst which "Time Works Wonders"—an excellent story, wonderfully acted—and "The Bubbles of the Day"—one of the wittiest and best constructed comedies in the English language—stand pre-eminent. Probably, however, his efforts which have been most completely appreciated by the public are those productions of humorous literary rank, "The Rent Day" and "Black-eyed Susan,"—which long enjoyed and still enjoy a solid popularity in the theatres of England. The titles of some of his other pieces may be added: "The Catspaw," "Retired from Business," "The Summer of War," "Cupid," and "The Heart of Gold."

JOHNSTON, ALEXANDER, Painter, born at Edinburgh 1816. First exhibited at the Royal Academy in 1836. A clever master of picturesque subject and of domestic scenes from his own subjects of a kind which finds many delineators at the present day, and many admiring patrons. His happiest pieces have been derived from Scottish song and Scottish story: from "The Shepherd," (1840); from Burns' "Sunday Morning," (1841); from "The Covenanter's Marriage," (1842); "The Covenanter's Burial," &c. Many of Mr. Johnston's smaller-priced pieces, "The Highland Home," "The Trysting Tree," "Introduction of Flora Macdonald to Prince Charlie," etc., have found favour with Art-Unions. At the Vernon Gallery occurs a clever example of his more ambitious style,—"*Lord and Lady Russell receiving the Sacrament in the East*," painted in 1846.

JOINVILLE, FRANCOIS-FERDINAND-PHILIPPE-LOUIS-MAURICE D'ORLEANS, PRINCE DE, was born at Neuilly, October 1814. He entered the French navy at an early age, and particularly distinguished himself at the taking of St. Jean d'Ulloa. The young prince had been educated with care, and early gave proof of considerable attainments. Nautical studies, however, engaged his chief attention, when once he was fairly embarked in the profession; and he became in time the favourite of the whole French navy. In 1841, when Louis-Philippe had determined to satisfy the feelings of the nation by restoring to France the remains of her great Emperor, the Prince de Joinville was selected to command the *Belle Poule* frigate, the vessel charged with that

author of "The Irish Flora," and niece to Mr. Francis Baily, the well-known astronomer. Doctor Kane held the appointment of Professor of Natural Philosophy to the Royal Dublin Society, which resigned, after a three-years' tenure, in 1847. In the same year the Royal Irish Academy awarded to him the Cunningham gold medal for certain discoveries in chemistry; among others the existence of the electro-negative radical amidoyene, and the true nature of ammonia. In 1843 Professor Kane delivered a series of lectures on the different sources of industry which exist in Ireland. He had been a member of the Royal Irish Academy from 1832, and placed upon its council in 1841. He was afterwards elected its secretary; an office which he continued to fill until he received the appointment of President of the Queen's College of Cork. He had presented, in 1840, to the Royal Society of London, some researches on the colouring-matter of the lichens, which were subsequently published in the "Philosophical Transactions" under the head of Contributions to the Chemical History of Archil and Litmus." In the measures recommended by Professor Kane for the formation of a Museum of Industry in Ireland were carried out; the Museum in St. Stephen's Green was created, and he was appointed its director. The Ordnance zoological and mineral collection of Mountjoy was also removed to it. This institution is under the immediate control of the Woods and Forests. In 1841-2 Dr. Kane published his most extensive work, "The Elements of Chemistry," the merits of which have been widely acknowledged. His "Industrial Resources of Ireland" attracted the attention of Sir Robert Peel. In 1845 Dr. Kane was appointed, in conjunction with Professors Wray and Playfair, to examine into the cause and means of preventing the potato blight. In 1846 he received the honour of knighthood from the Lord Lieutenant, and in the same year was named one of the Irish Relief Commissioners.

KAULBACH, WILLIAM, an eminent German Artist, was born at Arolsen, Westphalia, in 1804. His father, who was a smith, at first intended, and educated him for his own calling. He then devoted himself to agriculture, but after a short time abandoned this pursuit for the art in which he has since become so celebrated. In his sixteenth year he went to pursue his studies at Düsseldorf Academy, at that time under the direction of Cornelius. An accidental circumstance gave rise to one of his most celebrated works. Having been engaged in painting in the chapel of the insane hospital at Düsseldorf some groups of angels and garlands of flowers, the head physician was so well pleased with the work that he introduced the painter into every part of the establishment. He employed the experience thus gained by the artist some time after of his celebrated "Madhouse." His work had attracted the attention of Cornelius, and he intrusted to him the execution of one of the cartoons designed for the Glyptothek at Munich. In 1825, by his influence, he was sent to Munich, where he executed six allegorical frescoes in the

 favouring to render that small income as productive as possible.
 was in 1814 that, having entered the great metropolis in a wag-
 a. Edmund Kean found his long-sought opportunity of addressing
 age and discriminating audience. We are not writing his life,
 I can, therefore, only glance for a moment at his first trium-
 success. Never was the proud ovation of genius more com-
 or unquestioned. Charles Kean, after the usual preparatory
 at private schools, was entered at Eton in 1824, with an
 allowance for board and education of 300*l.* a-year. His tutor was
 Chapman, afterwards Bishop of Ceylon; Dr. Goodall being the
 and Dr. Keate the Head-master of the College. He re-
 at Eton three years, taking as high a stand as the rules
 of the institution would allow. When removed, he was in the upper
 of the school, where he obtained much credit for his Latin
 In one of the favourite amusements of the school—boating
 he became so expert, that he was elected Second Captain of the
 Boats; no slight distinction in the eyes of an Eton boy. He
 achieved under Angelo considerable repute as a fencer, an ac-
 quishment which stood him in some stead in after-years. Up
 the period the fortunes of his family continued to be highly
 prosperous. Since the days of Garrick, indeed, no actor had ever
 made so much money in so short a space of time as Edmund
 a. But irregular habits, generated probably by his early asso-
 ciation, and an inveterate love of low company, which was, indeed,
 meeting sin, combined with a reckless disregard of money, soon
 began to estrange him from his wife and child. The voices
 of his counsellors, accomplices in his extravagance, and flattering
 weak points of his character, prevailed over the advice of the
 friends who were bold enough to attempt to arrest his downward
 career. This is no place in which to follow him in his retrograde
 career. Suffice it to remark, that he soon fell from his high po-
 sition; his popularity declined; his physical powers sank under a
 more decay; and his finances, dissipated by his riotous course
 of life, also became exhausted. Never has genius presented a wreck,
 moral and physical, so total and so deplorable. His son had for
 some time suspected the derangement of his father's affairs, but
 was not the worst until recalled from Eton in 1827 by a pressing
 illness of his mother. He found her weighed down by sickness
 anxiety, and the affairs of his father in a condition of absolute
 ruin. At this critical moment Mr. Calcraft, one of the most influ-
 ential members of the Drury Lane Committee, offered him a cadet-
 ship in the East India Company's Service. This offer was accepted
 by his father, and he was ordered to make instant preparations for
 departure; but the broken health of his mother, who had been
 long separated from her husband for more than two years, and
 was nearly bedridden,—helpless as an infant, and without any

: Theatre, on the opening ni
the character of Norval, in E

ported for his *début*. He had not yet attained the age of seven-
 and was so complete a stripling in appearance, that the au-
 dience of the theatre hesitated whether to announce him as Mr.
 junior, or Master Kean; but he settled the point himself by
 rejecting the latter designation with disdain. On the Saturday
 he preceded his appearance a dress rehearsal was ordered by
 the manager, that he might "face the lamps" for the first time,
 and familiarise himself with his stage costume. The experiment
 was considered successful; and whilst supping after the performance
 in the manager's room, he expressed a wish to show himself to his
 father in his theatrical attire. Mr. Price consented that he should
 do so; but, seeing him still linger in the theatre, drew from him
 a reluctant confession that he had not money enough to pay for
 a hackney-coach. The cash was instantly forthcoming, and his wish
 was gratified. In spite of a contretemps or two, for which he was in no
 way responsible, and the difficulties which present themselves on
 the first appearance, and which always tend in some degree to dis-
 courage the débutant, the audience received him throughout with
 kindness, and often with warm approbation; and some good
 people were not slow to discover in his acting on that occasion a
 promise of future excellence. If his success was not as pro-
 mised as it might have been, no one could deny that he had made
 a good hit. The press, however, was all but unanimous in its con-
 demnation of him; for when "critics do agree their unanimity is
 terrible." The crude effort of the schoolboy was condemned
 with a severity which ought scarcely to have been directed against
 the failure of the mature and practised actor. The hearts of the
 father and her son were overwhelmed with dismay, so absolutely
 that an appeal did their sentence appear to be; and for the
 moment the boy débutant had resolved to abandon the stage alto-
 gether. In this mood he proposed to release Mr. Price from his
 engagement; but the worthy Yankee, who could see a yard or two
 further than most theatrical managers, declined to avail himself of
 the opportunity, and urged him to persevere. With no great amount
 of money, but with a determination strengthened by a sense of duty,
 he remained at Drury Lane Theatre until the termination of the
 season; appearing from time to time as Norval, Selim in "*Bar-
 bara*," Frederick in "*Lovers' Vows*," (on which occasion he made
 his first appearance for the first time with Mrs. C. Kean,) and Lothaire in
 "*Alfred*," but he obtained no reversal of the unfavourable ver-
 dict which had been passed upon him; and in a state of great dis-
 content and mortification he left London for a tour of practice
 in the provinces. During the fulfilment of an engagement at Glas-
 gow he visited his father, who was then residing in the cottage he
 had built in the Isle of Bute. His reception was more cordial than
 he had anticipated, and a complete reconciliation was the result.
 He declined an offer on the part of the elder Kean to act one night
 at Glasgow for his son's benefit, Brutus to his Titus, in Howard
 Pritchard's tragedy of "*Brutus*." The house was crowded to excess, the
 receipts amounting to nearly 300*l*. In January, 1829, Mr. Charles

sentential and affectionate letter to her, entreating her forgiveness and requesting her to visit him. The reunion, after an estrangement of seven years' duration, was complete. She returned to him gratefully, and the best understanding prevailed between them to the last. All this was the work of their son. The first appearance of Charles Kean after his father's death was in Sheridan Knowles' *Wife*, in which he played Leonardo Gonzaga to Miss Ellen Tree's *Isabella*; Knowles himself filling the part of Julian St. Pierre. This performance ran for the rest of the season, and continued to draw crowded houses long after the Covent Garden company had removed to the Theatre; but as yet the young actor had never been fully satisfied with his success. In an interview with the Treasurer of Drury Lane Theatre, in the course of which an offer was made to him to join his company at a comparatively low salary, he declined it at once, declaring that he would never set foot in a London theatre unless upon his own terms of 50*l.* a-night. "Then, Charles," said, rejoined Mr. Dunn with a smile, "I fear you may bid a long farewell to London, for the days of such salaries are gone for ever!" This prognostic was soon falsified. At the end of five years, during which he had realised 20,000*l.* by acting in the provinces, Charles Kean drove to the stage-door of Drury Lane in his own carriage, with a signed agreement in his pocket for 50*l.* a-night; and an arrangement was paid him for upwards of forty nights by the very man who had predicted its impossibility. In 1833, after the London season, Charles Kean accepted an engagement at Hamburg with Mr. Barham Livius, the heroine of the company being Miss Ellen Tree; but their performances were interrupted by the refusal of the authorities to allow "foreigners" to interfere with the profits of the local establishments. During his probationary performances in the provinces he owed his chief encouragement to Dublin and Edinburgh; in both of which cities he entered into repeated engagements, which were alike beneficial to the respective managers and to himself. In Dublin he had been long an established favourite, and in Edinburgh, by a single engagement in 1837, he realised nearly 1000*l.* At Manchester, Bath, Exeter, and many of the larger towns, he was proportionably successful; and on his return to Waterford, in 1826, was presented by the amateurs of a neighbourhood with a silver claret-jug, valued at 100*l.*; thus illustrating the curious anomaly of an actor without London popularity who could command success everywhere else. He was now to stand among the heads of his profession, or to sink into a secondary rank. His enemies attributed his success to his good fortune in satisfying provincial audiences, and proclaimed their belief that if he attempted to face a London audience he would find his level. This opportunity was soon afforded him. When Mr. Matthews entered, in 1837, upon the management of Covent Garden Theatre, he applied to him, in terms sufficiently indicative of his opinion of his merits, for his co-operation. "Your celebrity," said Matthews, "has, of course, reached me. In the most frank and cordial manner I invite you to a participation in the struggle I am about to

had been formed against him, which to people not behind the scenes seemed unaccountable; but, on the whole, we cannot think that he had much reason to complain. Success has its penalties as well as its advantages; and if the balance be satisfactory, we must be content to take the sweet with the sour. Desiring to obtain a play of the highest character, he applied to Sir Edward Bulwer-Lytton, in whose "Lady of Lyons" he had made a great hit in the provinces, to write him a play on his own terms; but Sir Edward declined "heavy engagements" for not accepting the offer. In 1839 Kean made a similar engagement with Mr. Webster to that which he had made with Mr. Bunn, of 50*l.* a-night and a benefit. This arrangement, like its predecessor, was extended. On its termination he once more crossed the Atlantic, and at Boston, in 1839, narrowly escaped being killed by the fall of part of the machinery; and beside him having been crushed to death on the spot. He was here seized with an attack of bronchitis, which compelled him to abandon several engagements. After a visit to the Havanna he returned in June 1840, to the Haymarket, where he added Macbeth to his list of London characters, with entire success. In the ensuing season he played Romeo to Miss Ellen Tree's Juliet. On the 29th of January, 1842, he was united in marriage to that amiable and accomplished actress; and thus secured not only a most congenial partner in life, and a handsome addition to his fortune, but an invaluable coadjutor in his theatrical pursuits. By a pleasant coincidence they were called upon to play in the "Honeymoon" immediately after their marriage. At Glasgow, in the following February, their combined performances secured for them 1000*l.* in a single week. Wishing to pay a farewell visit to his American friends, Mr. Kean again crossed the Atlantic accompanied by his wife, and at the end of the first year had realised a larger amount of profit than had been made in that country in the same space of time. A new play which had been purchased of Mr. G. Lovell, called "The Wife's Secret," and for which Kean had paid 400*l.*, proved universally successful. In 1846 he ventured on the production, in America, of "King John" and "Richard III." on a scale of splendour never before witnessed in that country; but the taste of Brother Jonathan for pageants, however magnificent, seems to have fallen far short of the enthusiasm exhibited for the same pieces in this country. In a word, the expenses of their production far exceeded the receipts. In 1847 Mr. and Mrs. Kean returned to England, and hearing that their friend Mr. Calcraft, the lessee of the Haymarket Theatre, had fallen into difficulties, crossed over to Dublin to play for his benefit; and after fulfilling a series of engagements at Birmingham, Manchester, Liverpool, and Dublin, they returned to the Haymarket in January 1848, where they appeared in "The Wife's Secret" no fewer than thirty-six times; her Majesty honoured them with her presence at their benefit. In 1849 Mr. Kean was selected by her Majesty to conduct the Windsor Theatricals; a series of private performances at Windsor Castle; a commission which he executed to the entire satisfaction of the Queen and

palus," a gorgeous sp

both were exceedingly productive. "Marco Spada," the Easter piece, ran forty-six nights; but was not proportionably attractive. The season was altogether a profitable one. In 1853-54 "Richard III." although put on the stage with great splendour, was a failure, and which the absence of Mrs. Kean, from illness, may have had a great deal to do. "Faust" and "Marguerite," belonging to an order of melodrama, which is, we confess, little to our taste, ran sixty-seven nights, and "The Courier of Lyons" twenty-six. The season for 1854-55 opened with a play by Mr. Douglas Jerrold, which was only played eleven nights, and then withdrawn. It is impossible to maintain the absurd imputation that Mr. Kean desired its failure, when we consider the great sacrifice which that failure entailed upon him. He paid Mr. Jerrold 600*l.* for his two pieces, and is stated to have lost above 1000*l.* by them. Surely no man of common sense would humour his spleen at such a cost. In "Louis XI." Mr. Kean acquired fresh laurels by his successful exposition of that character. An admirable and highly complimentary criticism in "The Times" newspaper ranks his impersonation of Louis as the highest effort of his genius. It was played sixty-one nights, but was only interrupted by "Henry VIII." which closed the season, after a career of upwards of one hundred nights. A great increase in the attractions of this play, brilliant as they were, was the reappearance, after her long secession from the stage, of Mrs. Charles Kean as Queen Catherine. Any dramatic performance more accurate in costume and magnificent in its pageantry has never been witnessed on any stage. The Pantomimes of the Princess's Theatre have been always productive. The last ran nearly eighty nights. "Hamlet" is often acted there, and always with success, and even the old comedy of "The Rivals" has been performed thirty-two times in the course of the last two seasons. Mr. Kean's good taste and his powers, and that of his wife, have rendered this little theatre one of the most agreeable places of resort in the metropolis. We trust, however, that the vast success of most of his revivals will not induce him to discontinue those liberal commissions to dramatic authors which have done him so much honour.

KEBLE, THE REVEREND JOHN, M.A., Vicar of Hursley, near Winchester, eminent as a Church Poet, was born about 1800, after having finished his education at Oriel College, Oxford, where he filled a high academical position, he was appointed some years afterwards Professor of Poetry in that University. If the value of his "Christian Year" be estimated by the number of editions, in all forms, which have appeared of it during the last few years, it would bear precedence over any single volume of verse of our day. Mr. Keble now confines himself exclusively to his clerical duties, and his parish is said to be so perfect a seat of High Church, that it is a boast of his friends that it does not contain a single dissenter. Under the "Christian Year," which has gone through upwards of fifty editions, he is the author of "The Child's Christian Year," the "Lyra Innocentium," "The Psalms of David in English Verse,"

Harry Mayhew, in his papers on Labour and the Poor. These
 with the Rev. F. D. Maurice at their head, convinced that no
 class is chartered to revel in luxury while another is doomed
 to die, yet lack the necessary means of existence; and believing
 that they came into the world on purpose to share in its work,
 about inquiring how they could best ameliorate the con-
 dition of the afflicted and half-starved poor. They had left
 their halls and mansions to teach in noisome Ragged Schools.
 They had given and given in money until the conclusion was
 reached upon them that indiscriminate alms was often a pre-
 mium to idleness. So they thought, that if they could assist
 the poor to help themselves a great point might be accomplished.
 In this view they called conferences, at which parsons, lawyers,
 and peers, met numbers of artizans and labourers to discuss their
 troubles and remedies. It was considered that the best thing to do
 would be to set the operatives up in business on their own account,
 to combine capitalist and labour in one person. As the tailor-
 trade was then eliciting special attention, and its "sweating
 system" held up for general execration, it was determined to com-
 mence the experiment with a "Working Tailors' Association."
 Loans were subscribed and lent to it at an interest of 4 per cent.
 The scheme was launched and succeeded. Other associations
 in various trades followed, with more or less success. Mr.
 Kingsley powerfully contributed to their success by his lectures,
 and the novel of "Alton Locke," which had a tailor for its
 hero. It is as an author that he is best known. And here we
 usually encounter the rough vigour of the old Saxon spirit
 which he inherits, and the swift bounding blood, sparkling with its
 own health, that tingled in the veins of the Commonwealth's
 heroes. They dash out in "Alton Locke," "Yeast," "Hypatia;" in
 a libel, article, and review, passionately, startlingly, and with
 this earnestness. He flies at the throat of an error or abuse
 with a mastiff-like fierceness and pertinacity, and does not quit
 till all the last drop of life is wrung from it. Of him it may
 be said truly, that if his pistol misses fire he knocks down the
 man of his attack with its butt-end. Mr. Kingsley is a dramatic
 and lyric poet, in addition to being a very popular and pictorial
 prose writer. At the age of twenty-seven he wrote the "Saint's
 Tragedy," which is one of the best reading dramas of modern
 times, and contains some remarkable representations of human life
 created and wrestled in the time of Elizabeth of Hungary.
 The author is especially successful in dealing with the struggles
 and heart-burnings of religious fanaticism, in which he reveals a
 deep knowledge of human nature; and all his writings are
 full of that tumult, transition, enthusiasm, and aspiration, that
 so often agitate the young mind of the Present—the "spirit of
 years to come, yearning to mix itself with life." Throughout
 his prose writings, and in various periodicals, Mr. Kingsley has
 scattered delicious drops of song, which mirror the broad nature of
 the great lyric poet, even as the drops of dew reflect the wide heaven

whence they descended. In addition to the books we have mentioned, Mr. Kingsley is the author of "Phaethon," "Alexandria and her Schools," "Hypatia, or New Foes with an Old Face," "Glaucus, or the Wonders of the Shore;" "Westward Ho!" and various pamphlets and books of Sermons.

KINKEL, GOTTEFRIED, formerly Professor of History, Fine Arts, and Modern Literature, in the University of Bonn. One of the most distinguished of those exiles who have been driven to seek a refuge from political persecution in this hospitable land was born in 1815, at Obercassel, a village of Rhenish Prussia, on the right bank of the Rhine, about three miles from Bonn. His father, a clergyman and an accomplished scholar, who had been rector of the grammar-school of Elberfeld, took charge of his education until he entered the Gymnasium of Bonn; where, by distinguishing himself in various branches of learning and science, he obtained the degree of Doctor of Philosophy, and taught divinity, especially the history of the Church, for upwards of nine years. In 1837 Dr. Kinkel travelled through Italy, for the purpose of qualifying himself to become a lecturer on Christian Art. He there turned his opportunities to such account as to enable him to achieve subsequently considerable celebrity, both in his own country and in England, by his lectures on Scriptural and Mediæval Art. It was on his return from Italy that he became a teacher of divinity, and preached his first sermon at Cologne with great success. Many of his discourses have been published in his own country, and were so highly approved that they led to his appointment to the Professorship of Theology in the University of Bonn. He advocated, however, on all occasions, the necessity of separating Church and State, and the management of the affairs of the Church by the Government, one of the most powerful of the levers employed by Despotism in Prussia. This bold step drew upon him, as might have been expected, the displeasure of the Government, and the Minister of the day expressly declared that he should never be promoted to a regular chair in a State University. This hostility had the effect of firming the young professor in his antagonism to the authorities, and tended, doubtless, to give additional bitterness to the expression of his political opinions. Abandoning theology as a pursuit, Kinkel devoted himself to historical literature and ancient and mediæval art, on which subjects he published, in 1845, a work which is considered a standard authority in Germany, and wrote and lectured on similar topics with great assiduity and success. A liberal in politics by education and conviction, his opinions were confirmed and strengthened by the persecution of which he was the victim. About this time he published a poem entitled "Otto Schutz," which has passed through no fewer than eighteen editions. He continued to lecture at Bonn and Cologne, not only to the students, but to mixed audiences, on literature and art. He seemed now, indeed, to some extent to have appeased his enemies, and beginning to feel more settled in his position, married an accomplished con-

an excellent practical musician and teacher, and an able writer on musical topics. The Revolution of 1848, however, put an end to this pacific course of life, and committed alike by his publicly-voiced opinions and his position to a decided course, he embarked heart and soul in the liberal cause, and was elected a member of the Baden parliament, in which he supported the left or democratic party. As the revolution progressed he became more enthusiastic in the cause, and not content with supporting it with his pen, resolved to aid it with his sword, and accordingly hastened to Baden, where the whole army of Baden, 30,000 in number, subsequently attacked 70,000 Prussians, was assembled to defend the Constitution at Frankfort. The Professor joined a free-corps, in which he fought for eleven days. The insurgents were quickly scattered by the Prussian troops, and Dr. Kinkel was taken prisoner, tried by court-martial, and sentenced to incarceration in a fortress for life.

This sentence the King of Prussia changed arbitrarily to confinement in a penitentiary, whilst his ministry flattered the passions of their royal master by superadding the further torments of hard labour and bad and insufficient food. In order that Dr. Kinkel might be subjected to every indignity which it was possible for them to inflict upon him, he was compelled to wear the prison-dress and to spin cotton. Of meat he was only allowed a few ounces four times a-year. After six months' confinement at Naugard he was brought, in May 1850, a second time to trial at Cologne, before a jury, for expressions which had been provoked by the atrocious breach of faith of which he had been a victim. On this occasion he defended himself with a heroism worthy of his character, and exposed with undaunted courage the cruelty and illegality of the treatment he had experienced. Returned to the fortress of Spandau he was again imprisoned, not with other political offenders in the citadel, but in the penitentiary, where he had to undergo a repetition of the insults and indignities which he had already been subjected to. In the latter part of 1850, aided by the courage and devotion of a friend (who had been one of his pupils), and the unwearied efforts of his wife, he managed to effect his escape; landing at Edinburgh on the 1st of December, 1850.

For the figments circulated by his political opponents (for personal enemies he had none), it was affirmed that he had been sentenced to be shot, but had been permitted, by the connivance of the government, to escape. There was no foundation whatever for these assertions. He was tried in the first instance by court-martial, and afterwards by a jury, his only legal sentences being confinement. Far from there having been any complicity on the part of the government, the turnkey of the prison was subjected to three years' imprisonment for not having prevented his escape; and several of his friends, who were suspected of having aided him in his flight, are still in confinement for the imputed offence. Having resumed his residence in London, Dr. Kinkel commenced his career in the country as a Professor of German Literature and a Public Lecturer on History and the Fine Arts. His lectures on modern

His heroic conduct at the defence of Kars may be best told in the words of an eye-witness:—"The fight was a most bloody one, lasted seven hours and a half, without one second's intermission. Russians left upwards of 3000 men dead on the field; and losses in killed, wounded, and prisoners, must have exceeded 4000 men. The defence was commanded by dear old General Kmetz; and when our General thanked him in the name of Queen Victoria for his gallant repulse of the enemy, I thought the brave man would have burst his heart open, he was so proud. The fight, not like lions, but like fiends. I never saw such reckless-ness of life. You can form some idea of what a desperate business it was, when I tell you that the Russians had their whole force concentrated upon General Kmetz's division, and with the reinforcements he afterwards received, did not amount to 8000 men." A Pesth correspondent of the "Augsburg Allgemeine Zeitung" bears testimony to the intense interest excited there at the conduct of their distinguished countryman, and says:—"General Kmetz not merely commanded in person at the most dangerous position, but inspired his troops by his own example with the most devoted courage of the hero, and with his handful of men pursued the fugitive Russians, scattering death and terror among them. Who, five-and-twenty years ago, would have thought of the harmless, blithe, and well-behaved youth then studying at the Presburg Protestant Evangelical Lyceum for the Christian Ministry?"

KNIGHT, CHARLES, Publisher and Author, was born about 1750 at Windsor, of which neighbourhood, in the early part of the reign of George the Third was king, he has scattered up and down many pleasing and picturesque reminiscences. On the death of his father, who carried on business as a bookseller in that town for many years, and of which he had been mayor, Mr. Knight succeeded to the business. The success of the "Etonian," a periodical contributed to by the *élite* of the Eton scholars, induced Mr. Knight to remove to London, and commence the publication of a new volume on a more extended plan, under the title of "Knight's Quarterly Magazine," which had the distinction of publishing several of the author's earlier productions. He became subsequently the proprietor of the "Penny Magazine," the "Penny Cyclopædia," and other works issued under the sanction of the Society for the Diffusion of Useful Knowledge. Mr. Knight, who is possessed of considerable literary talents, has written a number of very agreeable sketches; is the author of the best "Life of Shakspeare" as yet published; and deservedly takes rank as one of the most able of our present editors of his works. The public, however, are chiefly indebted to him in his character of projector and producer of cheap and good editions of valuable books. "The Pictorial History of England," the "Pictorial Bible," the "Pictorial Shakspeare," the "Illustrated Volumes," "Cyclopædia of London," etc., all bear testimony to his title to be ranked amongst the friends of literature and

General for Ireland, Mr. Napier, who was one of his pupils, "neither our schoolmaster nor our school-fellow—he was both, sometimes more than both: but we loved him and he taught us." The literary efforts of Knowles shows what one man could accomplish, even by irregular and periodical efforts, in one department. Knowles's love of the drama seems to have divided his attention with his pupils, and it was about this time that he produced his play of "Brian Boroihme," an alteration of a piece from another play. His next production was a great improvement on its predecessor. We allude to his "Caius Gracchus," first performed by Talbot's company, on the 13th Feb. 1815, with the greatest success, and subsequently (1823) brought out in London; Mr. Macready playing the part of Caius. The next in succession was "Virginius," written at his own request for Edmund Kean, who, however, does not appear to have played in it; another tragedy on the same subject having been accepted at Drury Lane Theatre. It was, however, first performed at the Glasgow Theatre, under the management of Mason; Cooper playing the hero very passably. It ran five nights when a friend of Mr. Macready, who happened to see it, earnestly recommended it to his notice. It was accordingly sent to Harris, the lessee of Covent Garden; but, although comparatively successful, did not draw much the first season. Kean seems to have regretted that it did not come out under his auspices, and at length to have studied it with much labour. Macready's adoption of the character, however, made not only the fortune of the play, but his own. Hazlitt was of opinion that Macready's performance of Virginius was his greatest card; and although the suggestion of the character did not originate with him, it appears that that of *William Tell* did. Next followed the "Beggar of Bethnal Green," "Hunchback," and "Alfred," an early effort remodelled. It was accepted at Drury Lane, and was subsequently reproduced at Covent Garden; Miss Fanny Kemble performing the principal character; then "The Wife," in which, as well as in "The Hunchback," Mr. Knowles himself played a leading character. In 1818 Knowles revisited his native city of Cork, where in "The Wife" and "The Hunchback" he took parts himself. An engagement at Dublin was now offered to him, and in 1836 he produced, under the patronage of Stephen Price, his play of "The Daughter." In 1819 he visited America, where a public dinner was given to him, and he was received with every demonstration of respect. On his return home he wrote "The Love Chase," which was produced at the Haymarket; "Woman's Wit," for Covent Garden; the "Mistress Mariendorpt," for the Haymarket; and his comedy of "Love and Laughter" for Covent Garden. This is one of the best of his later plays. "Old Maids," and "John of Procida," for Covent Garden, were his next attempts; to which succeeded "The Rose of Arragon," for the Haymarket; and in 1843, "The Secretary." The profits of his plays might have been expected to be large, for they were all very popular. About this time the health of Mr. Knowles began to fail, and an application was made by a body of dramatic authors

Mr Robert Peel on his behalf, for a pension, which, after some delay, was conferred upon him in 1849. It is said that 100*l.* per annum was first offered, but that Knowles's friends applied with success for a larger sum. He is now in the receipt of 200*l.* per annum. On this appeal it was shown that Mr. Knowles had never received 200*l.* per annum by his pen. We should add that the merchants of Glasgow made a similar application in his behalf. Mr. Knowles has since been appointed Curator of the House of Shakspeare at Stratford-upon-Avon. His plays have been collected and printed in three volumes. They are all written on the model of the elder dramatists. In 1847 he published a novel in three volumes, called "George Lovell;" and another entitled "Henry Bruce," a tale, written for the columns of the "Sunday Times." These were wholly unworthy of his genius. He has also contributed various pieces to the annuals and other publications. He has travelled over the whole kingdom, lecturing on dramatic literature; and in 1835 he visited the United States. Knowles has latterly turned his attention to polemical discussion, and has produced two works, "The Rock of Rome," and "The Idol demolished by its own Priest." He has finally become a Baptist minister, and has preached a great many eloquent sermons. It is, however, as a dramatist, and a dramatist only, that he must look for enduring fame. "To him," says a friendly critic, "the modern stage is indebted for paintings of the heart, which human passions, human thoughts, and human feelings, are embodied with a force and expressed with an intensity worthy of the intellectual school whose works adorned the Elizabethan stage. Adopting the style of the elder dramatists, he has had the courage to think for himself. As an actor, he knew, like his masters, how to suit his characters to the players of the time. Standing for the stage he forgets the closet, and always recollects that the eye has to be pleased as well as the ear. He knows the art of placing his characters in the most striking and picturesque scenes, and for this often sacrifices clearness of plot to produce dramatic effects. His imitation of the style and diction of the elder dramatists has been objected to, as being inconsistent with his words and ideas. It has been urged, too, that he should have chosen for his subjects the passions and humours of his own age, and should have expressed them in the language of his own age. In the structure of his plots he is sometimes defective, but generally in his plays there are to be found combined, unity of action, settled purpose, and precision of outline. In portraying his characters, his excellence is universally admitted. The sympathy with which he has pictured the purity of woman's heart, and the tenderness of her affections, is full of truth, exquisite delicacy, and tenderness. As he said a lady to him on one occasion, 'I could speak on behalf of my sex, and thank you as you deserve for the way in which you have drawn us.' 'What else could I have done, my dear madam?' said Knowles, in his own hearty way. 'God bless me, I painted them as I found them.' Subjects for pictures like

Virginia, Julia, and Mariana are still to be found, but where are the painters?"

KNOX, ROBERT, Journalist, Editor of the "Morning Herald" was born in Ireland about 1808. He was for some years connected with the newspaper press in his own country, but subsequently came to London, where he rose by successive steps to the responsible post he now occupies as editor of a leading daily morning newspaper.

KOCK, CHARLES-PAUL DE, a popular French Novelist, the son of a Dutch banker, and was born at Passy, in 1794. Instead of following his father's business, for which he had been destined, he devoted himself to literature at an early age, and published his first novel, "L'Enfant de ma Femme," when only eighteen. Its success was limited, but this did not discourage the author, who continued to write vaudevilles, melodramas, etc., for the minor theatres, until he brought himself into public notice. In 1820 he again attempted novel-writing, and has produced a number of stories in rapid succession, most of which are well known throughout Europe and America. "Perhaps no author," says the "Edinburgh Review," "ever excelled the genius who created 'Le bon Enfant,' and 'Frère Jacques,' in that vivid and thrilling tragedy, which seeks its elements in ordinary passions of daily life. M. Paul de Kock has received a grievous wrong from the current criticism respecting his talents, when he has been represented as eminent only in broad farce, and humorous caricature. He resembles Hogarth in the subtle and profound skill which he connects the ludicrous with the terrible. In the details of his masculine and nervous pictures he appears to be laughing at follies, but the whole composition frequently makes an accurate and startling representation of the consequences of vice." With this *ex cathedra* opinion of so respectable an authority we take liberty to disagree. The writings of Paul de Kock are distinguished by all the licentiousness, both in manners and morals, of the modern French school of novelists; and however we may admire his skilful delineation of the morbid characteristics of his subjects, we cannot help feeling that their pruriency is dwelt upon and gloated over with the gusto of a *débauché* rather than the severity of an anatomist. Few of his works have, we are happy to say, been deemed worthy of translation into the English language.

KOSSUTH, LOUIS, ex-Governor of Hungary, was born in the year 1806, at Monok, in the county of Zemplin. His father, a member of the noble class, was an advocate, descended from an ancient family, out of which, during the civil wars from 1527 to 1540, the Austrian Government selected seventeen members for execution on charges of high treason. Louis was educated at the Protestant College of Scharaschpatak, where he qualified himself for the profession of an advocate. On obtaining his diploma

-ame agent to a Countess Szapary, and as such sat in the Comital
 .embly. In the twenty-seventh year of his age he took his seat
 : the National Diet of Presburg, as representative of a magnate. He
 ublished reports of the proceedings of this great assembly on
 'ographed sheets, until they were suppressed by the government,
 and subsequently in manuscript circulars. The government, deter-
 ined not to allow reports of parliamentary debates to become cur-
 rs in Hungary; prosecuted him for high treason, and in 1839 he
 a sentenced to four years' imprisonment "for having disobeyed
 " king's orders." After about a year and a half of confinement he
 u liberated under an act of amnesty. In January, 1841, he became
 :f editor of the "Hirlop," a newspaper published at Pesth. His in-
 :ence with his country increased with each succeeding year, until the
 ar of continental convulsion was heard, when he was generally recog-
 .ed as a man from whom great things were to be expected. In
 arch, 1848, he entered Vienna with a deputation to urge the claims
 his country upon the government. The Vienna national guards
 w his carriage into the city. Guards of honour were posted at his
 :ing; Count Brenner, Prince Lamberg, Professor Hye, and other
 :abilities of the Austrian Liberal party, waited upon him; and the
 'multitude, carried away by enthusiastic admiration, declared their
 :willingness to storm the palace should the government refuse to
 :appoint him a minister. Kossuth returned in triumph to Presburg.
 as Bathiany was made President of the Council, Prince Ester-
 ay Minister of Foreign Affairs, and Kossuth Minister of Finance.
 nder his influence the Diet carried out those important internal
 :forms which he had formerly advocated. The last remains of the
 :pressive feudal system were swept away, the peasants were declared
 " free from all seignorial claims; the country undertaking to indem-
 :fy the landlords. The peasant and the burgher were at once
 :admitted to all the rights of nobles; and a new electoral law was
 :passed, conferring the suffrage on all who possessed property to the
 :amount of 300 florins, or thirty pounds sterling. After decreeing
 :the most important measures, the Diet was dissolved, and a new Diet
 :was summoned for the second of July. When, however, the Servians
 :on the one hand, and the Croats on the other, became unmanage-
 :able, and when his colleagues—Baron Corvos, Deak, and Clauzal
 :—supported by the Palatine, suggested a trimming policy, his spirit
 :rose with the occasion, and in the end the ministry gave way to
 :Kossuth, feeling that their own dissolution was inseparable from
 :the movement. While Jellachich was strengthening his connexion
 :with Vienna, the Hungarian Government was opening the new Diet at
 :Pesth, and Hungary soon afterwards took up arms against the Aus-
 :trians, to defend its new franchises. The Diet declared itself *per-
 :manent*; and appointed Kossuth Governor, with a Committee of
 :Public Safety for his council. The military events which now suc-
 :ceeded, the defensive operations of the winter of 1849, the transfer
 :of the Diet to Debreczin, the creation by Kossuth of an army, his
 :recruitment of able and successful generals from among its lieutenants,
 :the declaration of independence, the campaign in the spring of

...ery, and to trace the course of its development. In addition to the works enumerated, Kugler has produced many others upon a great number of subjects. His "Schools of Painting in Italy" and his "Hand-Book" have been translated by Sir Charles Eastlake, and a similar service has been rendered by Sir Edmund Head to his German, Dutch, French, and Spanish Schools."

L.

LABOUCHERE, THE RIGHT HON. HENRY, was born in 1800, at Highlands, Essex. He received his education at Christ Church, Oxford, and took honours there in 1820. In 1826 he entered Parliament for the borough of St. Michael's, which he represented until 1830, when he was returned for Taunton, for which he has been since re-elected. He was made a Lord of the Admiralty in 1832; Vice-President of the Board of Trade and Master of the Mint, and a Privy Councillor, April 1835. In March, 1839, he became Under-Secretary for the Colonies; and in the latter end of the same year, President of the Board of Trade. He resigned office at the Whig cabinet in September, 1841. With the return of his party in July, 1846, he became Chief Secretary for Ireland, and in June, 1847, once more President of the Board of Trade; going out of office on the resignation of Lord John Russell's ministry in February, 1852. In November, 1855, he accepted the seals of the Colonial Office, in succession to Sir William Molesworth.

LACORDAIRE, JEAN-BAPTISTE-HENRI, Abbé, a renowned French Preacher, and some time a Representative of the People, was born May 12, 1802, in Burgundy; and educated at Dijon, which he left in 1819 to prepare for the stage. He became one of the most able and promising pupils of Talma, whom he strikingly resembles in gesture and intonation. He afterwards studied for the law, and was a fellow-pupil with Baroche and Chaix d'Est-Ange, being fair to rival both in talent and popularity. In the capital he frequented with a celebrated advocate of the Court of Cassation, and made the acquaintance of Berryer, the great Legitimist lawyer, the Abbé Gerbert, and the eccentric Lamennais. About the same time he renounced the sceptical opinions he had imbibed at Dijon, and became an attached member of the Church of Rome. In 1824 he entered the seminary of St. Sulpice to study for the priesthood, and was ordained 22d September, 1827. It has often been remarked, that there reigns in the whole person of Lacordaire a certain savour of the different social estates through which he has passed, and which follows him into the very pulpit, the graceful and impassioned gesture of the actor often accompanying the subtle argument and brilliant logic of the lawyer. The public eye has been turned upon him; for the restless ambition with which he began

William Laing, author of a "History of Scotland." He has been
 highly educated. From school he entered St. John's College, Cam-
 bridge, in 1829, where he took the degree in 1832, being second
 wrangler and second Smith's prizeman. He was subsequently
 elected a fellow of St. John's, and resided in the University as a
 mathematical tutor. He next entered at Lincoln's Inn, where he
 was called to the bar in 1840. Shortly afterwards he became pri-
 vate secretary to Mr. Labouchere, then President of the Board of
 Trade; and upon the formation of the Railway Department was
 appointed secretary; and thenceforth distinguished himself in railway
 administration under the successive presidencies of Mr. Labouchere, the
 Earl of Ripon, Mr. Gladstone, and the Earl of Dalhousie. In 1844
 he published the results of his experience in "A Report on British
 Foreign Railways." In the same year he gave much valuable
 evidence before a Committee of the House of Commons upon rail-
 ways, and to his suggestions the humbler classes are mainly in-
 debted for the convenience of parliamentary trains at a minimum
 of payment. In 1845 Mr. Laing was nominated a member of
 the Railway Commission, presided over by Lord Dalhousie, and
 contributed the chief Reports of the Commission on the railway
 matters of that period. Mr. Laing's recommendations were then
 popular; but had they been followed, much of the mischievous
 speculation of the year 1845 would have been prevented, as
 is shown by Mr. Laing, in his evidence before Mr. Cardwell's com-
 mittee in 1853. The reports of Lord Dalhousie's Commission having
 been rejected by Parliament, the commission was dissolved, and Mr.
 Laing resigned his post at the Board of Trade; he then returned
 to the bar as a profession, and obtained much practice as a par-
 ticular counsel. But his experience in railway matters soon
 led to fresh relations with them. In 1848 he accepted the post of
 Chairman and Managing Director of the Brighton Railway Com-
 pany, and by his judicious administration of its affairs the passenger
 traffic of the line became, in five years, nearly doubled. In 1852 Mr.
 Laing was returned to Parliament for his native borough of Kirkwall,
 which he has since represented. The same year he became Chairman
 of the Crystal Palace Company, and to his exertions may be attributed,
 as a great measure, the opening of the Palace at Sydenham in 1854. In
 the following year, however, Mr. Laing retired from this chairman-
 ship as well as from that of the Brighton Railway Company. His
 services to railways have been extended to the Continent,
 and our colonies, in the direction of the Grand Central and Grand
 Northern Railway Companies in France; of the Antwerp and Rot-
 terdam, and the Simbart lines, in Holland and Belgium; and the
 Great Western Railway of Canada. In politics Mr. Laing is a Libe-
 ral, and was a steady supporter of Mr. Gladstone's financial mea-
 sures, and of his views for the pacification of Europe, in 1855; and
 his exertions mainly contributed to the repeal of the duty on ad-
 vertisements on newspapers. Mr. Laing is an able speaker, and has
 the rare art of combining attractive illustration with the development
 of sound political views.

LAMARTINE.

LAMARTINE, ALPHONSE DE,—whose original name was **ALPHONSE DE LA MOTTE**,—poet and Historian, first saw the light at Macon, in 1794. He was an officer of cavalry under the Bourbons, and he was a daughter of Madame de Rons, under governess to the family. The most distant recollections of the gifted historian to a gloomy guard house, where he was taken to visit his prison during the terrible days of the French Revolution; and he carries him back to the suggestive period, when the Temple was occupied by royal captives; when the king and queen were there; when the dauphin was brutalised and sacrificed and the youthful princess—afterwards the Duchess of Angoulême—was in the vaults of a prison, worse than a sepulchre, to see the miseries of her royal race. When the worst days of anarchy were over, Lamartine's family retired to an obscure estate and there his childhood glided by in tranquillity. The poet and historian was sent to complete his education at the college of the Pères de la Foi, within the cloisters of which religious germs implanted by an affectionate mother in his breast were fully developed. After having left this seclusion for some time at Lyons, and made a short tour in Italy, he returned to Paris during the first days of the Empire, when he again divided his time between study and dissipation and he made the acquaintance of the celebrated Talma, to whom he derived gratification of reading the fragments of "Saul," an unfinished tragedy. On the fall of the Empire he offered his services to the restored Bourbons, and entered the Gardes du Corps, but after the Hundred Days quitted the army. In 1814 he went a short time to Italy, gave himself up to the cultivation of the arts, and in 1820 published his "Meditations Poétiques," which circulated to the number of 45,000, and won general recognition of his poetic genius. This literary success, which was one of the brilliant of the day, opened up a diplomatic career for him, and the poet became attaché to the embassy of Florence, where he resided till 1825. Having accepted subsequently the post of secretary to the Embassy in London, he espoused an English beauty, talent, and fortune; and his means, already considerable, were increased by the legacy of an opulent uncle, in consequence of which he adopted the cognomen of Lamartine. He returned to Florence as charge d'affaires; at this time, sitting under the cloudless sky of Italy, his "Harmonies Poétiques." Lamartine was involved in an affair of honour. In 1825 he had described the Italians as but "the dust of the desert," and General Pepe, since renowned for his gallant defence of Vesuvius, with some remarks derogatory to the glory of France, and more than the flesh and blood of the poet and peacock. He challenged the Italian; a duel ensued; and he was severely wounded; but, even while his presence was hanging on a thread, the poet manifested the generosity of imploring, and receiving a promise from the Grand Duke that his military antagonist should not be punished. On the

of that revolution which drove the Bourbons a second time from France, the future historian of the Restoration, being in Paris, was nominated Minister Plenipotentiary of Greece; and before Charles X. had sought safety in exile, Lamartine had an interview with that inadequate representative of the hero of Ivry, whose house he and his father had both served. Lamartine's position, after Louis-Philippe had ascended the throne, was such as he felt to be somewhat anomalous. "By the family and services of my father," he wrote to a friend, "I belong to Charles X.; by the services of my mother, I belong to the House of Orleans." The Citizen-King failed to confirm Lamartine's appointment to the Greek embassy; but the proposal was rejected. "I loved that old Bourbon family," the poet once said, "because it had the love and blood of my father, and of all my dearest relatives." He now resolved on the execution of a long-pondered project,—bought a ship, fitted it out at Marseilles, and sailed forth, with his family, on a poetical pilgrimage to the East. At Beyrout he had the misfortune to lose his first daughter, whose beauty and promise had inspired him with eternal hopes; and whose untimely death, although it saddened the heart of the poetic pilgrim, elicited some of the most pathetic odes that ever flowed from his inspired pen. Leaving Madame De Lamartine at Beyrout, he travelled through Syria and the Holy Land, and was at Jerusalem when intelligence arrived that he had been elected Deputy for the department of the North. The poet upon his return returned to France, to try his powers as an orator and politician. His friends, of course, persisting in the popular error, often refuted, that a man of genius cannot deal with matters of business, were under the impression that he would prove out of place in a legislative chamber; but he speedily dissipated their delusions. When he ascended the tribune, the rapidity with which he could get over a subject, the simple manner with which he went straight to the point, and the eloquence with which he adorned whatever he touched, made him as useful and practical a member as any lawyer or manufacturer, and won for him general admiration. Though knowing little what he calls "the vulgar utility" of Louis-Philippe's reign, and rather scorning his pretensions, Lamartine, on entering on his duties as a deputy, embraced the Conservative cause, and took his seat in the ranks headed by Guizot; but he soon gave indications of holding opinions of a much more progressive character than those maintained by that eminent minister. Though in his heart the love of the Bourbon dynasty contended with the republican principles which his reason recommended, Lamartine's politics gradually assumed a more liberal colour; and the longer he devoted attention to public affairs, the more convinced he became that the French nation had been deluded, and that the king and his ministers were the foes, and not the friends of the people. From the tribune he warned the Government to exhibit a spirit of concession to the popular wants and wishes; but finding his words disregarded, he withdrew his support from men whose measures excited his suspicions, and whose policy filled him with alarm.

of the people." While the poet, orator, and statesman, was endeavouring "to stay the plague both ways," a loud noise was heard in one of the tribunes, and forthwith a body of men, armed with muskets, rushing in, forced their way to the front seats, and pointed their weapons first at the Deputies, and then at the royal party, with so menacing an aspect, that the perplexed princess with her son quitted the Chamber. It having now become evident that compromise was out of the question; a Provisional Government, including Lamartine, was formed; the Chamber of Deputies was forbidden to meet; the Chamber of Deputies was dissolved; and Louis-Philippe was fain to escape in a craven manner, in a four-horse brougham, from the people whom his policy had exasperated to insurrection. The Republic, which was thus brought into existence, was immediately exposed to peril; for the populace were in a state of fierce excitement, and suspicious of all public men. In this crisis, Lamartine had the enviable distinction of saving his country from dreadful and sanguinary anarchy. Under his auspices the Provisional Government adopted resolutions against capital punishment for political offences, and substituted the tricolor for the ill-omened red flag. These measures, which were proposed by Lamartine, owed their success entirely to his courage and eloquence. In one day the Parisian populace, mad with excitement, assembled five times in front of the Hôtel de Ville; and as often, Lamartine addressed them in words, whose influence made him the master of their passions and his own. "You are," he said, "from calumny to calumny against the men who have devoted themselves, head and heart, to give you a real republic, a republic of all rights, all interests, all the legitimate rights of the people. Yesterday you asked us to usurp, in the name of the people of Paris, the rights of 35,000,000 Frenchmen,—to give them an absolute republic, instead of one invested with the strength of their consent. To-day you demand from us the red, instead of the tricolor flag. Citizens! for my part I never will give the red flag, and I will explain why I will oppose it with the strength of my patriotism. It is because the tricolor flag has made the tour of the world, under the Republic and the Empire, with our liberties and our glories; whilst the red flag has only made the tour of the Champs de Mars, trailed through torrents of blood of the people." The effect of this speech was quite magical; the crowd clapped their hands, shed tears, embraced the speaker, shook his hands, and carried him aloft in triumph. But a few minutes afterwards, fresh masses of the people, armed with sabres and pikes, surrounded the building, knocked at the doors, and filled the streets. A cry arose that all was lost, that the mob was about to seize the members of the Provisional Government, and that only Lamartine's voice could allay their wrath. Lamartine appeared. He was on the staircase; but, for a whole hour, the crowd continued to vociferate and brandish their weapons without even deigning to listen. Lamartine at length folded his arms, commenced his address, and by softening and appeasing the people, did all that

orator could do, to induce them to become the guardians of the Provisional Government. The Parisians, however, were anything but docile: and the lives of the republican chiefs were never in any degree of safety, until they had put it beyond all doubt that the cause of the people would be secure in their keeping. Remembering how they had been duped in 1830, they distrust all professions of liberalism, however sincere; and often as they were soothed and charmed by Lamartine's eloquence, their suspicions would still return as soon as his voice had ceased to enlighten their ears. The more the orator had enchanted them, the more enraged they felt at the idea that all his fine words might be nothing but cajolery. Their perplexity would have been to the highest degree comic, had it not threatened a most tragic catastrophe. They insisted that the Provisional Government should, every quarter of an hour, report their proceedings to the people. On one occasion Lamartine came forward and said, "Citizens, I come to impart to you the ideas of the Provisional Government." "We won't have any ideas—down with ideas!" shouted the mob. Another time Lamartine began thus: "The first necessity of the Republic is order." "We won't have any order—down with order!" exclaimed the impatient populace. Among the rational of the Parisian republicans, few were more conspicuous in February, 1848, than Lagrange. He was regarded as the father of the Revolution, and the consideration in which he was held by his confederates may be inferred from the fact, that he was named the Lieutenant of the 5th Legion of the National Guard. He had formally transmitted Louis-Philippe's act of abdication, which had been put into his hands by an officer of the château. The Provisional Government, although in dread of the notoriously incendiary principles of Lagrange, felt compelled to nominate him to some post of eminence, and for two days he figured as the mayor of the Hôtel de Ville. His official career, however, was of the briefest duration, and terminated with a scene sufficiently alarming to all moderate politicians. On the Monday succeeding the king's flight a grand council of all the revolutionary leaders was held, to dictate terms to the Provisional Government. The calm demeanour of Lamartine irritated in no slight degree the boiling, passionate nature of Lagrange, whose excitement was so fierce that several members of the Assembly prepared to withdraw in alarm. Lamartine alone blanching not, and the self-possession displayed in his replies only served to exasperate his opponent. At length, infuriated beyond control, the Republican enthusiast drawing a pistol from his pocket, rushed towards Lamartine, exclaiming, "You are no true patriot!" pointed the weapon at the head of the minister. "What hinders me from taking thy life—at once—upon the instant?" shrieked he, with redoubled fury, as the calm eye of Lamartine met his. "Your own conscience," coolly replied the minister, "and the utter uselessness of such an outrage; for should I fall, there will still remain my colleagues, who are resolved to a man to meet death rather than submit."

silence or return to the senseless anarchy of 1793." The words
 had the effect of calming for an instant the fury of Lagrange.
 He dropped the weapon which he held, and turning pale as death,
 while his eye quailed before the steady gaze of Lamartine, he
 muttered between his teeth, "You are not a true Republican, nor
 a true patriot; but I believe you are an honest man." In a few
 moments Lagrange arose, and with the most frightful yells began
 to rend the clothes from his back, and to tear the flesh from his
 sides, until the blood spurted forth. Excitement, it appeared,
 had turned his brain, and Lagrange was a raving maniac. He
 was secured with difficulty, and carried to a lunatic asylum. La-
 martine's first act, in his capacity of Foreign Minister, was to send
 a document explaining the principles which would in future govern
 the intercourse of France with other nations. The effect of this
 document—eloquent, temperate, and dignified—was generally to
 restore confidence. The same moderate and self-possessed language
 was heard by him to the various deputations of foreigners who
 came to seek the aid of the Republic in their projected attempts
 to revolutionise their respective countries—especially to those of
 Poles and Italians. But with all his genius, Lamartine could
 not accomplish the great achievement of establishing a safe and
 permanent republic. While he was discharging, with a firmness and
 courage worthy of all praise, the high functions with which he
 had been entrusted, the populace, incited by some designing men,
 for the misfortune of the nation—had found a place in the Pro-
 visional Government, were preparing those disorders which resulted in
 the catastrophe of June. Lamartine, with the prescience of genius,
 saw the storm, and prepared to meet it. "We are approaching a
 crisis," said he in council, "and it will not be a riot or a battle,
 but a campaign of several days, and of several factions combined.
 The National Assembly may, perhaps, be forced, for a while, to
 leave Paris. We must provide for these contingencies with the
 vigour of a Republican power. The 55,000 men sufficient for Paris
 will not suffice to bring back the national representation into the
 capital. I demand, besides, a series of decrees of public security;
 and the Minister of War immediately order up to Paris 20,000
 men." This proposal was unanimously agreed to; and thus,
 ere the insurrection broke out, the Government had
 made arrangements to bring 75,000 bayonets to the support of the
 National Guard of 190,000 men. General Cavaignac carried the
 orders of the Government into execution as rapidly as quarters
 could be provided. Lamartine every day inquired as to the arrival
 of the troops, and was told, "The orders have been given, and the
 troops are in movement." Taking into account the effective
 strength of the Garde Mobile, the Garde Républicaine, and the
 National Guard of Paris, the effective number of the garrison in and
 around the capital at the end of June was 45,000 men. The steps
 taken by Government to break up the useless Ateliers Nationaux
 aggravated the struggle, and on the 23d of June the insurrection
 commenced. Its obstinacy and protracted duration, together with

its suppression by Cavaignac, are well toward the Government of the Republic with a brave spirit; and the nation, frightened to elect a Chamber, the majority of which was of Lamartine. On the 21st of December he was elected President of the Republic, with a majority of 8,000,000; while the candidate was formerly the idol of the people, and who was elected by six constituencies, could not get 100,000 votes. Lamartine met his fate after a long and terrible crisis, had done his duty. He was a man of great convictions, when thrones were being overthrown, when kings were flying from France, when from their rulers, he had been placed in a position of danger and difficulty. From the beginning he had been patriotic, and he had held fast to his principles without wavering. The purity and clearness of his principles had inspired him with courage.

"Justum et tenacem pro
Non civium ardor pravi,
Non vultus instantie
Mente quatit solida

He had defied the wrath of a disreputable and to the irrational demands of imperious and of conciling order with freedom; but as he fell with dignity, carrying with him the friends and the respect of his opponents. He has been busy with his pen, he has written "Bien Public," in the "Conseiller du Bien Public," "History of Turkey," and "Characters;" all of which are, more or less, in a picturesque, and fascinating style, and of a fervid, poetical spirit, and irradiated by a refined and brilliant imagination.

LAMORICIÈRE, JUCHAULT DE
French Army of Algiers. In 1830 he was in the history of his rapid advancement is told in a series of battles. In February, 1848, he was elected to the National Guard of Paris, at the moment when he solved to give up M. Guizot, and was to proclaiming the appointment of the President. In the epoch he belonged to the Moderate Republic. With Cavaignac and others he was involved in the coup d'état, December 2, 1848, and went into exile.

LANCE, GEORGE, Painter. One of the most successful masters, (in oils), since the Dutch masters, of Still-life. Born at Easton, near Colechester, March 24, 1802; he first exhibited at the Academy in 1828; since 1835 he has been a regular contributor. At the British Institution, his pictures have been more numerous, and have been seen to greater advantage. Flowers "from the garden just plucked;" fruits "fit to fill the golden vases of an emperor's feast;" and "from the lake just shot:"—all visitors of exhibitions are struck with the excellence of Mr. Lance's imitations of nature in this department,—the truth, power, and harmonious wealth of colour shed on them. Elaborate, as well as gorgeous and effective compositions, many are. Carved antique cup or goodly tankard is the luxuriant fruit or gorgeous exotic. And in some instances animals are introduced. One of his most celebrated examples is "The Cup," in which a monkey, adorned with red head-gear, forms a contrast to a varied display of still-life. A duplicate of this picture forms one of the three examples of this master in the Vernon Gallery. He has also executed several historical and imaginative pictures of great merit. One, "Melancthon," gained the prize at the Academy. Mr. Lance's present style tends perhaps to over-elaboration, in compliance with the taste of his admirers. Less finished essays of his art are reported to contain even higher qualities than those shown in the after-stages. A considerable portion of the admired Velazquez, the "Boar Hunt," in our National Gallery,—whole groups of figures, mules, etc., and the greater part of the landscape,—are in reality the work of Mr. Lance. The truth we learn from his printed evidence before the Parliamentary Committee, (evidence to which the artist still adheres, in contradiction to Mr. Stirling's statement in his "Velazquez and his Works") "restored" the picture some twenty years ago, while in the possession of the Dowley family, or rather that of the liner, who, by applying a great heat, caused portions of the original painting to peel off, leaving the canvass in many parts entirely bare. This combined Velazquez and Lance has since been "cleaned," much to its disadvantage.

LANDOR, WALTER SAVAGE, Poet, is the son of Walter Esq., of Ipsley Court, in the county of Warwick, by his first wife Elizabeth, eldest daughter and co-heiress of Charles Esq., of Tachebrook, who added to the fortune of her husband an income of upwards of £10,000l. Walter Savage Landor, the eldest son of this marriage, was born at Ipsley Court in 1775, and was sent, at a young age, with a private tutor (the late Dr. Sleath, of St. John's), for education to Rugby. When he had reached the head school he was too young for college, and was placed under private tuition of Mr. Langley, of Ashbourne. A year after he left Rugby he was entered at Trinity College, Oxford, where, as well, the poet, was his private tutor. He had, indeed, the benefit of every advantage that money could procure for him. In 1800, after the Peace of Amiens, he repaired to Paris, and saw Napo-

leon made First Consul for life, estates in Staffordshire and Warwickshire for seven hundred years, 7000*l.* besides building a house & gust of his tenantry, one of whom and in the first fever of his irritation demolished and the property to be rector in Spain. he raised a battery and joined Blake, the viceroy of Valencia mentions a gift from him of 2000*l.* received the thanks of the Supreme Council of England and had the commission conferred upon him. On the expedition, Mr. Landor returned to the approbation, as well as his commission was "willing to aid the Spanish liberties against the antagonist of liberty with a perjurer and a traitor Julia, the daughter of M. J. Thunberg, first gentleman of the bed-chamber was residing at Tours when, after the death of 4000 Englishmen, having no relatives left the neighbourhood. In the year 1793, he retired to Florence, and then purchased a villa at Fiesole, with its garden under the ancient villa of Lorenzo de' Medici during the interval of his confinement at Bath a few years ago, three children. Although he retained but a small portion of it, he has by far the greater part to his credit known to the public by his tragedy of "The Roderick;" and his acquaintance with Mr. Landor led to an intimate friendship. Mr. Landor's next efforts were originally written in Latin, but published in English. There is, in fact, little in them remembered, beyond the fine passage which has been appropriated by Wordsworth in his "The Excursion," of which Southey expresses a eulogy. An edition of his scattered poems published by Mr. Moxon, but did not meet with much success. It is to his prose, however, for a chance of being remembered, that his "Conversations" more especially, conversations of distinguished men of former times, are of so much interest and kind; everything in them is in fact, precisely the sort of conversatio-

may be supposed to have indulged. Mr. Landor disdains the commonplace of criticism, and has in these "Conversations" given us opinions sometimes paradoxical, but always original. He is a man who, Cobbett-like, always seizes the expression that first comes to hand, and finds his account in it: for it is usually the best that could have been selected. He has, indeed, invested his ideal phrases with a vitality which makes them act, speak, and look precisely as some of them may be presumed to have acted, spoken, and acted a thousand years ago. Lady Blessington describes Mr. Landor in one of her letters as "the courtly, polished gentleman of high standing, of manners, deportment, and demeanour, that we might not meet with in one who had passed the greater portion of his life in courts. There is no affectation of politeness, no finickiness in his urbanity; no far-fetched, complimentary, hyperbolic strain of eulogy in the *agréments* of his conversation with women, the pleasing things he says to them when he cares to please." Intense hatred of humbug, political and literary, occasionally induces him to a style of expression which will hardly fall within the above category. He has been for many years a contributor to "Examiner," and whenever any incident occurs that seems to require remark, he demonstrates most unequivocally that he holds a pen of a ready writer. His latest work, "The Last Fruit of an Tree," betrays, notwithstanding his great age, no diminution of mental powers. Men, however, resemble wine. If of inferior strength and quality, its culminating point is soon reached; but if full-bodied, and well-preserved, it will bear a longevity which will reduce a weaker beverage to water, or what is even worse, to vinegar. Mr. Landor is almost the only writer of modern times, if except the late Mr. Beckford, whose mental vigour at upwards of eighty years of age has suffered no diminution.

LANDSEER, CHARLES, R.A., Painter, one of a family fertile in distinguished names; son of John Landseer the engraver; brother of the famous Sir Edwin, and related to several less distinguished contributors to past exhibitions. Charles Landseer was for a time of Haydon's pupils. He first exhibited at the Academy, in 1828, "The Hunter;" in the same year, at the British Institution, studies of Continental subjects,—a group of "Portuguese Peasants," "The Hunter;" not again at the Academy till 1832. Among the number of his succeeding pictures for feeling and spirited execution are "Clarissa Harlowe in the Prison-room of the Sheriff's Office" (now in the Vernon Gallery), and "Pamela." Other clever efforts in a popular class,—the "Plundering of Basing House," "The Battle of Langside,"—led to his election as Associate of the Academy in 1837. During the palmy days of the Art-Union, Charles Landseer shared largely in its prosperity. The "Deceit in Disguise of Charles II. from Colonel Lane's" (1842), "The Monks of Melrose" (1843), and the "Return of the Dove from the Ark" (1844), all secured the favour of prizeholders for 300*l.*, 200*l.*, and 300*l.* The pages of Scott and of English history,—

those, that is, which are wont to re-
 painters of *tableaux de genre*,—have f
 principal works. In 1851 he succeeded
 the Academy—an office which include
 Antique School, etc.

 animal-portraits have unhappily prevail
 being always eager to obtain fac-simil

was so gifted a hand. At no period, however, has he painted pictures more poetic in feeling, as in expression masterly, than his "Pastoral Scene" of 1845, or those with which he took the public by surprise in 1846,—“Peace” and “War,” now in the Vernon Gallery. The scene from the “Midsummer Night’s Dream” (1851), “Titania, Bottom, and Fairies attending,” is in fancy one of his most felicitous works:—a unique version (on canvas) of that fruitful subject, and a marvel of execution. Perhaps his least successful works, notwithstanding the power displayed, are such as “Van Amburgh and his Animals” (1847), the “Dialogue at Waterloo” (of 1850), both commissioned by the late Duke of Wellington; and “Royal Sports on Hill and Loch” (1854), commissioned by the Queen. In each case the genius of the painter is thwarted by his task. Very different are his *con amore* human portraits, as that of his Father (1848), a masterly piece of reality and art. Comparatively powerless, when taken out of his own element, it is in the delineation of strongly-marked character in nature,—witness his Scottish Shepherds, Scottish Bagpipers,—and of nature’s humour, so to speak, in animals, that Landseer is altogether approachable. His gifts have been always highly appreciated. He was the favourite of the aristocracy and of royalty, as well as of the public. He has realized by his art an income only equalled, (among artists), by no fashionable a portrait-painter as Lawrence. Of the “picture-gallery” windows he has long had the monopoly, succeeding others in that species of supremacy. For the copyright of the “Highland Drovers,” the first of his pictures (of any consequence) painted, he only received 200 guineas. Publishers have since been eager competitors for his copyrights. For that of the “Peace” and “War” he received from Mr. Graves 3000 guineas, in addition to the 1500 paid for the pictures by Mr. Vernon; for the “Dialogue at Waterloo” another 3000. In reality, however, it is only a few of his pictures which are intrinsically fitted for engraving. Landseer was knighted in 1850.

LANSDOWNE, HENRY PETTY FITZ-MAURICE, MARQUIS OF, a Whig Minister of State, was born 1780. He was educated at Westminster, at the University of Edinburgh, and at Trinity College, Cambridge. In 1802 he became Member of Parliament for Calne, and sat for that borough till 1806, when he was returned for the University of Cambridge. In the ministry of “All the Talents,” which held its ground only from February 1806 to April 1807, he was Chancellor of the Exchequer. From 1807 to 1809 he sat for the borough of Camelford, when he succeeded his father as Marquis of Lansdowne. He was Home Secretary from August to December, 1827; Lord President of the Council in the Whig ministry, from November 1830 to November 1834; from April 1835 to September 1841; and again in July 1846. His leadership has been for many years the acknowledged chief of the Whigs, with whose history his public career is identified. As leader of his party in the Upper House, he is possessed of an intimate

acquaintance with every subject of debate: an ample command of language, and a pleasant extemporaneity, which the most violent attacks of his opponents could not disturb. In 1803 he accepted a seat in the Cabinet under Lord Aberdeen, without office. When that Cabinet was broken up he was recalled, as a disinterested and experienced statesman, both by his sovereign and the principal persons who were called to take part in the formation of the new government.

LARDNER, HENRY, D.C.L. Encyclopædist and Writer on Science. He was the son of a solicitor practising in the Dublin Courts, and was born in that city April 3, 1768. He received the education which is usual in Irish schools at that period; and at the age of 15 years was placed in his father's office, where he remained about three years. Following the profession, he entered himself at Trinity College, Dublin, in 1812. In 1813 he gained the first prize in Arts, on a subject with which he had been wholly unacquainted before the previous November. He next gained three or four prizes in mathematics, pure mathematics, natural philosophy, and natural history; and in 1817 he received the degree of Bachelor of Arts. From this period until 1827 he remained in the university as a resident member; and in the last year of his residence he lectured on geometry, trigonometry, and the astronomical and natural sciences; in addition to the first six books of Euclid with a commentary, followed by a treatise on solid geometry. The latter work became established as a class-book, and obtained for its author a considerable reputation. It was followed by a popular treatise upon the Steam-engine, based upon a course of lectures delivered by Mr. Lardner before the Royal Dublin Society, and which received the cordial acknowledgment, he was presented with a gold medal. This work, the first popular exposition of a subject of so great importance in the annals of mechanical science, has been revised and enlarged as the progressive improvement and extension of steam power rendered necessary, and is now in its eighth edition. It contains the refutation of those absurd reports which have been generally circulated, imputing to the author opinions as to the impossibility of the Atlantic voyage, which are far from the nature of those he really expressed. During the years 1827-28, Mr. Lardner contributed articles on mathematical subjects to the "Edinburgh Encyclopædia" and the "Encyclopædia Metropolitana"; and he wrote some somewhat extensive treatises upon algebra and trigonometry. He next wrote for the "Library of Useful Knowledge" a series of articles on various branches of natural philosophy, including an elaborate analysis of Newton's optical experiments. In the year 1827, upon the establishment of the London University, now University College, Dr. Lardner, at the invitation of Lord Viscount Brougham, accepted the Professorship of Natural Philosophy and Astronomy; and in the following year removed to London. Here his first labour was the projection of a popular Encyclopædia, to which the most eminent writers of the day might be

liced to co-operate. The plan was communicated by Dr. Lardner
 his friend and publisher, Mr. John Taylor, himself a man of
 considerable literary attainments. They next secured the co-opera-
 tion of Messrs. Longman and Co., the publishers, and some of the
 most eminent literary and scientific men of the day, as contributors,
 among whom were Scott, Southey, Mackintosh, Moore, Herschel,
 Brewster, Lindley, Powell, etc. At Dr. Lardner's request, Sir John
 Herschel wrote for "The Cabinet Cyclopædia" his celebrated Preli-
 minary Discourse upon Natural Philosophy, the greatest work of its
 kind since the days of Bacon. Herschel likewise prepared for the
 series his well-known "Treatise on Astronomy." Sir David Brewster
 contributed a treatise on optics, the department of physics in which
 he has obtained the highest rank. Dr. Lardner wrote for the series
 treatises upon hydrostatics and pneumatics, heat, arithmetic, and
 geometry. Soon after the commencement of the publication of the
 "Cyclopædia," Dr. Lardner was compelled, by pressure of other
 engagements, to resign the superintendence of the work, which
 has, however, since been completed in 135 volumes. Meanwhile
 Dr. Lardner was an occasional contributor to the "Edinburgh Re-
 view," and other periodicals, of papers on physical science, and its
 application to the industrial arts. Between 1830 and 1840, he was
 much engaged by railway companies in the scientific and engineering
 departments of the evidence upon their bills passing through Par-
 liament. In 1840 Dr. Lardner left England for the United States,
 where he remained until 1845. In the interval he lectured to
 crowded audiences in every principal town of the Union, and ex-
 tended his tour to Cuba. These lectures were subsequently pub-
 lished in two large volumes, of which fifteen editions have been
 sold. On his return to Europe, in 1845, Dr. Lardner settled in
 Paris, where he has since resided. In 1850 appeared his elaborate
 work of railway statistics, entitled "Railway Economy." In 1851
 Dr. Lardner wrote for the "Times" a series of papers upon the Great
 Exhibition, since republished in a volume. He next undertook
 an elementary course of treatises, under the title of "Handbook of
 Natural Philosophy and Astronomy," the second edition of which,
 in six volumes, appeared in 1855. In 1853 he commenced a series
 of essays on physical science, and its applications to the industrial
 arts, entitled "The Museum of Science and Art," the publication
 of which, in cheap periodical volumes, started with nearly 50,000
 subscribers. He has since completed a volume on animal physics,
 presenting a popular view of the structure and functions of the human
 body and those of the inferior animals. Several original papers
 have been read by Dr. Lardner to the Royal Astronomical Society,
 and published in their "Transactions." Dr. Lardner has been
 twice married: first to Miss Flood, a descendant of Henry Flood,
 well known in Irish Parliamentary history as the contemporary
 of Henry Grattan. By this lady Dr. Lardner has one surviving
 son, a Commissary-General in the British army. The Doctor
 married, secondly, the only child of the late Lieutenant-Colonel
 Napier, of the 12th Lancers, by whom he has two daughters. Dr.

acquaintance with every subject of de language, and a pleasant equanimity, of his adversaries cannot disturb. In the Cabinet under Lord Aberdeen Cabinet was broken up he was considered an experienced statesman, both by his public men who were called to take part in government.

LARDNER, DIONYSIUS, D.C.I. on Science, is the son of a solicitor in London and was born in that capital, April 3, 1803. His early education obtained in Irish schools. At the age of fourteen was placed in his father's law office about four years. Disliking the profession he entered Trinity College, Cambridge, in 1812. He won the prize in Aristotelian logic, a subject to which he was unacquainted before the previous November. He won sixteen prizes in metaphysics, philosophy, astronomy, and moral philosophy, and the degree of Bachelor of Arts. He remained in the university as a resident. He published three treatises on geometry, differential and integral calculus; in 1817, of Euclid, with a commentary, followed by a treatise on geometry. The latter work became established for its author considerable reputation. His popular treatise upon the Steam-engine, lectures delivered by Mr. Lardner before the Royal Society, for which, besides the customary acknowledgment, he received a gold medal. This work, the series of contrivances unparalleled in the history of science, has been revised and enlarged, and the extension of steam power in its eighth edition. It contains reports which have been generally considered as to the impossibility of precisely the reverse of those he read in the interval, 1817-27. Mr. Lardner contributed subjects to the "Edinburgh Encyclopedia Metropolitana," among which are some on algebra and trigonometry. He next published "Knowledge," a series of articles on various branches of philosophy, including an elaborate analysis of the various sciences. In the year 1827, upon the recommendation of Lord (then Mr.) Brougham, accepted of a lectureship in Natural Philosophy and Astronomy; moved to London. Here his first labor was the Cyclopædia, to which the most emi-

faced to co-operate. The plan was communicated by Dr. Lardner to his friend and publisher, Mr. John Taylor, himself a man of considerable literary attainments. They next secured the co-operation of Messrs. Longman and Co., the publishers, and some of the most eminent literary and scientific men of the day, as contributors, among whom were Scott, Southey, Mackintosh, Moore, Herschel, Brewster, Lindley, Powell, etc. At Dr. Lardner's request, Sir John Herschel wrote for "The Cabinet Cyclopædia" his celebrated Preliminary Discourse upon Natural Philosophy, the greatest work of its kind since the days of Bacon. Herschel likewise prepared for the series his well-known "Treatise on Astronomy." Sir David Brewster contributed a treatise on optics, the department of physics in which he has obtained the highest rank. Dr. Lardner wrote for the series treatises upon hydrostatics and pneumatics, heat, arithmetic, and geometry. Soon after the commencement of the publication of the "Cyclopædia," Dr. Lardner was compelled, by pressure of other engagements, to resign the superintendence of the work, which has however, since been completed in 135 volumes. Meanwhile Dr. Lardner was an occasional contributor to the "Edinburgh Review," and other periodicals, of papers on physical science, and its application to the industrial arts. Between 1830 and 1840, he was much engaged by railway companies in the scientific and engineering departments of the evidence upon their bills passing through Parliament. In 1840 Dr. Lardner left England for the United States, where he remained until 1845. In the interval he lectured to crowded audiences in every principal town of the Union, and extended his tour to Cuba. These lectures were subsequently published in two large volumes, of which fifteen editions have been sold. On his return to Europe, in 1845, Dr. Lardner settled in London, where he has since resided. In 1850 appeared his elaborate work of railway statistics, entitled "Railway Economy." In 1851 Dr. Lardner wrote for the "Times" a series of papers upon the Great Exhibition, since republished in a volume. He next undertook an elementary course of treatises, under the title of "Handbook of Natural Philosophy and Astronomy," the second edition of which, in six volumes, appeared in 1855. In 1853 he commenced a series of essays on physical science, and its applications to the industrial arts, entitled "The Museum of Science and Art," the publication of which, in cheap periodical volumes, started with nearly 50,000 subscribers. He has since completed a volume on animal physics, presenting a popular view of the structure and functions of the human body and those of the inferior animals. Several original papers have been read by Dr. Lardner to the Royal Astronomical Society, and published in their "Transactions." Dr. Lardner has been twice married: first to Miss Flood, a descendant of Henry Flood, well known in Irish Parliamentary history as the contemporary of Henry Grattan. By this lady Dr. Lardner has one surviving son, a Commissary-General in the British army. The Doctor married, secondly, the only child of the late Lieutenant-Colonel Spicer, of the 12th Lancers, by whom he has two daughters. Dr.

Lardner resides in Paris, and has the appointment of Foreign Correspondent.

LAUDER, ROBERT SCOTT Silver Mills, near Edinburgh, 1800. Suggested some of the young painters. David Roberts was the first to give him an exhibition of the works of Sir Allan Ramsay, when some fifteen years old, a painter. His friends, ignorant of his power to forward his aims; but Scott secured his admission as a student, where he remained four or five years in London, studying for three years in a private *Life* academy. In 1826 he was elected Associate of the new Scottish studies in the Trustees' Academy; and he took Allan's place, as teacher. Greatly now marked his pictures:—"cabin of the ship," In 1833 he paid a visit to Italy, where he remained in Munich on his return. For the first time in London, exhibiting at the Academy, Scottish history and Scottish romance. Scott. "The Bride of Lammermoor," "Meg Merrilies;" "Claverhouse" (1844), selected by an Art Union. "Chrom and the Glee Maiden" (1845-1850). Pictures of more ambitious nature, and "Christ Walking on the Water," minister Hall Competition of 1847. Academician, John Eckford Lauder, his "Parable of Forgiveness," has been purchased by the Scottish Academy of Art as the commencement of a new series. In 1849 he has rejoined his fellow-artists and resides.

LAYARD, AUSTEN HENRY and Author, was born in Paris, belongs to one of those families who survived the revocation of the Edict of Nantes, and the picturesque banks of the Garonne, and temper, the exile of his mother, and whom dark eyes, and complexion, distinguish remarkably from his countrymen. Layard was originally destined for the study of law; but soon forsook it for an artistic career. In 1830, his imagination was attracted by the late Daniel O'Connell, he followed him on his tour of travel, and visited various parts of

forwards passed through Albania and Roumelia, and made his way to Constantinople. In that city he was at one period the correspondent of a London daily newspaper. He subsequently travelled through various parts of Asia, and learned the languages of Persia and Arabia. He is said to have studied the habits and manners and dialects of the East so well, that he might almost have been mistaken for an Arab. In all his journeyings he continued to live in a most economical way; eating and drinking cheerfully whatever the country afforded, however unpalatable it might be. In his wanderings, he seems to have lingered with peculiar satisfaction around those spots believed to have been the sites of ancient cities; and when he found himself at Mosul, near the mound of Nimroud, he has described the irresistible desire he felt to examine carefully the spot to which history and tradition point as the birthplace of the wisdom of the West." A Frenchman, M. de Botta, had been making excavations at the cost of his government, and had found a great number of curious marbles. Layard sighed for the opportunity of making similar discoveries. On returning to Constantinople, he laid his views before our ambassador there, Sir Stratford Canning, since ennobled by the title of Lord Stratford de Redcliffe; and that gentleman, with a degree of liberality that will long redound to his honour, offered him to bear the cost of excavations at Nimroud. In the autumn of that year Layard set off for Mosul, began forthwith his labours at a spot previously undisturbed; was rewarded by an unexpected amount of success; and ultimately exhumed the numerous wonderful specimens of Assyrian art which now enrich the British Museum. The English Government and the authorities of the British Museum have acted in a niggardly spirit towards Layard; but happily, the public have rewarded him, not only by their applause, but by the abundant patronage of his works on Nineveh, the editions of which have been sold. Layard was named ambassador to the embassy at the Porte; and in 1852, among the changes consequent upon the dismissal of Lord Palmerston from the Foreign Office, through the intrigues of Lord John Russell, he was appointed Under-Secretary of State for Foreign Affairs. Shortly afterwards he was returned to Parliament for Salisbury; and in the following year was presented with the Freedom of the City of London, in consideration of his enterprising series amongst the ruins of Nineveh. On the fall of the Peel Cabinet, Lord Derby offered to confirm him in his Under-Secretaryship of State until the return of Lord Stanley to England, and then to give him a diplomatic appointment. This offer Layard, on taking the advice of Lord John Russell, declined. Under Lord Aberdeen's administration he was offered appointments not inferior to that which he had before held; but as they were of a nature to remove him from the field of Eastern politics, which he had made his own, he had the honesty to decline them. In 1853 he went out to Constantinople with Lord Stratford de Redcliffe, and on returning to his post; but differing with his chief, returned

in the course of the year to England the advocate of a more decided course. Lord Aberdeen could reconcile him. House several energetic speeches on made a deep impression on the public again proceeded to the East, as a speech then taking place in the Crimea, and the Alma from the mantop of the day the Crimea until after the battle of acquainted with its actual condition. urgent among the members of the Committee of Inquiry into the state of frequently took a leading part in the and contributed his evidence. On the formation of the administration he was again offered a connexion with the foreign policy of the government, "the right man in the right place" himself with the new Government, and of the Administrative Reform Association brought before the House of Commons embodying the views of the new cabinet a large and decisive majority.

LECONTE, JOHN L., M.D., an American naturalist, was born in New York in 1825, and entered the College of Physicians in 1846. In 1844 he undertook a serious exploration to the distant territories of the West, a journey from Lake Superior to the United States, visited the Rocky Mountains; in 1846 he returned to Lake Superior; and in 1848 accompanied a journey to Lake Superior, the results of which he published in a special work. In 1849 he made a journey to the southern part of the state; he also explored the river Colorado, from the mouth to the source, having been the first navigator to ascend a considerable distance. Dr. Leconte's publications are devoted to Entomology, and are contained in the *Proceedings of the Academy of Natural Sciences*, *Lyceum of Natural History of New York*, *Natural History*, and Agassiz's *Lake Superior*.

LECURIEUX, JACQUES, a French historian, was born at Dole in 1822, studied under Letronne, and after his graduation he was employed as an ill. He published the *History of the Dukes of Burgundy*, *England by the Normans*, among his other works. His pictures are "Francis I. at the Ton

Bayard at Dijon," "St. Louis at Damietta," "The Raising of Lazarus's Daughter," the "Education of Jesus," "The Last Moments of Louis XI." "Mary of Burgundy," "Luther when a Child," "St. Firmin baptizing the Princess Attalia," and "St. Bernard setting out to found the Abbey of Clairvaux." He has also painted a considerable number of *tableaux de genre*. His chief attention had hitherto been given to works of a devotional character. Of his *tableaux de genre* one of the most striking is the scene in Schiller's "Robbers," between Moor, Schweitzer, and Schwarz, wherein the former has been wounded by some Bohemian cavaliers whilst procuring water for his captain, which he brings to him in his hat. The versatility of M. Lecurieux's genius, no class of subject coming amiss him, has rendered him extremely popular in France, if little known in this country. Like Delaroche, Horace Vernet, and Delacroix, he belongs to what is called the Renaissance or Romantic school of art, which had its origin with Baron Gros' practical protests against the cold and classical school of David.

LEDRU-ROLLIN, M., Republican Politician and ex-Minister of France, was educated for legal pursuits, and when embarked in a profession is said to have been employed frequently on behalf of men charged with offences against the Government. Being a politician of vehement character and extreme opinions, he, no longer, rendered himself conspicuous as an avowed representative of the Communist interest. Having married an Irish lady, M. Ledru-Rollin paid a visit to the "Emerald Isle" during the summer of O'Connell's "monster meetings." He was present at a memorable assemblage at Tara, and on that occasion was hailed by the excited multitude as a delegate from the Republicans of France to the Irish Republic. M. Ledru-Rollin, as an able and energetic orator, took a prominent part in the Revolution which returned the throne of Louis-Philippe; and having, by his speech in the Chamber of Deputies on the 24th February, 1848, been chiefly instrumental in bringing the Provisional Government into existence, he was nominated Minister of the Interior under the short-lived system of "liberty, equality, and fraternity." When the period arrived for the election of a President of the new Republic, M. Ledru-Rollin figured as a candidate; but the contest resulted in the nomination of the heir of the Bonapartes by an overwhelming majority; and M. Ledru-Rollin being third on the poll. Subsequently, the self-styled aspirant was implicated in a conspiracy to overthrow the late President's administration, and was reduced to the hard necessity of seeking safety in exile. M. Ledru-Rollin then came to England, and in 1850 published his book, entitled "*La Décadence de l'Angleterre*," a work characterised by considerable ability, but not particularly complimentary to the nation whose time-honoured institutions had afforded him security in days of peril. When time went on and Sebastopol fell before the allied armies, M. Ledru-Rollin, in conjunction with Mazzini and Kossuth, issued a long manifesto, declaring that the period had arrived for European

LEECH, JOHN, Artist, was born in London about 1816, and was educated at the Charter House. The sketches of Mr. Leech, thrown off in great abundance, are familiar to the English public in the pages of "Punch," where they continue to afford the whole nation a good deal of amusement; for which they seem to be amply grateful, if we judge by the amount of patronage bestowed on the periodical in which these facetiae appear. Mr. Leech, like Cruikshank, is entitled also to the higher praise of letting morality as well as humour out of his pencil. His "Pictures of Life and Character," which contain his best sketches from "Punch," have had a very wide circulation in their collected form.

LEFEVRE, THE RIGHT HON. CHARLES SHAW, Speaker of the House of Commons, was born in 1794. He was educated at Trinity College, Cambridge; called to the bar in 1819; and returned to Parliament for Downton in 1830. In 1839 he was chosen Speaker of the House, on the retirement of Mr. Abercromby, and in opposition to Mr. Goulburn; the votes being 299 to 317. He was again elected Speaker in 1841, 1847, and 1852. Before his appointment to the chair he voted for short parliaments and inquiry into the Pension-list. He has represented North Hants since 1833. He is a partner in Whitbread's brewery, with the head of which he is connected by marriage.

LEMON, MARK, Journalist, Editor of "Punch," was born Jan. 30, 1819. Mr. Lemon was for some years a writer for the *Art*, and as a member of the Guild of Literature and Art donned work and buskin. When the knot of authors who established "Punch" made up their party, Mark Lemon was one. From the first he was joint-editor; but on the secession of Mr. Henry Colburn, Mark Lemon succeeded to the chief post, which he has since retained. He is the author of upwards of fifty dramatic works, and has written in "Household Words," the "Illustrated London," and other publications.

LESLIE, CHARLES ROBERT, R.A., Painter and Author, was born in London,—not, as often stated, in America, but—of American parents, in the year 1794. In 1799 his father quitted England and settled in Philadelphia, where the painter was educated. In 1811 the young painter returned to England. His instructors in England were both American-born artists: the venerable President, West,—who in all ways showed himself a true friend to the youth,—and Washington Allston, a painter of refined taste, better and more justly known on the other side of the Atlantic than on this. In 1821 Leslie was elected Associate of the Royal Academy; in 1826, R.A. In 1833 he was appointed by the American United States Government, Professor of Drawing to the Military Academy at West Point; which post, after a trial of five months, he resigned, and returned finally to England. Leslie's is

a name more in esteem with lovers of art than with the general public. The most poetic of our painters of "domestic life," one of those who have attained the highest excellence without having paid a visit to Italy,—although an intelligent and catholic appreciator of the works of his predecessors in the art,—his style is individual and English; and has been one of progressive excellence. In the last forty years he has contributed to our exhibitions canvases displaying to initiated eyes unfailing command of expression, and of the subtler qualities of his art, but not so well calculated to attract the popular eye as more showy merits and more tangible powers. Hasty observers would inevitably overlook those delightful, unpretending groupings, that quiet mastery of the language of Beauty and feeling of the finest quality are ever there, and even the slightest accessory. Competent judges pronounce that he has succeeded—in a modest "manner" of his own—in what he has undertaken. His art is as refined as it is unconventional. Of Shakspeare he is the only imaginative illustrator we have. In his scenes from "Don Quixote,"—those by which he is most widely known,—are shown qualities kindred to those of his contemporaries, Sterne, Fielding, Smollett, and other congenial authors, he has adequately put on canvas,—often in a language more refined than his own. In such trying task-work as the "Queen's Coronation," etc., the same fine qualities are discernible, triumphing over much unimproving material. As for his female studies and portraits, we find in them some of the sweetest English flesh and blood which has ever been painted. Leslie's earliest works were, in subject, not confined to the range in which he has since won his fame. They included historical and religious themes: "Saul and the Witch of Endor," one,—of orthodox "historic" proportions. Grand subjects on large canvases were soon, however, finally relinquished for dramatic scenes from Shakspeare, "Don Quixote," the "Spectator," etc., and from parts of English history admitting of similar treatment, that of the poet and the novelist rather than of the chronicler. Among his more successful early pictures were "Sir Roger Coverley," "Anne Page and Slender," and that delightful piece of antiquarian fancy, "May-day in the reign of Queen Elizabeth." All these were engraved. In 1821 he was elected Associate of the Academy. "Sancho Panza and the Duchess," one of his most successful and best-known works, was originally painted in 1824 for the late Lord Egremont. A repetition, with variations and many improvements,—as in all Leslie's repetitions of himself,—was executed twenty years later, for Mr. Vernon. To "Slender with the assistance of Shallow courting Anne Page," (1825), followed his election as R.A. in 1826. Among his principal subsequent works have been: from Cervantes, "Don Quixote in the Sierra Maestra," "deluded by the Curate and Barber," (1826); "Sancho Panza and Dulcinea," (1838); "The Duke's Chaplain reprimands the Duke and quits the table in a rage," (1849); "Governor Sancho Panza and the Doctor," (1855): from Shakspeare, "The Dinner

—“Merry Wives of Windsor,” (1831, and again in 1838); “Truchio and the Tailor,” (1832); “Autolycus,” (1836); “Pericles,” (1837); Scene from “Twelfth Night,” “Sir Toby and Sir Andrew,” (1842); scenes from “Henry the Eighth,” “Katherine and her Waiting-woman,” (1842)—“Wolsey discovering the King at Masquerade,” (1849), “Katherine delivering her last Messages to the King,” (1850)—“Beatrice,” (1850); “Falstaff personating the King,” (1851); “Juliet,” (1852). From Molière and the humorists of the last century, his pictures are all especially admirable for the art of telling a story: “Sir Roger de Coverley and the Gypsy,” (1829); “Uncle Toby and the Widow Wadman,” in the Vernon Library, (1831); “Sterne recovering his Manuscript,” (1833); the comical *Gentilhomme with the Fencer*, (1840); scene from “Vicar of Wakefield,”—“Virtue, my dear Lady Blarney,” (1843); “Malade Imaginaire,” (1843); “Les Femmes Savantes,” (1845); “Reading of the Will” from “Roderick Random,” (1846); “Tom and Sophia,” (1850); “The Rape of the Lock,” (1854). In two instances Leslie has shown a capacity for treating religious subject with deep feeling, and in an unborrowed style: “Martha and Mary,” (1833, and again in 1847); “The Pharisee and Publican,” (1847). A favourite subject with him has been the story of Lady Jane Grey; from which in 1827 he painted Lady Jane prevailed on to accept the Crown,” and in 1848 the same gentle scene “Musing with Plato.” From Domestic Life, what pictures equal in sweetness of feeling and of art his “Mother and Child” (1841 and 1846), “Children at Play” (1847), and “The Shell” (1847)? Among his more important portrait-pieces have been “The Grosvenor Family” (1832); “Sir Walter Scott” (1825); the “Mary of Holland House,”—with portraits, (1841); “Coronation of Queen Victoria” (1843), and the “Christening of the Princess Royal,” (1843, but never exhibited). In 1844 he executed one of the pictures from “Comus” for Prince Albert, in the Buckingham Palace summer-house. The choice collection of Mr. Sheepshanks is rich in his works. A few of his larger pictures have been well engraved: as “Don Quixote and the Duchess,” the “Mother and Child,” etc. In the Annuals appeared some of the best of modern book-plates: various of his small pictures: “The Duke and Duchess reading Quixote,” the beautiful first sketch of “May-day,” etc.; also in illustrated editions of Scott, “Walton’s Lives,” and other works. Leslie is a lover of literature, and keenly relishes the poets and great authors of the last century, whom he delights to reproduce on canvas. He himself uses with success the pen as well as the brush. In 1845 appeared a “Life” of his friend Constable, a true and unaffected piece of biography; one of the best (of an age) we have. From 1848 to 1851 he filled the post of Professor of Painting at the Academy, much to the content of the students, among whom he is popular,—and of lovers of art. His Lectures on Painting have lately been published, with additions, as a “Handbook for Young Painters:” forming one of the most acceptable contributions to the literature of art yet furnished by a painter. Literary in

spirit, genial yet searching, without formalism or technicality; they evince independent judgment, and a power of looking to the intrinsic in harmony with his career as an artist.

LEVER, CHARLES JAMES, Novelist, was born in Dublin on the 31st of August, 1806. His father was a builder of substance and respectability in the Irish capital; and the future Romanist having been at an early age destined for the medical profession, studied with that view, first in his native country, and afterwards in France. When cholera for the first time made its appearance in Ireland, Lever was selected as medical officer of a district in the North, comprehending the city of Londonderry and the towns of Coleraine and Newtown-Limavady; and his practice is stated to have been wonderfully successful. He was subsequently nominated Physician to the Embassy at Brussels, and while occupying that position made a brave dash at fame by publishing periodically "Harry Lorrequer," which, on its completion, he dedicated to Sir G. Hamilton Seymour, then Envoy at the Belgian Court. This story, which was in the highest degree entertaining and exciting, and which was read by many never guilty of reading a work of fiction before, made Mr. Lever a literary celebrity, and he did not fail to pursue his brilliant success. "Harry Lorrequer" was followed in time passed on, by "Charles O'Malley," "Jack Hinton," "The Commissioner," "Our Mess," "The O'Donaghue," "St. Patrick's Eve," "Roland Cashel," "The Knight of Gwynne," "The Pattons," "The Dodd Family Abroad," etc. Mr. Lever's novels are from first to last, characterised by Irish fun, humour, blarney, and exaggeration; and although he has sufficiently proved his acquaintance with life on the Continent, whether the inhabitants are occupied with peace or war, he is generally considered most fascinating when the scene is laid in the "Green Isle." There is no doubt, however, that, taken as a whole, his works of romance and adventure form some of the very pleasantest reading of which the light literature of the day can boast. Mr. Lever, as a writer, has been described as equally light-hearted and light-handed, gay, dashing, lively, and frolicsome,—as being, in short, neither more nor less than a "Prince of Neck-or-Nothing Novelists." While engaged in the production of his numerous works of fiction, he, in 1842, took his residence in the neighbourhood of his native city, and figured a time as Editor of the "Dublin University Magazine." This sort of work was no doubt found rather irksome by the dashing and brilliant Irish Novelist. At all events, he returned to the Continent about 1845, and has, since that date, resided at Florence.

LE VERRIER, U. J., Astronomer, and not many years ago a young and modest man of science, silently carrying forward works of enormous extent in the shadow of M. Arago's telescope, and who one day astonished the learned world by the announcement, that in an indicated point of space, and at a specified instant they would see a star unseen until then,—has been described

Christopher Columbus of the heavens. The discovery here mentioned installed him as the first astronomer of France. Honours and places were heaped upon him from all sides, and, with the aid of universal suffrage, the electors of the Manche sent M. Le Verrier to the Legislative Assembly. They, doubtless, thought that a man who could so easily read the heavens would be able to see more clearly than any other into the affairs of the earth. The Royal Astronomical Society of London voted him, in 1848, a Testimonial for his *Researches in the Problem of Inverse Perturbations, relating to the discovery of the planet Neptune.* He is President of the Philomathique Society of Paris, and has published in the *Comptes Rendus*, and the *Connaissance du Temps*, many valuable papers on his researches on comets and upon planetary motions.

LEWES, G. H., Litterateur, was born April 18, 1817, in London. He was educated partly abroad, and partly by the late Dr. Burney at Greenwich. On leaving school he became a clerk in the establishment of a Russian merchant, but quitted that lucrative business and took to medicine. His temperament did not, however, enable him to stand the shock of witnessing surgical operations; he pursued anatomy and physiology only as branches of philosophical study, adopting literature as a profession. As a critic his views have grown firmer, for he can handle the literary scalpel without the slightest trepidation. He went through an express course of training for literature in Germany, during the years 1837 and 1839. He then returned to London, and has since lived by his pen; and a marvellous pen it is,—a golden pen, which has not, and doubtless will be again, dipped in indelible ink. It is the pen of a ready writer, which can touch upon an unlimited range of subjects; the pen of a poet, the pen of a philosopher,—or throw the two together, and say the pen of one who has a philosophic imagination; the pen of a profound critic and brilliant wit. We can only regret that its strokes have not oftener been thunderbolts, instead of sheet-lightning. It has sometimes been too soft, yielded to the wooings of too many Muses. But when life is brought to the point of a pen, a man must look sharp to earn his first,—his immortality may follow. Mr. Lewes has lived much abroad, principally in Germany and France. He is author of *A Biographical History of Philosophy*; “*The Spanish Drama: Don Quixote de Vega and Calderon*”; a “*Life of Robespierre*”; “*Ranunculus*,” a novel; “*Rose, Blanche, and Violet*,” a novel; “*The Heart*,” a tragedy; and “*Comte's Philosophy of the Sciences*.” He has contributed to the “*Edinburgh*,” “*Westminster*,” “*Foreign Quarterly*,” “*British and Foreign*,” and “*British Quarterly*,” Reviews; to “*Blackwood*,” “*Fraser*,” the “*Classical Review*,” and “*Monthly Chronicle*”; also to the “*Morning Chronicle*,” and “*Atlas*” newspapers. He was the editor of the “*Leader*” newspaper from its commencement in 1849 until July 1854. Poor Margaret Fuller met Mr. Lewes on one of her visits to Carlyle's house, and has recorded her impression of him as fol-

lows:—"The second time, Mr. C. has a witty, French, flippancy sort of metaphysics, and now writing a Life of Goethe as unfit as irreligion and sparkle. But he told stories admirably, and interrupted Carlyle a little." Mr. Lewes of Goethe, on which he has spent time also an English edition of Spinoza's Exposition of the Principles of Phy-

LEWIS, JOHN FREDERICK
 brilliant Painters in Water-Colours
 1805; he is the son of Mr. F. C. Lewis,
 scape painter. He first attracted
 from animals in water-colours and
 engraved, remarkable for their truth

enthusiastically testified to this artist's "peculiar apprehension of the most sublime characters of animals," in their wilder state. "The alien isolation of the brutal nature; the dignity and quietness of the mighty limbs; the shaggy, mountainous power, mingled with grace, as of a flowing stream; the stealthy restraint of strength and truth in every soundless motion of the gigantic frame:—all this was never to have been seen, much less delineated," before. He then devoted himself to foreign travel, and to portraying "the comparative animal life" of the semi-civilized nations of the North and East. One of those artists he is, "who by Nature appreciate the characters of foreign countries more than of their own:" the "excitement of strangeness" enhancing the interest of the character and scenes whereof he has so intense a perception. To their education he has brought "powers of artistical composition like those of the great Venetians," and "a refinement of drawing almost marvellous: appreciable only as the minutiae of Nature are appreciable, with the help of the microscope." Prolonged and repeated visits were paid by him to Italy and Spain. After his second visit to Spain in 1833-4, a selection of his drawings from Spanish life and scenery was published in lithograph, with which his name has ever been universally associated; also a selection of drawings from the Alhambra, made during a residence of some months within its walls. Thirteen years' absence from England followed; commencing in 1837, of which two years were spent in Italy, the remainder in Greece, Turkey, and Egypt. In 1851 he returned to England with well-stored portfolios; and the following year made a sensation among the art-loving public by exhibiting his marvellous series of "The Hhareem,"—perhaps the most remarkable specimen of his art, of his rare fidelity of eye and hand. It has been succeeded by other drawings of Italian and Oriental subjects,—*"Roman Peasants at a Shrine," "Scenes in the Desert;"* which, to use the words of an intelligent critic, "nothing can surpass the characteristic truth to Nature, Italian or Bedouin, and the marvellous rendering (though always without labour) of all the details:—the mosaic of the church, the dry, almost calcined surface of the desert, the furniture of the camels, etc. As for the animals themselves, they give one a better idea of the animals in question than the actual, damp, coat-losing Zoological Gardens' specimens." His style may be described not so much as a highly-finished one in the common sense, as one of extreme accuracy of drawing and unlaboured colouring. Every detail is designed so perfectly as to require only the simplest process in the addition of colour. During his Continental visits Lewis employed himself in studying not only the people and scenery, but also with equal diligence the works of the great masters,—those most congenial to his own genius. In 1853 his admirable copies,—sixty-four drawings in water-colours,—from some of the most famous examples, of the Italian and Spanish schools chiefly, were purchased by the British Academy, as the commencement of a gallery of copies from the *chefs-d'œuvres* of the old masters:—the latest instance of

that enlightened spirit which dictated many years before of five of Etty now endeavouring to realize in a picture the resources of water-*color* the latter, and with every prospect of success. At the Exhibition of 1855 a small oil painting, "Cairo," was hung, of course belittled by the quick sighted, open-hearted race, names beyond the pale,—which it looked. But that modest canvas piece of *painting* in the whole in delicate finish and other high influence on the mind. "a poem and luxury."

LIEBER, FRANCIS, LL.D., the University of South Carolina in the year 1800. At the age of 18, he joined the Prussian army, served against Napoleon of 1815, and was twice wounded. As a soldier over, he recommenced his studies, and became a pupil in one of those celebrated by Dr. Jahn. These gymnastics government proved false to its soldiers, liberty to the people, became the consequence of their political revolutions. Kotzebue, Jahn and others, were arrested. Some seditious songs and papers were published by the students, and Lieber was imprisoned. Upon his release, he published a small volume of poems on his captivity. Lieber completed his studies at the universities of Berlin, Halle, and Göttingen, but contrived to escape the vigilance of the Prussian Greeks in the agony of their heroic struggle. He reached Rome, in spite of the Prussian agents, and became a guest of the illustrious ambassador at Rome. In the year 1820, he published "Greece," which issued from the press of Dr. Lieber to Germany after a few months' imprisonment, so annoyed by persecution and that he came to England. He resided in London, writing for the German press in the German language and various other works. While in London, he published his views on the Prussian and Lancastrian systems of education. He visited the United States in the year 1840, and was the editorship of the "Encyclopedia of the Sciences and Arts," a work which involved the labour of

found leisure for the translation of a German work on Caspar Hauser, and of a French work on the July Revolution of 1830. Soon afterwards, he published a translation of Beaumont and De Laquerville's work on the penitentiary system, with an introduction and copious notes. These were translated into German. It may be stated as an evidence of the high repute to which Dr. Lieber had at this time attained, that the trustees of the Girard College requested him to draw up a plan of education for that institution. After a short residence in New York, Dr. Lieber removed to Philadelphia, where he wrote his "Relation between Education and Crime;" "Reminiscences of an Intercourse with Niebuhr the Historian;" and "Letters to a Gentleman in Germany." Both these works were republished in Germany, in the letters under the title of "A Stranger in America." The appointment to a professorship in South Carolina called Dr. Lieber to Columbia, where he now resides. Dr. Lieber's works are numerous, and on a variety of subjects. His "Political Ethics," his "Essays on Labour and Property," his work "On the Principles of the Penal Law," and his various essays on political, philosophical, and philological subjects, fully justify his high reputation for learning and intelligence. In 1828 Dr. Lieber received the degree of LL.D. from the university of Jena, and subsequently from Harvard University, and he has also been elected a member of the French Academy.

LIEBIG, BARON JUSTUS, one of the most eminent Chemists and Philosophers of modern times, was born at Darmstadt, May 12, 1803. His boyish predilection for physics induced his father to remove him from the Gymnasium at Darmstadt. He next studied at Bonn and Erlangen, from 1819 to 1822. By aid of a travelling stipend allowed him by the Grand Duke, he removed to Paris, where he continued his studies, from the autumn of 1822 to 1824, contemporaneously with Mitscherlich. Here the young Liebig read at the Institute his maiden paper on Fulminic Acid, which attracted much attention. After the lecture, a grave-looking man, regularly dressed, came up to Liebig, and conversed with him on the subject of his paper, and inquired as to his views and prospects. Liebig told him he knew few persons in Paris, but attended the various lectures. The unknown gentleman asked him to dine at his house on the following Monday, where he would meet some of the most eminent French chemists. Fearing to give offence, Liebig did not ask the grave gentleman who he was, but watched him going out of the hall, and then inquired of the porter of the Institute the name of his new friend, which, to Liebig's chagrin, the porter did not know, and the day of the dinner-party arrived without the young chemist having found out his kindly host. A few days afterwards he was met by a chemist, who inquired why he had not been at Humboldt's, where a party of chemists had been invited specially to meet him; of course he immediately apologised to the illustrious Humboldt, through whose influence he first took his

presented to the Baron; the remaining 400*l.* being expended on the purchase of a Bill in his favour. The plate consists of five copies, in order that each of the Baron's children may inherit a copy. In the subscription list are the names of many eminent men and men of celebrity in almost every branch of science. Professor Liebig has frequently visited England. In stature he is of the middle size; he is of slight and delicate frame; his head is large, the forehead is exceedingly high and broad, and the eyes intellectual and expressive; and his countenance, though sharp and anxious, is animated and agreeable: but no description can convey that "all-searching glance," characteristic of most men of genius, but most essentially of Liebig, when any important subject comes for a consideration of thought.

LINDLEY, JOHN, one of the most eminent Botanists of our age, was born in the East of England, towards the close of the last century. Doctor Lindley has laboured rather for the diffusion than the increase of botanical knowledge, and his own is rather extensive than diffuse. His *chef-d'œuvre*, the "Vegetable Kingdom," is one of the best, if not the very best, work of the kind in the English language, as a comprehensive view of the structure and uses of the plants of the known world. Dr. Lindley is Under-Secretary and Chief Manager of the London Horticultural Society, and Professor of Botany in University College, London. Among his chief publications are "Introduction to Botany," two volumes; "Elements of Botany;" "Natural System of Botany;" "Botanical History of Roses;" "Treatise on Botany;" "Medical and Economic Botany;" "Flora Medica;" "Medico-Botanical Atlas;" "Lectures on First Principles of Horticulture;" "School Botany;" "Ladies' Botany;" "Theory of Horticulture;" "British Fruits," five volumes; "Orchard and Kitchen Garden;" "Synopsis of British Flora;" "Vegetable Kingdom," illustrated; and, with Johnston, "Fossil Floræ of Great Britain," three volumes.

LINDSAY, ALEXANDER WILLIAM CRAWFORD, LORD, eldest son of the Earl of Crawford and Balcarres, born in 1812, has distinguished himself by his literary works. He is the author of "Letters on Egypt, Edom, and the Holy Land," 1838; "A Letter to a Friend on the Evidence and Theory of Christianity," 1841; "Regression by Antagonism, a Theory involving Considerations on the Present Position, Duties, and Destiny of Great Britain," 1846; "Sketches of the History of Christian Art," 1847; and "The Lives of the Lindsays," 1849. Neither Lord Lindsay's subjects nor his views are calculated to attract so many readers as those of some popular writers of the day; and he is accordingly one of the few men of rank who write, of whom it may be said with perfect justice that he is less read than he deserves to be. But several of his works have attracted attention, and those who read them, read them with peculiar pleasure and interest. His style is graceful and lively, with a pleasant poetic glow and a tinge of chivalrous enthu-

LINDSAY, WILLIAM SCHAW.

bout it. In his "Letters on Egypt" he has given many a fresh picture of Eastern scenery which will not easily be forgotten. "Lives of the Lindsays" is, in a literary point of view, perhaps not the family history we have. It contains a very copious account of an ancient, illustrious, and widely spread Norman family to which he descends, and of which the present Earl of Crawford is the head; and thus, necessarily, a view of the History of Scotland likewise. Lord Lindsay is, indeed, an earnest antiquarian, and still deeper earnestness in the questions of the age may be traced through all his writings, of which the underlying seriousness is more interesting than the vivid and pleasant expression.

LINDSAY, WILLIAM SCHAW, M.P., Shipowner and Public Servant, deserves a place amongst the "Men of the Time," not only on account of his position as the head of one of the largest ship-owning families in the metropolis, but from the encouragement which his remarkable career affords to the intelligent and industrious seaman. It does, that the maxim holds good in Commerce as well as in War, that "nothing is denied to well directed industry." Mr. Lindsay is a native of Ayr, in Scotland. He was born in 1816, and orphan at six, and when only fifteen years of age entered on his career; leaving home with three shillings and sixpence in his pocket to push his fortunes as a sea-boy! He worked his way to Liverpool by trimming coals in the coal hole of a merchant ship. Arrived in that great commercial emporium, he found himself friendless and destitute, and seven long weeks passed as he was able to obtain employment,—four of which were spent in such utter destitution that he was reduced to the necessity of sleeping in the sheds and streets of Liverpool; often eating and drinking but what he begged for. At length he was fortunate enough to be engaged in the *Isabella*, West Indiaman; and notwithstanding the hardships to which the cabin-boy of that day was subjected, that at times it might almost be questioned whether his lot was for the better. But William Lindsay was not discouraged by hardships. Pressing steadily onward, in 1834, four years after he first joined the ship in the humblest capacity, he was appointed to the position of second mate; but, even here, his hopes had begun to smile upon him, her face was not altogether brightened; for in the same year he was shipwrecked, and his legs and one arm broken. The following year he was promoted to be chief mate; and in 1839, in his nineteenth year, he was appointed to the command of the *Olive Branch*.—At this point, however, so far to have belied her name, that being in the *Olive Branch*, in 1839, in a hostile encounter, her commander was killed by a sabre stroke across the breast, he at the same time being assailed by a pistol-shot. The following year he retired from the sea, and in 1841 was appointed a Director of the Castle-Eden Coal Company; was mainly instrumental in the formation of the Hartlepool Dock, and rendered assistance in the establishment of its docks and wharves.

he removed to London, and laid the foundation of that extensive business which now entitles him to recognition as one of the "merchant princes" of the metropolis. Nor, amid all the bustle and occupation of a busy life, did Mr. Lindsay lose sight of his mental improvement. Devoting his spare evening hours, which thousands waste in idleness or dissipation, to self-instruction, he speedily overcame the defects of his early education, and stored his mind with a variety of sound information, which has been of essential service to him in his subsequent career. In proof how profitably he employed these hours of study, it may be stated that he has published various pamphlets and letters on questions connected with the shipping interest, in which he himself holds so large a share, as well as a more important work, entitled "Our Navigation and Mercantile Marine Laws." No sooner was his position as one of the largest shipowners and shipbrokers in the kingdom achieved, than he resolved to get into Parliament. He contested Monmouth in April, and Dartmouth in July, 1852, in both of which he was beaten by aristocratic influence and the unsparing use of other means of corruption. Undaunted by these defeats, and determined to succeed at last, even if twenty times defeated, and to succeed too by purity and principle alone, he became a candidate for Tyne and Wear in March, 1854, and, after a severe struggle, was elected by a narrow majority of seventeen. When engaged in the contest at Tyne and Wear, Mr. Lindsay gave the electors an account of his career and his commercial position, which shows, in a striking light, the magnitude of the operations of a large mercantile establishment. He then, it appeared, owned twenty-two large first-class ships; and as underwriter he had, in his individual capacity, during the year, insured risks to the amount of 2,800,000*l.* In the conduct of their extensive export trade the firm of W. S. Lindsay and Co. of Austin Friars, ship and insurance brokers, of which he was the head, had, during the same year, chartered seven hundred ships to all parts of the world, but principally to India and the Mediterranean; and as contractors, had shipped 100,000 tons of coal and 150,000 tons of iron; whilst as brokers, during the year, their operations extended to 1,200,000 quarters of grain! Mr. Lindsay took an active part in the formation of the Administrative Reform Association, and at the initiatory meeting at the London Tavern proposed one of the resolutions in an amusing speech, in which he detailed his experiences connected with his subject, both at home and abroad. Mr. Lindsay married, in 1842, the sister of the late Lord-Provost of Glasgow, and has one child.

LINNELL, JOHN, Painter, great in landscape and in portraiture, born in London in June, 1792. He commenced life as a pupil of the low-pupil with Hunt, the water-colour painter, for one—of John Henry, the father of the existing school of Water-colour Painting. He exhibited at the Academy in 1807,—two small landscapes; at the British Institution, in 1808,—“Fishermen, a Scene from Nature;” at the Academy again in 1821,—Landscape and Portraits.

and are distinguished for nicety of and scholarlike finish. He displays and a highly cultivated taste. I of all American poets. Of Mr. L appreciative critic remarks:—"Verse nature painted with exquisite simplicity a breadth, and a durability of colorfulness of its parentage. About mawkish sentimentality, no versified gloom. His bold, broad brow, cap points of heaven, and disperses through the homesteads of his thiest, the heartiest, and the most poets. True to nature, he is true legend is made fruitful by the war but when, as in this "Song of intrinsically charged with the genius, baring its broad pinions to unmistakably how yearningly it pines."

LOUGH, JOHN GRAHAM, Greenhead, in Northumberland, boy he followed the plough, but delighting to make figures in clay he had read in such odd volumes "Homer," a volume of Gibbon, bood, on his return one day he "saw in a garden attached to L of models of legs and arms lying in; found the ceiling of the kitchen lying about in every direction." He cited. He asked Lough to his house Michael Angelo, Canova; the form on the aspiring youth. Despite foreign travel or by patronage, L studying, in the first instance, from exhibited at the Academy a bas-relief Homer. In 1827 he executed a "Milo," and by the circumstance Haydon has, with some characteristic, given an interesting account of money, of food even, and of fire while devoting himself in obscurity. "He declared solemnly to me the months, and began the fourth. I he felt the want, and used to be weak, — at last faint, — giddy and a half of coals the whole with his clay model of this immortal

"Obedient Prophet" (1854),—all unmistakably grand in feeling, in colour:—for Linnell is a truly great colourist. Still more faithful remembrances, perhaps, do the less ambitious titles of his recent works awaken: "The Last Gleam before the Storm," "Crossing the Brook," "The Timber Waggon," "Barley Harvest," "Under the Hawthorn," etc. In 1852 Linnell took up his residence at Reigate, where he is in the centre of scenery specially congenial, showing every variety of cultivated and waste land, of hill and woodland; whose sandy lanes supply him with foregrounds too in colour for Cockney taste. From his own neighbourhood, are derived the characteristics of his grander scenes. In "The Obedient Prophet," for instance, the Scriptural incident is subordinated to "a majestic scene, in which a mighty group of firs on a sand-hill constitutes the principal feature." Linnell is not a member of the Academy, and has never, it is said, gone out of his way to become one. He enjoys one of the highest positions among living English painters, a wide circle of admirers, and large patronage from the wealthy manufacturers and merchants, who are in a measure the chief purchasers of pictures.

LISZT, FRANZ, a celebrated Hungarian Pianist, was born in a Hungarian village of Reiding, in 1811. His father, an accountant for Prince Esterhazy, possessed sufficient musical education to direct the early development of the talents of his son. In his ninth year he made his first public appearance in a concerto for the piano and a voluntary fantasia, when he excited general admiration. The support of Counts Amadé and Sapary enabled the father to take him to Vienna, where Czerny undertook his education, and gave him lessons in harmonics. After eighteen months of study, Liszt appeared in a concert given by his father, and met with brilliant success. He was then taken to Paris, in order to complete his education at the Conservatoire: where, however, he was rejected by Cherubini, as a foreigner. But the genius of the youth opened a path for itself. He played before the Duke of Angoulême, and soon became the favourite of the brilliant world of Paris; and it can be ascribed only to the strictness of his father, who enforced constant practice, that he was not ruined. Still this discipline of his life has, undoubtedly, exercised a decided influence on his subsequent development. In 1825 an opera of his was performed at the Académie Royale, but met with no substantial success. He had, in the meantime, made several successful tours through the departments and in England. His father died in 1827, and Liszt, freed from restraint, gave himself up to all the promptings of his impulsive nature; sometimes to romantic fancies, sometimes to religious enthusiasm, and not unfrequently to their very opposite. At one time he became a St. Simonist; then, inspired by the Revolution of July, he composed a "Symphonie Révolutionnaire," which, however, was never published. He at last heard Paganini, and seemed to have gained thenceforward a definite object. He wished to become the Paganini of the piano—that should be the object

of his life—an object which, through the kind assistance and encouragement of Erard, he, in a great measure, attained, but at no small sacrifice: the creative composer has been lost in the wonderful artist. His compositions are chiefly valuable as having brought the art of piano-playing to a height before undreamed of. His *violin* compositions, however, striking as they are, have no sound basis and are often feeble in invention. He seems never to have had leisure for continuous study in composition; but as a player he must be allowed the merit of not confining himself to his own compositions. Bach, Handel, Beethoven, and Weber, have found in him a worthy interpreter; although here, too, he is liable to the charge of having unwarrantably tampered with their productions. As a performer of the primitive staff no one has ever equalled him, and no one except Mendelssohn-Bartholdy can be placed in competition with him. During the last few years he has travelled throughout Europe, and has everywhere met with unbounded triumph. The cities of Odenburg and Pesth presented him with the rights of citizenship; the Hungarian magnates gave him a sword of honour; the King of Prussia made him a member of the Order of Merit; the Faculty at Königsberg made him Doctor of Music; and so through a long list of the minor German sovereigns. It must be further added, that he has not used his talents merely for his private advantage, but has always been ready to employ them in the service of any object of public utility.

LOCKE, JOSEPH, Engineer, and M.P. for Honiton, born at Attercliffe, near Sheffield, 1803, was educated at Barnsley Grammar School. He obtained employment under Stephenson, the great engineer, and gaining the esteem of that distinguished man, became himself a constructor of railways. Mr. Locke is a Member of the Institution of Civil Engineers, a Director of the Glasgow, Paisley and Greenock Railway, and received the Cross of the Legion of Honour in 1845, after constructing a French railway. He possesses land at Honiton, and was first returned for that borough in 1847.

LÖWESTEIN, GENERAL, a French Officer appointed by Napoleon to the command of the National Guard of Paris on the eve of the *coup d'état* of December 2d. General Löwestein entered the army in 1805, in the 3d Dragoons; in 1807 he was made lieutenant in the 2d Cuirassiers; in 1810 he was captain and aid-camp of Marshal Sebastiani, then commanding in Spain; in 1811 he was *chef-d'escadron*; in 1813, officer of the Legion of Honour; in 1814, colonel at the battle of Arcis-sur-Aube; and in 1815, colonel of the 3d Chasseurs. During the first period of his military career he served in the campaigns of Prussia, Poland, Spain, Russia, Saxony, France, and Belgium. In 1815 his career was interrupted but in 1830 he re-entered the service. In 1848 his name was called by the Provisional Government from the *cadres* of the army, although he had not attained the age for retiring. He thus owed the Revolution a grudge, which he paid off on the 2d of December.

LONGFELLOW, HENRY WADSWORTH, an American Poet, the son of the Hon. Stephen Longfellow, of Portland, Maine, was born in that city, February 27, 1807. At the early age of sixteen he entered Bowdoin College, Brunswick; and at the close of the usual period of four years took his degree with high honours. A few months in 1825 he was a law student in the office of his father, but having been offered a professorship of modern languages at Bowdoin College, he was relieved from an uncongenial pursuit, to Europe, and prepare for the discharge of his new duties. He accordingly left home, and passed three years and a half travelling in France, Spain, Italy, Germany, Holland, and England. He returned to America in 1829, and entered upon the duties of his professorship. When, in 1835, Mr. George Ticknor resigned his professorship of modern languages and the belles-lettres in Harvard College, Cambridge, there was no hesitation in calling to the vacant post Longfellow, who had already acquired somewhat of a veteran's experience though but twenty-eight years of age. He now resigned his professorship at Bowdoin College, and again went abroad, to become thoroughly acquainted with the languages and literature of modern Europe. He passed more than twelve months in Denmark, Sweden, Germany, and Switzerland, and again returning to America in the autumn of 1826, entered immediately upon his duties at Cambridge, U.S. where he has since resided, except during a brief absence to Europe, made for the restoration of his health, in 1842. As has already been intimated, Longfellow commenced his literary career at an early age. While yet an undergraduate, he wrote many short and carefully-finished poems for the "United States' Literary Gazette," and while professor at Bowdoin College, contributed some valuable criticisms to the "North American Review." In 1833 he published his translation from the Spanish of the celebrated poem of Don Jorge Manrique on the death of his father, prefaced with an introductory essay on Spanish poetry; in 1835 his "Hyperion;" in 1839, "Hyperion," a romance, and "Voices of the Night," his first collection of poems; in 1841, "Ballads and Poems;" in 1842, "Poems on Slavery;" in 1843, "The Student," a play; in 1845, the "Poets and Poetry of Europe;" and "The Belfry of Bruges;" in 1847, "Evangeline;" in 1848, "Kavanagh, a Tale;" and in 1849, "The Sea-side and the Shore;" "The Golden Legend," 1851; and "The Song of Hiawatha," 1855. Longfellow's poems have, together with great poetic and dramatic beauty, a simplicity and fidelity to nature which commend them alike to the rudest and to the most cultivated. The tenderness and melancholy pleasure with which, in many of his poems, he dwells upon a poetical association, or an historical incident, have, however, proved a stumbling-block to many of his countrymen, who demand more freshness and an onward direction of the poet's eye; an objection which his "Song of Hiawatha," the most original and truly American of all his writings, has gone far to remove. No American poet has been so frequently reprinted in his country as Longfellow. His works are eminently picturesque,

minated one of the Legislative himself by his labours upon his committee reporting in fa National System, which now fe adopted in every part of Austr active part in colonial politi administrative abuses of the guishing himself as a success being the abolition of impriso Lowe returned to England in parliamentary career. LOWELL, JAMES RUSSELL is the son of an eminent Cong Boston in 1819. At the age University, and afterwards in that profession. We believe city, and been constantly employed his career as an author the publication of a class book although a rather crude production. In 1841 he put forth a volume "A Year's Life," and in 1842 merit, containing a "Legend of well-known works. The following conversations on some of the criticisms, evincing a careful selection of poems appeared in cations of Mr. Lowell's interestropic questions of the day principles of which he has written in prose and verse. Among his "Anti Texas," "The Capture year appeared "A Fable for C rhyme, in which the author puns and takes his revenge on his a collection of humorous poems the Yankee dialect, and "The published in 1848. Mr. Lowell magazine called "The Pioneer "Anti-Slavery Standard." He American Review," and other

LUDERS, GENERAL, Commander of the fifth Infantry corps of Russian army, and Aide-de-camp-General of the late Emperor. Services by which this general is best known were rendered as commander of one of the three Russian army corps which took part in the conquest of Hungary in 1849. Luders, who had, in 1848, occupied Wallachia with a corps d'armée, in violation of the Sultan's treaty, entered Transylvania in 1849, under the convention between the two Emperors, with 40,000 men. On the 14th of July his corps joined to those of the Austrian General Puckner, took the assault, and on the 21st Hermannstadt. On the 31st Luders defeated Bem, whose troops, imperfectly instructed, had also been harassed with marching, and fighting against superior numbers. Hungarians were defeated, and Bem himself wounded. At the beginning of August, Luders again encountered and defeated a diminished army, and afterwards marched northwards, and co-ordinated with Rudiger the movements which led to Görgei's surrender. One of the first acts of the new Czar was to give Luders the command of the army corps in Bessarabia, under Prince Schakoff.

LYELL, SIR CHARLES, Geologist, is the eldest son of Charles Lyell, Esq., of Kinnordy, county Forfar, and was born 1797. After having an education at Exeter College, Oxford, he was called to the bar, but occupied himself with the mysteries of geology in preference to those of the law. He was elected President of the Geological Society in 1836. His chief works are, "Principles of Geology," "Elements of Geology," and "Travels in North America." He is also the author of numerous papers in scientific journals, and was an active student of the science to which he has devoted his life. He was knighted in 1848. He became a second time President of the Geological Society in 1850-51. As a geologist, Lyell earned great honour by his diligent collection of facts illustrative of the uniformity of the laws of nature throughout the pre-Adamite period, but, in the opinion of many, this honour is not a little tarnished by his obstinate adherence to an associated idea, that, although only negative evidence of the progress of the organic creation throughout the geological ages, we are entitled to believe that man may have been animals of the highest kind in the primary and all the tertiary rocks.

LYNDHURST, JOHN SINGLETON COPLEY, LORD, ex-Secretary and Statesman, although of Irish extraction, is a native of Boston, in America, where he was born, in the year 1772. He came to England by his father, a painter, now best known by the "Death of Lord Chatham," in the Vernon Gallery, young Copley was educated at Trinity College, Cambridge, and in 1804 called to the English bar. Although understood to have been originally imbued with Liberal politics, he saw reason to change opinion; entered Parliament under Tory auspices, and was Secretary-General in the Liverpool administration from 1819 to

1823. Having held the office of Attorney-General from the latter date till 1826, he was then appointed Master of the Rolls, and in 1827 elevated to the Lord Chancellorship of England. After holding the Great Seal during the Canning, Goderich, and Wellington administrations, Lord Lyndhurst resigned it in 1830, on Lord Grey's accession to power; but accepted soon afterwards the judicial seat of Lord Chief Baron. On the formation of the first Peel ministry, in 1834, Lord Lyndhurst resumed his seat on the woolsack, and on Sir Robert Peel's defeat became most formidable as an opposition leader. Indeed his speeches, characterised by power, brilliancy, bitterness, and sarcasm, particularly his annual review of each session, are considered as having exercised an enormous influence, especially in the country, in reanimating the Conservative party, which, in 1841, restored power to Sir Robert Peel and the Great Seal to Lord Lyndhurst. On the fall of the Peel ministry in 1846, Lord Lyndhurst described himself as "at the close of his public, almost his natural life," but his voice has since been often heard with pleasure and profit in the House of Lords, and his exposure of the policy of Prussia in 1855 was eminently worthy of a place among the clear, lucid, sagacious speeches, often cited to disprove the popular fallacy that lawyers are sure to fail when transferred from the Courts of Law to the Houses of Parliament.

LYONS, REAR-ADMIRAL SIR EDMUND, was born in 1779 and in his eleventh year entered the navy, as first-class volunteer, on board the Royal Charlotte yacht. After seeing much service in the Mediterranean, the youthful sailor went as a midshipman in Dacworth's expedition to the Dardanelles, and took part in the demolition of the redoubt on Point Pesquies. About the close of 1807 he sailed for the East Indies; and while there, in the following year, was appointed acting lieutenant in the Barraconta brig. When the island of Banda Neira was taken, in 1810, Lieut. Lyons signalled his courage and prowess by being the first to escalate the walls of the castle of Belgica; and on the arrival of his vessel at Madras with the news of the victory, he was forthwith nominated Flag-Lieutenant to Admiral Drury in the Minden. In that ship he proceeded, about the opening of 1811, to the coast of Java, there to await the arrival of a squadron which was fitting out at different ports of India for the subjugation of the island. While stationed in the Sunda Straits, Lieut. Lyons' naval zeal and natural gallantry led him to the performance of a most daring exploit. This was nothing less than the successful storming, on the night of July 30, 1811, with not more than thirty-five men, and with but trifling loss, of the strong fortress of Marrack, mounting fifty-four guns, and garrisoned by 180 soldiers and the crews of two boats. Previously to this exploit he had materially assisted in reconnoitring and procuring information relative to the force and position of the enemy. During the operations which were soon afterwards regularly commenced, Lieut. Lyons was at first intrusted with the command of a flotilla of five gunboats recently captured, and was then allowed to serve in the

was opposed to Fort Cornelis. After the glorious assaults on that stronghold his health became so impaired from the exertions he had undergone, that he was under the necessity of invaliding. Having been promoted on his arrival in England, Capt. Lyons was, in April 1813, appointed to the command of the *Rinaldo*, in which vessel he had the distinction of carrying Louis XVIII. and the British sovereigns to England. He was not again on active service until 1824, when he was nominated to the command of the *Blonde*, going out for the Mediterranean; and in the autumn of the ensuing year, after having for some time blockaded the port of Navarino, he directed the movements of a naval part of an expedition ordered to co-operate with the French in the siege of Morea Castle, the stronghold of the Turks in the Peloponnesus. During an arduous service of twelve days and nights, in very unfavourable weather, which preceded its unconditional surrender, he greatly distinguished himself; and having landed, he was almost constantly in the trenches, exposed to a tremendous fire of great guns and musketry. The perseverance of Captain Lyons' exertions, added to the satisfaction afforded to the French by his cordiality towards them, led to his being invested with the insignia of the Order of St. Louis of France, and that of a Knight Commander of the Order of the Redeemer of Greece. Towards the close of 1831 Captain Lyons was removed to the *Madagascar*, and in May, 1832, witnessed Ibrahim Pacha's bombardment of St. Jean d'Acre. In 1833 he escorted King Otho and the Bavarian Regency from Trieste to Greece. In 1835 he returned from the *Madagascar*, was nominated a K.C.H., and received the honour of knighthood. He filled the office of Minister Plenipotentiary at the Court of Athens, was created a Baronet for his civil services in 1840, a Civil G.C.B. in 1844, and a Military G.C.B. July 5, 1855. His commission of Rear-Admiral of the Blue bears date Jan. 1850. When a war broke out with Russia Sir Edmund was nominated second in command of the English fleet in the Black Sea, where, during 1854, he performed signal services; and having in 1855, on the retirement of Admiral Sir Deans Dundas, been promoted to the chief command, he linked his name with the brilliant exploits in the Sea of Azov. The Sultan has conferred on him the Order of the Medjidie of the first class. Sir Edmund is popular in private life for his amiable manners and *bonhomie*, and is understood to be a pleasant converser—not without a taste for literature. Some years ago his daughter was married to the Earl of Arundel and Surrey, son and heir of the Duke of Norfolk,—an alliance which has probably contributed (along with undoubted merit) to the Admiral's success.

LYTTON, SIR EDWARD BULWER, M.P., Poet and Novelist, third and youngest son of the late General Bulwer, of Heydon Hall, Norfolk, and was born in the year 1805, with prospects very different from most men destined to literary eminence. While still in early youth he was deprived by death of his father; but, fortunately for the development of his promising intellect, he was blessed with a mother—the heiress of the patrician family of Lytton of Knebworth

—who had inherited from her father, an accomplished scholar and the friend of Sir W. Jones, a decided taste for elegant literature, and did much to form the mind of her son. It was for the pleasure of his mother—at least, so runs the story—that the embryo poet and novelist, when only five or six summers had passed over his head, wrote his earliest verses; some of which, by the bye, were imitations of those charming English ballads which Bishop Percy had, in the previous century, restored to public favour, and which Walter Scott had, in his romantic boyhood, perused, as he tells us, with the eagerness of a young tiger devouring its prey. After he had been educated at private schools, and pursued his studies under two private tutors, Bulwer was sent to complete his academic training at Cambridge. Whilst figuring among his equals—among those who deemed themselves such—at Trinity Hall, driving his own horses, and indulging in the manifold eccentricities characteristic of sumptuous fellow-commoners, Bulwer not only realised his precocious talents by carrying off the Chancellor's prize medal with his English poem on "Sculpture," but applied his faculties with vigour and energy to the study and observation of life under various aspects and in different localities. He occupied the long vacation with pedestrian rambles over England and Scotland, and, moreover, travelled on horseback through a great part of France. Having previously exercised his powers by some effusions in verse, among which were "Weeds and Wild Flowers," and "O'Neill the Rebel," the literary aspirant published, in 1827, "Falkland," a work of fiction, which appeared anonymously, and which is understood to have cost him more trouble than any of his more celebrated works. Next year "Pelham" was given to the world, and although critics were much divided in opinion as to the merits of the work, its author was admitted to be a writer of no ordinary powers. The cry of "Anathema" was, indeed, raised by a hundred voices. Bulwer, however, was not a man to be thus put down, but was one who knew well how to "work and wait." "Pelham" was succeeded by "The Disowned" (1828), a more hastily-written novel, with more romance and less worldly wisdom than its predecessor, and, as a whole, less uniformly sustained, although containing many scenes and episodes, brimful of the peculiar poetry and passion for which the ambitious author was then distinguished; a poetry akin in spirit to that which had been so popular in the works of Byron. His next production was "Ireneux," a novel of great power, which appeared in 1829, and which was succeeded, in 1830, by "Paul Clifford," a wonderfully clever extravagance, with a highwayman for a hero. This work was followed, after a very brief interval, by "Eugene Aram," with a criminal for a hero and an execution for a climax. Bulwer wisely called a halt in his career as a novelist, and appeared before the public for a time as editor of the "New Monthly Magazine," in which he contributed a series of papers, known as "The Conversations of an ambitious Student," the choicest of which have since been published in a collected form, and entitled, "The

udent." All this time he had been engaged with his "England and the English," a clever and somewhat caustic anatomy of the national character, which appeared in 1833. Having stood the test of the abuse and laudation which this essay brought upon it, Bulwer broke ground with a new romance, "The Last Days of Pompeii," the result of a visit to Italy,—a tale not of mere glowing gorgeousness; of the banquets, the festivals, and the productions of old times; but strong in human interest, and vivid in display of character. After this came "Rienzi, the Last of the Romans," the chief excellence of which consists in that complete mastery of character which, in portraying a hero, dares to exhibit flaws and blemishes which mingle with his noblest efforts; enough of what is small, unworthy, and personal, to prevent him from wielding omnipotence over the destinies of an inferior race, and which can still enchain our sympathies for him to the last. Never in the rise and progress of a revolution more cleverly sketched was the balance more evenly held between a righteous end and unrighteous means; and this by fresh, vivid dialogue, and scenes that thrill us with their intense interest. The characters, too, are bolder and brighter than in any previous work. We need hardly instance Rienzi's high-hearted and haughty wife—the Provençal knight, with his tender, romantic, troubadour heart, breaking out from under his warrior's suit of mail—the chief of corrupt Roman nobles—and the citizens, with Cecco del Carroccio, the sturdy and selfish smith, at their head. It would be difficult to name a work of its class higher in conception, or more masterly in artistic treatment, than "Rienzi;" and it gave Bulwer a variable and enduring position among the novelists of the day. "The Two Maltravers," another novel, appeared in 1837, and was followed by a continuation of the same story, entitled, "Alice, the Mysteries;" neither of them altogether worthy of the rank of "Rienzi." His next work, "Athens," possessed high merit. The book, which is stated to have been commenced when its author was at college, and to have been executed at intervals during many years, bears the impress of a mind at once shrewd, daring, and systematic; and it is embellished by all the graces of an ornate style. Next, in 1838, came "Leila, or the Siege of Granada;" "Calderon the Courtier;" then "Night and Morning," and "Day and Night." To this pretty long list succeeded "The Last of the Barons," perhaps his grandest effort, and one of the noblest historical novels that ever appeared; and "Zanoni," a powerful romance in which skilful use is made of the dreams of the Rosicrucian mystery. These were followed by "Harold, or the Last of the Saxon Kings," a most interesting and impressive picture of English life at the memorable era of the Norman Conquest; and "Luttrell," a tale of high artistic power, but somewhat too full of horrors to be read with satisfaction, or invested with popular favour. Bulwer, as a novelist, had now come to the top. He had won fame, and won it fairly. He had originally proceeded with slowness and difficulty; but, with a characteristic

perseverance worthy of all praise, he had continued to practise writing as an art until, with three hours' labour a-day—from ten o'clock in the morning to one—he averaged twenty pages of novel print. In these three-hour sittings many volumes had been produced. He had, as a novelist, been before the public for more than two decades. He had tried, as it has been said, first the fashionable novel, then the romantic and incidental, then the sentimental, and then the historical; and he had been eminently successful in each line. He now resolved upon writing a domestic novel, and "The Caxtons" made its appearance in the columns of "Blackwood." This charming story of familiar life, which was read with delight, which gave the world a new idea of the author of "Pelham," and raised him enormously in public opinion, was succeeded by "My Novel, or Varieties of English Life,"—a work of literary art, embracing a wider field, which few have perused without profit, pleasure, and admiration. Meanwhile the voluminous novelist had not neglected other fields of literary labour. About 1830 he published "The Siamese Twins," a serio-comic poem. In 1837, a play from his pen, entitled "The Duchess de la Vallière," was performed at Covent Garden; and although it failed, from the same being one for which it was difficult to enlist the sympathies of an English audience, his other dramas, "The Lady of Lyons," "Richieu," and "Money," had a very different and much more fortunate fate. In 1842, "Eva, the Ill-omened Marriage," with other tales and poems from his pen, appeared; and, at a later period, "The New Timon" and "King Arthur," two clever poems, were published anonymously. Upon "King Arthur" Bulwer had expended much thought and labour; and when his identity with the author of the poems was so generally insisted on that he felt there was no choice between the indiscretion of frank avowal and the effrontery of denial, he wrote, "I believed, whether truly or erroneously, that this experiment would have a fairer chance of justice, if it could be regarded without personal reference to the author: and, at the events, it was clear that I myself could the better judge how far the experiment had failed or succeeded, when freed from the partial kindness of those disposed to over-rate, or the pre-determined censure of those accustomed to despise my former labour. Whatever influence of good or ill my formal adoption of these foundlings may have upon their future career, like other adventurers they must, therefore, take their chance in the crowd, happy if they can propitiate their father's foes, yet retain his friends, and, irrespective of either, sure to be judged at last according to their own deserts." When the Guild of Literature and Art was formed Bulwer wrote for its benefit a drama, entitled "Not so Bad as it Seem," which has frequently been acted by the amateur company, in which Mr. Dickens is the chief, as also by professional performers; and he, moreover, manifested his strong sympathy with the cause of those not so highly favoured by fortune as himself by appropriating from his domain a site for an hospital for decayed artists and men of letters. Having thus sketched Bulwer's literary career

far as it has been run, let us refer with brevity and candour to
 part he has enacted in political affairs. It was, of course, as
 natural that a man of the station and talent of the heir of the Lyttons
 could be admitted to Parliament as to Almack's, and accordingly,
 1831, he was returned to the House of Commons as member for
 Ives. Inspired with popular predilections he found his way to
 benches from which the cause of the people was pleaded, and
 conspicuous in the ranks of "the English Radicals." He
 rose in his senatorial capacity to link his name still closer with
 nature, by his exertions in favour of a law for the protection of
 dramatic copyright, and of measures for relieving the newspaper
 from the burthen of the stamp-laws. Moreover, when Sir R.
 took office, in 1835, Bulwer published a pamphlet, entitled
 "The Crisis," which ran rapidly through more than twenty editions,
 secured no inconsiderable influence on the elections, won for its
 author a baronetcy, and would have opened for him the path to
 real life had he accepted the invitation to go forward. The
 accomplished novelist declined to pursue his political triumph; and
 the general election of 1842 he was rejected by the borough
 Lincoln, which he had represented for ten years. From that
 time, for several years, he was excluded from Parliament. But in
 1844, when parties had been broken up and recast, he, having
 meantime inherited Knebworth, with the estates of his maternal
 father, and assumed, by royal license, the historic name of
 Lytton, again entered the political arena, with a pamphlet in the
 form of "Letters to John Bull," recommending a settlement of the
 American Question on terms of mutual compromise; and when
 Parliament was dissolved in 1852 he was a successful candidate for
 the county of Hertford, and took his seat in the House of Commons
 as a Conservative, and a supporter of Lord Derby. In his aspira-
 tion after parliamentary success and political power, Sir E. Bulwer
 Lytton has, doubtless, to contend against such prejudices as ever in
 similar circumstances beset the path of those who have proved their
 merits and won their fame by works of fiction. His parliamentary
 speeches and motions, however, which are thoroughly English in
 character and popular in sentiment, have been eminently calculated
 to disarm prejudice; and he is now pretty generally recognised
 as a great parliamentary personage, who, in the event of a minis-
 terial change, may, with advantage to the interests of the country,
 take a prominent part in the administration of national affairs.
 Early in 1854, Sir E. Bulwer Lytton, as Honorary President of
 the Associated Societies of the Edinburgh University, proceeded to
 the northern capital, and delighted the inhabitants with an inau-
 gural address, characterised by unrivalled power, displaying extensive
 learning, combining practical wisdom with poetic eloquence, and
 comparing advantageously with any oration of the kind that has
 been delivered in recent years.

M.

MACAULAY, RIGHT HON. THOMAS BABINGTON, M.P. Poet, Essayist, and Historian, was born at Rothley Temple, Leicestershire, in the year 1800. His father, Zachary Macaulay, the son of a Scottish clergyman, having been sent, when a boy, to Jamaica, became so convinced of the iniquity of the system of slavery, that he endured for many years the unhealthy climate of Sierra Leone in order to aid in ameliorating the condition of the African race afterwards figured as one of "the Clapham Sect," and performed services to philanthropy; which won for him a monument in Westminster Abbey. Meanwhile the embryo poet and historian, after graduating with high distinction at Trinity College, Cambridge; being elected to the Craven Scholarship in 1821; and becoming a fellow in 1822; was destined for the legal profession, and was in 1826 called to the bar at Lincoln's Inn. Mr. Macaulay's sympathies, however, it may be concluded, were from the beginning rather with the quiet academic grove than with the noisy and bustling forum; and his tastes were hardly such as to fit him for the pursuit of forensic celebrity. About 1824 he had given evidence of his literary turn and talent by some poems in the "Etonian" and in "Knight's Quarterly Magazine;" and in 1826 his article on Milton, in the "Edinburgh Review," indicated that an essayist of no ordinary brilliancy had arisen to instruct and amuse the reading public. Ere long the leaders of the Whig party, in recognition of his intellectual superiority, appointed Mr. Macaulay a Commissioner of Bankruptcy; and in 1830 they opened for him a way to the House of Commons through the borough of Calne. He became, moreover, Secretary of the Board of Control; figured prominently in the discussion on the Reform Bill; and in defending against Peelites, Radicals, and Peepers, the general policy of the Grey ministry, took a part, second only in influence to that enacted by the present Earl of Derby. Having thus achieved parliamentary celebrity, Mr. Macaulay was, in 1832, returned to Parliament as the representative of Leeds, but in 1834 he resigned his seat and office to proceed to the East, as a member of the Supreme Council of Calcutta. He enjoyed that lucrative post for three years; and on returning to England, turned his acquaintance with Indian affairs to account, in his magnificent sketches of Lord Clive and Warren Hastings. Still pursuing his political career, which had opened under auspices so brilliant, Mr. Macaulay, in 1839, accepted the office of Secretary at War; succeeded, in 1840, in obtaining his election as member for the city of Edinburgh; and in the days of the second Peel administration was conspicuous among the statesmen who presided over the Whig Opposition for his advocacy of free trade and liberal measures. Having in his younger days produced several choice ballads, among which those on the Spanish Armada and the Battle of the League and Ivry are the best known, Mr. Macaulay tried his powers on a larger scale, and in 1842 gave to the world his "Lays of Ancient Rome;" containing

striking pictures of life and manners, founded on the heroic and
 romantic incidents narrated by Livy; and remarkable for rapid,
 energetic narrative, classical allusions, appropriate images, and
 beautiful style. In the following year his *Essays*, which had previously
 been published in America, were collected in three volumes; dis-
 tinguished by profound erudition, a wide range of information, historical
 knowledge all but unrivalled, and passages of surpassing eloquence.
 His latest contribution to the great Northern Review is understood
 to have been the second part of his essay on Lord Chatham, which
 appeared in October, 1844, and was, in every respect, worthy of
 being so splendid a series. When, in 1846, the Whig party, under
 the leadership of Lord J. Russell, was restored to power, Mr.
 Macaulay was appointed Paymaster of the Forces, with a seat in the
 House of Commons, and for a time exercised the functions of that office. Un-
 fortunately, there was between the literary senator and his con-
 stituents a serious disagreement on what they considered a vital
 question;—he having, in regard to the Maynooth Grant, expressed
 views in which they could not concur, and pursued a course of
 action which they could not approve. The consequence was, that at the
 election in 1847 they rejected Mr. Macaulay in favour of Mr. Cowan,
 whose theological bias and ecclesiastical views were much more
 in favour with the majority. Under ordinary circumstances, his
 removal would have been the subject of lasting regret; but while
 admirers were deploring the fact of a man known to fame as a
 writer, essayist, and orator, being thus displaced by a constituency so
 ignorant and intelligent, they derived no small consolation from
 the rumour, that he was to devote his leisure to the grand project
 of writing a history of England. His peculiar qualifications for
 such a task, his parliamentary career, his official knowledge, his social
 position, his historical information, his familiarity with ancient
 literature, and the art he was known to possess of writing what
 was like to read, as well as dealing skilfully with the less at-
 tractive parts of a subject, raised high expectations; and when, in
 1848, an instalment of two volumes appeared, with the title of “*The
 History of England from the Accession of James the Second*,” they
 met with an enthusiastic reception, and elicited universal applause.
 The majestic sentences with which he introduced his work to the
 public, Mr. Macaulay stated that he would cheerfully bear the
 reproach of having descended below what is called the dignity of
 history, if he could succeed in placing before the English of the
 nineteenth century a true picture of the life of their ancestors. He
 made the sacrifice, and accomplished his object. By a judicious
 selection and arrangement of materials; by retaining only what
 was interesting of itself, or could be rendered so by the artifice of
 fiction; and by adorning his pages with biographical sketches of the
 principal actors in the scenes he treated of, Mr. Macaulay succeeded
 in producing a book which few can peruse without gratification.
 Strong feelings as a political partisan, his sympathy with the
 opinions of the great Whig connexion, his admiration of those
 who first made it powerful in the State, and his undisguised anti-

pathy for their opponents, were naturally enough objected to by critics who dissented from his views; but the most determined supporters of Tory doctrines declared, with promptitude and candour, that he had won with honour a high place among modern historians. In 1848 Mr. Macaulay was chosen Lord Rector of the University of Glasgow, and delivered an inaugural address, memorable for its ability. In 1849 he was nominated Professor of Ancient History in the Royal Academy. In 1852, when a general election occurred, he was, by his friends, put in nomination for Edinburgh. Mr. Macaulay, however, stood haughtily aloof from the stirring contest; neither issuing an address, nor appearing as a candidate at the hustings. Nevertheless, the electors restored themselves to the good opinion of the world by replacing him in his former position; and going northward in the autumn, he delivered a speech that did much to clear a way for the Coalition Government, which he subsequently supported in the House of Commons. His two orations deemed not quite worthy of his ancient reputation. In 1853, Mr. Macaulay's various speeches were collected and published. In 1855, the third and fourth volumes of his "History of England" were hailed with an enthusiasm which marks them out for a popularity hardly less extensive than that which attended their predecessors. A recent writer has thus criticised Mr. Macaulay's style:—"In authorship there is a school exactly analogous to the class of painters who excel principally in effect. Macaulay is the Tintoretto of historians. His touch is singularly free, his colour is rich and deep, and his mind is never fatigued. There is in all that comes from his pen a remarkable facility of illustration, if he rarely produces original thoughts or profound views of life. A more brilliant and interesting writer of English prose could not be named. Macaulay's greatest distinction, considered critically, is found in his invention of a new prose style, which is decidedly his own, whatever be its merits or its faults. Without violating the properties of the English tongue, Macaulay has added some peculiar graces to his style, which give it originality, and increase, by the charm of novelty, the power of its effect. Of all English writers, Macaulay is the most Italianised. If Carlyle thinks in German, Macaulay may be said to compound according to Italian notions of grace. His style has the faults along with the merits of the genius of the Italian tongue. Sentences are softened and lengthened for the beauty of the cadence, and the sound were fully of as much consequence as the sense. He employs, as the Italians do, too many diminutives and superlatives; and if his style be more musical than his contemporaries, it is much less muscular and nervous than many of them. The merits of Macaulay are the vigour of his manner, his picturesqueness, his brilliancy of effect, his airy, animated, and splendid diction. His defects are the profusion of his ornaments, his composition bespangled all over with sparkling sentences and vivid points, and his constant use of literary artifice. In morals, Macaulay is a conventionalist. There is no profound originality of conception in his

... of life. His morality is of that kind current in a select London club-house. He wants classic simplicity of personal character, and a lofty moral purpose. Hence his rhetoric is captivating, while his thinking is commonplace. Too often, when he attempts to be profound, he *thinks by proxy*, and clothes in his own words some idea of an unnamed intellect, more sagacious and penetrating than his own. The critic who would class Macaulay with Hume or Gibbon, would rank Tintoretto with Angelo and Raphael."

M'CULLOCH, HORATIO, R.S.A., an eminent Scottish Landscape-Painter, was born in 1806, in Glasgow, where his father was a manufacturer. He was named after Horatio Lord Nelson, whose glorious victory and death were then the theme of all tongues. He studied his art in his native city and at Edinburgh, and first exhibited, in 1829, a "View on the Clyde." In 1834 he was at the Exhibition of the Scottish Academy no fewer than nine pictures, all of which evinced his peculiar style of effect. In misty and rainy moor scenes he excels more especially. In 1836 he was elected an Associate of the Scottish Academy, and the following year he removed to Hamilton, to study the scenery of Cadzow and in that neighbourhood. While residing there he painted two of his most celebrated pieces, the "Highland Loch," and "Loch Eilan." In 1838, in which year he was elected a member of the Scottish Academy, he exhibited a "View in Cadzow Forest," which was universally admired. In 1838 he went to reside at Edinburgh. He is at the very head of Scottish landscape-painters, and his works invariably command large prices.

M'CULLOCH, J. R., Political Economist, Author, and Journalist, was born in Galloway, Scotland, about 1790. He was first known to the public, in a literary capacity, in connexion with "The Edinburgh" Edinburgh newspaper, to which he became a contributor after four numbers had been issued, and of which he was subsequently editor for more than two years. He is now the author of "Lectures on Political Economy," "Dictionary of Commerce," "Key and probable Consequences of a Repeal of the Corn Laws," "Influence of the East India Company's Monopoly on Tea," "Historical Sketch of the Bank," "Statistical Account of the British Empire," "Geographical Dictionary," "Observations on Duties on Imported Goods," "Circumstances which determine the Rate of Interest," "Operation of Duties on Paper," "Treatise on Taxation of the Funding System," the "Literature of Political Economy." M'Culloch is a Member of the Institute of France, occupies a post in the Government Stationery Office, and is in the receipt of a pension of 200*l.* a-year for literary acquirements. He has, moreover, been heard before the public as the literary executor of Ricardo and the successor of Adam Smith. He adopted the doctrines of Free Trade long before the "Manchester School" was heard of; and he enjoys the reputation of being the greatest political economist now living.

MACDOWELL, PATRICK, R.A., one of the most poetical-minded Sculptors of our time, was born at Belfast on the 13th August, 1799. His father, a tradesman of that town, not satisfied with the moderate profits of his business, was, unhappily for him, induced to dispose of it, as well as of all his convertible property, and invest the proceeds in a speculation which eventually involved him in ruin. His losses preying upon his mind, he died prematurely, leaving his wife and only child in a great measure unprovided for. At eight years of age, the boy was sent to a school in Belfast, kept by a gentleman who united in his own person the professions of an engraver and a schoolmaster, and under whose tuition he remained four years. It was here that the first symptom of his taste for the fine arts began to develop itself. After school hours his cherished relaxation was to make copies of such prints in his master's collection as attracted his fancy. He owed this privilege to a drawing which had been accidentally discovered upon his chest of a sportsman in full costume accompanied by his dogs; the result of certain stolen visits to the window of a neighbouring print-shop, and of sufficient merit to attract the attention of the worthy dealer. When he was about twelve years of age, his mother was induced to leave Belfast and settle in England, where she had friends, to whom she looked, in all probability, for some assistance towards educating her child; and after two more years of schooling under a clergyman in Hampshire, she apprenticed him to a coach-builder, whose trade, to his infinite disgust, he was constrained to follow for upwards of four years; when his master, fortunately for his future fame, became a bankrupt, and thus released him from his indentures, and left him at liberty to follow after a humble fashion the bent of his own inclinations, which were strengthened by the coincidence of his having taken a room in the house of a French sculptor of the name of Chenu. It was here that he may be said to have commenced his education as an artist; drawing diligently from the casts by which he was surrounded; modelling from various parts of the human form; and, at length, venturing with some success upon a copy of the entire figure. During his sojourn in Chenu's house, moreover, he obtained some elementary knowledge of modelling in clay, to which he soon almost exclusively devoted himself. His first attempt was a Venus with a mirror, after Donatelli, of so satisfactory a character, that his landlord purchased it of him at the price of eight guineas. From Chenu's house the young sculptor removed to a small studio of his own in Seymour Street, Essex Square, where he began to practise his art on his own account; and having been informed of an advertisement in the newspapers inviting artists to send in models for a monument to Major Cartwright, the well-known advocate for annual parliaments, he was induced to try his fortune. After some hesitation he sent in his model, with slender hopes of success, to the committee, and was at once selected to execute it. The funds subscribed for the statue proving wholly insufficient, an inferior artist was called in to complete the work. The beauty of his sketch, however, introduced him to the wife

Major Cartwright, who expressed a wish to purchase it, and was unwearied in her efforts to promote his success. It was at this period that Mr. MacDowell made his first essays on a great subject, choosing for illustration a passage from Moore's "Lines of the Angels" for his maiden effort. The first commission with which he was entrusted for a group in marble was from E. S. Cooper, formerly member of parliament for Sligo. The subject was Cephalus and Procris, and the conception and style of execution were such as to fix at once Mr. MacDowell's position in the world of art. The work which fully established his fame, however, was his charming figure of "A Girl Reading," which was sold at private view of the Royal Academy, and was afterwards repeated by that tasteful and munificent patron of art the Earl of Ellesmere; and sent for Mr. MacDowell immediately after the exhibition of the original, and gave him a commission for a copy. Shortly afterwards Mr. William Beaumont, of Yorkshire, became so warmly impressed with the beauty and merit of Mr. MacDowell's works, that he gave him commissions for two large groups; stipulating, however, that he should do nothing for any one else for three years. And as this arrangement might appear at a first glance, it has not a great drawback to the success of the artist whose interests were designed to promote. His "Girl Reading" brought him many commissions which he was unable to undertake, and when his compact was terminated by the death of his patron, many persons who would have been glad to employ him were left under the impression that his hands were still tied by a similar engagement. This is, in fact, no patron like the public at large. The works executed by Mr. MacDowell for Mr. Beaumont, however, greatly increased his reputation, and caused him to be appointed, without solicitation on his part, to the rank of A.R.A. In 1846 he was elected R.A. Having nearly completed his first large group for Beaumont ("Love Triumphant"), that gentleman was desirous that the sculptor should visit Italy, and offered to supply him with the requisite funds. It is hardly necessary to add that this proposal was accepted with gratitude, and after an absence of eight months, during which time he visited everything worthy of remark in his branch of art that was to be seen in Italy, he returned to England and completed his "Love Triumphant." To this succeeded "A Girl at Prayer," "Cupid," "Early Sorrow," "Psyche," "Death of Virginia," and "Eve;" all of which formed leading attractions in the Exhibition of the Industry of All Nations in 1851. In 1846, Mr. MacDowell was entrusted by the late Sir Robert Peel to execute one of the national statues of British Admirals (Lord Exmouth) destined for the decoration of Greenwich Hospital. With his genius, he is little fitted for the sort of active and noisy competition which is now the order of the day; and he has consequently not had a fair share of those public works to which his position as a sculptor so pre-eminently entitles him. Not one of the Peel or Wellington monuments, numerous as they have been, have fallen to his share. His genius appears to have been

little understood or appreciated by the civic and other functionaries who form for the most part the committees of taste, to whose judgment public works in London and the provinces seem now to be abandoned. We are indeed surprised that any artist of established reputation will condescend, by taking part in a competition in which the best and purest model is almost invariably rejected, to subject themselves to the decision of such judges. Mr. MacDowd has only one child, a son, whom he is educating for a sculptor, and who has already given promise of treading worthily in his steps.

MACINTOSH, J. L., Journalist, Editor of the "Morning Post." Mr. Macintosh is one of the senior members of the body of London journalists, and his pen has done good service to the aristocratic section of the community, to which the "Morning Post" has long especially addressed itself.

MACKAY, CHARLES, Poet and Journalist, born in Perth in 1812, but having been removed in infancy to London, may be almost regarded as a Cockney. He gained a valuable portion of his education in Belgium, where, in 1830, he was a witness of the startling events of the Revolution. In 1834 he published a small volume of poems, which was the means of introducing him to the notice of John Black, the editor of the "Morning Chronicle," through whose instrumentality he became connected with that paper. After remaining on the "Morning Chronicle" for about nine years, during which time he published another volume of poems, the principal of which is "The Hope of the World," he became editor of the "Glasgow Argus;" entering upon his duties in September, 1844. He relinquished the management of that paper at the general election in 1847, in consequence of a schism in the Liberal party relative to the choice of a candidate to represent the city in the House of Commons. In 1846, the Glasgow University conferred the title of Doctor of Laws upon Mr. Mackay, by unanimous vote. Upon the appearance of the "Daily News," Dr. Mackay wrote poems under the title of "Voices from the Crowd," all of which, with additions, were successfully published under that name in a separate form. In addition to these works, Dr. Mackay has published "Voices from the Mountains," in 1846, "Town Lyrics," in 1847, each volume containing poems on the same model; and "Egeria," published in 1850. For some years he wrote the chief leading articles for the "Illustrated London News."

MACLAREN, CHARLES, Journalist, for many years Editor and Proprietor of "The Scotsman" Edinburgh newspaper, was born about 1785, and derived, chiefly from self-education, the knowledge which, in his possession at least, became power. In the year 1817 Mr. Maclaren, who then held a subaltern office in the Excise, had the capacity to project and the courage to establish a connexion with the late Mr. William Ritchie, "The Scotsman" newspaper; he wrote the leading article in the first number, and

down to the public, acted as editor for four or five months. Circumstances rendering it inconvenient for him to appear as editor, it was then no joke to conduct a Liberal newspaper—Mr. Maclaren relinquished the post of responsibility to Mr. J. R.ulloch. He resumed it, however, after an interval of two years, continued to exercise the editorial functions until compelled by health to resign them in 1847; continuing, however, to write occasionally for the paper, then placed under the management of Mr. Under Russell. Mr. Maclaren possesses a philosophical intellect, is a careful statistician, accomplished in geology and physical geography, and an elegant writer. Under his hands "The Scotsman" was considered as the leading political journal of Scotland; and he having been from the first Whiggish and anti-ecclesiastical. Maclaren is the author of "A Treatise on the Topography of Fife," "The Geology of Fife and the Lothians," 1839; and of numerous scientific papers scattered throughout public journals. He resides in Edinburgh, where his personal character is much esteemed.

MACLISE, DANIEL, Painter, born at Cork, January 25th, 1811. He was placed at an early age in the establishment of Mr. Newenham, the banker of Cork, his friends not venturing to commit him to the career of an artist, for which he had exhibited great aptitude and strong predilection. At the age of sixteen he left the bank, and went to devote himself to artistic studies. His first money is said to have been earned by drawing the portraits of all the officers of the 14th Light Dragoons. He afterwards made a pedestrian tour through Wicklow, sketching the scenery through which he passed. In the course of this excursion he was benighted, and was obliged to sleep one night on a mountain, with stones for a bed and a blanket for a coverlet. He returned the bearer of a collection of landscapes, drawings, and characteristic sketches of the Irish country. Of the versatility of his talents and the geniality of his character many amusing illustrations have been preserved. It is related that upon one occasion, when a masquerade had been got up by a charitable society, he added considerably to the funds by painting an itinerant artist, throwing off grotesque sketches of the characters present, which were rapidly sold on the spot for the benefit of the institution. For several years he studied anatomy under Dr. Woodroffe, proceeding in his studies from drawing to dissection. In 1828 he came to London, presented a trial drawing to the Royal Academy, Somerset House, and was admitted. In the same year he gained Sir Thomas Lawrence's medal in the drawing School of the Academy, and was admitted into the *Life-School*; where he also obtained the medal for the best copy of Raphael's "Painting by Guido." During this period he drew sketches innumerable, many of which were caricatures of well-known characters, for "Fraser's Magazine," to which he was also a poetical contributor. In the summer of 1830 he went to Paris, and studied in the Louvre and Luxembourg galleries. In 1831 he made his first public attempt in historical painting, and won the gold medal

of the Academy by his "Choice of Hercules." The Academy's pension for enabling artists to study three years in Italy was now at his command, but he preferred to remain in England. In 1831 he revisited Cork, returned to London, and painted his "Allhallow Eve," exhibited in the next year with his "Love Adventure of Francis I. with Diana of Poitiers." In 1834 he produced "The Installation of Captain Rock," and illustrated Bulwer's "Pilgrims of the Rhine." In 1835 appeared "The Chivalric Vow of the Ladies and the Peacock," in which what may be called the highly poetic character of his style first became prominent. From this time forward his works were very numerous. The following are among the most successful: "The Choice of Hercules;" "Mokanna revealing his Features to Zelica" (Lalla Rookh); "Puck disenchanting Bottom" (Midsummer Night's Dream); "Henry VIII's Interview with Anna Boleyn at the Masque;" "Allhallow Eve in Ireland;" "Francis the First and Diana of Poitiers" (Love Adventure); "Installation of Captain Rock;" "Chivalric Vow of the Ladies and the Peacock;" "Interview between Charles the First and Cromwell;" "Macbeth and Witches;" "Bohemian Gipsies;" "Myrrha and Sarapalus;" "Robin Hood and Richard Cœur de Lion in the Greenwood;" "Christmas in the Baron's Hall" (procession of the Bear Head); "Banquet Scene in Macbeth" (for Lord Chesterfield); "Gil Blas and the Parasite" (for Her Majesty); "Scene from the play of Midas" (for Her Majesty); "Gil Blas dressing as a cavalier;" "Salvator Rosa painting Massaniello;" "The Knight's Farewell to his Ladye;" "The Return of the Knight;" "The Hypochondriac;" "Malvolio smiling on Olivia" (now in the Vernon Gallery); "Olivia and Sophia dressing Moses for the Fair;" "Play Scene from Hamlet" (now in the Vernon Gallery); "The Sleeping Beauty" (purchased by an Art-Union prizewinner for 300*l.* and since resold at a considerable advance); "Cornish Girl at a Waterfall;" "Helen the Slipper;" "Origin of the Harp" (Moore); "'Come, rest this Bosom'" (Moore); "The Cluricaune" (Moore); fresco of "Comus," in the Pavilion, Buckingham Palace; "Scene of the Enchanted Chair, Comus," (painted for the King of the Belgians); "Actresses' Reception of the Author" (Gil Blas); "Scene from Undine" (for Her Majesty); "The Ordeal by Touch;" "The Sacrifice of Noah;" oil-picture of "Chivalry of the time of Henry VIII.;" fresco of the same; cartoon of "Spirit of Chivalry" painted in fresco (House of Lords); oil-picture of "Spirit of Justice," painted in fresco (House of Lords); "The Gross of Spectacles;" "Caxton in his Printing-office" (Almonry, Westminster), and "Macready as Werner" (1851); fresco of "Alfred in the Danish Camp," and oil-picture of "Alfred in the Danish Camp" (1852); the "Marriage of Strongbow with the Princess Eva" (1852) of which a version in fresco has been commissioned for the Houses of Parliament. These pictures range from six to fifteen feet. Besides these and minor paintings, MacLise has produced numberless sketches for "Annuals," "Keepsakes," "Amusements," etc., of which no account can be taken. He has also made

signs for Art Manufacture ; among others, one for a very elaborate marquetry table, now in course of execution for the Duke of Cumberland. His beautiful designs for the "Seven Ages" (1818) were originally intended for the embellishment of a porcelain card-tray. MacLure was elected Associate in 1835, and Academician in 1840.

MACLURE, SIR ROBERT JOHN LE MESURIER, KNT., R.N., the Discoverer of the North-West Passage, is the son of Captain Maclure of the 89th Regiment, who served with Abercrombie in Egypt, and who was by the side of that truly British hero when he received his death-wound at Aboukir. The elder Maclure married, in 1806, Jane, the daughter of Archdeacon Elgee, rector of Wexford, but survived his marriage only four months. Robert John Le Mesurier Maclure, the posthumous child of this couple, was born at Wexford on the 28th January, 1807, at the residence of his grandfather, where he remained for the first four years of his life under the care of his mother, who, before she had reached the age of nineteen, had been a wife, a widow, and a mother within a year. The sponsor for the infant was General Mesurier, hereditary Governor of Alderney ; a man of large fortune and amiable disposition. A warm intimacy had long subsisted between the elder Maclure and the General. They were comrade-officers ; and Captain Maclure is said to have saved the life of the General whilst they were on service together in Egypt. In friendship originated a promise, that if Captain Maclure should die and have a son (he having no children of his own) he would adopt and provide for him. This promise he redeemed ; receiving the child into his house when only four years of age. There he remained until he was twelve, when an unlooked-for change occurred in the General's family. After three-and-twenty years of childless marriage, his lady presented him, in three successive births, with three sons, the youngest of whom is now the inheritor of his father's large fortune and munificent spirit—a spirit which was recently manifested by a donation of 10,000*l.* towards the rebuilding of a church at Alderney. The General did not, however, neglect the orphan. He sent him to Eton, and thence to Christ Church ; but the military profession proving distasteful to him (the loose discipline of the place at that period may have had something to do with his escapade), he left the college with three years of rank, sympathising adventurers, who were his fellow-students, and proceeded to France, determined never to enter the service of Sandhurst again. This rash deviation from the path which had been chalked out for him was, of course, far from being agreeable to his benefactor, who, however, does not appear to have withdrawn from him his countenance. On the contrary, he allowed him to choose his own profession ; and his strong predilection for the sea, the appointment of midshipman in the old ship the *Victory* was obtained for him. During the long ten years he served in various ships, in different parts of

the world. In the Hastings, Home Station; in the Niagara, Canada; in the Pilot, in North the Romney receiving-ship, in the Coast Guard: but our by his Arctic services. In 1836, he and passed his examination for Admiralty to seek employment. sea-lord exclaimed—"Maclure, There is an expedition fitting for The proposal took him by surprise in order to give it some constant-room, he sat down on a coming in at the moment, asked He told him. "Well," said he, chair, thinking, just like you, what they offered him. Do you do suggestion, and volunteered to sail under Sir George Back. Additions, even did our limits permit a work like this. A brief catalogue, ever, not be considered irrelevant Captain John Ross, in the Isabella Buchan and Franklin, in the Discovery in 1818; of Franklin's first land first voyage in the Hecla and voyage in the Fury and Hecla, Spitzbergen and Greenland in 1819 in the Griper, 1824; of Parry's Fury, 1824-25; of Franklin's second Captain Beechey's voyage to 1826-28; of Parry's fourth or of Captain John Ross's second Back's land journey in search of in 1836; of Dease and Simpson America; of Dr. John Rae's Captain Sir John Franklin's last Terror, 1845-51. The following searching expeditions:—that of the Enterprise and Investigator Star; of the second voyage of under Captain Collinson and the Plover, under Captain Pullen, the Sophia, Mr. Penny; of the Res Austen, 1850-51; of Sir John Franklin 1850-51; of the Resolute and can searching expedition, Lieutenant the Prince Albert, Captain Fort expedition undertaken since 181 Maclure took his first Arctic sea

as a mate, and had passed his examination for a lieutenancy. Captain Back had already distinguished himself on the American in 1833, where he discovered the magnificent river which bears his name, and which empties itself into the Polar Sea after a course of 530 miles. Immediately on his return he was, by the vote of the Geographical Society, appointed to command an expedition. It was for this voyage that Maclure volunteered to accompany him as mate. Captain Back set out on the 14th June, 1836, with a crew of sixty men, in the *Terror*, a sailing-vessel, whose subsequent fate with Sir John Franklin is still so painful a mystery. The season was unusually severe, and by October they were completely frozen in within sight of land, but unable to reach it. When the ice broke up the ship was nearly sunk by a submerged berg; but after working upon it day and night the crew managed to saw it asunder, and the vessel righted. Within a week of home they were visited by a hurricane which had well-nigh wrecked them, the ship having been so violently injured that it was scarcely possible to keep her afloat. On the 3d September, 1837, they reached, with great difficulty, Lough Swilly, and ran the ship ashore, when they discovered an immense leak, from the effects of which she must have foundered in two or three hours. Maclure's promotion to a lieutenancy followed immediately. He was appointed to the *Porpoise*, the ship destined to convey Lord Durham to Canada, and whilst on the Canada station captured a notorious freebooter, whose person, dead or alive, 5000*l.* had been offered by the Government. The capture having, unluckily, been made on the American side of the river, the Government refused the payment of the reward. Captain Sandom, however, appointed Mr. Maclure to the superintendence of the dockyard, and subsequently placed him in command of the *Romney* receiving-ship at the Havanna, where he remained until 1846. He afterwards served in the Coast Guard; and in 1844, Sir James Ross, who had not long returned from the Antarctic Pole, having been appointed to the command of an expedition in search of Sir John Franklin, Lieutenant Maclure again volunteered for the service, and was nominated to be his first lieutenant. The events connected with Sir John Franklin's expedition are too well known to need recapitulation. Certain Admiralty officials, who derived much of their importance from their connexion with the West expeditions, were determined, at whatever sacrifice to themselves, that fresh attempts should be made. They were well aware that no possible advantage, in a commercial point of view, could be derived from the consummation of their wishes; but they sought to gratify the desire of having directed a successful expedition; and such was the feeling with which they inspired their officers, that the most martyr to their vanity, Franklin, declared that "it would be a tolerable disgrace if the flag of any other nation should be carried through the North-West Passage before our own." The crews of the *Erebus* and *Terror*, a hundred and thirty-eight men, have been sacrificed, along with their noble commander, to the vagaries of Admiralty red-tapists. Franklin sailed

in May, 1845; and after Dr. Rae's late revelations, it can no longer be doubted that he and his gallant companions, having endured the most horrible privations, perished miserably. After waiting two years for news of Sir John Franklin, the Admiralty offered a reward of 20,000*l.* to any ship that might rescue him from his peril. Three simultaneous expeditions were immediately organised: one by land along the north coast of America, under Sir John Richardson and Dr. Rae; a second to Behring Straits, under the commands of Captains Kellett and Moore, with the *Herald* and *Plover*; the third and most important, under Sir James Ross, was to follow the track of Franklin up to Wellington Channel, with the *Enterprise* and *Investigator*. To the last-mentioned expedition Mr. Maclure was attached; and it sailed for its destination on the 12th of June, 1848. It reached Barrow's Straits in September, but found a further advance impossible. By October it had taken refuge in Leopold Harbour, a position which commanded all the Great Arctic highways. During the winter, sledge parties traversed the ice in all directions; but although at Fury Beach they found the provisions which had been left there, sixteen years before, by Sir John Ross, they heard nothing of the missing explorators. Every device that could be thought of was adopted in turn; among others, that of letting loose foxes with inscriptions round their necks, to acquaint Franklin and his party with their position. In 1849 they quitted Leopold Harbour, and tried to penetrate westward; but huge barriers of ice pressed around them on every side, and rendered their efforts fruitless. They arrived in England in November, when Lieutenant Maclure was immediately promoted to the rank of Commander. The expeditions to the Pacific and North Coast were equally unsuccessful in finding any trace of the *Erebus* and *Terror*, although they ascertained clearly that they could not have been wrecked along that track; Captain Kellett therefore returned to the Sandwich Islands, leaving the *Plover* to winter at Behring Straits. The Admiralty now determined on another expedition, and Maclure's services were a third time volunteered and accepted. In January, 1850, he was appointed to the command of the *Investigator*, a ship destined to rank in celebrity with the *Golden Hind* of Drake. Captain Collinson, his senior officer, commanded the *Enterprise*, and their instructions directed them to proceed by the Pacific to Behring Straits, and thence, if practicable, to Melville Island. Another expedition was to take the route of Baffin Bay, to search Wellington Channel, and reach Melville Island also from the westward. Since Parry had passed through Wellington Channel, thirty years before, no access had been obtained to it; yet all believed that on this course alone was Franklin likely to be traced. There were, consequently, no fewer than ten vessels collected in Barrow's Straits in the summer of 1850, with 220 picked men, and the best officers that could be selected for the service. Some few but indistinct traces of Franklin's expedition were discovered on Beechey Island, which seemed to show that it must have wintered there in 1845. There were the hut that sheltered them,

the deserted fire-place, the empty meat-canisters, fragments of newspapers and letters, and ends of rope; but not a single document writing to indicate whither they had gone. There were also the bones of three men. All the officers of the squadron prosecuted the search with unwearied assiduity. Lieutenant McClintock travelled 800 miles over the ice to the extreme end of Melville Island; Captain Penny made a daring effort to penetrate Wellington Channel, and having proceeded in sledges, and occasionally a boat, to the head of the channel, found that it opened out westward into the Great Polar Sea, in which direction he naturally presumed Franklin must have sailed. A piece of English elm, which was drifting in the channel, confirmed him in this notion; but he could not explore the open sea merely with boats, Captain Penny offered to go up in one of the steamers to search the sea and land. This noble offer was declined by Captains Austen and Penny, to the great disappointment of the whole squadron; so this vast expedition returned homeward without the discovery either of Franklin or the North-West Passage. Another squadron was subsequently despatched, under the command of Sir Edward Belcher, to Wellington Channel, following the track opened by Captain Penny; but with no other result than the discovery of new islands and more ice. Thus, since 1850, no fewer than fifteen expeditions, consisting of thirty vessels and above a thousand men, have been employed in the search from Baffin's Bay to Melville Island, with no more important discovery than the slight traces left at Beechey Island; and Captain Penny's investigation of Wellington Channel. The small expedition to which Captain Maclure was attached, was ordered to reach Melville Island from Behring Straits, an achievement which no ship had hitherto accomplished. Two vessels sailed from Plymouth on the 20th January, 1850, destined for three years, with a complement of sixty-six men in each; the Investigator commanded by Captain Collinson, the senior officer, and the Enterprise by Commander Maclure. The two ships were instructed to press forward to the Sandwich Islands, refit there, and then use every exertion to pass Behring Straits and break the ice by the 1st of August. The Enterprise and Investigator were parted by a gale in Maghellan's Straits, and never met again. The Investigator proceeded alone to the Sandwich Islands, found neither the Enterprise nor the Herald. Captain Kellett went on to Behring Straits, having given up all hope of meeting with either the Enterprise or her consort. Maclure went on to the Sandwich Islands. Captain Kellett had proceeded as far as Lisburne, to bury the remains of Captain Collinson, and was returning south, when he met a vessel steering up from the Straits. It was the Investigator. After going over the ship, they parted at midnight, the Investigator being under every stitch of canvass she could carry. It was that Captain Kellett, startled at the danger of a single vessel pressing on into the ice at such speed, made the signal for all; but Maclure telegraphed in reply—"Can't stay—important—own responsibility;" and pushed away with a determination

to effect his object or perish in the attempt. That midnight interview with Captain Kellett was the last he had with any one, save his own officers and crew, for three years; and when he and his friend met again it was after he had discovered the Passage, and was standing on for Melville Island. Once again Maclure was seen under a press of canvass, steering to the North, into the pack of Capé Barrow. From that date until his achievement was known to the whole world, nothing further was heard of him. Having rounded Cape Barrow he reached Cape Bathurst and Cape Parry, and then struck northward, and saw land about fifty miles off. He landed and named it Baring's Island. He found it to be an extensive country, with fine rivers, lakes, ranges of hills two or three thousand feet high, valleys verdant with moss, and thronged with herds of deer and musk oxen. Divided from it by a strait was another tract of land, with ranges of volcanic hills and verdant valleys, which they named after Prince Albert. The strait he called after the Prince of Wales. All he had toiled for seemed now within his reach; for through this strait he arrived within twenty-five miles of Barrow's Straits, and, in fact, in the waters of the Atlantic, when a north-west wind set the whole mass of ice drifting to the east, and Barrow's Straits were effectually barred from him. Having secured his ship to a floe of ice eight fathoms deep, he drifted with it down the strait some miles, and was finally frozen in on the 30th September, two months after he had entered the ice; "having accomplished," says Sir Edward Parry, "the most magnificent piece of navigation ever performed in a single season;" traversing, in fact, from 900 to 1000 miles that had never been navigated before! On the Atlantic side Parry had reached Melville Island, but for thirty years no one had accomplished so much. No one had trod that path before:—

"He was the first
That ever burst
Into that silent sea!"

Winter was now setting in, and preparations were made to enable the officers and crew to leave the vessel, should she be struck by the ice. The question which suggested itself was, did a communication exist between the ship and Barrow's Straits. The solution of this postulate would decide at once and for ever the question of a North-West Passage. Maclure took six men with him and a sledge, and travelled five days. On the sixth they pitched their tent on the shore of Barrow's Straits. Opposite lay Melville Island. They erected a cairn fifteen feet high, inscribed with the date of their discovery, October 26, 1850; and on the 31st returned to the ship again, having travelled 156 miles in nine days. Even now, however, they were in danger of never reaching it, for when they had arrived within fifteen miles of the Investigator, the gallant Commander had quitted the sledge, intending to hasten on alone and have all his efforts ready for his companions on their arrival; but fogs came on and thick darkness, so that he could no longer see the compass, and after floundering about for some time, he had to stop and wait.

himself in the snow for the night. The next morning he found that he had passed the ship some four miles, but contrived to reach her in a few hours in safety, after frightful perils of various kinds, great fatigue, and twenty-four hours' fast. Winter had now set in, and for six months they were all chained to this spot. The *Enterprise* had entirely failed in her first attempt to pass Behring Straits; on the 19th of September she succeeded; but Maclure had advanced to the eastward 700 miles, and had nearly achieved the great object of his ambition. With the return of spring sledge-travelling was resumed and searching-parties organised. We cannot follow Captain Maclure through the details of this most interesting portion of his life. At Baring's Island he found the remains of an immense forest, extending over an entire range of hills, although a tree is never to be met with in the Arctic regions beyond the 66th degree latitude. In Prince Albert's Island he discovered a primitive tribe of aboriginals, who had never seen an European before. His first converse with these people was the only communication he and his crew had had with any human being for three years. For ten months the *Investigator* remained immovable in the ice, and the travellers were at length compelled to cause its disruption by gunpowder. They were thus enabled to pass through, but could not reach Barrow's Straits during the whole summer, and tried in vain to break passage by the north side of Baring's Island. Nothing could exceed the perils to which they were exposed in these attempts; locked continually between huge masses of ice, from which they could only extricate themselves by blasting—using at one time so much as 225 pounds of gunpowder. They were, however, once more completely beset in, and their provisions became so reduced that they were obliged to be content with half-rations. But for their hunting-parties they must have perished. Expecting that provisions had been deposited for them at Melville Island, Captain Maclure sent a search-party in search of them; but after travelling eighteen days he found that Captains Austen and Ommaney, with their powerful squadron and abundant supplies, had not given them a thought. The summer of 1852 passed away without any prospect of release. They were now reduced to half-a-pound of meat a-day, in a climate in which they could have consumed four. On the 8th September, three years after their imprisonment in the ice, Captain Maclure came to the resolution of sending half the crew home in the following spring, and of remaining with his officers and the ship so long as there was a chance of extrication. That proving impracticable, he resolved to make his way home in 1854 by sledges, to Port Leopold in Barrow's Straits, where he would be likely to fall in with ships or whalers. The vessel was still sound, and he would not desert her in a single favourable season might enable her to run through Behring Straits, and so perfect the North-West Passage. Fortunately they had store of powder and shot, and their hunting-parties brought in enough of deer to keep them from starvation. We cannot conceive anything more honourable, to England in particular and to humanity in general, than the cheerfulness of Maclure's crew under

their many and most severe labours and privations. In spite of their scanty provisions they kept Christmas right merrily. "As I contemplated the gay assemblage," says Maclure, "I could not but feel deeply impressed with the many and great mercies" (he had named the little spot in which the ship obtained a temporary refuge—"Mercy Bay") "extended towards us by a kind and beneficent Providence, to whom alone is due our heartfelt praises and thanksgiving for all the great benefits we have hitherto experienced." On the 30th March the men were told off who were to proceed home, and a full allowance of provisions given them. They were divided into two parties; one by sledge to Melville Island, and thence, if possible, to Beechey Island, in the hope of meeting ships and supplies; the second to proceed by Mackenzie River to the nearest trading station. The 15th April was fixed for their departure. In what he had good reason to believe might be his last words home, his old Commander Sir George Back, the only personal favour that asks of the Admiralty is, that his commission be antedated to the 31st October, 1850, the day on which he discovered the Passage. To the Admiralty he writes—"If no tidings of me are heard next year from Port Leopold, it may be concluded that some fatal catastrophe has happened; either that we have been carried into the Polar Sea, or smashed in Barrow's Straits. In that case, *let no ship proceed to our relief, for we must all have perished from starvation; let no lives be risked in quest of those who will then be no more!*" Of this and other of Captain Maclure's despatches Sir Roger Murchison has remarked—"Since Captain Cook, no officer has written despatches that will be more indelibly impressed on the minds of Englishmen." His report was now near at hand. On the arrival of Captain Kellett at Melville Island he found, to his surprise, the notification left there by Maclure, in April 1851, of his discovery of the Passage, and the condition at that date. A sledge-party was accordingly despatched to the Bay of Mercy, under Lieutenant Pim of the Resolute. The feelings of Maclure and his companions on its arrival may be conceived but can hardly be described. The sick were first removed, and the companions followed. In sixteen days the whole party were conveyed in safety to their destination; but Captain Maclure preferred to return to and remain with his ship. His subsequent return and modest account of his adventures are well known to all the world. 5000*l.* has been awarded to him by Parliament, with a corresponding amount to his officers and crew, as a reward for their gallant exploit. He received the honour of Knighthood in 1855. 800*l.* was also voted for erecting a monument to Franklin and his crew.

M'MAHON, GENERAL OF FRANCE, and Captor of the Malakoff, was born about 1807, and derives his descent from a family which, after figuring with distinction for many centuries in Ireland, risked and lost all for the last of our Stuart kings. The M'Mahons, carrying their national traditions, ancestral pride, and historic loyalty to France, mingled their blood by marriage with the old nobility of their adopted country, and obtained, with the hand of an heiress

magnificent castle and extensive estates of Sully. The General's father, the Comte de M'Mahon, who was an officer of high rank, a peer of France, a Grand Cross of the Order of St. Louis, and a personal friend of Charles X., espoused a lady of the ducal house of Caraman, and left four sons and four daughters. Of this numerous family, the youngest is the hero of the Malakoff. General M'Mahon first entered the military service of France in 1825, as member of the school of St. Cyr, was in 1830 sent to the Algerian wars; in 1832, while acting as aide-de-camp to General Achard, took part in the expedition to Antwerp. He attained to the rank of Captain in 1833, and after holding the post of aide-de-camp to several generals, and taking part in a severe African campaign, during which, in 1837, he received a bullet-wound in the chest at Constantine, the gallant officer was, in 1840, nominated Major of the 1st Battalion of Foot Chasseurs. Returning once more to signalise his valour in the Algerian wars, M'Mahon became, in 1842, Lieutenant-Colonel of the Foreign Legion; in 1845, Colonel of the 1st of the Line; and in 1848, General of Brigade. For a while General M'Mahon occupied the position of Governor of the province of Oran, and afterwards in the division of Constantine; and at length, in 1852, he was advanced to the rank of General of Division. Having stated enough to indicate that General M'Mahon proved himself—

"No carpet knight so trim,
But in close fight a warrior grim,
In camps a leader sage,"

he hasten on to that splendid achievement which spread his name throughout Christendom. When, in 1855, the amiable and chivalrous Canrobert left the Crimea, General M'Mahon, being then in command, was selected by the Emperor Napoleon to succeed him in the command of a division; and when the chiefs of the allied armies were about assaulting Sebastopol on the 8th of September, they entrusted to General M'Mahon the honourable and perilous post of commanding the works of the Malakoff. "Soldiers of the First Division, saviours of the Guard," said the gallant warrior, inspired with the confidence of victory, "you are at last about to quit your position to attack the enemy hand to hand. On this decisive day the Emperor has confided to you that most important task, the defence of the Malakoff Redan—the key of Sebastopol. Soldiers, the whole army has its eyes upon you, and your colours planted on the ramparts of that citadel will be the answer to the signal for the general assault. Your bravery is a guarantee for the success which will immortalise the numbers of your regiments. In a few hours the Emperor will tell France what the soldiers of Alma and Inkermann can do. I will give the signal by the cry of 'Vive l'Empereur.' Our rallying word shall be 'Honneur et Patrie.'" Inspired with this spirit-stirring address, the soldiers sprang forward with that heroic bravery characteristic of their nation, and, notwithstanding unexampled difficulties, and a most exciting foot-to-foot combat, succeeded in effecting a lodgment in the anterior part of the

Malakoff. The enemy showered down a storm of projectiles of all kinds upon the assailants; but the brave Bosquet supported them with his Guards; and Pelissier, standing on the Mamelon, with his military reputation trembling in the balance, exercised all his characteristic energy in pushing forward the reserves; and, convinced that the fall of the Malakoff would be decisive of success, directed his whole attention to retaining possession of the grand position. Matters were, indeed, somewhat critical; but resolution and courage overcame all difficulties. Bosquet was struck by the bursting of a shell. Another General took his command. A powder-magazine exploded; and the Russians, hoping to profit by this accident, immediately advanced in dense masses, and, disposed in three columns, simultaneously attacked the centre, the left, and the right of the Malakoff. But measures of defence had already been taken in the interior, and General M'Mahon opposed to the enemy bodies troops whom nothing could intimidate. After the most desperate efforts the Russians were compelled to make a precipitate retreat. General M'Mahon remained master of the Malakoff; and the tricolor flag waved in triumph from its battlements. An Imperial decree has since elevated him to the dignity of Grand Cross of the Legion of Honour.

M'NEILE, THE REV. HUGH, Minister of St. Jude's, Liverpool, Canon of Chester, was born in 1795, at Ballycastle, in the neighbourhood of Belfast. He was originally intended for the law, but he resolved to devote himself to the church, and studied divinity at Trinity College, Dublin, where he took his degree of M.A. In 1822 he married the daughter of the late Archbishop of Dublin, Dr. Maguire, whose family he had been tutor: this gave him a position; and his intense hatred, as an Orangeman, of the Roman Catholics made him an eager and vehement speaker at the Rotunda. He afterwards spent a few years of his life in London, where, however, he failed to produce the effect he anticipated. About twenty years later he became the Rector of St. Jude's, Liverpool, where he acquired immense influence, and has become virtually the spiritual dictator of a very considerable circle of admirers. He has published several sermons and controversial pamphlets. One of his most popular sermons was that delivered on the occasion of Prince Albert's visit to Liverpool. His eloquence is of a highly energetic and declamatory character, and he is gifted with a commanding presence and a sonorous voice. Whilst in London, Mr. M'Neile preached at the Charlotte Street Chapel, Fitzroy Square; but failed to make an impression upon the religious classes, Irving at that time being in full possession of the field.

M'NEILL, SIR JOHN, G.C.B. and F.R.S.E., third son of John M'Neill, Esq., of Colonsay, Argyleshire, and brother of the Right Hon. Duncan M'Neill, Lord Justice-General of Scotland, was born in 1795, and in 1831 was appointed Assistant-Envoy at the court of Persia. In 1834 he became Secretary of the Embassy.

1836 Envoy Extraordinary and Minister Plenipotentiary to that court. In 1834 he received the Persian order of the Lion and Sun, and in 1839 was created a Civil Knight Grand Cross of the Order of St. Michael. In 1844 he returned home. During the time that he spent in the East he became thoroughly acquainted with the politics, policy, and resources of the Asiatic nations; and the signal sagacity with which he even at that period pointed out the aggressive designs of Russia, was acknowledged even by those who were unwilling to participate in all his apprehensions of danger. Soon after his return from Teheran he was placed at the head of the board appointed to superintend the working of the new Scottish Poor-law Act of 1845, and in 1851 conducted a special inquiry into the condition of the Western Highlands and Islands. In February, 1854, he was chosen by the Government of Lord Palmerston to take over the Commission of Inquiry into the Administration of the Commissariat of the army in the Crimea.

MACREADY, WILLIAM CHARLES, Tragedian, was born in London, March 3d, 1793. His father was the manager of a provincial company, and lessee of several theatres; but, desiring a more respectable profession for his son, sent the future actor to Rugby. At this celebrated school he acquired considerable reputation by his classical attainments, and gave promise of future celebrity at the bar, for which he was at that time destined by his parents. In his seventeenth year, whilst expecting to proceed to the University of Oxford, his father's affairs became deeply embarrassed. It is said that offers of assistance, such as would have enabled the younger Macready to continue his academical career irrespective of family misfortunes, were at this time made by friends, but they were declined. Be this as it may, the son now resolved to follow his father with those talents which the latter had made it his business to improve. He exchanged the quiet of the school for the excitement of the theatre, and in June, 1810, made his first appearance at Birmingham in the character of Romeo. Having industry as well as talents, he was soon recognised as a valuable actor, and saw his exertions in behalf of his father crowned with success. Till Christmas, 1814, Mr. Macready remained with his father's company as a leading actor and stage-director; performing to great applause at many of the chief towns of the midland and northern counties. In the two following years he visited the islands of Ireland and Scotland; increasing his reputation, which was now thought sufficient to warrant him in making his appearance on the London stage. Accordingly, on the 16th of September, 1816, he came before a Covent Garden audience as Orestes in "The Distressed Mother." His *début* caused much excitement in the theatrical world, and Kean, among other eminent actors, witnessed and applauded his performance. At the conclusion of the tragedy of "The Distressed Mother," the announcement of Macready's re-appearance was hailed with three rounds of applause. Notwithstanding this favourable *début*, Macready had a hard battle to fight

for many years. Kean, Kemble, and Young were the great favourites of the town; and the monopoly which limited the presentation of Shakspeare's dramas to the two patent theatres narrowed the arena of competition. Clubs were formed, the bond of which was an engagement to prevent the intrusion of new-comers upon what was considered the domain of established favourites. Under these circumstances, he was compelled to refrain from assuming a number of Shakspearian characters in which he has since become a favourite with the public. His *Virginus*, *Mirandola*, and *Rob Roy*, were pronounced very masterly personations. After his triumph in the first, he speedily took his place as a Shakspearian actor. On removing from Covent Garden to Drury Lane, he became the original representative of the respective heroes of Mr. Sheridan Knowles: *Caius Gracchus* and *William Tell*. He reappeared at Drury Lane in 1826, and from that time to the present moment has continued to hold that high rank in public estimation which he has never forfeited. Mr. Macready had undertaken in turn the management of the two patent theatres, and sustained considerable pecuniary injury in his endeavour to elevate the character of dramatic amusements. In 1826 he went to America, and in 1828 visited Paris, where he was enthusiastically received. In 1849 he paid a second visit to New York, where the jealousy of Forrest, the American actor, led to a riot, in which the Astor Opera-house, in which Macready was performing, was attacked by the mob, and the English actor only escaped with his life. The military were called out to suppress the disturbances, and having fired, killed twenty-two men on the spot, besides wounding thirty others, some of whom subsequently died of their wounds. Mr. Macready returned to England shortly afterwards, where he was warmly welcomed by his friends. He commenced his final engagement at the Theatre Royal, Haymarket, in the autumn of 1849 (Oct. 8), of which he was obliged to relinquish the completion when about half fulfilled, on account of ill health; he resumed it in the autumn of the following year (October 28, 1850), and brought it to a conclusion on Feb. 3, 1851. His benefit took place at the Theatre Royal, Drury Lane, February 26, 1851, and the Macready Banquet was celebrated almost immediately afterwards.

MADOZ, M., Minister of Finances in the Espartero-O'Donnell Cabinet of the Queen of Spain, was President of the Constituent Cortes when chosen for his present post, having been elected by a large majority after the resignation of Marshal Espartero. He is one of the most influential men in Spain, and a leader of the Progressista party. He is an avocet and a literary man, and has been several times elected deputy to the Cortes, where he has always opposed abuses, and demanded reforms in the finances and in the government. Before being elected President of the Cortes he was named civil Governor of Barcelona. He pacified the province in a few days, and put an end to the strike of the workmen. It was he who obtained permission from the Government to pull down the walls of Barcelona, and who ordered their demolition.

and most complete "Geographical Dictionary of Spain" is from the pen of M. Madoz. Upon acceding to office, he found the finances in a state of complete disorganisation; the revolution having at once enormously enhanced expenses and diminished revenue. As a bold expedient, he has proposed that the Government should assume and realise the property of the Church,—a measure which has created immense excitement in Spain.

MAGNÉ, M. French Minister of Finance, is one of the many men of the new régime of whom the European public know little. He was a member of an obscure family in Périgord, was introduced to public life in Paris by Marshal Bugeaud, a man of the same part of the country. Originally appointed a member of the Treasury, he rose to become Secretary of Finance. His administrative ability was remarked by M. Fould, who is generally said to have been the founder of his political fortunes. A member of the Constituent and Legislative Assemblies, M. Magné occupied no leading position as a debater. Occasionally, however, he made practical speeches, which were always listened to with attention. His ministry of Public Works, which he held for a short time, is generally admitted to have been very successful. It has been his lot to conclude many most important treaties with the great railway companies, and during his career of office he personally inspected not only all the principal lines of France, but also those of other countries, to enable him to avail himself of their experience. His known talents augur well for the new administration of finance, but it is objected by members of a certain party in France that he is likely to be too much under the influence of M. Fould. He received his present appointment in January, 1855.

MAHONY, FRANCIS, Journalist and Author, one of the Editors of the "Globe," born in Ireland about 1805, left at an early age for the Colleges in France and the University of Rome. Returning without orders from Italy, a short experience of their Irish exiles seems to have decided him to resume literature as his profession. Uniting in an eminent degree ripe scholarship, wit, a ready pen, and a rare style, he was, under the *nom de plume* of "Peter Proul," gladly enrolled amongst the band of able men who years ago—in the hey-day of Dr. Maginn—contributed to "Punch Magazine." He spent some years in travel through Hungary, Minor, Greece, and Egypt, and has written several books; his chief literary labours have been devoted to, and his chief influence has been exerted in, the columns of newspapers. He edited the Roman correspondence of the "Daily News;" continuing to the columns of that journal a series of articles full of feeling, sparkling wit, and zeal for the cause of Italy, in the course of which he has not spared anointed wrong-doers. He was examined by the Parliamentary Committee on the Mortmain in 1851, principally as it regarded their effect in the Roman

MANTEUFFEL, BARON OTHO-THEODORE, Minister President in the Government of the King of Prussia, and Minister of Foreign Affairs. The name of M. Manteuffel has become permanently associated in England with the pro-Russian policy of the Court of Berlin throughout the Eastern war. It would, however, be paying him far too high a compliment to believe that he is anything more than the tool of those from whom that policy has in reality received its impress and direction. M. Manteuffel is only nominally president in the councils of the King of Prussia, just as Prussia itself is a constitutional country but in name. He is descended of a family belonging to the landed gentry or petty nobility in Prussia, which has several members in the military or civil service of the government. Otho-Theodore was trained for the board of Poor-Law Administration, and filled a subordinate office when Count Brandenburg was called to power in the autumn of 1848, and charged with the duty of suppressing the revolution. Brandenburg would have had great difficulty in finding colleagues of name or note, but he did not consider such men necessary. His sole reliance was on the sword of General Wrangel. He appointed Manteuffel Minister of the Interior; and as the kingdom returned to a more settled state the new minister found opportunities of developing a certain administrative ability, which gained him the good will of a large party among the commercial and middle classes. His chief merit is that of being a free-trader. In December, 1850, he was called to the department of Foreign Affairs upon the fall of General Radowitz, and at Olmutz immediately surrendered to Austria on all the questions of German policy for which Prussia had contended with more or less earnestness for two years and a half. The influence of Prussia in and beyond Germany has never recovered that humiliation. In January, 1852, Manteuffel was made President of the Council of Ministers. The course which the Prussian Government has taken throughout the war between Turkey and Russia is well known; but to estimate Manteuffel's share therein it is necessary to consider the internal constitution of the Prussian Government. This a writer in the "Westminster Review" has truthfully portrayed in the following words:—"With us, Cabinet means the Ministry; in Prussia it means the private secretaries of the king and their staff. These gentlemen, the most notorious of them, General Von Gerlach (brother of the judge), and M. Niebuhr, son of the historian, are entirely in the Russian interest, and in constant communication with Baron Budberg, the Russian envoy. They constitute a second government. The whole of the royal household and its visitors, excepting Alexander Von Humboldt, who keeps aloof from politics, are of the same disposition. The most prominent partisan of Russia, by his social position, is a man who betrayed last year the secret plan for the mobilisation of the Prussian army to the Czar, and would have been hanged, but that he happened to be the brother of the king, Prince Charles." Of Manteuffel the same writer says:—"He is without comprehensive views; and when he took the reins of power he was, owing to his career.

to a stranger to those branches of knowledge which form the man. By way of making up for such deficiencies he keeps a lot of unsuccessful journalists to cram him with facts, quotations, facts, ideas, even with ready-made speeches; and afterwards he reads them with consulships. He has shown some talent, at the time, in corrupting the press, and managing public opinion through its medium. There is a perpetual squabble," the reviewer says "between his journals and that of the Junker party, and there is a chronic rumour of the minister's having tendered his resignation; but all this is 'but a pantomime to deceive the public.'"

MARCY, WILLIAM L., one of the leading Democratic Politicians in the United States, was born at Sturbridge, Worcester county, Massachusetts, December 12, 1786. As his father was in comfortable circumstances, the son was enabled to obtain a liberal education, and when he had completed his academic course entered Yale University, where he graduated with high honour in 1808. He then took up his residence in Troy, in the state of New York, and there he studied and commenced the practice of the law. He took a prominent part in the political discussions growing out of the foreign policy of Jefferson and Madison; heartily approving their measures and defending their administration with zeal and ability.

On the declaration of war with Great Britain, Mr. Marcy offered his services to Governor Tompkins, and served with distinction during the greater part of the struggle. About the year 1816 his political services were rewarded by the appointment of Recorder of the city of Troy; but on account of his forming a close connection with Mr. Van Buren, and his opposition to Governor Clinton, he was removed from his office in 1818. In 1821 he became Adjutant-General of the State, and Comptroller in 1823, when he moved to Albany; where he has ever since resided, becoming a member of the famous "Albany Regency," which for many years directed the action of the democratic party in New York. In 1825 he was appointed one of the Associate Justices of the Supreme Court, but resigned that office on his election to the United States Senate in 1831. He remained in the senate about two years, and having in the mean time been elected Governor of the State of New York, he entered upon the discharge of the duties of that office in January, 1833. Mr. Marcy was twice re-elected Governor, but on a fourth nomination by his party in 1838 he was defeated by a large majority, and from that time held no political office until Mr. Polk succeeded to the presidency in 1845. He was then tendered the post of Secretary of War in the cabinet, which he accepted. The duties of this office during Mr. Polk's administration were no sinecure, and Mr. Marcy discharged them with energy and ability. He resigned his office in 1849, on the accession of General Taylor. He ranks highly as a writer, and has the reputation of being a shrewd political tactician. He was one of the principal candidates for the presidency before the recent democratic convention at Baltimore, but upon the election of General

Franklin Pierce took office as Secretary of State. In this capacity he procured the meeting known as the Ostend Conference, at which Mr. Mason, Mr. Buchanan, and Mr. Soule, Ministers of the United States at Paris, London, and Madrid, met to devise means for obtaining the annexation of Cuba to the United States. The ministers made a report in favour of offering to buy the island of the Spanish Government, and recommended that in case Spain should decline to sell, the Washington Cabinet should "consider the course to be taken." It immediately appeared that Spain was not to be induced to part with its finest foreign possession, and as Pierce and Marcy were not bold enough to pursue the matter, Soule and Buchanan were recalled.

MARKHAM, FREDERICK, General, was born about the year 1808, and is son of Admiral Markham, whose father was Archbishop of York for nearly half a century. Markham entered the army in 1824, as an ensign in the 32d Regiment, obtained his Lieutenancy in the following year, and became Captain in 1829. Whilst holding the latter rank he accompanied his regiment to Canada; and in 1836-37 saw much active service during the disturbances in that colony. In the latter year he was severely wounded. A couple of years subsequently he was promoted to be Major; and in 1842 he obtained the command of the 32d Regiment as Lieut.-Colonel. In 1846 his corps was ordered to India, and Colonel Markham went with it to that country, where he landed in the autumn of the year, and marched forthwith to the north-west provinces, the frontier of which was in a disturbed state. When the insurrection broke out in the Punjaub, and the fortress of Moultan declared in favour of the enemy, the 32d Regiment was ordered to the seat of war, and Lieutenant-Colonel Markham received the command of a brigade of infantry. During the entire campaign he distinguished himself by his energy, and by the efficient manner in which all his duties were performed. For the six years he commanded his regiment it was a pattern in camp and quarters to the British army; and as a brigadier his reputation was not behind what it had been when he was the leader of a battalion. At the close of the campaign he received the well-merited rewards of being nominated an Aide-de-Camp to the Queen and a Companion of the Bath—the former honour giving him the rank of full colonel in the army. After a short period of leave in England, Colonel Markham rejoined his corps in India, determined that no consideration of ease or comfort should induce him to abandon the regiment in which he had risen from the lowest to the highest, commissioned rank. He was not, however, destined to do duty again with that corps; for upon the death of Colonel Moun-
tain, the Adjutant-General of the Queen's troops in India, Colonel Markham was selected to succeed him. After serving but a short time in this very responsible post, the royal warrant of October, 1851, gave the Commander-in-Chief the right of selecting for promotion to the rank of Major-General any Colonel, irrespective of his standing in the service, whose professional character stood high enough

merit such a choice. The very first officer thus distinguished was Colonel Markham, who was at the same time nominated to command a division of the Bengal army. When, however, the British public and the English press began to canvass every fresh nomination to the staff of the Crimean army, orders were sent out to General Markham to join the head-quarters before Sebastopol without delay. Within thirty days of receiving this order, in the far west of India, he reported himself at Sebastopol, and received the command of the Second Division of the army; and when it became known that General Simpson's health was such as to render his return home probable, General Markham was generally spoken of as the officer likely to succeed him in the command of our army in Crimea. It was, however, ordered that it should be otherwise, for after enacting during the assault on the Redan a part which cannot be said to have added much to his military fame, General Markham left the seat of war for the peaceful shores of England.

MARMORA, ALPHONSE DELLA, General of the Piedmontese Army of the East, and formerly Minister of War, is member of the family which has given many soldiers to his country. The first of the family, who was wounded in Russia in 1812, is now a lieutenant-general; another, Albert, who was a subaltern officer in 1812, devoted himself assiduously to the affairs of the island of Sardinia, where he acted as lieutenant of the king until 1848; a third, Alexander, made his *début* in the military career by the introduction of riflemen into the Sardinian army; a force which rendered important services in 1848 and 1849, and he worthily gained the rank of general at the point of his sword. Alphonse della Marmora was only a major in his branch of the service in 1848; but his energy and his sense of reform having thrown great impediments in the way of promotion during his earlier years. He became a Lieutenant-General in 1849, and Minister of War in 1852. The confusion which the Sardinian army fell after the disasters of 1848 excited his grief. To the old officers, who were quite perplexed by the extraordinary events, and the generals who saw their labour wasted as if by enchantment, succeeded inexperienced innovators, he opposed their work of disorganisation by the defeat of Novara. The regiments after that battle were completely dispersed. There were some brigades which after the combat reckoned their numbers by hundreds, and the acts of pillage which followed close upon the defeat of the Piedmontese troops, and upon the really admirable conduct of those troops in Lombardy, prove clearly that those disorders ought not to be imputed to the soldiers alone, but to the bad organisation of the Sardinian army. It was the work of Alphonse della Marmora to take up these remnants of the army force of Piedmont. The drill and discipline, the constitution of the regimental staff, the scale of pay, have all undergone considerable modification, and the cultivation of the military art was the minister's incessant care. When the new army

was about to be brought to the Crimea, the General gave a proof of his confidence in his task by leading it in person; and the Earl of Hardwicke, himself an officer, said in the House of Peers, when the Sardinian treaty was under discussion, that "he could state for the satisfaction of the British army that General della Marmora was a man of high ability, whose soldier-like qualities would merit their esteem; that he possessed, moreover, so much openness, frankness, and nobility of character, that he would be always accessible to their communications, and receive them in a congenial manner: and that the General was a good soldier, and also a perfect gentleman in his deportment." About the beginning of May, 1855, General della Marmora, attended by a staff of officers, all wearing plumes of green ostrich feathers, made his appearance at the seat of war, and was received by Lord Raglan with the consideration due to a man of his character and career. The eminent Sardinian's system and his generalship were, ere long, put to a severe test; but the result was, in both respects, satisfactory. Indeed, of the capacity with which he had administered the military affairs of his country, and of the skill with which he could guide his countrymen amidst the roar of guns and the excitement of conflict, no better proofs could have been given to Europe than the events which terminated in the memorable victory of the Tchernaya.

MAROCCHETTI, THE BARON. A truly great Sculptor, the worthy successor of Torelli and Torrigiano,—men who knew how to make bronzes. He was born in 1809, at Turin; where stands his first work, the equestrian statue of Immanuel Philibert. At the death of his father he inherited the Château de Nans, near Paris, where he lived till 1848. Among his principal works executed for France have been two equestrian statues of the Duke of Orleans, of which one stood in the Court of the Louvre, and another stands yet in the Place du Gouvernement at Algiers: a *Assomption* in white marble for the *maître* altar in the Madeleine church, Paris; and the great bas-relief looking south in the Arc de l'Etoile at Paris. In 1844, while still in France, he executed by commission an equestrian statue of the Duke of Wellington, for Glasgow, one generally acknowledged to be the finest of the legion erected to the great soldier's honour. Political causes helped to bring him to England in 1848. Here he has since remained, and attracted substantial recognition from the wealth and aristocracy of the land. At the Great Exhibition of 1851 the model of his colossal "Courage and Lion" introduced him to an European public, and to European admiration. There were few visitors to that memorable show but remember the statue as one of its most marked features, standing outside the building, at the west, with uplifted arm and countenance grandly defined against the sky. So noble a work was a novelty in "ideal sculpture:" the romantic expression of a romantic and typical theme, (for Richard is the representative of an era), dignified in sentiment; not theatrical, as in ordinary hands it would have been; good a chance of being. The execution is of great beauty; the

so remarkable for truth and spirit, as are the details for accuracy. A public subscription was set on foot to secure the work, in bronze, in London; and the first names put down for this subscription were—to the mutual honour of all—artists' names; that of the sculptor Gibson heading the list. Originally, the proposal was to place it in Hyde Park as a memorial of the Great Exhibition; then, in front of Westminster Hall. Last year a cast was placed experimentally in Palace Yard. Around the pedestal is to be executed, in bronze, relief of the principal events of Howard's life. Altogether, it will be quite an epic when finished. Marochetti, since he has been in England, has executed by commission for Glasgow,—where he has found many and influential patrons,—another equestrian statue of the Queen. It was inaugurated in 1854; when a banquet was given to the sculptor, at which Senator Alison justly described him as “a man of a million.” A statue of Peel for Glasgow, from the same gifted hand, was on that occasion talked of. To the exhibitions of the Academy, Marochetti contributed a portrait-bust of Prince Albert (1851), one of Lady Florence Gower, and several others, of ladies; all these are of great beauty: refined, intellectual, and of rare sweetness in execution. The exhibition of 1854 was a “Child and Greyhound:” the child, rapid and winged, of simple yet exalted character; the modelling of the dog matchless, tendinous, full of strength, swiftness, grace. That of 1855 stood a characteristic and surpassingly beautiful statue of “The Hon. Mrs. G.”

MARSHALL, WILLIAM CALDER, R.A., Sculptor, born in Edinburgh, where he was educated; and for some years used his art. He next studied under Chantrey in London, and under Baily; and in 1836 visited Rome. He first exhibited at the English Academy in 1835; took up his residence in London permanently in 1839. In 1842 he was elected Associate of the Academy, in 1844 of the English Academy, and in 1852, R.A. Marshall is one of the few who have resisted the attractions of the more lucrative branch of his art, portrait-busts. He has devoted his great skill as a modeller of the figure to poetic sculpture: and with gradual success. From the Art-Union he has received important help in a course always difficult. The “Broken Vase” (1842), “Rebecca,” and other models in plaster, were used by Art-Union prizewinners; and the former executed in marble to the purchaser's order. A reduction of the “First Whistle of Love” (1845), was chosen by the holder of a 300*l.* prize. “Dancing-Girl reposing” obtained the Art-Union premium of 50*l.* reduced copies in Parian being distributed among the subscribers. One of his best works for refinement of feeling and of execution is “Sabrina” (1847), well known from the good porcelain statue issued by Copeland. The original marble had to wait many years before it found a purchaser, in 1855, in George Moore. For the New Houses of Parliament, Marshall—one of the sculptors employed—executed the fine statue of Clarendon (in

1847), and subsequently that of Lord Somers. He has also been selected for important statues erected by public subscription—that in bronze to Peel at Manchester: others proposed to be placed in public sites, to Jenner, Campbell, and Cowper. The public interest, however, in the last poetic name has been too languid to secure adequate funds,—even after a lengthened canvass. Campbell's statue was long denied admission to Poets' Corner, for want of money to pay the fees demanded by Dean and Chapter; ecclesiastic black-mail, which the churchmen in the end relinquished. Jenner's statue,—to which there were many foreign subscribers,—has lately been cast in bronze.

MARSTON, WESTLAND, Poet and Dramatist, was born at Boston, in Lincolnshire, January 30, 1819. His father, who has been dead for some years, was a Dissenting Minister, a man of great worth, eloquence, and learning. His mother was a descendant of the Byrners, a family formerly well known in Southern Lincolnshire. He was articled to an uncle who was a solicitor in London; but finding, on the completion of his legal education, that he was in possession of a slender competence, he relinquished law for literature. He is one of our most successful living dramatic authors. His plays, whilst they are really acting ones, are full of poetry of a very high order. His five-act plays hitherto represented are, "The Patrician's Daughter," a tragedy; "The Heart and the World," a play; "Strathmore," a tragedy; "Philip of France," a tragedy; "Ann Blake," a play. He is also author of "Borough Politics," a comic drama in two acts, and part author of a three-act piece called "Trevanion, or the False Position," etc. Shortly after the appearance of "The Patrician's Daughter," he published "Gerald, a dramatic poem, and other pieces." Mr. Marston has published from time to time some very stirring lyrics in the "Athenæum," and still more recently his "Death Ride to Balaklava." He is married and has three children, one having died in infancy.

MASSEY, GERALD, Poet, author of the touching ballad of "Bar-Christabel," was born in May, 1828, near Tring, in Herts, in a little stone hut, the roof of which was so low that a man could not stand upright in it. Massey's father was a canal boatman, earning ten shillings a-week. Like most other peasants, he had no opportunities of education, and could not write his own name. But Gerald Massey was blessed in his mother, from whom he derived a finely organised brain and a susceptible temperament. Although quite illiterate like her husband, she had a firm, free spirit, a tender, courageous heart, and a pride of honest poverty which she never ceased to cherish. But she needed all her strength and courage to bear up under the privations of her lot. Sometimes her husband fell out of work, and there was no bread in the cupboard except what was purchased by the labour of the elder children, some of whom were sent early to work in the neighbouring silk-mill. None of the members of this poor family were educated, in the common

aptation of the term. Several of them were sent for a short time to a penny school, where as regards knowledge the teacher and the pupils were about on a par; but as soon as they were old enough to work, the children were sent to the silk-mill. So, at eight years of age, Gerald went into the factory, rising at five o'clock in the morning, and toiling there till half-past six in the evening; up in the grey dawn, or in the winter before the daylight, and trudging to work through the wind, or in the snow: returning home shivering under the cold, starless sky, on Saturday nights, with 9d., 1s., or 1s. 3d., for his whole week's work; for such were the respective amounts of the wages earned by the child-labour of Gerald Massey. When the mill was burned down, and the children held jubilee over the bonfire, the boy stood for twelve hours in the wind, and sleet, and mud, being in the conflagration which thus liberated him. Then he went to straw-plaiting, — as toilsome, and perhaps more unwholesome, than factory-work. Without exercise, in a marshy district, the plaiters were constantly having racking attacks of ague. The boy had the disease for three years, ending with tertian ague. Sometimes four of the family and the mother lay ill at one time, all struggling with thirst, with no one to give them drink, and each too weak to help the other. "Having had to earn my own dear living," says Massey, "by the eternal cheapening of flesh and blood from early years, I never knew what childhood meant. I had no childhood. Ever since I can remember, I have had the aching fear of a throbbing in heart and brow. The currents of my life were poisoned, and few, methinks, would pass unscathed through the scenes and circumstances in which I have lived; none, if they were as curious and precocious as I was. 'The child comes into the world like a new coin, with the stamp of God upon it; and in like manner as the Jews sweat down sovereigns, by hustling them in a bag to get gold-dust out of them, so is the poor man's child hustled and sweated down in this bag of society to get wealth out of it; even as the impress of the Queen is effaced by the Jewish money-changer, so is the image of God worn from heart and brow, and day by day the child recedes devil-ward. I look back now with wonder, that so few escape, but that any escape at all, to win a nobler life for their humanity. So blighting are the influences which surround thousands in early life, to which I can bear such bitter testimony." Thanks to the care of his mother, who had sent him to the penny school, Massey had learned to read, and the desire to read had been awakened. Books, however, were very scarce. The Bible and Bunyan were his principal resources; he committed many chapters of the former to memory, and accepted all Bunyan's allegories as *bonâ fide* history. Afterwards he obtained access to "Robinson Crusoe" and a few Wesleyan tracts left at the cottage. These constituted his whole reading until he came to London, at the age of fifteen, as an errand-boy; and now, for the first time in his life, he was met with plenty of books, and read all that came in his way. A religious awakening ensued,—the delightful sense of growing knowledge,—the charm of new thought,—the wonders of a new

world. "Till then," he says, "I had often wondered why I lived at all,—whether

' It was not better not to be,
I was so full of misery.'

Now I began to think that the crown of all desire, and the sum of all existence, was to read and get knowledge. Read! read! read! I used to read at all possible times, and in all possible places; up in bed till two or three in the morning, nothing daunted by once setting the bed on fire. Greatly indebted was I also to the bookstalls, where I have read a great deal, often folding a leaf in a book, and returning the next day to continue the subject; but sometimes the book was gone, and then great was my grief! When out of a situation, I have often gone without a meal to purchase a book. Until I fell in love, and began to rhyme as a matter of consequence, I never had the least predilection for poetry. In fact, I always eschewed it; if I ever met with any, I instantly skipped it over, and passed on, as one does with the description of scenery, etc., in a novel. I always loved the birds and flowers, the woods and the stars; I felt delight in being alone in a summer-wood, with song, like a spirit, in the trees, and the golden sun-bursts glinting through the verdant roof; and was conscious of a mysterious creeping of the blood, and tingling of the nerves, when standing alone in the starry midnight as in God's own presence-chamber. But until I began to rhyme, I cared nothing for written poetry. The first verses I ever made were upon 'Hope,' when I was utterly hopeless; and after I had begun I never ceased for about four years, at the end of which time they rushed into print." There was, of course, crudeness both in thought and expression in the first verses of the poet, which were published in a provincial newspaper. But there was nerve, rhythm, and poetry: the burthen of the song was, "At eventime it shall be light." The leading idea of the poem was the power of knowledge, virtue, and temperance to elevate the condition of the poor.—a noble idea, truly. Shortly afterwards, he was encouraged to print a shilling volume of "Poems and Chansons," in his native town of Tring, of which some two hundred and fifty copies were sold. Of his later poems we shall speak hereafter. "As an errand boy," he says, "I had, of course, many hardships to undergo, and to be treated with much tyranny; and that led me into reasoning upon men and things, the causes of misery, the anomalies of our social state, politics, etc., and the circle of my being rapidly outstripped. New power came to me with all that I saw, and thought, and read. I studied political works,—such as Paine, Volney, Howitt, Louis Blanc, etc., which gave me another element to mould into my verse, although I am convinced that a poet must sacrifice much if he writes party-political poetry. His politics must be above the pin-rack party zeal; the politics of eternal truth, right, and justice. It must not waste a life on what to-morrow may prove to have been merely the question of a day. The French Revolution of 1848 had the greatest effect on me of any circumstance connected with my own life. It was scarred and blood-burnt into the very core of my

ing." But, meanwhile, he had been engaged in other literary work. Full of new thoughts, and bursting with aspirations for freedom, he started, in April 1849, a cheap journal, written entirely by working-men, entitled, "The Spirit of Freedom:" it was full of very earnestness, and half of its weekly contents were supplied by Gerald Massey himself, who acted as editor. It cost him five guineas during a period of eleven months;—two because he detected burning candle far on into the night, and three because of the tone of the opinions to which he gave utterance. As a poet, Gerald Massey is a teacher through the heart. He is familiar with the passions, and leans towards the tender and loving aspect of our nature. He takes after Burns more than after Wordsworth; after Elliot rather than Thomson. He is but a young man, though he has had crowded into his few years already the life of an old man. He has won his experience in the school of the poor, and nobly earned his title to speak to them as a man and a teacher, dowered with "the hate of hate, the scorn of scorn, the love of love." Thus far we are indebted to "A Biographic Sketch" appended to "The Ballad of Babe Christabel, and other Lyrical Poems" (fifth edition, 1855). What follows is from the pen of another poet, who himself holds a high rank amongst the singers of our day:—"Robert Burns," says Alexander Smith, in a lecture on the Poorer Poets of England, "taught Scotchmen that poverty and hard work are unable to stifle genius: Massey has taught the same lesson to Englishmen. The future career of one who has drawn beauty from poverty, and strength from privation, is one which all men must look with interest, and some, perhaps, with little anxiety. That it will be a brilliant one we have little doubt. He is yet young, and may reasonably expect a long life. His power is in lyric poetry: of this he seems to be aware; and he is therefore, likely to waste his best years in walks of art foreign to his nature and genius. Great praise has already been his. His praise is not, we take it, a vain and giddy thing, which will be only satisfied with its own accomplishments; indeed, to men like him the danger lies more on the other side. Let the eagle soar ever high, higher still soars the heaven! We hope that when he dies he will leave many songs behind him in the hearts of the people of Scotland,—songs which will assist them in the work of the day, and help to make the night beautiful."

MASSON, DAVID, Author, also Professor of Literature at University College, London, was born in 1823 in Aberdeen, educated at Marischal College in that city, and subsequently at the University of Edinburgh. He is one of the great workers in the world, who work anonymously in the profession of Journalism, where so many labour almost unknown to those whom they delight and instruct, and so few can build up a fame commensurate with their powers. There are many thus toiling, of whom the world seldom hears by name, who possess brilliant and solid intellectual capacities, such as would win a wide renown could they conserve and

concentrate them on some public work. In the first rank of these unpublished writers and teachers is David Masson; of whom Thomas Carlyle has written so gracefully and so truly:—"Nobody can know him without feeling that he is a man of truly superior qualities, calculated at once to secure success in his undertakings, and the love of his fellow-creatures by the way. A man of many attainments in scholarship and literature; and with a natural fund of intelligence, delicate, strong, and deep, such as belongs to very few, even among scholars and men of letters. A man of beautiful and manly character withal; ardent, vivid, veracious, and yet altogether quiet, discreet, and harmonious; likely to be distinguished, I should expect, at once by love of peace, and by fervour and steadiness in doing work. For he is full of what one might call central fire, which is singularly well covered in, and tempered into genial warmth, of many useful and beautiful kinds." David Masson commenced his literary career at the age of nineteen, as editor of a Scottish provincial newspaper. He came to London in 1844, with more general literary intentions. He remained there about a year, contributing to "Fraser's Magazine," and other periodicals. He then established himself in Edinburgh for two or three years, as a writer for Edinburgh and London journals and reviews, and having special engagements with the Messrs. Chambers. He returned to London in 1847, where he has chiefly resided since. In 1852 he was appointed to the Chair of English Language and Literature, then vacant by the resignation of Professor Clough. A mere enumeration of articles contributed by him to the "North British Review," and the "British Quarterly Review," alone would prove how deeply indebted to his pen is this branch of our periodical literature. It will suffice to mention his papers on "Milton," Carlyle's "Latter-Day Pamphlets," Dickens and Thackeray, "Rabelais, his Life and Genius," "Literature and the Labour Question," "Pre-Raphaelism in Art and Literature," "Theories of Poetry," "Shakespeare and Goethe," "Hugh Miller of Cromarty," and "De Quincey and Prose-Writing," to show that, as a reviewer, he brings to his work a combination of the rarest faculties; a vitalising spirit of research; a masterly grasp of understanding; imagination, both poetic and philosophic; an original vigour of thought; and a clear, compact, terse, yet delicate power of expression. He has a strong Scotch nature, ripened by sunny English influences.

MATHEW, FATHER THEOBALD. The great Apostle of Temperance, was born at Thomastown, near Cashel, county Tipperary, in 1790, and was left an orphan at a very early age. On the death of his parents he was adopted by Lady Elizabeth Mathew, who placed him under the care of the Rev. Denis O'Donnell, the parish-priest of Tallagh, in the county of Waterford. At thirteen he was sent to the lay academy of Kilkenny, where he soon became a prime favourite of his master, the Rev. Patrick Magrath. In this establishment he remained seven years, when he removed to Maynooth, where he pursued his ecclesiastical studies with

and earnestness and industry. Whilst in that establishment was induced, by two Capuchin friars of his acquaintance, to become a member of their order, and repaired with them to Kesh, where he remained until appointed to Cork. He was ordained in Dublin on Easter Sunday, 1814, by Dr. Murray, having been, for some time previous, under the care of the Very Reverend Celestine Corcoran. His manners and address were, from an early period of his career, highly polished and agreeable; much so, indeed, as to impress strangers with the notion that he had been educated in France; and they were so much the vogue to draw the *élite* of his neighbourhood to his friary. There (says an author of "Ireland and its Rulers,") the devout *belle* went to every mass later by an hour than it could be heard in any other chapel in Cork. The father was usually at the door to welcome his visitors, and, whether rich or poor, he had ever the same bland and encouraging word for all. No Catholic clergyman in Ireland has ever exercised so wide an influence in the confessional as he has done; and if the number of persons who sought his counsel be admitted as a test of his capacity, he must be regarded as one of the greatest spiritual guides in the church of which he is a member. With so much power in his hands, it is no slight praise to affirm that he has never exerted it, save for good—we think we almost say, for unmixed good. Such was the man to whom Teetotallers applied to assist them in their well-meant endeavours. He had made himself known and esteemed as a most devoted friend to the poor. He had established a religious society for visiting the sick and indigent, and had enlisted in its support numbers of young men of the middle classes. This institution was founded upon the plan of those which originated with Vincent St. John. So beneficial, indeed, was its influence, that the Poor-Law Commissioners, who visited Cork in 1834, paid especial attention to its composition; and one of them accompanied Father Mathew on his visits to the poor, to acquaint himself with the practical working of the society. In 1838 a meeting of Teetotallers took place at the Infant School in Cove Street, Cork, when it was resolved to send a deputation to Father Mathew, entreating his aid and co-operation. His reply was favourable, and a Temperance Society, of which he was unanimously elected the president, was formed, at which thirty-five new members took pledge at his hands. On the following day the town was visited, several hundred took the pledge, and from the 10th of April to the 14th of June, 1838, no fewer than 38,000 persons came among his converts. In the course of five months 131,000 registered their names, making an aggregate of 150,000 names from Cork alone. "The prestige in favour of Father Mathew," says the "Dublin Review," "was greatly increased by the fact, that those who took the pledge improved rapidly in health—a circumstance easily to be accounted for, but which was at once referred to the miraculous powers of their leader, and led to produce for him a corresponding increase of popularity.

The success of the movement at Cork induced him to accept an invitation to visit Limerick. The excitement occasioned by his presence was almost unequalled. Crowds from the farthest part of Connaught hurried forward to meet him, until the throng into the city became so great that fears were entertained for the public peace. And the next that arose was as to the means by which the multitude were to be fed. Bread reached three times its ordinary price, and everything else increased in proportion. But for the generosity of the leading citizens of Limerick, many would have perished from hunger. The house, from the steps of which the worthy father administered the pledge, was that of his sister; and there he stood for many hours admonishing the thousands who presented themselves before him. The private resources of Father Mathew were at no time large, and were soon absorbed by the sacrifices demanded of him by the great cause in which he had embarked. One of his chief sources of income had been a distillery at Castlehade, in Tipperary, which he broke up, refusing a large rent for the premises when it was offered by parties who desired to devote them to the same business again. Two of his brothers were largely engaged in the trade; one of his sisters was married to an eminent distiller; but, regardless alike of his own pecuniary interests or those of his family, he persisted in the course which his sense of duty appeared to have prescribed to him. The only person of importance, who regarded the worthy father with anything like a feeling of invidiousness, was the arch-misanthrope of Ireland, Daniel O'Connell, who professed to think that the Irish people were making "too much of him." He foresaw, doubtless, that the wholesome influence of the Apostle of Temperance was calculated to damage his own popularity. We lament to find that the sacrifices entailed upon Father Mathew, by his crusade against intoxicating liquors, not only reduced him to penury, but left him overwhelmed by debt; and although the Queen, in the exercise of a wise discretion, has granted him 300*l.* a-year out of the Civil List, it barely suffices to pay the insurance on his life, which he considered it his duty to make, for the purpose of securing the payment of his creditors in the event of his death. Of honour and public esteem he has earned a large measure. Statesmen of the highest rank have acknowledged the value of his services to the cause of morality in both Houses of Parliament; and even Royalty itself has awarded him the meed of its praise. He has, in fact, been equally successful in winning the respect of the rich and the affection of the poor; and if we are to look at the practical result of his exhortations, it can scarcely be doubted that he has achieved a larger amount of unmixed good than any other "man of our time."

MAURICE, FREDERICK DENISON, M.A., Chaplain of Lincoln's Inn, and late Professor of Divinity in King's College, London, was born in the year 1805. His father, as a Unitarian minister, was conspicuous, not only in his own denomination, but also

for bodies of Christians, for earnest devoutness. He was frequently associated with the "Evangelical Dissenters" of his day promoting the objects of Bible Societies and similar schemes of benevolence. Mr. Frederick Maurice was very young when he entered Trinity College, Cambridge. John Sterling became a member of it about the same time (1823), and they migrated together to the smaller college of Trinity Hall. Whilst at college, they were together on terms of the most intimate friendship; and in after years were connected by their having married two sisters. John Sterling often declared that he owed more to his friend than to any other except Coleridge. Whilst Mr. Maurice was at Trinity Hall, one of the Professors was so much struck by the manner in which he conducted his examinations, that he advised the authorities of his college to give him a fellowship. He was then a Dissenter, and had not taken a degree, although he had passed the preparatory examinations; and, without the degree, he could not be admitted to a fellowship. The tutor communicated to him that, upon his taking his degree, there was a fellowship vacant at his disposal. He told the tutor that he was not prepared to declare himself a *bonâ fide* member of the Church of England, without which he could not take a degree. The tutor suggested, that as he was a young man he might change his views in a year or two, and that therefore he might keep his name on the college books, which would afford him the opportunity of returning to Cambridge whenever he chose to take his degree; and offering, at the same time, to defray the small annual payment necessary for that purpose. Mr. Maurice, thanking him for his courtesy, declined the favour, as he did not wish to have a bribe and conscience hanging round his neck in that manner. Within a few years of this time he became a member of the Church of England; but it is worthy of remark, that he did not go to Cambridge to take his degree, which he might have done by the residence of a term or two, but went to Oxford and took his degree there. Between the interval of leaving Cambridge and visiting Oxford, he was for a short period editor of the "Athenæum;" and about the time he took his degree he wrote a novel called "Eustace Con-

In late years he has made himself notable as a writer of theological books, in some of which expression is given to opinions at variance with the leading tenets of the Church of England. Their orthodoxy has also been called in question, in a treatise at Exeter Hall by the Rev. Dr. Candlish, which has been published. Although, in consequence of these "heterodox opinions," he has been obliged to vacate the Professorial Chair in King's College, his popularity with those holding more liberal views, both in the Church and out of it, has greatly increased. His efforts, in connexion with the Rev. Charles Kingsley, in their efforts towards the education of working men, deserve, even in brief notice, honourable mention. He has published many volumes of "Lectures," "Sermons," "Theological Essays," and other works. The more recent of his labours are "Learning to Work," six lectures, and "The Religion of Rome," four

lectures delivered in the Philosophical Institution of Edinburgh, 1854.

MAURY, MATTHEW F., Astronomer and Hydrographer, son of Richard Maury, was born in Spottsylvania county, Virginia, January 14, 1806. His parents removed to Tennessee when he was three or four years of age. They were in moderate circumstances, and being in a newly-settled country with a family of nine children, they could only afford them a plain education. In 1825, Matthew obtained a midshipman's appointment in the navy, and was appointed to the *Brandywine*, then fitting out in Washington to convey General Lafayette to France. Returning in that vessel to the United States, in the spring of 1826, he again sailed in her to the Pacific. There he joined the *Vincennes* sloop, and having circumnavigated the globe, returned in her to his native land, after an absence of about four years. After passing his examination, he was again ordered to the Pacific station, as master of the *Falmouth*. He commenced his work as "Navigation" in the steerage of the *Vincennes*, and completed it in the frigate *Potomac*; to which he was ordered as acting lieutenant when the *Falmouth* was about to return to the United States. From the time of his first entering the navy up to this period he had been a close student. Proceeding upon the principle of making everything bend to his profession, he taught himself the Spanish language by studying a course of mathematics and navigation in that tongue. On his return to the United States he was regularly promoted to a lieutenancy, and received the appointment of Astronomer to the South Sea Exploring Expedition, under Commander Thomas Ap-Catesby Jones. When that officer gave up the command of the expedition, Lieutenant Maury retired from it also, and was afterwards put in charge of the dépôt of charts and instruments which has served as a nucleus for the national Observatory and Hydrographical Office of the United States, of both of which he is now the superintendent. His labours in organising the observatory, and placing it at once upon the most respectable footing, as well as his investigations with regard to the winds and currents of the sea, are familiar to all who take an interest in such subjects. In 1854 Mr. Maury visited England, and drew much attention to his important inquiry into the ocean currents, local winds, etc., a subject of the utmost importance to all maritime nations; and in illustration of which he has published a work entitled "*The Physical Geography of the Sea*," with illustrations, charts, and diagrams, 8vo. 1854. The King of Prussia presented to Lieut. Maury the gold medal for these investigations; and accompanied the present with one of the gold medals struck in honour of the publication of Baron Humboldt's "*Cosmos*."

MAYHEW, HENRY, Author, and one of the most original writers of the present day, was born in London on the 23rd of November, 1812. His birth had nearly taken place in a pri-

the box of Covent Garden Theatre during a pantomime, and it is to this accident that he facetiously attributes his great love of humour, and his taste for dramatic literature. He was educated at Westminster, where Mr. Gilbert A'Beckett and Mr. Thomas Arnold (both magistrates now) were his schoolfellows. He did he run away from school—twice was he pardoned; but being that the birch—at that time a large branch of the tree of knowledge, and the chosen instrument for inculcating in boys the lesson of forgiveness—made but little impression on his tender soul, his parents sent him to sea; it being a cherished paternal tradition less than half-a-century ago that there was no school of education so effectual as that of the cockpit of a man-of-war. The result of this school was such, that on the second day everything aboard was stolen; and when he came back in a twelvemonth from India, so destitute was he that the very shirt he had on belonged to a "fellow-middy," who called two days afterwards to reclaim it, "he could not spare it any longer." To complete the boy's education he was articled to his father, at whose office he did labour for three long subpoenaing years. He then went to Wales, turning his attention from clients to sheep; and finished his studies and speculations amidst the goats and mountains by coming back to London, and taking, in partnership with Mr. Gilbert A'Beckett, the Queen's Theatre. Their joint fortune was sixpence and two or three manuscript pieces. At that theatre he produced "Wandering Minstrel,"—a farce that has been acted oftener than any other of the present day. Previous to this he had assisted in publishing "Figaro in London," the father of "Punch," and the forerunner of modern satirical publications. As, several years afterwards, in 1841, Mr. Henry Mayhew framed, built, and manned "Punch," and was the first to launch it into popular favour, to him goes the credit of being the parent of the two cleverest satirical publications that have enjoyed the greatest longevity and success in the country. He was the first to prove in journalism that satire need not be conducted without personality, and that humour did not necessarily consist in sneering at morality. Others have profited by the chart which he laid down for the navigation of "Punch," although most of the crew that sailed with him at first still remained in the old ship, yet he, their original commander, is no longer at the helm. A quarrel with the proprietors made him retire from the publication, and since that period Mr. Henry Mayhew has published works in his own name; his reputation, if not in his pocket, gaining largely by the exchange. He has written much for the stage—he has engaged in educational controversies—he has contributed to papers and magazines innumerable—he has started a Pharaoh's host of reviews and periodicals, all of which have been long since swallowed up in the (un)Red Sea of literature; and in his time has known all the ups and downs that are as in a "Bradshaw's Guide," the pages of a literary man's career. In truth, the list of his works would be almost Alexandrian in its length; but amongst the most popular may be

enumerated "The Greatest Plague of Life, or the Adventures of a Mistress in Search of a Good Servant;" "Whom to Marry, and How to get Married;" and "The Image of his Father." These, written in conjunction with his younger brother Augustus, enjoyed an extensive popularity; and "The Greatest Plague" sold more copies than any other serial since the days of "Pickwick." Then there were a variety of Christmas books, such as the "Magic of Industry," and the "Magic of Kindness;" besides innumerable almanacs and minor publications, both comic and serious, in which he was generally aided by the suggestive pencil of his friend George Cruikshank. However, the *magnum opus* of Mr. Henry Mayhew is, undoubtedly, the series of investigations he commenced in the "Morning Chronicle," under the title of "London Labour and the London Poor." These brought to light, out of the garrets and cellars, and all the dark corners of the metropolis, where Misery is apt to crouch and hide itself, so startling a mass of revelations, as to the struggles, privations, and heroic sacrifices of the poorest of the working classes, that Mr. Mayhew may be said to have discovered a new world—a new London in the very heart of London, of which no Londoner was previously aware. He established by himself, as it were, a Committee of Inquiry into the state of poverty in the metropolis; and visiting the poor needlewomen, the half-starved tailors, the broken-hearted prostitutes in their own desolate homes, took the evidence from their trembling lips, leaving them to tell their own tale of wretchedness in their own piteous manner. For two years he persevered in this holy mission, penetrating into haunts where no literary man had ever penetrated before, relieving the unfortunate, feeding the hungry, lifting up the fallen, and extending the hand of pity to all even to the most abject outcasts of society; such as philanthropists oftentimes turns away from in sheer despair, as being almost beyond the reach of redemption. He was the benevolent Howard of pauperism; and the awful scenes of misery he had daily to encounter, and like a moral physician to probe and examine, and give clinical lectures upon, whilst the poor patient was all but dying of exhaustion, would have sickened any other heart less sustained with the holiness of the work he was intent upon. It was a mission of ennobling charity, such as many ministers would be proud to have recorded in their biographies. In any other country, Mr. Mayhew would have been assisted in his labours by the Government; for, in truth, he was doing government work without receiving government wages. As it is, his history of poverty is, unfortunately, incomplete, and of the grand monument he wished to erect as a beacon, as a lighthouse, for society, there remains at present nothing beyond the mere foundation; a foundation that sufficiently indicates the dangerous nature of the locality, but provides no kind of refuge for those who may be wrecked upon it. It is to be hoped that Mr. Henry Mayhew will one day finish the curious structure; so that Belgravia, by looking at it after dinner, may learn now and then how Bethnal Green lives and starves. Ever since the period the

Mayhew was obliged to abandon the grand plan on which he was anxious to set the seal of his fame he has been engaged on various literary works, amongst the most successful of which have been the "Peasant-Boy Philosopher," the "Wonders of Science;" still his other productions, with all the glittering brightness and success upon them, appear pale when examined in the pure light of the noble work that his genius endowed, as a rich man opens a hospital, to receive the complaints and heal the wounds of the suffering poor. Mr. Henry Mayhew has had two great triumphs in his time, and triumphs gathered in totally different paths of literature,—he has been the originator both of "Punch" and "London Labour and the Poor." Mr. Mayhew belongs to a family singularly distinguished by their literary acquirements. An elder brother, Thomas, was one of the first labourers in the field of cheap literature. He started the "Penny National Library," to supply the market with school-books at a penny a number. There were "Penny Encyclopedias," "Penny Grammars," "Penny Blackstones," "Penny Law," etc. The speculation, however, was a losing one, and, after a loss of 10,000*l.*, was abandoned. There can be no doubt that he was the parent of the "Penny Magazine," as it was unquestionably the originator of the Educational Series of cheap publications, since it was sold out so successfully by the Messrs. Chambers. Amongst the newspapers, Mr. Thomas Mayhew was the editor of the "Poor Law Guardian," and at the time of the Reform Bill a reward of 100*l.* was offered by Government for his apprehension. Beloved by all who knew him, not a workman was tempted by the bribe to betray him! Another brother, Edward, was for several years of his life the manager of a strolling company; combining in his own person as many opposite appointments as Edmund Kean once did. He was actor by night and scene-painter by day. In addition to this he was his own carpenter, his own musician, and frequently even harlequin; and, when he had nothing else to do, would employ himself in writing his own pieces. Of these, the farce of "My poor Wills" may be mentioned as the most favourable specimen. For many years past Mr. Edward Mayhew has devoted himself to literature, contributing largely to the magazines. He has been connected with the "Morning Post," and other newspapers, in the capacity of Fine-Art Critic; and has published several volumes on veterinary subjects, which are standard works of reference, and which show the most varied knowledge. One of his younger brothers, Horace, is on the "Punch" staff; having fought in that corps from the commencement of its earliest campaign. He is the author of several quaint little books, which touch on a number of strange subjects, from the visible representation of the "Tooth-drawer" down to a batch of "Letters left at the Pastrycook's." Another brother, Augustus, must also be mentioned. He was associated with his brother Henry, as one of the "Brothers Mayhew," in the production of "The Greatest Plague of Life," and other works. He is also evinced by his contributions to the current literature of the day, and the possession of a large share of picturesque, descriptive,

and humorous power. His pen has the gift of word-painting, writing as it were in colours, and reproducing the scene as naturally before you as though you were looking at it through a camera obscura.

MAZZINI, GUISEPPE (JOSEPH), a chief of the Democratic party of Italy, was born in the year 1809, at Genoa, where his father was a medical practitioner, and during the latter years of his life a university professor of his science. He was educated for the law at the same university, and resolved to do what he could to awaken his fellow-men to political life. He accordingly established the "Genoa Indicator," in which, under the veil of literary discussion, he ventured on questions touching the future of Italy. The Italian Governments, lately troubled by Carbonarism, were then united in a league against liberal opinions. Mazzini was no Carbonaro; he hated secret societies; but the authorities had determined to allow him no voice, and his "Indicator" was suppressed. He then established the "Indicator of Livourne," but was not suffered to continue his labours; for before he had finished his studies he was arrested on suspicion of being connected with Carbonarism; and although the judicial functionary before whom he was brought declared that nothing was proved against him, he was carried off to a fortress at some distance from the town, and was only released in order to be shipped off into exile. He then took up his abode at Marseilles, where he became the founder of "la Giovine Italia," and conducted the journal of that name, devoted to the cause of the unity and independence of Italy, and a Republican form of government. The rule of Louis-Philippe did not allow Mazzini to remain long in France, and on the application of the Sardinian ambassador he was ordered to quit the French territory. For nearly twelve months he succeeded in evading the vigilance of the police, during the whole of which time he never went out except on two occasions, in disguise, and brought out his journal which was easily distributed from Marseilles into Italy. He at length was obliged to fly, and in 1831 found himself in Switzerland. There he organised the expedition into Savoy, which failed through Ramorino, to whom the military command was given. This was the general whose negligence, or treachery, was so fatal to the Sardinian army, when, in the revolutionary cause, it opposed Radetzky, for which he was shot by sentence of court-martial. Mazzini was now arrested, tried by court-martial, and sentenced to imprisonment in the fortress of Savone, where he was incarcerated for six months, and then released upon his promise not to reappear in the Sardinian States. He now retired to Marseilles, and founded the society called "Young Italy," putting openly in his writings to the Republican form of government as that to be established in his country. In 1844, after a silence broken only by occasional publication in the English papers and magazines, he established in London a journal called "Apostle Populaire." In 1846 his name was brought prominently before the

ish public, in consequence of the disclosure of a practice of opening the letters of refugees in the London post office by the British Government at the request of foreign ambassadors.—a practice of which Mazzini was a victim. It was Sir James Graham, in forgetfulness alike of his character of a British minister and the honour of an English gentleman, stooped to become the instrument of the vile espionage of Austria and the Pope, and added a new descriptive phrase to the English language, not soon to die out—that of the “Grahaming of letters.” During the years of exile Mazzini was a resident in the British metropolis, and supported himself by his contributions to the leading radicals and journals. Upon the outburst of the French Revolution of February, 1848, Mazzini conceived that Paris was the centre of action, and, accordingly, he went thither. He returned to England for a short time; and then Lombardy having risen against the Austrians, he repaired to Milan, where he set up a paper entitled “L’Italia del Popolo.” Having little political sympathy with Charles-Albert, and distrusting him as the liberator of Italy, he remained at Milan until the defeat of the king. When Charles-Albert abandoned Milan, the people wished to make Mazzini their chief, and to intrust the defence of the city to him; but the Austrians were already at the gates, and nothing remained for the Italians but flight. Mazzini took refuge in the canton of Valais, in Switzerland, whence, shortly after the expedition into Piedmont, he was again expelled. Rome had now declared itself a Republic, and Mazzini was at once elected Deputy to the Constituent Assembly for the town of Leghorn, where he landed, and was received with acclamations. After spending some time at Leghorn, in attempting to effect the fusion of Tuscany and Rome, he at length repaired to Rome. From that moment he became the leading spirit of the Roman Republic. On March 30, 1849, Mazzini, together with Armelli and Saffi, was appointed a Triumvir, and received, with his colleagues, the full powers of the young Republic. He immediately set himself to organise an army of 50,000 men, and prepared in every way to govern and defend the Republic. On April 26, General Oudinot arrived at Civita Vecchia, with 6000 men, and not having been expected, effected his landing without difficulty. On April 27, Oudinot’s army began its march from Civita Vecchia to Rome. Three days afterwards a proclamation by the triumvirs was issued, providing for the security of peaceable French students at Rome. Such was the spirit which the Romans and their Government prepared for the attack of the French army, when on the point of being exposed to bombs and cannons of 30,000 besiegers. The first attack and repulse of the troops of Oudinot took place on April 30. A day afterwards, a Neapolitan army of 15,000 men, commanded by King of Naples in person, invaded the Roman territory, and marched to Albano, about fifteen miles from Rome. On May 10, the second attack and repulse took place; and it was not until May 17, that, in consequence of the proposition of M. Lesseps,

who had been sent as plenipotentiary from France to come to an understanding with the Romans, that there was any cessation of hostilities. From June 3, when Oudinot recommenced his attack, to June 30, when the Assembly resolved that the heroic city could defend itself no longer, Rome, as all know, was one continued scene of combat, fire, ruin, and carnage, which only ceased under the martial law of the French. On July 3, 1849, Mazzini left Rome, where his presence could no longer aid the cause of the nation. Devoted, as ever, to the cause of his country, still hopeful, politic, and industrious, he now labours busily in England, to secure the success of the next struggle for his country's emancipation. After a period of comparative seclusion, Mazzini once more appeared prominently before the public as one of the signers of the address to the European Republicans, calling them to combine action, issued by Kossuth, Mazzini, and Ledru Rollin, October 1848. Whatever be the issue of the contest in which the authors of this letter seem so desirous to engage, no one who has paid the slightest attention to the course of events in Italy can doubt either the urgency of the call or the purity and unselfish aims of M. Mazzini.

MELVILL, THE REV. HENRY, B.D., President of Halesbury College, Herts, graduated at Cambridge, and on his appointment to Camden Chapel, Camberwell, was at once recognised as a preacher of unrivalled eloquence and power. Under the government of the Duke of Wellington he was appointed Chaplain to the Tower, and subsequently to the "Golden lectureship." Mr. Melville had the honour to be selected to preach before the House of Commons on the occasion of the General Fast, March 1855, which he received a vote of thanks. He has published several volumes of sermons; is an active member of the High Church party, and is unrivalled amongst contemporaries as a pulpit orator.

MELVILLE, HERMAN, the Author of "Typee," and other works, was born in the city of New York, August 1, 1819. His father was merchant, and a son of Thomas Melville, one of the "Boston Tea-party of 1773." When about eighteen years of age he made a voyage from New York to Liverpool, before he visited London, and returned home in the same capacity. In a few years, the experience of this voyage suggested his "Red Rover." About a year after his return home he shipped on board a whaling-vessel, bound on a cruise to the Pacific, to engage in sperm-whale fishery. Having been out about eighteen months, the vessel arrived at the port of Nukaheva, one of the Marquesa Islands, in the summer of 1842. The captain had been harsh and tyrannical to the crew, and preferring rather to risk his fortune among the natives than to endure another voyage on board, Melville determined to leave the vessel. In a few days, the ship's board watch, to which he belonged, was sent ashore on a mission, and he availed himself of the opportunity thus offered to get

sign in execution. Accompanied by a fellow-sailor, he separated from his companions, intending to escape into a neighbouring bay, occupied by a tribe of friendly natives. But, mistaking their way, after three days' wandering the fugitives found themselves in the Typee valley, occupied by a warlike race, taking their name from that of that locality. Here Mr. Melville was detained in a state of indulgent captivity for about four months. His companion had disappeared, and was supposed to have been murdered by natives. He had long given up all hopes of being restored to his friends, when his rescue was effected by a boat's crew from a New England whaler. Shipping on board this vessel for the cruise, he arrived at Tahiti the day the French seized the Society Islands. When he went ashore. Several months passed in the Society and Sandwich Islands afforded Mr. Melville opportunities for observing the effect produced by missionary enterprise and foreign interference upon the native population. For some months he resided in Honolulu, in the Sandwich Islands. The frigate *United States*, lying at that port, offered the safest and quickest passage home, and Mr. Melville shipped aboard as "ordinary seaman," and arrived at Boston in October, 1844, after a homeward cruise of thirteen months. He thus added to his knowledge of the merchant and whaling service a complete acquaintance with the inner life of a man-of-war. With this voyage home ended Mr. Melville's nautical life. In 1847 he married the daughter of Chief-Justice Shaw of Boston. Until 1850 he resided in New York, removing for the summer of that year to a farm in the neighbourhood of Amherst, Massachusetts, where he now resides. Mr. Melville has published some eight or ten works, all more or less popular; among them "Typee, or a Peep at Polynesian Life, during a Residence of Nine Months in a Valley of the Marquesas," was published in London early in 1846. It immediately appeared in the United States, and was soon translated into several of the European languages. It met with marked success, and the writer suddenly acquired a substantial reputation. "Omoo, or Adventures in the South Seas," appeared in 1847, in London. In 1849, "Mardi, and a Voyage thither," "Redburn, or the Adventures of the Son of a Gentleman," were published; in 1850, "Whitejacket, or the World in a Man-of-War;" in 1851, "Moby-Dick, or the Whale." His latest production, "Pierre, or the Ambiguities," an unhealthy mystic romance, in which are conjured up "unreal nightmare conceptions, a confused steam-galley of distorted fancies and conceits, ghostly abstractions, and fitful shadows;" altogether different from the hale and buoyant sailors and fresh sea-breezes of his earlier productions. It was a decided failure, and has not been reprinted in this country.

MENSCHIKOFF, PRINCE ALEXANDER-SERGIUS, lately Commander-in-chief of the Russian forces in the Crimea, was born in the year 1789. The Menschikoff family, although now one of the most powerful in Russia, is of recent origin. Its founder, Alexander, the son of a pastry-cook, rose by the favour of Peter I. to

importance in the state, and under Catharine became yet more rich and powerful. The family estates were confiscated by Peter II. but restored by Paul I. to the father of the present prince. The name of Alexander-Sergius Menschikoff was inscribed on the list of the Russian army in 1805, but at that time the young prince was at Dresden, where he remained two or three years, professedly to study civil and international law. Shortly after his return to Russia he was sent to Vienna, as an attaché of the Imperial embassy there. He accompanied the Emperor Alexander in the capacity of aide-de-camp during the campaigns of 1812-1815, and at their close he attained the rank of a General. After the Peace of Paris he was an ardent promoter of the Greek *hetaria*, professedly aiming at the restoration of the Greek Empire, but in fact seeking to realise the dream of Peter I., and to secure Turkey to the house of Romanoff. The failure of the Greek scheme detained Menschikoff for a time from the court of Alexander, but on the accession of Nicholas I. he was recalled to St. Petersburg, and at once employed in an important service. The Czar had encroached on the dominions of his neighbour the Shah of Persia, and occupied the territory lying to the north and north-east of lake Goktcha. Desiring to legalise the usurpation by a treaty, Nicholas sent Menschikoff, towards the close of the year 1826, to Teheran, to negotiate with that object. The Russian envoy, after vainly trying the arts of cajolery, made himself remarkable by an ostentatious contempt of the etiquette so much prized by Eastern courts, marching in jackboots into the presence—a course of conduct which enraged without intimidating the Persians, and the negotiations were abruptly broken off. Menschikoff had arrived at Tabreez, on his return to Tiflis, when he was suddenly arrested and held prisoner for some time. By the intervention of the British ambassador he obtained his enlargement at the end of a month, and renewed his journey. The campaign of Paskiewitch was the sequel of his unsuccessful mission. Persia lost not only the disputed territory, but the khanate of Erivan and Nakhitschevan, having besides to pay an indemnity of 80,000,000 roubles. Menschikoff attended the first battles of this campaign as an amateur. On the outbreak of the war with Turkey in 1828, Menschikoff received the command of an army corps, and was sent to Anapa, a Turkish coast-fortress. The Ottomans, it was apprehended, might be able to raise the tribes of the Caucasus against Russia. On the 23d of June the place surrendered. Menschikoff was then sent to Bulgaria, and ordered to operate against Varna: the fewness of his troops compelled him to choose a point of attack in which he could receive support from the Russian fleet. It was soon found, however, that the ships could not approach near enough to the fortress to render any important assistance, and that the army relied almost entirely on itself. A division of the Imperial Guard arrived, and Menschikoff hoped to carry on the siege with energy, when an incident occurred which for a time interrupted his military career. One evening, as he was returning to his quarters after giving his orders to the troops, he turned—perhaps to indulge some

a depressive mood, perhaps to review the dispositions of the siege—
 He placed himself in a favourite attitude, with his legs extended
 apart, and was so standing when a round shot from a Turkish battery
 struck under him, and left a groove in each of his thighs. He
 resigned the command to Prince Woronzoff, and was long unfit for
 any employment. After his recovery, he was nominated Vice-
 admiral and chief of the naval staff of the empire. In this capacity
 he devoted himself to the creation of the Baltic fleet, which, as it
 stands at present, may be said to owe its origin to Menschikoff. In
 1844 he was appointed Admiral of the Fleet, and two years after-
 wards, Minister of Marine. During a portion of this time he admi-
 nistered the government of Finland, to which he was appointed in
 1841. In the latter months of 1852, the journals of Europe began
 to draw attention to the prince's presence in the south of Russia
 in the Crimea, marked as it was by unusual concentrations of
 troops, and frequent naval and military reviews. M. Ozeroff, Rus-
 sian chargé d'affaires at Constantinople, was at that time disputing
 with the Divan respecting the claims of the Czar to certain privi-
 leges connected with the Holy Places in Palestine. As is known, he
 failed, and thereupon (namely, in March 1853) Prince Menschikoff
 arrived at Constantinople, with special powers from the Czar.
 The prince's suite gave from the first a menacing character to his
 mission. He was accompanied by eleven persons of rank, among
 whom were one general, two colonels, and two captains of the Im-
 perial navy. The great state which these persons assumed, the
 splendour of their expenditure, the prince's haughty and systematic
 regard of Turkish ceremonial, and the presence of the Russian
 steamer *Foudroyant* in the Bosphorus, quite overcame the rea-
 son of the Greek population, who believed in their hearts, and declared
 in their primary discourse, that the days of Moslem ascendancy were at an
 end. The prince, while dazzling the populace by displays of mag-
 nificence, sought to overawe the Divan by a stern exhibition of
 power. The Grand Vizier and all the chief functionaries of the
 government had appointed a day for his reception, when all were in gold
 uniforms. Menschikoff appeared in a paletot and an old round
 hat. The next day he sent word that he should not recognise the
 Sultan's Minister for Foreign Affairs, and the able and enlightened
 Effendi was compelled to resign that post. Shortly after-
 wards he was invited, at his own desire, to confer with the ministers
 assembled in the Divan; but disdaining to reply to this invitation
 he repaired to the palace of the Sultan, who was in a state of pro-
 found domestic affliction, and who at the moment had no minister
 to receive him. The prince addressed his majesty in a most menacing
 tone, and bade him take the advice of those who could tell him
 that it was to go to war with Russia. His negotiations with the
 Sultan, and his intercourse with the French and English ministers,
 were marked by duplicity. The prudence and magnanimity of the
 British Government enabled the Porte to satisfy all his require-
 ments respecting the Holy Places, and the ostensible object of his
 mission was thus gained. It was then that he asserted that as-

tounding claim, by which it was demanded that to 12,000,000 of the Sultan's subjects should be given a right of appeal from Constantinople to St. Petersburg. The demand was rejected, and on the 21st of May Menschikoff sailed from the Bosphorus for the Crimea, thus terminating a mission which from first to last was a mystery and an outrage. In 1854, Menschikoff was appointed to the supreme civil and military command in the Crimea. It must be admitted, that at that important post he faced with great energy the storm he had drawn down upon his country. His abilities as a commander of troops in the field do not appear to have been equal to his presumption; and the battle of Alma must have enlightened him as to the real quality of French and English troops, when compared with those of Russia. It may be admitted, that he exhibited great energy and inexhaustible resources in the defence of Sebastopol. History affords no example of defences and works of so extensive a character, thrown up by a besieged garrison in the presence of a powerful enemy; and it is something for this amphibious commander to say that whereas on the 26th of September the place was almost open and only defended by the vessels in the harbour, five months later and in spite of repeated attacks, the town was stronger than at first. It must not, however, be forgotten, that Sebastopol was during this time successfully defended; it was only effected by the sacrifice of that very object which the fortifications were constructed to guard—it was at the expense of the Russian Black Sea fleet, five ships of which were left in Sebastopol harbour on the 5th of March, 1855, the rest having been sunk to block up the entrance of the harbour. In the last week of the reign of Nicholas, or the first in that of his successor, Menschikoff was relieved of his important command, and also of the ministry of marine and the governorship of Finland. It was at first thought in Europe that he had fallen into disgrace, but subsequently reasons have transpired for believing that the official account of the matter published at St. Petersburg was correct, and that the state of his health forbade his further employment. The following startling announcement we copy from the columns of the "Times:"—"The 'Patrie' states, that a private letter received by a Russian family in Paris announces that Prince Menschikoff has become a monk. He has enrolled himself, it is said, in a monastery near Moscow!"

MERIMÉE, PROSPER, a French Author, was born at Paris in 1800. His earliest work was "Théâtre de Clara Gazal, Comédienne Espagnole" (1825), published under an assumed name and professing to be a translation, for the sake of misleading the classical critics. "La Gazal, ou Choix de Poésies illyriennes, recueillies dans la Dalmatie, la Bosnie, etc." (1827), was a happy mystification, the secret of which was first divulged by Goethe. "La Jacquerie, Scènes féodales, suivies de la Famille Carvajal" (1828), and "1572, Chronique du Règne de Charles IX." (1829) are historical romances, possess considerable interest, on account of their abundant material and clear narration. Among his romances

"*La Double Méprise*" (1833), an admirable picture of man-
 and "*Colomba*" (1840). Of decided value are his descrip-
 of his numerous travels, which have mostly been undertaken
 the purposes of archæological investigation. To these belong
 "*Notes d'un Voyage dans l'Ouest de la France*" (1837), and
 accounts respecting Provence, Corsica, and other parts of
 France.

METTERNICH, CLEMENS-WENZEL-NEPOMUK-LO-
BAR. Prince Metternich, for forty years one of the most powerful
 masters in Europe, was born at Coblenz, May 15th, 1773, and was
 educated at Strasbourg and Mayence. In 1790 he obtained the
 rank of Master of the Ceremonies at the coronation of the Emperor
 Leopold II.; in 1794 he visited England, became Austrian ambassador
 at the Hague, and in 1795 married the grand-daughter and heiress
 of the well-known minister Kaunitz. His diplomatic career com-
 menced at the Congress of Rastadt, where he appeared as a deputy
 of the Westphalian nobility. In 1801 he became Austrian ambas-
 sador at Dresden; and in the winter of 1803-4 was at Berlin, where
 he negotiated a treaty between Austria, Prussia, and Russia; and
 in 1805 was sent as ambassador to Paris. In this capacity, in 1807,
 he concluded the treaty of Fontainebleau. On the commencement
 of the war between Austria and France, in 1809, he hastened to join
 the Imperial court at Comorn, and after the battle of Wagram
 succeeded Stadion as Minister of Foreign Affairs. Metternich con-
 ducted the negotiation which purchased a respite for the empire
 at the price of an archduchess; completing his work by conducting
 the second Empress of the French to Paris. The decided impulse
 given by Metternich to the policy of Austria in the parley of
 Vienna and the conferences of Prague, was the signal of Napoleon's
 downfall. The 10th of August, 1813, had been assigned as the
 day within which France might accede to the liberal offers of
 the Three Powers. That fatal term passed by, and Count Metter-
 nich spent the same night in framing the Austrian declaration of
 war. A month later, the Grand Alliance was signed at Töplitz;
 and before October had closed, the Emperor Francis raised him to
 the dignity of a Prince of the Empire upon the field of Leipzig.
 When the Allied armies invaded France, Metternich took an active
 part in the management of affairs. He signed the treaty of Paris,
 and afterwards proceeded on a mission to England, when the
 University of Oxford conferred on him an honorary degree. When
 the Congress of Vienna opened, Metternich, then in his forty-second
 year, was chosen to preside over its deliberations. He assumed at
 this important conjuncture that primacy in the diplomatic affairs
 of Germany and Europe which he retained, by the courtesy of
 Austria, until the close of his career; and which, at certain periods
 of his administration, extended to a real predominance over the
 leading states of Europe. His power became so great, that, from
 1814 to 1822, England allowed her foreign policy to be wholly
 directed by the system of the Austrian cabinet. The accession of

Mr. Canning to office broke this bondage, and England recovered her independent voice to protest against the abuses which had hitherto been committed with impunity in Europe. It is justly a reproach to him, that in the war which broke out between Russia and Turkey in 1828 the Russians were allowed to outflank Austria between the Black Sea and the Hungarian frontier; to hold for a considerable time the fortresses of the Lower Danube; to establish their ascendancy in Moldavia and Wallachia: and, finally, by the treaty of Adrianople, to master the mouths of that river, which is the artery of the Austrian dominions. In 1830 the French Revolution filled Austrian statesmen with alarm. The first exclamation of Francis, when the intelligence reached him, was "*All ist verloren!*" and "All is lost!" seemed for a moment to become the maxim of his minister. Metternich, however, soon learned the secret of the new French king's character, and a tacit understanding arose between the Governments of Austria and France. The events which agitated Europe in consequence of the Revolution of July, met, of course, a strenuous resistance from the Austrian minister. Italy was filled with Austrian troops; in Poland, Metternich had for an instant carried on a negotiation with the insurgent patriots, but their speedy defeat placed him again in the catalogue of their foes; in the Low Countries he laboured to support the pretensions of the King of Holland; in Spain, he thought it worth while to expend incredible sums to enable Don Carlos to carry on a desperate contest in the name of legitimacy; in Germany measures were taken, in conjunction with Prussia, to crush every symptom of popular excitement and national independence. In his hands the Austrian Government became an administration of anonymous and irresponsible agents, working under the imposed shelter of a few weighty names. In February, 1848, the monarchy of France was again overturned. The shock reacted on Vienna. A street tumult of two or three hours on the 18th March, 1848, was sufficient to destroy the entire fabric of the Government. The ex-Chancellor of State stuck to the last moment to his old system. As the deputation of citizens on the evening of the 13th arrived at the court, they passed through a suite of rooms into a spacious hall, where Archduke John received them. As the speaker of the deputation depicted the unfortunate state of affairs, and urged the necessity of a speedy decision on the part of the Government, Archduke John quieted them by saying, that the first measure would be the resignation of Prince Metternich. At these words the prince came out of the adjoining room, in which all the archdukes and ministers had assembled to deliberate, and leaving the door open, he said in a loud tone, "I will not resign, gentlemen—no, I will not resign!" Archduke John upon this, without answering the prince, repeated what he had said, and cried in an earnest tone, "As I have already told you, Prince Metternich resigns." At these words, the prince exclaimed, in a tone of great excitement, "What! is this the return I now get for my fifty years' services?" Whereupon, all the men formed

family council broke out into a loud laugh, which seemed to humiliate the unfortunate statesman. On the morning of the 1st he arrived at the station of the Gloggnitz Railway, under the escort of fifty hussars; went by rail to Wiener Neustadt, and from there to Fröh-dorf, where, apparently, he hoped to find a refuge. His expectations, however, were not realised; and he then fled to Aspberg, one of the seats of Prince Leichtenstein, on the frontiers of Austria, and subsequently to his own property, Kopstein. Having rested there a week to recover himself, he went to Dresden on the 25th, and started in the first train to Leipzig the next morning. He would not, however, touch at Leipzig, but left the train nearest to it, to proceed thence to Schkeuditz, then by the train to Magdeburg and Hamburg, to go finally to England. He inscribed himself in the *fremde buch* (strangers' book) under the name of Herr V. Meyer and lady and suite, merchant, from Berlin. In England—the last hope of the exile, princely or republican—he found a secure abode until time and the follies of ultra-revolutionary leaders had worn off something of the enthusiasm which attached to his character. He left this country, and resided some months in Belgium. At length the population of Vienna was thought to be coerced sufficiently to admit of his return, and in the autumn of 1851 he made a progress in semi-official to his splendid palace in the Rennweg at Vienna. Metternich has not been re-admitted to an official position.

METZ, FREDERIC-AUGUSTE DE, (properly DEMETZ), philanthropist, the founder of the well-known Institution at Metz, one of the most successful Reformatory Schools for juvenile criminals, formerly held an appointment as a judge in Paris. In his capacity his attention was painfully attracted to the extent of the reformation of young criminals, by the numbers of children brought before him. "Many of these," says he, "were sent to my desk, and as there were at that time no establishments for the reformation of juveniles only, I was obliged to send all to prisons, where they were associated with grown-up criminals, most of them the most hardened of their class; and where, moreover, the treatment for children was the same as for adults, which, consequently, I knew to be utterly unfit for them." Formerly about this time, through the instrumentality of M. Lucas, director general of prisons, there was formed in Paris the "Society for the Patronage," with a view to attempt something towards stemming the terrible tide of juvenile depravity, which threatened to be of a magnitude of the most appalling description. Of this society M. De Metz soon became one of the most active members. By a series of experiments more or less successful in ameliorating the moral condition of young criminals, the Society, desirous of pressing still farther in its good work, and having unanimously arrived at the conclusion that the establishment of agricultural colonies, or colonies, was the most promising if not the only feasible means of building up habits of industry in the objects of its care,

deputed M. De Metz and the late M. Léon Faucher to proceed to Belgium and Holland, for the purpose of inspecting the industrial colonies there established for similar purposes. After devoting some time to the careful inspection of the various establishments, they arrived at the "capital fact," that a great error had been committed in planting those colonies in remote and sterile situations, having apparently in view more the amelioration of the soil than the reformation of humanity; and were convinced that it was impolitic to oppose any obstacles to the love and habits of industry, which, instead of being repressed by combating with an ungrateful soil, required to be cherished and made attractive by speedy and satisfactory results, and not, as one of the Belgian colonists expressed it, that "every blade of grass should cost a drop of sweat." About this time M. Faucher returned to Paris, leaving M. De Metz to finish the inquiry alone. After visiting various other places, and amongst others Rauhe Haus, near Hamburg, in which he found confirmation for many of his views, M. De Metz returned to France, and the establishment of Mettray was commenced. At the invitation of the Viscount de Courteilles, the experimental institution was formed on his property in the neighbourhood of Tours. The progress of the experiment will be best given in M. De Metz's own words:—"M. de Courteilles and myself commenced the institution of Mettray in July, 1839, by assembling twenty-three youths of respectable parentage, whom for six months we occupied ourselves in training for teachers. We thus began an Ecole Préparatoire, or school for officials, which I believe to be the most important feature of the institution; so important, indeed, that if that were to be given up Mettray itself must cease to exist. In January, 1840, we admitted twelve young criminals, and very gradually increased the number. Mettray has first for its basis discipline, without which it is impossible for such an institution to proceed; secondly, the family principle for a bond; and thirdly, military discipline for a means of inculcating order. The military discipline adopted at Mettray is this: the lads wear a uniform, and they march to and from their work, their lessons, and their meals with the precision of soldiers, and to the sound of a trumpet and drum. But, as the sound of the trumpet and the drum lead men on to perform acts of heroism, and to surmount the greatest difficulties, may it not reasonably be employed with the same object in a reformatory school, where, in resisting temptation and conquering vicious habits, true heroism is displayed, and a marvellous power of overcoming difficulties must be called forth? A striking proof of the hold the system had obtained over the minds of the boys was given at the time of the Revolution of 1848. France was then, from one end of the country to the other, in a state of anarchy, and all the Government schools were in rebellion. At Mettray, without walls, without coercion, there was not a sign of insurrection; not a single child attempted to run away. It was in allusion to the absence of walls that M. le Baron de la Crosse, Secretary of the Sénat, observed: 'Here is a wonderful prison, where there is no prison.'

but the *chef des champs*! If your children remain captive, it is you have discovered the key of their hearts.' During the solution a band of workmen came to Mettray, with flags flying, trumpets sounding, and, meeting the youths returning tired from field labour, their pickaxes on their shoulders, thus addressed them:—'My boys, do not be such fools as to work any longer. Work is plentiful; it is ready for you without labour.' The *chef* was conducting the lads, and who behaved with the greatest steadiness and tact, immediately cried, 'Halt! form in line.' The youths, being accustomed to march like soldiers, immediately formed. The *chef* then stepped forward and said to the men, 'My friends, you have learned to labour; you have a right to rest; but leave the lads; let them learn now, and when their turn comes they will rest as you do.' The men gave way, the youths marched on, and Mettray was saved—saved, as I believe, by our habit of military discipline. Had those lads been walking homewards without discipline, like a flock of sheep, the men would have got among them, and away one or two, and the rest would have followed; but, being up in line, they met the attack in one body, and thus it was saved." Mr. Hall, Recorder of Doncaster, has printed a very interesting account of a visit to Mettray, and of the system there adopted, not the least valuable portion of which is the account of the mode of living by those who devote themselves to this "labour reformatory." The dietary is of the most simple description. M. De Metz is common with his officers and pupils, partaking of the same fare, and feeling himself supremely happy in the exercise of this most noble and self-denying mission, at the cost of sevenpence a week. The principles on which the reformatory operations are conducted at Mettray have thus, perhaps, been sufficiently indicated. Simply by appealing to the better feelings of our nature that remarkable success has been achieved. The rule of the establishment is that of strict discipline, but of unvarying kindness. A young prisoner is received as if he were admitted into a family, to which the organisation of the school is closely assimilated. In M. De Metz he finds a paternal protector, an unwearied counsellor and adviser, and he soon discovers that his own personal improvement is essentially connected with his attention to the rules of the institution. "M. De Metz is about sixty years of age, of middle height—one of those firmly-knit men who seem formed for enduring fatigue. There is little in his appearance to indicate the remarkable man he is, except the high forehead and dark eye, expressing strong feeling, and in his dress only the morsel of red ribbon which marks a member of the Legion of Honour. M. De Metz is a man of most untiring energy. His power of enduring fatigue is extraordinary,—on one occasion travelling from Naples to Paris, a journey of seventeen days and seventeen nights, without stopping. In his ordinary habits he continues to exhibit this remarkable energy. He begins work at four o'clock in the morning, writing for an hour in bed. At five he gets up and begins the active part of the day. This wonderful power of labour is one grand

source of his success; the other is his devotedness. The first created what we may term the financial prosperity of Mettray; the second has infused into it the Christian spirit of love which pervades the whole institution." Such is Mettray and M. De Metz, destined, we hope and believe, to perform an important part in the solution of a very interesting and important social problem—the management and reformation of our juvenile criminal population. M. De Metz visited Redhill, Parkhurst, and other cognate establishments in this country, in the autumn of 1855, and attracted much attention to the subject by his speeches at various public meetings in Birmingham, Bristol, and elsewhere. Those who are interested in this most important subject will find much information in a large pamphlet edited by Mr. Jelinger Symons, Barrister, entitled "Collection of Papers, etc. on Reformatories." London, 1855.

MEYERBEER, GIACOMO (MEYER BEER), Musical Composer, was born at Berlin in 1794. His father, James Beer, a rich Jew banker, gave him an excellent education, and his musical talents developed themselves so early, that at seven years of age he played the pianoforte at concerts. When fifteen, he commenced his great musical studies. The Abbé Vogler, one of the greatest organists of Germany, had at this time opened a school of music at Darmstadt, into which only the rarest talents were received for cultivation. Here Meyerbeer had for fellow-pupils Gæusbarber, chapel-master at Vienna, C. Marie von Weber, and Godefroy de Heber. Each morning the pupils met in the drawing-room of the professor, who gave to every one a theme, which was to be accomplished in the course of the day; one day it was a psalm, another an ode, and on the third a lyric. In the evening Vogler again met the pupils, when the pieces were executed. Two years after the commencement of Meyerbeer's residence at Darmstadt, Vogler the latter closed his school, and the two travelled in Germany during a year. At Munich, under Vogler's auspices, Meyerbeer produced his first work, "Jephtha's Daughter;" he was then eighteen years of age. Vogler now drew up, with amusing complacency, a brevet of *maestro*, to which he added, with the usual plea, his blessing, gave both to Meyerbeer, and bade him adieu. At this time the Italian style was in high favour at Vienna; Meyerbeer wrote his "Two Caliphs" at the request of the court, neglecting the prevailing taste, failed of success. He then took the advice of Salieri, author of "Tarare," who comforted him with the assurance that he had evinced true musical genius in his composition, and pressed him to visit Italy. Here his tastes were modified under the influence of a beautiful climate, and he was charmed with the Italian style. In this style he wrote his great opera, the "Crocato in Egitto," which established his fame. From this time he commenced a series of works which have achieved the highest success. A list of his numerous compositions would exceed our limits. His "Robert le Diable," "Huguenots," the "Prophète," and the "Etoile du Nord."

an all over Europe. Besides his operas he has written a *Miserere*, a *Te Deum*, twelve psalms, several cantatas, oratorio, and a great number of melodies to Italian, French, and German words. In 1842 he was named Chapel-master to the King of Prussia. He is also a member of the Academy of Fine Arts at Berlin, an Associate of the Institute, and an officer of the Legion of Honour.

MIALL, EDWARD, M.P. for Rochdale, the leader of the Anti-Corn Law party, and the Proprietor and Editor of the "Nonconformist" newspaper, was born at Portsmouth in 1809. He was originally intended for the ministry, and was educated at the Protestant Dissenting College at Wymondley, Herts. He officiated for three years as Independent minister at Ware, and in the same capacity at Peterborough for upwards of six years. He left the last-mentioned place for London in 1841, for the purpose of establishing a journal in the advocacy of "Anti-State Church" principles, and has been since the first its proprietor and editor. He was an unsuccessful candidate for the representation of Southwark in 1845, and of Exeter in 1847. He was returned for Rochdale in 1852. His principal separate publication is "The Nonconformists' Sketch," a reprint of a series of articles which originally appeared in the "Nonconformist" newspaper. He is also the author of "The British Churches, in relation to the British People." Mr. Miall is a forcible speaker, and his oratory smacks more of the platform than the senate. His opinions are those of the "extreme left." He is an advocate for universal suffrage, and is opposed to ecclesiastical endowments of any kind. As a journalist his style is at once clear and vigorous.

MICHELET, JULES, French Historian, was born at Paris, Aug. 26, 1813, and having devoted himself early to historical studies, became in his twenty-third year a public teacher, after having passed a brilliant *concours*. From 1821 until 1826 he was engaged in teaching the ancient languages, history and philosophy, in the Collège de France (otherwise Collège Sainte-Barbe). In 1827 he was appointed professor of *des conférences* at the Ecole Normale. Shortly after the Revolution of 1830 he was appointed chief of the historical section of the Archives of the realm; and Guizot, prevented by the claims of political life from continuing his lectures on history in the Faculty of Letters at Paris, named Michelet as his substitute. In 1838 he succeeded Danvion in the chair of history in the Collège de France, and in the same year was elected member of the Institute. As an historian, M. Michelet belongs to the school which regards history as a body of philosophic teaching. He supports his views upon the philosophy of history as it is taught in Germany, and particularly on the ideas of Vico, of whose works he has published an edition. Michelet's greatest works are his "Roman History," and his "History of France," neither of which are as yet completed. Both are distinguished by great warmth and colouring. His "Outlines of the History of France before the Revolution" is highly popular.

MILLARS.

1832 he was called to the Institute, in the class of Political Science; and on the death of Charles Comte he succeeded to its perpetual secretary. In the discharge of his duties he has had occasion, for about fourteen years, to visit the Academy, according to usage, sketches of the lives of deceased members, as they were removed. A number of these have been collected and published under the title, *Œuvres historiques.*" He has also written "*Négociations relatives à la Succession d'Espagne sous Louis XIV.,*" and a number of historical and diplomatic documents relative to the pretensions to the Spanish throne. In 1837 the Academy elected him one of its members, in the room of Raynouard. As a man of liberal views, of Thiers, it was natural that Mignet should be considered by the republicans as their enemy. Accordingly, one of the first acts of Lamartine on taking possession of the ministry of Foreign Affairs was to remove his old colleague of the Academy from the office of Director of Archives. Of all the offices of the Academy under the monarchy of July, he only retains the office of Secretaryship of the Academy of the Moral Sciences, in which he is protected by the tacitly recognised principle of non-interference.

MILLAR, JOHN EVERETT, A.R.A., one of the most successful of our young Painters,—having risen to the rank of a great artist has still lingered in obscurity at Southampton, in 1810;—showed a faculty of drawing unusually than usual, and was (even among artists) a prodigy at the age of eleven. In his ninth year he was admitted into the Academy in Charlotte Street; at eleven the Royal Academy he successively carried off all the principal prizes. He gained his first medal at the Society of Arts in 1827, for "Pizarro seizing the Inca of Peru" was his picture at the Academy,—in 1846. Much ably assisted by an unpromising subject; as well as in 1847, for "Dunstan's Embassadors seizing Queen Elgiva" was his picture at the Academy,—in 1848. Much ably assisted by an unpromising subject; as well as in 1849, for "The Widow's Mite;" and in 1849, at the Academy, "The Tribe of Benjamin seizing the Idol of the Canaanites." In 1849, Keats's "Isabella" was one of the subjects of his pencil. While but a youth of eighteen he was in the Academy's schools—Millar, supported by Holman Hunt and Rossetti, had tacitly rebelled against the routine conventions of Academic teaching. Strengthened by such specimens of early Italian art as they banded together to study Nature as it appeared in "the antique," etc. These three, joined by Charles Collins and other younger painters, however small or obscure, must have a great influence on the young enthusiasts, in their admiration of feeling and fidelity of aim of the painters of the old school.

ceded and led up to the culmination of art in the fifteenth century,—so swiftly followed by its decline—the self-elected title of “Pre-Raphaelites,” has, perhaps, excited even more objection and misapprehension than would have followed their pictures alone. The public is still slow to be convinced that it is the principles of the earlier painters, not the painters themselves or their errors, that these men endeavour to revive: above all, the principle of looking to reality for their inspiration, and of painting everything direct from Nature, down to the minutest detail, and with the minutest accuracy. For a short time the artists tried to enforce their views by the pen as well as the brush, in a periodical, “The Germ, or Art and Poetry” (1849), which only struggled through a few numbers, and hardly reached the eye of the public. The principal pictures executed by Mr. Millais under the influence of his new convictions have been:—in 1850, a mystical picture of our Saviour, and the “Ferdinand Ruc by Ariel;” in 1851, “Mariana in the moated Grange,” and “The Woodman’s Daughter.” The unquestioned talents and power of the painter of these pictures drew admirers; their hardness, exaggerations, and crudity, as many opponents. In the following year his “Huguenot” and “Ophelia” showed a great advance in power, aroused even greater discussion, and increased his admirers. Though the sense of beauty remained still deficient, candid critics were far better pleased with the honest reality of his pictures than with the unmeaning prettiness and clever generalities of which they have had so much. It was the extreme to which the Academic system of idealising and generalising Nature had been carried, with its utterly barren results (in ordinary hands), which secured for the novel “Pre-Raphaelite” attempts, however crude, to follow Nature in wholesome humility, and in instant attention and general interest. In 1851 Mr. Ruskin came to the support of the new school with enthusiastic approval, freely expressed in letters to the “Times” and in a subsequent pamphlet on Pre-Raphaelitism, his doubts and explanations renewed in his “Lectures on Architecture and Painting,” of 1853. Mr. Millais’ latest exhibited pictures have been, “The Order of Release” and “The Proscribed Royalist” (both 1853), evincing more mature powers of conception and execution than he had hitherto displayed. For colour he has shown a faculty which is the characteristic of our school. “The Order of Release” has in its handling none of that over-elaboration of the Pre-Raphaelite manner which often results in the appearance of fixity. It is in parts very freely painted, to the increase of its resemblance to Nature. It is now being engraved by Cousins. In 1853 the Academy, to its great credit, elected Mr. Millais an Associate.

MILLER, HUGH, justly celebrated as a Christian Geologist, was born in 1805, at Cromarty, in Scotland, and laboured for about fifteen years as a common quarryman, storing his mind with knowledge by close reading and observation with the facts and processes of nature. A bank having been established in his native village

received the appointment of accountant, in which situation he remained for five years. When the contest in the Church of Scotland had come to a close by the decision of the House of Lords in the Auchterarder case, in 1839, Miller's celebrated letter drew to him the attention of the Evangelical party, and he was regarded as the most competent person to conduct the "Witness" paper, the principal metropolitan organ of the Free Church. The paper owes its success to his able articles, political, ecclesiastical, and geological. Notwithstanding the engrossment of such an occupation, Mr. Miller has devoted himself, with characteristic energy, to the prosecution of scientific inquiries. His first work, "Scenes and Legends of the North of Scotland" (1843) is highly popular; it has gone through several editions and has been republished in America. He is also known in Scotland, as the author of "A Letter from one of the Scottish People to the Honourable Lord Brougham and Vaux, on the Opinions expressed by his Lordship in the Auchterarder Case," and as the author of "The Whiggin of the Old School, as exemplified in the History and Present Position of the Church of Scotland." But the works which have given to Hugh Miller a world-wide reputation are "The Old Red Sandstone, or a New Walk in an Old Field," "First Impressions of England and its People," and "Foot-prints of the Creator." More recently he has published an autobiographical work, entitled "My Schools and Schoolmasters," giving an account of his own self-education and the means by which he has overcome the difficulties of his position.

MILLER, THOMAS, Poet and Basket-maker, was born in the town of Gainsborough, in Lincolnshire, August 31st, 1800. His parents, Bloomfield, Hogg, and Cunningham, he is self-taught, and his education, as he has himself stated, enabled him "to write a very indifferant hand, and to read the Testament tolerably." He began his life as a basket-maker; but having written some verses which attracted the notice of Rogers, the banker and poet, Miller was encouraged and assisted to start in a new walk of life. He has written a considerable number of books, more or less successful. His novels are "Royston Gower," "Fair Rosamond," and "Jane Grey," each work containing three volumes. Besides these he has written "Gideon Giles," "Godfrey Malvern," and "Holdersworth," the last of which appeared in "The Illustrated London News," a paper to which he has also contributed "Piquette Sketches of London." His country books are, however, the most popular of his works. They are, "A Day in the Woods," "Scenes of the Country," "Rural Sketches," "Pictures of Country and Country Scenes." To these may be added, his "History of Anglo-Saxons" (a strange subject for him to have selected), "Light and Shadows of London Life," "The Language of Flowers," a volume of poems. His works for youth are, "The Boy's Year-Book," "Fortune and Fortitude," "Old England,"

and "Original Poems for my Children." He has, moreover, been contributor to various periodicals.

MILMAN, THE REV. HENRY HART, Author and Divine, was born in London, February 10, 1791. He is the youngest son of S. Francis Milman, physician to George III. He was educated at Burney's academy at Greenwich, at Eton, and at Brasenose College, Oxford. In 1817 he took orders, and becoming at once a clergyman and a dramatist, was appointed vicar of St. Mary's, Reading, and published the play of "Fazio." This drama was acted with great success, especially at Covent Garden, where Miss O'Neill sustained the character of the heroine. In the early part of 1818 appeared his next work, "Samor," an heroic poem in two books. Of this poem, a writer in the "Quarterly" affirms that every page (there were 374) exhibits some beautiful expression, some pathetic turn, some original thought, or some striking image! In 1820 he published another poem, entitled the "Fall of Jerusalem" founded on the narrative of Josephus. In 1821 he was elected Professor of Poetry to the University of Oxford. He afterwards published, at brief intervals, "Anne Boleyn," the "Martyr of Antioch," and "Belshazzar." Mr. Milman has written in prose "History of Christianity," a "History of the Jews," "Notes and Illustrations to Gibbon's Decline and Fall," and a number of articles in the "Quarterly Review." Having been some time rector of St. Margaret's, Westminster, he was, in November 1849, presented to the deanery of St. Paul's.

MILNES, RICHARD MONCKTON, Poet and Statesman, was in Parliament for Pontefract, which borough he first represented in 1837. He was born in 1809, and is the eldest son of Robert Pemberton Milnes, Esq. of Frystone Hall, and Bawtry, Yorkshire, by the Hon. Henrietta Maria, fourth daughter of Viscount Galt. Mr. Milnes graduated M.A. at Trinity College, Cambridge, in 1831. He has published "Memorials of a Tour in Greece," and three volumes of poems, after the manner of Wordsworth: his "Flight Time," his "Lay of the Humble," his "Long Ago," and "M. of Old," are admired specimens of his poetic genius; and in the latter poem he shadows forth the spirit of "Young England," which party Mr. Milnes was, a few years ago, a representative. Mr. Monckton Milnes is in politics a Moderate Conservative. In 1846 he proposed the retention of a low duty on foreign corn; but he would not consent to restore the old Corn-laws. He is a warm advocate of liberty of conscience, and "considers religious equality the birthright of every Briton." Mr. Monckton Milnes married, in 1851, the Hon. Annabella Hungerford, youngest daughter of the second Baron Crewe.

MINIÉ, M., the Inventor of the well-known Rifle which bears his name, was born about 1800, in Paris. He began life as a painter.

MINIÉ.

having volunteered at an early age. We have no details of his career in the army. We know only that he has attained to the rank of Chef d'Escadron, and that he superintends a department of Ordnance at Vincennes. Many important improvements in military arms have been made during the last quarter of a century, but nothing that approaches in practical value to the invention of Minié, a discovery which has given not only an enormous increase of range, but a far greater certainty of aim than had ever been attained by the old musket. Since the supersession by the "Breche" of the cumbrous machinery of the arquebus, no improvement in the manufacture of fire-arms has approached in completeness and practical efficiency, as an engine of war for the infantry, the latest edition of the Minié rifle. It has, indeed, everything to be desired, and must soon supersede every other arm in use, as completely as the percussion cap and hammer has superseded the random concussion of flint and steel. From military statistics, it appears to be certain that the waste of ammunition, etc. of killing an enemy, under the old system, was about 90%, and of wounding him, 10%. There was in those days a random fire, if indeed the powder was proper to explode anything beyond the priming; and in sixteen cases out of twenty the ball went over the head of the body towards which it was directed. Everything but a hit at the end of the gun was blind chance—pure guess. When the soldier had pulled his trigger, he had done his duty, and he could do unless its butt-end should happen to be in the enemy's breast, and then he might do tolerable execution. The enormous waste of expending 90% worth of ammunition in destroying an enemy, appears to have awakened military men throughout Europe to the absolute necessity for some great practical improvement in the old gun, and on this, as on many other occasions, France has borne away the bell. The ironical saying, "they manage these matters better in France," has become an undeniable fact. The conical ball, an indispensable appendage to the Minié rifle, and equally the suggestion of its inventor, has completely revolutionized the use of fire-arms which is absolutely without parallel in the history of weapons of war, and which seems to have reached the *plus ultra* of usefulness in this department of science. A correspondent of the "Daily News" has given an account of a visit with its distinguished inventor at Vincennes. He and his wife were shown into an elegant *salon*, which proved to demonstrate that Monsieur le Chef du Tir, "was no stranger to the science of art." The room was hung with paintings by modern artists of eminence; but before the curious visitors had time to examine them minutely M. Minié made his appearance in full military uniform, with the cross of the Legion of Honour and other decorations on his breast. He at once conducted his visitors to his workshop, where they saw at a glance that they were in the presence of a real workman. He was evidently no novice as an inventor; but one who had worked out every detail of his inv-

tions with his own hands. J rifles and muskets of every window was covered with all was a little forge and other a In the course of conversatio he had never taken out a pat to his country. His chief im arms had suggested themselves him to carry them out more co to the practical details of the was thus soon enabled to f own hands. His devotion t had well nigh cost him his ra Louis Philippe. His dismiss when the Duke de Montpens to his honour, applied for an enabled to pursue the pract and the decorated *chef d'esc* sionally with the leathern ap the hammer to the anvil wi Elihu Barritt himself. Louis Ordnance Commissioners, th ted, and that if they were, t had no sympathy with the o his personal superintendanc riments as a derogation fro think the *chef* himself; and shadow of the grim tower whe upon his labours—the modes eminent services to his gener and he is, accordingly, frequa ments. He has already man mense number of rifles, but yet the *ne plus ultra* of his Splendid overtures were form establishment with an adequa tersburg; but he would do t true patriotic devotion, his t and position elsewhere. “It correspondent of the “Dai amine the *chef's* collections bullets. They are contained grimly-menacing set of instru conceivable shape; and he has hands. He explained to us t in each experiment; but the of these secrets from any man he holds them as secrets; fo inventor without mystery and benefit of us all. But it is for

however, state that one of these balls is of remarkably inge-
 formation. I believe it is calculated to give the least pos-
 sible resistance to the air. M. Minie illustrated its force
 of resistance. He took up an iron tube, and standing at one
 end of the room, blew this leaden bullet with such force that it
 struck the opposite wall. It was curious to see how closely,
 after time, it reached the same point in the wall, when blown
 from a fixed tube—rising or falling a little, of course, in proportion
 to the force of the breath used each time. In reference to this ex-
 periment M. Minie related to us an incident, which I think may be
 published. He took some of these balls, together with a
 letter to the Tuileries one day, and submitted them to the Emperor.
 He related whether or not his Majesty thought well of the
 experiment; but the doors of the rooms in the palace soon bore
 witness to the practical tendencies of the Imperial mind. M.
 Minie is an enthusiastic soldier, burning to see the war in the
 East crowned with success, and hoping, from his little workshop
 at Vincennes, to send forth the invincible argu-
 ment by which the Czar is to be conquered. He is in the hands
 of a sovereign who is in reality his own war minister, and whose
 energy and sagacity in this capacity have been long ago acknow-
 ledged even by his bitterest enemies. The advantages of a vigor-
 ous minister, prompt to decide and to operate, cannot be better
 illustrated than by M. Minie's experiences in the arming of the
 Imperial Guard. The Emperor, in deciding the question of arms
 for select troops, at once appealed to the man in his dominions
 who was necessarily the best qualified to give advice. The ques-
 tion was not slowly filtered through councils and ministries. M.
 Minie was summoned. He gave his notions, and the reasons for
 his conclusions. The conclusions were at once weighed, and, with-
 out delay, adopted. The Imperial Guard was armed by M.

MODENA, FRANCIS-FERDINAND-GEMINEN, DUKE OF,
 son of Francis IV., whose father was the Archduke Ferdinand
 of Austria. His grandmother was the only daughter of Duke
 of Modena III., in whom expired the male line of the celebrated
 House of Este. As his father took good care to support, during a
 reign of thirty-two years, all popular institutions in the duchy,
 Francis V. has had little to do since his accession in 1846 but enjoy
 the pleasures of his state, sometimes at home and sometimes in
 the East. He was born June 1, 1819, and married March 30, 1842,
 Princess Adelgonde, daughter of the ex-king Louis of Bavaria.
 He is married to the Comte de Chambord, the Legitimist
 claimant to the crown of France.

MOLE, COUNT, a French Statesman and ex Minister, was
 born in 1780, and is descended of an illustrious legal family. At
 the commencement of the present century he entered the service of
 Napoleon under the First Consul, as Auditor of the Council of State,

and filled subsequently high administrative functions under the Emperor. He was afterwards made a Pair de France, and for a long period was regarded by educated Frenchmen as one of the foremost and most considerable men of France. He is rather a man of the world than a *littérateur*, or a man of science; yet he is more of a scholar and a man of science than M. Thiers, and understands all questions of diplomacy and administration better than either Thiers or Guizot. Molé was an opponent of the Revolution of February, which balked him of power, as his name had been selected by Louis-Philippe as the head of a new ministry, only a hour before that monarch was compelled to abdicate. He was not included among the representatives of the people in the Constituent but sat in the National Assembly, where he was recognised as the leader of that monarchical party which sought to fuse the interests of the elder and younger branches of the House of Bourbon and unite all the friends of kingly government for a counter-revolution.

MOLTKE, ADAM - WILLIAM, COUNT, a Danish Statesman, is one of a noble family which has furnished many distinguished men for the service of the State. Adam was born in 1785; he is the son of Joachim Godske, count Moltke, who entered the public service by the most humble portal, and having afterwards administered public affairs at a most critical period, and raised the national credit, died in 1818, leaving an immense fortune. In 1848, Count Adam Moltke had been for more than thirty years Danish Minister of Finance. On the 22d of March, 1848, he was made president of the new ministry, which was then formed to assert the integrity of the Danish monarchy, in opposition to the Separatists of Schleswig-Holstein. On the 10th of August, 1848, he resigned office.

MONTENEGRO, VLADIKA OF. From time to time it has been announced in the newspapers that the Pasha of Albanian Scutari has sent in haste to Constantinople for troops to hold in check bandit-marauders from Montenegro, those interesting mountaineers have descended upon the villages of the plain, had attacked the tower of Zabliak, or driven off cattle from the Herzogowina. Old treaties contain expressions from which diplomatic ingenuity can deduce that Montenegro belongs, ought to belong, or has at some time belonged to Turkey; but, in point of fact, the tribes have long enjoyed independence under the easy rule of the family of Negösch. The late ruler of this people, like his predecessors for about two hundred years, was a bishop of the Greek Church as well as a temporal sovereign, devoted therefore to celibacy. He died in October, 1843, when, according to custom, he was succeeded by a nephew, Dan Petrowitch. This personage was completing his studies at Vienna when he was called to the cares of state. On his arrival at the mountain-village of Cetinje, his capital, he called the elders around him, and expressed a desire to be excused the spirit

with which until then the civil and military power had been vested. The mountaineers were willing; but that was not enough, the young ruler must ask the consent of his protector at St. Petersburg. This was given, on the condition that, upon every accession, the new chief should journey to St. Petersburg and be admitted in his office by the Russian Emperor. Herein lies the importance of the savage Montenegrins. Their ruler is the vassal of the Czar on the Adriatic coast. The late Vladika, as his successor draws, 400,000 per annum as a pension from St. Petersburg. Daniel Petrovitch signalised the commencement of his reign by attacking Turkey on the west, just as the ambassadors of Austria, Russia, and France, were distracting the Divan by their insupportable demands. Omer Pacha was sent against Montenegro, to compel some observance of propriety by a population which had assumed position in Europe, and having defeated the mountaineers in several sanguinary encounters, stood within a day's march of their capital. The Czar followed his movements with a jealous eye, and remarked to Sir Hamilton Seymour, — "It may be well to tell you, that should any attempt at exterminating this people be made by Omer Pacha, and should a general rising of the Christians take place in consequence, the Sultan will in all probability lose his throne, but in this case he falls to rise no more. In such a case I protest to you that I will not allow a pistol to be fired." The Russian Government, which was very apprehensive of a religious war, and the seat of its population of the Greek rite, and at the same time desirous of asserting its influence at Constantinople, sent an ambassador to the Porte, and giving an undertaking that the aggressions of the Montenegrins should cease, obtained the withdrawal of Omer Pacha. By advice and threats, supported by a strong military force, the Vienna Cabinet has kept Daniel Petrovitch, who has over 20,000 fighting men, moderately quiet, and deprived the Porte of a useful auxiliary. The present ruler has assumed the title of Prince, and figures as Prince Daniel I. in the "Almanach de l'Europe." He was born in 1820, is of small stature, and on that point despised by his people, who, however, are fully sensible of the advantage of living under a ruler who does not need taxes or contributions, but spends a good income in the country. The "Prince" was married at Cetinje, the capital village of the principality, on the 15th of January, 1855, to the daughter of a merchant of Trieste. The bride was obliged to ride on horseback from Cattaro to Cetinje, as the snow rendered the road impassable for all kinds of carriages. The procession was led by 240 Montenegrins, who fired carbines until their store of powder was exhausted; the flag-bearer followed, and then the bride, with her six lady guards. The Archbishop and General Baron Mamula, with their suites, brought up the rear.

MONTGOMERY, THE REV. ROBERT, Poet and Preacher, naturally moved in humble life, and was not intended for the church. A lady, struck with some of his early literary perform-

ances, sent him to the University. He was at one time a popular preacher; his poems have had an extensive sale. They are: "The Omnipresence of the Deity," "Satan," "Luther," etc. etc., and are more remarkable for fluency and command of language than for taste or originality. Some of them had, however, the distinction of being severely handled by Macaulay in the "Edinburgh Review," and subsequently abused by Lockhart in the "Quarterly." Mr. Montgomery's sermons, many of which are published, partake of the same characteristics as his poems. He preaches at Percy Chapel, Chardon Street, Bedford Square.

MONTI, RAFFAELLE, Sculptor, born in 1818, (according to Mrs. Jameson's "Crystal Palace Handbook"), in Milan. He studied under his father, Gaetano Monti of Ravenna, also a celebrated sculptor, in the Imperial Academy at Milan, where he obtained the gold medal for a group of "Alexander taming Bucephalus." In 1838, having exhibited a group of "Ajax defending the Body of Patroclus," he was invited to visit Vienna, where he gained extensive patronage. Nor was he less fortunate when he returned in 1842, to his native city; which he enriched by various successful works. In 1847 he came to England, and exhibited at Colnaghi's, besides other minor works, the veiled statue for the Duke of Devonshire, which attracted much attention during that season. Returning to Milan, he joined the popular political party, and in 1848, as one of the chiefs of the National Guard of Milan, was among those sent on a mission to the camp of King Charles Albert. The war over, he fled to his country, which had received him so favourably the year before. The originality of his subjects and conceptions, united to great executive skill, have, as in the case of Marochetti, secured him great popularity among us, and extensive patronage. Among his works executed here have been: the group of the "Sister Anglers," the "Veiled Vestal," and "Eve after the Fall." Few of the thousands who visited the Great Exhibition of All Nations in 1851 will forget the beauty of his sculpture displayed in the Milan department. At the Sydenham Crystal Palace are now to be seen models of his "Italy," "Truth," and "Eve;" also two Fountains from his hand, enriched by emblematical figures; and six of the colossal symbolic national figures on the Upper Garden Terrace.

MORSE, SAMUEL FINLEY BREESE, one of the Inventors of the Electric Telegraph, is the eldest son of the Rev. Jedediah Morse, the first American geographer, and was born in Charleston, Massachusetts, April 27, 1791. He was educated at Yale College, where he graduated in 1810. He had from a very early age determined to be a painter, and his father finding his passion for art incorrigible, consented to indulge him in his wishes; and he accordingly sailed for England under the charge of Mr. Allston, and arrived in London in August, 1811. Here he formed an intimacy with C. R. Leslie, and the first portraits of either of these artists

MORSE.

in London were likenesses of each other. Mr. Morse progressed in his profession. In 1813 he exhibited at the London Exhibition his picture of "The Dying Hercules," of colossal dimensions, which received high praise from the connoisseurs; and the plaster which he made of the same subject, to assist him in his work, received the prize in sculpture the same year. On his return to America he settled in Boston, but met with so little encouragement that he removed to New Hampshire, where he found employment in painting portraits at fifteen dollars per head. He was induced by his friends to remove to Charleston, South Carolina, where his art proved more profitable. About 1822 he took up his residence in New York, where he found his works and talents more fully appreciated. Under a commission from the Government, he painted a full-length portrait of Lafayette, which was sent to the United States. In 1829 he paid a second visit to Europe, and remained here three years. On his return to America, in the packet-ship *Sully*, in 1832, a gentleman was conversing with him of the experiments that had just been made in Paris with the electro-magnet; the question arose as to the time occupied in conveying electric fluid in passing through the wire, stated to be several hundred feet in length. On the reply that it was instantaneous (repeating the experiments of Franklin), he suggested that the electric spark could be carried to any distance, and that the electric spark could be used as a means of conveying and recording intelligence. This idea, which drew some casual observations of assent from the others, took deep hold of Professor Morse, who proposed to develop the idea which he had originated; and before the evening of the same day he had drawn out and written the general plan of the system with which his name will be inseparably connected. The object was to effect a communication by means of the electric current, that would leave a permanent record by signs answering to the letters of the alphabet; and which, though carried to any distance, would be able to communicate with any place that might be on the line. His plan was to pass a strip of paper, saturated with some chemical substance that would be decomposed when brought in contact with the electric wire, along which the electric current was passing. The decomposition would form an alphabet by marks, varying in width and number, and which could be made upon the paper at the will of the operator by means of a lever. On his return to New York he resumed his work, still devoting all his spare time, under great disadvantages, to the perfection of his invention. Finding his original plan impracticable, he availed himself of the action of the electro-magnet on the lever as a mode of using pens and ink, as in the rule. Of these he had five, with the idea of securing different characters from one of the pens. These he abandoned, and after a trial of various means for obtaining the characters, and finding by experiment that he could obtain any required character on the lever, he adopted the stylus or steel point for inscribing the characters on paper, and it is this which he has since used. After

difficulty and much discouragement, Professor Morse in 1833 demonstrated the practicability of his invention by completing and putting in operation in the New York University a model of his "Recording Electric Telegraph;" the whole apparatus, with the exception of a wooden clock which formed part of it, having been made by himself. In 1837 he filed his caveat at the Patent Office in Washington; and it is somewhat singular that during this year (1837), Wheatstone in England, and Steinheil in Bavaria, had invented a magnetic telegraph, differing from the American one from each other. Wheatstone's is inferior, not being a recording telegraph, but requiring to be watched by one of the attendants, the alphabet being made by the deflection of the needle. Steinheil's, on the contrary, is a recording telegraph; but, from its complicated and delicate machinery, has been found impracticable for extensive lines. At a convention held in 1851 by Austria, Prussia, Saxony, Wirtemberg, and Bavaria, for the purpose of adopting a uniform system of telegraphing for all Germany, that of Professor Morse was, by the advice of Steinheil, the one selected. In 1840 he perfected his patent at Washington, and set about getting his telegraph in practical operation. In 1844 the first electric telegraph was completed in the United States, between Baltimore and Washington. Since then he has seen its wires extended all over the country to the length of more than fifteen thousand miles—an extent unequalled elsewhere in the civilised world.

MULREADY, WILLIAM, R.A., Painter,—a great name in the English School,—was born at Ennis, in Ireland, in 1786, and was admitted student of the Royal Academy when only fourteen years of age, before which he had won the kind notice of Banks the sculptor, and the prediction "that he would distinguish himself." Some of his earlier pieces, were, it is said, in subject and size, of great pretension than we are accustomed to associate with his name. A class of which a few samples were given at the exhibition of his works in 1848:—sketches for "Polyphemus and Ulysses;" "Caliban's Trinculo, and Stephano;" the "Disobedient Prophet," etc. Pictures of modest size and merit, and still more modest subject, afterwards succeeded them; careful studies, honest, and in colour harmonious, reminding us of the Dutch masters:—"A Cottage;" a "View of St. Alban's;" a "Carpenter's Shop;" a "Gravel-Pit;" an "Old Gable;" "Horses Baiting;" the "Kitchen-Fire," etc. More than 100 of these pictures—painted by the youth of twenty, or little more, and comparatively unnoticed at the time,—excited general admiration when exhibited "on the line" thirty years later. Among those pretending to more incident executed during the first ten years of his career were, "The Rattle" (1808); "The Roadside Inn" (1811); "Punch" (1813). To his "Idle Boys" of 1815 succeeded his election as Associate of the Academy in the same year, and R.A. the following,—a rapidity of promotion very unusual. His pictures are among his most felicitous, for humour and graphic telling of the story: the "Fight Interrupted" (1816); "Lending a Bit

; "The Wolf and the Lamb" (1820), purchased by the IV.; "The Careless Messenger" (1821); "The Convent" (1822); "The Widow" (1824); "The Origin of a Riot" (1826); "The Cannon" (1827). Later works—"The Voyage" (1833); "The Last In" (1835); "The Sonnet" (1836); "First Love" (1840); "The Ford" (1842), suggest still strikingly how much consummate technical power is required to express in art the simplest theme. In all technical excellence Mulready's has been one continuous course of steady improvement, until the very last year in which he lived; although the elaborate finish of his latest style tends, as it were, to excess. As a painter, his art is perfect; for luminousness of colour, for "delicacy and completion" of drawing,—as unerring, and what artists call large in manner, as the great Italian masters; showing that it was choice, not necessity, which confined him to small canvasses. An untravelled artist triumphant over all the greatest difficulties of his art, he only laughs, it is said, at that supposed necessity to a painter's education,—a visit to Italy. "Know what you have to do, and do it," is, according to Mr. Ruskin, his favourite apophthegm. Indeed as this artist has been in perfecting his powers of execution, a very simple range of subject has throughout sufficed. The strife and humours of schoolboy-life, or of the village, have supplied the material; in later as in earlier years. The subject-matter of "A Street Preacher" is made in 1800; a drawing of the very same in 1822. Pictures finished in 1830 ("Dog of Two Minds"), or in 1840 ("Fair Time"), were first painted twenty or thirty years before; gradually ripening under the hand. On this method of production comparatively few works have been finished for the exhibitions; seldom more than one. In 1840 he executed twenty designs for an illustrated edition of the "Vicar of Wakefield." From this source have been derived many of his finest pictures: "The Whistonian Process" (1844), "Choosing the Wedding Gown" (1846); "Ell and Sophia" (1847). From his perfect command of the range of his art, Mulready's careful sketches for his pictures, whether in outline or in colour, have a value possessed by the work of scarcely any other modern painter, reminding us rather of the old masters. His Academy studies from the *Life*, are unique in their class, for truth, power of drawing, and definition of colour, although only executed in red and black. A finished picture of this class, "Women Bathing," exhibited in 1842, evidenced the rare mastery attained in an opposite field to wherein he had won his fame: of a kind unexampled among painters of "Domestic." In 1848 an exhibition of his works opened at the Society of Arts,—a great boon to the lovers of art since that date he has exhibited little of importance. The gallery is rich in examples of his genius; as is also the collection of Mr. Sheepshanks. In the Royal Collection, and in that of

Sir Robert Peel, there are fine examples of earlier date. Mulready's pictures do not engrave advantageously.

MUNTZ, GEORGE FREDERICK, Merchant and Political Reformer, M.P. for Birmingham, was born in 1794. He was one of the chiefs of the Birmingham Political Union that exercised great an influence upon public opinion when the first Reform Bill was under discussion in Parliament. He was prosecuted for a alleged riot at the church-rate meeting in 1837, and although convicted in the first instance, the proceedings were reversed as illegal when a higher legal tribunal was appealed to. Mr. Muntz is Radical Reformer, and has advocated his views, not only by word of mouth in Parliament and at public meetings, but also by his pen in various published pamphlets. He is said to have made a large fortune by the invention of a mixed metal, cheaper than copper, and adopted to ships' sheathing. He has strong opinions on the Currency question.

MURAT, LUCIEN-CHARLES-JOSEPH-FRANCOIS-NAPOLEON, PRINCE, and Pretender to the Crown of Sicily, was born on the 16th of March, 1803. His father, Joachim Murat, son of an innkeeper in the south of France, after figuring with high distinction in the wars of the French Republic, allied himself with the Imperial house of Bonaparte by espousing Napoleon's sister, the beautiful and ambitious Caroline; and when Lucien, their second son, was about five years of age, his father was metamorphosed by the Conqueror of Continental Europe from the most dashing of dragoon officers into the King of the Two Sicilies. But after a few years had passed over, when Bonaparte's sun was setting, and when the great Corsican soldier was branded by his Imperial relatives as the common enemy, the Murat family were under the necessity of leaving the scene of their royalty; and when, after the battle of Waterloo, King Joachim, rather driven by despair than attracted by hope, landed on the territory where he had exercised sovereign sway, instead of realising his dream of making Italy free, he fell into the hands of the restored Bourbons, and was shot as a traitor. Notwithstanding the blood that flowed in his veins, Lucien Murat, as he arrived at manhood, so far from exhibiting any ambition, appeared an easy, well-conditioned, and somewhat indolent individual, who was perfectly contented with a private position. As events progressed, however, he altered his views. The death of an elder brother, Napoleon-Achille, in 1847, rendered him heir to the pretensions of the murdered king; in 1848, when the Five Years Revolution brought a republic into existence, he was elected representative of the department of Lot in the National Assembly; and in the summer of 1855, when "King Bomba" (see Naples) was perpetrating some of those insane atrocities which have rendered the once great name of Bourbon synonymous with crime, King Joachim's heir began to be talked of as the destined emancipator of Italy. The aspect of affairs was not particularly inviting to a man not inclined

are to "play for kingdoms and crowns;" the Italians being divided into no fewer than ten political parties, and even the states into two sections; one of which prefers Prince Lucien's claim to himself. Under these circumstances Murat expressed his intentions to his sister's son, the Count Pepoli of Bologna, in a letter which runs thus:—"Since it appears that I am the only solution, I am forbidden all initiative. He must be a fool who argues from the fact of his being born on the steps of the throne that the crown belongs to him, or who considers an entire people as his property just as a private individual would a sheep. Let Italy call upon me, and I shall be proud to answer. I will add that she will never find others who will serve her better than myself. Her enemies are mine, and there is a territorial dispute to settle between us. But, if Italy makes another choice, I shall not the less pray for her happiness; and I shall be ready to give the last drop of my blood to contribute to her success. Happy shall be the elect of Italy! His mission is easy. Be brave and remember this maxim, which is not the less true because old—*Noblesse oblige.*"

MURCHISON, SIR RODERICK IMPEY, D.C.L., one of the ablest and active Geologists of the present day, is the eldest son of Kenneth Murchison, Esq., of Tarradale, Ross-shire, where he was born in 1792. He was educated at Durham Grammar-school and at the Military College of Marlow; and received the degrees of M.A. from the Universities of Cambridge and Oxford. He was an officer in the army from 1807 to 1816; served in Spain and Portugal with the 30th Foot; afterwards on the staff of his uncle, General Sir Alexander Mackenzie; and lastly, as lieutenant in the 6th Dragoons. "After having served his country bravely," says an able writer in the "North British Review," "Murchison brought into the field of science all the ardour of youth, and after twenty years of unremitting toil placed himself in the highest rank of modern geologists. When the more recent formations on the earth's surface had been well investigated, and had been placed beyond a doubt that their age could be ascertained by their unbedded fossils, it became a problem of the greatest interest to extend the same law to the older sedimentary formations; to trace the later formations downward to the oldest; to trace the formations which contain the earliest traces of life, and to distinguish the strata which compose them from those which had been deposited when no living thing moved upon the waters." So early as 1831, Mr. Murchison applied himself to a systematic examination of the older sedimentary formations in England and Wales, and after five years' labour he succeeded in establishing what he calls the Silurian system, comprising a succession of strata which lie beneath the old red sandstone, and seem to be in close approximation to the deposits which preceded the existence of plants and animals. This system is distinguished from its occupying those countries which formed the

ancient kingdom of the Silures) is consisting of Ludlow and Wenlock Caradoc and Llandeilo rocks. The sedimentary strata was found in North and South America; and Mr. Murchison of the Silurian system to the mountains of Sweden, and particularly to the Alps, where the relative position of the strata shows no disturbance from the intrusive action of the granite. In the maintenance of the Imperial Government with Professor Sedgwick and Mr. Murchison, a geological survey of the Russian Empire was explored several parts of Germany as intermediate between the British and Russian systems. He next examined the Paleozoic rocks, and the results of the entire Expedition were published in 1845. In 1841, upon the proposal of the Emperor, upon this geological survey to the Emperor, majesty presented Mr. Murchison to the second class of St. Anne, in diamonds. The Office in England meanly refused to accept of the Emperor, as if aware of the slight offered to England, presented him with a magnificent diamond, mounted on a column of granite, with the inscription: "*Gratia Imperatoris totiusque Geologiæ Rossicæ Exploratori, 1841*". In 1841, labour, Mr. Murchison completed his work, and the Emperor conferred upon him the Order of Stanislaus; and upon his return to England, accredited, he was permitted to accept of the Order, and received the honour of Baronet. Mr. Murchison has since published his work, consisting of 528 pages, containing a faithful and detailed description, and a full view, of the older sedimentary rocks, and the remains. In this work the author has shown conclusive evidence, that the Silurian system, which appears to have been formed at the same time, of the same age, and inhabited by the same animals and plants, is established this system, with incertainties in Scotland and Ireland, Germany, France, Portugal, Sardinia, Cape of Good Hope, Hindostan, Australia, South American Islands, etc. Sir Roderick Murchison has published one hundred memoirs to the Royal Society. In 1844 he instituted a geological survey of Eastern Australia and those of the West, as a result, he was the first who discovered gold must exist in Australia. In

tin-miners to emigrate to New South Wales, and there gold from the alluvial soil in the manner that they extract from the gravel of their native country. Later in the year Sir Roderick addressed Earl Grey, then Secretary for the Colonies, stating his views as to the existence of rich gold-fields in the colony. Sir Roderick has served four times as President of the Geological Society and the Geographical Society; he is a Fellow of the Royal Society and the Linnæan Society, and is Member of the Academies of St. Petersburg, Berlin, Copenhagen, etc. In 1855 Sir Roderick succeeded the lamented Sir H. De la Beche in the office of Director of the Museum of Practical Geology.

MUSSET, ALFRED DE, a French Poet, son of Musset Pathay, by his life and works of Rousseau, was born at Paris in 1810. His talents were developed at so early an age, that before he had his twentieth year he had become one of the leaders of the Romantic school. His first work was the "Contes d'Espagne et d'Italie" (1830), containing many things quaint and wonderful. "Spectacle dans un Fauteuil" (1833), and the "Comédies et Fragments" comprise many beauties, along with much that is gross. The "Confession d'un Enfant du Siècle" (1836, rewritten in 1845) gives many interesting particulars relating to the intellectual development of the author, besides furnishing a glimpse of the life and feelings of "Young France." He has also published "Fables et Proverbes en Prose" (1840). A collection of his poems appeared in the same year, under the title of "Poésies complètes." His bitter and passionate reply to Becker's "Rhine-roman" was the occasion of a sharp newspaper controversy.

MUSTAPHA RESCHID PASHA, alias RESCHID PASHA, the foremost of the political servants of the Sultan, was born at Constantinople in 1802, and is the son of a wealthy Turk. In his fifteenth year, having lost both his parents, he was taken in hand by his uncle, who had married his sister, and was governor of one of the remote provinces. He subsequently accompanied his brother-in-law to the Morea and Broussa, of which his patron became subsequently governor. In 1822 Ali Pasha was called to Constantinople, to become Grand Vizier; but upon the outbreak of the Greek revolution, having advised the employment of mild measures towards the insurgents, he was deposed and banished to Gallipoli. As it appears to us, he was afterwards sent to the Morea, to assist the rebels, and took with him Reschid, who shared the privations and disasters of the campaign. Ali Pasha not being more successful than his predecessors, was deposed, and died of grief. Reschid then found a protector in the person of Selim Pasha, whom, in 1826, he accompanied, as private secretary, in the campaign against the Russians. He continued his services under Izet Pasha, who was secretary of the Turkish plenipotentiary, was one of the plenipotentiaries of the treaty of Constantinople. For this service he was promoted to the rank of an Amedzi. He was shortly afterwards sent

MUSTAPHA RESCHID PASHA.

a diplomatic mission to Mehemet Ali, viceroy of Egypt; in, in 1833, visited Cairo, in a like capacity, with Haili Pasha. On this latter occasion he assisted in negotiating the treaty of Hünkâr Hissâr. In 1834 he was rewarded for this service with the rank of Pasha. The Porte, desirous of strengthening its relations with the powers of Western Europe, sent Reschid, in 1834, to Paris and London, as the representative of the Sultan. He had passed 15 years alternately residing in these capitals, enlarging his acquaintance, and forming the acquaintance of eminent statesmen, who suddenly recalled to Constantinople to occupy an important office in the Turkish government under Pestur Pasha. He arrived in Turkey when he learned that a palace revolution had proved fatal to his friend and patron: Pestur Pasha had been strangled in pursuance of an order obtained from the Sultan, Mahmoud, at a moment when he was sunk in inebriety. The position in which Reschid now found himself was a most trying one. From his earliest youth his ambition has been directed towards the highest office in the Turkish empire. His visit to Europe had taught him that a great work was before the statesman who seriously attempt to save his country from ruin. He saw that Turkey was to be saved from absorption by her powerful neighbour, she must gain the sympathies and be brought into the community of those European states which, at that time, regarded her as an alien and an outcast. He saw that a country rich in natural gifts, and favoured above all lands by situation, was afflicted by every political, social, and domestic vice. He had seen the unfruitful efforts of Mahmoud to regenerate Turkey one after another, reversed in vain, and just as he thought he had attained a position which would enable him to recommence the work with larger energy and on better principles he found himself bereft of support, and the object of hatred and suspicion to those who had just ruined his powerful friend. Over these difficulties his skill taught him to triumph. He obtained the ear of the Sultan, who inspired his sovereign with deep resentment against his brother, and in the end established himself in power. The sword of Reschid Pasha was not yet at hand to execute the humane and liberal reforms which Reschid Pasha avowed his determination to carry out. The Sultan, for its own obvious purposes, has always secretly supported the Mahometan fanatic party, encouraged the functionaries to oppress the populations, everywhere to revile the reformer. The Sultan had to learn that it is possible to travel too fast, even in the way of reform. Mehemet Ali was in arms, and was making the Sultan aware of the prejudices of the Turks against the new ideas prevalent in Constantinople. Reschid was removed from the post of vizier, but he had become too important a man to be set aside. The Sultan again sent him to Europe. He was in Paris when, on the 30th, the news of the death of Sultan Mahmoud, and of the success of the Turkish army by the Egyptians at Nezib, reached him. He hastened to conclude the quadruple alliance, which was to assure the independence of Turkey against the designs of the Egyptian viceroy.

ably returned to Turkey. His diplomatic services, and still his astuteness and knowledge of human nature, rendered him of the situation at Constantinople; and, receiving the title of Master of Foreign Affairs, he became practically the first minister of the new Sultan, Abd'ul Medjid. The great day of Reschid Pasha was that of the proclamation of the Tanzimat, otherwise called the statute of Gulhané. Upon the 3d of November, 1839, representatives of all the European powers, the ministers, governors of provinces, generals, corps of ulemas, patriarchs of Christianities, together with an immense crowd drawn from all of the community, were assembled in an open space belonging to the Sultan of Gulhané to hear read a charter which was to serve as the basis of civil and religious law in Turkey. The Sultan appeared in great pomp, and near him was seated the Prince de Joinville. Reschid Pasha read the document aloud. Copies and translations were distributed to all present, and a universal shout of approval greeted the Sultan. Before the promulgation of the Tanzimat, or beneficial ordinance, the various provinces throughout the empire were governed by pashas, whose authority was absolute over life and property. Procuring their appointments by bidding for the district governments, they paid a fixed yearly tribute to the Porte and then made the most of their bargains by every art that cruelty and grasping avarice could suggest. Appeal to justice was in vain: the pasha had his friend at head-quarters, and the complaint, if it ever reached the capital, fell dead to the ground. Tanzimat was to change all this. The pashas were no longer to be put up to auction, but entrusted to the Porte, who were to receive a fixed salary from the Government, and to turn into its coffers whatever revenue the pashas produced. A municipal council composed partly of Mohammedans and partly of Christians, was appointed at each of the provincial seatments, and by them all civil and criminal law business of importance was to be decided; subject only to the confirming sanction of the Sultan. Christians were granted an immunity from military service, and as a set off against this privilege were subjected to a special poll tax. Life and property were to receive protection from the rapacity or avarice of the governors, and a vast improvement was introduced into the whole administrative system, both in Constantinople and the provinces. Since this important event Reschid Pasha, with brief intervals, occupied most important posts in the service of the Sultan. He has held several times the appointments of Vizier and Minister of Foreign Affairs. In 1841 he became for a time the Sultan's representative in England. His administrations have been a series of struggles to realise the reforms; but it must be owned that in this he has only very imperfectly succeeded. His foreign policy has been directed above all to the maintenance of peace. He was not in power when Menchikoff visited Constantinople; but when the Russian presented to the Sultan a disgraceful convention, the sovereign was so much affected that he felt that the time was come to make an end of the

NAPIER, SIR CHARLES.

s which had excluded his ablest servant from power.

Pasha was again called to direct the affairs of the empire in the spring of 1855 he again lost office, still, however, exercising influence on the Government. A gentleman who has had many opportunities of personal intercourse with Reschid Pasha knows him as well versed in history, French, and logic, very popular to Europeans, and ever ready to attend to their suggestions. A very moral man, discountenances the Turkish *harem* system, and is the husband of one wife, by whom he has a family.

His chief fault is, that he is too mild and tender hearted; he is not sufficiently energetic for the trying times in which we live, and the reckless adventurers that ever surround the throne. He is fifty-three or four; he is of middle stature, has a pleasant countenance, good eyes, and a fine head.

N.

NAPIER, VICE ADMIRAL SIR CHARLES, K.C.B., G.C.B., K.S.G., K.R.E., and M.P., late Commander in Chief of the Fleet, is the eldest son of the Hon. Charles Napier of Pitlochry Hall, in the county of Stirling, and grandson of Francis Napier. He was born on the 6th of March, 1780, the second of his father, and entered the Royal Navy in 1799 as a volunteer on board the *Martin* sloop-of-war, Captain the Hon. Wm. St. Clair, employed in the North Sea. Removed, at the start of the ensuing year, to the *Renown*, 74, the flag-ship of Lord Borlase Warren, he accompanied an expedition to the Eastwards to the Mediterranean; where, in November 1800, he was promoted midshipman of the *Greyhound*, 32, Captain William Boscawen. On his return from a visit to St. Helena in the Egyptian frigate, he successively in 1804-5 the *Mediator* and *Renommée* frigates. In 1806 he was appointed Lieutenant of the *Courageux*, 74, the first ship of the squadron under Sir J. B. Warren at the capture of the *Marengo*, 80, the flag-ship of Admiral Lord Keith, the *le Poule* frigate, 40; and in March 1807, being then a Lieutenant, he commanded the *Prince George*, 98, was nominated acting Captain of the *Pultusk* brig; to which vessel he was appointed on the 10th of November following. On the 17th of July, 1807, he had been present at the reduction of the Danish islands of Copenhagen and St. Croix, he assisted, in the boats of the fleet, in the cutting out of a Spanish merchantman lying at anchor under the protection of two batteries; the guns of which were spiked. In August of the same year he commanded the *Pultusk* brig of 18 guns, in which he fought a smart action with the *Albatross*, a French corvette of 22 guns; which, after he had been most gallantly shot away, many of his carronades dis-mounted, and he killed and himself wounded, he succeeded in capturing her.

On this occasion, although his thigh was broken by a shot, he refused to leave the deck until the enemy was out of sight. In Nov. 1809 he assisted at the reduction of Martinique, where he gained considerable distinction, and shortened the duration of the siege by the manner in which, with only five men, he scaled the walls in open day planted the Union Jack upon the ramparts of the Citadel. In the ensuing April he assisted Sir Alexander Cochrane in a chase of three French ships of the line, which lasted for a period of two days, and which terminated in the capture of the *Leviathan*, 74. On this occasion he signalised himself by the close and accurate fire with which he struck to the enemy, and shot away their masts and rigging, although fired at from their stern-chasers. For services in this affair the Commander in Chief posted him on 14th May, 1810, to the *Jason* frigate, an appointment which was confirmed by the Admiralty on 26th May, 1810. In the ensuing summer, Captain Napier returned home in the *Jason* frigate, and did not go afloat again until 1811, in the early part of which year he was appointed to the *Jason*, 12. On the 26th of July following, in concert with Captain Sir John Clifton (now Viscount of the Black Rod), he silenced the seven gunboats and a salacca moored across the harbour of Port-au-Prince, as well as that of a round tower; and captured a merchantman and a quantity of stores destined for a ship-of-war and a frigate. On the 1st of November, 1811, in command of his own boats and those of the *Impetieuse*, he landed with 100 and fifty men of the 62d Regiment at the back of the town of Port-au-Prince, and carried the neighbouring heights under a fire from the enemy; who, having vainly endeavoured to dislodge them from their position, were compelled to retire. The next day he succeeded in capturing ten gunboats, twenty two richly laden feluccas, and a battery of 24 pounders by which they had been protected. His exploits in this affair obtained the unqualified approbation of Lord Pellew, the commander-in-chief of the station. On 1st May 1812, he attacked the port of Napier; took twenty-eight prizes with sail; and, supported by the Pilot sloop, compelled a battery and tower to surrender at discretion. On the 26th of May, in concert with the *Furieuse*, 36, and having on board a battalion of the 10th Regiment, he took possession of the town of Port-au-Prince, whilst exposed to the fire of four batteries mounting 18 and 12 pounders, and two nine inch mortars. On the 10th May, 1813, he captured *La Fortune*, xebecque, armed with ten long 9 pounders and four swivels, along with twenty prizes, lying in Cavalier road. In the ensuing winter, he was on shore the *Belleme* French store ship of twenty two guns and one hundred and twenty men; and compelled a galley of twenty guns and one hundred and fifty men to seek refuge under the batteries. He sailed shortly afterwards with a squadron commanded by Captain Andrew King for North America, where he took part in the brilliant expedition against Alexandria, with such effect that Captain J. A. Gordon, the conducting officer, declared, in his report, that "he owed him more than he was able to express."

once upon engaging it. Everything depended on the issue of the contest, which appears to have been most severe. The British reserved their fire until within musket shot, when they opened in right earnest, but without doing any serious damage. The constitutionalists then returned their fire, and the *Ramha* was laid alongside the *Don John*, Captain Napier boarded in the utmost impetuosity. "I had not intended to board," he says, "having enough to do to look after the squadron; but the moment was too great, and I soon found myself on the enemy's deck, supported by one or two of my officers. There I paused, and when men jumping on board we rushed aft with a loud shout and passed through a party drawn up on the break of the main deck to oppose us. At this moment I received a severe blow from a crowbar, the owner of which did not escape unscathed." In a few minutes the battle terminated altogether in favour of the British forces; leaving in their possession two ships of the line, mounting eighty and seventy six guns; with four 48-pounders for throwing shells; one frigate, and a corvette of 18 guns. Two corvettes and two brigs having escaped. The loss of the British squadron was about ninety men killed and wounded; that of the enemy between two and three hundred. By midnight the British were manned, their crews secured, and after a hard day's fighting the British squadron was in full sail for Lagos Bay. For this important service Don Pedro conferred upon him the title of Viscount of Cape San Vicente, and appointed him Admiral-in-Chief of the Portuguese fleet. "All this," says Napier, in his own account of the affair, "was very gratifying; but I should have preferred the title had been let alone." Throughout the whole of this campaign he appears to have conducted himself with signal valour and energy, and to have exhibited in a high degree important qualifications for command for which the world had not hitherto done him credit. Besides the civil and naval honours conferred upon him, Don Pedro gave him the Grand Cross of the Tower and Sword, and thanked him personally, with great fervour, for having "placed the queen upon the throne." Disgusted by the treatment he afterwards experienced from the Portuguese Government, and the reduction of the naval force under his command, Napier turned his back upon Portugal, and became once more a candidate for employment at home. This he was not obtaining. On the 1st of January, 1839, he was appointed to the command of the *Powerful*, 81, fitting for the *Mediterranean*, in which ship he hoisted, in 1840, his broad pendant as Admiral, and became second in command, under Sir Robert Peel, of the fleet employed on the coast of Syria. On the 10th of September of that year he effected a landing at Djenné, at the head of fifteen hundred Turks and British marines, and in this his first operation on the Syrian coast displayed such indefatigable zeal and energy as to elicit warm commendations from his admiral. In the course of the same month he defeated a body of men at Kalboun, in accordance with a plan which he had previously matured,

town of Sidon, protected by a fort armed by two thousand seven hundred garrison prisoners. It has been all some show of reason, that he should exploit a great deal more of the town.

In his letter to Lord John Russell he said, "I took the garrison prisoners," and denied. It appears from much that the officer who so gallantly dashed at the head of the Turkish troops, was a member of the royal navy; that the battle was fought at the first sea-gate of the town to sea; that the British officer, Sir John Napier, as he would lead us to believe, was a member of the Royal Marines; and that the last body of troops that was led to the other sea-gate was led to the sea, as might have been expected, by a member of the Royal Marines. The same facts in the "Times," "if such a number of these bodies of troops, he could not entirely to himself of having taken the garrison prisoners." He might have gone to the upper or land gate, but the largest body of troops was at the sea-gate, and if an officer does not attack, but crawls round outside the town, the brush is going on within the town. On the 9th of October, Napier, obtained a signal success over the Turkish forces, which occupied a strong position. The eccentric appearance of the battlefields of Syria was often a sight to the flowers. Seated upon a donkey, with a formidable bludgeon in his hand, by his side, he led his troops. The chivalrous courage of a Paladin, and that in personal appearance he was the result of the promptitude with which he surrendered Beyrout and the city of Damascus. Within a month from the day when the whole of the Lebanon had been in his power, notwithstanding that his small force was small, he managed to capture up to the point where he cannot follow him through the mountains, and it is the less necessary to himself the chronicler of its glories, and himself and his services in full power. On the 2d November, 1840, the British forces of Acre, under the command of Sir Robert Peel, of the affair himself as if there were no Robert in existence! The square

consisted of four war-steamers and seven line-of-battle ships, but by somewhat lubberly handling, the *Powerful's* progress was nearly arrested just as she was bringing up alongside one of the batteries; a blunder which had well-nigh thrown the whole army into confusion. What seemed stranger still to the gallant hero was, that his superior in command was not very well pleased with what appeared to him at the moment to have been a disobedience of his orders. However, when Napier did get his position, he let fly with such "a will" against "the stone walls" of Acre, that the governor was compelled to abandon the town, and the greater part of its garrison along with him. "At day-break the morning after the siege," says the Commodore, "I went aboard the *Phoenix*, where the admiral still was, and after congratulating him on the capture of Acre, I said that I hoped he was satisfied with the position I had taken up. To which, to my surprise, he answered, 'Not at all; you ought to have gone south-west angle.'" How he received the admiral's rebuff he himself informed us:—"That I was hurt beyond measure," he said, "may be easily conceived. An admiral passing censure as a second in command was not to be borne with me. Some few words passed on both sides, which I do not recollect, and the conversation finished by my asking in an abrupt manner if he had any further commands for me, which was answered in the negative in the same style." Napier pretends to attribute the admiral's anger to his having "pressed him to carry on more measures, and perhaps in too urgent manner;" an insinuation which no one who is acquainted with the antecedents of Sir Charles Napier will give the slightest credit. But indeed for the discretion with which he performed his delicate and most arduous duties in Syria, we should long ago have been involved in a similar fate. Nothing could be more distinct than the orders issued by the admiral or more eccentric than the Commodore's mode of carrying them out. However, "all's well that ends well." The former of Acre lasted six months, and after twenty thousand shells and a hundred thousand shots had been thrown into the town, the governor was compelled to surrender for want of water. In 1840 it was almost by a coup de main, and the enormous damage done to "the stone walls" on that occasion proves that all that we have heard of the impregnability of such defences is a mere bugbear. Nelson at Copenhagen, and Exmouth before Algiers, solved the problem that stone walls gulf yawn before a British broadside, and he approached near enough to give it a chance. With some exceptions, fully redeemed by his subsequent performances, where Napier's services in Syria were of the most distinguished character, and were attended with great benefit to the civilised world. Both in land as well as sea operations he threw himself thoroughly up to his work. After the reduction of Acre the Commodore proceeded to take charge of the squadron off Syria, where he concluded an advantageous convention with the Pasha. In acknowledgment of these really important ser-

as he was created a Knight Commander of the Bath on the 1st of January, 1840. He was also included in the thanks of Parliament to the Commander-in-Chief and his subordinates; and was presented by the Emperors of Austria and Russia and the King of Prussia with the Cross of Maria Theresa of Austria, the Cross of St. George of Russia, and the insignia of the second class of the Order of the Black Eagle of Prussia. In the spring of 1841 he returned to England, and on the 30th November of that year was appointed one of the naval aides de camp to her Majesty. He had already (in 1837) received the captain's good service pension. He was appointed Rear Admiral of the Blue, and held for two years the command of the Channel Fleet with his flag on board the *Centurion*, 120. During this service he had, unfortunately abundant cause for newspaper controversy, and for teaching First Lords to perform their duties. He accordingly set to work to collect his caustic letters on naval reform with which he had supplied the public through the "Sun" and "Times" newspapers during the previous thirty years, and published them in 1841 with an original and very glorious preface from his own pen. To this was added an Introduction, couched in somewhat truculent language, in the pen of his cousin, Major General W. Napier (the author of "The History of the Peninsular War," and some hundred inflammatory letters in the "Times" and elsewhere,) in which he speaks of the "effrontery of Lord Grey," the "stolidness of Lord John Russell," and the "utter groundlessness of his charges against Charles." In this volume, which is entitled "The Navy as it is, and its present state," the gallant Admiral has fired a series of broadsides in the shape of letters, some of them sufficiently caustic, at the late Lord Melville, the Duke of Clarence, Lord Alborough, the Duke of Wellington, Sir James Graham, Earl Minto, Lord Palmerston, Lord John Russell, Lord Ellenborough, Lord Palmerston, the late Sir Robert Peel, and the Editor of the "Times," of whom, to apply the nautical shibboleth, "he gives a good account." He sets out with a recapitulation of his own marvellous performances abroad and ashore, in which he claims credit, we believe for having introduced some useful reforms into the administration of naval affairs, and here and in his letter to Lord John Russell intimates pretty clearly not only that he is the most brilliant Commander in the royal navy, but that he possesses, in an eminent degree, all the qualifications for a first lord! He for sorrowing to the slowness of promotion from the rank of captain to that of admiral, a long peace would find the latter too old for work. He proposed, therefore, that when an officer came within one hundred miles of the top of the list of captains, he should be allowed to retire as a supernumerary admiral; and further that a captain of twenty years standing should be eligible for the rank of admiral, provided he had performed any service which justified his selection. If this suggestion been adopted, it cannot be doubted that the navy would have been in a very different state from what it is now. He would have abolished flogging round the fleet and

punishment of petty officers. However discredited at
 time, the gallant Admiral has lived to see most of these
 carried out. He recommended that the system of keep-
 ing monthly pay of the sailor in hand should be abolished, and
 the men should be paid what they earn, and allowed to spend
 before they are ordered to sea. In 1826 he suggested the system
 of registration, imperfectly carried out by Sir James Graham, and
 subsequently improved by Mr. Sidney Herbert. These are the
 fruits of his many useful practical recommendations, almost all of
 which were improvements on the old system, and the greater
 of which have since been adopted. Anxious, it may be pre-
 sumed, to give the Commodore something better to do than write
 "subordinate" letters to his superior officers (all suggestions for
 administrative reforms are considered insubordinate in high places),
 the Admiralty nominated him, in 1847, in succession to Sir William
 Parker, to the command of the Channel Fleet. This appointment
 lasted for two years. But on the accession of Sir Francis Baring
 to the head of the Admiralty he was superseded in his post. Highly
 resentful at such treatment, and at the marked disregard by the
 Admiralty of many of his suggestions, he brought a Lancaster gun,
 in the shape of a final letter to Lord John Russell, to bear upon
 the Government, which greatly widened the breach that already
 existed between him and it. It is hardly possible to conceive any
 action more entirely vain-glorious than this epistle. A few
 extracts from it will afford some notion of its character. "Had
 I displayed energy and boldness, the probability is that this
 country would have been involved in war and our foreign policy
 reversed." "I dethroned Don Miguel. Had the battle of Capo
 St. Vincent been lost, Don Miguel would have been on the throne
 instead, the dynasty of Louis Philippe shaken to its centre, and
 probably Lord Grey's administration." "I upset the Grand
 Vizier of the Lebanon, the ally of Mehemet Ali; defeated Mehemet's
 army and drove his troops out of the mountain." "My services are
 surpassed by those of any admiral on the list. I think I may
 say without fear of contradiction, that they have had more influence
 on the state of Europe than those of any other officer in the
 century." "The battle of Cape St. Vincent changed a dynasty as well
 as the whole political face of Europe." "I served as second in
 command at Acre." "I fought on the heights of Lebanon two
 times, and gained them both." "I stormed Sidon and took the gar-
 rison." "But for his exploits, the gallant Bombastes assumed
 that the Syrian expedition would have failed, Acre would not
 have been attacked; war with France would have been inevitable;
 they overthrown; and with it the Melbourne administration."
 John Russell, in his reply to all this braggadochio, declared
 although far from disputing the value of his services, he could
 not see in him that implicit confidence which was required in a
 successor to Sir William Parker. The command of the Mediter-
 ranean Fleet was accordingly given to Vice Admiral Deans Dundas,
 and Charles Napier was put for a time upon the shelf. On the

NAPIER, SIR CHARLES.

ion of the probability of war with Russia, Napier had the mind of the public to a belief in his own estimated heroism and irresistible decision of character, that appears to have had no alternative but to appoint him Commander-in-Chief of the Baltic Fleet. He talked it well, and produced miracles. He had under his command the finest ships that left the shores of this or any other country, and he had the confidence of the nation at large. At a public dinner given to him on the occasion of his appointment, he is reported to have declared that he would take Cronstadt in a month, or not to be mentioned to ears polite." He vowed that if a war was declared by the time he got out, he would "do it." Soon after he lost sight of Spithead he telegraphed to the Admiralty "to sharpen their cutlasses," and promised to give a good account of the Russians." As an earnest of what he would do, he signalled for large quantities of chloroform. One of the frightful operations his valour would render necessary; and after bobbing about from port to port for several weeks, he made off upon the trumpery affair of Bomarsund; and he was obliged to retire from the granite walls of Cronstadt, Sweaborg, and Helsinki, without having done anything worthy of the name of a victory. He, however, brought home his fleet in good order; but for any result of importance beyond this, it might just as well have remained at Spithead. In 1846 he was promoted to the rank of Rear-Admiral of the Red; in 1848 to that of Vice-Admiral of the Blue; and in 1853 to that of Admiral of the White in June 1855. The only war in which he has been engaged has been in a war of words with the Government, which has at length grown into "a very serious matter." In the meantime Sir Charles has been succeeded by Admiral Saunders Dundas, a son of Lord Melville. The public, it is clear that he owes the blank disappointment of the campaign, in a great measure to his own extravagance. The world was ready enough to believe that granite forts were not to be captured by a *coup de main*; but he thought that he meant to do it off hand, and that before long he would be dictating terms to Russia in the place of the Emperor. Hence the strong reproof given him by John Bull, and the fairer enough tells him. He formerly charged him with want of discretion, and accuses him of having displayed too much. We owe the gallant Admiral had had another chance; but he was not supported by his former bottle holder Lord Palmerston, and he was advised by his quondam apologist Sir James Graham to do it otherwise. He still fires an occasional shot at the newspapers, and in a very foolish speech made at a house dinner, he appears to have called forth explanations which have improved his position. Sir Charles Napier was a politician in his time. In 1832 and 1837 he con-

sively the boroughs of Portsmouth and Greenwich, and in 1825 was returned to Parliament for Marylebone. He has been a continual thorn in the sides of successive ministers; was always a place in the House; present at every division, and oftener missed the House than any other member whatever. At the vacancy for Marylebone caused by the death of Lord Dudley Stuart, Sir Charles was readily induced to stand; but the majority, having a wholesome dread of his presence in the House of Commons, managed to detain him in the Baltic until the contest was over. In November, 1833, on the death of Sir Milesworth, he was elected for Southwark. In 1828 he submitted to the Admiralty the model of a ship, which has not yet, however, been built; and in 1846 we find him engaged, at the instance of John Bull, in constructing the *Sidon*, a steam-vessel of 100 horse-power, but, like Lord Dundonald's *Janus*, a complete failure. It was the fashion of the Governments of those days to allow any ingenious gentleman possessed of a certain amount of influence in high places, to dissipate large sums of the public money in the construction of ships of war. But with a few exceptions, the *Inconstant*, built after the lines of the late Admiral Hayes, they were all comparatively useless for practical service. The *Sidon*, but that is not saying much for it, is one of the best of these amateur affairs. Sir Charles Napier married the daughter of Edward Elers, Esq., R.N., whose son perished whilst commanding the *Avenger* steam-frigate, when she was wrecked on the Scylla Rocks in the Mediterranean. Sir Charles has only one child, a daughter.

NAPIER, SIR WILLIAM, K.C.B., General and Historian, born 1791, at Castletown, in Ireland, is son of Colonel the Hon. Sir John Napier, by the celebrated Lady Sarah Lennox, daughter of the Duke of Richmond, and brother of the illustrious commander of Scinde. Sir William, having entered the army in 1800, distinguished himself at the siege of Copenhagen, and fought at the battle of King's Mountain. He served with Sir John Moore in 1808, and continuing in the Peninsula throughout the subsequent campaigns, commanded the 43d Regiment at Salamanca, Nivelle, and Née, and was severely wounded during the war. He was Lieutenant-Governor of Germany from 1842 to 1848; and in the latter year received a Military Knight, and became Colonel of the 27th Regt. He was raised in 1851 to the rank of Lieut. General. Sir William had proved that he could use the pen as well as he had wielded the sword. In 1828 he commenced his history of "The History of the War in the Peninsula and in the South of France, from the year 1807 to 1814." This work, which consists of six volumes, is justly regarded as the most valuable record of the scenes it narrates; and the acuteness, accuracy, and knowledge of the art of war, displayed in its pages, are beyond all question. It has been cited as a strong testimony, not only to the fidelity of Sir William's narrative, but to his genuine

in Sicily, which had now began to insist upon a separate constitution. Messina joined the insurrection; and it is computed, on the 7th of March, no fewer than 5000 projectiles were hurled from the citadel and Fort Salvador, and from the return. On the 14th of May, the deputies who had been elected to the Neapolitan Chambers met to discuss the nature of the oath to be taken to the new constitution. The king wished them to be sworn to *en bloc*, as he had promulgated it; but the deputies insisted upon swearing to it "without prejudice to any amendments which may be made to it hereafter by the Chambers." A dispute ensued, in which neither party would give way. In the morning of the 15th barricades were erected in the streets, the royal palace was garrisoned by troops, while artillerymen pointed their guns with lighted maubes. The king hereupon declared that he acceded to the wishes of the deputies, and called the National Guards to withdraw from the barricades and disperse. The latter replied that they would do so as soon as a royal decree was signed and issued, and not before. As invariably happens at such crises, "a musket of a National Guard went off." The other guards thought that the Swiss troops were attacking them, and fired a volley. A bloody fight now ensued, which lasted for eight hours; the Lazzaroni were let loose on the king, and pognarded and plundered in all directions, and many of the population were thus fighting on the side of the insurgents. The consequences may be imagined. At length General Baudi, who was in the harbour, notified to the Government that if it were not ended he would land a force to restore order. The troops now ceased firing, the king was once more proclaimed, and the Chamber was dissolved. Naples was subdued, and the insurrection remained. On the 20th of August, a body of 15,000 soldiers sailed to Messina, and joined the royal troops in garrison. On the 24th of September an attack was made on the part of the insurgents, the fleet in the harbour, and a force which had landed on the shore. After a bombardment of four days, during which the city was fought with heroic courage, the city was taken—a heap of ruins. The insurrection was not so readily put down in Palermo, the seat of the Provisional Government, and at the beginning of 1849, the king thought it expedient to offer to that body, by which it would lay down its arms and acknowledge him as king, a statute, or fundamental law, on the basis of the Constitution of 1812: an electoral law accompanied this proposition. The British and French ministers considered that the concessions contained in this offer were as large as the circumstances of the case would permit, and made the continuance of their mediation contingent upon their acceptance. The Provisional Government, having taken into much to the character of the king, and the probability of his fulfilling his promises, as to the nature of the latter, preferred peace to arms. On the 25th of March hostilities against the king were again resumed. Catania was taken by General Baudi, after a bombardment which laid a great part of the city

of the war in the Basque provinces, in 1840, he quarrelled with Espartero, went over to the party of the queen-regent, and was among those who, in 1841, attempted to overthrow Espartero by insurrection. The attempt miscarried, and he was obliged to take refuge in Paris. Here he was one of the heads of the moderate party in the camarilla of the exiled queen. If not the chief, he was the most zealous furtherer of her plans, for which his ardent and energetic habits fitted him, notwithstanding his eccentric and some peculiarities of character. In 1842 he went to Peru, the better to conduct the movement in favour of Christina. He was one of the leaders of the insurrection against Espartero, in 1843, which resulted in the expulsion of that minister, was owing, in a great measure, to Narvaez, who was rewarded for his services with the dukedom of Valencia, and made a grandee of the first class. On the return of Queen Christina he was at the head of the moderates, and kept down the Progressists and Agacuchos, until the monarchy was overthrown in February, 1846. He remained now in the background, and seems to have opposed the marriage of the queen, as if with the design of making terms with the republic party. Nevertheless, the Pacheco ministry found it advisable to get so formidable a man out of the way, and in May, 1847, appointed him ambassador to Paris. He forthwith made terms with Louis-Philippe, and became a leader in the plots formed against Isabella by her mother and Louis-Philippe. In October, 1847, he became President of the Council, and head of the ministry, but he retained till January 1851, when his ministry broke down on account of financial embarrassments. Bravo Murillo assumed the presidency of the council, and Narvaez went once more to

NASH, JOSEPH, Painter in Water-Colours, brother of Frederick Nash, also a well-known water-colour painter. One of the most valuable of a valuable class of painters, peculiar in their excellence, they are the men who have devoted great skill to the faithful as well as to the picturesque delineation of those remains of true Architecture which have been spared to us, but which the nineteenth century, with its "improvements" and "restorations," is unwilling to respect. As a picturesque draftsman he is unsurpassed for minuteness of architectural detail. Twenty years ago Nash commenced exhibiting at the Society of Water-Colour Painters,—drawings of French castles and antiquities. Careful transcripts of old English architecture followed. Throughout his career he has occasionally painted historical scenes from Shakespeare and Scott. His pictures on which his fame rests are his illustrations of the architecture of the Middle Ages, and the publications lithographed from them: his "History of the Middle Ages," published in 1848; and still more famous "Mansions of England in the Olden Time," in four volumes, published from 1839 to 1849,—an admirable and delightful series. The picturesque effect of these noble old English interiors,—the "withdrawing-room," "carved parlour," or stately "stair-

case,"—is enhanced by effective figures in the costume of centuries ago; but the reality and historical value were. Among Mr. Nash's more elaborate water-colour drawings (of the very nature of the task) not his most felicitous, have "The Queen's Visit to Lincoln's Inn Hall" (1846), and his "Interior Views of the Great Exhibition."

NASSAU, ADOLPH, DUKE OF, born July 24, 1847, ascended the government on August 20, 1839. A constitutional government had existed in his states for many years before his accession to the throne, the nation being, however, represented, not in chambers elected by popular suffrage, but by the States of the realm. In 1848 a new constitution, upon a liberal basis, was proclaimed, and the duke declared his intention to govern by parliamentary means. For a time the experiment promised to succeed. The duke was one of the sovereigns who joined the union of German States under the presidency of the King of Prussia, and after the failure of the Frankfort Constitution, seemed to guarantee a certain amount of constitutional liberty in Germany. The reaction which carried away larger states, however, overpowered Nassau. The duke, probably indulging his own pretensions, went over to the Austrian party in 1850, and has since been with it in the Diet. In November, 1851, the Constitution was extinguished. In 1844 the duke married the daughter of Grand-prince Michael of Russia. The younger line of his family is enthroned in the Netherlands.

NESSELRODE, COUNT, Russian Diplomatist and Minister of State, was born about the year 1770, of a family that had emigrated from Hanover and settled in Livonia, in days when the province was thoroughly German. His father, who was high in favour with the Empress Catherine, was the Ambassador who negotiated the marriage between the eccentric Paul and a princess of Saxe-Coburg; and young Nesselrode, having been educated at the Imperial Military College of St. Petersburg, was honoured by the Czarina with a commission in the Guards. When Paul ascended the throne, he appointed Nesselrode one of his aides-de-camp; but the latter soon discovered that it was a diplomatic and not a military career, for which he had been intended by nature. He seemed to favour his aspirations. Paul had just begun to indulge his romantic admiration of Napoleon; and Nesselrode, then in the vigour of his years and faculties,—just above thirty,—was despatched to Paris. One of the most passionate desires of the Czar was to possess Malta, and Napoleon told him he should have it. Under the influence of this promise, and vainly jealous of the naval and commercial supremacy of England, Paul was stirred to burn all the British vessels in the ports of the Baltic, and to throw their crews as prisoners into the interior of Russia. It was Nesselrode who managed all this; who obtained the promise of Malta for a Russian possession; who fomented the quarrel about it.

and; who aided Bonaparte to organise the Northern Confederacy, which left England alone to fight all the world; and who at the battle of Copenhagen. Consulting his sovereign's mood, and the scheme of his own career upon it, he chose as the first principle of his personal policy that the enmity between Russia and France, and the hostility of both to England, would last his time at least. When Paul suddenly disappeared from the stage of European affairs, Nebelrode, somewhat over-joyed, returned to St. Petersburg, where his gravity, knowledge, industry, and flexibility, won him the favour of the Czar. He was selected as Secretary to the new Emperor, and was soon actively employed in organising an alliance of the great States of Europe against France. He was travelling with his master towards the seat of war when Ulm surrendered, the Austrians were flying before Bonaparte's generals; and Savary sought the Russian quarters, on the arrival of the Emperor to deliver one of Bonaparte's flourishing letters about peace. Nebelrode, but in reality to act as a spy in the Russian camp, it was Nebelrode who received him, exchanged fine sentiments with him, and invited him to come again, to discuss the possibility of a peace without the desertion of Austria by the Czar. Nebelrode, at a second interview with Savary, went forward to Austerlitz to see the Czar and his starving army. Here, by the side of the ex-emperor Alexander, he witnessed the defection of the Austrians, the consultations between the latter and Napoleon about the terms of the Russian alliance. With the whole body of Russians he shared off the Austrian territory; sharing, to all appearance, the indignation experienced by his master at such treatment. As a result, he wrote the protest on the occasion. Some months later he witnessed the perplexing vicissitudes of the day of Eylau, when Napoleon was actually in the very hands of the Russians without being recognised. A few weeks later, when the Czar and Napoleon met on the raft on the Niemen, Nebelrode was present. When the fire of the wooden house was shut, and Alexander opened the conversation with the memorable words, "I hate the English as much as you do, and am ready to second you in all your enterprises against them," Nebelrode was not present, because the Emperor was absent, but he knew what the Czar was there to say; and he knew as well as anybody, that it had been said. In so far as he was concerned in the Treaty of Tilsit, he was answerable as second for the humiliation of Copenhagen, and for that seizure of the British fleet which was absolutely confirmed by the secret articles of the treaty. Nebelrode witnessed the festivities at Erfurt, where his master and the French Emperor rode over the field of battle, and showed one another the remarkable points of the battle; he was quite ready for the shifting of the scenes; and when Napoleon was branded as the common enemy, and the Congress assembled at Vienna, he appeared in the Austrian capital as Russian Plenipotentiary, and exercised his diplomatic skill to procure the restoration of Poland and the annexation of a great part of

NEWCASTLE, DUKE OF.

Prussia. Since that date Nesselrode has been successive Czars, with the office of Minister of Foreign Affairs. He has never, however, in that capacity exhibited any great ability, and it is deemed probable that he has only been little more than head clerk to his Imperial Master. When Turkish affairs came up, from time to time he issued commissions and authorisations to Vicomtes and Consuls who intrigued in Persia; and then, when the matter became a serious matter, disavowed those agents. Lord Durham and Clarendon were obliged to declare themselves with his disclaimers. Recent events, however, are not likely to have disconcerted the hoary courtier, and baffled his craft. After nearly sixty years of labour in the service of his country, during which he has yielded, willow-like, to every wind, Nesselrode is said to have become an object of suspicion to the Emperor and to the heads of both the great parties in his country. He is suspected by the Czar of retaining his long-cherished sympathies in favour of France; and while the German party are at the war now raging, the Muscovites express their indignation at his supposed good will towards the Allied Powers.

NEWCASTLE, HENRY PELHAM CLINTON, DUKE OF. Born 22d May, 1811, and graduated at Christ Church, Oxford, in 1831. In 1832, on Lord Lincoln's death, he became M.P. for South Notts in the House of Commons, and represented that county till 1846. He was a Lord of the Treasury from December 1834, until April 1835; and First Commissioner of Woods and Forests from September 1841, to January 1846. He was then Chief Secretary for Ireland; a post which he resigned in 1846. He unsuccessfully contested South Notts in February, 1846, and was returned for the Falkirk district of Scotland in 1847. He was a member of Sir Robert Peel's party, in favour of the endowment of the Irish Roman Catholic clergy, and of agricultural improvement. In 1852 he joined the Government of the Earl of Aberdeen as Colonial Secretary, and in 1854, according to the system of distributing employments, he was appointed, and performed the duties of Minister of War. On the declaration of war with Russia in the spring of 1854, he continued to perform the duties until then devolving on the war minister, and the Duke of Newcastle was appointed a fourth Secretary of War. The terrible mismanagement which left our troops in the first months of the ensuing winter without shelter, without fuel, and often without food, was referred to him: a great outcry arose against his incapacity. On the meeting of Parliament in January, 1855, the duke defended himself with temper and ability, and his colleagues, who had left him almost alone in the autumn to combat the inertia and obstructiveness of the Government under him, bore witness, too late, to his indefatigable and unremitting care. The House of Commons resolved that a select committee should take place into the management of the war, and the Duke of Newcastle resigned. His successor, Lord Palmerston,

createdly borne testimony to the duke's ability and zeal, as well as by the state in which he had found the War Department; and of official experience generally have bestowed praise on the duke whom the public has so prematurely blamed. Lord John Russell told the House of Commons that, in his opinion, the duke was weak because he had not sufficient personal weight to enforce his policy, and that this defect was not made up by the support which should have been afforded him by the premier. In the autumn of 1855 the Duke visited the Crimea, and subsequently the Southern Kakh, and other military posts on the east coast of the Black Sea.

NEWMAN, F. W., Author, son of John Newman, formerly a banker in Lombard Street, of the firm of Ramsbottom, Newman, and Co., died in London in 1805. His earliest childhood, excepting the winter, was spent at Ham, near Richmond, and afterwards at Norwood. But at the age of six years he was sent to a large private school, where he continued until he was sixteen. He then went to the Rev. Dr. Nicholas's, at Faling, which in those days had the magnitude and almost the rank of a public school; being at one time 290 names on the books, and the plays of the time being acted every summer, as at the Westminster School. In 1822 he was admitted a commoner of Worcester College, Oxford; and at the Easter examinations of 1826 was judged worthy of being placed in the first class of Classics and of Mathematics. In October, 1826, he was admitted Fellow of Balliol College, and held the fellowship until the summer of 1830, at which time he resigned, because he was unable conscientiously to subscribe the Thirty-nine Articles for his Master's degree. Mr. Newman left England the same year, and was absent at Akkpo, Bagdad, Persia, Tabreez, and Constantinople, for nearly three years. In 1833, having returned to England, he became Classical Tutor at Balliol College. At the close of 1835 Mr. Newman married a daughter of the late Sir John Kennaway, of Escot House, Devonshire; formerly English Resident at the court of Hyderabad. In 1836 he became Classical Professor at Manchester New College. In 1846 he received the post—which he still holds—of Latin Lecturer in University College, London. His work on "The Soul, its Nature and Aspirations," has been of immense avail in bridging over the gulf between utter scepticism and struggling faith among many who were insensible to pulpit influences. He has also published "Lectures on Logic," "A Grammar of the Berber Language," "Phases of Faith," "Lectures on Political Economy," "The Fall of Rome," "A History of the Hebrew Monarchy," "Odes of Pindar, translated into unrhymed Metres," "Catholic Union," and several other works, classical and political. He has been a contributor to the *Eclectic* and *Prospective Reviews*, and is now a contributor to the "*Westminster Quarterly*;" chiefly of political articles.

NICHOL, J. P., LL.D., Professor of Astronomy in the University

ard- abolished. On the 7th of April, 1831, Lord Normanby called to succeed his father in the earldom of Mulgrave. In the troubles which prevailed in Jamaica demanded the presence of a governor at once resolute and gentle. A rebellion broke out in the island; the slaves were expecting from the present some amelioration of their condition, and the new lords were resolved to grant their emancipation. Lord Mulgrave was selected to fulfil the difficult mission of restoring tranquillity, and preparing negro and planter alike for the approaching change. Soon after his arrival the Unionist party had excited the troops to mutiny, and a scene of disgraceful confusion ensued. The governor, addressing the troops, recalled them to a sense of duty, and order was secured. The Emancipation Act was passed by the Imperial Legislature, and Lord Mulgrave, having won the confidence of all parties by his judicious, firm, and conciliating conduct in carrying out its provisions, returned to England. He accepted the office of Lord Privy Seal, which he held until the breaking up of the first Melbourne cabinet in 1834. When, in 1835, Lord Melbourne returned to office, Lord Mulgrave was appointed Lord Lieutenant of Ireland. He landed in Dublin May 11th, and immediately attempted an administration of the Government on the principle of impartial justice to all parties, and became the popular of viceroys. He removed from the bench a crowd of judges, who had abused their office to oppress the king's subjects, because they were of another party or creed; abated the rage of entrusting the dominant clergy with the administration of the law; and at the same time strengthened the law by reforming the executive system; uniting in it Catholics as well as Protestants, and making all feel that the law was no longer an enemy to any powerful faction. O'Connell said of him, that he was the Englishman Ireland had ever seen. In April, 1840, he accepted the Irish Lieutenantcy, and was Secretary for the Colonies from September to December of that year, when he became Home Secretary, and held this office until September, 1841. He was appointed Ambassador for France in 1840, which he held until the *coup d'état*, when he was succeeded by Lord Cowley. In 1842 he was appointed Minister to the court of Tuscany. In his spare days he wrote several novels, entitled "Yes and No," "Matilda," "The Contrast," "The Prophet of St. etc.

O.

ONER PACHA, Generalissimo of the Sultan's Forces in Europe (Grand Vizier), is of Croat origin, and was born in the year 1780 at Placki, a village in the district of Ogulin, about sixty miles from Fiume, in the Adriatic. His father, possessed of a small

OMER PACHA.

tion, that to skill in writing, often superciliously considered a mere mechanical attainment, a man of Omer's undoubted worth could after time, indebted for a position in which his talents could assert themselves. It may also be worth mentioning here, that the Marshal cherishes to this day a particular autographic skill; his favourite gift to strangers desiring to possess his autographic Turkish signature, "Omer Le Benefactor;" a title conferred on him in 1853. He was guardian to one of the richest ladies in Constantinople, daughter of an aga of Janissaries, whose father gave her to marriage. The Turkish army at this time existed in little more than a name. Kosrew took a leading part in its organisation, and his work made considerable use of Omer. While yet in the army, he passed two years in the Danubian principalities, employing himself in topographical studies. An author affirms, that when Omer Pacha took the command of the army of Europe in 1854 there was not a wood, brook, or mountain of any kind available for military purposes of which he did not possess a complete knowledge. It was in quelling the insurrection in Albania that Omer first distinguished himself, and was equally successful in Kurdistan. In the year 1848, when Ibrahim Pacha, he made the acquaintance of the Russian army, which the troubles in Wallachia led to the entrance into that country of a Russian army, sent by the Czar in his characteristic "Omer Pacha" was directed also to occupy it in order to uphold the respect due to the Sultan as suzerain. In this duty he executed with great discretion and firmness. He treated the Mohammedan Bosnians, always the most fanatical of the Moslems, resolved to endure no longer the rule of the Sultan, under the Sultans Mahmud and Abdul Medjid, had been driven into Turkey; and taking most of all to heart the want of protection afforded to the Christian subjects of the Empire, he proposed to establish Bosnia as a semi-independent Servia, in order that they might be free to oppress or be oppressed at their pleasure. Tahir Pacha, who then held the command in Bosnia, acted as if he had a secret understanding with the Russians, who soon were masters of Bihars and the entire Herzegovina. At this juncture Omer appeared on the scene, with a small but compact force, and with unlimited powers. He moved rapidly upon one strategic point after another, and defeated the forces brought against him, completely crushing the insurrection, and by the strict discipline which he maintained, and by words, assured the terrified Christian population of the power of the Sultan to afford them the protection which was promised in the Tanzimat. It is customary to reproach him with being a renegade, and doubtless he must bear the stigma attached to that character, but let it be understood, that the part is quite a new one. "Converts," it is said, "are persecutors," but Omer Pacha has been the protector of the Christian subjects of the Sultan and the ameliorator of the

ry 17, 1855), was also effected by Omer Pacha. About the time that the passage of the Danube was effected at ~~an~~, another Ottoman corps of 30,000 men crossed from ~~to~~ Kistat and there formed an entrenched camp, against a powerful Russian army corps was sent, but which was never ~~l~~. The battle of Uitate, fought in front of this position on ~~of~~ January 1854, was most creditable to the Turks; Omer did not command here in person, but to him belongs the ~~of~~ great judgment in placing the Kalafat corps between the ~~a~~ army and the Servians, their ready adherents. Throughout ~~ing~~ and summer of 1854 Omer Pacha's position was one of ~~par~~ty. With resources restricted in every direction, with ~~trial~~ enemy in front and often very equivocal support from ~~at~~inople he yet managed to hold the Russians in check. ~~ge~~ of Silistria began in form about the middle of May, was ~~ed~~ forty days, and ended in complete failure. The Russians ~~(10,000)~~ strong, they had sixty guns in position, and threw ~~s~~ of 30,000 shot and shell into the works, besides an ~~usual~~ quantity of small arm ammunition. They constructed more ~~ree~~ miles of approaches and sprang six mines; made repeated ~~s~~ (at on the 14th of June with 30,000 men), yet gained not ~~of~~ ground, and abandoned the siege with a loss of 10,000 ~~ar~~ goods killed, including Schilders, the chief engineer of ~~ve~~ army. In the following August, Omer Pacha entered ~~est~~, the Russians having received orders from St. Petersburg ~~the~~ Pruth. In the course of January and February, 1855, ~~s~~ked 35,000 men of his Danubian army at Varna for ~~ra~~, according to a plan concerted with Lord Raglan and ~~C~~anrobert. The defences of the town were far from com- ~~n~~ the 17th of February, 1855, when Eupatoria was attacked ~~re~~ estimated by Colonel Simmons, English Commissioner at ~~ba~~ha's head quarters, at not less than 40,000 men of all ~~with~~ 100 guns, many of them thirty two pounders. The ~~st~~ works intended to protect the town had not been com- ~~g~~, and even the intrenchments enclosing it were incom- ~~A~~ gentleman who witnessed the whole affair writes:— ~~ground~~ surrounding Eupatoria is a vast sandy plain, broken ~~d~~ then by hillocks, and close to the entrenchments by two ~~e~~ small ravines. mb of the wealthy shopkeeper or d
d induced them to choose such a spot
urd to imagine; as the inequalities of
n them more or less into disorder in
minutes previously the Furious had
landed on the extreme right of the
gst the windmills, opened their fire on

was just as the head of the column issued from the burying-ground and appeared on the glacis, and at the same moment the attack commenced from the entrenchment. The column pushed to a distance of not more than twenty yards from the ditch, but gave way and fell into disorder. Selim Pacha now made a charge with a brigade of Egyptians, and charged them with the bayonet; but in the act of leading his men on, received a musket-bullet through the body, and fell dead. Ismail Bey was also wounded on the same occasion. The Russians now fell into disorder, gave ground and retired, leaving the graveyard strewn with their dead. Artillery limbered up, and went off, firing occasional shots till they reached the brow of the hill. The cavalry preceded it at a canter, and on the other side the whole retreated in the most beautiful order to a distance of about two miles, where they bivouacked on a plain." The Russian loss on this unlucky day was near seven thousand men. The injurious effect of the news of this disaster upon Czar Nicholas is recorded in the official account of his last illness. Subsequently Omer Pacha joined General Canrobert and fought at Raglan with a part of his army before Sebastopol. His troops, however, took no part in the siege, nor had any other opportunity of distinguishing themselves. After the fall of the Crimean stronghold, the main body of the Turkish army was transferred to the town of Kalka, on the Circassian coast; and in the middle of October, 1855, Omer Pacha led out his battalions to march against the Russians in Mingrelia, and thence threaten the Russian power in Georgia and the other Transcaucasian provinces of the empire. Writers describe Omer Pacha as one of the most agreeable men ever met with; as affable in his high post as he is able and energetic. His personal and domestic habits are European, his religious creed notwithstanding. He is a handsome man, of about five feet nine inches, with grey hairs and moustache, and closely cropped beard; his head is round and well formed, and his countenance pleasing and expressive.

ORLOFF, COUNT ALEXIS, Chief of the Secret Police of the Russian Empire, with the title of Commander-in-Chief of the Imperial Guard. The family of the Orloffs is of recent origin in Russia. The first of that name who rose to distinction under Peter the Great was one of those turbulent Strelitzes whom the sovereign found it necessary to destroy in large numbers. Peter used to honour the daily executions with his presence. One morning, as he was standing close to the fatal block, he was a little surprised when one of the condemned came bustling up and addressed him,—“Now, Prince, move out of the way; this is my place.” Peter thought it a pity that so much fortune should be wasted, and, calling the man aside, conversed with him and spared his life upon receiving a promise of faithful service. The Orloffs rose in power, and increased in wealth. One of the members of the Orloff above referred to was the murderer of Czar Peter III., whom he first poisoned and then strangled;

human court will acknowledge that no man—not even such, who received far more honours—could attempt to stand on the same footing as Orloff with the Emperor. Under the Emperor Orloff retains the direction of that vast system of patronage which makes him one of the most feared men in the empire. Although he may not sustain towards Alexander those personal relations which bound him to Nicholas, his experience and his position will always guarantee to him an important place in the councils and the government of his sovereign. Count Orloff is a nobleman, possessing landed estates of immense extent and fertility.

OVERBECK, FREDERICH, a German Artist, residing at Bonn, is the principal founder of the modern religious school of painting. He was born at Lubeck, July 3, 1789, and commenced his education at Vienna, in 1806. While a student he gave evidence of the peculiar bent of his genius. In 1810 he went to Rome, and embraced the Catholic faith, and has ever since made that city his residence. A Madonna, exhibited in 1811, gave him a wide reputation. The first considerable work executed by the artists of this school were the frescoes from the "History of Joseph," painted at the villa of the Prussian Consul general, Bartholdy. Of these Overbeck painted the "Selling of Joseph," and the "Seven Years' Famine" (1816). In the following year the school won a still higher reputation by the frescoes at the villa of the Marchese Massimi, of which Overbeck furnished five large compositions from Tasso's "Jerusalem Delivered," which were received with great favour. His most famous, however, is the "Miracle of Roses of St. Francis," in the church of the same name at Assisi. His oil paintings are not numerous, for he does not work rapidly. The one best known out of Italy is, "The Entry of Christ into Jerusalem," at Lübeck; a picture begun at Rome, but not finished till 1824 at Rome, and exhibited there. Besides this there are the "Christ on the Mount of Olives," at Bonn; the "Marriage of Mary;" several "Holy Families;" the "Birth of St. Joseph," and the great painting in the Stadel at Frankfurt, representing the "Influence of Religion upon the Human Mind." His drawings, "Christ blessing little Children," "John the Baptist in the Wilderness," "The raising of the Young Man of Nain," and the "Gathering the Manna," also bear witness to his powers. The school to which Overbeck belongs is characterized by the simplicity of the early Italian and German painters, but, however, the only one who has remained faithful to the style with which he set out. His fundamental belief is, that art should exist for its own sake, not for the sake of beauty, but to subserve the cause of religion. Deep sincerity of religious feeling, correctness and harmony of composition, simplicity and touching beauty of expression, cannot be denied to him. But on the other hand, his indifference to all those forms which do not serve as a direct vehicle of religious expression; a contempt for models, for the nude figure, and likewise for antiquities, often betray him into incorrectness and lifelessness of

ry," 2 vols. 1840; "History of British Fossil Mammals and Birds," 8vo. 1 vol. 1845; "History of British Fossil Reptiles," 4to. 1846; "Lectures on the Comparative Anatomy of the Vertebrate Animals," 8vo. 1 vol. 1843; "Lectures on the Comparative Anatomy of the Vertebrate Animals," 8vo. 1 vol. 1846; "The Archetype and Homologies of the Vertebrate Skeleton," 1 vol. 1848; "On the Nature of Limbs," 8vo. 1 vol. 1849; "Parthenogenesis, or the Successive Production of Procreative Individuals from a Single Ovum," 8vo. 1 vol. 1849. Professor Owen has also communicated numerous papers to the Transactions of the Royal, Linnean, Geological, Zoological, Cambridge Philosophical, Medico-Chirurgical, and Microscopical Societies; he has contributed some elaborate Reports, published in the Transactions of the British Association. Of the Microscopical Society he was one of the founders, and first President; and he was a Fellow or Associate of most of the learned societies or scientific academies at home and abroad. Of the foreign estimation of our distinguished countryman we have pleasing evidence in his selection, by the King of Prussia, as Chevalier of the Order of Merit, on the vacancy in the Foreign Members of that body occasioned by the death of Oersted.

OWEN, ROBERT, a Political Theorist, born in Wales. His early career is thus related by one of his admirers:—"At seven years of age he was usher, and at nine under master, of an elementary school in his native town. Next year he was in a neighbouring grocery and drapery shop, and then proceeded to Stamford as a draper's shop, supporting himself for four years, when he came to London, where in two years he was offered a half partnership in the lucrative establishment he had joined, with the promise of the whole concern and adequate capital after a time; but he declined, and at eighteen became a partner in a cotton-spinning factory employing forty men, Arkwright's machinery being introduced therein for the first time. Progressing in worldly prosperity he commenced the Chorlton Mills, near Manchester, and selling out his share with his partners the celebrated New Lanark Mills, in Scotland, including its farm of one hundred and fifty acres and upwards of two thousand inhabitants. During more than a quarter of a century that he conducted this establishment, 'he was visited by kings, princes, archbishops, bishops, and clergy of every denomination, from all countries, to witness the unheard-of results effected on children and on a population of adults living in harmony, and governed only by the novel influence of well directed kindness without punishment or fear.' In furtherance of his great aim, 'to revolutionise peaceably the minds and practice of the human race,' Mr. Owen was invited in 1824, by the Mexican Emperor and others interested in human progress, to go to Mexico which he did, under the sanction and with the aid of the British Government, to ask from the Mexican authorities the government of Yucatan and Texas, then undisputed provinces of Mexico, which

had not the right of appointing governors to these provinces,—they being elected by the people. But they freely offered him a district extending one hundred and fifty miles in breadth, from the Gulf of Mexico to the Pacific, along the line dividing the republic of North America from the republic of Mexico, and in which was included what is now called the golden region of California. New Lanark was commenced in 1784 by Sir R. Arkwright, with David Dale of Glasgow, ‘one of the most benevolent men of the last century.’ Owen married the daughter of this gentleman, and commenced business in the city just half-a-century ago. All sorts of difficulties beset him, for he had to make profit for his partners and work at benevolence for himself. In ten years the gains, after paying 5 per cent capital, were 60,000*l.*, and he bought out his partners for 84,000*l.* His new partners, not content with a similar rate of profit, objected to this extraordinary expenditure for philanthropic purposes, which they ridiculed as visionary and impracticable; and the concern being put up four years after the second partnership, he purchased it for 114,000*l.*, which the partners at that time said declared to be 20,000*l.* too cheap, they having realised in the four years 150,000*l.* profit. The majority of his new partners being men of much benevolence, he had everything his own way, and in 1816 commenced in earnest his great moral experiments.” His friends laud these in the highest terms, but where are now the results? Since that period Mr. Owen has been less fortunate. He attempted to establish a New Moral Community, which failed, and a Labour-Exchange Bazaar, which was equally unsuccessful. He still has followers, who preach the doctrines of their master-school. A more kind-hearted and truly benevolent man does not exist. A sceptic as it regards religious revelation, he is, nevertheless, an out-and-out believer in spirit movements.

OXFORD, THE RIGHT REV. SAMUEL WILBERFORCE BISHOP OF, was born in 1805. He is the third son of the celebrated philanthropist and M. P., William Wilberforce. The highest university honours of this bishop are as follow: He was educated at Oriel College, Oxford; was second class Classics and first class Mathematics, 1826; M.A., 1829; Bampton Lecturer, 1841; D.D. 1845; admitted *ad eundem gradum*, Cambridge, 1847. His early preferments were,—Rectory of Brightstone; Archdeaconry of Surrey; Rectory of Alverstoke; Canonry of Winchester; Chaplaincy to Prince Albert; Dean of Westminster. He was consecrated Bishop of Oxford in 1845, and is also Chancellor of the Order of the Garter, and Lord High Almoner. Amongst his published works are “Agathos,” “Eucharistica,” “Note-Book of a Country Clergyman,” “The Rocky Island,” “Sermons at Oxford,” “Sermons before the Queen,” “Sermons on Miscellaneous Subjects,” etc.

P.

PAKINGTON, THE RIGHT HON. SIR JOHN, Member of Parliament and ex Minister of State, is the son of the late Wm. Pakington, Esq., of Powick Court, in the county of Worcester, and was at his father's seat in 1790. He was educated at Eton, and Balliol College, Oxford; and in 1831 assumed the name of Pakington, as heir of his maternal uncle, the Baronet of Westwood. He, in 1832, been nominated a Deputy Lieutenant of Worcester, and in 1834 Chairman of the Quarter Sessions of that county. He was, in 1837, returned to the House of Commons as Member for Droitwich, which he has ever since represented. Sir John being a staunch Conservative, opposed in 1846 the free-trade measures of Sir R. Peel, who, nevertheless, created him a Knight before leaving office; and in 1848, when Lord J. Russell appeared at the head of affairs, and the deplorable state of the India colonies rendered the sugar duties the question of the day, he was one of the committee of which Lord G. Bentinck was chairman, and as the advocate of a differential duty took a prominent part in the discussions that ensued. When, in 1852, Lord Russell lost a precipitate retreat from office, and Lord Derby was upon to assume the reins of government, Sir John Pakington nominated Earl Grey's successor at the Colonial Office. The Government deemed it hardly less absurd to appoint a chairman of the sessions to the administration of colonial affairs than a Minister to the management of the national finances, and a cry was raised against him by the metropolitan journals; but the Ministry of State bore the abuse like a man determined "to do his duty;" and his industry, sagacity, and intelligence, by silenced derision and elicited praise. Sir John Pakington, after his resignation of office taken an important part in the proceedings of the House of Commons; and during the session of 1855 submitted to Parliament a comprehensive scheme on the question of "education." After several long discussions, however, he was under the necessity of withdrawing the measure, but in an expression of his resolution to reintroduce it in the succeeding session.

PALMERSTON, HENRY TEMPLE, VISCOUNT, First Lord of the Treasury since the accession from that office of Lord Aberdeen, is beyond all question the most remarkable man of his time. In his public career he has displayed, upon all occasions, a genius for surmounting the difficulties incidental to high official station, and a sagacity and energy more especially, which has rarely been equalled, and has never been surpassed, by any minister of the crown who has occupied the reins of government in this country for the last century. A powerful and eloquent orator, with more prudence than Prougham, and less regard for consequences and regard for more expediency than Peel;

PALMERSTON, LORD.

tician, with much of the astuteness of Talleyrand, with un-
 resty; a good natured opponent, with a power of reconcil-
 ing discordant elements to his will, and of snatching from
 antagonists triumphs which it is their business and duty
 to avert;

"They come to scoff, and they remain to vote."

command of sarcastic humour which has sometimes been
 like John Galt's horse, further than its master could
 an approachableness of disposition which it demands none
 of political dignity to concede, and a freedom from con-
 stitutions which has led him, in an age of almost unprece-
 dent, to confer some of the most valuable appointments
 and upon political opponents, or strangers, who possess
 upon his patronage but their merits, a friend of oppor-
 tunities, so far as prudence and foresight have permitted
 qualifications, welded together and impelled by an energy
 and physical, which is almost without a parallel among
 of his years; have rendered him, after a career of unex-
 ceeded for half a century, the most popular minister of his
 Palmerston, although of ancient English and Saxon line,
 takes his title from the peerage of Ireland, in whose records
 is recorded as "Henry John Temple, third Viscount Palmerston,
 of Palmerston, County Dublin, and Baron Temple, of Mount Tem-
 ple, County Sligo." The Temples, to whom his family owes its
 name, are said to have descended from Algar, Earl of Mercia, a relative
 of the mythical Lady Godiva. However this may have been,
 the nobility of his descent, probably from Henry de Temple, Lord
 of the manor of Stowe and the immediate ancestor of
 John Temple, the secretary to Sir Philip Sydney, and
 afterwards to the unhappy Earl of Essex, has never been disputed.
 Philip's family, which was not ennobled until the year 1522,
 is connected with the ducal house of Buckingham and Cam-
 bridge. His ancestral connexions may be instanced the cele-
 brated William Temple, the patron, some say the father, of

Henry Temple, Viscount Palmerston, was born on the 20th
 of October, 1784. His education commenced at Harrow, was con-
 tinued at the University of Edinburgh, and was completed at the University of
 Cambridge.

So far back as the year 1806, when the formation of the
 Grenville administration obliged Lord Henry Petty, of
 the office of Chancellor of the Exchequer, to appoint
 constituents, Lord Palmerston, then little more than a
 student with him the representation of that University, and
 successful on the occasion was fain, for a time, to content
 with the representation of the pocket borough of Rye. In
 the succeeding Parliament he was returned for Newport
 and Wight, which he continued to represent until elected mem-
 ber of the University of Cambridge. On the formation of the Pe-
 tersfield administration, Lord Palmerston, who had dispe-

derable ability in Parliament, was appointed a junior Lord of the Admiralty in which capacity he is said to have shown maturity of judgment that could hardly have been expected in a young man. From that period high expectations were formed of his future career, and a deference was paid to his opinions which is rarely accorded—in political life, at least—to youth and relative inexperience. A speech made by him on the 3d of May, 1804, in opposition to Mr. Ponsonby's motion for the production of papers explanatory of the grounds on which the Admiralty had advised the expedition against Copenhagen, may be held as an indication of the principle of much of his subsequent career as a diplomatist. He objected, as he has often since done, to the disclosure of the facts and motives which had influenced the Government; and defended the policy of the expedition by arguments which were amply verified by subsequent revelations. The success of Copenhagen and the seizure of the Danish fleet were acts of necessity, although, if possible, more "unlucky" than the destruction of the Turkish fleet at Navarino. The young Lord took a statesman's view of the alternative, and as the result proved a correct one. In 1806, on the resignation of the Secretary at War by Lord Castlereagh, Lord Palmerston was appointed to that office. The moment was a critical one; and as there was no dearth of older and more experienced candidates, his appointment for the post affords an incontrovertible proof of the estimation in which his talents and judgment were then held by his contemporaries. In February, 1810, he first moved, as Secretary at War, the Estimates, and was warmly complimented by several influential members of the House on the ability and perspicuity of his statement. Lord Palmerston continued to fill that office until 1812, under the successive administrations of Mr. Perceval, the Duke of Liverpool, Mr. Canning, Lord Goderich, and the Duke of Wellington. During the whole of this period he confined himself to speeches in Parliament chiefly to the business of his department, interfering occasionally only in discussions on other topics, and of these exceptions, however, was the important and vexed question of Catholic Emancipation, to which he had always given a firm and discriminating support. With Mr. Canning, Lord Palmerston, although "paraded" on the Tory side of the House, was in now termed a Liberal Conservative; in other and simpler language, a moderate Whig. Like his great political archetype, he hunted to death a few years afterwards by pseudo-Tories avowing the very principles which, so soon as his presence was removed from the arena, they themselves adopted and turned into political capital, he saw many of those changes the increasing intelligence of the age has rendered inevitable, sharing with Canning in his earnest advocacy of Catholic Emancipation, and in his encouragement of freedom abroad. Lord Palmerston appears like him, in the earlier part of his career, to have been no friend to Parliamentary Reform, although his sentiments on that question underwent in due course a total change.

PALMERSTON, LORD.

ing's death Lord Palmerston seems to have fraternized with Lord Goderich and Mr Huskisson. Having office with the last-mentioned statesman under the Duke of Devonshire, he appears to have resented with manly warmth the Duke's conduct on the East Retford question; and to have reproached the great Duke to drag him as an arbitrary minister for exercise of authority; and, as a proof of his sensibility offered to his friend, he withdrew from the Duke altogether. In the month preceding his accession, Lord Palmerston so far belied his antecedents as to vote against the Corporation Acts; professing, as his motive, that he wanted the emancipation of Dissenters so long as the rights of the Roman Catholics remained unredressed. In May he delivered a powerful address to the House on the state of the country, in which he demonstrated, unimpeachably, his fitness to succeed Mr. Canning in that department. On 1 of March, 1830, he made a brilliant and convincing speech on the affairs of Portugal; in which, after explaining his views on the foreign policy of England, he advocated the necessity of more sympathy than had hitherto been displayed towards the struggling nations of the Continent. His motion was carried by a large majority (150 to 73 votes); but the foundation of a new triumph was laid. On the retirement of the Wellesley administration, and the accession of the Whigs to power, Lord Palmerston became Secretary of State for Foreign Affairs; and until his temporary retirement in 1831, he filled most ably that office. During his tenure of this office his industry was marvellous, and to the clerks of the Foreign Office often extraordinary; for he has sometimes been known to remain at his desk until one or two in the morning; and on such occasions the impatience of his subordinates became inevitable. They were often disturbed by his presence at a very early period of the day; he seldom got fairly into work until late in the afternoon from the date of his accession to the Foreign Office. Lord Palmerston followed the fortunes and supported the policy of the Whigs, and seems to have been selected during that period as the butt for the small wit of his Tory opponents. His habits, and appearance, were alike objects of their attack. Nothing could be more vapid or pointless than the squibs. To designate a well dressed gentleman of a certain age "or" "the juvenile Whig," must, however, have been painful to the members of the party, or the folly would have been repeatedly repeated. A favourite mode of assault with the poets of the day, was to ascribe to his lordship's poetry that appeared in any Whig or Radical newspaper. The public were assured, night after night, for years, that Lord Palmerston was the author of most of the leading articles of the "Morning Star," and that he did not disdain occasionally to entertain his friends on fashion and politics through the medium of the "Morning Star," and thus assertions of the most ridiculous and imprudent.

PALMERSTON, LORD.

acter were repeated, from time to time, until the *godemouches* of the aristocracy and their neophytes began to give them credit. The aristocracy might have assisted in giving currency to these rumours. No cabinet minister of any period was ever so fully courteous to the newspaper press as Lord Palmerston. These civilities by any means restricted to the journal party. If the "Standard" or "Morning Post" required a copy of some official document, or the confirmation or correction of some important political rumour which they could not obtain from the official sources, it mattered not whether the applicant were Whig or Tory, or for; the request, if it involved no breach of official secrecy, was readily complied with. Between 1841 and 1846 Lord Palmerston was in opposition. In December, 1845, some advance was made to him; but the decided hostility of Lord Grey rendered any further arrangement impossible. He was no admirer of the nepotism of Lord Grey, and his lordship knew it; hence the door of office to the stately Earl was then the keeper, was closed against him. On the resignation of Sir Robert Peel the noble Viscount returned to office; resuming with undiminished energy his post of Secretary of State for Foreign Affairs. During the interval between that date and 1851, when he was driven from office by the attacks of Lord John Russell, he carried out the general principles of his policy with vigour and effect. The most important subjects which called upon his attention were: the troubles in Portugal; the revolution question; the revolutionary movements of 1848; the Spanish question of 1849; the Greek question, which had its origin in 1821 and was brought to an issue by the reprisals of 1850; and, finally, the Crimean War and the protection of the fugitive Hungarian emigrants. Lord Palmerston was the object of unceasing intrigue; he contended with an organized and formidable combination of Whigs, and Radicals, encouraged by the press; but he never yielded, whenever he thought it worth his while to put forth his strength, to defeat his assailants most signally. The most serious attack was that which was made upon his policy in 1849; but even on that occasion he succeeded, after a long and bitter debate, in turning the tables on his opponents. The Tories never forget his support of the Catholic Emancipation Bill; and the Dissenters resented his hostility to the Disestablishment of the Test and Corporation Acts. His Lordship's connexion with the Whigs terminated in 1851. He had held the post of Foreign Office from 1830, until the dissolution of the Whig government in November 1844. In the ensuing April he resumed office, but resigned it again in 1846. With the return of the Whigs he became once more Foreign Secretary, but resigned in December 1851. During his connexion with the Whigs, Lord Palmerston committed himself without reserve to the cause of the Whigs; and, abandoning his early prejudices against Parliamentary Reform, advocated, with all his might, the adoption of the Reform Bill. This defection cost him his seat for the 1

rope by the quadruple alliance of England, France, Spain, and
 and. Seldom had a crisis of greater difficulty presented itself
 a country than attended the settlement of the Eastern Question,
 by the solution of which the pacification of Europe was secured
 second time; and it was upon such occasions that his genius
 diplomatist, and his firmness and prescience as a minister, were
 advantageously exercised. His rumoured approval of Louis-
 Napoleon's *coup d'état* once more called into activity the motley band
 opponents, who were not slow to avail themselves of the cir-
 cumstances. On the formation of the cabinet of Lord Aberdeen in
 Lord Palmerston became Secretary of State for the Home De-
 partment, in which capacity his activity and fore-sight have earned
 no slight honour. No public duty appears to come amiss to
 his sanitary measures have, accordingly, kept pace in useful-
 with his skill in the adjustments of national disputes, and his
 actions of the balance of European power. He appears to have
 seen the *coup d'état* of Louis Napoleon with the eye of a states-
 man, as a desperate remedy—a necessary evil. In December, 1853,
 Palmerston's resignation of his post gave rise to rumours of a
 secret character. It was described as having arisen from an
 constitutional attempt at dictation on the part of an influential
 member of the Court; but, whatever may have been its origin, it
 remains a mystery, which is now less likely than ever to be
 cleared. After a few days' withdrawal, Lord Palmerston yielded to
 the importunities of his colleagues and returned to his department,
 where he remained until called by the unanimous voice of the
 House to replace Lord Aberdeen as Premier of England. In 1832
 Palmerston was created a Knight Grand Cross of the Bath,
 and in 1841 a Knight of the Tower and Sword of Portugal.

PALMERSTON, THE RIGHT HON. FOX MAULE, LORD,
 Secretary of State for the War Department, was born on the 22d
 April, 1801. His father, although bearing a new title, was a
 younger son of the noble Scottish family of which the Marquis of
 Dalhousie is the head, and a descendant of that Sir Alexander
 Maule celebrated in medieval chronicles as "The Flower of
 the North." Having been educated at the Charterhouse, Mr.
 Maule entered the army as an Ensign in the 70th Highlanders,
 and for several years in Canada, on the staff of his uncle,
 the Earl of Dalhousie, and retired in 1831 with the rank of
 Major. He commenced his political career in the electioneering
 of Perthshire, and in 1835, when a court intrigue placed
 Peel in office, Mr. Fox Maule contested the county on the Whig
 ticket, and was returned by a triumphant majority. On the forma-
 tion of the Melbourne ministry he was initiated into official myste-
 ry as Under Secretary for the Home Department; and although
 elected from the representation of Perthshire in 1837 he retained
 his office, and was in 1838 restored to the House of Commons as
 member for the Elgin burghs. Elected a second time in 1841, as
 member for Perth, he figured for a brief period as Vice-President

ry numerous; and he had the good fortune to encounter Mirza on the 27th September, 1827, with a vast multitude of armed soldiers. The result was that which commonly happens when a European army meets a really Oriental force. There was brief fanatical and aimless fighting on the part of the Persians, who, however, fell by hundreds under the close heavy fire of Russian artillery and musketry, and were soon in full retreat. Subsequently, Abbas Mirza signed at Deh Koryhan, not far from Erivan, a place, by which Russia gained the khanates of Erivan and Nakhichevan, the exclusive right of maintaining armed vessels in the Caspian, and an indemnity of 40,000,000 roubles. Paskewitch was promoted with the rank of a Field-Marshal and the title of Duke of Erivan. He next turned his arms, but with small success, against the Tchetchen and Lezghians, tribes of the Caucasus, who were at this day, defended their independence against the ambition of Russia. In 1829 he led a Russian army across the frontiers into Turkey, and increased his Russian reputation. His army of three pashas won a pitched battle, and took six ill-dreaded forts. In the next campaign he took the Turkish entrenched camp near Erzeroum, defended by 50,000 men, all either irregular or raw levies, and thus made himself master of that city. He advanced no further when the peace of Adrianople put an end to the war. Upon the death of Diebitzsch, in 1831, Paskewitch was appointed to command the army sent to subvert the revolted kingdom of Poland. His strategic arrangements on this, the Polish campaign, have been much censured, as they needlessly exposed his several corps to isolation; the anarchy which reigned among the Polish generals kept them from taking advantage of this defect, and Paskewitch secured a favourable position for his army to attack Warsaw. The city was taken by assault after the most dreadful struggles on record. Paskewitch was for his services made Prince of Warsaw and Governor of Poland, and a special ukase ordered that throughout the empire the same honours should be paid to him as to the sovereign himself. In 1848 he entered Hungary, as is too well remembered, and notwithstanding a series of military blunders of the first magnitude, had the good fortune to write to the Czar at the end of a few months: "Sire, I am at your Majesty's feet." In 1853 he planned for Czar Nicholas the invasion of the Turkish principalities, but this was diverted, and afterwards superintended in person, the military operations on the Danube, ending with the unsuccessful siege of Silistria.

PATMORE, COVENTRY, Port, born at Woodford in Essex, 1823, is the son of P. G. Patmore, of Literary Remuneration, who was a friend of Hazlitt, Charles Lamb, and Cornwall: the first editor of the "Court Journal," the author of several books, and one of the earliest contributors to "Black-Magazine." Mr. Coventry Patmore's first publication was a volume of verses, which, with many defects, evinced no inconsider-

distinguishing himself which were not overlooked. He laid out the gardens of Chatsworth, famous throughout England; and his plan for the Crystal Palace gained fame for himself throughout the world, and the honour of knighthood. He was elected for a year under the patronage of the Duke of Devonshire in 1854, to be the Editor of "Paston's Magazine of Botany," and the author of various works on gardening; and it is to him we are indebted for the dispatch of the Army Works Corps to the Crimea.

PELISSIER, AIMABLE-JEAN-JACQUES, Marshal in the French Army, appointed May 10th, 1855, Commander-in-Chief of the Army of the East, and also G.C.B., was born at Maromme, département of Rouen, on the 6th of November, 1794. In his twentieth year Pelissier commenced his military career as cadet at the Artillery school of La Fleche, where he remained but two months, and then joined the Ecole Militaire de Paris.

On the 18th of March, 1813, two days before Napoleon entered Paris on his return from Elba, Pelissier was attached to the staff of the king's household with the rank of sub lieutenant; but on the 10th of the next month he was sent to join the 57th Régiment de ligne; one of the regiments of the army assembled by Napoleon at the Rhine. The disbandment of August, 1813, placed him in the 1st Régiment de cavalerie; but on the 25th of October of the same year he was transferred to the 1st Régiment de ligne of the Lower Seine. He now immersed himself in the study of military science, and with so much success that upon the formation of the corps d'état major in 1819, he was admitted to it after a severe examination. He served four years in the infantry, and became an aide major général, when, in May 1819, he was attached to the regiment the "Garde de la Meurthe," and in August, 1820, promoted to a lieutenant.

In 1821 he was appointed to the 51st Régiment of the line, but at his own request was permitted to serve in the 35th Régiment in which his elder brother was captain. In 1823, when Louis XVIII. consented to restore the active rôle of the French Emperor, making it the tool of the Holy Alliance in Spain, Pelissier was placed upon the general staff of the army corps of the Pyrenees, and in the Spanish campaign as aide de camp of General D. Espartero. He received, in September 1823, the cross of a Chevalier of the Legion of Honour, and in December of the same year that of the Grand Officer of Spain. After his return from Spain, Lieutenant Pelissier was successively appointed the aide de camp of Generals D. Espartero and Vallin, and accompanied them in the military inspection of 1824 and 1825. In 1826, while aide de camp of General D. Espartero at the infantry camp of St. Omer, he drew up a plan for the Minister of War on the new manœuvres which had been ordered there under the inspection of a special commission. He was then appointed to the 13th Régiment of infantry of the line; but he was transferred to the infantry of the Royal Guard; and in 1828, promoted to the rank of Captain. In 1828 and 1829 Pelissier served a campaign in Greece, as aide de camp of

PELISSIER.

ral Durrien, and for his brilliant conduct at the siege of
of Morea received the cross of a Chevalier of the Order
, and subsequently the gold cross of the Greek Order of
ur. In 1830 he went out with the expedition to Algiers
distinction, and was appointed Chef de Bataillon and
egion of Honour. In 1831 General Clement de Bort
ed him his aide-de-camp; in April 1832 he was employed
ar depôt, and for a few months directed the military school
ia. In the autumn of the same year he returned to France
became the aide-de-camp of General Pelot, commander
of Observation assembled on the Meuse during the
to Antwerp. From this time we find Pelissier holding
honourable appointments until November 1839, when he
oted to be Lieutenant-Colonel, and appointed Chief
of the Third Division of the troops in Algeria under the
l of General Schramm. In November, 1840, he filed up
in the division of Oran, and on the 8th of July was
nel and Assistant Chief of the General Staff of the Army
na. It was in 1845 that the name of Pelissier acquired
in connexion with an event which has been the subject of
opposite opinions, but of unanimous regret. The Arabs
, had just proclaimed the holy war in the Sahara, and
self "the invulnerable," had inspired the fanatical Kabyles
nd confidence. The insurrection was general. Marshal
d comprehended the importance of crushing this formidable
g with the utmost promptitude, and took his measures
. It is better that the sequel should be told by a Frenchman
. The "Akhbar" of Algiers, of July 5th, 1845, supplies the
wing account:—"There has just occurred in the Sahara
terrible events which deeply afflict all who witness them,
convinced of their frightful necessity, and when they are
n declaring that everything possible was done to prevent
trophe. It is known that the corps commanded by Gen-
sler, St. Arnaud, and De l'Admirault, have been carrying
aned operations in the west. Colonel Pelissier was leading
ing the Ouled Riabs, who have never yet submitted, into
n immense caverns where it would be madness for them to
ter. On the 18th of June, finding themselves closely pressed,
fled to their usual place of refuge. Having surrounded the
ns, some fagots were lighted and thrown by the French into
e the entrance. After this demonstration, which was intended
nvince the Arabs that the French had the power to enter,
ed, of suffocating them in their hiding places, the French
in letters, offering them life and liberty if they would
nder with their horses. At first they refused, but afterwards
consented if the French troops would withdraw. This
was considered inadmissible, and more fagots were thrown
A great tumult now arose, and it was known afterwards
se from a discussion as to whether there should be a
r or not. The party opposed to a surrender carried

and a few of the minority escaped. Colonel Pelissier, wishing to spare the lives of those who remained in the cavern, sent messengers to them to exhort them to surrender. They refused, and a woman, who did not partake of the savage fanaticism of the rest, attempted to fly; but their husbands and relatives bound her, to prevent their escape from the martyrdom they were themselves prepared to suffer. Colonel Pelissier ordered the throwing of the burning fagots, and sent a messenger to parley with the Ouled Raha; but his messenger was killed with a discharge of fire-arms, and could not fulfil his mission.

This state of things continued till the night of the 19th, when all patience, and no longer having a hope of subduing the rebels, who formed a perpetual nucleus of revolt in the country, the fire was renewed and rendered intense. During this time the cries of the unhappy wretches who were being suffocated were heard, and then nothing was heard but the crackling of the falling fagots, which spoke volumes. The troops entered and found the bodies. About 150 Arabs who still breathed were brought into the open air, but a portion of them died soon afterwards. The French, who read this effect, that none but those who, like ourselves, have seen the spot, can judge of the efforts made to avert this catastrophe, comprehend how great was the necessity of reducing these rebels for the sake of the general tranquillity." The transaction was known in Paris, than regret and indignation found universal expression. The opposition party in the Chambers, the press, and the public, was loud in reprobating a proceeding which had degraded France in the eyes of the civilized world.

General Soult, on behalf of the Government, declared that he deeply regretted and strongly disapproved of what had been done, and had written to that effect to the Governor-General of Algeria.

Marshal Hugaud was not deterred by this language from justifying the deed, and taking upon himself the responsibility. The *Moniteur Algérien* of July 22d, 1845, contained an article in which it was asserted that the deed of June 19 was not only a necessity, but an act of general humanity; that having pursued the Arabs to the grotto, Colonel Pelissier had no choice but to demand their submission, or to confirm the belief of the natives in the security of those retreats; and thus indefinitely prolong the war, the delay of a blockade would have endangered the success of the operation, in which the columns of St. Arnaud and L'Armand were equally engaged with that of Pelissier; and that a complete interior of the cave would have rendered certain as great a loss of life as that which took place, against the intentions of the Government.

Finally, and this is what most concerns us here, it was stated that on the 19th of June Colonel Pelissier only carried out the orders of the Governor-General and Commander-in-Chief.

In the following year Pelissier became *Marechal de Camp*. General Cavaignac appointed him *Commandant* of the *Province of Oran*; and seven years later he was still at this post, when an imperial order transferred him to the second command

under General Canrobert before Sebastopol. Pelissier served in Algeria fifteen consecutive years, and took part in every important military operation executed there during that period. It is narrated of him, that on one occasion being, as chef de bataillon, in command of a company of a punishment corps called the Zephyrs, he attacked a mud fortress occupied by Arabs. His men in vain attempted to get over the wall. The Arabs kept a good look-out and repulsed every assault. Pelissier at length said to three or four men about him, "Throw me over, I am sure the company will follow me." His orders were executed. For two or three minutes he was alone at the enemy's position, and in that space of time he received three or four wounds. But he had rightly judged the effect of his heroism; the men followed and the place was taken. He was wounded in the shoulder with a musket-ball in the Bois des Oliviers, 15 June, 1840, and in the arm with a musket-ball in the campaign of Mascara in 1842. Pelissier joined the army before Sebastopol when it was enduring the rigours of its first winter campaign. The first corps, of which he assumed the command, was assigned to the duty of supporting the artillery and engineers before the forts of Sebastopol, extending from the Quarantine Bastion to the great rampart which leads to the Military Harbour; while the second corps, under General Bosquet, was held in readiness to repulse any attack which might be made by the Russian army in the field. He had held the command about four months, during which the French works had been considerably advanced, numerous sorties repulsed, and the Central and Flagstaff Bastions almost ruined; when, on the 19th May, General Canrobert announced his own resignation of the command, and in language honourable to both parties stated that "the Emperor had appointed General Pelissier his successor." Many explanations were at once offered for this sudden transfer: some it was affirmed that General Canrobert's opinion had been negatived in an important discussion at a council of war; by others that he could not acquiesce in the plan of campaign recommended to the Emperor: no one admitted the sufficiency of the reasons put forward in the published official documents relating to the change—the failing health of the resigning general. Whatever the immediate cause of General Canrobert's supercession may have been, it is difficult to discover reasons which must have appeared to the French Government to render it desirable. Although no distinction made between the Allied Governments between the authority with which the commanders-in-chief in the East were invested would authorize either in assuming a superiority, seniority and larger military experience gave a kind of primacy to Lord Raglan from the hour of the death of Marshal St. Arnaud. This relation of the command, if permissible just after the battle of Alma, when the Queen's troops outnumbered those of the Emperor, was not suited to the state of the two armies in May 1855, when the English troops were about 35,000 and the French 120,000. By appointing to the chief command of his army a general entitled by years and reputation to hold firm language in the military councils of the Allies, the Em-

PENNEFATHER, MAJOR-GENERAL JOHN LYS.
Commander of the Second Division of the Army
s the son of an Irish clergyman, the Rev. John
late of New Park, Tipperary. He was born in 1808,
ny as Cornet in January 1818, and obtained the
ant-Colonel in 1839, without having purchased any
Pennefather's name first came prominently before th
usted officer of that distinguished commander, the
James Napier. The operations which secured the c
de have been declared by the Great Duke "the mos

ordinary of which he had ever heard or read;" and in these Pennefather performed an important part. We have had commanders who knew how to starve the *élite* of the British army within five miles of their own abundant supplies. In 1843 Napier, taking Pennefather for his brigadier, started from the banks of the Indus with a force chiefly native, marched across the desert without fear wanting supplies, captured and destroyed the fort of Imannaghar and then concluded a peace with the Ameers of the country. The peace was broken within twenty-four hours after its signature by a treacherous attack on Major Outram's residence, in February 1844. When Napier heard what had taken place, he determined promptly to punish the treachery. Having ascertained that the Ameers were in position at Meannee, ten miles distant from his own camp, with a force of 22,000 men, he resolved not to wait until their interest should increase their numbers and add to their confidence, but to attack them on the 17th. The force with which he proposed to defeat the enemy was composed of only 2800 men of all arms, and twelve pieces of artillery. The enemy were very strongly posted, with fifteen pieces of artillery. Woods were on their flanks, and they were connected by the dry bed of a river, which had a high bank. Napier's force advanced as at a review, across a plain swept by the enemy's cannon. The Artillery, and Her Majesty's 22nd Regiment in line, formed the leading *échelon*, the 25th Native Infantry the second, the 12th Native Infantry the third, and the 1st Grenadier Native Infantry the fourth; the infantry were under Pennefather. The British musketry fire opened at about one hundred yards from the bank, in reply to that of the enemy, and in a few minutes the engagement became general along the bank of the river, on which the combatants fought for three hours or more, man to man, with great fury. Then was seen the superiority of musket and bayonet over the sword, shield, and matchlock. The Beloochees, first in charging their matchlocks and pistols, dashed over the bank with desperate resolution, and at one time the numbers and courage of the enemy bore heavily upon our infantry. A timely charge on the right of the enemy by two cavalry regiments, which had formed in reserve, hastened the result of the battle, and the infantry forced the bank, captured several guns, and decided the victory. The whole of the enemy's artillery, ammunition, standards, and camp were taken. One who was present at the battle has described the face of Sir Charles as beaming with delight as he greeted Pennefather after the battle. Upon a subsequent public occasion in England, Napier declared that to his brigadier he owed the victory of Meannee. In the grand charge, as our regiments were advancing up the bank of the river, Pennefather was shot quite through the body, notwithstanding which he remained at the head of his troops until the victory was completed. For his services in Scinde he was made a Commander of the Bath, and received the thanks of Parliament; his name was also inscribed with that of Napier on the Bombay triumphal column, cast from the metal of the guns captured at Hyderabad. In 1846 he received the colonelcy of the 28th Foot.

PETERMANN.

in the same year attained the rank of Colonel in the army. On the formation of the Eastern army in 1854, Pennefather was placed in command of the first brigade of the Second Division, and attained the rank of Major-General. At the battle of the Alma he led his regiments across the river, opposed by the enemy's artillery on the heights above, and pressed on with the greatest gallantry. An eye witness of the engagement writes of the success which succeeded the passage of the river,—“Brigade-major Pennefather was in the thickest of the fight, leading on and cheering his men, the 55th, 30th, and 95th Regiments. Again and again they were checked, yet they never once drew back in their own ranks, which was marked by a fierce roll of Minie musketry.” After the siege of Sebastopol the Second Division was posted to the Crimea, and on the 26th of October, it was attacked by several battalions of Russian infantry. Upon this occasion Pennefather's brigade chased the enemy over the ridges, and down to the foot of the mountain; and their Brigadier received again the marked approval of the Divisional General. At the battle of Inkermann the Second Division was under the chief command of Pennefather, and Evans having gone on board ship in the harbour of illness. It was the first to sustain the Russian attack, and in the words of Lord Raglan, “gallantly maintained its position in the greatest difficulties throughout this protracted conflict.” Pennefather's “admirable behaviour” was brought under the notice of the Minister of War in the despatch of the Commander-in-Chief. One who was at the battle of Inkermann wrote two years after the event,—“To-day I visited a shipful of wounded (the 2nd Division), including six officers. General Pennefather is among the most astonishing instances of merciful preservation from violence. He and his Brigade-major Thackwell (both unhurt) were shot under them. I saw the carcass of the general, and beside it the unexploded shell, which had passed through the general's head and out through his neck. After the battle of Inkermann, Pennefather was compelled by the state of his health to retire for a time from the field. He, however, returned to duty, and took the permanent command of the Second Division, and attained the rank of Lieutenant-General. In June, 1855, he was promoted Colonel of the 46th Foot.

PETERMANN, AUGUSTUS HENRY, Geographer, was born at Scherode, a small Prussian town situated between the Harz mountains and the Thuringian Forest, on the 18th of April, 1811. He received his education at the College of Nordhausen, and was destined by his parents to become a clergyman; but a decided talent for geography having made itself apparent just as when Professor Berghaus founded a Geographical Institute at Potsdam, a favourable opportunity was thereby offered out his natural inclination, and he was thus, in 1839, transferred to Potsdam. Here he not only visited Professor Berghaus, but during a period of six years was constantly

him in the capacity of private secretary and librarian; living in his house, and thus having the best opportunity to lay a solid foundation for his geographical career. In this position he became personally acquainted with some of the most celebrated men of the profession in Germany, among others Baron Humboldt, for whom he drew, in 1841, the map illustrating his work "Asie Centrale." Owing to his having been for six years chiefly employed on Professor Berghaus' "Physical Atlas," Mr. Petermann was engaged by Mr. A. K. Johnston of Edinburgh to co-operate in the preparation of the English edition of that work, and thus came to Edinburgh in 1845, where he resided two years; in the course of which he constructed and compiled a considerable number of maps of that and other countries, including the explanatory text, all of which bore his name in the first issue of the work. From Edinburgh Mr. Petermann moved to London in 1847, where he became an active member of the Royal Geographical Society, and a contributor to the "Athenæum" on important and interesting geographical topics of the day. He also published various works; amongst others the "Atlas of Physical Geography in connexion with the Rev. Thomas Milner; and an "Account of the Expedition to Central Africa;" he moreover constructed numerous maps, and was a contributor to the new editions of the "Encyclopædia Britannica." His chief claim, however, consists in the interest he took in the explorations then going on in Africa, for through his suggestions and exertions Drs. Barth, Overweg, and Vogel, were charged by the British Government with missions, which have been attended with unexampled success: opened out new and fertile regions to English commerce and enterprise, and created a new interest for the whole continent. His views on Arctic Geography have recently been amply corroborated by Dr. Kane's discovery of a Polar Sea. In 1854, Mr. Petermann was created Professor of Geography at Gotha by the Duke of Saxe-Coburg-Gotha, and in January, 1855, received from the University of Göttingen a diploma of Doctor of Philosophy. Following a call to superintend the Geographical Establishment of Justus Perthes at Gotha, the largest in the world, Dr. Petermann has recently resided at that place, publishing among other works a "Monthly Geographical Journal," but still remaining in intimate connexion with England.

PETO, SIR SAMUEL MORTON, BART., the constructor of many of the greatest engineering works of the present century, and alike remarkable for his active philanthropy, is a native of Woking in Surrey, and was born in 1809. He worked for seven years as carpenter, bricklayer, and mason, under his uncle, Mr. Henry Peto, at whose death, in 1830, Samuel Morton Peto, then just of age, succeeded to a moiety of the very large business; his joint partner being Mr. Thomas Grissell, another nephew of the deceased. Mr. Peto coming at the same time into possession of a very large fortune by his uncle's will, the above partnership was dissolved by mutual consent in 1845; Mr. Grissell continuing on his own account the erection of the Houses of Parliament, the greatest of the

public buildings undertaken by the firm : among these were Hungerford Market, and the Reform and Oxford and Cambridge Clubhouses. He has since constructed a large portion of the London railway works in England, and is at present engaged in the formation of a vast railway in Canada. Having himself begun as a journeyman at the handicraft he was subsequently enabled to superintend, he not only thus acquired an insight into the mechanism of labour, so essential to his calculations in its application to vast organized masses, but he also became familiar with the idiosyncrasy of the English mechanic, and has been enabled to convert such knowledge to the moral improvement of his labourers ; and thus his agents might be seen upon railways of his construction, not merely giving directions and instructions to the men, but also providing them with religious and moral books for the education of themselves and their children ; and telling them that education can civilize the mind, reform the character, and elevate the understanding. This system of management combines discipline, personal freedom, moral admonition, and a total avoidance of ostentatious parsimony. He has also the secret of attaching to him those usually connected with him in his vast operations, as well as winning their gratitude for his ever vigilant supervision of their welfare ; and upon his beautiful estate of Somerleyton, in Norfolk, he has built a model village, and devised various other arrangements for the healthful enjoyment of his labourers. For their moral care he has also provided, by the erection of places of worship ; he has extended this pious care to the metropolis. St. Mary's Chapel was built for the Baptists' worship at the instance of Mr. Peto ; and the Diorama pictures in the Regent's Park have been purchased by him, and altered to a chapel for the use of the Baptist denomination. Among Mr. Peto's recent works should be reckoned his completion of the Norwegian Grand Trunk line, and the Copenhagen and Roskilde line, in 1854. Upon the opening of the latter he received from the hands of the King of Denmark the Order of the Dannebrog. Towards the close of 1854 Mr. Peto took, without prospect of profit, the construction of a railway from Balaklava in the Crimea, originated by the Duke of Newcastle, then Minister-at-War. In consequence of this disinterested undertaking he retired from the representation of the city of Norwich, which he had filled since 1847, and in appreciation of these services received a patent of baronetcy. Sir G. Morgan is married to the daughter of Henry Melnall, Esq., of Kesh, by whom he has several children.

PHILLIPS, CHARLES P., Author of "Anecdotes of Curran," a Barrister-at-law, and Commissioner successively of the Bankruptcy and Insolvency Courts, an Irish forensic orator whose early speeches, and by the delicate style of Hibernian eloquence, attracted a great amount of attention in their day, was born at Sligo in 1787. He con-

menced his education at a private academy in his native town which he quitted in 1802 for the University of Dublin. Having taken his degree of A.B., he entered the Middle Temple in 1807, and was called to the Irish bar in 1811. He there obtained considerable celebrity by a style of oratory which exhibited remarkable command of language, but which was on the whole better adapted to the predilections of Irish audiences than to the more matter-of-fact tastes of English juries. No one is now more thoroughly alive to the defects of the school of oratory by which his youthful taste was nurtured than Mr. Phillips himself; and he would now laugh as heartily over sundry passages in some of his early speeches, as the most fastidious of his critics. We ought not to overlook the fact, however, that this sort of oratory was by no means confined to the Irish bar. The florid style was at that time in considerable request in our own courts of law, if but little favoured in the House of Commons. The advocates of the present day appear to have fallen into the opposite extreme, for they give us nothing but the dry husk of forensic narrative; unenlivened by any of those flowers of oratory which used to impress and conciliate the juries of our youth. We doubt if the highest flights of Curran would now be tolerated in an English court of justice. Dan O'Connell in the Rotunda, however, and Mr. O'Connell, M.P., in the British House of Commons, were perfectly distinct personages, and adopted very different figures in their speeches. Mr. Phillips was called to the English bar in 1821, where he soon acquired considerable reputation as a criminal lawyer, and secured a profitable practice in that capacity. During the chancellorship of Lord Brougham he was offered a silk gown and a seat on the judicial bench of Calcutta; but having "other tow on his distaff" he declined both honours. In 1842 he was appointed by Lord Chancellor Lyndhurst a Commissioner of Bankruptcy at Liverpool, and four years afterwards by Sir James Graham a Commissioner of the Court of Insolvent Debtors; an office which he fills at the present moment with marked delicacy and discrimination. On one occasion, and one only, during his long professional career, has he become obnoxious to public censure. We allude to the conduct imputed to him in his cross-examination of a witness called for the prosecution on the trial of the murderer Courvoisier. Within the last four or five years Mr. Phillips has published a reclamation to some remarks in the "Examiner" newspaper which reiterated the charge, accompanied by documents of so convincing character as to have set the question at rest for ever. The conduct ascribed to him was, moreover, at variance with all the antecedents of his life. Had the charge been well founded, that of attempting to cast discredit on the testimony of a witness whose character was beyond reproach, he would have done no more than many men of the highest eminence in the profession had already done repeatedly, with the most perfect impunity. He declined, however, to shelter himself behind any such precedent; preferring to prove the correctness of the imputation altogether.

PICKERSGILL, FREDERICK RICHARD, A.R.A., an able artist in what may be called the orthodox Academic style, was born in London in 1821. A nephew of H. W. Pickersgill, R.A., the landscape-painter, he is nephew also, on the mother's side, to another — Witherington the landscape-painter. Under the supervision of the latter he gained his earliest instructions in drawing the figure. His aim was from the first to succeed in the "historic" line. In 1840 he first exhibited at the Academy a colour drawing of "The Brazen Age," and that same year became a student of the Academy. He never succeeded in winning a medal. And for some years his meritorious attempts to render great themes, often as uninteresting as difficult,—the "Cure of Hercules and Achelous," "Amoret delivered by Urtomart," "Jupiter cursing his son Polynices,"—attracted little attention. At Westminster Hall, in 1842, his cartoon, "The Death of Lear," attended with greater success; having obtained for him a 100*l*. under the second award. His fresco of the following year, according to his own confession, a failure as to manipulation (the process was one in which, from his moderate command of it, he was ill fitted to excel). In 1845, his scene from Spenser "The cottage of Sclauder," was purchased by Vernon. Two years later his position was suddenly changed; his name made generally known by his colossal "Burial of the Dead," an oil painting, which in the Westminster Hall competition obtained one of the three first class prizes, of 500*l*. (standing second on the list). A varied and difficult composition, it surprised the public by its power of conception and striking execution in drawing, and sober splendour of colour. It was purchased by the Commission for a second sum of 500*l*. and is now placed in the New Houses of Parliament. Two other pictures were purchased at the same time—the "Alfred" of Mr. Watts, and Cruikshank's "The Lion." To this great success succeeded in the same year his election, at the age of twenty-seven, to be Associate of the Academy. His subsequent pictures have been all of a poetical turn from Spenser and Italian history chiefly, displaying much ability of drawing, and of colour. Undoubtedly his finest picture is the "Samson betrayed by Delilah" (of 1850), a triumph in the "grand style," in treatment as well as size; noble in drawing, magnificent in colour, and of dramatic force. It might have secured his promotion to R.A. The "Death of the Duke of Fougere" was his last picture (1854); of higher merit than any of its immediate predecessors.

PIERCE, FRANKLIN, President of the United States, is the son of Benjamin Pierce, who rose to the rank of brigade-major in the American army during the revolutionary war, and held several local offices in the state of New Hampshire. Franklin Pierce was born in the western part of that state, in the town of Hillsborough, in 1804, and, after completing his academical studies at Bowdoin College, Maine. Immediately on leaving college

he commenced his legal studies with Judge Howe, an eminent jurist of Northampton, Massachusetts, but subsequently returned to his native state, and finished his studies at Amherst. He was admitted to the bar, and commenced the practice of his profession in his native town; but before the end of two years he was elected a representative in the State Legislature, and during his second year's service was chosen Speaker of the House. In 1833 he was elected to Congress, and remained a member of the House of Representatives for four years. During this period General Pierce, although a firm supporter of democratic measures, seldom distinguished himself as a debater; being modest and unassuming in his character, and rather quick to hear and slow to speak. In 1837 he was elected a member of the United States Senate, but after five years' service in that body resigned his seat, intending to devote himself wholly to his profession. He had been more than ten years in public life, and he felt the necessity of giving his attention to his private affairs, which had suffered in his absence. He accordingly settled in Concord, the capital of his native state, and resumed his practice at the bar, with a firm resolution to withdraw for the future from public life. He rose to high distinction as an advocate, being considered one of the ablest lawyers in New Hampshire. He firmly adhered to his resolution of accepting no political office; declining to become a candidate for Governorship of the State, or United States Senator, and he also refused the offices of Attorney-general and Secretary of War, which were tendered him by President Polk. On the breaking out of the Mexican war, however, General Pierce deeming that his services were required in the cause of his country, enrolled himself as a private soldier in the New England regiment, but President Polk sent him a colonel's commission, and subsequently raised him to the rank of Brigadier-General in March, 1847. His command consisted of 2500 men, with whom he landed at Vera Cruz, June 28, 1847. He distinguished himself in most of the battles which were fought between Vera Cruz and the city of Mexico, and made himself highly popular with the men under his command. On the restoration of peace between the two countries, he resigned his commission and returned home. He was elected President of the United States in 1853.

PIUS THE NINTH (THE POPE) was born at Senigallia in 1792. A member of the noble family of Ferretti, he was originally intended for the army; but it is said, that having fallen deeply in love with a young English lady at Rome, who refused the proffered alliance on the grounds of the difference in religion, young Ferretti resolved to retire from the world and devote himself to the church. For several years after his ordination he attended to his pastoral duties with an exemplary self-devotion that won universal esteem. He was nominated by Pope Pius the Seventh on a mission to the Government of Chili, in South America, shortly after the recognition of the independence of that republic. The duties of the mission, which were both delicate and important, were performed

discretion and success; and immediately on his return to Rome he was appointed by Leo XII. to one of the most important of the civil departments of administration in the city of Rome after the accession of Gregory XVI. to the Papal throne. He went as apostolic nuncio to Naples; and while the cholera was raging there in 1836, he personally visited the hospitals, attended to the sick, disposed of his plate, furniture, and equipment, and distributed the proceeds among the poorer victims of the epidemic. During the whole period of the epidemic, he was employed night and day in administering the consolation and assistance from his purse. In these visits he went on foot, replying to those who remonstrated with him as to the impropriety in these remarkable words: "When the poor die in the streets, his ministers ought not to ride in coaches." His name is still idolised by the poorer inhabitants of Naples, who will long remember with gratitude his disinterested efforts to alleviate their sufferings. In 1840 he was created Cardinal Bishop of Imola, in the Romagna, where much political excitement existed. However, he devoted himself to the duties of his office with so much zeal and self-denial, and displayed such purity of sentiment, that he soon gained the affections of his flock, and restored peace and tranquillity to the district. During the years of his episcopacy he was only twice absent from his diocese—once on going to Rome to receive his hat as cardinal; and when summoned to attend the conclave for the election of a successor to the pontifical chair. Pope Gregory XVI. died on June 6, 1846. On Sunday, the 14th, the cardinals went in procession with great pomp into conclave. The following day was celebrated throughout Rome that a new Pope was chosen. It was said that the election of Cardinal Ferretti was carried by a majority of four. This, however, does not appear to have been the case. There were three scrutines. At the first ballot, Cardinal Lambruschini—the stern and cruel minister of Gregory XVI.—obtained a plurality of votes, but not sufficient for a decision. Thirty-four were the number required for an election. The cardinals, alarmed at the prospect of the election of the unpopular Lambruschini, and fearing the consequences of the existing disaffection of the inhabitants of the Roman States, withdrew their votes from Lambruschini, and hastily transferred them to Cardinal Ferretti, who happened to be one of the three cardinals present at the opening of the voting papers. On opening the fourth ballot, which gave him the necessary majority, his emotion was so great that he fainted. On the morning of Tuesday, June 10, at nine o'clock, Cardinal Camerlengo appeared in the balcony of the Quirinal to announce the exaltation of Cardinal Ferretti to the papacy, under the name of Pius the Ninth. Austria was powerful enough to command a military occupation in Italy, it had been her policy to crush every movement that promised the slightest approach to a constitutional government. The sub-division of the peninsula into petty states favour

this policy, and gave her a dictatorial power over both princes and people. This power was exercised to retard every improvement, and, notwithstanding the most urgent protest on the part of enlightened men, the system was persevered in until an almost fatal desperation had sprung up amongst all classes of civilisation, and a considerable proportion of the unbeneficed clergy. So intolerable had become the system of government in the Papal States before the death of Gregory XVI., that nothing but the interference of Austria could have kept him on his throne. It was under these circumstances that Pius IX. assumed the pontifical government. The new Pope set to work immediately to popularise himself, by favouring the hopes and wishes of his people; and an enthusiasm not only of the Romans, but of the whole Italian people, was raised to the highest pitch. The disgraceful persecutions and imprisonments of the previous reign afforded him a graceful opportunity of inaugurating the new era by an act of mercy and justice. An amnesty was proclaimed for all political offenders, with very trifling exceptions, and was supposed to have restored about 3000 noble and respectable citizens to their families and friends. A great many offices, for which formerly Churchmen only were eligible, were at once thrown open to the laity. The freedom of the press and the public administration of justice were conceded, and various other reforms were proposed, in spite of the remonstrances of the Austrian ambassadors, and every possible opposition on the part of the Sacred College. Owing to the state of confusion in every department of the public service, these arrangements were not only difficult but dangerous. Although the bulk of the people and many of the nobility went hand-in-hand with the Pope, he was vigorously opposed by the leading clergy who had so long enjoyed the exclusive monopoly of all the patronage of the State. But he was not to be deterred from pursuing what he thought was the path of duty; and seeing his determination and enraged thereat, his opponents entered into a conspiracy to create a tumult, and to take advantage of it to further their views: happily, all was discovered, and the plot prevented. For a considerable time the name of Pius resounded over Europe, and he was hailed with enthusiasm by every true friend to liberty. No doubt the Pope was anxious to give his people beneficial and practical reforms; but, from his secluded life, he had no idea of the strong hold which democratic principles had taken on the Italian mind, and believed it possible to construct such a government as the moderate party as would give his subjects all good and practical reforms; while at the same time it enabled him to resist the broad demands of the more democratic party. But the French Revolution of February, 1848, took place, and gave a new direction to the enthusiasm, not only of the Italian patriots but of the friends of liberal institutions all over Europe; awakening a demand, not for administrative reforms alone, but for popular systems of representative government. These sweeping changes the Pope was not prepared to concede, and from that moment his popularity began to

e. A policy of reaction was attempted, which only tended to increase the agitation for these organs. The heart of all Italy was set on expelling the Austrians. Pius IX. would probably not have been sorry to see them depose him, if he had been assured of the safety of his chair. He even went so far as to countenance the formation of a Roman legion, to which he appointed Gavazzi chaplain; at least this was done in his name. But it is certain that he shrank from the decisive step, and recalled the troops before they had entered the common enemy. At length he took for his minister Rossi, one of the most aristocratic and unpopular men in Rome.

When Rossi was placed at the head of the ministry, the people could with difficulty be restrained from breaking out to open violence. On the 15th of November he went to open the Chamber of Deputies, and his proud and haughty spirit was everywhere brave with gesture and expression the hatred and hostility of the assembled multitude. The result was soon seen. Although surrounded by a strong military escort, a tumult took place at the entrance of the Chamber, and in a moment Count Rossi fell by the hand of an assassin, who escaped. Next morning an immense multitude took up arms, and marching to the pontifical palace, demanded a change of ministry and various organic reforms. They were temporised, but the day of hesitation was gone by; war had been declared, and whoever was not for Italy was against her: the people demanded an immediate and definite answer, which was refused. Rossi had made his election: he loved the temporal power of the papal chair better than his country. A collision took place between the people and the Swiss Guards, who were on duty, and in a short but severe contest the former were victorious. Rome was in a state of the greatest excitement: the popular forces were in the streets, but no one thought of harming the Pontiff.

In the midst of these scenes the diplomatic corps arrived to offer their respects to the Pope. He received them with his usual calm and courtesy. However, the ignorant and hasty Swiss closed the doors of the palace from the windows, wounding five or six persons. A rumour was at the same time disseminated through the crowd that Rossi had been seen with two pistols in his hands, and that he had threatened the people; and their excitement and anger redoubled. When then M. Martinez de la Riva offered, in the name of the King of Spain, and of his sovereign, to place a vessel at the Pope's disposal, and to give him an asylum in Spain. The ambassador of the French Republic also said: "I have not received any instructions to that effect, but I do not fear to be disavowed if I offer to my Father my assistance to protect him and secure his withdrawal." However, outside, Ciceroacchio was calming down the popular frenzy; the few troops on whom Pius IX. thought he could rely to support him against the nation fraternised with the assassins, and the Trancascerini did not stir. Several times the Pope wished to satisfy himself if any persons remained faithful to his cause among the troops or the populace, but he found not

"You see," said the Pope to the ambassadors, "all is impossible. A list of a new ministry was then presented to the Pope: "I cannot sign that," he said; "it is against my conscience." Meanwhile, the crowd augmented, the danger increased, and at about seven o'clock, his signature was given. Rome was then illuminated, and the people went through the streets, crying out—"The Sovereign has given us the Republic." The Pope now handed to the foreign diplomatic body the following protest:—"I am, gentlemen, a prisoner. They have taken away my guards, and I am surrounded by other persons. My conduct at this moment, when support fails me, is based on the principle of avoiding the effusion of all fraternal blood. I make all yield to this principle; but I wish that they would not even employ the ordinary formalities. After these events the Pope remained a prisoner in his palace under the charge of the Civic Guard, but uniformly declined sanctioning any act of the Government, which was still conducted in his name. On the 24th of November Pius escaped from the Quirinal in the disguise of a footman of the Bavarian minister, and arrived safely next day at Gaeta, the first town in the Neapolitan territory whither he was followed by the diplomatic corps. On the 27th sent to Rome an ordonnance, declaring void all the acts of the Government, and superseding it by a state commission. This manifesto the Roman Chambers treated with contempt: appointed a Provisional Government, and set about improving the important results which they had achieved. The Pope remained long at Gaeta, the object of sympathy as the head of the Catholic Church with his own spiritual adherents, and of pity with all liberal men, that had lost the golden opportunity of raising the name of Pius IX. to a greater height than churchman had ever yet attained. His friend to the progression of mankind. His subsequent decisions have proved that Pius IX. was never more than an administrative reformer. He had no confidence either in his people or himself. For eighteen months after his flight from Rome he lived at the royal palace of Portici, about four miles from Naples. On the 4th of April, 1850, he left Portici, escorted by Neapolitan and French dragoons, and accompanied by the King of Naples and several members of his family. He crossed the frontier at Capua on the 6th, and entered Rome on the 12th, amidst the thunder of French cannon. His subsequent government at Rome has been a melancholy exhibition of priestly administration in the worst features of rapacity and imbecility, maintained by the aid of foreign arms.

PLAYFAIR, DR. LYON, C.B., the eminent Physicist who took so active a share in the Great Exhibition of 1851, is the son of Dr. George Playfair, and was born in Bengal in 1819. He

born at St. Andrew's, in Fifeshire, and at a very early age took an interest in chemistry as a recreation. In 1831 he entered as pupil in chemistry, under Professor Thomas Graham, at the University, Glasgow. His health failing in 1835, Playfair revisited India, and upon his recovery returned to Scotland, and rejoined his friend Graham, then Professor to the University. In 1838 Mr. Playfair went to Gießen, to study chemistry under the famous Liebig. Upon his return to Scotland, he undertook the management of the large calico printing of Messrs. Thompson, of Clitheroe, whence he removed, and to Manchester, and was appointed Professor of Chemistry at the Royal Institution. He was next, through the interest of Robert Peel, appointed on the Commission then just constituted to inquire into the sanitary condition of our large towns and populations, and his Reports were characterised by great ability. At the close of the Commission Mr. Playfair was appointed by Robert Peel Chemist to the Museum of Practical Geology; and with the same interest he became associated with the Great Exhibition, and was appointed to visit the manufacturing districts, to advise the manufacturers as to their contributions. Dr. Playfair was also appointed Special Commissioner in charge of the Department of Mines; and at the close of the Exhibition, in recognition of his scientific services, he was made a Companion of the Order, and received an appointment in the Prince President's household. Subsequently Dr. Playfair delivered some valuable illustrations of the benefits of the Exhibition. On the establishment of the Department of Science and Art, in 1853, he was appointed Secretary with Mr. Henry Cole; but in 1855, when Mr. Cole resigned the office of Inspector-General, he became sole Secretary.

PLUMRIDGE, REAR ADMIRAL SIR JAMES HANWAY, distinguished by his gallantry and judicious conduct in the capture of Bomarsund, in the autumn of 1854, entered the naval service in 1799, in the *Osprey*, on the home station. In 1806 he received his commission as Lieutenant, and subsequently served in the *Leda* on the coast of Egypt, and at the defence of Malta, for which services he has received a medal and two clasps.

On May 1, 1809, we find him commanding the *Melpomene*, and gallantly destroying a Danish cutter-of-war, of 16 guns, and several merchantmen, lying under the protection of the land batteries in the harbour of Hülbo, on the coast of Jutland. Afterwards, in the same ship, Lieutenant Plumridge contributed to the repulse of a flotilla of twenty gunboats, whose violent fire killed twenty-four of the ship's people, and greatly damaged her hull, sails, and rigging. In 1814 he acted as Sir Ed. Pellew's aide-de-camp at the reduction of Genoa. In 1815 he was made Commander; acting Captain of the *Amphitrite* in 1817; and in 1822 he was posted. On October 1, 1852, he was promoted to be Rear Admiral of the White, and in 1854 was appointed to command the squadron of paddle-steamers attached

to the Baltic fleet, and hoisted his flag in the *Leopard*; and at Bomarsund he placed his squadron with such success to prevent reinforcements being thrown in, that two Russian admirals, who were sent along the islands to see if it were possible to pass the blockading station, returned in despair. After the action Rear Admiral Plumridge, as second in command, was removed from the *Neptune*, now returned the second time from the Baltic. He was created a Knight Commander of the Bath on July 5, 1855. Admiral Plumridge sat in Parliament for Falmouth from 1841 to 1847; and is now Admiral Superintendent of Devonport dockyard.

POOLE, PAUL FALCONER, A.R.A., a Painter of mind and great poetic capability. Many who have fewer technic skills have not a tithe of his feeling and expression. Born at Bristol in 1817. First exhibited at the Academy, in 1830,—“The Well, a scene in Naples;” and not again till 1837. He has exhibited comparatively few pictures: seldom more than one a-year, sometimes none. But these few have been generally the fruit of thought and of conscientious labour; original in conception and treatment, as often subject. In most of his earlier pictures—“The Farewell” (1837), “The Emigrant’s Departure” (1838), “Hermann and Dorothea at the Fountain” (1840),—the bias is towards sentiment:—always the artist’s forte. “By the Waters of Babylon we sat down and wept,” “Margaret at her Spinning-wheel,” from *Faust* (1842), were of grander spirit. In 1843 his reputation was greatly enhanced by a scene from the history of the Plague,—“Solomon Eagle exhorts the People to Repentance;” an original subject, treated with dramatic power. Of a similar calibre are “The Belshazzar’s Feast” (1844); and “The Visitation of Sion Monastery” (1845). These pictures won admirers and purchasers. In 1846 he was elected Associate of the Academy; beyond which dignity he has yet advanced, although many of inferior genius have been promoted in the interval. In 1847, when oil-pictures were admitted, he entered the lists as a competitor at Westminster Hall, with a large picture of “Edward the Third’s Generosity to the People of Calais;” a work full of episode, life, and interest, but deficient in unity. It gained a prize in the second class, of 300*l.* His subsequent works have been,—“Arlète first discovered by the Red Diable,” (1848); three small scenes from “*The Tempest*,” (1849); “Job and his Friends receiving the Tidings of his Calamity” (1850); “The Goths in Italy,” (1852). The “Job” is Mr. Poole’s most remarkable picture; a new reading of a grand and typical theme, distinguished by clear, forcible action and story, by a discriminated character. In defiance of conventional tradition Job is here represented, not as a venerable greybeard, but as a patriarch in the prime of life. A dreamy, imaginative feeling, akin to that pervading the “Goths in Italy,” characterised Mr. Poole’s last pictures: “The Song of the Troubadour,” (1854); and “Flomena’s Song by the Beautiful Lake,” from the “*Decamerone*” (1855): both romantic and poetic compositions. “The *senza*”

former, "expressed in the earnest, as the warrior-minstrel's strain, is height like atmosphere over battlement anies,—defects of proportion or of patures,—noticeable in the "Job" anese also. Mr. Poole's drawing is und true. His tone and colour possesses, great depth and splendour. Some pictures have never been exhibited colours, and were rustic and domestic," "The Ale-house Door," etc. Late ar class—"The Mountaineers," "Th—are memorable for their depth and signal beauty of colour.

Principal of the Royal Academy o in 1702. He received his earliest in wood, Callcott, and Crotch; and after Germany. At Vienna he enjoyed th gave him valuable advice and assist any years held an eminent place among distinguished himself as a composer among of orchestral symphonies, overtures r his own instrument, are numerous esteemed. As Principal of the Roya h office he succeeded Dr. Crotch, h he usefulness of that national insti

., KING OF, born on the 18th of Sept Ferdinand of Saxe-Cobourg-Gotha, b ia, who, as heiress of the royal hona nty-six troublous years over the realm when Cross and Crescent, Christian anpremacv on the fields of Spain. Th the crown, had hardly attained to hi ual sway remained with his father a ver, had been carefully educated, and of the advantages of foreign travel, b e summer of 1854, and paid a visit t d his own country the relations have larly intimate character. In the sum tugal, availing himself of his nonage t rld, visited the Emperor of the French tained at the Court of the Tueries e, proceeded to Sardinia, where all du ence to Naples, where he was receive ks of respect as to lead to the belie cilian bride. He subsequently lande of England, and on returning to Por

tugal was formally inaugurated as its sovereign. He has since given indications, not to be mistaken, of a resolution to do his duty to the people over whom he reigns. A letter from Lisbon states that the king, soon after his inauguration, called for a list of all the prisoners in the realm, but received only a statement of such names as the authorities deemed deserving of notice. Hereupon the king returned the paper and demanded a complete list, stating that he considered himself the best judge of such criminals as were worth of his notice, and did not wish to overlook the meanest of them. Another rumour is, that the administrator of a petty district having died, his son, a young man of twenty-five, petitioned the king and was promised the place. His Majesty, however, mentioning the matter to the authorities, was told that the new administrator was too young, and that there was a fitter man for his post. "How so?" the king is said to have replied; "I am much younger, and yet am thought capable of governing Portugal. Let the appointment be confirmed." There is yet another of these anecdotes. It is said that during the late regency the business of the cabinet was sometimes transacted with the accompaniment of cigars, the regent himself occasionally smoking. When the indecorous custom was observed for the first time before Dom Pedro, apologetic explanations were made to him. The king is reported to have given no reply, but merely to have turned his back, and afterwards to have issued orders that the practice should be prohibited. It is evident that the king acts advisedly: he conciliates the army, and in public always appears in uniform. He has surrounded himself by men of years and sagacity; for example, General Loureiro, Da Costa, the Marquises de Ficalhos and Bemposta, and others of a similar character. He never signs a paper until he has read and understood its purport, and hopes are entertained that he will gradually remove that mass of corruption which clings so close around the heart of Portugal, and pervades every branch of the administration.

POWERS, HIRAM, Sculptor, was born in Woodstock, Vermont, July 29, 1805. He was the eighth child of a family of nine, and his parents were plain country people who cultivated a small farm. He acquired such education as the district school afforded, and he also found leisure to obtain some knowledge of divers kinds of handicraft, among which was the art of drawing. His father, finding it difficult to maintain his family upon his farm, removed to Ohio, where he died soon afterwards, and the future artist was thrown upon his own resources. He set out for Cincinnati to seek his fortune, and found employment in a reading-room connected with one of the principal hotels of the city; he afterwards became clerk in a provision-store where he remained until his principal failed. He then found a situation with a clockmaker, by whom he was employed in collecting debts, and afterward in the mechanical part of the business; but although this employment was not disagreeable to him, he aspired to some higher branch of the arts. In Cincinnati he made the acquaintance of a Prussian, who was engaged upon a bust of General

with honours appropriate to his favourite studies, and with an intention to devote himself to the legal profession. But the great misfortune of his life had already befallen him. Before he had graduated, an accidental blow had deprived him of the sight of one eye, and the natural consequence soon followed. The other became weakened by the increased labour thrown upon it; and after a severe illness, during which he was entirely blind, he found the sight of his remaining eye so much impaired, that he was compelled to give up his professional studies and hopes of success at the bar. The two next years he spent in Europe, travelling for health in England, France, and Italy, and seeking the aid of the greatest oculists of London and Paris. He returned to America with renovated health, but for his great misfortune found no relief. Still he was not disheartened, but turned with alacrity to those studies which remained yet within his reach. He resolved to become, in the best sense of the word, an historian, and freely gave himself ten years to prepare for the task he had always loved. He next selected his subject, and, having done this, gave ten years more to his "History of Ferdinand and Isabella," one of the most important periods in the affairs of modern Europe that seemed to invite the hand of a master. With this, in 1838, at the age of forty-two, he appeared before the world as an author, publishing simultaneously in London and Boston. His work was received on both sides of the Atlantic, with unhesitating applause. It has since passed through several editions, and has been translated into German, Italian, French, and Spanish. During his labour on this work, Mr. Prescott's vision had been somewhat improved by diminution of the sensibility which had led to earlier inflammations, and which had compelled him to live in a darkened apartment, relying entirely on a reader when collecting his materials. His "Conquest of Mexico," therefore, first printed in 1843, although prepared largely from manuscript documents, was perhaps a work of less laborious toil than his first had been. The prompt honors it received were even more brilliant than those paid to the "Ferdinand and Isabella;" and having before been admitted to several of the distinguished academies of Europe, he was now elected member of the French Institute. His "Conquest of Peru" appeared in 1847; it is marked by the same striking order of events which distinguished its predecessors. He subsequently published a volume of his miscellanies, consisting of Reviews, Essays, &c. The first two volumes of his "History of Philip II." were given to the world in November 1855.

PROCTER, BRYAN W., Poet, (better known under his pseudonym of BARRY CORNWALL), was born about the close of the last century. He was at Harrow with Byron, and while this noble class-mate was enjoying the leisure that fortune secured his less lucky school-fellow gave his youthful hours to the dry tasks of a conveyancer. He began his career in the office of a solicitor at Colne, in Wiltshire, and made his debut as a poet

under the *nom de plume* of "Barry Cornwall" in 1815. His first was a small volume of dramatic sketches, completed with care and skill, and displaying a more natural manner than usual in modern dramatic compositions. In 1821 he produced a comedy, entitled "Mirandola," which was brought out at Covent Garden Theatre with considerable success. He is also the author of "A Sicilian Story," "Marcian Colonna," "The Flood of Thessaly," and a series of lyrics for music entitled "English Songs." His most original efforts are the "Dramatic Scenes." In certain points of style they are modelled upon the old English drama; but they abound with a winning simplicity and graceful sentiment, spontaneously born in the poet's mind. There is nothing stilted or forced in his poems. Like clear streams winding beneath odorous branches and flowery banks, in the soft moonbeams or cheerful sunshine, they steal pleasantly onward. They enlist the reader's sympathy by a delicate truthfulness, and lead him cordially to hail the author as a genuine poet. "Mirandola" is a play which combines not a few of the merits of the "Dramatic Scenes," and the dialogue is throughout interesting. "Marcian Colonna" contains passages of peculiar power, and describes some of the most subtle of human feelings with a rare discrimination. The rhythm is perhaps too unstudied, and the metre and manner given to carelessness; but it contains many felicitous turns of thought and expression which atone for such defects. "The Flood of Thessaly" is a vigorous blank-verse poem. It is well sustained, and exhibits sometimes a Miltonic command of language. Besides these, and many other elaborate poems, Barry Cornwall has published a volume entitled "English Songs," many of which have become general favourites from their feeling tone and simple simplicity. He is a barrister, and enjoys the profitable post of Commissioner of Lunacy. Mr. Procter's poems have passed through several editions.

PRUSSIA, FREDERICK-WILLIAM IV., KING OF, was born 15, 1795, and is the son of Frederick-William III. His father, anxious to make him a worthy ruler of a state whose existence is so nearly dependent on arms and intellectual superiority, withdrew him early from the care of his mother, and placed him under the instruction of the most distinguished men of the day. Having been instructed by Scharnhorst and Kneesebeck in military science, and by F. C. Delbrück and Ancillon in philosophy and letters, the crown-prince studied the principles of public and national law from the celebrated Savigny, while his taste for the fine arts was fostered by Schinkel and Rauch. His boyhood was passed amid affliction and degradation which followed the battle of Jena; but the war of liberation and the revival of Prussian nationality occurred while he was yet a youth. He was present at most of the great battles in the campaigns of 1813 and 1814, although not entrusted with any command. At a suitable age he was admitted to the Council of State, where the affairs of the nation were dis-

cussed prior to the establishment of the parliamentary system and he was afterwards appointed Military Governor of Pomerania. Called to the throne by the decease of his father on the 7th June, 1840, he distinguished his accession by repairing several of the injuries which had grown out of his father's repressive system of government. He issued an amnesty for political offences and recalled many scholars and professors who had been displaced for political reasons; among whom may be mentioned the brothers Grimm and Professor Arndt, of Bonn. At the same time he surrounded his throne with many men eminent in literature and art; as A. M. Schlegel, Tieck, Cornelius, and Mendelssohn-Bartholdy, and founded an order of Civil Merit. The press also now enjoyed unwonted freedom, associations were less narrowly watched, and the provincial representative councils received a new extension. It is to be regretted that the same spirit has not dictated the subsequent part of the reign of this prince. Frederick-William IV. desires, above all things, that his subjects should enjoy good government, but also that they should be entirely indebted to him for it. Hence the delay which took place in the promulgation of a constitution which had been promised from the throne in 1815. Hence the restricted and secondary attribute of the United Diet, or States-General, when, in 1847, it was convoked for the first time in Prussian history. "No piece of paper shall ever come between me and my people," was the expression of the king on opening that assembly; words which the revolution, that broke out in the following year, induced the king to falsify, but which still expressed the inmost wishes of his heart. The constitution promulgated by the king in the plenitude of his power and liberty he wears like a fetter. Too scrupulous to abrogate it, twice within two years he sought the aid of the Chambers to release him from those provisions which best guarantee representative government. In his conduct towards Russia and the Allied powers in the Eastern war, we have a complete development of his character—timid, vacillating, and insincere.

PRUSSIA, FREDERICK-WILLIAM-LOUIS, PRINCE OF and heir-presumptive to the throne of that kingdom, was born March 22, 1797; he is the son of Frederick-William III. and consequently brother to the present sovereign. The prince is Military Governor of Rhenish Prussia, and the king's lieutenant in Pomerania. He observes a scrupulous abstinence from all unauthorized interference with the affairs of the general government; but manifests very decided sentiments whenever his opinions are invited to the king. It generally happens that the brothers think differently and the prince then ostentatiously retires to Coblenz, and, by a double measure of attention to military duties, proclaims that he is a soldier and not a politician. In some important respects he is the moral antipodes of the king. He has no ambition to be esteemed a patron of learning, a pietist, or a philosopher. He would be a Prussian prince of the school of Frederick the Great.

There is in the Prussian Chambers a so-called "Prince of Prussia party;" a small band of Conservative statesmen, headed by Rothmann-Hollweg, who differ from the court party as much as Peel or Gladstone differed from Eldon. This party supports the constitution, but it is by no means certain that the prince would do so if called to the throne; at present he has not sworn to it, and according to the casuistry of the Germanic courts, no ordinary right would entitle him to assume the crown without taking the oath. The prince is known to be heartily ashamed of the part played by Prussia since the outbreak of the Russo-Prussian war; considering it one of unworthy subservience to Russia. On this account he has lately been praised in some of the Continental newspapers as a Liberal. In 1848, however, he was stigmatised as a violent Absolutist, and was so unpopular as to be compelled to leave Prussia for a time. Should he ascend the throne, Prussia will have a strong government or a revolution. The prince married, 11th June, 1829, the Princess Maria-Louisa-Augusta, daughter of Charles-Frederick, grand-duke of Weimar, a lady of liberal disposition, the friend of letters and every liberal art. They have two children: the elder, Prince-Frederick-William-Nicholas-Alexander, born 18th October, 1831; the younger, the Princess Marie-Mary-Elizabeth, born 3d December, 1838.

PUSEY, EDWARD BOUVERIE, D.D., Theologian, and, with Dr. Newman, generally regarded as the founder of the Anglican movement in the Church of England called Puseyites. Some twenty years ago he commenced, in conjunction with Dr. Newman and others, the publication of the work called "Tracts for the Times," in which great learning and the most subtle reasoning were brought to bear in supporting a theory of church worship based upon the primacy of apostolical succession, and attributing an efficacy to the sacraments of the church not inferior to that claimed exclusively by the Church of Rome. These attempts to Romanise the Protestant Church of England led, in 1848, to his suspension, for a time, from the work of a preacher within the precincts of the University. Against this suspension he protested. He is Regius Professor of Hebrew in Oxford, and Canon of Christ Church. Since the desertion of his friend and coadjutor, Dr. Newman, to Romanish communion, Dr. Pusey has taken up a position rather more defensive with regard to Anglicanism; having been somewhat alarmed by the large secessions from the Church among the alumni of Oxford.

PYE, JOHN, the Father of the Modern School of Landscape engraving, and one of the originators, and for upwards of forty years a zealous and energetic supporter, of the "Artists' Fund," was born at Birmingham in 1782. He came to London for the first time in 1801, and passed four years in the studio, or, to speak more properly, the atelier of the late Mr. James Heath, the well-known historical engraver; without, however, acquiring much additional

knowledge of his art. The system of manufacturing engravers practised in those days by even many eminent men of that profession was destructive of the general progress of their pupils. The principals of such establishments usually gave themselves little concern for the advancement of their pupils; seeking only to avail themselves of their dexterity in the peculiar branch of the art in which they displayed the greatest expertness; and keeping them to that department almost exclusively. By such a course, their dependence on their employers was secured; for it often happened, that after labouring in their masters' studios for years, they were wholly incapable of carrying a plate through its various stages to completion, although skilled in the translation of "backgrounds," unapproachable in their "skies," or unrivalled in their "draperies." If Mr. Pye learned little from others, however, he managed to teach himself a great deal more than had been acquired, or practised by most of his contemporaries. In 1810 he became professionally known to the lovers of art by a print of Pope's Villa, at Twickenham, after a picture by J. M. W. Turner; the first engraving which represented an aerial variety of tint for which the works of that great painter had been so deservedly celebrated. This favourable specimen of his work was the means of securing for him full and profitable employment for his burin, although the diminutive size of the engravings which he was at that time for the most part confined, afforded him but little opportunity of exhibiting his capabilities. At an early period of his career, Mr. Pye, having noticed the demoralising effect of improvidence and pauperism on artists in general, and on the body to which he belonged in particular, determined, if possible, to supply a remedy; and with this view, united with several of his friends, painters and amateurs, as well as engravers, in the foundation of the "Artists' Fund;" one of the best and most honestly and judiciously conducted institutions of the kind that has ever been established in this country. The account given by Mr. Pye, in his interesting "History of British Art," of the origin and progress of this self-supporting society, might shame the managers of some of the splendid charities which, with fifty times its means, have done little to realise the objects for which they profess to have been established; and had he no other claims upon public gratitude for his successful exertions, for upwards of forty years, to benefit his poor brother-artists, would entitle him to an honourable mention among the eminent men of our age. The Artists' Fund, or, rather, the society from which it sprung, was commenced in 1809, and has since, from time to time, increasing in public favour and in practical usefulness. Instead of wasting its resources, like the "Guild of Literature and Art," in *fétting* and remunerating its members; or like the "Literary Fund," in large salaries and an expensive council, it presents a model to all similar establishments of which they can too soon avail themselves. It is not only conducted with rigid economy in everything but its benefactions; but is carried on in a spirit which tends to preserve those who have a title to its aid from the loss of self-respect which is one of the degrading consequences of

ely eleemosynary relief. In his admirable *resumé* of the struggles which British art has been called upon to undergo, from the days of George II. to our own, Mr. Pye has detailed the difficulties encountered by the noble little band of philanthropists with whom this association originated, before it was placed upon a permanent basis. Nor has this been the only occasion on which he has established a title to the respect and gratitude of his brother-artists. He has laboured energetically and successfully in rescuing the name of art which he professes, from the stigma so long cast upon it by the Royal Academy of Painting, in refusing to engravers the honours of their diploma. Until very recently, an engraver was not eligible to be elected an Associate, but was denied a full membership of the Royal Academy. The consequence of this insulting restriction was, that no engraver of eminence could be prevailed upon to become a candidate for its honours; and the Associate Engravers were accordingly selected from the rag-end of the profession. Stimulated by Mr. Pye's able exposition of the injustice, a Committee of the House of Commons has recommended that this invidious restriction should be removed, and it has been removed accordingly. In 1836 Mr. Pye published an account of the connexion of engraving with the Royal Academy of Painting, and a *resumé* of the evidence given before the House of Commons on the subject, which has done more to have given the *coup-de-grace* to the monopoly. Her Majesty, as the fountain of honour, and the patron of the Royal Academy, commanded its discontinuance. In 1829 the members of the Artists' Benevolent Society presented Mr. Pye with a piece of plate in recognition of his long and earnest exertions in behalf of the institution. Mr. Pye can, as we have seen, handle his pen with as much facility as his burin. In 1845 appeared his "Patronage of British Art," comprising an account of the rise and progress of art and architecture in London, from the beginning of the reign of George II. to the present period; and a history of the management and distribution of the Trustees' Fund. This work, which is a complete repository of facts and anecdotes connected with British painters and engravers, is indispensable to every genuine lover of art, and must have cost the author no inconsiderable research. As a record of interesting events connected with the English School of Art it is invaluable. Mr. Pye, who has long occupied the first rank among landscape engravers, has executed several fine plates after *chefs-d'œuvre* of Turner, of which the "Temple of Jupiter" may rank as one of the most important. Much of his earlier labours were devoted to those exquisite little engravings for which Peacock's pocket-books were once so celebrated. Among his small plates, two, executed for annual publications, after the "Klosterkirche" of Turner, for the "Literary Souvenir," and the "Sunset" of Barrett, for the "Amulet," are among the most perfect gems of the kind that have ever been produced in this or any other country. They were the first, and, we suspect, the last attempts ever made upon steel by this artist. Mr. Pye is an Honorary Member of the Imperial Academy of Arts of St. Petersburg.

PYNE, JAMES B., Landscape-Painter, was born at Bristol December 5th, 1800. Despite natural leanings to art, he was placed in an attorney's office; and until reaching the age of twenty-one, felt bound to devote himself to his parents' wish. That age once attained, the law was abandoned, and painting adopted as a profession. Nearly five years were passed in Bristol in self-tuition; the painter occasionally sending a landscape to the London Exhibitions. The scanty livelihood his brush could secure he improved by teaching drawing, and by repairing old pictures. In 1835 he came to London, where a year was spent in solitary study. An introduction to Mr. Carpenter of Old Broad Street led to the purchase by the latter of a picture, and to Mr. Carpenter's friendly assistance;—both advice and pecuniary help. Mr. Carpenter, the picture-dealer, also discerned the merit of his works, and proved a friend. After a year or two, pictures were sent to the Academy and so hung as to induce Mr. Pyne to join, in 1839, the ranks of the Society of British Artists; at whose exhibitions his pictures commanded good places, and consequently, buyers. In 1846 a tour was made through Italy, Switzerland, and Germany; which countries have contributed a large proportion of the pictures now painted by him. The English lakes afforded his next supply of picturesque material—material of which previous artists had long availed themselves. Mr. Agnew, the print-publisher of Manchester, commissioned him to execute a series of thirty pictures, illustrative of that noble district. The artist spent three years in the task of exploring, and executing faithful transcripts of its various scenery, under the varied effects of all seasons and of all moods of nature. Mr. Agnew has since published a series of lithographs from these views. The artist paid a second visit to Italy, of three years; returning in 1854 with an abundant store of sketches, drawings, and pictures. The poetry of aerial perspective Pyne understands. Light and air—intangible powers so rarely fixed on canvas,—are realized by him in some of their most dazzling effects. Mr. Pyne is Vice-President of the Society of British Artists. He has written on the technical part of his art in the "Art-Journal."

R.

RADETZKY, JOSEPH, COUNT, Commander of the Austrian army in Italy, was born at Trebnitz, in Bohemia, in 1766. His predilection for military adventures was early developed, and he commenced his military career on the 1st of August, 1781, as a cadet in a cavalry regiment. He was called to take part in the long struggle with Napoleon, and in 1786 became an ensign. Twelve months afterwards a lieutenant. In 1793 he was made captain; and in 1796, major. In 1800 he obtained the colonelcy.

regiment of the Albert Cuirassiers; and in 1801 the rank of major-general. In 1809 he fought with distinction under the Archduke Charles at Agram and Erlingen. On the 27th of May, five days after the battle at the latter place, he received the appointment of Field-marshal-lieutenant, and chief of a regiment of Hussars. In the battles of 1813, 1814, and 1815, he gained honourable distinctions, inasmuch as he defended the independence of his country; at Kulm, Leipsic, and Brienne, exhibited great bravery. He has since been nothing more than the able executioner of a soul-crushing tyranny. Having been successively Governor of Ofen (Hungary), Olmutz (Moravia), and Lemberg (Poland), he was, in 1842, appointed Commander-general of the Lombardo-Venetian Kingdom. Towards the close of 1847, the inhabitants of Milan, affected to the last degree to the Austrian Government, which was regarded as the sign of foreign domination, resolved to injure the revenue of their oppressors by abstaining from the consumption of tobacco; and the use of cigars by an Italian thus became the sign of an anti-patriotic feeling. To bring this cigar question to some point of issue, on the 8d of January, 1848, a supply of cigars was furnished to the soldiers of the Milan barracks, that they might smoke in the streets. As was doubtless expected, the people resented this affront, and frequent collisions between them and the soldiers took place during the day. The soldiers used their arms, many were wounded, and some killed. The 15th January, Radetzky issued from Milan a general order, warning them to prepare for a struggle. In February the emperor announced, in a letter to Archduke Rainer, that he would make no further concessions to the Lombard provinces, and that he relied on the courage of the troops to prevent any evil consequences. The French Revolution was still in the air at Milan, and the people, excited as they were, remained unmoved. But when the tidings of the Revolution of Vienna came, the guard at the Government-house was attacked and overpowered, and O'Donnell, the vice-governor, made prisoner. Two days afterwards, on the 26th of March, the Austrian cannon swept the streets of Milan; but the people got the advantage in many places, and everywhere fought with courage. Radetzky now decided on a bombardment. The people had taken possession of the palace of the viceroy, and planted an immense Italian tricolor flag on the top of the cathedral. They had secured as hostages the family of Director-general Torresano and Count Bolza. The hôtel of the military commandant-general was the only place which resisted the attempts of the people to obtain possession of it. On the night of the 22d it was evacuated, and the soldiers held only the gates of the city. Emissaries arrived from Pavia and Brescia, announcing that they were in open insurrection, and that Archduke Rainer's son was a prisoner. By means of balloons the surrounding population were summoned to come to the help of the Milanese, and to destroy all the roads and bridges by which artillery could be brought to Radetzky. On the 23d, armed peasants from Lecco took the Como and Tosa gates; the citadel was evacuated, and

the Austrians retired in two columns on Verona and Mantua; thence to Cremona, with the intention of falling back upon Verona there to await the arrival of reinforcements. On the 18th of April Charles-Albert, who had now taken the field, forced the Austrian line on the Mincio, and crossing the Adige, took up a position north of Verona. Radetzky was thus cut off from the valley of the Trent, and the Piedmontese army lay between him and Nugent, who was marching to his aid with 15,000 troops. Charles-Albert assigned the Roman troops under Durando the duty of opposing this junction; but that general, disaffected to the patriotic cause, retired before the columns of Nugent, which joined their comrades at Verona, April 22d. On the 6th of May a severe engagement took place between the Piedmontese and Austrians before the walls of Verona. The contest lasted from nine in the morning until five in the evening, but closed without any decisive result. On the 14th of May, the King of Sardinia attacked the fortress of Peschiera, which surrendered on the 30th. On the 29th, Radetzky had struck the Tuscan and Neapolitan line, and driven the Piedmontese general, Bava, to Goito; but the next day Charles-Albert came on and repulsed the Austrians along the right bank of the Mincio, the gates of Mantua. The king now took Rivoli after a sharp engagement; but while he was staying there, the old marshal appeared suddenly before Vicenza, which capitulated, and he turned back to Verona just as Charles-Albert, thinking the place was abandoned, was proceeding to occupy it. By the end of June the Austrians had taken Padua and Palma Nuova; thus securing their communications with Vienna through the Tyrol. A succession of rapid attacks on the Sardinians now took place, and by the 27th of July they had abandoned every post on the line of the Mincio except Peschiera. Radetzky occupied successively, Cremona, Pizzighetone, and Lodi; arrived at Milan, and received offers of capitulation from the chiefs of the Committee of Public Safety, while Charles-Albert was yet in the city. On Sunday, the 6th of August, Radetzky entered Milan, and signed an armistice for six weeks. Peschiera and Osappo were to be evacuated. An armistice, which continued to the end of the year, was signed by the marshal and the king. The Sardinian troops were to be permitted to return to their country, and this was all that their sovereign could obtain. On the 12th of March, 1849, a superior officer arrived in Radetzky's quarters at Milan, bearing a cabinet despatch, which announced the cessation of the armistice. Both the armies crossed the Ticino at the same moment on the 20th, each to invade the other's territory. Ramorino, who had been stationed on the bank to prevent Radetzky's passage, never struck a blow. The Sardinians were now compelled to withdraw their forces from the left bank. Radetzky gave the following account of the battle, which immediately followed, which decided the fate of the Italian cause:—"The hostile army, after (on the 24th of March) cut off from what was in reality their only chance of retreat, determined, with a force of 50,000 men, again to try their fortune of war in a position near Olengo, close to Novara.  been destroyed by fire. Fe
 as erected in a sup
 commensurate with

larity of its minister and the requirements of his congregation, now forms one of the noblest structures in the town of Liverpool. The eagerness with which Dr. Raffles's assistance is sought on the occasion of every important religious service among the sect to which he belongs, is, perhaps, the most striking proof of the estimation in which his ministerial gifts are held by his brother-divines, no less than by the world at large; whilst it may fearlessly be asserted, that unequalled diligence in the more retired walks of his pastoral duties, unwearied attention to the individual necessities of his flock, are no less distinguishing characteristics than his earnest and striking eloquence. Dr. Raffles's name has been rendered additionally familiar to the public by several literary works, some of which have been widely circulated both in this country and in America. Among them is a volume of Poems, published in connexion with his brother-in-law, the late Dr. James Baldwin Brown, barrister-at-law and Jeremiah Holmes Wiffen, the elegant translator of *Time* "Jerusalem Delivered." This was followed by a "Memoir" of the life and ministry of his predecessor, the Rev. Thomas Spencer; work which passed through many editions, and continues to be in request. In 1817 appeared "Letters during a Tour through some part of France, Savoy, Switzerland, Germany, and the Netherlands;" a volume which was dedicated by the author to his distinguished cousin, the late Sir Stamford Raffles, in whose company the tour was made. It was in great request as a guide-book at a time when travels and travellers were by no means so rife as they have become in the present day. To these publications should be added two volumes of lectures on religious subjects, a great variety of sermons, and many contributions in prose and verse to the press of fugitive literature. For his titles, Dr. Raffles is indebted to the University of Aberdeen, and Union College, Schenectady, U.S. the latter conferring the degree of D.D., and the former that LL.D., on the certificates of the late Dukes of Sussex and Somerset; both honours having been unsolicited and unexpected by the recipient. Such few leisure hours as could be snatched from his important avocations, Dr. Raffles has devoted for many years past to the collection of autographs; and having travelled extensively in this and other countries, has gathered together an extensive and valuable body of papers. Amongst his especial gems is a document comprising the signatures of all those who subscribed in Declaration of American Independence, and thus became founders of that great republic the United States; together with letters from all the Presidents, dating from the earliest period of American independence to the present day; a collection quite unique in this country, and therefore worthy of especial mention. It still remains for us to add, that Dr. Raffles married early in life the daughter of James Hargreaves, Esq., of Liverpool, an amiable and accomplished lady, now no more, who proved during her lifetime an able coadjutor of her husband in every plan of usefulness.

RANKE, LEOPOLD, Professor of History in the University of

tion, was born at Wiehe, in Thuringia, December 21, 1795. He embraced the profession of teacher, and in 1818 became head-teacher of the gymnasium at Frankfort-on-the-Oder. His leisure hours were, however, devoted to historical studies. In 1824 he published his first works, "The History of the Roman and Germanic peoples, from 1494 to 1535," and "A Critique upon the Later History of the German Nation." These works attracted so much attention to their author, that in the following year he was invited to Berlin as Professor of Ordinary of History in the University. Soon after entering in this office he was sent by the Prussian Government to Vienna, Rome, and Naples, to examine the historical materials there deposited, particularly those in the archives of the Venetian embassy. The first-fruits of these investigations were the "Princes and States of Southern Europe in the Seventeenth and Eighteenth Centuries" (1827), and the "Conspiracy against Venice in 1688" (1828). Both these works displayed great powers of personal delineation. Of still higher value was "The Popes of Rome; their Church and their State, in the Sixteenth and Seventeenth Centuries" (1834-1839). But the work in which Ranke displays the most laborious investigation, and the greatest completeness of form, is the "German History in the Times of the Reformation" (1839-1841). In these volumes he manifests a power for setting forth the details of history, in combination with their antecedents and consequences, and for delineating the persons of history, beyond that displayed in any of his earlier works. Ranke is satisfied with setting forth the new materials which he has himself investigated, often barely hinting at, and still more frequently altogether passing over what was before known. He has assumed the editorship of several historical periodicals, among which is the "Year-book of the German Empire under the House of Saxony" (1837-1840), in which he sedulously sought to bring before the public the labours of young historical writers. In 1841 Ranke received the appointment of Historiographer of the Prussian state, a distinction which he merited by those works which have placed him in the first rank of German historians.

RAUCH, CHRISTIAN, a distinguished German Sculptor, was born January 2, 1777, at Arolsen, in the territory of Waldeck. His studies in his art were pursued at Cassel, under the sculptor Schinkel. In 1797 he went to Berlin, where, though encountering many obstacles, he made great progress. In 1804 he accompanied Count Andreevsky on a journey through the south of France and Genoa to Rome, where he gained the patronage of Wilhelm Von Humboldt, and the friendship of Thorwaldsen, whose tendencies toward the antique had great influence over him, although he never became a pupil of the great Danish sculptor. While at Rome he executed the reliefs of "Hippolite and Phædra," and "Mars and Venus attended by Diomedes," and a statue of a girl of eleven years, besides a colossal bust of the King of Prussia, now in the White Palace at Berlin; the bust of Queen Luise, and those of Count Mengersky and

Rafael Mengs. In 1811 he was invited to Berlin, along with other artists, by the King of Prussia, to furnish designs for a monument to the Queen. That of Rauch was approved, and its execution entrusted to him; but he had scarcely commenced it when he was attacked by a nervous fever, and received permission, on account of his health, to carry on the work in Italy. He laboured in 1812 at Carrara, and finished the statue of the queen at Rome the next year. In the winter of 1814 he returned to Rome, in order to erect the monument. In 1815 the king gave him commissions for the statues of Generals Scharnhorst and Bulow, which were completed in 1822. As early as 1824 he had executed with his own hands more than seventy busts in marble, of which twenty were of colossal size. For the province of Silesia he modelled a colossal statue in honour of Blücher, which was cast in bronze, and set up at Breslau in 1827. He executed also another statue of Blücher, at the command of the king, in 1826, after the death of that officer. He had a share in the execution of the twelve statues which ornament the national memorial on the Kreuzberg, near Berlin. In 1825 he modelled a sitting statue of King Maximilian of Bavaria, which was cast in bronze, and erected in 1835. Among his masterpieces are the statue of Goethe from life, the memorial to Francke at Halle, the relief for the monument of Miss Cooper at Dublin, and the monument to Albert Durer at Nuremberg; the bronze statues of the old Polish kings, Mieczislaw and Boleslaw Chrobry, commissioned by Count Raczyneky for the cathedral at Posen, finished in 1840; the colossal Victory for the Walhalla; the relief for the sarcophagus of Scharnhorst; a beautiful Naiad for the Emperor of Russia; beside an immense number of busts. But the greatest work by Rauch is the "Frederick the Great," erected between the University and the palace of the Prince of Prussia, of which the model was completed many years ago. Rauch is, in many respects, at the head of German sculptors; he possesses not only the highest powers of imagination, but, as a portrait-sculptor, he unites the power of giving a poetical exaltation to his subject with the utmost truth to nature.

REBOUL, JEAN, "the Baker Poet," was born at Nismes in 1791. He has always resided in the place of his birth, following trade as a baker, which yields him a comfortable maintenance. Since he has gained a name by his lyrical poems, various unsuccessful attempts have been made to induce him to remove to Paris, and engage in literary pursuits. He is to be admired for felicity of expression, and tender, and romantic sentiment, rather than for original power of thought. The poems of Lamartine have evidently been the excuse of his productions. His "Poësies," published in 1836, with a preface by Alexandre Dumas, and a letter from Lamartine, contains some fine lyrical strains; but "Le Dernier Jour, Poème en dix Chants," issued in 1839, is defective in plot. The latest production of Reboul which we have met with is the "Poësies Nouvelles" (1846).

REDDING, CYRUS, Author and Journalist, the co-editor with Campbell, for ten years, of the "New Monthly Magazine," and co-editor of the "Metropolitan," and the author of the well-known "History of Wines," was born at Penryn, in Cornwall, in 1785. Coming to London in 1806, he joined the establishment of the "Evening Standard," an evening newspaper, which he left to commence the publication of the "Plymouth Chronicle," of which he was editor and proprietor for several years. One of his first literary attempts was a poem, entitled "Mount Edgecumbe," which was succeeded by spirited translations from Körner; and from 1815 to 1818, while Mr. Redding resided in France, where he became co-editor of "Galignani's Messenger." In the interim between his departure from Plymouth and the last-mentioned date he had edited "The Dramatic Review," a Warwickshire newspaper; and published a number of brochures, literary and political, some of which attracted considerable attention at the time. In 1820 he succeeded Mr. Dubois, as co-editor with Campbell of the "New Monthly Magazine;" the poet and the humorist having quarrelled and separated after the appearance of the second number. The "New Monthly Magazine" was commenced about the year 1812, and was projected by Mr. Colburn as a rival to Sir Richard D'Almeida's "Monthly Magazine." The enlarged and greatly improved series, which commenced in 1820, was managed for upwards of ten years by Campbell and his coadjutor, during which time stirring lyrics and able prose papers appeared in its pages from Mr. Redding's pen. The executive of the magazine was, however, left almost wholly in his hands; the name of the poet, and some of his lyrics scattered "like angels' visits, few and far between," and a series of lectures on poetry, forming his chief and almost only contributions. Of his connexion with the author of the "Pleasures of Hope," Mr. Redding has given an interesting account in a series of papers which have appeared in the "New Monthly Magazine" since the poet's death. In 1830 Campbell quarrelled with his publisher, and, taking with him his coadjutor, commenced the publication of the "Metropolitan." It was conducted on the same principle, but not with the same success. The enterprise and experience of a first-class book-seller (important elements of the prosperity of a magazine) was rather wanting; and at the end of a couple of years the poet and his "man Friday" quitted the pages of the "Metropolitan" for "fresh fields and pastures new." In 1829 Mr. Redding published a volume of spirited poems, entitled "Gabrielle, etc.;" and in 1833 his "History of Wines," of which three editions had been called for in 1834. Mr. Redding, an uncompromising Liberal from his youth, established, under the auspices of the late Sir John Molesworth and several leading politicians of his party, a Liberal newspaper, entitled the "Bath Guardian," which he edited for two years; when the shareholders—people who had had no experience in newspaper management—quarrelled among themselves, and he resigned his post. In 1836 he established the

"Staffordshire Examiner," one of the cleverest and most trenchant of the liberal provincial journals. For five years Mr. Redding continued to be the terror of Tory evil-doers in that part of the country, but returned to London in 1840, having abandoned the turbid waters of politics for general literature. Among the many productions of his pen, which appeared in succession during the ensuing ten or a dozen years, we may instance "Velasco," a novel in three volumes; a handbook for the wine-cellar, entitled "Every Man his own Butler;" a translation of Thiers's "History of the Consulate," and "A Naval Gazetteer," undertaken under the express sanction of the Admiralty, from its own archives. The last-mentioned publication, however, although partly printed, has never been completed, owing to some dispute between the printer and the speculation. The work would have been eminently useful at the present time, as it contained charts and bearings of all the navigable waters of the globe. Some of Mr. Redding's later years have been devoted to a record of the reminiscences of his own connexion, for more than half a century, with many of the most eminent political and literary men who have been his contemporaries, which promises to be of considerable interest.

REDGRAVE, RICHARD, R.A., Painter, was born in Pimlico, April 30, 1804. He is son of a manufacturer, in whose counting-house he passed his earlier years, chiefly in making designs and working drawings. Journeys were also made by him to measure and direct works in progress. On such occasions, his business duties would linger "with intense pleasure," writes Mr. Redgrave himself in the "Art-Journal," "on the heaths and commons which surround London, making such rude attempts at sketching as a little landscape painting learned at school would suffice for, and searching the plants and wild flowers that grow so plentifully on these open wastes; thus, perhaps, laying the foundation for a love of the growth of plants, and for landscape-painting, among the great sources of present pleasure." When between nineteen and twenty he obtained his father's permission to study from the marble-gallery of the British Museum; and in 1826 was admitted a student in the Royal Academy. But his father's family being large, and his business on the decline, the student would not remain at home to be a burthen. He relied henceforward on his own resources; supporting himself by teaching landscape-drawing. Hard times followed, continuous labour for bread, study under every difficulty, and disappointed hopes. Even when his income as a drawing-master increased, scantier leisure for painting was the result. His first attempts from Shakspeare, etc., were exhibited, and the Academy gold medal competed for;—twice in vain; on the second occasion no less a rival than Macclise carrying it off. At last, a picture exhibited at the British Institution, "Gulliver on the Farmer's Toilet," was bought for the purpose of engraving; his first success. His next effort (1838), "Ellen Orford," from Crabbe, rejected at the Institution, was hung "on the line" at the Academy; and at the

passed. His subsequent pictures, "Quintin Matsys," "Olivia's
 arm to her Parents," (both 1839), "The Reduced Gentleman's
 Chamber," (1840), commanded immediate purchasers and com-
 mends; thus enabling the painter to relinquish most of the drud-
 gery of teaching, and to devote himself to his art. In 1840 he was
 made Associate. The subject-pictures which succeeded, chiefly
 of the domestic and pathetic class, with a bias to the sentimental
 and didactic, won him considerable popularity. Among these were
 "The Castle-builder," (1841); "The Poor Teacher," (1843); "The
 Mistress," "The Wedding Morning—the Departure," (1844);
 "The Governess," (1845); "Sunday Morning," (1846); "Fashion's
 Fall," (1847); and "Country Cousins," painted for Mr. Vernon, in

1847. Very many of our figure-painters excel as delineators of
 landscape. The backgrounds of Mulready's pictures may be
 compared with the works of the finest Dutch painters. Whether of
 the sea or mountain scenery, whether of distance or foreground,
 whether of desert or moorland, what artist can be a more skilful
 painter than Sir Edwin Landseer? The air and sunshine, the
 murmuring trees, the rippling waters, in the midst of which Etty's
 nymphs disport themselves, are painted with a brilliancy
 of colour which no landscape-painter, since the time of Velazquez,
 has caught. And in Mr. Redgrave's works, the observer will re-
 mark with how much delicacy and truth the landscape portions
 of the picture are rendered, and with what keen observation and
 truth this painter evidently pursues Nature. During the latter
 part of his career Mr. Redgrave has devoted more direct attention
 to landscape, the branch of art which attracted him as a boy, one
 in which he has cultivated with greater power, far fresher feeling, and
 more felicity, than the range wherein he first won reputation. In
 1842, he exhibited at the Academy one of those "gloomy glades" of
 mossy trees, which (on canvas) we have since learned to associate
 with his name; and in 1846 his next landscape, "The Brook." The
 contrast of a few of his subsequent works, annually augmenting in
 number and in beauty, suggests pleasant thoughts of spots, "sweet,
 pure, and sacred:" "Happy Sheep;" "The Moor-hen's Haunt,"
 (1847); "Spring—the Trout's dark Haunt," (1848); "The Solitary
 Lake," (1849); "The Evelyn Woods," (1850); "The Poet's Study,"
 (1851); "The Woodland Mirror," (1852); "The Forest Portal,"
 (1853); "An old English Homestead," (1854); and the "Mid-
 dle Shade;" another "exquisite illusion" of an ancient grove,
 its trunks overgrown with lichen, and chequered with golden sun-
 light from above. An occasional cleverly-executed figure-piece
 has meanwhile been produced, of higher pretensions than the pre-
 vious scenes from every-day life: as "The Attiring of Griselda,"
 (1850); "The Flight into Egypt," (1851), in which year Mr. Red-
 grave was elected R.A. During the latter years of the Government
 School of Design, Mr. Redgrave was its head-master, and on the
 re-constitution of the Department of Practical Art, subsequently enlarged
 to that of Science and Art, he became Art-Superintendent, which
 office he still retains. He has also, in conjunction with Mr. Cole,
 been largely employed in the arrangement of the Museum of Ornamental Art at Marlborough House.

That loving study of plants and wild flowers, betrayed in the perfection of foreground detail of his landscapes, bears good fruit in practice as a teacher of Decorative Art. By his designs for Art manufacture he has made successful attempts to elevate the character of the latter; and his lectures on Decorative Art at the School display great original knowledge and original feeling on the subject.

REED, THE REV. ANDREW, D.D., Independent Minister, Wycliffe Chapel, Commercial Road, London, was born November 1788. He was educated at Hackney College, and is author of "Fiction" (1819), eighteen editions of which have already been published. Dr. Reed was deputed by the Congregational Union of England and Wales to visit America, and to report on the state of religion and education in that country; and he has published the *Narrative of the Visit*, in 2 vols. 8vo. Apart from his denominational position Dr. Reed claims a niche in these pages from his high philanthropic usefulness as the founder of the following charities:—The London Orphan Asylum, Clapton; Infant Orphan Asylum, Walthamstead; Asylum for Fatherless Children, Stamford Hill; Asylum for Idiots, for which a very handsome and commodious building has been erected at Reigate; and the Royal Hospital for Paralytics, charged as Incurable from the General Hospitals. "I was hungry, and ye gave me meat: I was a stranger, and ye took me in: I was sick, and ye visited me. Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

REID, CAPTAIN MAYNE, Novelist, is a native of the North of Ireland, where his father was a Presbyterian minister. He was born in 1818, and was educated for the church; but a taste for travel and adventure being more deeply seated in his mind than a love of theological studies, he in 1838 set out for Mexico, without any definite aim. Arrived at New Orleans, he was initiated in the wild and lawless freedom that then characterised life in the "Crescent City," and from this point his career is almost as adventurous as that of one of his own heroes of romance. He made two excursions up the Red River, trading and hunting in company with the Indians. In 1840 he returned to New Orleans, and a report being then prevalent of the invasion of Texas by the Mexicans, he joined a volunteer party for the purpose of repressing this outrage. The report, however, turned out to be unfounded, and the company was disbanded. He subsequently made several excursions up the Missouri, and the prairies, where he remained for nearly five years, enjoying the wild freedom of the backwoods, and its accompaniments. He subsequently travelled through almost every state in the Union, during which journeys and his previous backwoods experiences he acquired that knowledge of character and graphic incident by which his writings are so peculiarly distinguished. He subsequently settled down for a time in the city of Philadelphia, devoting himself to literature as a profession, and contributing largely to the journals and magazines. In 1845, when war was declared between the United States and Mexico, Captain Mayne once more assumed the sword.

ty over Captain Pen, and Mr. Reid sought and obtained a commission in the American army. He was present at the siege and capture of Vera Cruz, and also at the battle of Cerro Gordo. He took an active part in the various encounters with the enemy, he distinguished himself by heading the last charge of the army at the action of Churubusco. He led the forlorn hope in the assault of the castle of Chapultepec, ascending an almost perpendicular steep, and arriving foremost at the enemy's guns, he was shot down, and supposed to be killed. The news of his fate was conveyed to his family by the reports in the newspapers; but in the midst of their mourning for his death, they were relieved by a second and equally veracious report which reached them that not only was he not dead, but married to a Mexican lady, the richest heiress in the valley of Mexico! For his gallantry at Chapultepec, Captain Reid was mentioned in despatches of five officers, including the commander-in-chief. When the Mexican war was brought to a close he resigned his commission, and organised a body of men in New York to proceed to Hungary, to take part in the struggle of that country for independence. This expedition left New York in 1849, and had proceeded as far as Paris, when it was met by the unhappy news of the total failure of the expedition, and the extinction of all hope through the "treachery of the French." He subsequently came to London, where he once more devoted himself to literature, producing successively "The Rifle Hunters" (1849), "The Scalp Hunters" (1850), in both of which his own romantic adventures and experiences of prairie life and the adventure are largely interwoven. He has also, besides contributing to various periodicals, published a delightful series of books, in which adventure is pleasingly combined with instruction in natural history—"The Desert Home" (1851), "The Boy Hunters" (1852), "The Young Voyageurs" (1853), "The Forest Exiles" (1854), "The Bush Boys" (1855). He has also recently published a romance, entitled "The White Chief," 3 vols. 1855.

REID, COLONEL SIR WILLIAM, K.C.B., Royal Engineers, eldest son of the Rev. James Reid, a clergyman of the Scotch Church at Kinglassie, in Fifeshire, and was born at that place, in four or five miles of the birthplace of Adam Smith, in 1791, and brought up at Woolwich Academy for the corps of engineers. He entered the army in 1809, and was engaged during the last four years of the war in the Peninsula, under the Duke of Wellington. At the conclusion of the peace he served on the staff of America under General Lambert, until the termination of the war there, and rejoined the Duke of Wellington again in 1815. In 1816 he served in the expedition against the Moslems; was Adjutant of the corps of Sappers for some years after the peace; in 1838 was appointed to the Governorship of Bermuda; and in 1846 to that of the Windward West India Islands. In both these situations he was fortunate enough, by his calm and conciliatory conduct, to gain the confidence and good-will

of the entire population. On his arrival in Bermuda in 1833, found agriculture far behind; corn and hay were imported; there was little fruit; bitter citron-trees grew everywhere; and in front of the Government-house was a wide swamp. Colonel Reid set an example of improvement. He grafted a sweet orange on a bitter citron-tree in front of the Government-house; it bore good fruit and in due time all the bitter trees were grafted. He drained the swamp, imported ploughs, had ploughing taught, gave prizes for the best productions, and in 1846 held a grand agricultural show on a fine dry meadow field—the old swamp. In fact, he gave new life to the people; showed them how to work out their own prosperity; changed the face of the island, took great interest in popular education; and won the title of “the Good Governor,” by which he is still affectionately remembered in Bermuda. In 1848 he returned to England, and in 1849 was appointed Commanding Engineer at Woolwich, and directed the Engineer officers and Sappers and Miners at the Great Exhibition. On the resignation of Mr. Edw. Stephenson, Colonel Reid was requested by the Royal Commission to become, in his room, Chairman of the Executive Committee, in which capacity he served with unremitting attention. But the public services of Colonel Reid, in both civil and military capacities, will be less enduringly known than his valuable labours in the investigation of the law of storms, by a careful analysis of various hurricanes of the Atlantic and Indian Oceans. When employed as Major of Engineers in Barbadoes, restoring the buildings ruined in the hurricane of 1831, curiosity led him to inquire into the history of former storms; but the West Indian records contain little beyond details of losses in lives and property, and make no attempt to furnish data whereby the true character or the regular courses of these storms may be investigated. Mr. Redfield's paper in the “American Journal of Science,” on the “Gales and Hurricanes of the North Atlantic,” had been previously published, and of the copies sent to the West Indies, one was placed in the hands of Colonel Reid, who was impressed with the importance of the subject, and became satisfied of the rotative character and determinate progress of these storms as maintained by Mr. Redfield. In 1838, Colonel Reid having been able to devote more attention to these inquiries, published his first paper “On Hurricanes,” in the second volume of “Professional Papers of the Royal Engineer.” His valuable work, entitled “An Attempt to develop the Law of Storms by means of Facts arranged according to Place and Time,” appeared in the same year; three enlarged editions of which have since been issued. His later work, entitled “The Progress and Development of the Law of Storms and of the Variable Winds,” and the Practical Application of the Subject to Navigation, was published in 1849. By these labours, and those of Redfield, Piddington, and Thom, his principal co-operators, the power of knowledge has conquered even the hurricane; and the intelligent mariner, by the indications of the barometer, and those of the early signs of the coming storm, may securely watch its approach, and

at all cases) its dangerous vortex, and thus sail on unharmed gale, even while skilfully using its outer winds to expedite voyage. In September, 1851, Colonel Reid received the unsought appointment of Governor of Malta; and on the close of his service at the Great Exhibition, for which he declined remuneration, the office of knighthood was bestowed by the Queen, and he proceeded to the discharge of the governorship of that island.

RETZSCH, MORITZ, the well-known German Artist, was born at Dresden, December 9, 1779. Although he manifested as a child prodigious talent for drawing and modelling, his early ambition was limited to attaining the post of forester in the royal domains, but he did not form the determination to devote himself to art until a somewhat advanced period. He chose historical painting as his profession, and in 1798 attended the Academy, where he made rapid progress. His plans were deranged by the war which broke out in 1806. Being the sole support of his family, he was obliged to forego his cherished wish of visiting Italy. He selected his subjects principally from the region of romantic poetry, although he did not unfrequently draw from his own imagination, as in the case of his series of illustrations of human life, of which he published six sheets himself. His reputation, however, was founded on his outline illustrations to the works of the great poets, especially those to Goethe's "Faust," consisting of twenty-six sheets of designs, published in 1812, and an enlarged edition in 1834, which were widely copied in France and England. In 1816 he was elected member, and in 1824 Professor, in the Academy of Arts at Dresden. In 1822 he was commissioned by Cotta, of Stuttgart, to produce outline illustrations to "Schiller's works." He produced designs to "Fredolin," the "Fight with the Dragon," "Pegasus tamed," and the "Song of the Bell." He also undertook a series of illustrations to Shakspeare's Dramatic Works, of which eight parts, amounting to six plays, appeared between 1827 and 1830. Besides these he produced illustrations to "Burger's Ballads," two collections, "Phantasies," "The Contest between Light and Darkness," and many separate designs, the best of which is his famous "Chess-Players." In his peculiar sphere, marked by originality of conception and execution never lapsing into a feeble mediocrity, Retzsch has no superior. As a portrait-painter he was successful in producing striking likenesses; his miniatures are much admired, although his efforts in oil-painting have not been successful: he has lately contributed a series of designs to the London "Art-Journal," which are below mediocrity.

RICHARDSON, CHARLES, LL.D., Etymologist and Lexicographer, was born in July 1775, and bred to the law, but quitted it for the more attractive calling of literature. His first literary production was "Illustrations of English Philology," (1805), a cri-

tical examination of Dr. Johnson's Dictionary, and remarks on V. D. Stewart's essay, "On the Tendency of some late Philological Speculations;" in which he showed himself to be a strenuous advocate of Horne Tooke's "Principles of Language." Soon after publication of this work he was asked to undertake the lexicographical portion of the "Encyclopædia Metropolitana." The first part of this work was published in January 1818, but in consequence of the failure of the publishers it was suspended after publication of the fourth part for upwards of three years. Subsequently, the copyright and the stock were sold. Dr. Richardson again resumed the work under the auspices of Mr. Murray and his co-proprietors. The publication of the "Dictionary" commenced by the late Mr. Pickering, commenced in January 1833 and completed in the spring of 1837. An abridgment of the work, 8vo., was published at the latter end of 1808. Both works were also reprinted at New York. The unhappy failure of the respected publisher, Mr. Pickering, who held a moiety of the right, must of course have brought much trouble and anxiety on the author, which we understand was finally terminated by an arrangement under which Mr. Whittingham, of the famed Chiswick Press, and Mr. George Bell, became purchasers of the entire copyright, and editions of both, in quarto and octavo, have since been issued. Dr. Richardson has published a little volume "On the Science of Language." It professes to be an exposition of the principles inculcated in the "Diversions of Purley," by which the author declares himself to have been guided in the composition of the Dictionary. Besides these substantive works, Dr. Richardson contributed several papers to the "Gentleman's Magazine," a Historical Essay on English Grammar and English Grammars, and another on "Fancy and Imagination," in which he contrasts the opinions of D. Stewart and Mr. Wordsworth, considering quite unphilosophical to suppose them either different powers or different operations of the mind.

RITCHIE, LEITCH. Author of various popular works. Born in Greenock, about the beginning of this century. After serving an apprenticeship in a banking-house in his native town, while yet a mere youth, obtained letters of introduction to several leading merchants in London, and visited the metropolis, having been thrown much into the society of literary persons. The bent of his mind towards literature became greatly strengthened. He remained a considerable time in London, but at length his friends recalled him, and he performed the return journey to Scotland; spending on the way about two months, he profited by the opportunity to make an excursion to the Lakes of Cumberland. Through the interest of his family he obtained a situation in the counting-house of a firm of extensive West India and North American merchants in Glasgow, where he joined some friends in starting a periodical entitled "The Wanderer." His employers becoming bankrupts, he again set off for London, and wrote for several

periodicals of the time. He also published a volume of tales, "Head Pieces and Tail Pieces." Subsequently he visited India, but his health becoming impaired, he abandoned all claims of mercantile pursuits, and resolved to adopt authorship for a profession. On his return to London he contributed some articles to the "Foreign Quarterly Review," the "Westminster Review," and several other periodicals; but his principal reputation was the "London Weekly Review." He then published "Anecdotes and Confessions," and when the "London Weekly Review" passed into other hands, he and the editor, Mr. J. A. St. John, continued upon producing substantive works. Without losing sight of his former connexion, Mr. Ritchie and Mr. St. John took a family to Normandy. There Mr. Ritchie wrote "The Game of Chess," and "Romance of French History." The latter work established his reputation, and literary employment now came in upon him. With William Kennedy, author of "Fitful Days," he commenced "The Englishman's Magazine," so named after the Duke of Devonshire; but a severe attack of illness, produced by overtasking his powers, prevented him from continuing it. He was next engaged by Charles Heath to write two series of books of travels, to be published under the general titles of "Turner's Annual Tour," and "Turner's Picturesque Annual." This opened the Continent to his literary wanderings, from Moscow on the one hand to Venice on the other. He traversed an immense range of country, and was enabled to describe vividly and artistically the picturesque varied scenery which everywhere met his eye. He produced several volumes of these illustrated works, and afterwards published an illustrated "Pedestrian Tour of the Wye." At intervals he wrote papers in the "Athenæum," and published "The Magician," "Schinderaunes, or the Robber of the Rhine." At the same time he edited for Messrs. Smith and Elder the "Library of Romance." As the public had become tired of Annuals, to which Mr. Ritchie had made large contributions, he became editor of "The London weekly newspaper," and subsequently brought out and edited "The Indian News," the copyright of which, on its being remunerative, was presented to him by the proprietors. In conducting this publication he wrote "The British World in the East." In consequence of the publishers of the "Asiatic Review" having brought out a journal called "The Indian Mail," he disposed of the copyright of the "Indian News." Having accepted proposals from Messrs. W. and R. Chambers of Edinburgh to edit their "Journal," he returned to Scotland for that purpose, and for some years past has, in conjunction with these gentlemen, edited that periodical, besides assisting them in their other publications. His latest production, a work of fiction entitled "Weary of Common," is marked by the usual graces of his style. He has written upwards of thirty original volumes, edited and partly written between forty and fifty more, and, if collected, the aggregate bulk of his periodical writings would greatly add to this large number.

ROBERTS, DAVID, R.A., Painter, was born at Stockbridge, Edinburgh, October 24, 1796. He was apprenticed when a boy to an Edinburgh house-painter, Bengo, an eccentric man of talent, and served his time under him, along with D. R. Hay. That gentleman, unlike himself, adhered to his original craft; subsequently elevated it by his taste into that of Decorator, and making his name well known by many ingenious treatises on the laws of design and colour. Roberts acquired his first instruction in Art at the school in which Wilkie, Allan, and many another celebrity obtained their education—that of the Trustees' Academy. He made his debut in London as a scene-painter at Drury Lane Theatre, where he commenced his career, in conjunction with his friend and brother-academyman Stanfield, in 1822. He first exhibited in the Royal Academy, in 1823, a view of Rouen Cathedral, and in the following year another of Germain at Amiens; but only once again (1830), during the next seven years. Like Stanfield, Roberts was for several years a member, and part of the time Vice-President, of the Society of British Artists. In 1835–7 he contributed to the Academy, views of Spanish Antiquities; in 1839 was elected Associate; and has been since a copious contributor of views of Egyptian Architecture, Scenery, Spanish, Belgian, Scottish; worked up in oils, and sketches supplied by his well-filled portfolios. In 1841 he was elected R.A. For several of his later views Venice and Verona have supplied the materials. "The Inauguration of the Great Exhibition," of 1854, was a commission from the Queen. Next to Landseer, Roberts is almost the only living painter of our age who enjoys an European celebrity. This is due to the numerous published engravings of his sketches, and to the cosmopolitan materials of the latter. The first engraving of consequence of his works was a large mezzotint by Quiley, "The Departure of the Israelites from Egypt," painted for his early friend and patron Lord Northwick; but at the sale of his lordship's town collection purchased for the late Sir Robert Peel. It is now at Drayton Manor. Among the principal works illustrated by him have been "The Pilgrims of the Rhine," by Sir Edward Bulwer Lytton—a series of engravings in line by nearly, if not all, the best landscape engravers;—vols. 1835, 1836, 1837, and 1838 of the "Landscape Annual," embracing views, principally in Spain and Morocco, Grenada, Seville, Castile, Andalusia, and Biscay. These have been re-engraved in France, Germany, and Spain, and are curious from being the only views of the kind known in those countries. Roberts's "Spanish Sketches," again, is a well-known series in lithography. Many of the plates were transferred to stone by the artist's own hand. His principal work, and that in which the artist will be most identified, is his "Sketches in the Holy Land, Syria, Idumea, Arabia, Egypt, and Nubia," engraved in lithography by Louis Haghe, described historically by Dr. G. and published by Moon, in four folio volumes, containing 100 subjects, the size of the original drawings. It occupied the artist and engraver eight years, and is perhaps the largest illustrated

of the kind ever produced in this country, or any other: on which artist, engraver, and publisher may look back to pride; for it reflects equal honour on all. In reference to sketches of Roberts, Thackeray has admirably written:—That region of earth is there that does not show signs of Englishman's labour? Our painters share the spirit of enterprise along with the rest of our people; and Mr. Roberts has visited at least three of the quarters of the globe, and brought likenesses of their cities and people in his portfolio. He resided for years in Spain; he set up his tent in the Syrian desert; he has sketched the spires of Antwerp, the peaks of Mont Blanc, the rocks of Calton Hill, the towers and castles that rise on the Rhine; the airy Cairo minarets, the solemn Pyramids and Theban columns, and the huts under the date-trees along the banks of the Nile. Can any calling be more pleasant than that of such an artist? The life is at once thoughtful and adventurous; gives infinite variety and excitement, and constant opportunity for reflection. As one looks at the multifarious works of this brave and hardy painter, whose hand is the perfect and unflinching slave of his intellect, and ready, like a Genius in an Arabian tale, to execute the most wonderful feats and beautiful designs with the most extraordinary rapidity, any man who loves to venture himself must envy the lucky mortal whose lot it is to live in such a way. He reads the magnificent book of Nature for himself, and at first hand. O happy painter! from the deck of your boat you sketch the sea and the shore: you moor under the city walls; and mosque and dome, Gothic cathedral, tower, and ancient fortress, rise up with their long perspectives, and varied outlines and hues, and solemn shadows, fantastic and beautiful, built in an hour or two under the magical strokes of your delightful, obedient, little genius, the pencil! The ferry-boat pulls off from the stairs, and makes its way across the river to the old town on the bank yonder, where the windows in the quaint-tiled houses and the vanes on the towers are still flaming in the sunset, and reflected in the river beneath. Tower and town, river and distant hill, boat and ferry, and the steersman with his rattle, and the peasants with the grape-baskets singing in the street, are all sketched down on the painter's drawing-board before the sun has sunk, and before he returns to his snug supper at the inn, where the landlord's pretty daughter comes and peers at the magician's portfolio. Or the cangia moors by the bank: the Arab crew are cooking their meal and chanting their song: the camels come down to the water and receive their loads of cotton, and disappear with their shouting drivers under the date-trees, to the village with the crumbled wall and minaret, where the grave elders are seated smoking under the gate, and the women pass to and fro, straight and stately, robed in flowing robes, bearing pitchers on their graceful heads: the painter sketches them all down, while the light lasts him, and when the sun has set he smokes his own pipe under the stars on the deck;

after a long day of pleasant labour, and before he closes his eyes which have been so busy and so pleased all day. Or he is before dawn upon his mule to see the sun rise over the heights of the sierra; or he is seated at morning, the sheikh with his gun over his shoulder watching, and the Arabs lying round the tent, 'silent upon a peak in Lebanon.' Happy painter!"

ROBINSON, JOHN H., Engraver, was born at Bolton, Lancashire, in 1796, and became a pupil of James Heath. He is one of the most eminent line-engravers of the present day,—one who, in the teeth of discouragement, has striven to preserve the purity of the most difficult as well as the most satisfactory branch of his art. While Doo excels in boldness and grandeur of line, and Sharpe did before him, Robinson's manner tends to the modern perfection of finish; finish united (in his case) to intimacy, delicacy and sweetness of execution. Among his more celebrated prints are "Napoleon and Pope Pius IX.," after Wilkie; "The Wolf and the Lamb," after Mulready; "The Manilla," after the Marchioness of Abercorn, and "Little Red Riding-Hood," after Landseer; "Sir Walter Scott," after Lawrence; "The Emperor Theodosius," and the portrait of Rubens, both after Vanderwerf; "Spanish Flower-Girl," after Murillo. He has executed, too, some very beautiful book-plates. Two of the choicest examples of his art as an engraver are the "Sisters," after F. P. Stephanoff, and the recently published "Mother and Child," from Leslie's picture of 1846; that most lovely piece of nature and of refined poetic feeling.

ROBINSON, THE REV. EDWARD, D.D., LL.D., a distinguished American Scholar, born at Southington, Connecticut, 1794. He studied at Hamilton College, Clinton, New York, where he graduated in 1815, and afterwards became Mathematical and Greek tutor. In 1818 he married, and gave up his post; but by his wife, he entered the Theological Seminary at Andover in 1820, where he soon afterwards received the appointment of Assistant Instructor in the department of Sacred Literature. In 1825 he visited Europe, and studied at Paris and Halle, devoting his attention mainly to Oriental languages and literature. Here he married the daughter of Professor Jacobi, then and since distinguished in the world of letters under her *nom de plume* of "Talvi." On his return to his native country he was appointed Assistant Professor and Librarian at Andover, and subsequently Professor of Biblical Literature in the Union Theological Seminary, New York, an appointment which he still holds. Previous to entering upon the duties of his office he passed two years in the Holy Land; studying its topography, verifying its sites, and clearing away many of the monkish traditions by which its sacred localities had been obscured. He has given to the world the results of his inquiries under the title of "Biblical Researches in Palestine, Mount Sinai, and Arabia Petrea," 2 vols. 8vo. (1841), for which the Royal Geographical

ty voted him its gold medal. From the time of his return to United States and his entry on his professorial duties, Dr. Robinson has not ceased to be actively engaged in various lexicographical and literary labours, mostly connected with the subject of Hebrew literature. In the winter of 1851, Dr. Robinson again sailed on a second visit to the Holy Land, for the purpose of completing inquiries and of setting at rest certain controversies which had arisen in consequence of opinions promulgated in his former work. The results of this second tour have been announced for publication under the title of "Further Researches in Palestine," etc.

ROEBUCK, JOHN ARTHUR, M.P., a Radical Politician and barrister, is a grandson of Dr. John Roebuck, an eminent physician of Birmingham, and is maternally descended from the poet Tickell, a friend of Addison. He was born in Madras, in 1801. When a young boy he went out to Canada, and left that province in 1824, for the purpose of studying law in this country. He was admitted a barrister of the Inner Temple in 1832, and chosen member for Sheffield at the first election after the Reform Bill. The character of a thorough Reformer, which he won in this arena, led to his appointment, in 1835, to be agent for the House of Assembly of Lower Canada during the dispute pending between the Executive Government and the House of Assembly. Soon after this appointment, Mr. Roebuck (having previously contributed to periodical publications) commenced the publication of a series of political "Pamphlets for the People;" and having in these brochures attacked the whole body of political editors, sub-editors, reporters, and contributors of the press, and particularly those of the "Morning Chronicle," he became involved in what is called an affair of honour, and fought a very harmless duel with the late Mr. Black, the editor of that journal. Within the House a certain asperity of temper prevented his acceptance to the extent enjoyed by many men of inferior ability, but out of doors he was a popular favourite. In 1837, the same speaking he had practised towards the Whigs, whom he regarded as false to the cause of progress, lost him his seat. He was re-elected in 1841, but defeated in the general election of 1847. He was subsequently chosen member for Sheffield. Mr. Roebuck is a bold and unsparing orator, and has particularly distinguished himself in his replies to Mr. Disraeli. At the general election in 1852 he was again elected for Sheffield. In January, 1855, he brought forward in the House of Commons a motion for inquiry into the conduct of the war. The Aberdeen Government resisting the inquiry, was beaten on a division by an immense majority, and was compelled to resign. Mr. Roebuck had no place in the new cabinet, but acted as chairman of the committee appointed through his exertions. His "History of the Whig Party," as it respects the past acts and doings of the order, is a work of great ability and candour. In Dec. 1855 he became a candidate for the Chairmanship of the Metropolitan Board of Works, at a salary of 1500*l.*, but stood third on the list at the close of the poll.

ROGERS, HENRY, Critic, and one of the Professors at the Independent College, Spring Hill, Birmingham, was educated at Highbury for the ministry, and for a few years was settled as pastor of an Independent congregation, but was compelled to resign this charge in consequence of ill-health, and became Professor of English Language and Literature in University College, London, which chair he resigned on his appointment to Birmingham. Mr. Rogers's chief fame has arisen in connexion with the "Edinburgh Review," to which for some years he was a frequent contributor. Among his numerous articles, those on "The Genius of Plato," "Recent Developments of Puseyism," and the "Vanity and Glorification of Literature," exhibit in a striking light the profound erudition and surpassing eloquence of their author. Although the production of a scholar rather than of a man of the world, and therefore deficient in those touches from every-day life with which some of his contemporaries have adorned and popularised their lucubrations, the various contributions of Mr. Rogers are of sterling merit, and can hardly be perused by the informed or intelligent without equal pleasure and profit. Some of these have since been republished in a separate form, under the title of "Essays selected from Contributions to the Edinburgh Review." He has also published a "Life of Homer," "The Eclipse of Faith, or a Visit to a Religious Sceptic," and "A Defence," in reply to the strictures of Professor Newman. Mr. Rogers was one of the three judges to whom the decision of the respective merits of the Burnet Prize Essays was referred in 1834.

ROGERS, SAMUEL, Poet and Banker, was born in 1762, at Newington Green, then a village in the neighbourhood of London, although long since engulfed in its growing vastness. His father was a banker by profession, and the poet, after a careful private education, was introduced into the banking-house, of which he was still a partner. He is said to have had poetic aspirations first stirred within him by the perusal of Beattie's "Minstrel," when he was nine years of age. His boyish enthusiasm led him to sigh for an interview with Dr. Johnson, and to attain this he twice presented himself at the door of Johnson's well-known house in Bolt Court, Fleet Street. On his first attempt the Doctor was from home, and on the second, after he had rang the bell, his heart misgave him, and he ran away without waiting until the door was opened. Mr. Rogers made his first appearance as an author in 1786, with his "On Superstition, and other Poems." In 1792 he published the "Fiducial Sures of Memory;" in 1812 the "Voyage of Columbus;" and in 1813 "Jacqueline" was given to the world, in the same volume with Byron's "Lara." In 1819 appeared "Human Life," and in 1820 "Italy." Mr. Rogers's poems have been republished in various forms, from the splendid quarto, rich with engravings from masterpieces of Turner and Stothard, to the Quaker-like simplicity of the unambitious duodecimo, and in all have been favourably received by the public. Blessed with ample means, the poet has been enabled to cultivate his favourite tastes, and to enrich his house in all

-s's Place, London, with some of the finest and rarest pictures,
 books, and gems, and to entertain his friends with a generous
 unostentatious hospitality; and it is gratifying to mention that
 generosity is equal to his taste, his bounty having on many occa-
 sions been extended to suffering or unfriended talent. A recent
 writer has thus sketched the interior of a house so celebrated for the
 hospitality and taste of its proprietor. We quote the article from the
 pages of "The Builder," and, if it smacks somewhat strongly of the
 style of the "Decorator," it is still worthy of preservation for the minute-
 ness of its detail in respect to a poet's home—too soon, we fear, in
 the ordinary course of events, to be numbered with the things that
 pass.—"Overlooking the Green Park, there is a house which not
 only contains a choice collection of works of art, but is also in other
 respects rendered so remarkable by the good taste of its venerable and
 distinguished owner, that some account of it cannot fail to be in-
 teresting. The exterior, without having much pretension, has a fit
 and comfortable appearance. Near the top is an open verandah,
 which are plants and vases; the long garden in front is in winter
 fully planted with laurels and other evergreens, and in the summer
 fully decked with seasonable flowers. In this house, during three
 generations, Samuel Rogers, the gifted author of 'Pleasures of
 Travel,' has gathered round him the most celebrated statesmen,
 painters, sculptors, and those who in science or in other ways
 honourably distinguished. A house so eminently connected by
 association with the great in literature, art, and science, would, inde-
 pendently of other considerations, be a place of general interest; but
 in addition to this claim upon our attention, the taste of Mr. Rogers
 has produced an arrangement of furniture and decoration which
 strikes most eyes. Going into the house, not from the garden side,
 but from Park Place (No. 22), we find in the hall some choice Greek
 and other sculptures, busts and vases of large size, and we enter the
 drawing-room which overlooks the Park. This room, wherein so many
 great persons have assembled, is of a considerable length, and is
 lighted by a bow-window which occupies the whole of one end; the
 curtains are of a dull red colour—in the summer, intertwined with
 finer drapery of white, the trees and park seen pleasantly through.
 Near the window on one side of the room is a fine head by Rem-
 brandt; on the other side, the famous head of Christ crowned with
 thorns, by Guido, which has been often engraved. Other portions of
 the walls are covered with choice examples of the works of Rubens,
 masters of the Italian and Spanish schools, and some of the best of
 John Reynolds' pictures; for instance, the 'Strawberry Girl,'
 and 'Puck,' that wonderful personification of frolic and mischief.
 The walls are of a rich crimson, subdued as that colour would be in
 painting with a glazing of asphaltum; the carpet is of a very
 deep brown, crimson hue, mixed with grey, varying, however, from
 the walls and curtains. The cornice of the room is much or-
 namented, and partly gilt; the leather covering of the seats har-
 monises, yet produces variety of colour, which is enhanced by the
 'hurdy brown' of the furniture. We step up-stairs, glancing at

portions of Greek architecture, into the library, a square-looking apartment, lined with book-shelves on all sides except above the mantelpiece, where hangs a fine picture by Reynolds. The furniture in this room—couches, seats, table, library, ladder—are all of fine forms. On the top of the bookcases is a variety of Etruscan vases. The working patterns of the ceiling were supplied by Flaxman, who also designed and executed the sculpture on the mantelpiece, which is well worthy of study. Leaving the library, we pass through a vestibule, containing works of art, to the drawing-room, in which there is a glorious display of fine pictures of different schools. The mantelpiece in this room is of white marble, and, like that in the library, by Flaxman. This exquisite work is also surmounted by vases and statuettes of value; and underneath a careful garland of several orange blossoms, pearls, and other brides' favours, which in a mysterious manner, harmonise with the rare works of bygone generations with which they are surrounded, and touch the feeling. Look where you will, the eye rests on pleasant objects, and is carried from place to place, as it is by the skilful painter, who, by the cunning of his art, leads us from his bright light and colour into his deep, transparent shadows." It is nearly seventy years since Mr. Rogers published his first poem, and what changes have occurred since then! He has outlived not only his illustrious contemporaries, but the great poets who were unborn when he had reached his prime. The most prominent characteristic of his poetry may be said to be taste. In his writings there are few high reflective beauties, as we win reverence for Wordsworth, and scarcely an inkling of the impassioned force of Byron. We are not warmed in his pages by the lyric fire of Campbell, or softened by the tender rhapsodies of Burns. And yet the poetry of Rogers is very pleasing: it warms upon the heart by gentle encroachments; it commends itself by perfect freedom from rugged, strained, or unskilful versification: it is, for the most part, so flowing and graceful that it charms us as it awakes. Without brilliant flashes, or luxuriant imagery, it is clear, free, and harmonious. It succeeds by virtue of simplicity, and unpretending beauty—in a word, by the genuine taste which guides the poet, both in his eye for the beautiful, and the expression of his feeling. Great ideas are not often encountered in his poems, but the purity of utterance, and a true refinement of sentiment, everywhere abound.

RONGE, JOHANNES, leader of the German Catholic movement, was born at Birchofswalde, in Silesia, in 1813. His father was a farmer in narrow circumstances, with a family of eight children. The boy was employed in tending sheep, and his early education was acquired in the few hours of leisure which that occupation afforded during the winter months; but he manifested so much intelligence, and so earnest a desire, that the teacher of the school had occasionally attended prevailed upon his father to permit him to become a student. From 1827 to 1836 he attended the Gymnasium of Neisse, where he made good progress. In 1837 he entered the

University of Breslau, with the design of studying theology—more, however, in accordance with the wishes of his friends than his own. In 1839 he entered the theological department of that institution, his inclination, having yielded to his determination to avoid being longer a charge upon the narrow means of his parents. In 1840 he left the seminary, and entered upon a chaplaincy at Grottkarr, where he laboured with great zeal, especially in the training of the young. No small opposition was aroused against him from various quarters; he was charged with liberalism, infidelity, and schismatic tendencies, and the sphere of his activity was much narrowed. His words gave expression to the emotions thus excited in him in "Catholic Hymns" (1846). In 1842, Knauer, the newly-appointed Prince-bishop of Breslau, was obliged to wait a long time for his confirmation, and it was reported that the secular administrator had caused this delay. Ronge gave public utterance to this report in a communication to a periodical, under the title of "The Bishop and the Chapter of Breslau." He was, in consequence, removed from his office, and sent back to the seminary for penance. He protested, and was forbidden all exercise of the priestly function. Shortly afterwards he became instructor at the mining establishment of Laurahütte, whence he wrote his famous "Letter of a Catholic Priest to Bishop Arnoldi," in relation to the "Holy See of Trèves." This letter, although not free from defects, both historical and dogmatic, was the spark in the magazine, and led to the "German Catholic movement." His delectation and exposure of this flagrant imposture rendered him an object of intense hostility and persecution from the bigoted faction who originated or countenanced the fraud. He was excommunicated for the offence, and still further increased the irritation of his oppressors by his successful attempts to induce the educated German Catholics of Germany to break with the Pope, and form an independent religious association which should altogether repudiate his dictation. With this view he published in rapid succession addresses to his sympathisers under the following titles:—"To my Brethren in the Faith, and Fellow-Citizens," "To the Lower Clergy," "To Catholic Teachers," "Justification," "Appeal;" and after an interval, "The Romish and the German Schools," and "The New and yet the Ancient Enemy." Of these the first advocated a separation from Rome, the sixth presented the necessity of an entirely new system of school instruction, and the last was directed against the opposition which the movement had met with from Protestants. The first "German Catholic" congregation was formed at Breslau, on the 26th of January, 1845, and, within three months thereafter, there were formed more than one hundred in Germany, although with very wide differences in respect to the creeds adopted. A council was held at Leipzig, at Easter, 1845, at which a very simple and comprehensive creed was framed, which was generally adopted by the societies, and which not long afterwards were numbered more than two hundred, with a million of members. During the whole of this movement Ronge was the moving spirit,

and laboured with great zeal, making journeys throughout all Germany to further the progress of the cause. After the suppression of the revolutionary movements of 1848, the German governments took ground against the new societies, and they have been generally suppressed. Ronge himself was obliged to fly, and in 1850 made his escape to England, where he still remains, and employs himself as a professor of the German language; occasionally writing in periodical publications, and on the evenings of Sunday preaching at the Chapel in Tavistock Place, Tavistock Square. In England his followers are comparatively few, and that few for the most part foreigners; but in America his disciples form a large and powerful body, composed chiefly of German emigrants driven from their country at the free expression of their political opinions.

ROSS, CAPT. SIR JAMES CLARK, KNT., the intrepid Arctic and Antarctic Explorer, and Discoverer of the North and South Magnetic Poles, is the third son of George Ross, of Balcarrach, near Galloway, and is nephew of Sir John Ross, C.B. Sir James was born in Finsbury Square, in 1800. He entered the navy in 1812, on board the *Briseis*, commanded by his uncle, whom he subsequently accompanied in 1818, in his first North-west Expedition. Between 1819 and 1825 he was engaged under Sir Edward Parry in the other voyages to the Arctic regions; and again, in 1827, he was the companion of Parry in his attempt to reach the Pole from the northern shores of Spitzbergen, by travelling with sledge-huts on the ice. On his return to England in 1827 he was presented with a Commander's commission. He next, from 1829 to 1833, accompanied his uncle in his Polar expeditions, as second in command, undertaking the departments of astronomy, natural history, and surveying; and he had the honour of discovering the true position of the North Magnetic Pole, and placing thereon the British flag. He was raised to post rank in 1834; and in the following year he crossed the Atlantic to relieve some missing whalers, which had been frozen up in Baffin's Bay. He was subsequently, until 1837, employed in an Admiralty Magnetic Survey of Great Britain and Ireland. In 1839 he took the command of an expedition for Magnetic Research and Geographical Discovery in the Antarctic and South Polar Seas. During four years he made three attempts to penetrate the icy limits of the South Pole; the ships (*Erebus* and *Terror*) discovered a vast continent, fringed with a barrier of 150 feet in height; and they attained by some hundred miles the highest latitude ever yet reached ($78^{\circ} 10'$), or within 160 miles of the South Magnetic Pole. They likewise discovered an active volcano, 12,400 feet high, seated amidst eternal snows. The valuable results of this voyage to botany, zoology, and geology, as well as to meteorology and terrestrial magnetism, were published by the commander in 1847. The expedition returned in 1843, having in four years only lost three men by accident, and one by illness. In 1844 Captain Ross received the honour of knighthood. In 1845 Captain Sir John Franklin's expedition left England in *Barrow*.

the Erebus and Terror, and the expected intelligence not having been received at the distance of three years from their departure, Captain Sir James Ross was despatched to Baffin's Bay in quest of the missing ships; but, unhappily, he returned without having obtained intelligence of the explorers. Sir James Clark Ross, whose life may almost be said to have been passed in the Arctic and Antarctic Seas, has had several testimonials conferred upon him for his intrepid conduct. In 1844 he received the honorary degree of D.C.L. from Oxford; in 1833 he was presented with a piece of plate by the subscribers to the Land Arctic Expedition; and in 1831 he received the Founder's Gold Medal from the Geographical Society of London, of which Sir James is a Fellow, as well as of the Royal, Linnean, and Astronomical Societies.

ROSS, REAR-ADMIRAL SIR JOHN, KNT., C.B., the commander of the first Polar Expedition of the present century, is the son of Rev. A. Ross, of Wigtonshire, and was born in 1777. He entered the Navy in 1786; was fifteen years a midshipman; made Lieutenant in 1800; and was wounded in the Surinam, in cutting out a Spanish schooner from under the batteries of Bilboa, in 1806. He was appointed commander of the *Briseis* in 1812, on the Baltic station, where, with Lieutenant, a midshipman, and eighteen men, he gallantly attacked and recaptured an English merchant ship armed with six guns and four swivels, and defended by a party of French troops; the *Briseis* subsequently captured also a French privateer, and drove ashore three other vessels of the same description. In 1814 Captain Ross was appointed to the *Actæon*, 16 guns; in 1815, to the *Porpoise* sloop; and in 1818, to the command of an Expedition to explore Baffin's Bay, and search for a North-west Passage into the Arctic: the vessels were the *Isabella*, 368 tons, and 58 officers and men, commanded by Captain Ross; and the brig *Alexander*, 252 tons, and 37 officers and men, commanded by Lieutenant (the late Sir Edward) Parry. In this expedition Captain Ross, unhappily for himself, although too much satisfied of the contrary, pointed out the very course which led to the discoveries of his more fortunate successor, Sir Edward Parry. Captain Ross's statements were mistrusted and his skill doubted, but he still sought to establish his own views. Government could not be expected to sanction another attempt by an outfit; but in 1827, aided by his friend Mr. Felix Booth, Captain Ross was enabled to equip the *Victory* steamer; and in May, the captain and his nephew, Commander Ross, with 23 men, left the Thames, "to solve, if possible, the question of a North-west Passage from the Atlantic to the Pacific Ocean, particularly by Prince Regent's Inlet;" this being Parry's favorite theory in the voyage after returning from Melville Island, where the *Fury* was lost on the western shore of the inlet. Captain Ross fixed the autumn of 1832 as the period of his return, but having failed so to do, early in 1833 an Expedition, headed by Captain Ross, left England to search for the missing voyagers in Regent's Bay; his outfit having been provided by 7000*l.* raised by subscription. Captain Ross and his companions returned to England in

October following. After leaving Fury Beach, in lat. $72^{\circ} 30'$, they sailed in with the *Isabella* (the vessel in which Ross had made his first Polar voyage.) and were taken on board, "after having been four years lost to the civilised world." The narrative of this second Expedition was published in 1835, in a quarto volume of 350 pages: its principal results were the discovery of Boothia Felix and the North Magnetic Pole. Sir John Ross was British Consul at Stockholm from 1838 to 1844. When the fate of Sir John Franklin became a mystery, Sir John Ross remembered the promise he had made to his friend to look for him if he should be lost: accordingly in 1850, at the age of 73, Sir John went out in a small vessel of 90 tons, the *Felix*, which wintered in the ice, and would have stayed a second year had the means allowed. He gave up his half-pay and his pension for the cause he had so much at heart, yet the Admiralty refused to contribute even a portion of the necessary stores; and he was altogether excluded from the Arctic councils, at which his experience and advice would, doubtless, have been valuable. In the spring of 1855 he published a pamphlet upon this ill treatment. Sir John Ross has received numerous honours for his Arctic Expeditions. In 1834 he was knighted; was appointed a Commander of the *Sword of Sweden*, a Knight of the Second Class of *St. Anne of Russia*, and received the Second Class of the *Legion of Honour*, the *Eagle of Prussia*, and *Leopold of Belgium*. He also received medals from the *Geographical Society of London*, the *Geographical Institute of Paris*, the *Royal Societies of Sweden, Austria, Denmark, &c.*; the freedom of the cities of *London, Liverpool, Bristol, &c.*; six gold snuff-boxes from *Russia, Holland, Denmark, Austria, London, and Baden*; a sword, value 100*l.*, from the *Patriotic Fund*; a sword, value 200*l.*, from the *King of Sweden*, for services in the *Baltic and White Seas, &c.*; and numerous other acknowledgments. Sir John has received thirteen wounds, for which he enjoys a pension of 150*l.* per annum. In addition to the *Narrative of his Second Expedition*, he has written "*Letters to Young Sea Officers*," "*A Voyage to Baffin's Bay*," "*Memoirs of Lord De Saumarez*," "*A Treatise on Steam Navigation*," etc.

ROSS, SIR WILLIAM CHARLES, KNT., *Miniature-Painter*—was born in London, June 3, 1794. He is connected on both sides with artists:—his father was a miniature-painter and drawing-master of repute in his day; his mother a sister of Anker Smith, an engraver, and herself a clever artist. At eight years old he began to learn drawing under his father, and soon to execute portraits: at ten entered the Royal Academy as student. There he attracted the notice of West, Fuseli, and Flaxman, who remained his friends, and whilst there he distinguished himself by extreme precocity. In 1811, when only thirteen, he obtained a prize from the Society of Arts for a copy, and in each of the four following years medals, silver and gold, and sums of money, for original drawings and miniatures; in 1817, a gold medal for an original painting, and the Academy's silver medal for a drawing from the living model. The Academy's gold medal

also carried off; Hilton being one of the unsuccessful competitors. He had, in fact, at first dedicated himself to historical painting, colossal canvases, and to such themes as "The Judgment of Solomon," "Samuel presented to Eli," "Brutus condemning himself to Death," "Christ casting out Devils," etc.; showing therein his ability. After a while, the more ambitious walk of art was relinquished for portrait-miniatures, which he had also practised from the first. In this department he learned much from Andrew Barton, one of the "fathers" of the present school of miniature-painting; and learned still more from his own genius and persevering endeavours to excel. Developing in miniature qualities,—of *draw, finish, etc.*, unknown before, he also turned to good account the mastery of the figure acquired in another field. His miniatures are beautifully drawn:—hands, wrists, neck, etc. thoroughly under-

stood. This is not always the case in miniatures, the reduced scale of which favours ignorance in that particular. The career of Ross has been as prosperous in miniatures, as was that of Lawrence in

Like Lawrence, too, his courtly manners have made him a personal favourite among his aristocratic sitters. The bead-roll of sitters during the last thirty years would be simply a reprint of the Red Book. Of the Queen, Prince Albert, the royal children, of the members of the Coburg and Orleans families, he has executed admirable portraits. The sum total of his works exceeds, it is said, two thousand. To the last, his course has been one of progressive improvement; and consequently, fashionable and constant patronage is as constant to him as ever. In 1837 he was appointed "Miniature-painter to the Queen," whom he had then lately painted; in 1838 he was elected an Associate of the Academy; in 1842 an Academician; and in the same year he was elected. Ross is a true artist, an exquisite and individual one. He has but one rival,—Thorburn,—whose style is wholly distinct, reaching more the character of oils. In the legitimate exercise of his own fascinating branch of the art, Ross is unequalled for *drawing and expression, delicate colour, sweetness of manner.*

ROSSE, WILLIAM PARSONS, EARL OF, a Man of Science does honour to the Peerage, late President of the Royal Society, born in 1800; he succeeded his father in 1841; and married in 1842 the daughter of J. W. Field, Esq., of Heaton Hall, Yorkshire. Lord Rosse has devoted himself with much zeal and success to the study of optics and astronomy, and by great labour and at large cost succeeded in setting up a vast telescope for the investigation of the planetary world. Dr. Robinson has described the difficulties that lay in the path of this scientific peer whilst constructing his astronomical implements; giving a rapid sketch of the steps by which Lord Rosse was led to the construction of his instruments, the difficulties he met with in producing large speculæ of that most valuable and yet beautiful material, speculum metal, which, though it is as hard as steel, is yet so brittle that a slight blow would shiver it to atoms, and so sensitive to changes of tempe-

ture, that the effusion of a little warm water over its surface, not too warm to be disagreeable to the touch, would crack it in every direction. He has given a sketch of the contrivances by which the leading difficulties were overcome, of the process of grinding and polishing, and of the adjustments and mechanical suspension of the instruments. A deviation of the speculum from the parabolic form at its outside circumference, which should amount to the 1-100,000th part of an inch, would have rendered it optically imperfect, and a deviation from the proper focal length of any part to the amount of the 1-1,000,000th part of an inch could not be detected. Yet, by care and perseverance, and the expenditure of a considerable sum of money, the great end was achieved that has secured for Lord Rosse his present well-merited reputation. Lord Rosse was created a Knight of the Legion of Honour for his astronomical researches at the close of the French Exhibition of 1855.

ROSSINI, GIOACCHINO, the greatest Composer for the Italian stage since Mozart, was born at Pesaro in 1792. His father was an orchestral horn-player and his mother a singer; both employed by the strolling operatic companies which then used to make the circuit of the north of Italy. At the age of seventeen or eighteen he began to write operas, which were produced with great success at Bologna and Venice; but the work which made his name all at once famous was "Tancredi," first performed at Venice in 1812, when he was twenty years of age. It was welcomed with acclamations throughout Italy, and in two or three years made its way into every opera-house in Europe. This piece was followed in rapid succession by "L'Italiani in Algieri," "La Pietra di Paragone," "Demetri Polibio," and "Il Turco in Italia;" all of them greatly inferior to his first *chef-d'œuvre*, but all of them containing beauties which will preserve them from oblivion. It will be remembered, that "Italiani in Algieri" was one of the operas which first displayed to us the charming talent of Mademoiselle Alboni, when she appeared at the Royal Italian Opera in 1847. In 1815 Rossini was appointed Musical Director of the theatre of San Carlo at Naples, and it was there that he produced some of his most celebrated works. It was for that great theatre that he composed "Otello," "Mosè in Egitto," "La Donna del Lago," "Maometto Secondo," and "Zelmira;" all of them works of great power and beauty. "Mosè in Egitto," on account of its scriptural subject, has not been produced in England in its original form. It was first performed in this country at the King's Theatre, under the title of "Pietro l'Eremita;" and more recently at the Royal Italian Opera, under that of "Zora;" unfortunate expedients, involving gross absurdities and destroying the dramatic effect of the piece. "Maometto Secondo" failed on its first production; but afterwards, during Rossini's residence at Paris, he adapted its music to a French drama, called "La Siège de Corinthe;" and it is in this form, but in an Italian version, that it continues to be performed both in Paris and London, under the title of "L'Assièdi Corinto." "Zelmira" has never become popular, although it is

some of Rossini's most beautiful music. Its want of success might be ascribed to the feebleness of the drama. While Rossini thus employed, chiefly for Naples, he continued to produce at other places. The "*Barbiere di Seviglia*," without exception the most gay and delightful comic opera in existence, was first performed at Rome during the Carnival of 1816. The choice of this part was, it is said, not Rossini's own. Some libretti, which he proposed, were objected to by the Roman censorship; and, by getting over the difficulty, this drama, which the celebrated Paisiello had already made the subject of a successful opera, was presented to the young musician. Feeling some compunction at interfering with the veteran maestro, Rossini wrote an apologetic letter, which Paisiello answered by saying, that he was delighted at the choice made by the Roman police, and had no sort of objection to its being acted upon: a permission somewhat in the spirit that given by Milton to Dryden, when he asked leave to write a play on the subject of the "*Paradise Lost*." "Tell him," said the aged friend to Dryden's friend who made the application, "that he may sing my verses if he will." Rossini rewrote the "*Barbiere*;" his opera, however, over Europe; and Paisiello's charming, but less brilliant and melodious music, fell into oblivion. "*La Cenerentola*" was produced at Rome in 1817; "*La Gazza Ladra*" the same year at Milan, and (for several minor pieces) "*Semiramide*" at Venice, in 1823. This was the last which Rossini produced for the Italian stage. He left Italy immediately afterwards. In 1824 he paid a memorable visit to London, in consequence of an engagement with the manager of the King's Theatre, under which he was to superintend the performance of his operas and to produce a new one for the theatre. His wife, Madame Colbrand Rossini, was likewise engaged as prima donna. This lady had been one of the greatest beauties and singers of her day; but her powers were by this time in their decay, and she made no impression on the public. The season was ruinous to the theatre, and Rossini left England without having fulfilled his engagement to compose an opera. His visit, however, was profitable to himself. He was the lion of the metropolis, and the favourite of the fashionable world from royalty downwards. He had fifty guineas for showing himself at a party singing a couple of songs; and concerts were got up for him at enormous prices of admission, and as difficult of access as a ball at Carlton. Stories were circulated about his arrogant behaviour, but were met and refuted at the time; and there is no doubt that, however may have been the folly of his affected admirers, his own conduct was always that of a well-bred gentleman. At this time he took up his residence in Paris. He became Director of the French Opera, a situation which he held till the Revolution of 1830. During that period he composed a slight work called "*Il Viaggio di Reims*," on the occasion of the coronation of Charles X., the music of which he afterwards made use of in a French opera, "*Le Comte de Saxe*," which continues to be performed with Italian words, and has many beauties. During that period, too, he produced "*Guillaume*

Tell," on the whole the best and greatest of his works. On his retirement from the direction of the Italian Opera at Paris, Rossini returned to his native country, and has ever since resided at Florence, leading a quiet, indolent life. His only musical work of any importance during this period is the well-known "Stabat Mater," a very pretty and popular composition, but quite theatrical, and altogether destitute of the solemnity, depth, and grandeur which ought to characterise ecclesiastical music. He has been tempted, it is said, by immense offers from managers of opera-houses, but they have not overcome the attractions of the *dolce far niente*. He has never ceased, however, to take an interest in his art, and many instances have been mentioned of his kindness to young artists of merit.

ROTHSCHILD, SIR ANTHONY, Capitalist, and member of a family known by the magnitude of its transactions with European and other powers, was born in 1810, and is the second son of the late Nathan Meyer de Roth-child. Like his brother Lionel, present member for the City of London, he is a Baron of the Austrian empire, and received his English baronetcy in 1846, with remainder in default of male issue to his nephews, Nathan Meyer, Charles Alfred, and Leopold, sons of his brother before-mentioned. It is not be uninteresting, in connexion with this name, to give a sketch of the rise of the extensive co-partnership known as the house of Rothschild, the impersonation of that money power which governs the world. For nearly half a century their influence has been continually on the increase; and to them, more than to any minister of state, Europe is indebted for the preservation of peace between the great powers. In order to give even an outline of the immense and successful operations which have placed a German and his sons, and grandsons, at the head of the monetary interests of the world, it would be necessary to embrace the history of European finance since the year 1812; and this our space does not permit us to do. A brief sketch of the rise and progress of the house must, therefore, be sufficient. Its founder, Meyer Anselm Rothschild, born at Frankfort-on-the-Maine, some time about the year 1740, was a money-changer and exchange broker, a man of fair character, and in easy circumstances. When, in the first campaign of the French Revolution (1792), General Custine, at the head of the Republican army, took Frankfort, the Senate, in order to save the town from pillage, agreed to pay a heavy ransom within a very limited period. But the money was not forthcoming. Public credit in Germany was still in its infancy, and among the wealthy capitalists of Frankfort not one could be induced to assist the Senate. In this emergency Meyer A. Rothschild offered his services to obtain a loan of the required amount from the Landgrave of Hesse-Cassel, by which he had frequently been employed in money-changing transactions. The offer was accepted, and the loan obtained. Thus a new and lending connexion between the landgrave and M. A. Rothschild was begun, and as in the course of the war other German princes sought occasion for loans, M. A. Rothschild's agency was often offered.

pted, so that the house of Rothschild acquired a certain stand-
 This landgrave, William IX. (subsequently as elector, Wil-
 I.), was one of those German despots who, during the American
 tion, had sold their troops to England, and who, by means of
 ilar traffic during the wars of the French revolution, accumu-
 immense sums of money, but whose tricky politics drew upon
 the hatred of Napoleon. After the battle of Jena (October 1806),
 leon decreed the forfeiture of their states by the sovereigns of
 -wick and of Hesse-Cassel, and a French army was put in
 h to enforce the decree. Too feeble to resist, the landgrave
 ared for flight. But in the vaults of his palace he had twelve
 -a florins (about a million sterling) in silver. To save this
 and bulky amount of money from the hands of the French was
 utter of extreme difficulty, as it could not be carried away, and
 landgrave had so little confidence in his subjects that he could
 ring himself to confide his treasure to their keeping; especially
 the French would inflict severe punishment on him, or whoso-
 might undertake the trust. In his utmost need the landgrave
 ough himself of M. A. Rothschild, sent for him to Cassel, and
 ated him to take charge of the money; and by way of compen-
 n for the danger to which he exposed himself, the landgrave
 ed him the free use of the entire sum without interest. On
 terms Mr. Rothschild undertook the trust, and by the assist-
 of some friends, Jewish bankers at Cassel, the money was so
 ally stowed away, that when the French, after a hurried march,
 ed in that city, they found the old landgrave gone, and his
 ure vanished. At the time this large sum of money was
 ed in M. A. Rothschild's hands he had five sons, of whom three,
 -lm, Nathan, and Solomon, had arrived at man's estate. These
 associated with himself; keeping Anselm at Frankfort, while
 than was established first at Manchester, and subsequently in
 -lon; and Solomon, as travelling agent for the firm of M. A.
 th-child and Sons, visited the various courts and princes of Ger-
 -y who needed loans. Old Mr. Rothschild himself, as well as
 sons, especially the second, Nathan, of London, appear to have
 layed enterprise, prudence, and industry, of the highest order, so
 the large sum of ready money at their disposal increased and
 ultiplied with astonishing rapidity. In 1813, when, by the treaty
 oplitz, England agreed to pay Russia, Austria, and Prussia twelve
 -ons sterling as subsidies, the Rothschilds, on the recommenda-
 of the old landgrave, were appointed agents for the payment of
 money in Germany—an operation by which they profited to a
 -large amount. After the victory of Leipzig (October 1813), in
 ur rapid pursuit of Napoleon, the allied sovereigns suddenly found
 -selves on the banks of the Rhine. The Emperor of Austria,
 a brilliant court and staff, took up his quarters at Frankfort.
 the treasury of Austria, notwithstanding the large sums received
 in England, was empty; as whatever resources there might have
 n at Vienna were not available at Frankfort. A loan became ne-
 -ary; but the oft-repeated bankruptcies of Austria had destroyed

her credit, so that Prince Metternich, after having in vain applied to the Bethmans, and other Christian merchant-princes of Frankfort, was at length reluctantly driven to address himself to Rothschild, and the pride of Hapsburgh's Cæsar stooped to solicit succour from a Jew. The graceful manner in which the request was granted called forth the emperor's gratitude. Old M. A. Rothschild was created a Baron of the Austrian empire; his son Nathan appointed Austrian consul-general in Great Britain; and the whole weight of Austria, and of Metternich's influence, were put in requisition to extend and secure the financial operations of the house of Rothschild. The fall of Napoleon enabled the old landgrave to return to Cassel, and he gave the Rothschilds notice that he should withdraw the money he had confided to them; but before the notice expired, Napoleon's return from the Isle of Elba so greatly alarmed the landgrave, that he urged the Rothschilds to keep the money at the low rate of two per cent per annum, which they did until his death in 1823, when his son and successor was forced to receive it back, as the Rothschilds refused to retain it any longer. In 1811 James de Rothschild, the fourth son of M. A. Rothschild, opened a banking-house in Paris; in 1820 Charles, the youngest, established himself at Naples; and in 1821 Solomon, the third son, took up his residence at Vienna: so that at the death of M. A. Rothschild (1821) he saw his five sons placed at the head of five important establishments, at Frankfort, London, Paris, Vienna, and Naples, and united in a copartnership which is universally allowed to be the most wealthy and extensive the world has ever seen. No operation in which he or his sons embarked had miscarried; and this uninterrupted success was, in a great measure, owing to their foresight and enterprise. Rothschild in London knew the result of the battle of Waterloo eight hours before the British Government, and the value of this knowledge was no less than two hundred thousand pounds gained in one forenoon. No bad loan was ever taken in hand by the Rothschilds, no good loan ever fell into other hands. Their invariable success at length gained for them so large an amount of public confidence, that any financial operation on which they foundered was sure to fail. And so conscious were they of their influence, that after the July revolution in 1830, Anselm Rothschild, of Frankfort, was heard to declare, "The house of Austria desires war, but the house of Rothschild requires peace." In 1840, on the occasion of the troubles between the Porte and Mehemet Ali, the Rothschilds were again chiefly instrumental in preserving the peace of Europe. Nathan, the second son of M. A. Rothschild, died in 1836, Solomon in July, and Anselm in December, 1855: the other two brothers are yet alive. In addition to their five principal establishments, they have agencies of their own in several of the large trading towns of the Old and New World. As dealers in money and bills they may be said to have no rivals; and as the magnitude of their operations enables them to regulate the course of exchange throughout the world, their profits are great, while their risks are comparatively small. Indeed, the only heavy loss they have as yet experienced

through the February revolution of 1848, when it is said that, owing to the sudden depreciation of all funded and railroad property throughout Europe, their losses from March to December of that year reached the enormous figure of eight millions sterling. But, as those losses were, they did not affect the credit of the Rothschilds, and do not appear to have seriously impaired their power. The members of the firm are numerous, as the third generation has been received into the co-partnership, and as the cousins frequently intermarry, their immense wealth will, for a length of time, remain in comparatively few hands. In politics the Rothschilds of London and Paris profess to be Liberals, while those of Frankfort, Vienna, and Naples are Conservatives. It is, however, evident, that their interests must render them alike hostile to absolute monarchy and to popular movements. Constitutional monarchy, with its representative chambers, is the most congenial to loan contractors, and support which their occult influence is oftenest exerted.

RUDIGER, COUNT, General of Cavalry in the army of the Emperor of Russia, was a General of Division as long ago as the Turkish campaign of 1828-29, when he commanded the advanced guard of the army destined to cross the Balkan. In July, 1828, he distinguished himself by great skill in a position behind Shumla, so as to cut off the communications of the Turkish garrison with Constantinople. This advantage, gained only by severe fighting, he lost in a ordinary engagement, when vigorously attacked by the Turks under Mehemet Pasha. In the following year he commanded the right of two columns in which Diebitsch's army crossed the Balkan, and distinguished himself by his judicious dispositions, and the slight loss which at Erketsch he gained the point of juncture with the second Russian corps on his left. In the suppression of the Polish rebellion, begun in 1830, the advantages gained by the Poles in March, and early in April, promised to raise in revolt provinces which had not yet taken part in the war, and to augment the force of the insurgents, greatly so powerful. The Polish General, Dwernicki, intending to reverse the advantage, even crossed the river Bug. Rudiger, perceiving that Dwernicki had committed a fault in removing his army far from that of Sierawski, which should have been its support, attacked the former Polish general on the 20th of April, and compelled him to fall back, while another Russian commander, General Kreuz, defeated Sierawski, cut off Dwernicki's retreat to Poland, and left him to be driven by Rudiger on the Austrian frontier, where the Poles laid down their arms, and retired upon the Austrian territory. Rudiger now led his corps again towards the Vistula. The Polish generals, Janowski and Chrzanowski, had concerted a plan for enveloping him with their superior forces; he, however, anticipated them by the rapidity and decision of his movements; defeated Janowski singly, and then marched and compelled Chrzanowski to return to the left bank of the river. His army subsequently co-operated, by its presence, with the main army in the kingdom of

Poland, but Rudiger had no further opportunity of distinguishing himself in that war. In the Hungarian campaign of 1849 Rudiger commanded a corps d'armée, and defeated Görgei in a pitched battle at Waitzen. The Hungarian general capitulated at Villagos on the 31st of August, 1849, to Rudiger, who thus had the purely military honour of the campaign. General Rudiger has of late resided in Warsaw, and has frequently held the post of Lieutenant of the Kingdom of Poland in the absence of Paskiewitch, prince of Warsaw. Although, perhaps, without exception, the ablest general in Russian service, he was not a favourite of the late Emperor Nicholas; he was, however, the first general summoned to St. Petersburg by the new emperor, who gave him the command of the Imperial Guard, which he had just resigned.

RUSKIN, JOHN, undeniably the most gifted Author who has ever devoted himself to the exposition of Art. He was born in London, in Feb. 1819, and is the son of a London merchant. He was educated as a gentleman-commoner at Christchurch, Oxford, where, in 1839, he took the Newdegate prize for English poetry. A passion for art led him to devote himself for a time to its practice, and with some success. He acquired its elements from Copley Fielding and J. D. Harding. In 1843 he published under the title of "A Graduate of Oxford," the first volume of "Modern Painters." Commenced as a pamphlet in defence of Turner and the modern English school of Landscape painting, it swelled under his hands into a treatise on Art, and on Nature interpreted by Art, which twelve years have passed without enabling him to complete. By art-critics the reception of the book was hostile and contemptuous. With the general public it made its way quietly and triumphantly. A second edition was called for within a year. Within five years the author had taken his place as a popular author, for his book had passed through four large editions; it had been noticed with admiration and respect in most of the leading Reviews, had kindled enthusiasm among thousands who had previously cared as little as they had known about art, and had completely revolutionised public opinion as to landscape painting. The estimate of our English landscape-painters, before held silent and half unconsciously by a few, was strengthened, and extended to all but those too old to learn. Meanwhile, Ruskin had taken a lengthened visit to Italy, to study the great historical landmarks of art where alone the full materials for such study exist. The second volume of "Modern Painters" (now become a miniature) was the result, in 1846: in which a higher flight was taken than the first, and the early Italian painters and great Venetians were expounded in illustration of the principles discussed. The volume reached a third edition in 1851. The concluding part has been at that time (when already "in preparation,") until now, met with successive delays. Since 1846 Mr. Ruskin has paid repeated visits to the Continent; but during the interim, Architecture—more especially that of Italy,—has almost exclusively engrossed his attention.

his literary elucidation. Of that study we have had ripe results, in "Seven Lamps of Architecture" (1849), and "Stones of Venice," 1851, and (vols. ii. and iii.) 1853. These works, with the love of reverence which animates them for the art of Gothic ages, and contempt for the mimetic architecture which has succeeded, have as much outraged professional architects, as his "Modern Painters" had outraged connoisseurs: and, among the public, awakened the same keen interest and sympathy. The author's powers as an artist are to some extent evinced by his masterly verbal illustrations in these works: bold and powerful in light and colour, minute and faithful in detail. In 1851 Mr. Ruskin advocated the cause of the "Pre-Raphaelites," in letters to the "Times," and a subsequent pamphlet. The latter, however, was occupied as much with Turner as with his new clients. At the close of 1853 he delivered a course of lectures in Edinburgh in behalf of Gothic architecture, Pre-Raphaelitism, and Turner; which have been published. During 1854 he also gave in London, at the Architectural Museum, three lectures to working men on the Art of Illumination. Among other evidences of his ever-active mind have been occasional articles in the "Quarterly Review"—on Lord Bunsen's "Christian Art," 1847; on Eastlake's "History of Oil-Painting," 1847; and occasional pamphlets—on "The Construction of Sheepfolds," (the discipline of the Church,) 1851; and on "The Opening of the Crystal Palace," 1854. This pamphlet is the occasion of a plea for the conservation of the remains of architecture and art, daily throughout Europe being effaced by improvements, or falsified by restorations; a system against which he has frequently protested with his accustomed eloquence: for instance, in a short biographical notice of his friend Prout, in the "Art-Journal" of 1849. For the Arundel Society,—of which he is a leading member,—he has lately written a notice of "Giotto and his Works." His latest *brochure*,—"Notes on the Academy of Painting" of 1855, has found,—which such a criticism from his pen was sure to do, a public as eager to listen as he to be heard. In the literature of art Ruskin's works will ever mark an era. Of the writers in that wide field he is the only one who has obtained the ear of the general reader; and has kept it. For of all who have attempted interpretation of nature, his mind is the most sensitive to art and its influences; and as a consequence, the most deeply penetrated with its meaning and importance. He is, moreover, not only an artist in feeling, but a great original writer: an imaginative and sincere, if somewhat wilful one; a keen observer of nature; a singularly quick and fertile thinker.

RUSSELL, THE RIGHT HON. LORD JOHN, M.P., Statesman and ex-Premier, youngest son of the sixth Duke of Bedford, born in London on the 18th of August, 1792, and, after having been educated at Sunbury, Westminster School, and Edinburgh University, took his place on the Opposition benches of the House of Commons (in 1813), as member for Tavistock, a borough of

which his father had the patronage. Aspiring to the character of a man of letters, Lord John, soon after his admission to Parliament published a life of his ancestor, the celebrated Lord Russell; a tragedy known as "Don Carlos;" a novel, the title of which has long been forgotten; a series of "Sketches by a Gentleman who has left his Lodgings;" and an "Essay on the British Constitution." It was as a statesman, and not as an author, that this intellectualisation of the house of Bedford was to enrol his name in the annals of England. As a politician, Lord John was guilty of no unnecessary delay in associating his name with liberal doctrines. In 1817 he availed himself of Lord Castlereagh's suspension of the Habeas Corpus Act to denounce the system pursued by "the Cabinet of Medicrities," over which Lord Liverpool presided. In 1818 he submitted to the House of Commons resolutions, with a view to bringing about a Reform of Parliament. In 1821 he won reputation by his successful effort to accomplish the disfranchisement of Grampound. In 1822 he introduced another measure of reform and attempted to disarm the hostility of the owners of rectorial boroughs by holding out to them the prospect of compensation. In 1826, having diligently devoted the three intervening years to public business, he again brought forward the question of Parliamentary Reform, and was this time successful in carrying the second reading of a bill for transferring the electoral privilege from parishes to populous manufacturing towns. Having discontinued his efforts during the existence of the Canning administration, which included among its members the Marquis of Lansdowne and other Whigs, Lord John, who now represented Bandon Bridge, carried in 1828 a measure for the repeal of the Test Acts, and returning to charge in 1830, moved for leave to bring in a bill to confer on Lancashire, Manchester, and Birmingham, the privilege of returning members to Parliament. He was defeated in this very reasonable object, but a great change was at hand. The elevation of a man of genius to the premiership in the person of Mr. Canning, long kept down as a political adventurer, had shaken parties to their centre; his sudden death left them in a state of disorganisation; and the compromising hostility of the Duke of Wellington and Sir Robert Peel to all reform, drove many statesmen of spirit and intelligence to the Opposition ranks, presided over by Earl Grey. The aspect of affairs soon became too menacing to be disregarded; and at length in November 1830, the Duke and his political ally, leaving the Opposition body in dismay and everything in confusion, beat a precipitate retreat from the position which they had occupied with so much confidence and so little prudence. Earl Grey, who was not to be daunted by difficulty, undertook the formation of a ministry. Lord Brougham took his seat on the woolsack; Lord Althorpe became Chancellor of the Exchequer and leader of the House of Commons; and Lord John, although not admitted to the cabinet, was appointed Paymaster of the Forces. The policy of the new ministry was summed up in three words—"Peace, Retrenchment, and Reform;" and it proceeded with vigour to execute its main

March 1831. Lord John, not unaware that the obstacles to be entered were neither few nor far between, submitted to the House of Commons an outline of the ministerial scheme of Parliamentary Reform; and was successful in securing the second reading of the bill. At this stage, however, General Gascoyne carried a motion, to the effect that the number of members of the House should not be increased, and ministers declining to accept the decision, appealed to the country. When the new Parliament met in 1832, Lord John, who had been returned as member for Devon, submitted his measure; which this time, in spite of much opposition, had the fortune to pass through the Lower House. The Peers, however, rejected the bill, which ministers thereupon undertook to revise and improve; and when Parliament reassembled, passed the Commons without a division. The Peers, nevertheless, were unconvinced of its necessity; and Earl Grey having been defeated on Lord Lyndhurst's motion for postponing the disfranchising clauses, lost all patience and resigned with his colleagues. Storm now arose out of doors; and public indignation was so highly excited, that the Duke of Wellington advised the recall of political antagonists, and persuaded the Peers to allow the Reform Bill to become law. Our space would fail us to narrate the other achievements of the Grey Ministry; how Slavery was abolished in the British Colonies; how the Church Temporalities Bill in Ireland was carried; and how the English Poor Laws were amended. Suffice it to say, that in 1834, Lord Stanley refusing to concur in the policy of his colleagues as to the Irish Church, withdrew from the cabinet; and that Lords Grey and Althorp, differing on the Coercion Bill, resigned their offices. Lord Melbourne having for a brief period administered the affairs of the country, Sir R. Peel in December installed as Premier. The result is well known. He dissolved Parliament; he found the country adverse to his propositions; he sustained a defeat on "the Appropriation Clause;" and withdrew from office. Lord Melbourne becoming a second time Lord of the Treasury in April 1835, Lord John was entrusted with the leadership of the House of Commons, and nominated Secretary of State for Home affairs. He was at this period ousted from the representation of Devon; but having been returned by electors of Stroud, lost no time in carrying through Parliament a measure of Municipal Reform. Lord John, in 1839, exchanged offices of the Home for those of the Colonial Department, and held the latter office till 1841; when a general election placed Sir R. Peel and his friends in power. For the next few years, Lord John, who was now member for the city of London, led the Whig party with a moderation and dignity worthy of his character and career. The odds against him were numerically overwhelming; and the persuasive address of Peel, the vehement eloquence of Stanley, and the conversational oratory of Graham, bore down all opposition. But Lord John held his time; and in the autumn of 1845, when the doctrines of the "Manchester School" had been impressed on popular conviction, the Conservative Cabinet was in convulsions, penned his cele-

brated "Edinburgh Letter," avowing his conversion to a total repeal of the Corn Laws; and attempted to form an administration. The hostile, ambitious, and personal antipathies of his political coadjutors, rendered the effort abortive; but in July 1846, when the Corn-law question was settled, and the parliamentary tact of Mr. Disraeli placed Sir R. Peel in a humiliating minority, the chosen leader of the Whigs accepted the post of Premier, and constructed a cabinet. Lord John's ministry was weak from the beginning, and he employed no means to add to its stability. It was in vain that he was urged to bring forward liberal measures. His conduct only reminded people of a saying of the celebrated parliamentary personage whom he had to encounter week after week in the battle of debate. Once when Mr. Disraeli was "sowing his wild oats"—contesting the borough of Wycombe, on principles which were intended to be popular, and uttering high-flown sentences which nobody could understand—a hand-bill appeared, warning the electors to beware of a Conservative in disguise. "A Conservative in disguise!" exclaimed the author of "Vivian Grey," turning to his opponent, who was a Whig aristocrat. "I will tell you who is a Conservative in disguise.—it is a Whig in place." Lord John and his colleagues, when installed in Downing Street, seemed bent on making good this assertion. They accomplished nothing. They neither redeemed the pledges they had given, nor fulfilled the promises they had made; so that, when the Sugar question had been settled, and the Navigation Laws repealed, the advanced Liberals began loudly to express their discontent. When it came to pass that in February, 1851, when Lord John's "Taham Letter" had raised insuperable difficulties in the way of successfully dealing with the Papal aggression, he found himself placed in a minority by his own party, and availed himself of this disadvantage to resign office. He consented, however, to retain power, when it became evident that no other statesman was ready or willing to incur the responsibilities of the crisis; and when Parliament met in 1852, he made an effort to retrieve his popularity by the introduction of a new Reform Bill. But ere this measure could be discussed, Lord Palmerston, whom he had previously expelled from the cabinet, overthrew the ministry on a clause in the Militia Bill; and the reins of power were, at Lord John's suggestion, placed by Her Majesty in the hands of the Earl of Derby. Scarcely, however, had his successor been invested with the robes of office, than Lord John, summoning the senators of all shades of liberal politics to his residence, explained that the present ministers must be displaced forthwith, and formed what was called "the Chesham-Place Alliance;" and when, in December, the Coalition Ministry was formed, under the auspices of the Earl of Aberdeen, Lord John gave an unequivocal proof of his entire disinterestedness, by consenting to serve under an ancient foe, as leader of the House of Commons and Secretary of State for Foreign Affairs. Ere long, he resigned the latter post to Lord Clarendon; and after an interval, during which he led the House of Commons and sat in the cabinet without office, he became President of the Council.

le occupying that eminent position, Lord John, in the session of 1848, submitted to Parliament his Reform Bill that had been introduced two years before, but he withdrew the ill-fated measure in tears in his eyes, on finding that it was hopeless to prosecute such purely domestic scheme while public attention was monopolised by a foreign war. From that date, Lord John found his position gradually growing more unpleasant; and in 1855, as soon as the conduct of the war was converted into the great question of day, and the Coalition Ministers were threatened by Mr. Roebuck with an inquiry into the condition of our army before Sebastopol, Lord John hastened to escape from a cabinet, the conduct of which members he could not conscientiously defend. He was subsequently entrusted by Lord Palmerston with the seals of the Colonial Office, and sent as Plenipotentiary to the Vienna Conference; but the part he took in the negotiations for peace with Russia was utterly distasteful to the country, and Sir E. Bulwer-Lytton gave notice of a motion condemnatory of his proceedings. Lord John, anticipating the sentence of the House, once more resigned office; and the assembled Commons witnessed the strange spectacle of a great statesman, who for well-nigh forty years had stood in front of the parliamentary battle as the foremost champion of "civil and religious freedom," banished to the obscurity of back benches, amidst the derision of foes, the vituperation of former friends, and the contemptuous expressions of a too mutinous public. Notwithstanding this mortifying reverse—the more mortifying that it was unexpected—the admirers of Lord John did not despair. Indeed it is not improbable that he will, at the change of the political wind, be recognised as the bravest champion of Liberalism, and applauded as the rightful heir of the name of Fox and Grey—the true representative of those principles whatever their worth, for which Hampden died on the field of Chalgrove, Russell and Sydney laid down their lives on the scaffold. Lord John, we may add, has lately figured in the literary world, as the author of the Diaries and Memoirs of Thomas Moore, and as one of the editors of the Fox papers. He is, moreover, author of "History of Europe since the Peace of Utrecht."

RUSSELL, JOHN SCOTT, F.R.S., the Discoverer of the phenomenon in hydrodynamics known as "the great solitary wave of translation," has long been eminent as a man of science. He was born in the Vale of Clyde in 1808, and is the eldest son of the late David Russell, of the family of Russell of Braidwood. He received a university education, and graduated with honour at the University of Edinburgh in 1826. He evinced a very early predilection for practical mechanics, to encourage which his father first permitted him to be employed in the workshop as an engineer; and afterwards assisted him to prosecute his studies in mechanics, physics, and the higher mathematics. In these he had made such advances that when Sir James Leslie, the distinguished Professor of Natural Philosophy in the University of Edinburgh, died, at the commencement of the

new emperor and the young prince Alexander, now become Hereditary Grand Duke; but before this transfer of allegiance could be effected, St. Petersburg must resound with the heavy, earnest roar of artillery, and its squares be reddened with Russian blood. On the morning of the 26th December, 1855, the child whose throne was to be established or lost for ever, was with his mother in the Imperial Palace, when his father, kissing both, and commending them to God, rode out, and by personal courage and the unrelenting vigour of his measures, daunted the rebellious regiments, returning thenceforward to encounter revolution only beyond the frontiers of Russia. The youth of Alexander was passed under the tuition of generals and private teachers whose fame has not crossed the Western frontier. It is, however, to travel, to the society of the accomplished German princesses who have from time to time entered the Imperial family, and to the literature of the West, which he has sedulously cultivated, that he chiefly owes that which Europeans are accustomed to call education. Besides visiting the provinces of the empire, he has travelled more than once in Italy and has been a frequent visitor at the numerous courts of Germany with which his family is connected. His portraiture, as he appeared at the age of twenty, has been drawn by the Marquis Custine, with a free and skilful hand. The lively marquis saw then Grand Duke at the baths of Ems, in Nassau. He says:—“The Hereditary Grand Duke has arrived at Ems, preceded by four or twelve carriages, and followed by a numerous court. I placed myself at the side of the Grand Duke, among the curious crowd he alighted from his carriage. Before entering the house he stood for a long time at the door of the baths, in conversation with a Russian lady, so that I had time to examine him. He looks his age, which is twenty. His person is tall, but a little too stout for so young a man. His manner is agreeable, his gait noble, without the stiffness of the soldier; and the peculiar grace distinguishes him recalls the singular charm belonging to the Slave race. There is not the vivacious passion of warm countries nor the imperturbable coldness of the North; but a mixture of Southern simplicity and adaptability with Scandinavian melancholy. The Slaves are white Arabs. The Grand Duke is more than German; but there are German Slaves in Mecklenburg, as well as in some parts of Holstein and Prussia. Notwithstanding his youth, the Prince's face is not so agreeable as his figure. His complexion has lost its freshness; it is visible that he is a sufferer. His eyelid droops over the outer corner of the eye with a melancholy betraying already the cares of a more advanced age. His plebeian mouth is not without sweetness, and his Grecian profile recalls medals of the antique or the portraits of the Empress Catherine; but beneath that air of kindness, almost always conferring beauty, youth, and German blood, it is impossible not to recognize a force of dissimulation that terrifies one in so young a man. This trait is, doubtless, the seal of destiny, and makes me believe that the Prince is fated to ascend the throne. His voice has a soft

his tone—a thing rare in his family, and a gift he has received from his mother. He stands out among the younger men of his time without anything to stamp the distance observable between them, unless it be the perfect grace of his whole person. The Prince's expression is one of kindness; his step is light and graceful—truly that of a prince. His air is modest, without timidity, which is a great point for all about him. Such as he is, the Grand Duke of Russia still seemed to me one of the finest models of a prince that I had ever met." Elsewhere the same writer says of the Prince.—"If he should ever reign, he will make himself obeyed, not by terror, but by the attraction of his inherent nobility; unless the necessities that cling to a Russian Emperor's position should alter his character as well as his position." The position of a Crown Prince in Russia is under no sovereign favour—contrary to that pronounced development of independent character of which we have had memorable examples among our Princes of France; and least of all would the Emperor Nicholas tolerate any such pretensions in those of whom he considered himself as the commanding-officer as the father. There are no grounds, however, for supposing that while Hereditary Grand Duke, Alexander aspired to divide the power or direct the policy of his father. He did not seek or make occasions for identifying himself with the bellicose demonstrations in which his next brother, Constantine, delighted, it is probably because his tastes were not military; that he enjoyed the confidence of his father, and was thoroughly inducted into his policy and system of government, is well known. The relations of the Crown Prince and his brother Constantine were for years of a very unsatisfactory character. Constantine disliked his brother's inclination for books and the society of men of culture, and proclaiming, both in season and out of season, that the Emperor of Russia should be a soldier, he cultivated his brutal rudeness, and ostentatiously affected the society of military men. Alexander regretted the barbaric tendencies of his brother, and believing that something more than soldiers was necessary to the state, appeared as often as otherwise out of uniform. Upon one occasion, Constantine, who is admiral of the fleet, being on a cruise, carried a quarrel so far as to arrest his elder brother, who was on board his ship; an act for which he was in turn placed under arrest by his father. When the late Czar drew near his end, he feared that Constantine might become the chief of the party of resistance, represented by the old Muscovite families, against the party of moderation, of which Alexander had been considered the centre of gravitation. The Emperor Nicholas was not the first to perceive the opposite directions to which the Hereditary Grand Duke and the Grand Duke Constantine tended. Foreseeing that this might produce, sooner or later, intestine and fatal conflicts, he had required Constantine, so long since as 1843, upon the birth of Alexander's first child, to take on the Holy Gospels an oath of fidelity to the heir of the throne. At the time of the Emperor's falling ill, the Crown Prince Alexander, the present

Emperor, was the only son present in St. Petersburg. but the Grand Duke Constantine was summoned by telegraph and by courier, and arrived in time to see his father alive. In the presence of both the Emperor made over to his eldest son the Imperial throne, and obtained from both of them a solemn promise to remain for ever closely united, in order to save the country. The Grand Duke Constantine upon that occasion vowed to be the future Emperor's first subject. As soon as the news of the Emperor's death became known in the circles of the Court, various dignitaries of the empire hastened in dismay to visit the royal death-bed. The Czarowitsch on this occasion declared his intention to enter on the government of the empire in the presence of the Ministers and the Estates, and was immediately proclaimed Emperor under the name of Alexander II. The same afternoon the Estates of the Empire, and the military stationed in St. Petersburg, did homage; and at a council held under the presidency of the new Emperor it was resolved not in any way to interrupt the present course of the conduct of the war. Alexander's first act was to issue a manifesto to the nation, notifying his accession and declaring in general terms his intention to uphold the glory of the empire as it had been upheld by Peter, Catherine, Alexander and his late father. He at the same time summoned the able and long-neglected General Rudiger from Warsaw, and conferred on him the command of the Imperial Guards, until then held by himself. He renewed the powers of his plenipotentiaries then at Vienna and through them announced his adherence to the declaration made by Prince Gortschakoff on behalf of his late father. Persons who have had opportunities of studying the character of the new Emperor predict that he will display a firmness and energy which he has not hitherto generally received credit. He has not only an intimate knowledge of the whole system of the Russian government, acquired by working in concert with the Emperor Nicholas, but is personally acquainted with the abilities and character of all the generals, officers of state, and principal functionaries of the empire. Not long ago, in his capacity of head of the military academies of the empire, he laid before his father a plan he had drawn up for obliging the students of the universities and higher civil schools to receive instruction in the theory and practice of the first elements of military education, and particularly the duty and manœuvres of companies and battalions, so as to become effective as preliminary officers if their services should be required. The plan was adopted by the late Emperor, and the regulations were published only two days before his accession. Alexander was married, in April 1841, to the Princess Mary of Hesse, a lady six years younger than himself, by whom he has two children; the eldest, Nicholas, now Crown Prince, born Sept. 1843.

S.

ST. JOHN, JAMES AUGUSTUS, Poet, Politician, and Novelist, one of the most voluminous and accomplished writers of our time, was born in Carmarthenshire, at the beginning of the present century, and received the first rudiments of his education at a grammar-school. Imbued from his earliest years with an intense love of reading and meditation, he passed his boyhood in tramping over mountain and moorland, in all the freedom of untrammelled nature; and having acquired enough of elementary knowledge to enable him to teach himself more, applied himself to it with an earnestness and assiduity which could hardly have been looked for in one so young. Assisted subsequently by the aid of his neighbours, he became a good classical scholar, and taught himself the French, Italian, Spanish, Arabic, Persian languages. At the age of seventeen years he came to London, and in 1819, whilst yet young, married Miss Eliza Agar, a lady of great beauty and accomplishments, the sister of the author of "The Book of Archery," and the daughter of a physician of Bath. Having inherited nothing from his father, at his death, he was thrown altogether upon his own resources; setting aside the warnings and counsels addressed by Coleridge and Scott to young aspirants like himself, determined to follow literature as a profession, and took up its cross accordingly, with the ardour and enthusiasm of youth and inexperience. His first appearance before the public was as editor of a Plymouth newspaper, as radically liberal as provincial journals in those days were wont to be. An honest and uncompromising politician from a very early age, he has never ceased to combat on every available opportunity old-world prejudices, and to advocate political reform of thought and action in its most extended sense. One of his first adventures in the world of letters was an Oriental tale of considerable promise, entitled "Abdallah," and a short time after its publication he entered the *atelier* of that astute manufacturer, Mr. James Silk Buckingham, and became his assistant in the "Oriental Herald," of which, although it bore Buckingham's name, Mr. St. John was virtually the editor. At this connexion lasted, he wrote numerous articles on various topics in its pages; among others, a history of the rise and progress of British power in India. In 1827 he started, in conjunction with Mr. David Lester Richardson, the "Weekly Review," a journal designed to rival the "Literary Gazette," then in the meridian of its existence; but which, after a fair trial, was consigned to the "tomb of all the Capulets." In 1829, Mr. St. John left England with his family, and took up his residence at Caudebec in Normandy, where he remained a year. During his sojourn he walked over the whole of Normandy; visiting its towns and villages; tracing its antiquities, literary and archæological; and recording his experiences in an interesting little volume, which

forms one of the series of "Constable's Miscellany." In the following year he removed to Paris, where he wrote, for Colburn "National Library," "The Lives of Celebrated Travellers," and subsequently collected some of his own earlier essays under the title of "The Anatomy of Society." Proceeding southwards, he pitched his tent at Dijon, the capital of Burgundy, whence he sent home for publication, in the "Library of Entertaining Knowledge," a work in two volumes entitled "History, Manners, and Customs of the Hindoos." In 1832 he passed into Switzerland; residing first at Geneva, then at Vevay, and lastly at Lausanne. Leaving his wife and family of seven children in that town, he set out a few months afterwards for Egypt; traversed the Alps, Lower Italy, and part of Piedmont, and embarked at Leghorn for Alexandria, whence, after investigating all its marvels and antiquities, he proceeded across the Desert into the Delta, visiting its principal cities and finally to Cairo. Here he remained a considerable time, after climbing the Great Pyramid, and inspecting the wonders of that extraordinary region, ascended the Nile, and travelled the greater part of Egypt on foot; peregrinating as far as the second cataract, on the confines of Upper Nubia. On his return to Cairo he visited other parts of Egypt within reach of that city, and then descending the Nile to Alexandria, took ship for Europe, and crossing over from Malta to Sicily in an open boat, explored every part of that poetical island, and visited Naples and Capri, and Vecchia; and after remaining several months with his wife and family in Switzerland, returned to England in 1834, and published his travels under the title of "Egypt and Mohammedanism." In 1835 he took up his abode at Chantilly, in whose splendid forest he might often be met, with groups of children in their train, listening with greedy curiosity to the "wild wonder stories" he had gathered together in his travels. In all his wanderings Mr. St. John carried about with him a little library of Greek literature, and devoted all his leisure to the collection of materials for his well-known work on the Manners and Customs of the Ancient Greeks. It was, in fact, to clear up points connected with this book, that he visited Egypt, Sicily, and Magna Græcia. The composition of the work, however, occupied him eight years more, during which time he published, at various intervals, editions of Locke, Milton, Sir Thomas More's "Utopia," Sir Thomas Brown's "Religio Medici," Bunyan's "Pilgrim's Progress," and several novels; "Tales of the Ramadhan," in three volumes, (founded on stories he had picked up among the Arabs,) and "Margaret Ravcroft," in three volumes. At length, in 1842, he published in three volumes his "History of the Manners and Customs of Ancient Greece," his best and most important work; one which, had he written nothing else, would have secured for him a permanent place in British literature. In a touching dedication of this work to his accomplished son, Bayle St. John, he alludes to a calamity (a partial loss of sight) which overtook him in the midst of his composition, and rendered his son's services as his amanuensis indispensable.

able. By this work, which occupied him more or less for upwards of twelve years, he has never realised one farthing; having been so simple enough to consent to an arrangement by which his remuneration for this large amount of labour was to be contingent upon the publication of a second edition; foredoomed, of course, never to make its appearance! The learning, industry, and judgment displayed in these volumes, are worthy of all praise, and cannot fail to render the book, some time or other, a standard work of reference, which must find its way into every well-selected library. Meanwhile its contents are being plundered without compunction by more than one pseudo-learned Pundit, who, with better luck or more liberal publishers, have managed to thrive upon Mr. St. Leonard's unrequited labours. To his volumes on Greece have succeeded "Sir Cosmo Digby," a novel in three volumes; "Isis, an Egyptian Pilgrimage," in two volumes; "There and Back Again," two volumes; "The Nemesis of Power, or Causes and Forms of Revolution;" and "Philosophy at the Foot of the Cross." Mr. St. Leonard has been an extensive contributor to the best modern periodical literature, and has been a trenchant political writer of the extreme *gauche* for more than twenty years. Of his six sons, three have adopted literature as a profession;—Bayle St. John, also an Egyptian traveller, is the author of "Village Life in Egypt," "Two Years in a Levantine Family," "Purple Tints of Paris," "The Louvre," and several other works of considerable merit. Bayle St. John is the author of "Paul Peabody," and very many others in Cassell's "Illustrated Family Paper." Horace St. John is the author of "The Indian Archipelago," 2 vols., and "History of the British Conquests in India." These three gentlemen, in 1854, commenced a periodical under the title of "Utopia, a Political, Literary, and Industrial Journal;" but its politics being too utopian for circulation, it suddenly expired at the close of its sixth number. Two other of Mr. St. John's sons have, through the kindness of Sir James Brooke and Lord Palmerston, obtained valuable appointments in Borneo—one as Commissioner and Consul-General, and the other as Surveyor-General, of the Labuan.

ST. LEONARD'S, EDWARD BURTENSHAW SUGDEN, BARRISTER-AT-LAW, ex-Lord Chancellor, the son of a Westminster tradesman, was born in the year 1781, and was called to the bar at Lincoln's Inn in 1807. A year after donning the gown, Mr. Sugden brought himself into notice by his treatise on "Powers," which at once attracted the attention of the profession, and has since been considerably enlarged. He soon obtained an immense practice at the Equity Bar; and in 1822 became a King's Counsel, and a Bencher of Lincoln's Inn. While pursuing his political career as member for South Devon, Melcombe Regis, and St. Mawes, Mr. Sugden took a prominent part in parliamentary discussions, and was foremost among those who opposed the Reform Bill. Meanwhile, in June 1829, when the Duke of Wellington held the reins of government, he had been appointed Solicitor-General, besides being created a Knight

Bachelor; and in 1835, when Sir R. Peel formed a ministry, Sir Edward Sugden went to Ireland as Lord Chancellor. He, of course, resigned that judicial office on the fall of the Cabinet, and in 1837 was returned to the House of Commons as member for Ripon. On the formation of the Peel ministry, in September 1841 Sir Edward Sugden resumed his former position as Lord Chancellor of Ireland, in which he continued until the disruption of the Conservative party in 1846. Sir Edward Sugden now disappeared for a while from the arena of public affairs; but in 1851, when the ministerial crisis had heralded the advent of the Conservatives to power, he made his appearance at the grand banquet at Merchants' Hall; and in 1852, when the Derby Cabinet was constructed, its supporters announced with pride that he had accepted the post of Lord Chancellor. It was indeed deemed to their advantage that a party assuming office, with little to recommend it to public favour but the high spirit and unrivalled eloquence of its chief, should place upon the woolsack the most learned and profound of living lawyers; and having been raised to the peerage with the title of Baron St. Leonard's, he applied himself to the reform of the law, with a vigour and energy which more than realised public expectation. The Government were proud, as it well might be, of his achievements; and when parliament was dissolved they took care to sing his praises. On the resignation of Lord Derby and his colleagues, the Coalition Ministry were announced; that Lord St. Leonard's should retain the great seal. He declined the responsibility under the peculiar circumstances; but he had since taken an active and influential part in the business of parliament, and has exerted himself with diligence to keep up the character and efficiency of the House of Lords as a judicial tribunal. Besides his celebrated treatise on "Powers," Lord St. Leonard's is the author of "The Laws of Vendors and Purchasers of Estates," "Letters to a Young Man of Property," a pamphlet against the registration of deeds, and other essays on legal subjects.

SALDANHA, OLIVIERA E DAUN, JOÃO CARLOS, DUKE OF, a Portuguese Politician, and a Marshal in the army, was born in 1780, at Arinhaga. He is a grandson, by his mother's side, of the Marquis du Pombal, by his second marriage with the Countess Daun. He received his education in the School for Nobles at Lisbon, and at the University of Coimbra. He entered upon it as a member of the Council of Administration for the Colonies, and remained in Portugal after the emigration of the court to Brazil. In 1810 he came to England, and afterwards went to Brazil, where he commanded an army with some success, and was subsequently employed in diplomacy. In 1825 the King of Portugal named him Minister of Foreign Affairs. In 1826, when Isabella, after her king's death, had succeeded to the royal dignity, Saldanha was Governor of Oporto; but upon the introduction of Pedro's constitution he was made Minister of War. He suppressed the desertion

which at that time broke out in the north of Portugal, as those which shortly afterwards took place in Algarva. He persuaded the Government to decline the services of Lord Beresford, who had arrived at Oporto with the wish to undertake the command of the Portuguese army. He resigned office on the 21st of May, 1837; having failed in an attempt to remove two suspected members of the regency; and the strenuous attempts of the Liberal party to restore him to power remained without effect. He now returned to England; but when Miguel had assumed the government he returned, landed at Oporto, and with Palmella placed himself at the head of the Constitutional army. The troops proved so cowardly, that he laid down his command and returned to England. The efforts of the young queen assembled about two thousand men in England, for the purpose of landing in the Portuguese dominions, and strengthening the garrison of Terceira, the only spot where the rights of Donna Maria were recognised. The Government of England, however, took precautions to prevent this. Saldanha then went to France, where, in 1832, Pedro collected other exiles and landed in Portugal. Saldanha was made Commandant of Oporto, and chief of the general staff. In conjunction with the Duke of Palmella he broke the Miguelist lines before Lisbon, and in 1834 was appointed in the room of his companion in arms to the chief command. In the Cortes opened by Pedro, Aug. 5th, 1834, Saldanha belonged to the Opposition, but on the 27th of May, 1835, was made Minister and President of the Council. He was unable, however, to obtain a majority in the Chamber; and as the Government was daily sinking in credit, he resigned in November. In the session of 1836 Saldanha sat on the Opposition side of the Cortes, but was supposed to belong to the Liberal party; but when the September revolution broke out he embraced the Conservative party, and joined a number of peers in protesting against the violation of their exceptional privileges. He also joined the Duke of Terceira, in order to place himself at the head of a movement for restoring the Constitution of Don Pedro, but failed. In 1846, being in Paris, he was recalled to Portugal by the Duke of Palmella, upon the downfall of the Cabrais had taken office, to assume the portfolio of Foreign Affairs, and arrived soon afterwards; but, instead of embracing the offer, came to an understanding with the Duke of Terceira with a view to overthrowing the new premier. In consequence of these intrigues, a counter-movement in the reactionary interest took place on the night of Oct. 6, 1848, and was at first successful. Saldanha presented himself to the queen, as the bearer of a list of new ministers, at the head of which was his own name. This step called forth a popular insurrection in Oporto and the northern provinces, the issue of which was Saldanha's appointment to the premiership, which he has since retained.

SANTA ANNA, ANTONIO LOPEZ DE, late President of the Republic of Mexico, was born in the last decade of the

eighteenth century, and first came into public life in the year 1821. After he had expelled the Royalists from Vera Cruz, he was appointed to the command of that city, from which he was deposed in Nov. 1822. He immediately raised the banner of the Republic in Vera Cruz, and commenced hostilities against Iturbide, whom he overthrew. When he found that his ambitious purposes were not sufficiently served in the changes which followed, he placed himself at the head of the Federalist party, but was defeated, and retired to his estate near Jalapa until 1828, when he again appeared on the scene. He this time came forward to promote the presidency of Guerrero, who in 1829 appointed Santa Anna commander of his army. When, in 1830, Bustamante attained to the chief dignity, Santa Anna espoused the cause of Pedrazza, against whom he had formerly supported Guerrero. He defeated the army sent against him, and Pedrazza was president until 1833. At the next election in March, Santa Anna was chosen president; but, although the favourite of the army, he could not gain the confidence of the people. Arista and D'Arran, who in 1833 took up arms against him, were, however, defeated. In 1835, the rumour that he was intriguing for the imperial dignity produced an insurrection of the provinces. Having defeated Lacatecos, leader of the Reform party who had published against him a proclamation, he announced himself Dictator. The discontented now flocked to Texas, and proclaimed a government. Santa Anna went against them; and the war, which gained him no glory, ended in his being taken prisoner. Released from captivity, he took part, in Dec. 1838, in the defence of Vera Cruz against the French, in which service he lost a leg. After many vicissitudes, he was again made President in 1841 and governed absolutely until 1845, when a new revolution hurled him from power. The two succeeding presidents were, however, unable to carry on the government, and in the next Santa Anna regained his lost position. On the 22d of February, 1846, he encountered the American general Taylor, then invading Mexico at Buena Vista. Santa Anna had 17,000 men, Taylor 4000 or 5000. The fight lasted two whole days, and both parties claimed the victory. After this, the forces of the United States continuing to gain ground, Santa Anna withdrew further into the country, leaving Mexico in the hands of the enemy. During his absence the Mexican senate deposed him from his command. As first magistrate of the State, he refused obedience, and withdrew to Tehuacan. In the following campaign he was recalled to the supreme command, and in this capacity fought the decisive battle of Cerro Gordo, when his army was put to the rout. At Mexico the revolution had placed D'Arran in the presidential chair, but the advance of the United States army decided the people to concentrate all power in the hands of Santa Anna, who was once more proclaimed President of the republic. The Mexicans were, however, unsuccessful; and on the 2d of February, 1848, the treaty was signed by which the United States gained, among other advantages, the auriferous territory of California. In 1853 he contrived to subvert

power of General Arista, who had been constitutionally elected the presidency by a large majority, and obtained his own recall. President, he governed the country most despotically for two years; but in the autumn of 1855, his oppressions having united his opponents, he saw himself in great danger, approached the coast on pretext of official business, and then suddenly resigned his presidency, and escaped from the country.

SARDINIA, VICTOR-EMMANUEL II., KING OF, and Knight of the Garter, son of King Charles-Albert by a princess of the royal house of Austria, was born on the 14th of March, 1820. A prince, who, before his accession to the throne which he so worthily occupies, bore the title of the Duke of Savoy, educated by the priests, and although not very profoundly learned, acquired, as he grew up, considerable knowledge of men and a keen appreciation of circumstances. He was, however, unknown to the subjects of Sardinia, save as a dashing officer, lover of field-sports, and the husband of a princess of the house of Hapsburg, namely, the Archduchess Adelaide of Austria, to whom he was united in 1842. Such was his position, when, in 1848, the French Revolution agitated Europe and convulsed the Italian States. When matters arrived at this point, and when the king assumed the office of regenerator of Italy, Charles-Albert raised the banner of Piedmont; and six days after the Austrians had been driven from Milan he crossed the Ticino, and proclaimed a national war. Victor-Emmanuel, then Duke of Savoy, resolved to share with his father the fortunes of the campaign, and having done his duty as a brave and gallant soldier in the disastrous actions that ensued, he distinguished himself with a courage worthy of his race in the battle of Novara, fought on the 24th of March, 1849. On the evening of that day Charles-Albert, saddened by defeat, but calm in adversity, returned to the Bellini Palace: and a rumour was current that in order to allay the irritation of the Piedmontese, who did not make due allowance for the difficulties of his position, he was about to abdicate. Victor-Emmanuel and his brother, the Duke of Genoa, with the Minister Cadorna, the Commander-in-Chief, and the Lieutenant-General and Commanders of Divisions, were summoned to the royal presence. When King Charles-Albert entered the room in which the Council had assembled, the emotion of those present showed that they were aware of his intention; but the king, advancing with firmness and dignity, said:—"Gentlemen,—Fortune has betrayed my courage and my hopes: our army is dissolved: it would be impossible to prolong the struggle. My task is accomplished; and I think I shall render an important service to my country by giving a proof of devotedness in abdicating in favour of my son, Victor-Emmanuel, duke of Savoy. He will obtain from Austria conditions of peace which she would refuse if treating with me." The other persons in this scene burst into tears, but the king himself appeared unmoved; and all the arguments of his son to shake his resolution proved vain. The king then embraced all who were present, thanked

them for the services they had rendered him, and said:—"I am no longer your king. Be faithful and devoted to my son, as you have been to me." He then withdrew to write to the queen, and having charged the Duke of Savoy to deliver the letter of adieu with his own hand, betook himself to voluntary exile, and did soon afterwards in Portugal. When Victor-Emmanuel re-entered Turin on the 20th of March, at night, two days after the battle of Novara, but little was known about his character, and that little by no means to his advantage. He had proved himself a daring, dashing soldier, and a brave sportsman: but for the rest, his manners were described as harsh and haughty. He was the son and husband of Austrian princesses, and the pupil of Jesuits. When he joined his father in pledging his royal faith to the Constitution on the 1st of February, 1848, his huskiness of voice and sourness of mien had been the theme of ungenerous comments. The democratic ministry had resigned on the first tidings of the fatal issue of the war, and a new cabinet had been formed under General de Launay, one of the well-known reactionary counsellors of Charles-Albert. The appointment had caused the greatest uneasiness, and Piedmont was in breathless suspense. On the 28th of March, the new king received the deputation from the Chamber of Deputies of Turin, charged to inform him that the representatives of the nation continued to promise him all the means they could dispose of to carry on the great work begun by his father. King Victor-Emmanuel thanked the deputation for their grateful memory of his father; he then gave several details of the late disastrous campaign, and mentioned certain corps of the army which had fought bravely. He said his father, Charles-Albert, had determined to abdicate in consequence of the heavy conditions imposed by the enemy being such as broke his heart. The king added: "I have already obtained a considerable mitigation of the conditions, and I shall do my best that these terms may be reduced." The king then spoke still more of the war; he willingly accepted the generous offer of the nation to continue the war of independence. In this question, he said, he would not quit the footsteps of his honoured father; the nation might be assured that he had nothing more at heart than the honour of the country. It was with difficulty that Victor-Emmanuel could compose the agitations of the kingdom. At Genoa, the Republican party rose in revolt. The Chambers refused to ratify the best treaty which the king could make with Austria, and were dissolved. The King of Sardinia, however, was not a man to be fooled by despots, or daunted by demagogues. His character was too true, honest, and courageous. When Austria offered to insure to him Parma, if he would give up the Constitution he had sworn to maintain, Victor-Emmanuel preferred his honour to the tempting bait; but when the inhabitants of Genoa rose in insurrection, expelled the royal garrison, and proclaimed a Provisional Government, he soon taught them that he was prepared to maintain his rights as a constitutional sovereign. He acted on the occasion with characteristic vigour and decision; and General Della Marmora, raising a formidable force, laid siege to Genoa, and speedily over-

called submission to the royal authority. It was not, however, until the opening of 1850, that the Sardinian parliament ratified the peace with Austria, which was then essential to the internal order of the country, and which has since enabled king and people to walk steadily forward, hand in hand, toward national improvement and civil progress. Soon after Victor-Emmanuel was seated on the throne of Sardinia, began his struggle with the Papal See. He joined with his people in disregarding the monstrous pretensions of the Pope, who sought to encroach on the national independence of his kingdom in temporal matters; and, though adhering to the faith of his ancestors, he determined to commence such a policy as would ultimately separate the Sardinian States, in spiritual matters, from Rome. In conjunction with his parliament, he dealt with the various institutions in the Church in the way which they jointly deemed to be for the general welfare of his people; and he has pursued his resolution with a courage that is proof against the thunders of the Vatican. As time passed on, the King of Sardinia, in spite of his connexion with the perfidious house of Hapsburg, signed, on 26th January, 1855, a military convention with France and England, and soon afterwards despatched to the Crimea, under General Della Marmora, that noble army, which, under the white flag of Savoy, fought so successfully, and so gallantly, on the banks of the Tchernaya. But if the public career of Victor-Emmanuel has been thus far honourable to himself and advantageous to his country, his domestic life has been clouded by great sorrows. He was a most affectionate husband, a devoted son, and a fond brother. Within a few months he laid his mother, his wife, and his brother in the grave; and while he was still mourning the loss of relatives so near and dear, a fever, caused by his riding through a stream up to the knees, while hunting, brought him to the very verge of the tomb. When the king was in this dangerous situation, it is said that the great difficulty of his medical advisers and those about him was to make him aware of his own importance, and to impress him with a conviction of how valuable his life was, not only to Sardinia and Italy, but to civilisation in general. On being restored to health, the King of Sardinia, in November 1855, visited the capitals and courts of France and England. By both nations he was welcomed with enthusiasm and entertained with magnificence. An idea of his personal appearance may be gathered from the following sketch in the "Illustrated Times":—"Imagine a military-looking personage of decidedly foreign aspect, thirty-five years of age, or thereabouts, tall in stature, but strong in body and erect in carriage, with small and peculiarly piercing eyes, an ample forehead, a fair complexion, intelligent features, light hair, and immense moustachios, which owe their length to a singular combination of moustache and whisker, and which, by the bye, are stated to have created quite a sensation among the ladies of Paris; array such a figure in the bright blue tunic and the trousers of light grey, with black stripe, which constitute the uniform of a Sardinian general officer; decorate his broad chest with a cross of the Legion of Honour and the 'Soldier's

Medal,' the recent complimentary presents of the Emperor Napoleon, and you have before your 'mind's eye' King Victor-Emmanuel as he appeared to the crowds who thronged the streets of our metropolis to bid him welcome to 'the proud isle of liberty.' Her Majesty conferred on him the Order of the Garter. Victor-Emmanuel is titular King of Cyprus and Jerusalem.

SAXONY, JOHN, KING OF, who succeeded his brother, Frederick-Augustus, August 9, 1854, is a man of great vigour of character, and a determined antagonist to democracy in all shapes and forms. As the heir to the throne (the marriage of his brother, the late king, to the Princess Marie of Bavaria, aunt of the Austrian emperor, having produced no issue), he became an object of hatred among the Saxon people whenever political excitement arose. More than once he was obliged to leave the capital in consequence of *émeutes*; the unpopular acts of the government were falsely attributed to his influence; for they were mostly the acts of the king's favourite prime minister. The antagonism between Duke John and the people was religious as well as political; for while the population of Saxony were mostly Protestant, Duke John always distinguished himself as a violent, and even a bigoted, partisan of the ultra pretensions of the Roman Catholic church. Hence much danger was apprehended on his accession to the throne; for Saxony, although a small kingdom, with its population scarcely larger than London, may be made to play an important part in German politics; more especially in difference of policy or action between Austria and Russia; and it was apprehended that the king's ultra Catholic tendencies might induce the Pope to extend his spiritual dominion into Saxony. King John's political opinions are of the school of Metternich; and his position with regard to the great war is that of a partisan of Russia, because he believes that the principle of royalty in Germany rests on the maintenance of Russian supremacy. The King of Saxony was born in 1804; he is married to the Princess Amelia of Bavaria, the twin-sister of the King of Prussia. King John is a man of mark, and is more respected for his abilities than loved for his general character or opinions.

SCARLETT, GENERAL THE HON. SIR JAMES YORKE K.C.B., Commander of the British Cavalry in the Crimea, and leader of the heavy cavalry in the first of the celebrated charges at Balaklava on the 25th of October, 1854, is the second son of the eminent counsel Sir James Scarlett, afterwards raised to the Bench and the House of Peers as Lord Abinger. He was born in 1799, and was educated at Eton and Trinity College, Cambridge. He entered the army in 1818, joining the 18th Hussars. When that corps was disbanded he was for a time placed on half-pay, but shortly afterwards received a commission in the 6th Dragoons. On obtaining a half-pay majority he proceeded to Sandhurst, to pursue the study of fortification at that academy, and in six months prepared himself

examination and passed with credit. Having been appointed to full-pay majority in the 5th Dragoon Guards, he joined that regiment, and in 1840 became its Lieutenant-Colonel. In 1848, after the inspection of his regiment by the superior authorities, he received a distinguished approbation of the Duke of Wellington, commander-in-chief, conveyed to him in a special letter. In 1852 he became Colonel. When the British military expedition to Turkey was moved on, he was appointed a Brigadier-General of the Eastern Army, and the heavy cavalry was placed under his command. The service of the British army in Bulgaria gave Scarlett no opportunity of distinguishing himself, excepting by that watchful care over his troops, which is one of the first duties of a commander, and one of his officer's chief merits; but which is not of a nature to strike the attention of the many. The British Cavalry were destined, however, to acquire a celebrity before the troops composing it had been long on the Russian soil. On the 25th of October, 1854, the heavy brigade covered itself with glory. The enemy advancing to attack the position of the Allies in front of Balaklava, carried four regiments, which had been imprudently left in the care of raw Turkish troops—men who had never had the least military training,—and advanced with a force of cavalry about 2500 strong. Scarlett was ordered to attack this force with the Scots Greys and Enniskillen Dragoons, supported in second line by the 5th Dragoon Guards, and by a flank attack of the 4th Dragoon Guards. To describe what followed, we must borrow the language of an eye-witness:—"The heavy brigade advanced is drawn up in two lines. The first line consists of the Scots Greys and of their old companions in glory, the Enniskillens; the second of the 4th Royal Irish, of the 5th Dragoon Guards, and the 1st Royal Dragoons. We saw Brigadier-General Scarlett ride on in front of his massive squadrons. The Russians—evidently *troupes d'élite*—their light-blue jackets embroidered with silver lace, advancing on their left at an easy gallop towards the brow of the hill. A forest of lances glistened in their rear, and several squadrons of grey-coated dragoons moved up quickly to support them as they reached the summit. The instant they came in sight the trumpets of our cavalry gave out the warning blast, which told all that in another moment we should see the shock of battle beneath our very eyes. Lord Raglan, all his staff and escort, and groups of officers, the Zouaves, French generals and officers, and files of French infantry on the height, were spectators of the scene, as though they were looking on the stage from the boxes of the theatre. Nearly every one dismounted and sat down, and not a word was said. The Russians advanced down the hill at a slow trot, which they changed to a trot, and at last nearly halted. Their first line was at least double the length of ours; and it was three times as deep. Behind them was a similar line, equally strong and compact. They evidently despised their insignificant-looking army; but their time was come. The trumpets rang out again through the valley, and the Greys and Enniskilleners went right at the centre of the Russian cavalry. The space between them was

only a few hundred yards; it was scarce enough to let the horses 'gather way,' nor had the men quite room sufficient for the full play of their sword-arms. The Russian line brings forward each wing as our cavalry advance, and threatens to annihilate them as they pass on. Turning a little to their left, so as to meet the Russian right, the Greys rush on with a cheer that thrills to every heart; the wild shout of the Enniskilleners rises through the air at the same instant. As lightning flashes through a cloud, the Greys and Enniskilleners pierced through the dark masses of Russians. The shock was but for a moment. There was a clash of steel and a light play of sword-blades in the air, and then the Greys and red-coats disappeared in the midst of the shaken and quivering columns. In another moment we see them emerging and dashing on with diminished numbers, and in broken order, against the second line, which is advancing against them as fast as it can to retrieve the fortune of the charge. It was a terrible moment. 'God bless them! they are lost!' was the exclamation of more than one man, and the thought of many. With unabated fire the noble band dashed at their enemy. It was a fight of heroes. The first line of Russians, which had been smashed utterly by our charge, and fled off at one flank and towards the centre, were coming back to swallow up our handful of men. By sheer steel and sheer courage, Enniskillener and Scot were winning their desperate way through the enemy's squadrons, and also grey horses and red-coats had appeared right at the rear of the second mass, when, with irresistible force, like one bolt from a bow, the 1st Royals, the 4th Dragoon Guards, and the 5th Dragoon Guards, rushed at the remnants of the first line of the enemy, went through it as though it were made of pasteboard, and dashing on the second body of Russians, they were still disordered by the terrible assault of the Greys and their companions, put them to utter rout. This Russian horse, in less than five minutes after it met our dragoons, was flying with the same speed before a force of certainly not half its strength. A cheer burst from every lip: in the enthusiasm officers and men took off their caps and shouted with delight, and thus keeping up the same character of their position, they clapped their hands again and again. Lord Raglan at once despatched Lieutenant Curzon, and sent him to camp, to convey his congratulations to Brigadier-General Scarlett and to say 'Well done!' The gallant officer's face beamed with pleasure when he received the message. 'I beg to thank his Lordship very sincerely,' was his reply." Such was Scarlett's first action on the battle-field. His brigade was on the same day ordered to advance and bring out of action the light brigade, which, under Lord Cardigan, had charged with equal valour, but great loss. "The charge of this (the heavy) brigade," says Lord Raglan in his despatch, "was one of the most successful I ever witnessed, and was not for a moment doubtful. It was in the highest degree creditable to Brigadier-General Scarlett and the officers and men engaged in it." On the 12th of December Scarlett was made a Major-General. Lieutenant-General Lord Lucan having returned home

Arlett took the command the entire cavalry force in the Crimea. He was created a Knight Commander of the Bath in July 1855.

SCHEFFER, ARY, an eminent Painter of the French school, born in Holland in 1795. He was brought up in France, obeyed the instructions of Guérin, acquired at an early age great reputation by his historical and *genre* pictures, and was one of the founders of the French Romantic School. Beauty of colouring, and a certain breadth of style, characterise his later works, although there is often great affectation and striking negligence in those portions of his pictures which do not happen to be in his favourite line. These faults are particularly observable in the works which he has executed for the museum at Versailles, while his pictures of Goethe's "Faust," and Byron's "Giaour," are more completely finished. Among his best efforts are "Francesca da Rimini and her Lover, encountering Dante and Virgil in the Inferno," a group of great beauty; "Christ comforting the Weary and Heavy-laden," "The Dead Christ," and the two pictures of "Mignon," from Goethe's "Wilhelm Meister." Scheffer was, at an early age, instructor of the children of Louis-Philippe, and among others, trained, as an artist, the Princess Marie. He lives in Paris, apart from all coteries, and is making continual progress in art. One of his finest pictures is to be found in the gallery of Lord Ellesmere.

SCHNORR, JULIUS, Painter, was born at Leipzig in 1794. After studying under his father, who was Director of the Academy at Leipzig, he went to Vienna, and subsequently to Italy. At Rome he studied with Cornelius, and painted eleven frescoes on the "Orlando Furioso," for the Villa Massini. In 1827 he was appointed Professor of Historical Painting in the Academy at Munich, and there painted his admirable frescoes from "the Neibelungen-Lied." He is chiefly known in England by his admirable series of wood engravings in illustration of the Bible, of which an edition from the original woodcuts is in course of publication.

SCOTT, GEORGE GILBERT, A.R.A., Architect, the grandson of the author of the celebrated "Commentary on the Bible," one of the founders of the Architectural Museum, and a leading member of the school of Gothic revival in architecture, was born in 1811 at Sawcott, near Buckingham, of which village his distinguished grandfather had been the incumbent. At a very early age his enthusiasm in regard to old churches led his father to place him as an architect: but the practice with which he became acquainted during his probation afforded him no opportunity of gratifying his early penchant for Gothic architecture. He accordingly devoted most of his leisure hours to his favourite study, and, like most self-educated men of genius, soon taught himself more than most people learn under much more favourable circumstances. Of the school of Gothic revival Mr. Scott holds, by common consent, the first place. The leading members of this body

design with infinitely greater accuracy and purity, as well as freedom than the Gothic architects of twenty years since, following earlier and purer styles of Gothic. Reawakened love for the art of our ancestors has created a demand for its reproduction in churches, with immense advantage to architectural art. As early as 1825, when only a child, Mr. Scott began studying and sketching from ancient churches, not dreaming that such designs would ever again be wanted. For some years he was in partnership with Mr. W. B. Moffatt; a connexion which terminated with the year 1843. His first work which brought him into notice was the "Martyrs' Memorial" at Oxford, (1842); immediately followed by the new church at Camberwell, (1843-4). Later works,—at Croydon, Leeds, and Liverpool, display maturer taste and knowledge. After the terrible fire of Hamburg in 1846, the rebuilding of the church of St. Nicholas in that city was entrusted to him after a competition to which architects were invited from all parts of Europe. It is one of the most important Gothic works of the day, and will cost, when completed, 150,000*l.*; the proposed internal height exceeding that of any English cathedral except York and Westminster, and its proposed spire being only second in tallness to that of Strasbourg. The design follows in character the best periods of German architecture. In the present year another design has been furnished from his hand, for the new Hôtel de Ville and Senate-House at Hamburg, also a work of magnitude, which will cost about the same sum as the church which obtained the first premium, despite strong prepossessions on the part of the judges in favour of a other style. From his design also was erected, in 1848, the cathedral church of St. John's, Newfoundland. At home, a church which lately fell a victim to conflagration,—that of Doncaster,—is now being replaced under his superintendence. Mr. Scott has been largely employed in restoration, for which he is well qualified by extensive archaeological learning, and is in its execution more conscientious than many of the profession. The restorations of Ely Cathedral,—next to those of Hereford the most extensive which have been undertaken in an English church,—have, since the death of Basevi in 1846, been entrusted to him. From his designs are being executed the new choir screen (of wood),—the first of its kind in England, and of great merit in conception and execution; the elaborate stone reredos finished with mosaic and other features. He is also the official architect to the Dean and Chapter of Westminster; succeeding in 1849 to Sir George Blore. To the latter alone is due the credit (or discredit) of the present state of the choir and transepts of the Abbey; the result of an outlay of many thousand pounds. To Mr. Scott's credit, on the other hand, are to be placed the new Abbey-gatehouse and houses, adjoining the west of the minster: a noticeable example of the application of Gothic to dwellings. To the Academy Exhibition of 1850 he contributed a very interesting and suggestive "restoration" (on paper), of the ruined Chapter-house of Westminster, with its coloured interior decorations; executed from careful examination and measurements. Mr. Scott is the author of a "Treatise on the Principles of Gothic Architecture," published in 1840.

The Faithful Restoration of our Ancient Churches," 1850. The which he has displayed in the establishment of the Archæological Museum in Canon Row, Westminster (of which he is treasurer), has rendered it one of the most valuable as well as one of the most interesting institutions in the metropolis; and it has only, through his exertions, been enabled to take a high and permanent place among the scientific institutions of Great Britain.

SCRIBE, EUGÈNE, French Lyric Poet and Dramatic Writer, born Dec. 24, 1791, in the Rue St. Denis, Paris, where his father was a silk-mercant. His father, who saw in the boy a promise of high talent, placed him in the college of St. Barbe. At the age of twenty-one he wrote his first stage-composition, a vaudeville for the Gymnase. Shortly afterwards he began to write for the Théâtre Français, and has since produced two comedies in five acts, besides many shorter ones; also one hundred and fifty vaudevilles. In poetry he has written the words to forty grand operas and one hundred and three comic operas; he has also published several novels. M. Scribe has an elegant villa at Meudon, near Paris, and spends much of his time in the country. He is a member of the Academy, a commander of the Legion of Honour, and has received decorations from almost every sovereign in Europe.

SEDGWICK, THE REV. ADAM, M.A., Vice-Master of Trinity College, and Professor of Geology, in the University of Cambridge; born at Dent, Yorkshire. He took his degree of Bachelor of Arts in 1804, and the following year was admitted to a Fellowship at Trinity College, which he has retained ever since. Professor Sedgwick's eminence as a geologist is very considerable, though his writings on the subject have not been so systematic or popular as those of Lyell, De la Beche, or Murchison. The most considerable, indeed the only separate work on Geology which he has published, is "A Synopsis of the Classification of the British Silurian Rocks," &c. 2 vols. 4to., in which he had the co-operation of Mr. McCoy, now Professor in the University, Melbourne. His contributions to various scientific periodicals have been rather numerous, and are highly esteemed among scientific men. He is also noted to be the author of an elaborate article on the "Vestiges of the Natural History of Creation," which appeared in the "Edinburgh Review." His only other work is "A Discourse on the Duties of the University of Cambridge," which in its fifth edition (1841) grew from a thin pamphlet to a very thick volume. The text is 442 pages, and the appendix 228 pages, the discourse itself occupying 94 pages. This work is said to be very characteristic of its author, full of genius and knowledge, but exhibiting itself in a very irregular and desultory way. It was originally a sermon delivered in the chapel of Trinity College, at an annual commemoration. It was directed against the "utilitarian theory of education," as "not merely false in reasoning, but as producing a bad effect on the temper and conduct of those who adopt it."

In this line he had been preceded by the present Master of Trinity (Dr. Whewell), in "Four Sermons on the Foundation of Morals," and by the late Archdeacon Hare in various sermons "preached before the University of Cambridge." These three great men (who had a most noble and tender friendship for each other) had all have long been seeking to counteract the influence which they think Paley, in his "Moral Philosophy," has injuriously exercised on the studies of their Alma Mater. Professor Sedgwick is probably the most popular man in Cambridge; beloved by all classes for his genial, hearty character, and respected for his great talents. Marchese, in a speech at the last Cambridge meeting of the British Association, attributed his first impulse to geological studies to the influence of the friend of his youth, Adam Sedgwick. He is University Secretary to his Royal Highness Prince Albert, in his capacity of Chancellor to the University of Cambridge; and his simple, fresh character, is said to have made him a great favourite in his quarters. He was appointed Woodwardian Professor of Geology in the University in 1818. He is now about seventy years of age.

SEYMOUR, THE RIGHT HON. SIR GEORGE HAMILTON, G.C.B., English Ambassador at St. Petersburg from April, 1851, at the commencement of the war with Russia. This diplomatist, whose private conversations with the Emperor Nicholas so surprised the world on their publication in 1854, is the son of the late Lord George Seymour, and was educated at Oxford. He entered public service as attaché to the embassy at the Hague in 1817, and was in the Foreign Office as précis writer from 1819 to 1821. The following year he was private secretary in the Foreign Office, and in 1822 attended the Duke of Wellington on a special mission to Verona. He has been Secretary of Embassy at Frankfurt, Stuttgart, Berlin, and Constantinople. He represented his country at the court of Tuscany in 1830, at that of Belgium in 1838, and Portugal in 1846. In 1851 he was sent to St. Petersburg. The consummate skill by which, without for a moment deviating from a straightforward course, he led the Czar from confession to confession, thus unmasking the secret designs of Russia respecting Turkey, has been often commended. In Sir Hamilton's secret and confidential despatches of January 11th and 22d, Feb. 21st and 22d, and March 6th, the British Government had a kind of daguerreotype of the Emperor's mind. "The Turkish empire," said the emperor again and again, "is falling to pieces: if it falls, it falls to rise no more. I will not allow a pistol to be fired. Is it not better to be prepared beforehand for the contingency than to incur the certainty of a European war?" Sir Hamilton Seymour's own warnings were added. He wrote to Lord John Russell: "A sovereign who insists with such pertinacity upon the impending fall of a neighbouring state must have settled in his own mind that the hour, if not at least for, its dissolution was at hand." No one can read the book containing these communications, which was presented in 1854 to Parliament, and not admit that the British Government

gived full and fair warning from its ambassador of the perils
menaced the peace of Europe. Sir Hamilton Seymour left
Petersburg, at the express desire of the Russian Government,
several weeks before the declaration of war. He received the
Grand Cross of the Order of the Bath in 1847, having been made
Knight Bachelor and Grand Cross of the Order of Hanover
the previous year. In the autumn of 1855 he was appointed
ambassador to Vienna, in succession to the Earl of Westmoreland,
sworn in as a member of the Privy Council; and in the
month following he proceeded to his new post.

SHAFTESBURY, ANTHONY ASHLEY COOPER, EARL
Philanthropist, and lay-leader of the Low-Church party, was
born April 28, 1801, and educated at Oxford, where he obtained
first class in classics in 1832. In 1826 he took his seat in the
House of Commons, by the courtesy title of Lord Ashley, as mem-
ber for Woodstock, and supported the governments of Liverpool
and Canning, without, however, taking office. In the succeeding
administration of the Duke of Wellington he became a Commis-
sioner of the Board of Control. In 1830 he was returned for the
Borough of Dorchester, and in 1831 for the county of Dorset, after
a ten-days' contest with Mr. Ponsonby. He was a Lord of the
Treason in Peel's brief administration of 1834-35; and on the
death of the late Mr. Sadler took charge of the Ten-hours' Bill in
the House of Commons. When Sir Robert Peel again took office
in 1841, he invited Lord Ashley to join the administration: the
lord refused upon finding that Peel's views would not permit him
to support the Ten-hours' Bill. In 1846 he resolved to support
a measure for repealing the Corn-Laws; but his constituents
having manifested great dissatisfaction upon learning his intention
resigned his seat, and was for a short time out of parliament.
In 1847, however, he contested the election for Bath with J. A.
Black, the former member; and being strongly supported by the
various societies was returned. On the 2d of June, 1851, he suc-
ceeded his father in the peerage. In public life his lordship has
always acted with great independence. The chief object for which
he has laboured, in and out of parliament, has been the improve-
ment of the social condition of the labouring classes. Differences
of opinion divide the public upon concrete measures, such as the
Ten-hours' Bill; but the sturdiest opponents of that kind of legis-
lation acknowledge that no man has performed more arduous and
self-denying labour in informing himself of the actual condition of
the masses of the people in England, and endeavouring to ameliorate
their condition, than the noble earl. Lord Shaftesbury's influence in
the Evangelical party within the Church of England is of the highest
value. Romanising tendencies have not a greater enemy. He is
President of the Pastoral Aid Society, and the Society for the Con-
version of the Jews; and a prominent member of all those church
societies which are founded on a broad basis. Being a man of
liberal feelings, he has no difficulty in acting with Christians of

other denominations than his own, and thus is President of the Bible Society and of the Protestant Alliance.

SHAMYL, popularly known as a Circassian Chief, and by the Russians reputed to be one of their most troublesome enemies, was born in the year 1797, at the aoul of Himry, in the north of the Caucasian district of Daghestan. The career of this man is very remarkable, but the current relations of his life are so mixed with the rosy hues of the East, that Shamyl is in danger of becoming a mythological hero. It is related of him, that from his earliest years he was proud and ambitious, inclined to athletic sports and trials of skill with his compeers. His future character seems to have been determined by the instructions he received from a distinguished teacher named Dschellal-Edin. From him Shamyl learned the doctrine of the Sufi, a new sect, the reformers of Islamism. Dissatisfied with the barren letter of the Koran, Sufeyism appeals to human consciousness, and from our nature's sensible wants seeks to set before nobler hopes than a gross Mohammedan paradise can fulfil. The Sufi cultivate a poetical mysticism, and under the teaching of Dschellal-Edin, Shamyl, already a soldier, became a fervid mystic. According to Sufeyism, man has to climb through four stages of moral excellence to God, and on the fourth step only one man at one time can stand. This man is the "elect," the vicegerent of the Deity, whose commands must be obeyed as the voice of heaven. On the third step stand the Naibs, or lieutenants of the "elect"; on the second step stand the Murids, or disciples; and on the first stage the multitude, who satisfy themselves with the discharge of ordinary religious duties. As Sufeyism is the religion of the great number of the Moslems of the Caucasus, the foregoing system exhibits the government, both political and spiritual, of the tribes. When Shamyl, in 1824, first took part in his country's defence, as leader of the Lesghians, the most warlike of the tribes, was Kasi Mollah. Shamyl became one of his ardent and efficient followers, and rapidly rose in esteem for valour and devotion. For several years the mountaineers defended themselves with brilliant success, but in 1831 the Russian general, Von Rosen, assembling a large army, marched against Koissu in northern Daghestan, storming the reputedly impregnable pass, drove his enemy from position in sanguinary battles, and finally threw Kasi Mollah and his Murids back upon Himry. The Russians surrounded the place, and the besieged fought their last battle. Kasi Mollah and the Murids fell to the last man. Shamyl, pierced by two balls at his leader's feet. From this critical predicament he nevertheless escaped, in time to present himself at the first meeting of the confederated tribes held after the battle. He was not, however, at the time elected Kasi Mollah's successor, that honour having been conferred on Hamfaz Bey; but in 1836, when the latter fell the victim of a conspiracy, Shamyl was chosen, but not without dispute. His party declared itself for Taschan Hadschin, and for three years the schism weakened the tribes. In 1837, Shamyl inflicted on the army

General Iwelitsch the most serious defeat until then sustained by the Russians in the Caucasus. In the same year, with a handful of men, he defended the soul of Tiliboa so successfully against General Hafi and 12,000 Russians, that the latter, although they took the village by storm, were obliged to abandon the enterprise and commence a retreat, more disastrous than a lost regular battle. The same year Shamyl was acknowledged only chief of both sides. The Czar Nicholas now visited the Caucasus, and preparations were multiplied on either side. The Russians had this advantage that they had completely shut in the mountain country. On the north extended the so-called "Caucasian line" of forts, which united and connect the rivers Terek and Kouban; on the south they occupied Imeretia, Grusia, and Georgia; on the west, Mingrelia and Abkhazia; and on the side of the Caspian, Daghestan. The Russians at one time hoped to render the mountaineers defenceless by carrying off their powder and saltpetre; but the mother of invention taught the Caucasians to obtain the latter from the *Amaranthus spinosus*, a plant found in abundance in the country. At other times it was resolved to attack them simultaneously on several points; this system well-nigh effected its object, but Shamyl, aware of the danger, avoided protracted defences of particular positions, and moved from place to place with great skill and calculation, now striking a Russian column on its march, and now, while his antagonists were seeking him in gorges and forests, making a military promenade upon the plains, and carrying off cattle and valuables from some Russian colony. In the west the Russians were compelled to retire from the mountains, having sustained immense

losses. Fortune, however, was not always absolutely on Shamyl's side. In 1839 he was placed in extreme danger, while defending the castle redoubt of Akhoulogo against General Grabbe. Fifteen hundred of his Murids fell, and nine hundred were taken prisoners. When the battle was over, Shamyl, who had defended the place, was not to be found. The Russians, knowing that he had been present, and believing that they were masters of all the communications of the place, could not believe that he had escaped them, and they found themselves attacked in the rear by another force, led by Shamyl in person. These numerous escapes have contributed to exalt Shamyl amongst the great mass of his followers as a hero enjoying the especial favour and protection of Heaven. Every stage of this man's adventurous life is marked by feats and adventures such as those already described. The best Russian generals, such as Grabbe, Golowin, Gurko, Neidhart, Besobrasow, and Woyakoff, with armies of from 150,000 to 200,000 men, have not been able to break the power of this restless antagonist. Since 1845, the character of the Russian operations has been considerably changed. Large army corps have seldom been sent into the mountains, but expeditions have been made from time to time to destroy bit by bit the forests which so well protect the position of the mountaineers. Shamyl's mode of warfare is strictly adapted to the nature of the country in which he operates, and is essentially defensive notwith-

standing the frequency of his forays. This will partly explain the kind of co-operation afforded by Shamyl to the Turks during the war of 1853-54. Another fact to be considered is the want of common understanding among the tribes of the Caucasus, and further, their separation by the pass of Dariel, which divides the mountainous country, and is held by the Russians. The Nizam sent in 1845 to Constantinople, and who had interviews with Lord Raglan and Marshal St. Arnaud, fairly pointed out the position of his countrymen. "Of what use," he asked, "is it taking Circassian troops down into Georgia? At best Circassian troops are only Bashi-bazooks, and what help can they be to Selim Pacha? He has opposed to him a regular Russian army, constantly receiving reinforcements through Tiflis; and as long as this is the case, not all the Circassians in the world can help him and the small body of troops under him. God knows, and the world has seen, that our people do not lack bravery. They can fight, and they will do so when they have an object to be gained by it; but they do not see the object of going to sacrifice themselves down in Georgia, especially when their services may be required nearer home. The Russians have abandoned their forts on the coast, all except Anapa and Soujak-kalé; but they are still on the Sagonachen, on the Laba, on the Kuban. Our people live only a few hours from them; there is nothing to defend our women and our children, our homes and our flocks, against them excepting the valour of our men; and if they go down to Georgia, those for whom we have been fighting so many years will be at our mercy of the Russians. It was rumoured that the Russians had abandoned the forts on the Laba and on the Sagonachen; but this is a false report spread by our enemies. They have not abandoned these forts, nor is there any reason to believe that they intend so to do. If you wish to avail yourself of the assistance of Circassian bravery, you must do so where it can be of service in their own country. There are on the Laba, on the Kuban, and towards Mount Elbruz in the south-east of Circassia, numerous tribes which have been subdued by the Russians. The Nogai, the Kabardai, the Bislinoi, the Baschioch, the Karatzai, and other tribes—all these are groaning under the Russian yoke, and ready to rise in arms when they see a chance of doing so successfully. It is these conquered tribes that are the great obstacle to communication with Daghestan and Shamyl Bey. If a few regular troops, English or French, or Turkish, were to penetrate into these countries, they would all rally round them as one man, and then a junction with Shamyl Bey could be easily effected, the Russian communications with Tiflis by the Dariel pass intercepted, and the whole country swept, from Derbent on the Caspian to Anapa on the Black Sea. If all these subdued tribes, operate a junction with Shamyl Bey, and so cut off the Russian communications with Georgia, is the great object to be aimed at. Then Selim Pacha might have some chance of success in an advance on Tiflis; and as for Anapa and Soujak-kalé, they could not hold out any time. But, for all this, the presence of regular troops is indispensable, although a very great

ber may not be necessary. Our Circassians cannot stand against Russians and their artillery on level ground, although they might very efficient aid to a corps of regular troops provided with artillery. If Shamyl Bey has been so successful in his resistance to Russia, it is because he has been able to form a corps of artillery, and to organise regular troops. This we have not yet been able to do in Circassia." Shamyl's personal appearance is thus described: "His face is fair, with grey eyes and a regular nose. He is a middle-aged man, and a sufferer from pain in his eyes. His hands, feet, and mouth are small, and his skin is whiter than that of his countrymen. His beard is grey."

SIMPSON, SIR GEORGE, Local Governor of the Hudson's Bay Company's territories, was born in the mountainous parish of Culter, Ross-shire, Scotland, about the year 1796. In early youth he was sent out to America, to take a share in the troublous contest then raging between the chartered Hudson's Bay Company and the unchartered, but active and energetic, Northwest Company of Canada. From his tact and daring, and plausibility of speech and demeanour, he was mainly instrumental in accomplishing a reconciliation of the contending parties—a coalition by which the Northwest Company retained over one half of the capital stock of the new association, and secured more than half of the offices in the territory for their resident associates. Mr. Simpson was immediately appointed resident-governor of one of the divisions of the country thus restored to harmony. In this situation he exhibited much address and activity, that a few years afterwards he was appointed Governor of the whole of what is called the Hudson's Bay Company's territories, an office which he still holds. The Hudson's Bay Company was first established, and large grants of land were made to it, that the nature of the country itself and the capabilities and resources of the surrounding territory on all sides, might be ascertained and reported upon to the British Government; but it was not till 1836, when it became absolutely necessary to have some definite grounds on which to crave from the British Government a renewal of their charter, that the Company attempted to fulfil the obligations imposed upon them by their first charter. In that year, however, Mr. Simpson was instructed by the directors of the Company to make immediate arrangements for the equipment of an expedition to connect the discoveries of Captains Ross and Back. As he did with such forethought, zeal, and alacrity, that the expedition was entirely successful under the conduct of his nephew, the late Thomas Simpson, noted in Arctic discovery. Amid difficulties and dangers of no ordinary kind, during a period of three years, the expedition traced the Arctic coast of America from the mouth of the Mackenzie river to Point Barrow, and from the mouth of the Coppermine river to the Gulf of Boothia. In consideration of the services of the Arctic expedition, arranged and conducted as above described, her Majesty conferred, in 1840, the honour of knighthood on Governor Simpson.

SIMPSON, GENERAL SIR JAMES, G.C.B., and lately Commander-in-Chief of the English army in the Crimea, was born about 1792, in Roxburghshire, where his father was proprietor of a small estate, known as Teviot Bank. Simpson entered the army in 1811, and soon saw hard service. He took part in the Peninsular war from May 1812, until that month in the next year, including the latter part of the defence of Cadiz and the attack on Seville. He was promoted to the rank of Captain in 1813, fought in the ever-memorable campaign of 1815, and received a severe wound at Quatre-Bras. He afterwards served some time on the staff in Ireland, and subsequently held an important command in the Mauritius, where he won high reputation as a regular and meritorious regimental officer. It was probably to the fact of "making himself useful," that Simpson owed the favour with which he was regarded by the late Sir Charles Napier. When that illustrious warrior engaged in his last Indian campaign, early in 1845, Colonel Simpson acted under him as second in command, and in that capacity won such golden opinions, that the conqueror of Scinde indicated him as the fittest man of any then serving in the Indian army to undertake a high command, and Lord Ellenborough—at that time Governor-General—would unhesitatingly have intrusted him with the conduct of the war then raging, in case anything had happened to his famous chief. Sent out to the Crimea to discharge the important duties of Chief of the Staff, General Simpson was ere long, and against his will, pushed by the progress of events, into a situation, to master which fully a man would have required the genius of a Marlborough or the capacity of a Wellington. Nevertheless, when Lieutenant-General Simpson was nominated Lord Raglan's successor, he "did his best to do his duty." Being active for his years, he walked about the camp, made his way on foot through the most advanced and exposed works of the allies; examined the magazines, took the direction of the mortar-batteries, and appeared to be making himself a thoroughly master of the whole plan of attack, that on one occasion a soldier began to entertain grave suspicions, and thought of arresting him as a spy. The soldier, however, had the prudence to make some inquiry, and found that the officer in shabby uniform, who had excited his suspicions, was no less important a personage than the new Commander-in-chief of the English army before Sebastopol. He was not, however, fortunate in the exercise of his new functions, and when, on the 8th of September, 1855, a second assault on the Redan had resulted in a failure, which was deemed in no way honourable to the English army, his conduct was subjected to strictures from which a soldier of his character and antecedents ought perhaps to have escaped. He was nevertheless, "for distinguished service in the field," promoted to the rank of General, and decorated with the Grand Cross of the Order of the Bath. Sir James Simpson soon after receiving these marks of royal favour, resigned his command to Sir William Codrington; and on the 12th of November, 1855, took an unostentatious leave of our army in the Crimea. "All must feel sorrow," writes the correspondent of the "Times," "for

circumstances under which a veteran officer like Sir James Simpson resigned his command. His simplicity of manners and singleness of mind never failed to conciliate the regard, if not the respect and admiration, of those around him; but he failed in determination and firmness in a matter of vital importance to our army when opposed to a sterner will, greater vehemence, and force of character. An error of judgment, or rather such weakness, was especially culpable in the commander-in-chief of an army situated as our own, and the most ardent admirer of Sir James Simpson will scarcely at a moment pretend to say that he possesses the physical vigour to lead an army in an active campaign, or the strategical skill and variety of resources which would enable him to conduct difficult operations against an enterprising and able enemy, or to extricate troops with honour out of danger. The late Commander-in-chief was a victim to writing, like his lamented predecessor. He was more like a clerk than a general."

SIMPSON, JAMES YOUNG, M.D., Professor of Midwifery in the University of Edinburgh, and the Discoverer of the Anæsthetic properties of Chloroform, was born in 1811, at Bathgate, Linlithgowshire. The great Obstetrictist may be said to have literally commenced life in the exercise of his profession, for the surgeon whose memorandum-book records that on the — day of — he was summoned to his birth, still points to the significant note, "Arrived too late." The same strength and energy which characterised his entrance into the world, have signalised his laborious life and his rapid rise to eminence. A constitution unusually robust, perceptions singularly rapid and distinct, a mind that deals with facts more with the instinct of a general on the field than the slow calculation of ordinary science, and an incessant and indomitable activity of brain and body, enable him to transact his enormous medical practice; to perform punctually the duties of his Chair in the College; to be engaged more or less in nearly every Edinburgh movement of medical or local importance; to lead, on any occasion of unusual interest, the debates of some society of his youthful students; to contribute to the principal medical journals papers of curious disquisition on the more recondite matters of his profession; to be the ready referee on its antiquities or bibliography for aspiring medical authors at a loss for an authority, or an overworked brother-physician too much in haste to search a library, yet to enter largely into controversy, and to win the reputation for such general acquaintance with things extra-medical; that he who would know the freshest Government scandal, the contents of the latest "Quarterly," of the present "Athenæum;" the newest Poem, or the last Biography, seeks if he can to waylay the busy Professor. Those who see his activity through the never-resting day, may well forget that the night has been hardly less unquiet, and that he has given the heir an earldom, or helped a penniless woman through the crisis of some unusual emergency, before that bustling day began. Dr. Simpson commenced his professional career as assistant to the late

Professor Thomson. In 1840 he was appointed Professor of Midwifery in the University of Edinburgh. He introduced chloroform in 1847. Since that time, in addition to other professional occupations, he has been engaged in demonstrating by the results of an immense experience the safety of anæsthetic midwifery. The discovery of anæsthetic agents, and the successful application of them in the extremes of human suffering, have been hailed with delight: but of their practical consequences in the daily and hourly life of mankind we seldom realise any adequate idea. Compute the total bodily suffering indicated by the fact that some thousands of serious operations, many of them involving the furthest extremes of pain and patience, take place annually in the hospitals of London and Edinburgh; add to this the large number of provincial cases in hospital and private practice; and the spirit sinks before the contemplation of such accumulated misery. Then draw the pen through the whole, and feel the world brighten and the load of life lighten with the consciousness, that as completely as you have cancelled the figures on your paper is this great horrible fact erased from the lot of humanity. Again, attempt to recognise the still more incredible amount of mental pain that is in the sure progress of enlightened science to pass away before the face of this silent influence. There are at this moment about twelve hundred millions of human beings on the globe. At the most moderate estimate, the birth of every one of them was purchased by an hour of maternal anguish. Thus the twelve hundred million human beings represent twelve hundred million hours of an utterable pain. Then endeavour to realise what the man has accomplished who redeems the world from such a curse! Odd stories are told of the pilgrims who, early and late, besiege the famous Oracle; of the importunity of great titles, the sturdiness of unyielding Janitors, and the honest Scotch pride of high and low in the popularity of their celebrated countryman. A good-natured authoress relates with gusto that, taking a sick friend for the doctor's advice, she was informed by the servant that no more patients could be seen that day. "But," said the authoress, "I am sure I can be admitted, take him my name; Dr. Simpson knows me." "Dr. Simpson knows the Queen, ma'am," was the cool rejoinder, with which the door closed on the disconcerted ladies. This reminds us of a similar anecdote told in relation to a famous English physician. A patient unused to refusals was informed that the doctor was invisible till to-morrow. "I must see him to-day," urged the patient. "I have come twenty-five miles on purpose." "Very likely, sir," says Cerberus, nothing moved; "last gen'lman came from New Zealand." Patients from New Zealand and other distant parts of the world may be seen in that modest room in Edinburgh, where the popular Scotch Professor takes his populous breakfast and luncheon, and where the intervals which most men devote to privacy and repose are with him but opportunities for a new phase of mental activity. How those friends who desire a minute's conversation, or those strangers from a distance who are fortunate enough to bring with them the open sesame of a good introduction, endeavour to seize upon the

rest approach to leisure which may happen to this man of many arms. In the season, when the town is full and the influx of strangers is at its height, these breakfasts and luncheons are among the most curious studies of Edinburgh society. Assembled unceremoniously in a moderate-sized room, with little in common save a wish to meet their host, you find a company drawn together from every latitude and longitude, social and geographical. Of all the motley party there is probably hardly one who is not notable; the grades and classes of eminence run through the whole gamut of social distinction, from duchesses, poets, and earls, down to the author of the last successful book on cookery, the inventor of the latest new patent, a Greek courtier, a Russian gentleman, or a German count. At your elbow, the last survivor of some terrible shipwreck is telling his story to the wife of that northern ambassador, who is meeting with the softest of the Scandinavian dialects the strong maritime Danish of the clever state-secretary opposite. And you a knot of American physicians, just arrived, are discussing in a loud voice a speech in Congress, or agreeing, *sotto voce*, the particular professional topic upon which they have come to consult the great authority. Turn for a moment from this sculptor, who is waiting to ask the opinion of the many-sided Professor on the sketches which he is now showing to that portrait-painter, and learn which of them shall be done in marble for the nobleman, and the attention the Doctor has found time to direct to the rising young artist, and you may catch something of yonder violent discussion between those arrivals from Australia, who have come from the land of gold in search of what gold cannot buy. You are still turning the last price of provisions at Melbourne, the prospects of the new Australian College, or the size of the latest wonder in Mexico, when a carriage stops suddenly, and in a minute Dr. Simpson enters. A short stout man, negligently dressed, with an enormous head, a strong leonine face, and hair flowing in careless abundance. With a few genial nods, smiles, and shakes of the head to the nearest of his company, he begins to dispatch his pipe and roll put ready for him; and you are impressed with the manly softness of the eyes, and the amiable play of a mouth that looked just now stern-set and determined, but which is moving in a manner of ready sympathy and good-natured drollery as one or another expectants has for the moment possession of his attention. The painter who has a commission for a portrait snatches this only available time, and, beginning to sketch under such circumstances, is to draw largely on his imagination. His subject, almost shut out from him by eager guests, is eating, drinking, opening and reading the heap of letters that awaited him, writing a one-line response to some coronetted importunity or request of friendship, while a brother professor at one ear propounds a question of university discipline; and a soldier just arrived from the seat of war is giving him at the other the anecdote with which before evening he will have amused a hundred patients in abrupt episodes of consultation. In ten minutes the indefatigable Professor is again profes-

sional; beckoning some patient, he disappears into the consulting-room, where the other patients of the day have been long assembled; and such of the company as have been unable to get their minute's turn of conversation, are fain to wait for those sudden and hasty returns among them by which perhaps, an hour asunder, he relieves for five minutes at a time the fatigues of consultation. Meanwhile, news comes that some poor peasant's wife in a far-off village is in the dangerous stage of some medically interesting calamity. There are many wealthy invalids wearily waiting their turn. But kind-heartedness and the delights of a desperate case prevail, and the Doctor is off across the Forth, and will not be back till midnight. In 1849, Dr. Simpson was elected President of the Edinburgh Royal College of Physicians; in 1852, President of the Medico-Chirurgical Society; in 1853, under circumstances of very distinguished *éclat*, Foreign Associate of the French Academy of Medicine. Dr. Simpson's professional writings are numerous, and known throughout the world, having been translated into nearly every European language.

SMIRKE, SIR ROBERT, R.A., Architect; son of Robert Smirke the historical painter, famed for his book-illustrations, full of thought, character, and humour. The works by which he, son, the architect, is best known, are the British Museum, commenced in 1823, and the New Post-Office, erected in 1829. Both are examples of the revived "Grecian" style, in fashion during the earlier part of the century: one he has followed with as much success as any of his competitors. Sir Robert has a high reputation for integrity, practical capacity, and thorough mastery of the constructive principles of his art. No buildings of his, it is said, ever showed flaw or failing. And he has often been called in to remedy the errors of brother-architects of more showy, but less solid attainments. The restoration of York Minster after the fire of 1829, and that of 1830, was, in both cases, entrusted to him. He was knighted in 1831. His son, Sydney Smirke, elected Associate of the Academy in 1847, has also won reputation as an architect; practising the revived Gothic styles, which have succeeded in popular favour the Palladian and Grecian. From the latter design are the new buildings in the Temple, which form so conspicuous an object from the river; and the new Carlton Club.

SMITH, ALBERT, Author and Popular Lecturer, was born May 24, 1816, at Chertsey, educated at Merchant Taylors', and studied medicine at the Middlesex Hospital, becoming a member of the College of Surgeons in 1838; after which he continued his studies at the Hôtel Dieu and Clamart, in Paris, and then practised with his father at Chertsey. He found that his pen brought him in much more money than his lancet, and after writing for the "Medical Times" some clever and characteristic papers, entitled "Jasper Buddle, or Confessions of a Dissecting-room Porter," he came up to town in 1841, and began in earnest his literary career.

writing for the magazines. His first book was "The Wassail Bowl," a collection of tales and sketches. Since he has written "The Adventures of Mr Ledbury," "The Scattergood Family," "The Marchioness of Brinvilliers," "Christopher Tadpole," "The Skeleton Legacy;" and innumerable dramas, farces, sketches, and stories. He has also contributed extensively to magazines, newspapers, and other periodicals, articles the enumeration of which would occupy too considerable a space in these pages. He went to the East in 1849, and brought out his interesting volume, "A Month at Constantinople." On his return he established the entertainment called "The Overland Mail," which came out May 26, 1850. He ascended Mont Blanc, August 12, 1851, and his entertainment founded thereon was produced at the Egyptian Hall, March 15, 1852. So remarkable was the popularity of this illustrated lecture, that it attracted the Queen to the Hall in July, 1854, and Mr. Albert Smith repeated it to her Majesty's private family circle at Osborne in the following August. On the 3d of May, 1855, he gave the entertainment for the *thousandth* time! During this time Mr. Smith had given up literary pursuits. His last work—popularly considered as his best—"The Story of Mont Blanc," was published in 1853. A striking portrait and sketch of his career was published in the "Illustrated Times" of December 1855.

SMITH, ALEXANDER, Poet, was born on the 31st of December, 1830, in the little manufacturing town of Kilmarnock, where his father was a drawer of patterns. The boyhood of the poet was divided between his native place, Paisley, and Glasgow; and while at school in the latter town he manifested such singular ardour in the pursuit of knowledge, that his relatives destined him for the law. A severe illness, however, suddenly terminated his course of education; and family circumstances proving adverse to the project of his figuring as a minister of religion, Mr. Smith became, at an early age, a designer of patterns for one of the lace-factories in Glasgow. It was while pursuing this occupation, which, be it understood, is by no means merely mechanical, that Mr. Smith, about his seventeenth year, began to feel the stirrings of genius and to practise the divine art; and it was actually while at his daily avocations that he composed many of those beautiful pieces, which have since won him so wide a celebrity. His fame, ere long, gradually crept along the banks of the Clyde, but did not, for a time, enable him to emerge from obscurity. Indeed, the encouragement he received was not such as to raise very ardent hopes,—if, as we have been informed, a phrenologist who examined his head declared that he was intended by nature for a chemist or drysalter; and another worthy gave him the assurance that he would never be a poet, unless he first became a resident at Dunoon. At length Mr. Smith, disregarding the hints and suggestions of such oracles, forwarded the manuscript of his work, now known to fame as the "Life Drama," to Gilfillan, author of "Literary Portraits," and that reverend critic, on discovering the merit it possessed, published some passages, accompanied by

laudatory comments, in the "Critic" and the "Eclectic Review." In the columns of the former periodical the poem appeared during 1852; and the reading public became aware that there had arisen a new poet of no small power and brilliancy. Considerable interest was of course excited; and in the spring of 1853, the "Life Drama" having been published in London, with other poems, in a volume, won from metropolitan and provincial critics immediate recognition for the genius of its author. The noise it made will not soon be forgotten. Reprinted in America, it had a most extensive circulation on the other side of the Atlantic; and since that period has been reviewed in the "Californian Magazine," lectured on in Australia, and held up to continental admiration in the "Revue des Deux Mondes." Even critics who were not quite friendly confessed that Mr. Smith was a poet, who would shake off his faults as the wild horse shakes drops of dew from his mane. In 1854 Mr. Smith was appointed Secretary to the University of Edinburgh; and about the same time delivered a series of lectures, in the most able and interesting of which, namely, that on "Burns as a National Poet," he offers this vindication of the school, of which he is a distinguished ornament:—"The old poetry of incident and action—of men in collision with their fellows and the forces of nature—seems to have departed from England. The heroes of modern poems are generally students; instead of action, there is conversation on a manner of abstruse and metaphysical subjects. Soliloquy is largely employed. The woe is mental—the despair philosophic. Certain alarmed critics are crying out that poets now-a-days are altogether wrong, that they have strayed from the paths of their fathers; that if Poetry would again be strong and healthy, she must, like *Astræa*, touch the earth, and draw from thence a new supply of strength and beauty. This outcry is, however, in a great measure useless. No other kind of poetry could be written at present: its seeds were sown in the past—it is the necessary result of our circumstances. In a rich, civilised, and luxurious country, where men have not, as in earlier days, to contend for very life with the blind forces of nature; where the passions, those wild beasts of the heart, are so far tamed and domesticated; where society is ordered and bounded; where struggles are chiefly mental, and energetic action next to impossible; where men are thrown, if they would escape *ennui*, into politics, literature, and science; where science is only advanced far enough to see discordance and discrepancy, not harmony and completeness;—of such circumstances, the apparently lawless poetry which we have been speaking is the inevitable product. The sun shines from day to day, but the light of yesterday can never be recalled. Those who think our present poetry an evil, may comfort themselves with the thought that every evil thing rights itself at length. Nothing expires sooner than a worthless book. How quiet the *Della Cruscans* died! Gently as a sigh the *Minerva* *novels*! And noiselessly as ghosts, however trumpeted and applauded, will the army which no man can number of stupid authors walk into oblivion, each happily with his books under his arms." In 1855,

r. Smith, in conjunction with the accomplished author of "Balder," published a small volume of "Sonnets on the War," which are gems in their way; and we have no doubt that, as time passes on, he will realise his noble aspirations, and "broaden on the skies of fame."

SMITH, GENERAL SIR HENRY GEORGE WAKELYN, M.P. was born in 1788 at Whittlesea, in Cambridgeshire, where his father was by profession a surgeon, and having been educated by a clergyman in his native place, he entered the army in 1805 as second lieutenant of the Rifle Brigade. He served with great distinction in the Peninsula, and at Waterloo, and after that memorable victory he made a C.B. For his services as Adjutant-general in the battle of Maharajpore he was nominated a K.C.B. He commanded the 1st division of infantry in the army of the Sutlej, and for his distinguished services in the battles of Ferozeshah and Moodkee, in December 1845, he was awarded the thanks of Parliament, and invested with the freedom of the city of London. In January, 1846, he commanded at the battle of Aliwal, on the Sutlej; again received the thanks of Parliament and of the East India Company, and was decorated with the Grand Cross of the Bath, and raised to the rank of Baronet. He subsequently enacted an important part in the capture of the Sohraon, and on returning to England in 1847 became Colonel of the 47th Regiment. In the autumn of the same year he was appointed Governor of the Cape of Good Hope; but in 1851, while the Caffre war was raging, he was superseded in that difficult post, in a manner that did not add to the popularity of the Colonial Minister, and returned to England: he now reposes upon his laurels at Devonport, as General of the Western district.

SMITH, THOMAS SOUTHWOOD, Author and Physician, born about 1790. He first attracted public attention to himself by a work entitled "The Divine Government," written in 1814. Of this Wordsworth, in a letter, says, "The view Dr. Smith takes is so consonant with the ideas we entertain of Divine goodness, that, were it not for some scriptural difficulties, I should give this book my unqualified approbation." The argument is, that it seems probable, judging by analogy, that pain is a correcting process, whether physical, mental, or spiritual, and that the whole human race will be finally saved. Dr. Southwood Smith spent several years in the practice of his profession in the West of England, where he married. On his removal to London, in 1820, he attached himself to one of the metropolitan hospitals. He was afterwards appointed Physician to the London Fever Hospital. He employed his leisure in the composition of a "Treatise on Fever," which at once took the position as a standard medical work. He assisted in the formation of the "Westminster Review," and wrote the article on Bentham's System of Education in the first number. To this review he became a regular contributor; and it was his papers on the anatomical schools that brought the abuses of the old system of obtaining subjects for dissection so prominently before the

public and the legislature. He reprinted the main part of these articles, under the title of "The Use of the Dead to the Living," and his arguments, it is well known, prepared the way for the passing of the present law, which has extinguished the horrible traffic of the "resurrection-men." His next scientific labours were some articles on physiology and medicine for a "Cyclopædia;" and soon afterwards he furnished his celebrated treatise on "Animal Physiology" to the Society for the Diffusion of Useful Knowledge. The success of this work suggested the idea of treating the subject in a still more comprehensive manner: and hence, in 1834, his "Philosophy of Health." Dr. S. Smith had long been the disciple and physician of Jeremy Bentham, and had attended him in his last illness. A characteristic anecdote is related of the expiring philanthropist:—During his last illness he asked his medical attendant to tell him candidly if there was any prospect of his recovery. On being informed that nature was too exhausted to allow of such a hope, he said, with his usual serenity, "Very well, be it so; then *minimise* pain!" In order to show the world his superiority to the common prejudices of mankind, he left his body, by will, to Dr. S. Smith for anatomical purposes, and requested that after dissection his skeleton should be preserved. The Doctor fulfilled his desire, and delivered a lecture over the dead body of his friend in the Webb Street School of Anatomy, on June 9th, 1832.

In 1832, Dr. Southwood Smith was appointed one of the Central Board of Commissioners for inquiring into the condition of children and young persons employed in factories, and the joint report presented to Parliament by him and his colleagues led to the existing Factory Act, which both employers and employed now consider as representing as one of the most beneficent measures ever passed by the legislature. In 1838–39, Dr. S. Smith presented official reports to the Poor-law Commissioners "On the Physical Causes of Sickness and Mortality to which the Poor are particularly exposed, and which are capable of removal by Sanitary Regulations, exemplified in the condition of certain Metropolitan Districts, as ascertained by personal inspection." This led to the appointment of a select committee of the House of Commons in 1840, "On the Health of large Towns and populous Districts," which was followed in 1841 by the appointment of the Health of Towns Commission. In 1841 Dr. S. Smith was appointed one of the Commissioners for inquiring into the condition of children and young persons employed in mines and in those manufactories which are not included under the Factory Act. The reports of this commission were the first illustrated reports ever published under the authority of Government, representing pictorially the subjects of inquiry; and they produced such an impression on the public mind as led forthwith to the legislative restriction of the ages of children worked in mines, and to the banishment of women altogether from mining employments. In 1846, Dr. S. Smith was directed, as one of the Metropolitan Sanitary Commissioners, "to make special inquiry, whether any and what means may be requisite for the improvement of the health of the

ropolis." One of the results of his labours was the passing of Public Health Act in 1848, under which was constituted the Local Board of Health, of which body Dr. S. Smith was a leading member. The board has since been dissolved, and the original members have received pensions. Dr. Smith has the very inadequate one of 300*l.* per annum. He is said to have resumed his practice as a physician.

SMITH, WILLIAM, LL.D., Author, Professor, and Classical Examiner in the University of London, was born in London in the year 1814. He received his education at the University of London, where he gained the first prizes in the Latin and Greek classes; giving evidence, at an early age, of that great facility in mastering the dead languages, which has, in later years, made him so valuable as the editor of Classical Dictionaries. Dr. Smith was originally intended for the bar, and for that purpose kept the usual terms at Gray's Inn; but following the promptings of his genius, he devoted himself with unremitting assiduity to his classical studies, and soon qualified himself—by adding to his other accomplishments a knowledge of German—to be a Professor of those three languages in the colleges of Highbury and Homerton. In addition to his professorial and other duties, Dr. Smith found leisure, in 1842, to edit a "Dictionary of Greek and Roman Antiquities," published in one volume; and a "Dictionary of Greek and Roman Geography and Mythology," in three large volumes; the latter of which was originally published in parts, extending over a period of seven years (1842 to 1849). In addition to the onerous editorial labours connected with these works, he also contributed some of the most valuable and learned articles contained in the volumes. By means of these dictionaries Dr. Smith was brought into contact with the most eminent classical scholars of the day, and he occupies a position among them which very few men can boast of. By his enthusiasm as a teacher, his tastes and associations as an accomplished scholar, his influence gradually made itself apparent in the elevated tone given to the literary character of Highbury and Homerton; and with him, we believe, originated the idea of the amalgamation (which took place in 1850) of these two colleges with that of Coward College into one institution, under its present name of "New College London."

In 1850 Dr. Smith commenced the publication of his "School Dictionaries," which are concise, but comprehensive summaries, for the benefit of less advanced scholars, of the varied and critical researches embodied in his more voluminous publications. In 1853 he was appointed Classical Examiner in the University of London, which office, in conjunction with that of Medical Professor in New College, he still holds. The former appointment was conferred on Dr. Smith after a very severe competition with some of the best scholars of the country, and is the most convincing proof which can be given of his high standing as a classic. In the same year he issued the first edition of a "School

History of Greece from the Earliest Times to the Roman Conquest with Chapters on the History of Literature and Art." In the year following, (1854), he brought out the first volume of a "Dictionary of Greek and Roman Geography," and commenced his edition of "Gibbon's Decline and Fall of the Roman Empire," which by competent authorities is considered to be the best extant. In 1854 classical students were gratified by the publication of "A Latin English Dictionary, based on the works of Forcellini and Freund," which, along with the other dictionaries edited by Dr. Smith, "will," says the "Quarterly Review," "long remain the best and completest works on the important body of the subjects which they embrace."

SOUTH, SIR JAMES, F.R.S.L. and E., Astronomer, is the eldest son of a dispensing druggist in Southwark. Sir James is a Member of the London College of Surgeons, and formerly practised in Blackman Street. There he made several valuable astronomical observations; and between 1822 and 1823, in conjunction with John Herschel, he compiled a catalogue of 380 double stars. James next removed to Campden Hill, Kensington, where he constructed a fine observatory. He was one of the founders of the Astronomical Society, in 1820, and has filled the presidential chair. He received Knighthood in 1830, and enjoys a pension of 300*l.* *per annum* on the Civil List, for his contributions to astronomical science. Sir James married the niece of the late James Ellis, Esq. of St. Lambeth; she died in 1851. The account of Sir James South's astronomical observations in Blackman Street, and of their results, published in the "Philosophical Transactions for 1825," is accompanied by an elaborate description of the five-foot and seven-foot equatorials with which they were made; and one of these instruments is still mounted, and in excellent condition, in Sir James's observatory at Campden Hill. Here also are a seven-foot transit instrument, and a four-foot transit circle; the latter celebrated instrument having formerly belonged to Mr. Groombridge, and as having been the instrument with which the observations were made for the formation of the Catalogue of Circumpolar Stars which bears his name. Sir James has devoted great part of his life and fortune to the advancement of astronomy, and his observatory is of European fame.

SPOHR, LOUIS, Musical Composer, was born at Gandersheim in the duchy of Brunswick, about 1783, and is the son of a physician. He was instructed by the German violinist, Maurer, in the art of playing that master's favourite instrument, and early developed extraordinary capabilities for music. He was taken notice of by the duke, who appointed him a maintenance out of the civil list, and afterwards allowed him a stipend for the purpose of studying under the violinist Eck, whom he accompanied on a journey to Russia. In 1804 he made a professional excursion in Germany, and was appointed conductor of concerts to the Duke of Saxe-Coburg-Gotha.

ere he composed a number of concert pieces for the violin and sonata, quartets, quintets, duos for violins, variations, sonatas, pourris with harp accompaniments, and some overtures. He composed a collection of songs, with pianoforte accompaniments; the oratorio called "Das jüngste Gericht;" and the opera "Der Zweikampf der Geliebten." In 1813 he proceeded to the Vienna theatre, with the nominal appointment of Chapel-master, and attracted great notice during the session of the European Congress. In 1814 he composed, at Vienna, "Faust," his first great symphony, and the cantata "Germany freed." In 1817, having visited Italy, he accepted the post of Music-director of the Frankfort theatre, which he gave up the same year to come to London, where he wrote his two great symphonies. After his return to Germany he resided for some time in Dresden, until called to be Chapel-master at Cassel. During his abode in the former city he had composed, not only many of his best instrumental pieces, but had applied himself with zeal to the production of dramatic music. His operas, "Zemire and Azor," and "Jessonda," are full of deep and moving expression. "Peter von Abano," "Abruna," and "Der Chemist," are less esteemed. His oratorios, "Die letzten Dinge" and "Die letzten Stunden des Erlosers," prove him a master in church music. His fourth symphony is one of his most popular works. His compositions are all more or less characterised by a feeling of tender melancholy, such as in poetry is called elegiac.

STANFIELD, CLARKSON, R.A., the popular favourite among the Landscape-Painters, the honest reality of whose works, and their simple, unaffected style, win all sympathies, was born about 1798, in Cumberland, in the county of Durham. He commenced life as a sailor; thus acquiring that thorough knowledge of the sea and practical familiarity with nautical mysteries, which have enabled him to surpass most other sea-painters; to paint "the blue, boundless sea," with unexampled directness; independently of conventional music or melodramatic claptrap. That knowledge he has kept throughout life. He is one of the few painters who have studied the sea afloat oftener than ashore. At the outset of his career as a painter he joined the Society of British Artists, of which he for some years remained a valuable supporter. In 1827 he exhibited (at the British Institution) his first large picture, "Wreckers at Port Ronge." In the same year he exhibited at the Royal Academy "A Calm;" in 1829, a "View near Chalons-sur-Saône;" in 1830, his "Mount St. Michael;" and he has since been the regular contributor of a copious annual quota of works, always ranking among the most attractive in the Exhibition. In 1830 he completed a series of large pictures of Venice, for the Marquis of Londondown's banqueting-room at Bowood; and in 1834, a series of views in Venice, for the Duchess of Sutherland, at Trentham. In 1832 he was elected Associate; in 1835, R.A. In 1836 he painted the large picture of "The Battle of Trafalgar," for the Senior Naval Service Club. Stanfield's visits to the Continent have

been frequent; and the practice of his life has been to work up in the studio, pictures of great elaboration from the well-stored portfolios of sketches laid in during travel. The subjects for his canvases have been gleaned from Italy, France, Holland, the streets of Venice, the lovely spots which stud the Adriatic and the Bay of Naples; other romantic points amid the Italian mountains and lakes, amid the Pyrenees, or the rivers and coasts of France; or again, picturesque grey scenes on the Scheldt, the Texel, and the Zuyder Zee—where, too, he is equally at home. Few exhibition-goers but remember, among Stanfield's best pictures, his "Castle of Ischia" (1841), and "Day after the Wreck" (1844). Among his more important later works are those of 1847, "French Troops crossing the Magra," painted for the Earl of Ellesmere; "The Battle of Novaredo," and "Wind against Tide," both painted for Robert Stephenson, Esq., M.P. These three, with the "Castle of Ischia," were the examples of Stanfield sent to the Paris Exhibition of 1855. His large picture of 1853, "The Victory towed to Gibraltar after the Battle of Trafalgar," now being engraved, is its companion, "The Siege of St. Sebastian," of 1855, were both painted for the munificent Sir Samuel Morton Peto. The tendency of Stanfield's mind is to beauty rather than sublimity. Great is his knowledge of the sea, he has comparatively seldom painted it in storm. Throughout, his industry has been almost as remarkable as his genius. And of late, every year has witnessed an advance in technical perfection and careful finish. If competitors find any fault, it is with the present tendency to over-elaboration of detail. In another field, Stanfield, like Robert, especially the former, who has executed more, and more varied works in the scenic department than his brilliant coadjutor,—he had the means of doing more towards advancing the taste of the English public for landscape-art than any other living painter. Mr. Stanfield for many years taught the public from the stage, the pit and the gallery to admire landscape-art, and the help to become connoisseurs; and decorated the theatre with works so beautiful, that we regret the frail material of which they were constructed, and the necessity for "new and gorgeous effects," or "magnificent novelties," which has caused the artist's works to be carried away. Mr. Stanfield has created, and afterwards painted out with his own brush, more scenic masterpieces than any man. Clown and Pantaloon in his time tumbled over and belaboured one another, and bawled out their jokes, before the most beautiful and dazzling pictures which were ever presented to the eyes of a play-goer. How a man could do so much and so well as Mr. Stanfield did, during the time he was the chief of the Drury Lane scene-room, was a wonder to everybody. And it was not the public only whom he delighted, and awakened, and educated into admiration. The members of his own profession were as enthusiastic as the rest of the world in recognising and applauding his magnificent imagination and skill. The artist's son, George Stanfield, inherited much of his father's genius. He has during the last ten years

as a regular exhibitor of picturesque bits of landscape and architecture, — Continental and English; yearly improving in useful study, and in feeling, as well as in beauty of colour and technical ability.

STANHOPE, PHILIP HENRY, EARL, Historian and Essayist, son of the Earl who was so remarkable for his political eccentricities, and grandson of the inventor of the Stanhope Printing Press, was born at Walmer in 1805. Lord Mahon, the title which has been associated with his literary celebrity as a painstaking, though brilliant historian, having been educated at Oxford, was returned to the House of Commons in 1830 for Wootton Bassett, and after the passing of the Reform Bill became member for the borough of Hertford. When the first Peel Ministry was formed in 1834, Lord Stanhope appeared as Under-Secretary of State for Foreign Affairs, and presided over by the Duke of Wellington, and during the last year of the second Peel Ministry he held the office of Secretary to the Board of Control, and supported the repeal of the Corn-laws. He subsequently pursued a somewhat wavering course; voted with the Protectionists against the change in the Navigation-laws, and regained his seat for Hertford at the general election of 1852. Lord Stanhope is author of "A Life of Belisarius," "A History of the War of the Succession in Spain," "A History of England from the Peace of Utrecht," and several articles in the "Quarterly Review." He, moreover, appeared in 1845 as editor of the "Letters of the great Earl of Chesterfield." In 1846 he was elected President of the Society of Antiquaries, and in 1855 he succeeded his father as the fifth Earl Stanhope. His chief work has hitherto been his "History of England," but this will doubtless be outshone in interest by two others, in preparation, from the papers of Sir Robert Peel and the Duke of Wellington.

STANLEY, EDWARD HENRY, LORD, Statesman and Social Reformer, is the eldest son of the Earl of Derby, and was born at Knowsley in the year 1826. Having been educated at Rugby, and at Trinity College, Cambridge, where he was first class in classics, in 1844, besides taking mathematical honours and gaining a declamation and other prizes, the hopeful heir of the historic house of Derby unsuccessfully contested the borough of Lancaster in the year of 1848. It has been said, that to be the son of a great man is to be born in the purple; and Lord Stanley, when his political career opened, had that advantage; for his father was leader of a powerful parliamentary opposition, with the prospect of ere long becoming as Prime Minister of England. But the young patrician, instead of seeking to avail himself unfairly of the accident of birth, soon proved that he was one of those men who, "if left poor and homeless on Salisbury Plain, would nevertheless have found his way to fame and riches." Instead of dashing into fashionable life, and exhausting his energies in effeminate indulgences, like so many of his age and station, he set forth, as his sire had done twenty-

four years earlier, to make himself acquainted, by personal observation, with the state of affairs in Canada, and in the great republic on the other side of the Atlantic. During his absence in America he had the flattering distinction of being elected Lord G. Bentinck's successor, as member of Parliament for the borough of Lynn: and having, after a tour in the West Indies, returned to England, he delivered in the House of Commons, during the summer of 1849, a speech on the subject of the Sugar Colonies, which was highly praised by Lord Palmerston and Mr. Gladstone. Lord Stanley, with a laudable anxiety to prepare himself by study and travel for the work of the state and the warfare of the senate, next paid a visit to the East, and was still in India when nominated, in March 1852, Under-Secretary of State for Foreign Affairs in the Derby Ministry. At the general election he was again returned as member for Lynn, and in the spring of 1853, having meantime resigned with his party, he submitted to the House of Commons a motion, which had for its ultimate object a more complete reform of Indian affairs than that contemplated by the Coalition Cabinet. It is chiefly, however, as "a Social Reformer," and to his indefatigable exertions out of Parliament for the intellectual improvement of the great body of the people, that Lord Stanley owes the public favour which he now enjoys, and the reputation of being by far the ablest and most intelligent scion of the aristocracy who has entered public life since the passing of the Reform Bill. His conduct in this respect has, indeed, been admirable. He has shown that he has courage to face the truth, and the resolution to act on what he believes to be such; and few competent to form an opinion, no matter what may be their political leanings, will deny that the course pursued, the leading part taken, and the example set by Lord Stanley in regard to the encouragement of Mechanics' Institutes, the establishment of public libraries, and the promotion of popular education, have well entitled him to the gratitude of his country. Facts, indeed, speak for themselves. When, in 1855, the death of Sir W. Molesworth created a vacancy in the Colonial Office, Lord Palmerston, sensible of Lord Stanley's talents and popularity, offered the seals of that department to the industrious and promising young nobleman; but the latter, although understood to be ambitious of serving his country as a minister of the crown, remained true to his party, and declined the tempting bait. "The offer of the Colonies to Lord Stanley," says the "Illustrated Times," "was honourable to Lord Palmerston and Lord Stanley both. It was a recognition, on the Premier's part, of Lord Stanley's known talents, and of another of his qualities, still rarer,—we mean his arduous devotion to statesmanship as the business of his life. It has been so long the fashion to rate everything here by the Parliamentary standard only, that statesmanship proper scarcely exists. We have debates in plenty, but no Metternichs nor Chesterfields; while of the earlier and higher class of philosophic statesmen,—men who studied history and at the same time their own age as part of history,—a specimen is as rare as the capercaillie is in Scotland. Without the pedantry of a *doctinaire*, Lord Stanley has the speculative acumen

of a student, and unites with that a most attentive observation of the living time—without which no man can be worth a straw as a practical politician. It is an unquestionable honour to him to have been so selected by a veteran judge of men like Lord Palmerston, whose forte is probably his knowledge of mankind. At the same time, we cannot wonder that he declined the appointment.

Conservative party can hardly be expected to be so pleased with the conduct of the war as that one of her leaders should be anxious to incur the responsibility of approving of all that has hitherto been done in it,—which a junction with Lord Palmerston and the fragments of the Coalition might be thought to imply. It is as well that we should have some public men during the coming period of adjustment of the Eastern difficulty, who are not committed to any one view, and of these Lord Stanley is one."

STELL, JOHN, R.S.A., an eminent Scottish Sculptor, son of a carver and gilder in Edinburgh, was born in that city in 1804, and studied in its Academy, and at Rome. In 1830, on his return from "the Eternal City," he distinguished himself by a colossal bust of Alexander and Bucephalus. He has decorated several of the public buildings of Edinburgh. His sitting statue of Sir Walter Scott, in grey Carrara marble, under the lower ground arch of the picturesque and elegant monument to the great novelist at Edinburgh, procured for him the notice and support of the principal patrons of art in Scotland. A public competition took place for this statue, and his model was unanimously selected from among numerous others. His two principal works in Edinburgh are the fine sitting equestrian figure of the Queen, in her royal robes, with orb and sceptre, before the Royal Institution, and the equestrian statue of the Duke of Wellington, erected in 1852, in front of the Register House. The latter is one of the most striking of the many similar monuments of the great Duke that have been erected throughout the empire. The bust so pleased his Grace, that he paid the artist the high compliment of ordering two to be executed for him, one for the Leinster House, and the other for Eton or Oxford. Mr. Stell's statue of Admiral Lord de Saumarez, in the Hall of Greenwich Hospital, has been highly spoken of by competent critics.

STEPHEN, THE RIGHT HON. SIR JAMES, K.C.B., Essayist and Professor of Modern History in the University of Cambridge, was born about 1790, and is son of that Mr. Stephen who took an active part in the suppression of the slave-trade. Sir James, having been educated at Cambridge, became a student of law, and was called to the bar at Lincoln's Inn in 1811. During the existence of the Melbourne Ministry, when the difficulty of administering colonial affairs rendered the appointment of a permanent Under-Secretary of State for that department indispensable, he was nominated to the office. In that capacity his services were of peculiar value, from his intimate knowledge of the various constitutions of the dependencies of the British Crown. He resigned the arduous post in 1848, when

he was honoured with Knighthood, and nominated a member of the Board of Council for Trade and Foreign Plantations. In 1821, having previously signalled his literary capacity by his magnificent articles in the "Edinburgh Review," chiefly on subjects connected with ecclesiastical history, which have been published in two volumes, he was appointed Regius Professor of Modern History in the University of Cambridge. He has since published two volumes of lectures on the "History of France," which are characterised by his varied eloquence, and are eminently calculated to enlighten readers on the subjects to which they relate.

STEPHENSON, ROBERT, M.P., the celebrated Engineer, was born in 1803, at Wilmington. In 1822 he was sent to the Edinburgh University, and the year following commenced his apprenticeship as an engineer under his father, the proprietor of a steam-engine manufactory at Newcastle. He remained two years in this situation, at the end of which he set out upon an expedition to explore the gold and silver mines of Colombia and Venezuela. On his return to England in 1828, the subject of railways was beginning to receive considerable attention, and a reward of 500*l.*, had been offered for the best locomotive, which should consume its own smoke, weigh no more than six tons, with its complement of water, and draw a train of twenty tons at a rate of ten miles an hour. This prize was won by Mr. Stephenson, and in consequence was a large increase of the business of the manufactory at Newcastle. In 1833 the London and Birmingham railway was commenced under his sole supervision, and he was shortly afterwards invited to Belgium by the king to advise upon the best system of railroad lines through that country. He was rewarded for his services with the cross of the Legion of Honour. In 1846 he visited Norway, for the purpose of examining the country with a view to the construction of a railroad. In 1847 he was returned to Parliament for the borough of Whitby, as a Conservative and Protectionist. The principal railroads of England have been constructed under his superintendence, but the works to which he owes his chief reputation are the tubular bridges over the Conway at the castle, and the Menai at Britannia rock; which are among the most celebrated triumphs of modern art.

STIRLING, WILLIAM, Author, and Member of Parliament, son of the late Archibald Stirling of Keir, was born at Keir, near Glasgow, in the year 1818. Having graduated at Trinity College, Cambridge, Mr. Stirling, though born to an ample ancestral estate, pursued his studies with much devotion, and, with all the advantages which wealth commands, turned his attention particularly to the language and history of the Spanish Peninsula. The fruits of his taste in this respect soon appeared in "The Anecdotes of the Artists of Spain;" and in 1852 he published the "Critical Life of Charles V." He had carefully prepared himself for his mission by visiting the convent of Yuste, the place to which "the contest"

narch" retired, "to muse with monks unlettered and unknown;" as well as by a diligent search for materials in the archives of Paris; the contents of the work, when it was given to the public, led its author to be a literary artist of no common power. At the general election of 1852, Mr. Stirling was returned to the House of Commons as representative of the county of Perth; and he has from that date published a life of Velasquez, the famous Spanish painter.

STONE, FRANK, R.A., a popular Painter, who originally trained in water-colours. As late as 1846 he continued a member of the Old Society of Painters in Water-Colours; to the exhibitions he had, for twelve years and more, annually contributed a clever picture or two:—scenes from Shakspeare; others of a kind by which his name is better known,—*"The Moon Sketch," "The Evening Walk,"* etc. He first exhibited at the Academy in 1837; in that and the two following years, portraits; in 1840, a scene from the *"Legend of Montrose;"* in 1841, *"The Stolen Interview between Prince Charles and the Infanta of Spain,"* selected by the holder of an Art-Union prize of 200*l.* Popular to everybody by the engravings, are the pictures which he painted: *"The Last Appeal"* (1843); *"The Course of True Love Never Runs Smooth,"* etc. (1844):—pictures, the sentiment of which he who can read, whilst the beauty of their execution helped to make them popular. On this favourite theme Mr. Stone has often rung the changes: as in *"The Impending Mate;" "Mated,"* (both 1847); *"The Old Story"* (1854). In a more ambitious range are his pictures from Shakspeare: *"Ophelia"* (1845); *"Miranda and Ferdinand"* (1850); from *"The Merchant of Venice"* (1851); from *"Cymbeline"* (1852); others also, from Scripture,—*"The Sisters of Bethany"* (1848); *"The Master is come"* (1853). A pleasing variety of subjects, and perhaps the artist's most successful ones, are the quiet domestic pieces as *"The Duet"* (1849); *"At the Opera"* (1852); *"The Mussel-gatherer—Time to go"* (1854). Mr. Stone was elected Associate of the Academy in 1851.

STRATFORD DE REDCLIFFE, VISCOUNT, in Europe better known as Sir Stratford Canning, and under that name identified with British policy in Turkey, is the son of Stratford Canning, a merchant, who was uncle to George Canning the statesman. The future diplomatist was educated at Eton. In 1807 he obtained an appointment as *précis* writer in the Foreign Office, and in 1808 accompanied Mr. Adair on a special mission to Constantinople, and was next year made Secretary of Embassy, on Mr. Adair's appointment as permanent minister. He returned to England, resumed for a space those academic studies in which he had been called into public life, and in 1813 took the degree of M. A. at Cambridge. In 1814 he was advanced by the Government to the rank of Minister Plenipotentiary, and sent to Bern, and assisted in framing the treaty which united the Swiss

Cantons in the Helvetic Confederation. He was present at Vienna during the Congress of 1815. In 1820 he was sent on a special mission to Washington, to adjust certain differences left unsettled by the treaty of Ghent. He returned in 1823, the British Government declining to ratify the engagements he had made. In 1824 he was sent to St. Petersburg, to ascertain the intentions of Alexander respecting Greece. In the following year he went to Constantinople as Ambassador. There his influence was employed with the Sultan Mahmoud in favour of the Greeks; but not succeeding he returned to England on leave, to be present during the conferences of London; again proceeding to his post in 1827. After the "untoward event" of Navarino, diplomatic relations with Turkey were broken off, and Canning returned to England, receiving the Grand Cross of the Bath in testimony of the estimation in which his services were held by the Government. In 1831 he was sent on a special mission to Constantinople, and returned in the following year to undertake a mission, also special, to Spain. In 1841 he was appointed Ambassador at Constantinople, replacing Lord Ponsonby, who had filled that post during the intervening ten years. Since 1841, as Sir Stratford Canning or Lord Redcliffe, he has ceased to hold the office of Ambassador at the Sublime Porte and ministries of every political complexion. Twice he has been permitted or invited by the Government to visit England; and his personal elucidations of Eastern politics have, doubtless, had great influence with British statesmen. He has been the steadfast friend of Reschid Pacha, and the supporter of all his reforms. While disclaiming on behalf of his government any patronage of the Sultan's subjects, he has uniformly exercised his influence to improve the condition of the Christian population of Turkey. It is to be regretted that under the belief that the claims of France, Russia, and Austria respecting the holy places were adjusted, he should have left Constantinople in 1852, and that his post should have been occupied by a subordinate, although able and vigilant officer, when Prince Menschikoff was actually menacing the Sultan in his own palace; but it may be urged that England had no *locus standi* in the dispute until a territorial aggression became imminent, and that the instructions sent out, both by Lord Granville and Lord Malmesbury, directed that the representative of England should not officially interfere in the matter. The position of the Porte was most disadvantageous. Against all her wishes and interests, Turkey was dragged into a most dangerous and difficult dispute between the great powers, who founded their respective claims on contradictory documents, which date from remote ages. The Porte, a Mahometan power, was called on to decide a quarrel which involved ostensibly sectarian Christian religious feeling, but which, in reality, was a vital struggle between France and Russia for political influence at the Porte's cost in her dominions. The Sultan was required to be a judge, and to decide this dispute; but, so far from having judicial independence and immunity, his majesty was coerced and humiliated before his subjects by menaces; forced to give contradictory and dishonouring

tions: and then accused of perfidy by those who had driven him to adopt them. When the concessions of the Emperor Napoleon had offered the co-operation of England and France for the preservation of Turkey a possibility, our Ambassador repaired to his post. His influence was exerted to the utmost to avert war, and it has been a reproach to him, that since the declaration of hostilities he has many times prejudiced the operations of Turkey, and then of the Allies, by excessive reliance upon diplomacy and the exaggerated importance he has given to apparent indications of peace. However it may be, it is certain that he has been actuated by regard for the interests of Turkey, which has no truer friend than he. In 1832 Sir John Canning was raised to the peerage, by the title of Viscount Epsford de Redcliffe. He sat in the House of Commons for Stockport and Old Sarum before the adoption of the Reform Bill, and for Lynn-Regis from 1835 to 1842.

SUE, EUGÈNE, the celebrated French Novelist, was born in Paris in 1806, and is the son of a professor of anatomy, who left him a considerable estate. Sue himself studied medicine, and made a number of voyages as naval surgeon. He afterwards led a very extravagant life, and squandered the whole of his patrimony, and under the pressure of necessity commenced writing romances. His earlier productions showed that he possessed the material for a great writer, but that he was deficient in thorough culture. For a long time his productions excited little or no attention. At length, however, the romance "Mathilde, or the Memoirs of a Young Woman," attracted the capricious taste of the public; why, it is difficult to say, unless it was that in this work Sue abandoned his usual course of causing virtue to be conquered and vice to triumph, and now punished vice and rewarded virtue. But the success of "Mathilde" was far exceeded by that of the "Mysteries of Paris," in which Communist and Socialistic ideas were woven into the story, and the sufferings and errors of the lower classes were depicted side by side with the crimes and offences of the higher orders. This romance was read throughout the civilised world in the original, and in numerous translations. The "Wandering Jew," which followed the "Mysteries of Paris," was received with no less favour, especially as the person whose name it bears was made less the centre of interest than the Jesuits: an order of men much spoken against, and universally feared in our days, who were set forth in a highly mysterious light. He has also written the "Histoire de la Marine Française du Siècle de Louis XIV.," in five volumes. This work is half history and half romance; but possesses great interest, notwithstanding its twofold character. More recently Sue has joined the socialist party in France. His "Mystères du Peuple," of which high anticipations were formed, has failed to meet them. His election as member of the National Assembly, in 1850, excited a great deal of irritation with the party of *ordre*, and caused no little apprehensions to the Government. These, however, both proved groundless, for he took no prominent part in that body, and exerted no special

influence over it. Though professing to be a Socialist, Communist, etc., Sue lived in the most luxurious and extravagant style. He is now a refugee. Before he wrote the "Mysteries of Paris," he published a "History of the French Navy," which met with very little success, and entailed no slight loss on the publisher. The work was too serious for a novel. Something rather disagreeable happened to the author a few weeks after the publication of this work. He received a parcel from Toulon through the Foreign Office with three seals attached. He opened it very anxiously, and found a small box within, containing a silver medal, on which was engraved the following inscription, in French:—"To Monsieur Eugene Sue, a token of gratitude from the French navy." This was engraved in large letters; but under it, in very small type, were found the words:—"For the History of the French navy he did not write." His best publications were "The Seven Capital Sins," which, like all his previous works, are of more than questionable tendency.

SWAIN, CHARLES, Poet. Manchester would have good grounds of complaint against us if we omitted to find a notice on these pages for the only poet of real mark she has yet produced. "A prophet is not without honour save in his own country," says the proverb; and it was, accordingly, not until long after it had found its way to the hearth and home of many a far-distant land of poetry that the low, sweet voice, of Mr. Swain's graceful and ambitious muse was permitted to be heard amid the everlasting roar of its competitive and tumultuous industry. His father, without rivalry, because there was, in sooth, in the earlier days of its production, no demand for it; but when Wordsworth, Scott, Montgomery, and other lights of our age, bore testimony to its quality, and pronounced it to be durable, it began to be in demand even in its native place. "If Manchester," says the great critic Southey (1832), "is not proud of her poet, the time will come when she will be so. His poetry is made of the right material." If ever man was born to be a poet, he certainly is. The prophecy has been fulfilled. Manchester is proud of her poet. She has, it may be hoped, exhibited her regard for him by some more substantial than a tardy recognition of his genius. Charles Swain was born in Manchester, in 1803. His father, a native of Knutsford, died before he had attained the age of six years. He was "the only son of his mother, and she was a widow." His mother was by birth a Parisienne, and from her, as usual, the poetical temperament of her son appears to have been, in a great measure, inherited. Placed at an early age under the tuition of the Rev. W. Johns of Manchester, an excellent classic and a worthy and practical dominie, he became in a very few years a general scholar. At fifteen, however, he quitted school for the works of his mother's brother, a French gentleman of the name of Tavaré, who was at that time settled in Manchester, and who was a person of no ordinary worth and acquirements. M. Tavaré was a remarkable man in those days (when learning was of little value

a commercial mart), and would have been a noticeable one of our own. An accomplished linguist, he is said to have been able to speak and write fluently some eight or nine modern languages, and to have been a ripe classical scholar to boot. More than all, he was a kind-hearted man, and a second father to a young poet. He would fain have inducted him into his own business, and did so far secure his nephew's obedience that he remained fourteen years in his service; weary years in some respects, for the occupation was little suited to his tastes. There was a Tyrian hues in the mind's eye of the youthful enthusiast, which far transcended any colour that his respectable uncle could manufacture; and athirst for some more congenial employment, he joined the firm of Messrs. Lockett and Co., the well-known drapers of Manchester, of whom he afterwards purchased a share of their business, which he still carries on with considerable success. During his residence under his uncle's roof he had unrestricted access to a well-selected library, and taught himself much knowledge which he had had no opportunity of acquiring at school. A poem, published in the "Literary Gazette," attracted notice to his talents, and in due time he became very generally known to the public through Annuals and other periodicals. In 1827 he made his first independent adventure, in a volume entitled "Metrical Essays," the success of which was so pronounced as to encourage him to renew the experiment. In 1831 he published "The Mind, and other Poems," a volume of which three large editions have been exhausted, one of them very handsomely and tastefully illustrated. This poem gave him a position in modern poetical literature which he has fully maintained. His "Ayrburgh Abbey" (1832), a poem on the death of Sir Walter Scott, has been very highly spoken of, and deserves its fame. It is one of the very best tributes which have been paid to the genius of our great novelist. In 1847 appeared Mr. Swain's "Dramatic Chapters, and other Poems;" a collection of sketches, in which he displayed a dramatic power for which the world had hitherto given him credit. In 1849 he published a collection of his fugitive lyrics, under the title of "English Melodies;" and in 1853 "The Letters of Laura D'Auverne, and other Poems." His poetry is characterised by great harmony of versification, grace, and tenderness of sentiment, and those genuine touches of home pathos which have found a ready passport to the heart in all ages of the world. It belongs to that order of writing which Lord Jeffrey has so aptly described as the "poetry of the affection." Pleasing the ear by the melodious completeness of his diction, and touching the heart by the tender refinement of his feeling, he is remembered where more ambitious poets are forgotten. Several of his songs have been adapted to music with excellent effect. In America, as well as in England, of those selections of lyrical poems which are multiplying every day, Mr. Swain's truly English songs furnish a more than average proportion; and this is, after all, no bad test of poetical fame.

Many of his poems have been translated into the French and German languages, but we attach more importance to their reproduction in poetical selections of the kind to which we have referred than to any such extraneous distinction. Mr. Swain married, in 1827, Miss Glover, the granddaughter of the Rev. Mr. Sedgwick, of Mosley, a celebrated preacher of his day, and a zealous and indefatigable pastor of the Church of England. Of six children, four survive. A pleasant paragraph in the "*Athenaeum*" mentions that Manchester had so far fulfilled Southey's prophecy of her appreciation of Mr. Swain's merits as to invite him to a banquet, and present him with a testimonial. "Charles Swain (says the writer) had walked her busy streets for twenty years—years during which his name was a spell in many hearts, and his words were familiar to many homes in every part of England—and Manchester knew it not." It was high time that the omission should be repaired, and we rejoice to be enabled to add, that it has been repaired liberally as well as gracefully. Southey makes a pleasant reference to Swain's poetry in "The Doctor," and in his correspondence; and both Wordsworth and Montgomery have praised with cordial affection. In all the relations of private life few men of genius have commanded more unqualified esteem.

SWEDEN AND NORWAY, OSCAR I., KING OF, born July 4 1799, is the only issue of the marriage of Marshal Bernadotte and Desirée Clary, daughter of a merchant of Marseilles, whose elder sister married Joseph Bonaparte. Oscar Bernadotte was placed at the age of nine years, in the Imperial Lyceum, where his name may yet be seen on the walls of the various *quartiers* of that establishment. Marshal Bernadotte was elected Crown-Prince of Sweden, accepted the reversion of the crown, and borrowing 2,000,000 francs that he might not appear in Stockholm with only his sword, proceeded at once to that capital with his son, after both had abjured Catholicism on the road and embraced Lutheranism, the dominant religion of Sweden. The young Oscar now received the title of Duke of Sudermania, which Charles XIII. had borne before his election, and his education immediately became a matter of concert with his father, who saw that in this respect he must consult the susceptibilities of his new country. Bernadotte soon had the satisfaction of seeing his son forget his French in the course of a year, and acquire under the teaching of the poet Atterberg perfect mastery over the Swedish language. In 1818, when, after the death of Charles XIII., Bernadotte ascended the throne, he transmitted to Oscar the title of Chancellor of the University of Upsala, of which next year he became a student. His military promotion kept pace with his literary instruction, and in 1818 he became Colonel of the Guards. He has scarcely quitted the Swedish throne during his reign. Once, however, under pretence of going to visit the banks of the Rhine, he pushed as far as Eichstadt, in Bavaria, the residence of Eugène Beauharnais, duke of Leuchtenberg, whose eldest daughter Josephine he married, July 19 of that year. The

age was much talked of in Europe, as seeming to prove that plebeian origin of the new Swedish dynasty had not been forgotten by the courts of the Continent. In 1834 he was named king of Norway; and in 1838, in consequence of the continued illness of his father, regent of the kingdom. In 1844 he ascended the throne, and became heir to a personal fortune of 80,000,000 francs, saved by the late king from a civil list of but 3,000,000 francs annuum. His government has been marked by liberality and energy. He has four sons and two daughters, one of whom the old king of Denmark wished to make his third wife, but received a polite refusal. In November, 1855, General Canrobert was sent to Stockholm by the Emperor of the French, to carry to King Oscar the insignia of the Legion of Honour.

T.

TAYLER, FREDERICK, Painter in Water-Colours, was born at Barham Wood, near Elstree, Hertfordshire, April 30, 1804. Upwards of twenty years he has been a leading contributor to the exhibitions of the Old Water-Colour Society. Frequenters of the Gallery, accustomed as they are to look forward to his productions with much delight, little need to be reminded of the spirit, interest, and masterly execution of this artist's picturesque scenes from Highland, rural, and sporting life: his "Twinking Parties" of past times, or "Unkennelling," or "Calling of Cover," of modern time; his "Troopers" of two centuries ago, "Way-side Travellers," or "Harvest-Carts" of to-day. Some of Tayler's earlier "Scenes on the Moors," and "English Pastures," were painted conjointly with another admirable water-colour painter, the late George Barrett. Occasionally he has executed compositions of importance from Scott, etc.; in which his spirited style and special gift in the painting of horse and rider, etc., are turned to good account: as in the "Festival of the Minjaye" (of 1834), in which the effects of the successful shot are so well depicted. Mr. Tayler has illustrated an edition of *Mr. Roger de Coverley*, and several other books.

TAYLOR, BAYARD, a popular American Writer, was born in January, 1825, in the state of Pennsylvania, where he passed his youth. He turned his attention to literature at a very early age, his first production, a large poem on an incident in Spanish history, having been written when he was but eighteen years old. In 1844 he went out for Europe, and passed two years in Great Britain, Switzerland, Germany, Italy, and France. He first attracted attention by a work which he published on his return to the United States, giving an account of his travels, entitled "Views a-Foot, or Europe seen with Knapsack and Staff." About the same time he

settled in the city of New York, and became connected with the "Tribune" newspaper. In 1848-49 he spent some time in California, as "own correspondent" to that paper. He has since travelled extensively in the same capacity, visiting Egypt, Syria, Africa, Asia Minor, Sicily, and Spain. He also accompanied the American expedition to Japan. The results of these various journeys have been from time to time republished in a separate form, under attractive titles—"El Dorado," "Life and Landscapes from Egypt," "Pictures of Palestine," "Japan, India, and China," etc. Mr. Taylor has also published a volume of "Eastern Poems."

TAYLOR, ISAAC, Author, son of the late Rev. Isaac Taylor, a dissenting minister at Ongar, in Essex, and brother of Jane Taylor, whose "Contributions of Q. Q." are well known, was born at the close of the last century, and, we believe, educated privately under the immediate superintendence of his father. He was originally destined for the dissenting pulpit, and commenced a course of preparatory study; but he soon relinquished the idea of becoming a minister, and turned his thoughts to the bar. His connexion with the legal profession was not of long duration. He betook himself to literature, and for many years lived in retirement at Stanford Rivers—a beautiful rural retreat in the immediate vicinity of his native place. In this secluded spot he wrote and published anonymously "The Natural History of Enthusiasm," and other works, some of which have had a fair share of popular favour, more especially among the enlightened and thoughtful of various dissenting communities. His other principal works—"Ancient Christianity," published periodically, and manifesting intimate acquaintance with the writings of the early fathers—attempt to meet the Tractarians on their own ground, and prove that some of these ancient writers were not so immortal either in doctrine or morals, as to entitle them to the blind reverence claimed for them by their modern eulogists—"Elementary Thought," a small treatise which is used as a sort of text-book by students entering upon their philosophical studies in dissenting colleges—"The Physical Theory of Another Life," in which he indulges in speculations respecting the material condition of man and other created beings in a future state. The characteristics displayed in this and his other works gave rise to a highly amusing and interesting article from the pen of Sir James Stephen, in the "Edinburgh Review." Mr. Taylor, however, was comparatively little appreciated as a writer until it became known that he was the author of "The Natural History of Enthusiasm." He had been for some time before the public in *propria persona*, but failed to elicit that attention to his writings which their intrinsic merits deserved. His circuitous style and Coleridgean manner of viewing the various subjects on which he wrote proved a great barrier to his popularity. His classical learning, his philosophical acuteness, and his poetical

are, were never called in question ; but the laboured obscurity of style, and his indefinite mode of expression, proved substantial obstacles to his literary fame. "The Natural History of Enthusiasm," however, was very differently received by the religious public. It was fortunate in the time of its appearance. It was when the excitement and enthusiasm connected with Rowland Irving were at their height. Mr. Taylor's philosophico-religious views of mind, his previous studies, and even his peculiarities of expression enabled him to treat this subject in a manner agreeable to all professors of religion, of whatever sect or denomination. Young men preparing for the ministry began to imitate the idiosyncrasies of its style, and some with greater success to imbibe its Unitarian spirit. His other works on kindred subjects, "Fana-tism," "Spiritual Despotism," "Loyola and Jesuitism," "Wesley and Methodism;" the series of sacred meditations entitled "Saturday Evening," and "Home Education;" have all been well received, though their popularity has been by no means equal to that which "The Natural History of Enthusiasm" has all along maintained. In addition to his gifts as an author, Mr. Taylor possesses a certain amount of mechanical genius, which, we believe, he has turned to profitable account in originating various designs of a useful and ornamental character. It may not be uninteresting to add that his habits are simple and methodical ; although a "recluse," as he is somewhere in his writings styles himself, he is said to be an art and eager angler, and fond of healthy and manly sports. He spends his Saturday mornings in directing the games of his children, while his Saturday evenings are devoted to meditations of religious character, similar to those which appear in the work of that name ; and on Sundays he occasionally preaches, although a layman, to the great delight of those who are fortunate enough to hear him.

TAYLOR, TOM, Author of several dramatic pieces of polished diction, was born at Sunderland in the county of Durham, in 1807, and educated at the Grange School, the largest and one of the best-reputed schools in the North of England. He afterwards studied through two sessions (1831-2 and 1835-6) at Glasgow University, in the course of which he received three gold medals and several other prizes. From Glasgow he proceeded, in 1837, to Trinity College, Cambridge, where he took a degree as a junior member, and in the first class of the classical tripos ; and was subsequently elected a Fellow of Trinity. Mr. Taylor next held, for several years, the Professorship of English Language and Literature at Trinity College, London. He was called to the bar of the Inner Temple in November, 1845, and went the Northern Circuit until his appointment to the Assistant-Secretaryship of the Board of Health, in March, 1850 ; and in 1854, upon the reconstruction of that Board, Mr. Taylor was appointed Secretary, with a salary of 1000*l.* annuum. Besides his singlehanded dramatic works, Mr. Taylor, in conjunction with Mr. Charles Reade, has written some elegant

comedies and dramas; and has contributed to "Punch" several papers remarkable for their classic *verve*. Mr. Taylor has also compiled and edited, with great care and judgment, the "Autobiography of B. R. Haydon," from the journals of that painter.

TENERANI, PIETRO, one of the greatest of living Italian Sculptors, born at Carrara; the favourite pupil of Thorvaldsen. Conjointly with the latter he executed and shared the profits of several important works: the monument of Eugène Bonaparte at Munich, for one; in which the figures of History and of the Genii of Life and Death are by the Italian. Since Thorvaldsen's death, Tenerani has succeeded to his high place among the sculptors of Rome. Gibson himself modestly speaks of his rival as "the first of modern sculptors." He was one of the few foreign sculptors who did *not* contribute to the Great Exhibition of 1851 and is, consequently, not so well known at the present moment beyond Italian limits as he might have been. His works are nearly all of the ideal and poetic cast, from religious or Pagan story; his style strictly classic, remarkable for feeling and dramatic power. Among his principal subjects are the "Venus Wounded," the "Swooning Psyche," the "Descent from the Cross," a bas-relief of the "Martyrdom of Eudorus and Cymodoce," from Chateaubriand together with various *pietas* and religious monuments, of grand and noble character. He has executed a fine "Flora" for the English Queen; a sitting figure of the Princess Marie of Russia for the Czar Nicholas; who commissioned other works of him,—"Cupid extracting a Thorn from Venus' Foot," etc. One of his latest works is a statue of the Count Rossi, who fell a victim to the Revolution of 1848.

TENNYSON, ALFRED, the Poet Laureate. Mr. Tennyson is the son of the late Rev. G. Tennyson, a clergyman in Lincolnshire. His uncle, Charles Tennyson, has assumed the additional name of D'Eyncourt, to commemorate the descent of the family from that ancient Norman house. The poet was born in 1810, at his father's parsonage; was educated at Cambridge, about the same time as Thackeray, and wrote a prize poem there. His first publication was in conjunction with his brother Charles; but in 1830 he published "Poems, chiefly Lyrical," in his own name only; and in 1832 appeared under the same title again. He attracted at first little attention, or only hostile and depreciating notice. Some few of these early poems are not reprinted in his present collection. His publication in two volumes, in 1842, first brought him more prominently before the reading world; and since that time the growth of his fame has been first gradual; then strong, and latterly rapid. In 1847 appeared "The Princess;" in 1850, "In Memoriam." The friend celebrated and regretted in this poem was Arthur Hallam (one of the well-known historians), who died at Venice in 1833. We believe that both "The Princess" and "In Memoriam" were written, or chiefly written, a considerable time before they were given to the

ed, and that the order of appearance among his works does not always coincide with the order of composition. On the death of Wordsworth, Tennyson accepted

"the laurel, greener from the brows
Of him who uttered nothing base,"

He himself expresses it in his dedication to her Majesty. It is probable that this event still further stimulated the sale of his works, which is now very great. In discharge of his laureate duties he published (1852) the "Ode on the Funeral of the Duke of Wellington." His latest work is the well-known "Maud, and other poems," published in 1855. Tennyson's biography may be said to be represented by his poems: he has given his life to them. He does not go into society; he has lived alone, or among a few friends, near London, for many years; and latterly, since his marriage, at the Isle of Wight. He is understood to be desirous of having his retiring disposition and dislike of publicity respected, and what a curious inquirer might learn of his private life, a right-minded biographer would not be garrulous enough to repeat. This retirement and delicacy, this fastidiousness and sensibility, are apparent in their effects, in his works. Care, thought, tenderness, piety, religious sentiment, and brooding meditation, are visible in his work. He came just in the dead lull which followed the noisy popularity of the great poets of the first half of this century. A poet with a new manner—he had a prosaic epoch to meet and conquer—could not expect, and did not achieve, a hasty fame. Since he had to fall back on his own genius, and circumstance combined with character to make him an elaborate and fastidious artist in execution. No man more curiously and skilfully labours to perfect his work. He is the most classical man of what has been called the Romantic School. We have said that Tennyson is married; we may add that he has children. In politics he is, we believe, a Liberal. Besides his salary as Laureate, he receives a pension from the Crown; but we have understood that this was a kind of compensation for some pecuniary claim which he had on Government.

THACKERAY, WILLIAM MAKEPEACE, Novelist. Mr. Thackeray is descended from a Saxon family of Yorkshire. His grandfather was the Rev. Richard Thackeray, of Hadley, Middlesex. His father held a situation in the Civil Service of the East India Company, and his distinguished son was born at Calcutta in 1811. On coming of age he inherited a good fortune. He was educated at Cambridge, which he left, however, without taking a degree. It was his original ambition to be an artist, and he studied for that purpose at Rome. A variety of circumstances brought him into the world of letters and journalism more than twenty years ago, and he is understood to have contributed (besides other periodicals) to the "Times," when it was edited by Barnes. But he gained his first distinction in "Fraser's Magazine," where he wrote for many years, essays on art, reviews, tales, and social sketches. His

favourite pseudonym in those days was "Michael Angelo Titmarsh;" under which name also he published several books of travel, "Paris Sketch-Book," "Irish Sketch-Book," and "Journey from Cornhill to Grand Cairo;" also, the "Second Funeral of Napoleon," and "Chronicle of the Drum," which appeared together, and had no success whatever. Indeed, for some twelve years, although an esteemed writer, and much admired by competent judges, such as the late John Sterling, whose admiration of the "Hogarty Diamond" is strongly expressed in a letter in Carlyle's life of him, Thackeray was not a popular writer. Now that his early works are being reprinted as miscellanies, the reader will find it a curious literary study to observe his development. He will not indeed find books among them of equal merit with the later ones which he knows so well; but he will see the same kind of genius at work—the philosophic intellect laying in its stores of observation—the humour in its early bud or its first flower—the delicate and urban satire in its youthful playfulness. Nor is there any reason for wonder that Thackeray acquired his full fame late in life. He is essentially a philosophic writer, and much dependent on the results of prolonged observation and reflection; and the best novels in literature, such as "Tom Jones" and "Don Quixote," were the productions of their authors after they had arrived at mature years. Thackeray was not among the first "Punch" contributors, although he has done incomparably more than any man to give it a high-class reputation. The first thing he wrote there of any mark was the amusing series of the "Fat Contributor." "Jeames's Diary" was a good hit also; but the "Snob Papers" established his reputation as a social satirist, and are to our age what the papers of Chesterfield were to the times of George the Second, and those of Steele and Addison to the times of Queen Anne. Indeed, they gave a new reading to the old word "snob," which now describes what nothing else does so well, and which everybody understands, although few could define it. "Vanity Fair" was now (1847) running its course. The proposition was declined by one publisher, and the serial began with no remarkable éclat; but in a dozen numbers or so it was the universal topic in London, and ended by placing him among the first novelists of England. "Vanity Fair" was followed by "Pendennis," and this by the Lectures on the Humourists, which were first delivered in the summer of 1851, to a brilliant audience, in Willis's Rooms; afterwards, with success equally great, in the provinces; and subsequently in America. Few more charming books exist; the charm consisting in the dramatic and social portraiture of the men with whom it deals—who are usually described by common critics with the liveliness of a *post mortem*, and the elegance of an auction-room. The publication of the "Humourists" was preceded by another fruit of the same studies—the historical novel of "Esmond," which many consider the author's best book. Certainly, "Esmond," in a high degree, exhibits the more serious and lofty qualities of his genius, and more effectually than others shames the commonplace man.

tion that his books show more indications of satire than of sensibility. In this respect, "Esmond" is like its author's life. Since it was published, the "Newcomes" has appeared—a work too recently noticed to demand more notice now; and Thackeray has left for America, to deliver a course of lectures on the men and times of the four Georges. Mr. Thackeray has been called to the bar. He is a man of good literary attainments, has travelled much, and lives in London in the best society. He is a married man, and has two daughters.

THALBERG, SIGISMUND, Musician, was born at Geneva, January 7, 1812. When still young, he came to Vienna, where he received instruction from Hummel, in 1827. He played for the first time in public in 1830, made his first appearance in Paris in 1835, and from that moment his name rapidly attained great celebrity. Thalberg is the founder of the school of which Liszt, Döler, Chopin, and other composers of the present day, are followers. His compositions embrace concertos, fantasias, variations, études, etc., all for the piano.

THESIGER, SIR FREDERICK, KNT., ex-Attorney General, was born in London, in 1794. His first choice of a profession was the navy, and he entered as a midshipman on board of a frigate, and was present at the bombardment of Copenhagen in 1807. On the death of his elder brother he retired from the navy, with the intention of following the profession of the law, and, after pursuing his studies diligently, was called to the bar in 1818. He gradually won his way in his profession, and obtained a large practice, especially election cases. He was appointed a King's Counsel in 1834. He unsuccessfully contested Newark in February 1840, but was returned to Parliament for Woodstock in the following March, and made his first speech in condemnation of the Chinese war. He was again returned to Parliament in the following year. In 1844 he became Solicitor-General, and from July 1845 to July 1846, and again from February to December 1852, Attorney-General. He represented Abingdon from 1844 to 1852, in which year he was returned for Stamford, which borough he still represents. As a member of the Peel Government, Sir Frederick Thesiger supported the policy of free trade, and he has always been strongly opposed to the admission of Jews into Parliament.

THIERRY, J. N. AUGUSTIN, an eminent French Historian, was born at Blois, May 10, 1795. He was first trained at the college of his native city, and in 1811 entered the Normal school of Paris. In 1813 he went as teacher to an institution in the provinces, but in the following year returned to Paris, and threw himself earnestly into the Socialist Society of Saint Simon. As his friend and pupil, Thierry aided him in his labours, and in 1816 put forth a work of his own: "Des Nations et leurs Rapports mutuels." Perceiving the impracticability of St. Simon's projects, he abandoned him, and became a contributor to the "Censeur Européen,"

a journal edited by Comte and Dunoyer. When this was discontinued, he wrote for the "Courrier Français," to which, in 1820, he contributed ten letters upon French history, which contained the fundamental principles of his subsequent works, and excited considerable attention. In common with all youthful spirits, inspired with ideas of freedom, Thierry found every public sphere of action closed to him during the period of the Restoration. He therefore applied himself the more sedulously to historical studies, and acquired not only knowledge, but also independent views respecting the proper treatment of historical science. In English and French history, to which his attention was principally directed, he found the key for the elucidation of all civil and political relations, in the opposition between the conquering and the subjugated races. The claims of nobles and ruling families vanished before these investigations. He saw further, that the attempt to trace the connection between causes and effects in the exterior manner pursued by most historians, was insufficient to bring to light the truths of history. Sustained by diligent investigation, a lively imagination, and extensive culture, he resorted to a philosophical and generic method which was new to the English and the French, and which the latter designate by the terms "descriptive" or "picturesque." The first result of his strenuous labours was the "Histoire de la Conquête de l'Angleterre par les Normands," which appeared in 1825. This work, both from the diligence it displayed and the original mode of treatment, excited great attention, both in France and England. In 1827 he published, in an extended form, the letters which have been referred to, under the title "Lettres sur l'Histoire de France." About this time he almost lost his sight, owing to his continuous study, and was, moreover, attacked by a nervous disorder. These afflictions he not only endured with philosophical courage, but preserved his zeal for literary pursuits, and continued his labours with the assistance of his friends. In 1830 he was chosen a member of the Academy. From 1830 to 1835 he resided alternately at the baths of Suxeuil and with his brother at Besançon. By the assistance of this brother he put forth, in 1835, "Dix Années d'Etudes historiques," a series of admirable essays, growing out of his former investigations. About this time Guizot, who was then Minister of Public Instruction, invited him to Paris, and committed to him the editing of a "Recueil des Monuments de l'Histoire du Tiers Etat," a work which was to form a portion of the "Collection des Documents inédites de l'Histoire de France." In 1840, Thierry published his "Récits des Temps Mérovingiens précédés des Considérations sur l'Histoire de France," in the preface to which he gave a very interesting account of the course of his studies and of himself. For this work the Academy awarded him their prize.

THIERS, ADOLPHE, Historian and ex-Prime Minister of France, was born on the 16th of April, 1797, at Marseilles where his father was a working locksmith. His mother being of a decent

bourgeois family, although fallen into poverty, had sufficient influence, through her connexions, to obtain for her boy gratuitous admission to the public school of Marseilles, where he made marked progress, and studied geometry with that taste for the military profession with which Napoleon had inspired the rising generation. The fall of the Empire, however, dissipated any dreams of military distinction, in which Thiers might have indulged; and his friends having decided to make of him an avocat, he was sent to Aix, where he studied under M. Arnaud. There he made the acquaintance of Messrs. Mignet, A. Crémieux, Alf. Rabbe, and other men subsequently eminent. In due time Thiers made his appearance at the bar, but with very indifferent success. Disappointed in the outset of his legal career, he turned to literature, and having gained a few prizes, trifling in emolument but of vast ultimate importance to him, turned his back upon Arnaud, Aix, and all that it contained, and set out for Paris. His adventures on the way appear to have been of a curious description, judging from the common testimony of friends and enemies. The former represent him as having fallen among thieves, who stripped him of what he possessed; the latter published stories of his connexion with a troop of strolling players. Be this as it may, the future historian of the Revolution and Empire arrived at the house of his friend Rabbe in woful plight. But he was received with kindness; the company, consisting of one or two friends who were present with Rabbe, commiserating his abject position, befriended him; Rabbe himself procured him an engagement as a caterer for news to one of the Parisian journals; and to Thiers' disgrace it may be added, that when he afterwards attained power, Rabbe was one of the first whom he prosecuted. One of his friends gives the following account of his *ménage*, which offers indeed a strong contrast to the splendid mansion of the Minister of Louis-Philippe. Some time after his arrival in Paris, "I clambered up the innumerable steps of the dismal staircase of a lodging-house, situated at the bottom of the dark and dirty Passage Montesquieu, in one of the most crowded and noisy parts of Paris. It was with a lively feeling of interest that I opened, on the fourth story, the smoky door of a little room, which is worth describing, its whole furniture being an humble chest of drawers, a bedstead of walnut-tree, with white linen curtains, two chairs, and a little black table with ricketty legs." By means of great perseverance, Thiers now gained a footing in literary society, and was able to obtain an introduction to the celebrated deputy Manuel, who introduced him to the conductor of the "Constitutionnel;" and he was shortly afterwards engaged to write political articles. These being characterised by vigour of thought and great purity of style, excited much attention. In 1823 appeared the first volume of his "History of the French Revolution," which produced a lively sensation throughout the country, and added materially to the rising fame of the young author. Other volumes soon followed. The first edition was soon exhausted; a second was issued; and immediately after the Re-

volution of 1830 a third edition was called for. At the time that Charles X. appointed Polignac Minister of Foreign Affairs, Thiers, with Carrel and others, established a journal called the "National" in which the first resistance to the unconstitutional proceedings of that monarch was exhibited in the shape of a protest. After this he obtained a subordinate post in the finance department, in which he displayed such unquestionable capacity, that he was proposed by Baron Louis as Minister of Finance, when the last of the Ministry of 1830 were going out of office. Thiers declined the post, contenting himself with the situation of Under-Secretary of State in Lafitte's government. About this period he was elected deputy for Aix, and soon distinguished himself by his eloquence, ability and oratorical power. In 1832 he was appointed Minister of the Interior, in which office he signalled himself by the arrest of the Duchess of Berry. He soon resigned this post for the portfolio of Commerce and Public Works. In 1836 he was President of the Council and Minister of Foreign Affairs, and in March 1837 he was again raised to the same dignity: but the king rejected his retirement, and since that time he has not been called to office. He employed his leisure in writing his "History of the Consulate and Empire," in continuation of his former work. The Revolution of February found him unprepared, and when the Republic was proclaimed Thiers was a simple National Guard with a musket on his shoulder. His talents and caution, however, soon secured him a position, first in the Constituent and then in the National Assembly. He professed to accept the Republic heartily; and when Louis-Napoleon was elevated to the Presidency, it was thought by many that Thiers, whom the Prince had proclaimed as Minister in the expedition of Boulogne, would now take office. But the reverse is the fact: for Thiers was banished after the *coup d'état* of December 2nd, and after living some time in Switzerland was permitted to return to Paris, where he has since published a Continuation of his History, containing an eloquent eulogium on the first Buonaparte. A writer in the "British Quarterly Review" thus characterises the subject of this sketch:—"As to physical appearance, it is impossible to conceive a more ignominious being than Adolphe Thiers. He has neither figure, nor shape, nor grace, nor mien; and truly, to use the unsavoury description of Cormenin (Timon), looks like one of those provincial bores who, with brush and razors in hand, go from door to door offering their *savonnette*. His voice is thin, harsh, and reedy; his aspect sinister, deceitful, and tricky; a sardonic smile plays about his insincere and mocking mouth; and at first view you are disposed to distrust so ill-favoured a looking little dwarf, and to doubt his story. But hear the persuasive little pigmy, hear him fall out, and he greets you with such pleasant, lively, light, witty talk, interspersed with historical remark, personal anecdote, and ingenious reflections; all conveyed in such clear, concise, and inimitable language, that you forget his ugliness, his impudence, his insincerity, and dishonesty. You listen, and, as Rousseau said of

of his most eloquent letters, 'in listening are undone.' 'C'est peut-être le plus amusant de nos roués politiques, le plus aigu de nos sophistes, le plus subtil et le plus insaisissable de nos prestidigitateurs—c'est le Bosco de la Tribune,' says the incisive and punning Timon. As a journalist he was successful, as an historian he was popular, as a minister he was notorious, and national to a certain extent. He has, no doubt, many talents and many defects, but his successes in life are more owing to his worst vices than to his negative virtues. He is probably the most intelligent man in Europe, if a perception of the wants and wishes of the million denote intelligence; but he is possibly also one of the most inconsiderate, mocking, and corrupt, of public men, and at the bottom one of the shallowest in all sound knowledge. 'Donnez-moi un petit quart d'heure,' he wrote to Spring Rice, in 1834, 'pour m'expliquer le système financier de la Grande Bretagne.' In no other country but France could such a charlatan be tolerated or endured; and it says little for the national morality or feeling, that he has been not only suffered, but petted and propped up, by applauding flatteries and admiring millions."

THIRLWALL, THE RIGHT REV. CONNOP, D.D., BISHOP OF ST. DAVID'S, an English Historian, was born at Stepney, Essex, in 1707. His father was rector of Bowers Gifford, Essex. He was called to the bar at Lincoln's Inn in 1825, and withdrew from that Society in 1828: he was then ordained, and became Rector of Kirby Underdale, Yorkshire. His university honours were: Tutor of Trinity College, Cambridge; Craven Scholar, 1815; Bell's Scholar, 1815; 22d Senior Optime and Junior Chancellor's Medallist, 1818; Examiner for the Classical Tripos, 1828-29-32-34. He was formerly Examiner in the University of London, and is now Visitor of St. David's College, Lampeter, his chief distinction is derived from the production of his *History of Greece*."

THOMPSON, THE REV. R. ANCHOR, M.A., Clergyman and Author, the successful candidate for the Burnett Prize Essay in 1834, was born in the city of Durham in 1821. He was educated at Durham School, and afterwards as an Engineer Student of Durham University, and graduated at Cambridge (of Catherine Hall) in 1844, as twentieth Wrangler. He for some time held an appointment at the Observatory of Durham, and a volume of his observations was published at the expense of the University in 1849. He was afterwards appointed Curate of Louth, and promoted to the charge of Binbrooke in 1854, by the Bishop of Lincoln. Besides the prize essay, which has been published, Mr. Thompson is the author of a volume of Sermons which appeared in 1853.

THOMPSON, MAJOR-GENERAL THOMAS PEYRONNET, Political Reformer and Author, was born at Hull, in 1783. He was educated at Hull Grammar-school, then conducted by Joseph

Milner, the author of the "History of the Christian Church," and his parents being high Tories, the influence of his early days may have been entirely favourable to the old order of things. In October, 1798, he entered Queen's College, Cambridge, as a pensioner and in 1802 took his Bachelor's degree. At the end of the same year he made an experimental voyage of six weeks from the port of Hull, and next year sailed as a midshipman in the *Isis*. In 1804 he left the navy, and entered the army as a second lieutenant. In 1808 he was sent out, by the influence of Mr. Wilberforce, to be Governor of Sierra Leone, and exerted himself more vigorously than was pleasing to the Home Government in putting down the slave-trade; and upon news of his administration reaching England his successor was soon nominated and sent out. In 1812 he returned to the active service of the army, and in the campaign in the south of France, in 1814, he was taken from his regiment, and served under the personal orders of General Fane, commanding the brigade. At the peace of 1814 he was promoted to the rank of Captain. He arrived at Bombay in the middle of 1815, and here learned Arabic, was attached to the expedition against the Wabees of the Persian Gulf as interpreter; in which capacity he was present at several encounters, and took a principal part in negotiating the treaty with those tribes, in which the slave-trade was declared to be piracy. In 1821 he returned to England, and in June, 1825, was promoted to the rank of Major, and afterwards that of Lieutenant-Colonel. Having now settled in England, he cultivated the acquaintance of legislators and men of letters, among others, of Jeremy Bentham and Dr. Bowring. He now began to contribute to the "Westminster Review," of which he afterwards became a joint-proprietor. He also wrote, from time to time, a number of pamphlets and detached publications on the Greek question, and on various subjects of political economy; among which was his defence of Adam Smith's theory of rent against that of Ricardo. In 1827 appeared his famous "Corn-law Catechism," which did more than any other single publication to undermine the Protectionist system of commercial policy. In 1829 he published his "Enharmonic Theory of Music," which he supported in successive numbers of the "Westminster." In the course of the same year his "Geometry without Axioms" was given to the public. In 1835 he was elected for Hull. In the next election he was returned, and he then remained for some years without a seat, until elected for the constituency of Bradford, in Yorkshire. In the last general election he was again unsuccessful, and still remains without a seat. Having been one of the earliest and ablest assertors of the principles of free trade, he is still a hard defender of the conquest which these principles have achieved.

THOMS, WILLIAM J., Antiquary, (son of the late Nathaniel Thoms, Esq., Secretary of the first Commission of Revenue Enquiry), was born in Westminster, 16th November, 1803, and commenced life as a clerk in the Secretary's Office, Chelsea Hospital.

employing his leisure in contributing to the "Foreign Quarterly Review" and other periodicals. He is a Fellow of the Society of Antiquaries, (elected 22d Feb., 1838), and also of those of Edinburgh and Copenhagen, and Secretary of the Camden Society. His first publication was "A Collection of Early Prose Romances," 2 vols. (1828), and he is author of "Lays and Legends of various Nations," (1834), "Book of the Court," (1838), and editor of "Anecdotes and Traditions," (1839), "Stow's Survey of London," (1842), and "Caxton's Reynard the Fox," (1844). Mr. Thoms is probably, however, better remembered as the projector and author of "Notes and Queries;" a happy idea, which he has been enabled to carry out most successfully in consequence of the personal regard felt for him by a large circle of literary friends. We may add, that he has held for many years an appointment in the House of Lords.

THORBURN, ROBERT, A.R.A., Miniature-Painter, born at Birmingham in 1818. Undoubtedly one of our best portrait-painters; one of the very few whose miniatures are works of art. At an early age, Thorburn was sent (in 1833) to Edinburgh, where he studied the first rudiments of the art under Sir William Allan, and won the chief prize at the Scottish Academy. In 1836 he came to London, and was admitted student of the Royal Academy. His rise to fame was rapid. He first exhibited at the Academy, in 1837, two portraits, of anonymous sitters; in the following year a full number admissible (eight), all of titled persons. And in a very few years, both as to the art displayed and patronage received, he began to dispute supremacy with the established favourites of fashion—Ross and Newton: especially so far as the ladies are concerned, of whom his portraits have always been by far the most numerous. By 1845 he had attracted the notice of royalty, that year executing by commission a portrait of Prince Albert; in 1846, of the Duchess of Mecklenburgh-Strelitz; in 1847, of the Princess Charlotte of Belgium and the Duke of Brabant; and in 1848, a group of the Queen, with the Princess Helena and Prince Alfred. At the close of that year he was elected Associate of the Academy. He has since gone on annually increasing in fashionable estimation. The beauty of his groups,—those, for instance, of "The Hon. Mrs Norton's family" (1844), of "The Archioness of Waterford and Viscountess Canning" (1845), of "The Duchess of Buccleuch, Ladies Scott, Balfour," etc., excited much admiration. These groups exceeded the usual dimension of miniatures,—a tendency which has been carried out in most of Thorburn's subsequent numerous portraits of fashionable beauties and distinguished men, perhaps to an undue extent. In this and other respects, the peculiar beauty of water-colours is perhaps sacrificed to an imitation of the effects of oil. The further the present school of miniature-painters depart from Cosway,—whose beautiful works are now pronounced wrong in method,—the more wholly do those lovely, transparent, delicate effects of miniature

seem to disappear. However this may be, the power, breadth, fire, colour, and depth of tone of Thorburn's miniatures, merit all praise combined as these qualities are with good drawing, grace, and tenderness of feeling. He aims at making the costume of the dr. look classical; and successfully,—especially, of course, that of his women.

TICKNOR, GEORGE, a Scholar and Author, was born in Boston, in the state of Massachusetts, August 1, 1791. He was carefully educated at home, and while quite a boy was admitted into Dartmouth College, where he graduated in 1807. Returning to his native town, he devoted the three following years to the study of the ancient classics; after which he entered on the study of the law, and in 1813 was admitted to the bar. His literary tastes, however, proved too strong for his professional success; and a two years more (in 1815) he embarked for Europe, with the design of submitting himself to the thorough discipline of a German University. Two years were passed at Göttingen in philological studies, which he continued during a residence of two years more in various capitals—Paris, Madrid, Lisbon, Rome, and Edinburgh. During his absence, in 1817, the Professorship of Modern Languages and Literature in Harvard University was offered to him, and accepted, and his residence on the Continent afforded him the opportunity of studying the different European literatures under the best auspices in the respective countries to which they belong. On his return to the United States, although still residing in Boston, Mr. Ticknor engaged with earnestness in the new field of labour which was opened to him; and during the time that he occupied the chair at Harvard he delivered an elaborate course of lectures, on French and Spanish literature; on eminent individuals, as Dante, Goethe, and the English Poets, and on other kindred topics. A great sensation was produced by the stores of learning and elegant criticism thus exhibited in a department which had hitherto formed no part of the regular academic discipline; chiefly occupied with science and the ancient classics. After the labours of fifteen years, during which he placed his department on an admirable basis, Mr. Ticknor resigned his professorship, and with his family paid another visit to Europe. Three years more were passed there, partly in England but chiefly on the Continent, when he returned to his own country. It was not until 1840 that he fairly set himself about the composition of his great work, which was completed in 1848, but which bears on every page the evidence of being the result of a much longer period of study and meditation. In the course of the "History of Spanish Literature," in 3 volumes, 8vo., made its appearance, in both New York and London. It was at once welcomed with delight by European scholars generally, as well as those of Spain, who had long felt the want of some labourer in the field of letters competent to disclose to the public gaze the rich stores of Castilian literature so long hidden from the world. The principal journals of England and the Continent were lavish of

encomiums on the work, and preparations were instantly made for translating it into the Spanish and German. The first of each of these translations, executed by eminent scholars, accompanied with critical notes and illustrations, has already appeared. Besides his history, Mr. Ticknor has published some other sketches, which have gone through several editions. But his services to letters have been exhibited in other ways than his writings, especially by the efficient interest he has always taken in the cause of education. His house and his noble library have been freely opened to the scholar; his patronage has promptly extended to modest worth; and his influence has widely felt in fostering an enlightened taste and a generous love of letters in the community.

TIECK, LUDWIG, a distinguished German Poet and Novelist, born on the 31st of May, 1773, at Berlin. After studying at the Gymnasium of that town he pursued his studies at Halle, and subsequently travelled to Franconia, in 1792, where he passed considerable time at Erlangen. He resided afterwards at Berlin and at Hamburg, where he married. During the years 1779-1800 he passed ten months at Jena, at that time the headquarters of the new school, where he made the acquaintance of the brothers Schlegel, Novalis, Schelling, Fichte, Brentano, and others. From Jena he removed with his friends to Dresden, and afterwards lived at Berlin, and on the Finkenstein estate at Angermünde, near Frankfort, until the year 1805; when he travelled through Munich to Italy, in order to study the German poetry of the middle ages in the manuscripts of the Vatican. In the following year he returned to Germany, and resided a second time at Angermünde. In 1841 the King of Prussia called him to Berlin, where Schelling, the brothers Grimm, Rückert, Cornelius, and other men of acknowledged worth, found, through the generosity of the monarch, an honourable protection, free from cares, and in accordance with their inclinations. Tieck is peculiarly the representative of the Romantic School in the best sense of the word. Like Goethe, he has reflected in his works the entire literature of the ages. The Germans are indebted to him for the first translation of "Don Quixote," which preserves the spirit of the original; and he has been more active in spreading a taste for Shakspeare, than if he had contributed nothing to that translation which now goes under his name. The restoration of the German literature of the middle ages was also promoted by him, and, like Hagen anticipated him in the publication of the "Nibelungenlied," which, since Bodmer's time, had been forgotten, yet until Hermann's edition of Ulrich Von Liechtenstein, the "Frauendienst" is known only by the labours of Tieck. His writings are very numerous, extending over a period of fifty years, from his "Almansen," 1791, (1790), to his "Victoria Accorombona" (1840).

TIMBS, JOHN, F.S.A., a Writer and Compiler of books and

papers for the people, was born in London, Aug. 17, 1801. He worked for Sir Richard Phillips, and was subsequently editor of the twopenny paper called "The Mirror,"—one of the very first of the cheap weekly prints now so abundant in England, and which attracted the notice and public praise of Lord Brougham in his "useful-knowledge" promoting days. His "Curiosities of London," perhaps the most comprehensive compendium of all the ancient lore and modern information connected with this prolific subject—the result of nearly fifty years of intelligent labour, published in 1855, has met with decided success. Mr. Timbs is one of the working editors of the "Illustrated London News."

TODLEBEN, FRANCIS-EDWARD, General of Engineers in the Russian Army, the famous fortifier of Sebastopol, the son of a shopkeeper at Mitau, was born on the 25th of May, 1818. After studying in the schools of Riga, young Todleben was admitted into the College of Engineers at St. Petersburg, where his name now blazes, in letters of gold, with the inscription, "Sebastopol. 1854-55." When the present war broke out, he was Second Captain in the corps of Engineers on campaign. He distinguished himself under General Schilders in the campaign of the Danube, and proceeded to the Crimea. What he has done at Sebastopol belongs to history. From a comparatively open city, he succeeded, under the fire of the enemy, in making it an almost impregnable fortress, which resisted for nearly a year the gigantic efforts of the allied armies. In less than a year he passed successively through the grades of captain, lieutenant-colonel, adjutant-colonel, major-general, and adjutant-general; and received, among other distinctions, the decoration of the fourth and then of the third clasp of the Order of St. George, which is conferred only for brilliant deeds, and upon the proposal of the Chapter of the Knights of the Order. Rarely has a simple general of brigade received this high distinction. During the siege he was wounded in the foot and was removed from the city. When next heard of, Todleben is entrusted by the emperor with the defence of Nicolaieff, an important Russian arsenal, then threatened by the Allies. How far his success at Sebastopol will be repeated at Nicolaieff is, while we write, matter of speculation. That he is a man of tact and genius, the wonderful efforts made at Sebastopol plainly testify—meeting every approach of the Allies with hastily-constructed works of surpassing power of resistance, and with ubiquitous foresight and skill. Perhaps no stronger testimony to his genius can be borne than what has been written in the glowing pages of Major Hamley, in his "Story of the Campaign." "Russia," says he, "has her Todleben, the great soldier, who, in her hour of need, was equal to the emergency; the creator of the vast works that have so long repelled us. Should peace not shortly ensue, we may see whether his genius is as potent in the open field as in defence of a city, and how far generalship and science can avail against French vivacity and British firmness."

TROUBRIDGE, COLONEL SIR THOMAS ST. VINCENT

PE COCHRANE, BART., C.B., one of the most eminent of the Irish regimental officers who have distinguished themselves in Crimea, is the son of Admiral Sir Edward Troubridge, and grandson of Admiral Thomas Troubridge, the first Baronet, known as one of the heroes of the battle of the Nile, who perished in the *Themis*. The present Baronet was born in 1817, and entered the service in January 1834. His promotion to the date of the battle of Inkermann, where he was a Major, was acquired by purchase. On the formation of the Eastern Army his regiment, the 7th Royal Fusiliers, was included in Sir George Brown's (the Light) Division, and, as all must remember, together with the Second Division, fought in the battle of the Alma, and sustained the hottest fire of the day. Troubridge was in front of his men throughout that trying day, when ten officers of the 7th fell under the fire of the enemy: he, however, left the field without a wound. At the battle of Inkermann he had charge of the outposts of the first brigade of his division, and also of the Five-gun Battery. The position entrusted to him was commanded for a considerable time by the Russian field batteries, and also by some of those in front of the place, as well as the Round Bastion; but on the other hand, his guns had again and again opportunities of playing upon the dense columns of infantry with which the Russian generals attempted to break into and overrun our camp. About mid-day, when many officers of the 7th had fallen, a round shot from one of the bastions of the place struck Troubridge, and carried off his right leg and left foot. Determined not to leave his guns, he refused to be carried to the rear, but as he lay on the ground caused two bombardiers to raise his shattered body above the level of his body, and bind up his legs, to diminish the flow of blood; after which he continued his command, heroically exhorting and cheering his men until relieved by superior orders. Lord Raglan alluded generally to Troubridge in his despatch on the subject of Inkermann, as having, "although desperately wounded, behaved with great gallantry and composure." Fuller justice to his courage and fortitude is done in the despatch of Captain Lushington, then commander of the Naval Brigade, to Admiral Dundas. Sir Thomas Troubridge was conveyed to England in January 1855, and died at Portsmouth. He was made a brevet Lieutenant-Colonel in December, 1854, and has since received 584*l.* in consideration of the loss of his leg and foot. He was subsequently appointed aide-camp to her Majesty, and became a full Colonel. In July 1856 he received the decoration of C.B. Sir T. Troubridge has published a manual entitled "Principles of the Minor Operations of War," from the French of Lallemand.

TUAM, THE RIGHT REV. DR. M'HALE, ROMAN CATHOLIC ARCHBISHOP OF, a man of powerful talents and fanatical ambition, whose political influence and position in Ireland, both among ecclesiastics and laity, have been most painfully exercised on many occasions, was born in 1792, in the village of Tubbemaun, in the parish of Adergoole, county Mayo. He received his

early education in the school of his native village, and his classic course at Castlebar; entered the College of Maynooth in 1807; and was ordained a priest in 1814; when he was appointed Lecturer and subsequently Professor, of Theology. In 1825 he was consecrated Bishop of Maronia *in partibus*, and coadjutor of Kesh. He succeeded to that see in 1834, on the death of Dr. Wallace, whence, in the same year, he was translated to Tuam. While at Maynooth, Dr. M'Hale contributed largely to the periodical literature of the day; and published a series of controversial letters under the name of "Hierophilos," which then excited much interest. His appointment to the Archbishopric of Tuam was in opposition to the wishes of a large and influential English party, who desired to see the double cross hang upon a quieter and more passive bosom. One of the most violent outpourings of Archbishop M'Hale's wrath was his denunciation of the Queen's Colleges in Ireland as "godless." A provincial synod to consider the question was convened by him at Tuam, and in 1840 a National Synod was convened for the same purpose at Thurles, when the result was a majority of one bishop against the colleges.

TULLOCH, THE REV. JOHN, D.D., a Scholar and Theologian, Principal of St. Mary's College, St. Andrew's, was born in 1822, at Tibbermuir, Perthshire, of which parish his father was for many years minister. He entered the United College of Salvator and St. Leonard, St. Andrew's, about the year 1838, after attending the literary and philosophical classes in that college, passed into the college of which he is now the Principal, where he studied theology. He received license as a preacher in the Church of Scotland, and having been presented soon afterwards to the town-council of Dundee to a charge in that town, was, in 1841, ordained a minister. Having visited Germany, he formed an intimate acquaintance with the speculative theology of that country. In 1849 he was presented to the parish of Kittens in Fife, and on the death of the Very Reverend Principal Haldane, in 1854, was translated to the Principalship of St. Mary's College, University of St. Andrew's, when he received the degree of D.D. Dr. Tulloch first attracted attention as a writer in the "British Quarterly Review." He has also contributed to the "North British Review." In the latter periodical, a paper on Carlyle's "Life of Sterling;" another on Bunsen's "Hippolytus;" and a third, on Vinet, are understood to be from his pen. In 1855 he received the second of the great Bampton prizes on the "Being and Attributes of God," amounting to £500. The first prize (1800*l.*) was adjudged to the Rev. Robert Anderson Thompson, of Louth, Lincolnshire.

TUPPER, MARTIN FARQUHAR, Poet, was born in Leeds in 1811, educated at the Charterhouse, and at Christ Church, Oxford, where he took the degrees of B.A. and M.A. He subsequently entered at Lincoln's Inn, and in due time was called to the bar, but never practised. Mr. Tupper's publications are: "Proverbial Poems,"

phy, a Book of Thoughts and Arguments originally treated," which has gone through many editions, and for which an annual sale of 5000 copies is the best test of its acceptance with the public; "The Modern Pyramid, to commemorate a Septuagint of Worthies;" "The Author's Mind;" "The Crock of Gold;" "The Heart, a social study;" "The Twins, a domestic novel;" and "A Thousand Lines;" besides a variety of short poems. Perhaps no writer of a successful book has been so determinedly written down as Mr. Tupper; certainly no one has ever had so much opposition from the critics, but at the same time been so richly rewarded by the patronage of the public.

TURKEY, ABDU-'L-MEDJID, SULTAN OF, was born on the 11th of April, 1828, and was but sixteen years of age when called to succeed his father Mahmoud, whose death was announced on the 1st of July, 1839, although it is supposed that it occurred some days earlier. The ceremony of installation was performed on the 11th, when he was girded with the sword of Osman, with all the ancient formalities. The sultan, unlike his great enemy lately departed from the world, counts for very little in the government of his country. His reign will, however, be memorable for the important events which it has already led. He ascended the throne just as the chiefs of the empire were endeavouring to carve each his share out of its extensive territory. The Turkish fleet had been lost by piracy, and the Viceroy of Egypt was carrying on a most successful rebellion. The European powers interfered, and saved the empire on that occasion from external enemies; and then began an internal war. To introduce Western ideas of humanity and equal government into Turkey was the object of Reschid Pasha in introducing the Tanzimat, or reforming ordinance, promulgated in the 1st year of the sultan's reign. It has encountered the steadfast opposition of the old Turkish party; who see clearly that whenever liberal principles are acted upon in the land, Moslem ascendancy will be at an end. It has improved to a great extent the condition of the Christian population, but most of the evils which it was to extirpate still exist. In the meantime, its immediate effect has been to weaken Turkey. The general character of the Tanzimat is stated in the sketch of Reschid Pasha, which will be found in a preceding page. The noble course adopted by the sultan, when Austria and Prussia demanded the surrender of the Hungarian fugitives, will not be forgotten. He is of a peaceful, timid disposition, yet he firmly resisted the unjust claims urged by Prince Menschikoff in 1853, although a mighty army stood at the prince's beck on the Asiatic shores of the Black Sea, and a powerful fleet lay at Sebastopol. His education is not that which a European prince should have received, but it is better than a sultan ordinarily obtains. His father desired to place him under the care of a French gentleman of great ability, but the Koran was appealed to by the priesthood, and Abdu-'l-Medjid was doomed to ignorance. Indulgence in pleasure has made terrible inroads on his constitution. His personal

aspect has been thus described by a traveller:—"He is of the middle stature, with jet-black hair, beard, and moustache, the latter closely trimmed. His complexion is very pale, and he wears an aspect of the deepest melancholy. There is much kindness of expression in his large, dark, and yet sorrowful eye, and his voice is singularly pleasing and musical. If the moralist wished to show how little the possession of despotic power could do to secure happiness, he need look no further than the countenance of this kind-hearted and most interesting prince." Opinions differ: another traveller, referring to the common opinion, remarks:—"Many of the English, catching it from each other, would say he was extremely thin, and looked jaded and worn out. To me he seemed, on the contrary, to be of a good average stoutness; his features are marked, but not handsome, and he appears above the middle height rather. They said he looked dejected, jaded. How absurd to speculate in this way on the constantly serious deportment of a Turk! all are serious—in Turkey it is etiquette so to be. Nor is the paleness of his face any criterion of sickness or health; most Moslems are so among the higher ranks." After the evacuation of Sebastopol, the Emperor of the French forwarded to his majesty the Grand Cordon of the Legion of Honour, with which he was invested at the close of the year 1855.

TUSCANY, LEOPOLD II., GRAND-DUKE OF, the second son of the Grand-Duke Ferdinand III., was born at Florence, October 3, 1797. While Leopold was yet an infant, his father was driven out of his states by the French. The child was educated first at Salzburg, the secularised bishopric of which had been given to his father at the peace of Luneville, by way of indemnity, and afterwards at Warzburg. He received a German and Italian education, and in 1814 was restored to Florence on the fall of Napoleon. In 1817 he espoused the Princess Anne, daughter of Maximilian of Saxony, and succeeded his father June 17, 1824. During the long interval of continental misgovernment, which extended from 1815 to 1848, it is to the honour of Leopold that his government was the most liberal in Italy. Whilst following in the footsteps of his father and grandfather (Leopold II. emperor of Germany), he was ever alive to the material wants of the people, and he never forgot their moral and intellectual welfare. Besides making the best roads and bridges in Italy, he patronised scientific undertakings; founded institutions of beneficence; raised the standard of university education; and reorganised the administration of justice. The religious toleration which formed the basis of his system of government was manifested in the support he gave to the Protestant communities of Pisa, Florence, and Livorno. Tuscany under Leopold was long the envied of all the states of Italy. When the era of political change came, Leopold declared himself anxious to co-operate in effecting all possible ameliorations, and for a time appeared likely to weather the storm which agitated his country. Anti-monarchical ideas, however, he could not be expected to encourage; nor, as a prince

the House of Austria, was he likely to view with favour the attempts to wrest Lombardy from the hands of the Hapsburgs. The end came when he could no longer control his position, and he drew to await the subsidence of political feeling and the march of events. A Republic was proclaimed during his absence, but only of brief duration: the victorious Austrians tolerating no irregularities. The grand-duke returned to his capital amid demonstrations of joy, and on the 22d of April, 1850, a convention signed, by which 10,000 Austrian soldiers should occupy Tuscany and support the authority of the sovereign. This convention he considered as having been imposed on the grand-duke, and was then entirely in the hands of his powerful neighbours. He had under it little or no control over the duchy, which was governed by Radetzky. The Emperor's troops have since withdrawn.

U.

UHLAND, LUDWIG, who divides with Tieck the reputation of being the greatest of the living Poets of Germany, was born on 16th of April, 1787, at Tubingen. Having studied law, he took a degree in 1810. He afterwards visited Paris, where he applied himself to the study of the old French poets. After his return home, he was employed in the department of the Minister of Justice at Wurtemberg; was elected to the second chamber in 1816; became Professor at Tubingen in 1829; but resigned his post in consequence of not being admitted to the chamber. At the regeneration of Germany, in March 1848, the discarded name of Uhland assumed political weight. The Wurtemberg ministry having appointed him as a delegate to Frankfort, he took part in the reorganisation of the congress. During the height of the Romantic period he wrote his earlier poems, but the brightness of the imagery, the purity and simplicity of the thoughts, elevated them above ruling influences. He sought materials for his poems among traditions of all the nations of the west of Europe, but always clothed them with the pure German character and expression. He has been always quite as much of a politician as a poet, and has entered into and expressed himself strongly on the various issues of politics that have in turn agitated the German people. His principal works are: "Ernest, Duke of Swabia," a tragedy; "Louis the Bavarian," a drama; "Dramatic Poems," "Walter of Vogelweide." Several of his ballads—"the Black Knight," "the Castle by the Sea," etc., are familiar to English readers by the admirable translations in Longfellow's "Hyperion."

UWINS, THOMAS, R.A., Painter, was born in Pentonville, London, in 1783. Long and advantageously known to the public as

an illustrator of standard British classics, it was not until after a residence of some years in Italy, and he had attained a period of life when painters do not usually make any prominent advances in their profession, that he achieved the distinguished reputation which he now enjoys. Like most painters of real mark, he showed indications of his devotion to the fine arts at a very early age. Unfortunately, however, his youthful enthusiasm was chilled and thwarted by the disadvantages of the position in which he found himself. Whilst yet a boy, he was placed under the care of a well-known manufacturing engraver of the time, of the name of Smith, who enjoyed, by the vicarious exercise of his art, a considerable reputation; supporting an expensive house, and living in a state of comparatively luxurious ease, upon the talents and labours of his pupils. In his establishment a plate would pass through almost as many hands as a new pin; each pupil being employed in the department, whether of sky, landscape, figure, background, or etching, best suited to their peculiar capabilities. After a few touches here and there for the purpose of harmonising this patchwork mode of execution, the plate was sent into the world as the ostensible production of the employer, and thus enabled him to realise a considerable income, without the exercise of either talent or industry on his own part. Smith's ignorance, however, was wholly disadvantageous to the young painter; for it threw him upon his own resources, and helped to afford him a facility for the expression of his pictorial conceptions which he might not otherwise have attained. On leaving Mr. Smith's workshop, Mr. Uwins became a student of the Royal Academy, and attended the anatomical lectures of Sir Charles Bell. In order to realise the means of supporting himself during his noviciate, he employed his leisure hours in making designs for ornamental publishers; Mr. Ackermann and others, who employed him to make drawings of the commodification at Oxford, at which Warren Hastings, then in his old age, received the degree of Doctor of Civil Law, and the Reverend Henry Hart Milman was classical prizeman. He also made many of the copies for the engraved Galleries of the Fine Arts of Tadmor, Tresham, and Ottley. In 1811 Mr. Uwins was elected a member of the Society of Painters in Water-colours, for which institution he officiated as Secretary. His chief occupation, however, was that of making designs for books, and the numerous engravings from his works appended to some of the most popular editions of the standard authors, diffused his name more widely than any other branch of his art could have done; whilst the excellence of his designs entitles him to rank as a book-illustrator with Stothard, Smirke, Howard, and Westall. In 1814 Mr. Uwins visited the south of France, for the purpose of collecting materials for a picture of the Vintage, which, however, he does not appear to have executed until 1848, when it was commissioned by Mr. Vernon. On his return to England he was made responsible for the defalcation of a friend for whom he had been thoughtless enough to become security, and who was Collector for the Society for the Encouragement of Arts

the Adelphi, then in the palmiest stage of its existence; but although the Chairman of the Committee of Accounts was fain to admit that the Society owed their loss as much to their own negligence as the dishonesty of their servant, Mr. Uwins was called upon to good the deficiency. All his ambitious hopes and favourite ideas were thus, for a time, prostrated; for to meet the instalments by which he was compelled to pay off the debt, he was forced to abandon the more exalted walks of the profession for those occupations by which he could realise the largest amount of pounds, shillings, and pence. So closely, indeed, was he pressed, that his health almost fell a sacrifice to his exertions; and he had hardly made his last payment when he was threatened with almost total blindness. A suspension from all labour, for a time, was the consequence of this distressing visitation; and even after a long cessation from his usual employments, his vision remained too much impaired to admit of his continuing to make water-colour drawings. On his partial recovery of sight, Mr. Uwins was commissioned by Walker, the well-known publisher of the first cheap edition of British Classics, to paint a series of portraits for engraving; and having been led by this undertaking to visit Scotland, he set up his studio in Edinburgh, for more than two years, as a portrait painter. On his return to London he resolved to put in execution his long-neglected project of visiting Italy, whither he repaired in 1820. After sojourning awhile at Florence and Rome, circumstances led him to Naples; and the new views which dawned upon him in that land of loveliness produced a change in the course of his study which he had ultimately no reason to regret. In his excursions around the Bay of Naples, and in his wanderings among the surrounding hills, he discovered a class of subjects for his pencil which had been hitherto almost wholly untouched. The simplicity of the people, the picturesqueness of many of their ceremonies, and the variety of their costumes, supplied him with materials for pictures at almost every step. In the intervals of his relaxation from portrait painting (necessarily his chief occupation) he composed subjects interested with the manners and customs of the Neapolitans, which attracted the attention of amateurs of all countries who happened to be travelling in the neighbourhood. One of his earliest pictures of this class was purchased by the King of Belgium (then Prince Leopold). Another, executed for Lord Lilford, was applied for by the directors of the Museo Borbonico for the collection of the King of Naples; and many liberal commissions were given to him by Lord Dalhousie, Sir Matthew White Ridley, and other distinguished amateurs. After passing some time at Naples, Mr. Uwins visited France, and the north of Italy; and he is one of the few painters whose enthusiasm led them to make a pilgrimage to Urbino, the birth-place of Raffaello. A series of drawings, representing the house and the room in which the immortal painter was born, with several other interesting views of the city, were sent as a present by Mr. Uwins to his earliest patron and friend, the late Sir Thomas Lawrence. Such, indeed, was Sir Thomas's estimation of Mr. Uwins'

later efforts, that he gave him a commission for one of his Neapolitan subjects, at a price very far beyond his usual rate of charge for such subjects at that period. Among the most striking of the pictures painted during his residence at Naples, more than one which are widely known by successful and artist-like engravings, may be mentioned—"An English Child asleep in the hands of a Neapolitan," "The Mandolin," "Children asleep in a Vineyard," "A Sleeping Peasant Girl," and "Dressing for the Festa." Mr. Uwins returned to England in 1831, and exhibited at the Royal Academy a picture, which, from the novelty of the subject, and the admirable style in which it was treated, obtained for him no inconsiderable celebrity. It represents "The Interior of a Saint Manufactory at Naples," one of those ateliers which supply the carved and painted images which are deemed indispensable to the worship of the Church of Rome. Crucifixions, Madonnas, Saints, Angels, and Souls in Purgatory are here lying about in "most admired disorder;" and in various stages of completion. The chief manufacturer, with his tool in his hand, is suspending his pious labours to strike a bargain with the Capuchin friars, who are desirous of obtaining for their convent the cheapest possible rate, a group of finely finished cherubs with rosy faces and gilded wings. The journeymen fabricators of devils are engaged, some in adjusting the joints of angels, to which power of motion is to be imparted, and others in painting, with the fiercest vermillion, the flames and tortures of condemned sinners. Among the finished figures a Madonna is conspicuous, sitting on the moon, and crowned with stars; whilst cherubs are supporting her drapery, the folds of which, as well as the rich confusion of her flaxen curls, display much curious workmanship. The representation of the Queen of Heaven is obviously the glory of the shop. St. Michael and the Dragon are next in succession; then follow various saints, with old Januarius at their head, as patron and protector of the city. The foreground is occupied by a group of peasants bringing their household images to the carver to be repainted and repaired. In this picture there is no attempt to put things in a ridiculous point of view for any purpose of satire. The whole is simple matter of fact, which may be seen in every lightened Catholic town abroad, at almost any hour of the day. Perhaps the satire is the more severe on that account. The merit of this *chef-d'œuvre* could not well be overlooked. The earliest opportunity was accordingly taken to elect the painter an Associate of the Royal Academy; an honour which was conferred upon him in 1832. Of the many charming pictures which he has painted during the last twenty years, "Neapolitan Peasants returning from a Festa," "The Festa of the Madonna del Arco," "The Fishermen's Feast of Naples," and "Children in Prayer," are among the most successful. The first-mentioned picture was engraved for "Fine Art Gallery of British Art." The loveliness and grace of the principal figure, the beauty of the children by whom she is accompanied, the grace of its composition, and the brilliancy of its colour, place it in the highest rank of modern art. Mr. Uwins attained the same

R. A. in 1836. In 1842 he was appointed Keeper of Her Majesty's Pictures, and in 1847 Keeper of the National Gallery in succession to Sir Charles Eastlake, who retired from the post a short time before. The cabal which had so far prevailed against Sir Charles Eastlake as to induce him to resign that situation, was finally successful in driving Mr. Uwins from it also. The Keeper-ship of the National Gallery and the Secretaryship to the Trustees, the latter held by General Thwaites, are now combined at a salary six times as large as was received by Sir Charles Eastlake, or by Mr. Uwins; whilst Sir Charles has become the stipendiary Director, at a salary of 1000*l.* a-year.

V.

VAUGHAN, THE REV. ROBERT, D.D., Editor of the "British Quarterly Review," is the Principal of the Lancashire Independent College, Manchester. He was formerly minister of a chapel at Kensington, and Professor of Ancient and Modern History in the University College, London. He has distinguished himself by his writings in favour of popular education, and as an historian has obtained some notice. "The Age and Christianity," "John de Wycliffe, a Monograph," "A History of England under the Stuarts," published by the Society for the Diffusion of Useful Knowledge, are amongst his chief publications. As the founder of the "British Quarterly Review," it is admitted on all hands that he has achieved uncommon success.

VERDI, GIUSEPPE, the most popular Italian Composer of the day, is the only successor of Bellini and Donizetti, whose works, like theirs, have gained European celebrity. His principal pieces belong to the class of the opera seria, or lyrical tragedy. The "Lombardi," produced nearly twenty years ago, made an immense impression throughout Italy, and laid the foundation of his fame. Of his subsequent works, the most remarkable are "Nabucodonosar" (or Nebuchadnezza), "Ernani," (founded on Victor Hugo's tragedy), the "Due Foscari," "Attila," "Macbeth," the "Masnadieri," (founded on the "Robbers" of Schiller), "Luisa Miller," "Rigoletto," and the "Trovatore." The "Masnadieri" was written for Her Majesty's Theatre, and produced in 1847, with Jenny Lind for the heroine; but it entirely failed here, although it has since been successful in Italy. His last opera, the "Trovatore," has had great success, not only in Italy but in Germany and France; but it has not yet been performed in England. Notwithstanding Verdi's present popularity, he is less esteemed by sound critics than his predecessors Bellini and Donizetti; to whom he is inferior both in inventive power and in constructive skill.

VERNET, HORACE, the eminent French Historical Painter, was born in Paris, in 1789, and manifested a taste for painting at an early age. He is a member of a family long celebrated in the annals of art in France. After making some attempts in the classical manner of David, Vernet joined the innovators who were then endeavouring to bring about a more natural style; one which should imitate nature instead of the antique; and since military subjects were then the order of the day, he determined while gratifying the public taste, to represent real French soldiers instead of the Bacchuses and Apollos who hitherto figured in French uniform. Among his earlier works are the "Taking of the Redoubt," the "Dog of the Regiment," the "Horse of the Trumpeter," the "Halt of French Soldiers," the "Battle of Tolosa," the "Barrier of Clichy," the "Soldier Labourer," the "Soldier of Waterloo," the "Last Cartridge," and "Death of Poniatowski," which followed each other in rapid succession, and found much more favour with the multitude than with artists of the bas-relief school. In 1819 he painted the "Massacre of the Mamelukes at Cairo," now in the Luxembourg; and about the same time the battles of Jemappes, Valmy, Hangu, and Montmirail. In 1822 the entry to the Exhibition at the Louvre was refused to M. Vernet's works, on account of their "seditious" tendency; and the artist accordingly made an exhibition-room of his studio, had a catalogue printed, and presented to the public a numerous collection of battles, hunts, landscapes, and portraits. In 1826 he was admitted a member of the Institute; and in 1830 was appointed to succeed Guérin as Director of the Academy at Rome. There he resided for five years, and devoted himself to the study of the Italian school, the result of which was a series of pictures somewhat new in subject and manner of treatment. He abandoned for a while the life of the French soldier and the battles of the Revolution, the *capote grise* and the *petit chapeau*. During this period he painted "Judith and Holofernes," "Raphael and Michael Angelo at the Vatican," "Combat of Brigands against the Pope's Riflemen," "Confession of the Dying Brigand," and "Pope Leo XII. carried into St. Peter's." But he afterwards returned to his original subjects, and in 1836 produced four battle-pieces: "Friedland," "Wagram," "Jena," and "Fontenoy." When Algiers was occupied by the French troops, a whole gallery at Versailles was set apart for the purpose of commemorating their achievements in Africa. This gallery was styled the "Constantine Gallery," from a town of that name in Africa which had been captured by the French, and the decoration thereof was intrusted to M. Vernet. He produced a great many pictures on subjects connected with the Algerine war, among which may be mentioned the "Taking of the Smala," of Abi-el Kader, said to be the largest canvas in existence. M. Vernet has several times attempted biblical subjects, but his efforts in this line have added little to his fame. He is one of the most prolific and most popular painters of the day. He has also painted large picture representing the capture of Rome by General Oudinot.

1840. His only daughter married Paul Delaroche. She was a lady for love of whom poor Léopold Robert destroyed himself.

VILLEMAIN, ABEL-FRANCOIS, a French Author and Politician, was born in Paris, June 11, 1791. He received a careful education, and gave promise at an early age of future celebrity. His reputation was so soon established, that he was promoted to the Chair of Rhetoric in the Lyceum of Charlemagne before he reached the age of twenty. In 1811 he was appointed to deliver the Latin language at the distribution of the prizes, and acquitted himself with great *éclat*; and shortly afterwards he came forward as an author, and won the prize proposed by the Academy for the best essay on Montaigne. His discourse on the "Advantages and Inconveniency of Criticism," also won him the academic prize. This was delivered in April 1814; Paris was at that time occupied by the English, and the young lecturer prefaced his discourse with a glowing eulogy upon the Allied Sovereigns, both collectively and individually. His panegyric was remembered against him in after years. After the second Restoration he became Professor of Eloquence to the Faculty of Letters. About the same time he entered the ministry as head of the department of printing and publishing; and was afterwards named *ministre des requêtes* to the Council of State. But he had never been a thorough Legitimist, and in 1827, finding himself in opposition to the Government, he retired from office. In his professorship he was occupied from 1816 to 1826, with some interruption, in lecturing on the literary history of the fifteenth, sixteenth, and seventeenth centuries, of which two opening discourses are all that have been preserved. In 1819 he wrote his "History of Cromwell," and two years afterwards became a member of the Academy. After the Revolution of July he abandoned his chair and his literary labours, and devoted himself wholly to politics. In 1830 he was elected a Member of the Chamber of Deputies for the department of the Eure; in 1832 he was raised to the dignity of Peer of France, and received the appointment of Vice-President of the National Council of Public Instruction; and in 1839 became Minister of Public Instruction, which office he held until 1844. M. Villemain's principal works are the "Vie de Cromwell," "Cours de Littérature Française," and "Discours et Mélanges Littéraires." As a politician he has always been a Liberal Conservative; a zealous advocate for the liberty of the press; and after the Revolution of July a warm supporter of the Government of July. Of late years Villemain has been living a retired life, taking part in neither politics nor the literature of the day.

VOGEL, EDWARD, Astronomer, at present in Central Africa, the son of Dr. Carl Vogel, director of the principal school at Leipzig, and was born on the 7th of March, 1829. He received his education as astronomer first at his native town and afterwards at Berlin, under Professor J. T. Encke, the astronomer royal. Having been en-

that journal to eminence; who, by his energy in inducing men of talent to contribute to its columns, rendered it a great organ of free opinions and popular knowledge; and who, moreover, first, in spite of many obstacles, brought the steam-engine to the aid and service of the newspaper press. Having represented Berkshire in two successive Parliaments, he died in 1847, having devised to the present Mr. Walter the entire freehold premises belonging to the "Times" in Printing-house Square, and left him all his interest in the concern. To estimate the value of such a legacy, let us turn to a speech delivered by Sir E. Bulwer Lytton in the House of Commons, on the 27th of March 1853. "If," said the Hon. Baronet, "I desired to leave to posterity some memorial of existing British civilisation, I would prefer not our docks, not our railways, not our public buildings, not even the palace in which we now hold our sittings; I would prefer a £ of the 'Times' newspaper."

WARD, MATTHEW EDWARD, R.A., Painter, was born at Pimlico in 1816; he is the nephew on the mother's side of Harriet Smith, one of the authors of the "Rejected Addresses." His natural bias, so far from being opposed, was fostered by his parents. To the tender sympathy, judgment, and good taste of his mother, who lived to witness the artist's first fame, he attributes much of his success. In 1834 he was admitted a student of the Academy under the auspices of Wilkie, who lent him a helping hand. Here the true bent of his genius betrayed itself in a heterodox preference for original composition, and for colour, to formal academic study. His first picture, "Portrait of Mr. O. Smith in the character of Don Quixote," was exhibited in 1834. His second was less fortunate. In 1836 he visited Rome, and there stayed nearly three years; a diligent student from "the life," the antique, and the old masters. He gained in 1838 the silver medal from the Academy of St. Louis. After his stay in Rome, a few months passed in Munich, where he devoted to the study of fresco under Cornelius,—a style little to his taste. "Cimabue and Giotto," painted while he was in Rome, was the first picture exhibited, (in 1839), on his return. With the single exception of his "Napoleon in the Prison at St. Helena," bought by the Duke of Wellington, those which followed showed little promise, and won less favour, from hanging-committees than from the public. In the Cartoon competition of 1843 his "Raphael," with its figures of "heroic size," proved a signal failure. What is called high art was soon finally exchanged for the style by which he is now so celebrated. In that same year "The Vicar Johnson reading the MS. of the Vicar of Wakefield" first made him favourably known. "Goldsmith as a Wandering Musician" and "La Fleur's Departure from Montreuil," of the following year, maintained the impression; and in 1845, "Dr. Johnson in the Ante-Room of Lord Chesterfield,"—a picture stamped by mental power, and overflowing with character and action,—raised his reputation to the point at which it has since remained. It was

chased by Mr. Vernon, one among many eager to secure it. 1846 he was elected Associate of the Academy. The direct thenceforth permanently given to the painter's genius is stated by a bare list of his subsequent pictures: "The Duke of Clarendon," 1846, of which there is a duplicate in the Vernon Gallery; "The South-Sea Bubble," 1847, also in the Vernon Gallery; "Highgate Fields during the Great Fire;" "Inter-View of Charles II. and Nell Gwynne," both 1848; "De Foe and MS. of Robinson Crusoe," 1849; "Young Benjamin West holding the Baby in the Cradle;" "James II. receiving Tidings of the Landing of the Prince of Orange," both 1850; "The Royal Family of France in the Prison of the Temple," 1851; "Charlotte Corday led to Execution," 1852. In the latter year he was commissioned to paint eight pictures (in oil) for the corridor of the New House of Commons. Two—"The Execution of Marston" and "The Last Sleep of Argyle"—have been already shown and exhibited; and prove that he does his utmost to fulfil the historical tasks assigned him conscientiously. Mr. Ward's aim to paint the social life of the past is an original and useful one. He fulfils it with unmistakable power and energy, aided only by a faulty tendency to lay almost as much stress on costume and accessories,—which he paints most effectively,—as on human figures which give them meaning. Mr. Ward was elected R.A. (in succession to J. J. Chalon) in March 1855. He is married to a daughter of James Ward, the oldest living Academician; herself a clever artist and an exhibitor. The character, purity, and vigorous painting of her "Scene from the Camp at Abham" of 1854, attracted considerable attention.

WARREN, SAMUEL, D.C.L., Author, was born in Denbighshire 1807. He was originally intended to follow the profession of medicine, but subsequently changed his views and devoted himself to literature. Whilst studying for the bar he contributed a series of sketches to "Blackwood's Magazine," under the title of "The Diary of a late Physician," which excited much attention at the time, and were frequently reprinted in a separate form. These were followed by a tale, entitled "Ten Thousand a-Year," greatly superior to its predecessor in interest and able analysis of character. Scarcely another writer has achieved so considerable a reputation by the production of so few works; as, besides running a distinguished career through the pages of "Maga," his works have gone through many editions in their collected form; and in a cheap periodical form have been still more widely circulated. After the Great Exhibition of 1851, Mr. Warren published a sort of prose-run-mad rhymed poem, "The Lily and the Bee," the occult meaning of which he is perhaps the only man living who has fathomed; if, indeed, it be not intended as a burlesque, or an attempt to square literary circle. Mr. Warren is also the author of a third novel, "Now and Then," and has contributed largely on general subjects to the pages of "Blackwood." To professional literature he has

supplied several important works. He is a Queen's Counsel and holds the important office of Recorder of Hull.

WATT, JAMES HENRY, one of the most eminent historical Line-Engravers of our age, or indeed of any period, as his "Procession of the Flitch of Bacon," after Stothard, and his "Hobbs' Drovers' Departure," after Landseer, abundantly attest was born in London in 1799. At the age of seven years he was placed at Messrs. Allsopp's well-known academy at Kentish Town, where he remained until he was sixteen, and learned as much as was usually taught in private schools at that time of day. His love of drawing, which seems to have been intuitive, displayed itself at a very early age, and his first rude knowledge of the use of the burin may be said to have been derived from a schoolfellow, who afterwards made a creditable figure in the world of letters as a poet and romantic. In youth, the *fidus Achates* of his boyhood, and his fellow-practitioner in the art of engraving, was no other than the amiable but unhappy Henry Neele, the author of many pleasing poems and novels. The year the senior of Watt, of studious habits, if a passion for devout reading may be so characterised, Neele devoted whatever portion of his playhours he could spare from poetry and romance, to an experiment which appears to have excited in no slight degree the respect and admiration of his companion: that of making frenzy with a mysterious-looking instrument upon a piece of copper, which he usually carried about with him. This instrument was no other than a burin, with which he was making his first essay in the art of line-engraving. At the earnest entreaty of young Watt, the piece of copper was divided by a line, and one half of it allotted to his use; the burin changing hands as the occasion required. Dissatisfied with the incompleteness of his tool, however, Watt abandoned his self-imposed task for the more congenial recreation of drawing. Seated side by side, after schoolhours, and sometimes, we fear, during those which should have been devoted to severer studies, Neele would extemporise upon a slate a narrative which Watt illustrated on another. When Watt's slate was filled with as many "gallant knights" and "ladies fair" as could be crowded into its space, they were remorselessly sponged off to make way for newer combinations; until the successive scenes of the story had been duly represented. There was often an *exuberance de richesses* in the subjects of the author, which compelled the young draughtsman to curtail some of the *dramatis personae* of the story of their fair proportion of limbs; but enough of head and shoulders were usually retained to illustrate the more striking points of the narrative. Neele's father was a map engraver, a fact which accounted in some degree for his son's early predilection for the art. Watt's adoption of the burin had no other origin than the example of his schoolfellow; stimulated, in all probability by his early taste for drawing. However this may have been, he finally adopted engraving as a profession, and at the age of sixteen years was placed in the studio of the late Mr. Charles Heath, to learn

vocation *secundum artem*. We have elsewhere described the system of the workshop of a manufacturing engraver, and the various principle upon which both profit and fame were often based by the master. Heath was a man of acknowledged taste and genius as an engraver, and of kindly and even generous impulses; and he merely perpetuated a vicious system, which had been organised long before by his predecessors. His pupils were brought under the direction of an experienced overlooker, whose principal object and duty it was to extract as much profitable labour from them as possible. This was best achieved by confining them almost exclusively to those peculiar branches of their art in which they displayed the greatest amount of dexterity. The system of a division of labour, however injurious to the apprentice, was a source of no ordinary profit to the master; as each part of the work was executed by the hand that could perform it the best, and the process of harmonising the respective tasks having been accomplished, a plate of high finish, if not of great artistic excellence, was the result. Rapidity of execution was thus attained at the expense of qualifications of a much higher order, and habits were acquired which had to be eradicated thereafter. Watt must have taught himself a great deal which he could never have learned from such a system; for he has often been heard to affirm that the latter portion of his career was sedulously occupied in unlearning all that had been taught him during those seven or eight years of probation; but we think he can hardly deny that the portion of the marvellous dexterity in handling the burin, which he is known to possess, was acquired during that distasteful apprenticeship. What he has taught himself, however, can be inferred from the fact, that, independently of a facility of execution which has hardly been approached since the days of George Kneller, he is one of the most accurate draughtsmen that ever took pen in hand. In the execution of his flesh tones he is altogether without a rival; obtaining invariably the brilliancy and softness which characterise this department of his art by the daring fewness rather than the elaborate multiplication of his touches. This power was exhibited in a remarkable degree in his exquisite transcript of the most lovely and graceful composition, "The Procession of the Flitch," by Stothard; which has all the brightness and softness of a highly finished picture, although engraved from a sepia drawing, deficient in the richness and brilliancy by which the oil-paintings of Stothard's best time were usually characterised. Before the "Procession," which was executed as a labour of love from a design suggested by himself, and altogether at his own risk, Watt has engraved the "Highland Drovers' Departure," after Edwin Landseer; "May-day in the Reign of Queen Elizabeth," after C. R. Leslie; "Susannah and the Elders," after Caracci (National Gallery); "A Courtyard in the Olden Time," after E. Landseer; and (his latest work) "Christ Blessing little children," by Sir Charles Eastlake, P.R.A. The last-mentioned engraving is not yet published, but is fast approaching towards

completion; and by those who may be enabled to compare it with the original, cannot fail to be pronounced one of the finest engravings which has ever been produced in this or any other country. It has all the grace and beauty, without any of the feebleness, of the picture. The only book-plates we remember to have met with from Mr. Watt's burin are three, executed by Mr. Alaric Watts; the "Portrait of Lady Dover," after Sir Thomas Lawrence, a plate a few inches square for which he received one hundred and fifty guineas; the "Portrait of Mrs. Alaric Watts" after A. E. Chalon; an ideal portrait of "Ninon de Lenclos" after Stuart Newton; and "Twelfth Night," from Smirke, for Heath's "Shakspeare." These little plates, which have had a world-wide reputation, are among the most exquisite specimens of book illustrations ever executed. Mr. Watt is a member of the Institut Historique of France.

WATTS, ALARIC ALEXANDER. Poet, Journalist, and Writer on the Belles Lettres, was born in London on the 16th of May 1799. "There are few persons," says a popular modern critic, "in the middle and upper ranks of life who, in their meditative moments of joy or of melancholy, do not feel that they are thinking past and who do not recall, unconsciously, from the recesses of their memory, some snatches of sympathetic song. The poetical power commonly summoned by this electric process belong, perhaps in undue proportion, to a single mind, which has contrived to put itself *en rapport* with a wider circle than usual of the refined intellectual of its fellows. The very power, however, thus exerted over the heart, defeats the claims of the poet to personal consecration; for his thoughts are *ours*; the images that spring up in his fancy are its native produce; and even the sweet tinklings of rhyme that haunt and bewitch our ear seem, through old habit, like the inborn music of our own soul. Touched by this magic, 'My Fireside' are words of power which fill our eyes with dewy tears; the 'Youngling of the Flock,'—the 'loveliest and the truest'—becomes the dove of our weary ark; the flow of time is arrested by the memories of 'Ten Years Ago'; 'The First Grey Hair' on the brow we love is associated with ideas of imperishable beauty; and 'The Death of the First-born' is hallowed to our hearts by its agonies and consolations, and to our fancies by the image of a gentle mother trying to impart the comfort she does not feel. These are the titles of only a few of certain gushes of song that many of the present day will feel to well up in their hearts in the ordinary circumstances of life; and yet, notwithstanding that they are constantly reminded of it by numerous printed collections of English poetry, many of them are ignorant, or at least can only recognize the fact after reflection, that they are indebted for them all to Alaric Watts." Nor is it as a poet only that Mr. Watts has claims on our pages. "There is no living author," says the "Art Journal," "to whom British art is so much indebted as to Mr. Alaric Watts. Although many years have passed since his intercourse with artists

close and frequent, the present generation of painters who become famous owe him much ; for in their earlier struggles and the celebrity they have since obtained they were aided, not only by his judgment and experience, which gave many of their works, through the medium of engraving, to the world. The engravings which embellished 'The Literary Souvenir,' of which he was for so long a time the editor, have never been equalled in England since the abandonment of that ably-conducted publication. He laboured, and most successfully, so to raise the character of this class of works as to convert that which had been previously little more than a toy, into a production which represented the art-talent of the country ; and the exquisite gems that appeared from time to time in his volumes, judged not by their size but by their merit, are placed and will remain among the worthiest tributes to the genius of the age. We do Mr. Watts, therefore, no more than justice when we attribute to him much of the popularity which an improved state of art has obtained in this country." Alaric Watts is the descendant of an ancient and respectable English family, which numbers on its genealogical tree, military commanders, church templars, heads of religious houses, founders of colleges, and others (following their royal master "to the last gasp with truth and loyalty"), distinguished lawyers and philanthropists, and even Montague's Queen and a regicide.* By the marriage of William Watts, Esq., of Blakesley, with Mary the daughter of the famous Chief Justice Sir Edward Montagu, Knight of Boughton, the ancestor of the Dukes of Manchester and Montagu, and of the Earls of Halifax and Sandwich, Alaric Watts's family are the descendants of Jane D'Acon, or D'Acre, the daughter of Edward I. and Queen Eleanor of Castile. The same marriage also renders them Montague's kin to All Souls' College, Oxford.* Among their more immediate ancestors, John Watts, Esq., of Danett's Hall, was for many years the Receiver-General of the county of Leicester, and did great service to the manufacturers of that town in lending them money, without interest, in the infancy of the hosiery business. He also projected and nearly completed a plan for supplying the inhabitants of Leicester with spring water ; but the proposed rate of eighteen pence a-year to each householder was considered excessive, and his proposal was rejected. It is one of the favourite traditions of the family, that this gentleman had the honour, when king, of presenting to William III. the first goblet of wine quaffed by the Deliverer on his landing in this country. To his grandson, Rev. Dr. William Watts (the grandfather of the poet), the inhabitants of Leicester are mainly indebted for their noble Infirmary, which, indeed, he may be said to have been virtually the founder ; a service which was acknowledged by a public and unanimous testimonial from the nobility and gentry of the county, and by the presentation to him of an honorary life-governorship of the institution.

* Vide Edmonson's "Peerage," Nicholl's "History of Leicestershire," and Berry's "History of Northamptonshire," Berry's "County Genealogies," and Watts's "Landed Gentry."

The fortunes of the family had been then long on the decline, and its further decadence, owing to the improvidence of one of its members, followed hard upon the death of this excellent man. Much of the property which had formerly belonged to the Wattses had been sacrificed to the stubborn loyalty of their adherence to the royal cause; and the South-Sea Bubble completed what their cavaliership had begun. Dr. Watts, in spite of the political and tried loyalty of his ancestors, married a lady who was a direct descendant of Whalley the regicide. "He lived," says Nicholls, "and died universally respected." He left, as bequest, a competency to his daughter-in-law, that would enable her to educate her children; but the property was thrown into Chancery (a friendly suit, of course), where it remained for upwards of twenty years, until it terminated, as such suits usually do, in the absorption, by the costs of the respective attornies, of the whole of the funds in the honest and careful custody of the Court. A small inheritance from her own father enabled this lady to keep a wolf from the door. A widowed wife, however, separated by mutual consent from her husband, on the sole ground of incompatibility of temper, and stipulating only to be allowed the unmolested possession of her children, she was fain to accept of a nomination to Christ Hospital for her eldest son, which was offered to her by one of the representatives of the county of Leicester, as a mark of respect to her father-in-law. The little blue-coat boy (William Mosley Watts) progressed most favourably, and after the usual term of probation at school and elsewhere, established an academy of his own, in that instance at Putney, and afterwards at Barnes: where he died some years ago, leaving a handsome competency to his family. The younger poet, who was many years his junior, was sent, almost in infancy, to the then large grammar-school of Wye College, in Kent, of which his brother was one of the masters; and with him he subsequently migrated, under similar circumstances, to another large school, by the Rev. Alexander Power, at Ashford. In these establishments he received the rudiments of a plain English education, inferior, however, to what is usually taught in the present day in an ordinary charity-school. When the elder Watts opened an establishment of his own at Putney, he accompanied him thither; but that the demands upon his time of his brother's pupils and house left him no leisure for his own studies, he determined, when about fifteen years of age, to seek his fortune elsewhere; and having learned that George Crabbe, the well known author of the "Technical Dictionary," and other useful compilations, was in want of a private teacher, he offered himself as a candidate for the post, and was accepted at once. Adversity, that "tamer of the human brow," subdues the brow as well as the bosom, and thus it happened that the young poet looked some two or three years older than he really was. There, thanks to the necessities of the case (for he had to be perfected over-night in the lesson that was to be repeated in the morning), he made rapid progress in studies which he had hitherto attempted with little success; and acquired more

ze in a single year than he had learned elsewhere in seven. He seems to have been a worthy man, and a respectable scholar; the boy was earning nothing, and desired to be independent; so, for a year and a half of very hard scholastic labour, he and his faithful instructor parted with mutual regret and good will. After several experiments, which, in all but the amount of remuneration, were anything but satisfactory, the young poet settled down as tutor in a private family residing in the neighbourhood of Manchester, where he was uniformly treated rather as a son than as a dependant. In 1822 he published a small volume of poems, entitled "Poetical Sketches," with engravings by Heath from designs by Stothard, which five editions were called for within a very short period. Many of the lyrics contained in this little *brochure* have become widely known to the public, in numerous collections of poetry published in this country and in America; "Ten Years Ago," "The West-Born," "To Octavia," "I Think of Thee," and "Kirkstall Revisited" more especially; and have been warmly praised by Wordsworth, Coleridge, Southey, Montgomery, Campbell, Rogers, and other eminent contemporaries, with whom they were the means of bringing the author acquainted. In the latter part of 1822, Mr. Watts's booksellers having purchased the copyright of the "Leeds Intelligencer," a journal which was then at a very low ebb, tempted him, by an offer which would be considered fabulous in these days of cheap literature, to undertake its editorship. Having accepted their proposal, he took up his residence in Leeds, where he remained nearly three years. In those days the factory system was in its worst phase, and every attempt to suggest a mitigation of its evils was indignantly resented. Finding that the Leeds Infirmary was crowded with patients more or less mutilated by machinery, Watts ventured to publish an article in the "Intelligencer," urging upon all owners of cloth mills to incur the comparatively trifling expense of fencing, or as it used to be termed, boxing off their machinery. With the exceptions of his friend the late Michael Sadler, and James Montgomery, and two or three philanthropic mill-owners, the suggestion appears to have given general offence throughout the district; nay, was visited in several quarters by the withdrawal of the subscriptions of the dissentients. Although the number of frightful accidents by machinery had become alarmingly large, and the remedy was simple and comparatively inexpensive, the recommendation was resisted with the utmost pertinacity, as an improper and an impertinent interference. On resigning the editorship of the "Leeds Intelligencer," however, for the purpose of establishing a popular journal ("The Manchester Courier") in Manchester, Mr. Watts had the satisfaction of leaving it in a far more prosperous condition than that in which he had found it; and he and its proprietors parted with mutual esteem and good will. It was whilst yet in Leeds that a proposal was made to him by Messrs. Hurst and Robinson, the London publishers of Sir Walter Scott, to co-operate with them in the publication of an annual volume on the plan of the

well-known German pocket-books edited by Goethe, Schiller, and other eminent German *littérateurs*. Mr. Watts's notion was, if poems and short prose sketches from the most popular writers of the day, might be associated in such a work with highly-finished line-engravings from the best examples of the English school of painting. With this view, he selected some of the finest works of Turner, Leslie, Newton, Stothard, Roberts, Allston, Romney, Lawrence, Collins, Danby, Martin, and other eminent British painters, and placed them in the hands of Heath, Finden, Wall, and Pye, and other eminent engravers. The first volume was published in 1824, and its success was unequivocal. Of some of the succeeding volumes from 14,000 to 15,000 copies were called for. It has been a fashion with the newspaper press of late years to refer to the Annuals of that day whenever they have found occasion to refer to them. Yet it cannot be denied that some of the most exquisite works of art ever produced in this country appeared in the "Literary Souvenir," and that many of the most popular lyrics of Wordsworth, Campbell, Coleridge, Southey, Montgomery, Howitts, Praed, Hervey, Procter, L. E. L., and others, were published from time to time in its pages. The great success of the "Literary Souvenir" created a powerful competition, of which "Heath's Keepsake" and the "Amulet" led the van, and established an honourable rivalry with that publication. For a time, however, all went "merry as a marriage-bell;" but at length authors and poets more especially, began to find that the Christmas copies of their works, as gift-books, had been seriously affected by these attractive little volumes, and were at no pains to conceal their chagrin at their success. Moore, Southey, Wordsworth, Montgomery, and Lamb complained (some of them with considerable bitterness) of the effect of the popularity of such books on their yearly profits, and set to work to write and talk them down accordingly. What the quality of the art included in the better class Annuals really was may be inferred from the fact, that a majority of the subjects engraved in the "Literary Souvenir" have since been reproduced upon a scale commensurate with their importance, and have realised many thousands of pounds for their publishers. Of these may be instanced Leslie's "May-Day," "Sir Walter Scott," and "Duke and Duchess;" Lawrence's "Lady Dover;" Turner's "Ehrenbreitstein;" Collins's "Pet Lamb;" Newton's "Love-Quarrel" and "Forsaken;" and Danby's "Cleopatra." Ten volumes of the "Literary Souvenir" were published between 1824 and 1835, when it was discontinued. It was succeeded in 1835 by the "Calendar of Modern Art," under the same editorship, of which three volumes only were published. That the taste for the fine arts created by these elegant works led to the institution of Art-Unions can hardly be doubted; associations which, so far as the pecuniary interests of artists are concerned, have replaced them with advantage. Mr. Watts's estimate of the sum expended by him in illustrating his works (viz. 50,000*l.*) in the course of fourteen years be correct, and

outlay of rival proprietors at all approached his own, something half a million sterling must have been disbursed during that period among painters, engravers, *littérateurs*, printers, stationers, binders, and others. The price paid in those days to such men as Watt, Le Keux, William Finden, etc., varying from 150*l.* to 200*l.* a year for a single engraving, would crowd an ordinary gift-book of the present day with better embellishments than form the usual pictorial attractions of such publications. The "Manchester Courier" was permanently established in less than a year, but early in 1825 Mr. Watts disposed of his interest in it, and returned to London to engage in more congenial pursuits. From 1827 to 1847 inclusive, he was more or less connected with the newspaper press; having published or assisted in establishing during that period upwards of twenty Conservative journals in town and country; several of which are now realising large incomes for their respective proprietors. In the early part of the year 1827 he was invited to co-operate with Mr. Charles Baldwin and Dr. Giffard in the establishment of the "Standard" evening newspaper; but having engagements of his own which demanded his exclusive attention, he relinquished his post in less than a year after the commencement of that journal. In 1833 he started a class journal devoted to the interests of the army and navy, entitled "The United Service Gazette," the first newspaper of the kind which had appeared in this country, and of which for upwards of ten years he was the sole editor and manager. During his connexion with the Gazette he advocated many military and naval reforms, which have since been carried out. He denounced from time to time the enormous waste of money that was then going on in the royal dockyards under the sanction of James Graham and his protégé, Captain Sir William Symonds, and attempted to show that several millions of the public treasure had been expended upon the construction of ships which could never be rendered available as men-of-war, and which were often deficient in the requisites demanded in the most ordinary merchant-vessels. He also opposed, most strenuously, the system of promotion by purchase, and the undue privileges accorded to the Household troops and other regiments of the line. In 1843, disputes having arisen between Mr. Watts and his partner in the "United Service Gazette," the paper was violently wrested from him, and on his appeal to the Court of Chancery was directed to be sold by the Court. After many years' litigation, during which no fewer than five Chancery suits grew out of one, the money paid into court was pretty well exhausted, and the suits abandoned; leaving the original proprietor, by his connexion with that and other journals belonging to the same firm, and after ten years of assiduous labour, not only without remuneration for his time, but a large pecuniary loser besides. From 1841 to 1847 Mr. Watts became once more associated with the editorial staff of the "Standard;" but in the early part of the last-mentioned year he retired from all connexion with the newspaper press. In 1850 Mr. Watts published an edition of his select poetical writings,

under the title of "Lyrics of the Heart, with other Poems," illustrated by upwards of forty highly finished engravings, executed by artists who had been associated with him in his former publications. A few charming lyrics from the pen of his wife, the youngest sister of the late J. H. Wiffen, the accomplished translator of "Tasso" and of "Garcelasso de la Vega," and for many years private secretary and librarian to the late Duke of Bedford, are interspersed throughout its pages. Mrs. Watts has also written and edited several excellent volumes for young people, which have met with considerable success. One of the warmest admirers of the poetry of Alaric Watts was the late Sir Robert Peel. "Among the cordial and encouraging testimonies," says Mr. Watts, in the preface to his "Lyrics of the Heart," "which these poems have from time to time called forth, was one from the virtuous and patriotic statesman whose recent melancholy death has been so deeply and universally deplored; the more gratifying, because wholly unsought and unexpected by me. It is now (said the late Sir Robert Peel, in a letter which I had the gratification to receive from him in the year 1826) 'from mere courtesy that I assure you that your name is respected by me. I have had the satisfaction of reading many of your poems. I particularly call to mind two—'The Death of the First-Born,' and 'My Fireside;' to have written which would be an honourable distinction to any one.' Eighteen years afterwards, his recollection of these poems induced him to place at my disposal a Treasury appointment for my son; and, only a few months previous to his lamented death, I received an additional and unsolicited proof of the interest he continued to take in my welfare." In 1853 a pension of 100*l.* per annum upon the Civil List was conferred upon Mr. Watts by her Majesty, "in consideration of services rendered by him to literature and the fine arts." We may add that he has been an extensive contributor to the periodical press during the last thirty years, and has published several volumes of poems, in which he has not considered it worth his while to claim the paternity. Nearly twenty years ago a considerable speculation in reversions induced Mr. Watts to allow him to insure his life for ten thousand pounds. He is, however, in robust health at the present moment, having already survived the event long enough to have rendered the speculation a very unprofitable one indeed.

WATTS, GEORGE FREDERICK, a Painter, who greatly distinguished himself at the Westminster Hall competitions, and a worthy disciple of the great Italian Schools, was born in London in 1818. He first exhibited at the Academy in 1837: in that and succeeding years portraits, also some historical attempts; in 1841 "Isabella finding Lorenzo dead," from Boccaccio; in 1842, a scene from "Cymbeline." At Westminster Hall, in 1843, his cartoon of " Caractacus " obtained one of the three highest class prizes of 20*l.* and created sanguine hopes for his future career. A three-year

was then paid to Italy. On his return, in 1847, the highest honours were again obtained by him in Westminster Hall. Of two colossal oil-pictures, "Echo," and "Alfred inciting the sons to Maritime Enterprise," the latter secured for him one of the three highest class prizes of 500*l.*; and, together with the pictures of Pickersgill and Cross, (the latter having gained a second class prize), were purchased by the Commissioners. It is now in one of the Committee-rooms of the New Houses. In the "Alfred," together with dramatic power and masterly drawing, there were peculiarities and failures; much pedantic imitation of the Roman and Florentine Schools, and a studied abstinence in colour. At the British Institution, in 1848, Mr. Watts exhibited two pictures far more faithful to his genius; which proved the defects of his "Alfred" to have been wilful ones. His "Paolo and Francesca," and "Orlando pursuing the Fata Morgana," were remarkable compositions; poetic in feeling as elevated in purpose: the colour and tone very noble, deep, and luminous; the figure of Francesca and the floating form of the Fata Morgana both exquisitely modelled. At the Academy in the same year was exhibited his full-length portrait of Lady Holland, reminding one of the Venetian masters in its earnest character and deep harmony of colour. At the Academy in 1849, equally unnoticed by the general public, was his "Life's Illusions," a picture of the class of the "Fata Morgana:" wonderful in art, and imaginative, if somewhat dreamy and confused. There too, in 1850, an important picture from his pencil was hung to sight,—*"The Good Samaritan;"* dedicated to and painted in honour of the philanthropic Thomas Wright of Manchester. The picture subsequently presented it to the Town Hall of Manchester. His later appearances in Trafalgar Square have been irregular and unimportant: chiefly portraits (among them one of Henry Taylor), displaying peculiar effects, and power of a kind not calculated to win its way with the many. To this fact, and to much indulgence in *experiment*, may be attributed his not becoming so widely known as his real powers of mind and hand, and his lofty aims and attainments, should have made him. Latterly indeed, failing health, failing self-confidence, and the still more serious lack of adequate stimulus to exertion, (both in the artist's character and in his circumstances), have almost withdrawn him from the healthy work-day arena of professional competition. For the New Houses of Parliament, Mr. Watts has executed one of the frescoes in the Poets' Hall,—*"St. George welcomes the Dragon,"* from the pen of the painter, finished in 1853. In this work the painter has had to contend with the difficulties of a very bad light; and has aimed at reproducing the pure, broad, simple qualities of the Florentine school of Fresco. An offer to paint in fresco the west end of Lincoln's Inn Hall, on condition that the actual outlay should be defrayed by the Benchers of that Inn,—an offer backed by the representations of Mr. Hardwick, the architect of the building,—was recently accepted by the lawyers. The large vacant space is to be occupied by an allegory representing the world's greatest law-

givers, including Moses, Confucius, Justinian, Charlemagne, etc. Mr. Watts is deeply versed—perhaps too deeply—in the school of Italian painting. At the close of Haydon's Life, an interesting contribution from his hand shows not only candour and intelligence but powers of thought unusual (out of their own language) in painters.

WEBSTER, THOMAS, R.A., a truly English Painter. Born at London in 1800, he passed the early part of his life at Winton where his father was employed in the establishment of Carrall. He first exhibited at the Academy, in 1823, a portrait group; and again until 1835; after which he continued to contribute regularly one or more of those modest subjects which have secured him fame. The unobtrusive titles of his first pictures,—“The Soldiers' Return,” “A Committee of Taste,” “Gunpowder Plot,” “Birdcatchers,” indicate early persistence in the course wherein, after much personal self-improvement, his chief success was achieved. As early as 1831 he exhibited “A Village School,”—the theme so often handled since; in 1836, “Going into School” and “Coming Out of School.” Subsequent pictures,—“Returning from the Fair” (1837), “Breakfast” (1838), “Foot-ball” (1839), attracted each year general notice. In 1840 his picture of “Punch” was followed by his election to an Associateship. “The Boy and many Friends” (1841), “The Smile” and “The Frown,” of which engravings have been issued by the Art-Union to its subscribers, were still more popular. “The Grandmother,” “The Impenitent,” “Going to School” (1842); “Sickness and Health” (1843), Portrait group of the artist's father and mother, “The Pedler” (1844), succeeded; and in 1845 “A Dame's School,” the picture in the Vernon Gallery, one of his happiest realizations. In 1846 he was elected R.A. Among his principal subsequent works have been the “Good Night” (1846); “A Village Choir” (1847); “Dotheboy's Hall” (1848); “A Slide” (1849); “A School Play-ground” (1852); a repetition of the “Dame's School” (1853); “The Race,” (1851); pictures few in number but perfect of their kind. Other even smaller canvases and simpler themes,—“A Robber,” “A See-saw,” “A Cherry-seller,” “A Letter from the Colonies,” etc., display the same genuine qualities of character, expression, graphic telling of the story, and quiet humour. His direct “Studies from Nature,” again, humble, rustic material, such as “A Peasant's Home,” “A Farm-house Kitchen,” “Peasant Children;” homely fire-side scenes,—“A Chimney Corner,” “A Breakfast Party;” are all characteristic specimens of his complete but unpretending art, evincing the same keen sympathy with every-day Nature, as do his more important compositions. Webster's range is narrow, but he is a thorough master of it. He is one of the very few, even of the so-called “domestic” painters, who have been content to draw up to the real life around them, exclusively devoting himself to it, and sensible to the attractions of Wardour Street and Rag Fair. By and by his works will be *historical*, in addition to their other merit.

WEIR, WILLIAM, Journalist, was born in Edinburgh about 1802. After passing through the usual curriculum at the High School of the city he turned his attention to legal studies, and was called to the Scottish bar in 1826. Not making much progress in a session at that time crowded with aspirants, and in which few successes had occurred for some years to reward its junior members, Weir became for a time editor of the "Edinburgh Literary Journal," and having, in the discussions that preceded the passing of the Reform Bill, distinguished himself by the exercise of a ready and able style of writing, he was appointed Editor of the "Glasgow Free Press,"—a post which he occupied for several years. He subsequently removed to London, and after a time, became attached to the staff of the "Daily News," upon which he has since remained, and, it is understood, since the death of Mr. F. K. Hunt, the possible post of Editor.

WESTMACOTT, SIR RICHARD, R.A., D.C.L., Sculptor, was born in London, 1775. He went to Italy in 1792, where he studied for some time under Canova. He succeeded Flaxman as Professor of Sculpture in the Royal Academy in 1827, which post the learned sculptor still holds. In 1837 he was knighted. He has not exhibited since 1839. The list of the monumental works executed by Sir Richard during his busy career would be a long one. His ideal works are all strictly classical in style. Among those best known are "The Distressed Mother" (1822), which he executed three times, once for the Marquis of Lansdowne; "Euphrosyne" (1837), in the possession of the Duke of Newcastle; two statues—"Cupid" and "Psyche," in that of the Duke of Bedford; and a large alto-relievo, "The Death of Horace," executed for the late Earl of Egremont.

WESTMACOTT, RICHARD, Jun., R.A., Sculptor, son of Sir Richard Westmacott, was born in London, 1799. He visited Italy in 1820, and studied there for six years:—not, however, under any master. He first exhibited at the Academy in 1827; was elected Associate in 1838, R.A. in 1849. Among his best works are "The Cymbal Player," (exhibited in 1832); in the Duke of Devonshire's collection; "Venus and Ascanius" (1831); "Venus instructing Cupid," alto-relievos in Lord Ellesmere's Gallery; "Paolo and Francesca" (1838), an alto-relievo in Lord Lansdowne's possession; "Blue-Bell" (1838); and "The Butterfly" (1838); bas-reliefs full of grace and beauty, in Lord Ellesmere's collection. Westmacott excels in religious compositions. Fine examples are the "Angel watching," part of a large monumental group to the Ashburton family (1842); his bas-relief, "Go and Sin no more" (1850); recumbent monumental effigy of the late Archbishop of Canterbury (1850), in Canterbury Cathedral; and one of the late Earl Hardwick at Wimpole. Monumental works and busts have, especially during the latter

part of his career, been by far the more numerous portion of his works.

WESTMORELAND, THE RIGHT HON. JOHN FANE, EARL OF, lately British Ambassador at Vienna, is son of the tenth Earl, and was born in 1784. He entered the army in 1803, and in 1805-6 served in the expedition to Hanover, as aide-de-camp to Lieut.-General Don. He subsequently served in Sicily, the Dardanelles, in Egypt, and in Portugal under the Duke of Wellington, to whom he was aide-de-camp. In 1813 he was the English Military Commissioner at the head-quarters of the Allied Armies in Germany. He was appointed Envoy at the court of Florence in 1814, and in the following year accompanied the Austrian army in the campaign which restored the throne of the Two Sicilies to the Bourbons. In 1841 he was appointed British Minister at the court of Berlin, and retained that appointment until February 1851. In December of the same year he was appointed Ambassador at the court of the Austrian Emperor, and in that character took part in the negotiations connected with the Turkish questions: the Vienna note, the conferences, with the engagements embodied in the protocols, the treaty of December 2, 1854, and the interpretation of the four guarantees. Throughout those proceedings he performed the ordinary functions of an ambassador with an acumen for which he had not hitherto obtained credit. When, however, the English Government saw reason to hope that a basis for negotiation had been gained, it became its duty to send a distinguished statesman to the Vienna congress, at which the affairs of Europe were to be resettled. Lord John Russell was dispatched on special mission to act with the ambassador. In the autumn of 1855 he retired from his post at Vienna, and was succeeded by Sir Hamilton Seymour. The noble Earl is a privy councillor; he received the Grand Cross of the Bath in 1846; and is a knight of several foreign orders. He succeeded to his father's title in 1841.

WHATELY, THE RIGHT REV. RICHARD, ARCHBISHOP OF DUBLIN, an eminent Theologian and Writer on Political Economy, was born in 1789. He is the son of the Rev. Dr. Whately, of Nonsuch Park, Surrey. He was educated at Oxford, at Oriel College, of which, in 1819, he was elected a fellow. The college of Oriel is famous for having sent out some of the greatest thinkers of which English Churchmen of the present generation may boast, such as Arnold, Coplestone, Newman (until his perversion), and the subject of this sketch. Whately was appointed to read the Bampton lectures in 1822, in which year he accepted the rectory of Halesworth in Suffolk, value 450*l.* per annum. In the course of which took place in the University, when Sir Robert Peel appeared to his learned constituents upon the Catholic question, Whately voted for the right honourable baronet. In 1830 he was appointed President of St. Alban's Hall, and Professor of Political Economy; and in 1831 he was consecrated Archbishop of Dublin and Bishop

Glendalagh. The diocese of Kildare has since been added to his charge. His lordship has published a considerable number of theological writings, consisting of sermons and charges; all marked by a desire to place religion on a simple scriptural basis, and in harmony with man's intellectual nature. His style is aphoristic and luminous, and his reasoning most severe. In the administration of his office he has displayed an uniform liberality, and has been a constant promoter of the National system of education in Ireland. He is the author among other works of a treatise on political economy, and the best manual of logic which we possess.

WHEATSTONE, CHARLES, F.R.S., the scientific Inventor of the Electric Telegraph, and Professor of Experimental Philosophy in King's College, London, was born at Gloucester, in 1802. Mr. Wheatstone's connexion with the Electric Telegraph is set forth in an official paper, drawn up by Sir M. Isambard Brunel and Professor Daniell, at a time when some misunderstanding had arisen from conflicting claims as to the origin of this important invention; and as the subject is one of the vexed questions of science, we cannot do better than quote the decision at which these gentlemen arrived, with ample evidence before them; acquiesced in as subsequently was by the parties chiefly concerned:—"In March, 1836, Mr. Cooke, while engaged at Heidelberg in scientific pursuits, witnessed for the first time one of those well-known experiments on electricity, considered as a possible means of communicating intelligence, which have been tried and exhibited from time to time, during many years, by various philosophers. Struck with the vast importance of an instantaneous mode of communication to the world always then extending themselves over Great Britain, as well as for government and general purposes, and impressed with a strong conviction that so great an object might be practically attained by means of electricity, Mr. Cooke immediately directed his attention to the adaptation of electricity to a practical system of telegraphing, and, giving up the profession in which he was engaged, he from that hour devoted himself exclusively to the realisation of that object. He came to England in April, 1836, to perfect his plans and instruments. In February, 1837, while engaged in completing a set of instruments for an intended experimental application of his telegraph to a tunnel on the Liverpool and Manchester railway, he became acquainted, through the introduction of Dr. Roget, with Professor Wheatstone, who had for several years given much attention to the subject of transmitting intelligence by electricity, and had made several discoveries of the highest importance connected with this subject. Among these were his well-known determination of the velocity of electricity when passing through a metal wire; his experiments, in which the deflection of magnetic needles, the decomposition of water, and other voltaic and magneto-electric effects, were produced through greater lengths of wire than had ever before been experimented upon; and his original method of converting a few wires into a considerable number of circuits, so

that they might transmit the greatest number of signals which can be transmitted by a given number of wires, by the deflection of magnetic needles. In May, 1837, Messrs. Cooke and Wheatstone took out a joint English patent, on a footing of equality, for their existing inventions. The terms of their partnership, which were more exactly defined and confirmed in November, 1837, by a partnership deed, vested in Mr. Cooke, as the originator of the undertaking, the exclusive management of the invention in Great Britain, Ireland, and the Colonies, with the exclusive engineering department, as between themselves, and all the benefits arising from the laying down of the lines, and the manufacture of the instruments. As partners standing on a perfect equality, Messrs. Cooke and Wheatstone were to divide equally all proceeds arising from the granting of licenses, or from the sale of the patent rights; a percentage being first payable to Mr. Cooke as manager. Professor Wheatstone retained an equal voice with Mr. Cooke in selecting and modifying the forms of the telegraphic instruments, and both parties pledged themselves to impart to each other, for their equal and mutual benefit, all improvements, of whatever kind, which they might become possessed of, connected with the giving of signals or the sounding of alarms by means of electricity. Since the formation of the partnership the undertaking has rapidly progressed under the constant and equally successful exertions of the partners in their distinct departments, until it has attained the character of a simple and practical system, worked out scientifically on the basis of actual experience. Whilst Mr. Cooke is entitled to stand alone as the gentleman to whom this country is indebted for having practically introduced and carried out the electric telegraph as an useful undertaking, promising to be a work of national importance, and Professor Wheatstone is acknowledged as the scientist whose profound and successful researches had already prepared the public to receive it as a project capable of practical application, it is to the united labours of two gentlemen so well qualified for mutual assistance that we must attribute the rapid progress which this important invention has made during the few years since they have been associated.—(Signed) M. I. BACON.
J. F. DANIELL. London, April 27, 1841." Professor Wheatstone is also the inventor of the well-known Stereoscope; but it is upon his scientific skill in connexion with the Electric Telegraph that his fame will chiefly rest. At the Paris Universal Exhibition of 1855 Professor Wheatstone was one of the Jurors in the class for "Heat, Light, and Electricity," and was created a Knight of the Legion of Honour for his "application of the Electric Telegraph."

WHEWELL, THE REV. WILLIAM, D.D., Vice-Chancellor, Master of Trinity College, and formerly Professor of Moral Philosophy, in the University of Cambridge, was born at Lancaster in 1795. His writings have been numerous, and important. The following are amongst those which have attracted the greatest attention: "A History of the Inductive Sciences," in 3 vols.; "The

Philosophy of the Inductive Sciences, 2 vols.; *"The Elements of Morality, including Polity,"* 2 vols.; the *Bridgewater Treatise on Economy*; *"Notes on Architecture of German Churches;"* *"Lectures on the History of Moral Philosophy in England;"* *"Lectures on Systematic Morality;"* *"Indications of the Creator,"* in answer to the *"Vestiges of Creation."* Besides these he is the author of many educational mathematical works, and some works on University education in connexion with University reform. Well-authenticated rumour also attributes to him the authorship of *"The Plurality of Worlds,"* an anonymous book which has made considerable noise. Dr. Whewell has the reputation of being as encyclopædical in his knowledge as his great contemporary Lord Brougham, and a curious anecdote is current in Cambridge illustrative of this feature of his mind. The thing is said to have happened while he was a Fellow of the College, before he was made Master. It was generally found that whatever subject turned up in debate, Dr. (then Mr.) Whewell had more to say about it than any one else, and the Fellows used, but always unsuccessfully, to try to start some subject about which he knew nothing. As a resource, one of them turned over the leaves of the *"Encyclopædia Metropolitana"* for some out-of-the-way subject, and hit upon the game of chess as it is played in China. After dinner this gentleman commenced talking to his neighbour about this subject, and was corrected in the middle of some statement by the ever-ready Whewell. Hoping to find the omniscient in a mistake, he cited his authority—the *"Encyclopædia Metropolitana."* "Oh!" said Mr. Whewell, "that was my opinion when I wrote the article which you refer, but I have since seen reason to alter it." Amongst his other accomplishments Professor Whewell is well-versed in archæology, and is a contributor to the literature of this architecture.

WILLIAMS, WILLIAM FENWICK, BRIGADIER-GENERAL, K.C.B., entered the Royal Artillery as Second Lieutenant in 1825, was promoted to the rank of First Lieutenant in 1827, and to that of Captain in 1840. From that date to 1843 he was employed in Turkey, and for his military services there received the brevet rank of Major. Being subsequently sent to Erzeroum, to meet the Turkish and Persian plenipotentiaries, he took part in the conferences preceding the treaty of that city in May 1847, and for his special services on that occasion he was advanced to the brevet rank of Lieutenant-Colonel. Having, in June 1848, been appointed British Commissioner for the settlement of the Turco-Persian boundary, he was, in 1852, admitted as a Companion of the Order of the Bath. In August, 1854, Lieutenant-Colonel Williams, on being nominated Her Majesty's Commissioner with the Turkish Army in the East, was promoted to the local rank of Colonel, and a few months later to that of Brigadier-General. The glorious victory won, under his auspices, on the heights above Varna, on the morning of the 29th of September, 1855, after the city

had been invested for four months, first made the name of General Williams familiar to the British public, as a warrior with a cool head and a brave heart. After the sanguinary battle had raged for well nigh eight hours, and General Mouravieff had exerted all the talent which he had derived from nature, and all the industry which he had gained from experience, the Russian troops under his command, after persevering so long as there remained a chance of success, were repulsed with immense loss. In acknowledgment of his heroism on that memorable occasion, General Williams was no inated by the Queen of England a Knight Companion of the Order of the Bath, and honoured by the Sultan with the rank of "Mushir," or full General in the Turkish service. Time passed on; and General Williams and his brave comrades did all that brave men could do in defence of Kars, holding out sternly on the third of a soldier's rations. They were, however, perplexed in the extreme; for matters daily grew worse and worse. The garrison was worn out by famine; many of them died of hunger; so scarce were provisions, that horseflesh was reserved for the hospitals; and it is stated that the price even of cats rose to a hundred piastres each. All around was death and despair, and it had become a mere question of starvation against time, when, on the 14th of November, Mouravieff summoned the garrison to surrender. General Williams presided next day over a council of officers, and their deliberations ended in a flag of truce being sent to the Russian general, to demand a suspension of hostilities and the privilege of sending a courier to Erzeroum. An English officer, named Thompson, left the besieged city, but found the Russians within three leagues of Erzeroum, and Selim Pacha without any intention of attempting the relief of Kars. On the 22d he returned to the beleaguered town; and two days later, General Williams, having demanded an interview with Mouravieff, accepted terms of capitulation. Subsequently, the whole garrison, including nine pachas, surrendered as prisoners of war; and thus ended the siege of Kars, the defence of which has been one of the brightest and noblest incidents of the war. General Williams is now *en route* for St. Petersburg.

WILLIS, NATHANIEL PARKER, a Poet, Critic, and Journalist of considerable talent, was born in Portland, Jan. 20, 1817. While a child he was removed to Boston, and received his first education at the Latin school of that city and the Phillip's Academy at Andover. He entered Yale College in the seventeenth year of his age, and about the same time produced a series of poems on sacred subjects, which obtained for him some reputation. Immediately after he had graduated, in 1827, he was engaged by Mr. Goodrich (or Peter Parley) to edit "The Legendary" and "The Token." In 1828 he established the "American Monthly Magazine," which he conducted for two years and a half, when it was merged in the "New York Mirror," and Willis came to Europe. On his arrival in France he was attached to the American Legation by Mr. Bonaparte, then minister at the court of Versailles, and with a diploma

port he travelled in that country, Italy, Greece, Asia Minor, &c., and last of all in England, where he married. The letters he wrote while abroad, under the title of "Pencilings by the Fire," first appeared in the "New York Mirror." In 1835 he published "Inklings of Adventure," a series of tales, which appeared originally in a London magazine under the signature of "Peter Crosby." In 1837 he returned to the United States, and retired to a pleasant seat on the Susquehanna, where he resided two years. Early in 1839 he became one of the editors of the "Cortland," a literary gazette in New York; and in the autumn of the same year he came again to London, where, in the following spring, he published "Loiterings of Travel," in two volumes, and "Two Ways of Dying for a Husband." In 1840 appeared his "Sketches," and "Letters from under a Bridge." About the same time he wrote the descriptive portions of some pictorial works on American scenery and Ireland. In 1843, with Mr. G. P. Morris, he revived the "New York Mirror," which had been discontinued several years, first as a weekly, then as a daily gazette; but he withdrew from it upon the death of his wife in 1844, and made another visit to England, where he published "Dashes at Life with a Free Pencil," consisting of stories and sketches of European and American society. On his return to New York he issued his complete works, which filled a closely-printed imperial octavo volume of several hundred pages. In October, 1846, he married a daughter of the Hon. Mr. Gunnel, and is now settled in New York, where he is associated with Mr. Norris, as Editor of the "Home Journal," a weekly gazette of literature. Mr. Willis belongs to what has been styled the Venetian school in letters. There is no drawing, and much colouring in his pictures. His stories have little probability, coherence, or consistency; but the abundance of ornamental details scattered over his writings have gained for him considerable popularity in America, and some readers in this country. A sister of Mr. Willis has also gained a considerable amount of literary reputation under the *nom de plume* of "Fanny Fern."

WILLIS, THE REV. ROBERT, F.R.S., Jacksonian Professor of Natural Science at the University of Cambridge, born at London in 1800. The most learned and (in spirit) scientific of our Archæologists. He is the author of "Remarks on the Architecture of the Middle Ages and Italy" (1840), one of the first books which introduced English Archæologists to a correct knowledge of Italian Gothic; of a very valuable essay elucidating the "Nomenclature of the Middle Ages" (1842); of "The Architectural History of the Church of the Holy Sepulchre," of a remarkable paper on the "Vaults of the Middle Ages"; etc. Mr. Willis has also written a handbook on the "Principles of Mechanism" (1841), scientific papers (of investigation) on the "Vowel Sounds," the "Mechanism of the Larynx," and "Teeth of Wheels." With the principles of architectural construction he is thoroughly conversant. He has been one of the main supports of the Archæological Institute, since its first esta-

blishment in 1849. From its annual meetings have been prepared his "Architectural Histories" of Canterbury, Winchester, York, and other cathedrals; histories exhaustive of the subject, and unique, for their keen spirit of analysis, and their lucid illustrations. In his examination of a building, the method of its first construction and of each successive change or addition is investigated; and this structural testimony compared with the recorded evidence of contemporary chronicles. Professor Willis's oral explanation of the history of a cathedral, such as York, Lincoln, etc., is one of the great features of the Institute's annual meeting. The clearness and compressed volubility of his exposition rivet and instruct all hearers. Next to having witnessed with your own eyes the building of one of our old cathedrals, or of any subsequent century's alteration thereof, is to hear the Professor describe how it was done. Under his hands the stones speak and give up their story. By the vestiges of an earlier erection, to be described in that yet standing,—of Norman, say, amid Early English or Decorated,—he creates again the structure to which those vestiges belonged: as Professor Owen, with the help of a few bones, can construct an animal, "which lived and roared before the flood." In Winchester Cathedral, for instance, the casual observer will only recognise a Perpendicular (late Gothic) nave, of the 14th and 15th centuries. Professor Willis leads you behind the scenes, as it were; lays bare the still existing Norman core in piers and walls; and stone by stone builds up afresh the Norman nave, with its low pier arches, its triforium and clerestory, which William of Wykeham cavalantly transformed into the then latest architectural fashion of his day. Again, from the traces of certain small old windows in Chichester Cathedral, and the circumstance of the spaces diminishing between them, he re-constructs the Norman apse of the former building with a demonstrative force that carries conviction to his hearers, and that makes the before hidden links of the history obvious to every reader. His knowledge of what Norman churches were, had led him to look for the indications confirming a theory. Many a considerable error he will thus demolish in his course, many a loose theory or baseless date, by rigorous collation of existing documents with the silent language of the fabric itself.

WILLMORE, JAMES TIBBITS, Engraver, was born at Handsworth, Staffordshire, September 15, 1800. He is one of the most eminent and popular of the landscape engravers who have distinguished themselves by their reproductions of Turner. His style, one of great delicacy and finish, he has opened out for himself. It renders admirably that marvellous aerial perspective so poetic and original an attribute of his great exemplar. The beauty of such engravings as "Mercury and Argus," "The Old Téméraire," and the "Ancient Italy," is known to all lovers of art. Among Willmore's other works are, "Crossing the Bridge" after Landseer; "Wind against Tide," after Stanfield. There is also J. J. Chalon (not a very inspiring original), "The Water-Fall."

ed by the Art-Union to its subscribers, ill represents his powers. His latest works, "Harvest in the Highlands," after Landseer, "The Golden Bough," after Turner (the picture in the Vernon gallery), are both very beautiful examples of his art. Willmore was elected Associate-Engraver of the Academy in 1848; he being one of the few line-engravers of real eminence who was willing to accept the invidiously restricted honour to which the Academy was, in last year, confined.

WILLS, WILLIAM HENRY, Journalist, was born at Plymouth, January 13, 1810. Mr. Wills has been for the last twenty years one of that important class of literary men whom the present demand of knowledge keeps in full and profitable occupation; and who—though their names seldom appear on title-pages—are amongst the most prolific and useful of public writers. Mr. Wills was one of the "Punch" set who started "Punch," and was afterwards connected with the Messrs. Chambers of Edinburgh, whose sister he married. He was a member of the original staff of the "Daily News," and occupied for a considerable time the post of sub-editor of that paper, the leading columns of which he occasionally contributed. In 1840 he also joined Mr. Charles Dickens in establishing "Household Words," of which he is the working editor.

WILSON, JAMES, M.P. and Statistician, was born in 1805, Hawick, where his father was long engaged in the hosiery trade. The latter, a member of the Society of Friends, embarked in business, while very young, as a manufacturer of hats; but the speculation not proving successful, he left his native place to seek his fortune in the metropolis. He subsequently removed from London to Newcastle; but circumstances there also proving adverse to his prosperity, he was gradually attracted towards that sphere in which nature had intended him to shine. In 1839, Mr. Wilson published a treatise entitled "Influence of the Corn Laws;" in 1840, "Fluctuations of Currency, Commerce, and Manufactures;" and in 1841, "The Revenue, or what should the Chancellor do?" In length, he got into the tide which was to lead him on to fortune. Having, in 1843, established the "Economist" newspaper, and gained celebrity as its chief editor, he was, at the general election of 1847, returned, on Liberal principles, as member of Parliament for Westbury. He commenced his parliamentary career with a speech on the "Commercial distress," which then prevailed to an alarming extent; and subsequently spoke with great ability on the motion of Lord G. Bentinck, relative to the Sugar Plantations. The familiarity with which he treated the subjects under discussion, and the masterly manner in which he dealt with statistics in defence of the new fiscal system, marked him out for pre-eminence; and in May, 1848, he was appointed Secretary to the Board of Control—a post which he continued to occupy till the breaking-up of the Russell Cabinet. When Parliament was dissolved in 1852, Mr. Wilson was again returned for Westbury, and on the

formation of the Coalition Ministry he became Financial Secretary to the Treasury. He remained in that position after the Government had been reconstructed under the auspices of Lord Palmerston, and although, in the autumn of 1855, a rumour was afloat that he was about to accept the permanent office of Chairman of the Board of Inland Revenue, it has proved to be erroneous. Mr. Wilson would be a loss to the House of Commons, of which he is one of the ablest members. He is not, indeed, a man to create a great sensation, and then expose himself to ridicule, or sink into insignificance; but he endeavours to render his knowledge of figures and finance useful to the State; and he is most successful in his object.

WINDHAM, MAJOR-GENERAL CHARLES ASH, G.C.B. "the Hero of the Redan," was born in the county of Norfolk where his family flourished before the Conquest, and where he possessed considerable landed property. He entered the army in 1812, and passed many years of his life as an officer of the Coldstream Guards. He became Captain in May 1833; Major, in November 1840; Lieut.-Colonel, in December 1846; and Colonel, in June 1854. During all these years, the probability of the brave Quartermaster having an opportunity of performing exploits worthy of a hero of romance, must, indeed, have appeared slight. However, when the Allied armies invaded the Crimea, Windham acted during the campaign as Assistant-Quartermaster-General of the Fourth Division, and was appointed by General Simpson to the command of the second brigade of the Second Division, upon Brigadier-General Lockyer's appointment to the Ceylon command. Meanwhile, when the celebrated flank movement of the army was made on Balaklava, this gallant officer was on that occasion the bearer of the despatch to Admiral Dundas, requesting the co-operation of the fleet; and he afterwards proceeded with the order to Sir Edmund Lyons directing him to take the Agamemnon round to Balaklava. In the battle of Inkermann he enacted a distinguished part. Having been despatched to order up General Torrens' brigade to the right, and informed on the way that two of his guns had been captured and were being carried off by the Russians, he took upon himself the responsibility of sending, with General Torrens' consent, the 63d, which effected their object in recovering the guns. When he rejoined Sir George Cathcart, he found the Fourth Division which had proceeded to attack the Russians in flank, under a murderous fire. He was close to Sir George when that warrior fell, and became the only mounted officer of the division untouched, and its command devolving upon him to the end of the battle, he got his troops up the hill, and led them again into action, with an energy worthy of all praise. His gallant conduct on that occasion attracted little notice. The next achievements of Colonel Windham, however, were of a character far too high and heroic to pass without observation. When the tri-color flag waved over the Malakoff, as a signal for the English to advance upon the Redan,

Colonel Windham was about the first man, on his side, to enter the redoubtable stronghold; and when the assault became a scene of carnage and confusion—when soldiers were being mowed down by the Russian fire, and officers were falling on all sides—and as the different regiments were mingled in a mass, and all brigadiers except himself were wounded or unfit to lead, Colonel Windham, still struggling against fearful odds, made a last effort to form his men once more for the attack. Several times he was partially successful; but the soldiers melted away as fast as he collected them. He sent thrice to Sir W. Codrington, begging for support, and as often were the officers who acted as his messengers wounded as they passed to the rear. Finding his efforts on the left futile, Colonel Windham passed through one of the cuts of the inner parapet and walked over to the right, at the distance of thirty yards from the Russian breastwork, exposed to a close fire, but without a wound. When he reached the inner parapet at the right face he got some men together, but sooner had he brought them out than they were killed, wounded, or dispersed by a concentrated fire. Colonel Windham then walked back again across the open space to the left to retrieve the day. As men on the parapet of the salient, who were firing on the Russians, sent their shot about him, and the latter, who were firing volley after volley on all points of the head of the work, likewise directed their muskets against him; but, as if bearing a charmed life, he passed through this cross-fire in safety, and reached the inner parapet on the left, where his men were becoming thinner and thinner. A Russian officer now stepped over the breastwork, and tore down a gabion with his own hands, to make room for a fieldpiece; and Colonel Windham, seeing there was no time to be lost, said to Captain Crealock, "I must go to the General's supports. Now mind, let it be known, in case I am killed, why I went away." He crossed the parapet and ditch, and succeeded in reaching in safety the fifth parallel, through a storm of grape and rifle bullets. What conversation passed between him and the General is a matter of dispute. At all events, it was already too late; the unequal struggle was over; and as they spoke, the soldiers, overcome by numbers, were seen escaping from the Redan. When intelligence of deeds so daring reached England, the "Gazette" readily announced that Colonel Windham had, for distinguished services, been promoted to the rank of Major-General. He was moreover, soon appointed Governor of the Karabelnaia, that part of Sebastopol occupied by the English. His native county was not forgetful of the honour won for her by this brave officer. The Norfolk magistrates hastened to vote a congratulatory address to General Windham, for the heroic services he had rendered in leading the assaults of the British army on the Redan fort at Sebastopol on the 8th September; and to adopt measures for erecting an appropriate memorial in commemoration of the great valour and deeds of that distinguished officer. The Earl of Albemarle remarked on the occasion, that "it was right that Norfolk should pay honour

to so distinguished an individual as Major-General Windham, as he was connected with one of the most ancient and respected families of the county. Some years ago he was talking to his old friend, Colonel Windham, when the Colonel mentioned that he had got a commission in the Guards for his boy Charles, but that he was young enough and might wait. Lord Albemarle replied, that he had served a campaign when he had completed his 16th year, and that no man could enter too young into the army. The matter was taken, and the gallant officer, who had now attained the rank of Major-General, entered the army." On the 5th of July, 1851, General Windham had been elected a Companion of the Bath, and on the resignation of General Barnard, in November, he became Chief of the Staff, and as such, responsible head, as in the French service, of the two great departments of the Adjutant-General and Quartermaster-General.

WINDISCHGRÄTZ, PRINCE, some time Generalissimo of the Austrian troops, one who has bombarded more capital cities than any commander of his time, was born in 1786. Descended on the maternal side from Wallenstein the great Duke of Friedland, proud of his descent, but *borné* in intellect, and possessing little knowledge, he is, even as a soldier, hardly more than a first-rate corporal; a good drill-adjutant, and a great hand at frightening a mob. But he nevertheless enjoys considerable esteem among the Austrian officers: principally on account of his high aristocratic manners, which have earned him the title of "The first Austrian Gentleman." It had long been well known that his political opinions were on the side of Absolutism; and for many years it had been certain that, if a revolution should happen, Windischgrätz would be the general of the Absolutist party. The movements of the spring of 1848 took every one so entirely by surprise, that no one dreamed of offering any resistance to the popular will. But as early as the month of July a remarkable circular was handed round among the troops. It was drawn up by the officers of the Galician army-corps, and was expressed in the plainest terms,—“That the army was the real representative of the populations of the monarchy; that the officers were the representatives of the intelligence, and the privates the representatives of the strength, of these populations; consequently to them belonged the task of reconstituting the Austrian monarchy. And as the emperor and those immediately about him were evidently not in a state of free action, the Galician corps of officers hereby call upon the other officers of the army to place themselves immediately at the disposal of that person whom public opinion has long pointed out as the saviour of the country, in order to rescue the monarch, and crush Vienna, the focus of revolution.” The Prætorian guards thus gave plain warning of their intentions. The Minister of War at Vienna had no objection to their end, but a deep objection to their plan of carrying it out. If the counter-revolution were to succeed, it must not take the form of a military reaction. A character of national feeling

not be given to it; hence Jellachich, in spite of his very meagre military qualifications, must be put at its head; and, instead of directing it against Vienna, Hungary must be made the first point of attack. This would have been all very well, could Jellachich have executed what was expected from him; but he was beaten on every occasion, and it then became necessary to recur to the earlier plan. Windischgrätz took the chief command of the army; bombarded Vienna, as in the month of July he had already bombarded Prague; rejected all overtures on the part of the Hungarians, imprisoned their envoys; and whilst he was recruiting and strengthening his forces for a campaign in their country, amused himself at Vienna, from the beginning of November until the middle of December, by holding courts-martial, and carrying their sentences of death into execution. At length he took the field, and, with great speed, hurried in three weeks from Vienna to Pesth; the Hungarian leaders retreated before his superior force, and after the battle of Mohr, which was disastrous to them, they were compelled to leave Pesth itself to his disposal, and to retire over the Theiss. Windischgrätz was now extolled in every Absolutist paper as the greatest of European generals. In an incredibly short time Hungary was to be brought under the yoke; and certainly at that date no one even dreamt that the Hungarians would recover themselves as they did, and so quickly drive the Austrians beyond their frontiers. When, however, this happened, in the month of April, the whole blame was thrown on Windischgrätz. It was especially laid on his charge that he had not marched on Debreczin in the month of January, and, above all, that he had not absolutely prohibited the circulation of the Hungarian bank-notes. He was superseded from his command. The newspapers, which just before had extolled him to the clouds, now trampled him in the dust; and the people, rendered bitterly indignant by his executions in Vienna, Presburg, and Pesth, exulted in the fall of the harsh and blood-stained despot. Not a voice was uplifted in his defence; no one pleaded for him or recollected that he had been compelled to allow the Austrian army time to repose in Pesth; it having been entirely worn out by forced marches from Vienna to Pesth, in the dead winter, and the desperate though unsuccessful resistance of the Hungarians at Senitz, Tyrnau, Parrendorf, Altenburg, Babolna, and Mohr. Windischgrätz underwent what any one else under the same circumstances must have undergone: he was beaten. Had Windischgrätz conquered, history might have called him a hero. As it is, he will most probably be remembered only as the man who destroyed some of the most flourishing cities of Germany, and who murdered Robert Blum, one of the best speakers at the Frankfort Parliament; to say nothing of a parcel of unhappy journalists, whose totally unpractical and confused ideas hardly deserved to be chastised with musket-balls. Since the success of the reaction has been guaranteed by the Czar, Windischgrätz has been invited to resume his former governorship of Bohemia; a post which he has hitherto had sagacity enough to

decline. With the exception of a few days' fighting in 1814, Windischgrätz's valour has all been expended upon his fellow-citizens.

WINTERHALTER, F., Painter, was born at Baden in 1808. He first visited England in 1842; since which he has been fortunate in obtaining the highest patronage in the land. His portrait group of the Queen, the Prince, and the royal children, won marked favour, and was in 1848 exhibited by special command to the public, in Buckingham Palace; a concession which ensured its inspection by admiring crowds. It has since been engraved by Cousins: the publisher, Mr. Moon, giving the painter 1000 guineas for copyright and the engraver for his work 8000 guineas—the largest sum ever paid an engraver. For Her Majesty, Winterhalter has subsequently executed many works: a portrait group of Wellington and Peel (1850), also engraved; various portraits of herself, of which one was presented to Sir Robert Peel; portraits of Prince Albert, of the young Prince Alfred, etc. In 1852, Mr. Winterhalter exhibited at the Royal Academy an important subject-piece, very carefully drawn, and executed with miniature-like finish,—“Florinda—Roderick the Goth sees Florinda for the first time, as she and her companions are about to bathe in the Tagus. This picture was purchased for the Royal Collection.

WISEMAN, CARDINAL, the chief of the Romish Church in England, is by birth a Spaniard and by descent an Irishman. He was born at Seville in 1802. At an early age he was brought to England, and placed in St. Cuthbert's Catholic College at Ushaw, near Durham. He was thence removed to the English College at Rome, where he was ordained a priest, and made a Doctor of Divinity. He was a Professor for a time in the Roman University; and was then made Rector of the English College at Ushaw. Dr. Wiseman came to England in 1835, and in the winter of that year delivered a series of lectures. He subsequently returned to Rome, and is understood to have been instrumental in inducing Pope Gregory XVI. to increase the Vicars-Apostolic in England. The number was doubled, and Dr. Wiseman came back as coadjutor to Dr. Walsh of the midland district. He was also appointed President of St. Mary's College, Oscott. In 1847 he again repaired to Rome on the affairs of the Catholics, and no doubt prepared the way for the subsequent change resolved on in 1848, which was delayed by the troubles which ensued at Rome. The Cardinal's second visit to Rome led to further preferment. He was made Pro-Vicar-Apostolic of the London district, in place of Dr. Griffiths, deceased. Subsequently he was appointed coadjutor to Dr. Walsh, translated to London *cum jure et successione*; and in 1849, on the death of Dr. Walsh, he became Vicar-Apostolic of the London district. In August he went again to Rome, “not expecting,” as he says, “to return,” but “delighted to be commissioned to come back,” clothed in new dignity. In a Consistory held on the 21st

September, Nicholas Wiseman was elected to the dignity of cardinal, by the title of Saint Pudencia, and was appointed Archbishop of Westminster. Under the Pope, he is the head of the Roman Catholic Church in England, and a Prince of the Church of Rome. As a Cardinal, he has sworn temporal as well as spiritual obedience to the Pope. Dr. Wiseman is the seventh English Cardinal—if he can be called English, having been born in Spain, and passed the greater part of his life in Rome—since the Reformation. The other six were Pole, Allen, Howard, York (a son of the first, who was never in England), Weld, and Acton.

WORONZOFF, PRINCE MICHAEL, is a Soldier who has risen to a princely estate and to positions of rare responsibility in the Russian empire by ability and faithful service. The elder house of Woronzoff, best known to Russian history, died out in 1576, and the present prince derives his descent from one of the younger branches. He was born at St. Petersburg, 17th of May, 1782, and is the son of Simon, Count Woronzoff. His father was appointed shortly afterwards ambassador at London, but resigned his post when the emperor Paul took part with Napoleon Bonaparte; still, however, residing in London as a private gentleman. Upon the accession of Alexander he again became ambassador here, and resided in England with but few and brief intervals of absence, until his death, in 1832. Owing to these circumstances his son received an English education, while his daughter, sister to the present prince, abandoned her nationality by marrying the late Earl of Pembroke, and thus became mother to the Right Hon. Sidney Herbert, M.P. Michael entered the Russian army at the age of nineteen, and served several years with distinction in the Caucasus. He returned, and took part in the campaigns against Napoleon from 1812 to 1814. He afterwards represented Russia at the Conference of Aix-la-Chapelle. In 1823, after having been left for a time apparently forgotten, he was appointed Governor of New Russia and Bessarabia, and exerted himself with great effect in the settlement of those provinces; then maintaining a smaller population and contributing in a much lower degree to the sustentation of Europe than at present. His administration was for a short time interrupted by the war with Turkey in 1828–29, when he was ordered to assume the command after Menschikoff had been wounded at Varna. He directed the storming of Varna, 7th October, 1828, with five Russian companies, who penetrated the works, but were unable to hold the position. Yussuf Pacha, either terrified or bribed, surrendered the place immediately after this assault. In 1845 General Neidhard, governor of the Russian Caucasus, was recalled, and Woronzoff was appointed Lieutenant of that important province. He held this command together with that of New Russia and Bessarabia, the first who had ever done so; and to mark the great confidence placed in him by the emperor, the commission which had been given as a council to former governors was dissolved, and Woronzoff was invested with absolute authority, depending only

WRIGHT, THOMAS, "the Manchester Prison Philanthropist," presents, in his useful career, an instance of self-denial and practical philanthropy which has rarely been recorded. He was born in humble life, and was forty-seven years a weekly servant in Ormerod & Son's iron-foundry, in Manchester. His wages, as foreman in charge of the departments, was 3*l.* 10*s.* weekly, 2*l.* of which he handed over to his wife for housekeeping; the rest he, for many years, employed in his good work of the reclamation of delinquents in prison. In the spare time he could snatch from his daily labour he spent in the prisoner's cell; sympathising with the lost position of the inmate, and by kind persuasion and earnest prayer exhorting him to amendment and restoration to society. When criminals had been left for execution, Wright made it his business, as frequently as possible, to visit them, and implore them to make their peace with their offended Creator; and the success of his endeavours was often marked by the testimonies which the good old man received from the objects of his philanthropy; each breathing a silent prayer that God would bless and reward their venerable benefactor in his declining years. "In numerous instances," says the chaplain of the Salford prison, "Wright has succeeded in reconciling husbands and wives, parents and children, masters and workmen. In a variety of cases he has assisted in enabling convicts of superior education to regain their caste in society by means of emigration; and in several instances damned criminals have sought to obtain his Christian sympathy and assistance at the foot of the gallows." His prison visits have not been confined to Lancashire, but have been extended to various other prisons, in Scotland, London, and the hulks. In 1852 a subscription was commenced in Manchester to relieve Wright from his daily toil, and thus enable him exclusively to follow up his work of moral reformation. The sum of 3240*l.* was thus raised, principally in Manchester and Liverpool; and this sum having been intended, the venerable philanthropist is in receipt of a competent income with which to carry on his genuine labour of love.

WROTTESELEY, JOHN, BARON, and M.A., a Peer of the United Kingdom, born in 1798, succeeded his father, the first Earl, in 1841; is distinguished for his attainments in astronomical science. In 1839 his lordship received the gold medal of the Royal Astronomical Society for his "Catalogue of the Right Ascensions of 1318 Stars." In 1853 he called the attention of the House of Lords to Lieutenant Maury's valuable scheme of meteorological observations and discoveries; and on Nov. 30, 1855, succeeded the Earl of Rosse as President of the Royal Society.

WYATT, MATTHEW DIGBY, the well-known practical Writer in Decorative Art, is the youngest son of Matthew Wyatt, the late local magistrate of Lambeth Street, and was born in 1820, at Lambeth, near Devizes, where he was educated. At the age of sixteen he entered the office of his brother, Thomas Henry Wyatt, Architect, and in the same year he gained a prize for an essay from

the Architectural Society. In 1844 he left England for the Continent, where, for upwards of two years, he studied the principal monuments of art and antiquity in France, Germany, and Italy. In 1846 Mr. Wyatt returned to England, bringing with him, as a result of his Continental visit, a carefully-finished series of studies of the geometrical mosaics of the middle ages, selected from the principal basilicas and churches of Italy and Sicily; and next, he read to the Institute of British Architects and other societies some papers illustrative of the history of mosaic work and its employment in decoration. In 1848 he arranged and decorated the Adelphi Theatre. In 1849 he made to the Society of Arts a very able Report on the Exposition of Industry at Paris, with the history of previous French Industrial Expositions. In the same year he acted as Secretary to the members of the Society of Arts who had set on foot the project of the Great Exhibition, when he visited the principal manufactures in the kingdom; and his appointment was confirmed by the Royal Commission of 1850. In conjunction with Mr. Owen Jones and Mr. Wild, Mr. Wyatt greatly assisted in the constructional and other details of the Great Exhibition building in Hyde Park; and afterwards published "The Industrial Arts of the Nineteenth Century;" a series of 160 folio plates, elaborately printed in colours and gold, of the choicest specimens in the Exhibition. This was followed by "Geometrical Mosaics of the Middle Ages;" 11 plates in colours and gold, from drawings made by him in Italy and Sicily. Then followed "Metal-Work and its Artistic Design;" fifty coloured plates. Since then he has superintended the Fine Arts Department and decorations of the Crystal Palace at Sydenham, and has published the first series of "Views of the Crystal Palace and Park at Sydenham," besides the Guides to the Egyptian, Mediæval, Renaissance, and Italian Courts. Upon these periods, and upon the combination of art with manufactures, Mr. Wyatt is an able and experienced writer and illustrator. At the Paris Exhibition of 1855 Mr. Wyatt was one of the Jurors for Furniture and Decoration (his colleague being the Duke of Hamilton); he was then created a Knight of the Legion of Honour for the services rendered to manufactures and to the arts, and in the establishment of schools for industrial drawing.

YARRELL, WILLIAM, Naturalist, was born in Duke Street, St. James, London, in June 1784. He is the author of some very attractive works on Natural History, in which he displays a power of observation rarely equalled in this department of knowledge. His works, "The History of British Fishes" and "The History of British Birds" are models of writing, typography, and illustration. Mr. Yarrell is Treasurer to the Linnean Society of London, of which he became a Fellow in 1825, and has been an active member of the Zoological Society from its origin.

ADDENDA.

BARTH, DR. HEINRICH, the African Traveller, was born at Hamburg on the 19th May, 1821. He received his first education in his native town, and subsequently visited the University of Berlin. His favourite pursuits were Roman and Greek history and antiquity, not considered in an abstract and dry sense, but in their bearing, influence, and connexion on the development and present state of nations. He also made the geographical sciences the object of his earnest investigation. By these studies he was led on to the determination of visiting the cradle of classic antiquity, and exploring the entire shores and littoral countries of the Mediterranean. Having previously visited Italy and Sicily, he carried out his more extensive plan of a Mediterranean journey in the years 1845, 46, and 47, when he started at Marseilles, following the French and Spanish shores to Gibraltar; passing over to Tangier in Africa; and proceeding along the Algerian coasts, with excursions into the interior, to Tunis, Tripoli, and Benghazi. On his proceeding thence to Cairo, he was attacked by a band of Arab robbers, whom he most courageously resisted, and thus lost his life, although at the expense of a severe wound and the loss of all his effects and papers. Nevertheless he continued his marches, and from Cairo explored Egypt, Sinai, Palestine, Asia Minor, and Greece, until he had made the circuit of the Mediterranean. Part of the results of these travels, made entirely at his own expense, were published in 1849, under the title "*Wanderungen durch die Küstenländer des Mittelsmeeres*;" and he was immediately employed in the preparation of a second volume when an invitation reached Berlin from Mr. Augustus Petermann for a scientific companion to Mr. James Richardson, then charged by the Foreign Office with a political and commercial mission to Central Africa. The family of Dr. Barth were against his embarking on a new undertaking, still more dangerous than the one in which he had so recently escaped from death, and thus Dr. Overweg was deterred. Meanwhile the desire to accompany the mission grew so strong in Dr. Barth, that he hastened to Hamburg to persuade his relations to grant him permission so to do. This he obtained, and he accompanied Mr. Richardson in addition to Dr. Overweg, who had been already engaged. The scientific world and the whole public has been kept well informed by Mr. A. Petermann of the progress and results of that mission, in which Dr. Barth occupies a prominent part. Suffice it to say, that he left Marseilles on the

8th of Dec., 1849, for Africa, and safely returned to the same port on the 8th Sept. 1855, after nearly six years' absence, having been already believed dead. Barth's travels rank among the most remarkable feats of modern enterprise, as is shown by a mere comparison of the extent of his routes with that of other celebrated African travellers. Thus the routes of

	Geog. Miles
Bruce's travels, 1769-1772, amount to about ..	2500
Mungo Park's travels, 1795, 96, 97	1500
Galton's travels in the Ovaheiro country ..	1200
Livingston's travels from Koloberg to Loanda, 1849-1854	2000
Barth's travels, 1849-1855, <i>at least</i>	12000

Few travels or expeditions can, indeed, be at all compared with those of Dr. Barth. What Cook has done for marine discovery and Humboldt for our knowledge of the New World, Barth has accomplished for the discovery of Africa. And not only has he explored a large portion of this continent, but by his endeavours and success has created a new interest on its behalf, and has stimulated fresh and more vigorous exertions for its entire exploration and regeneration.

CODRINGTON, GENERAL SIR WILLIAM JOHN, K.C.B. Commander-in-chief of the English army in the Crimea, was born in the year 1805, and is the eldest surviving son of Admiral Edward Codrington, who won the battle of Navarino. Sir William entered the Coldstream Guards in 1821, and rose through the different regimental steps to the rank of Captain and Lieutenant-Colonel. He received the brevet rank of Colonel in 1846, and became a Major-General in the brevet of June 20th, 1854. He was known in his regiment as a very steady officer, fond of his profession and courteous to those around him. His promotion to the rank of Major-General in 1854 left him unemployed just at the commencement of the war, and he went out to Turkey as an amateur. Shortly before the sailing of the expedition to the Crimea, Lord de B. who held the office of Quartermaster-General to the army, was compelled to return home by ill health, and Brigadier-General Airey was appointed to succeed him. This left the command of a brigade to be filled up by Lord Raglan. General Codrington was at hand, his qualities were known, and within a few hours of the departure of the expedition from Varna he was placed at the head of the 1st Brigade of the Light Division, then composed of the 7th, 23d, and 83d Regiments. At the Alma, which was the first engagement at which he was present, General Codrington and his brigade played a distinguished part; and at Inkermann he rendered good service to his country. While he was visiting the outlying pickets of his brigade at five in the morning of the 5th of November, 1854, an officer on duty remarked to him that it would not be surprising if the Russians availed themselves of the mist of the morning to attack our post.

; calculating on the effects of the rain in disarming vigilance spoiling weapons. General Codrington turned his pony round, retraced his steps through the brushwood towards his lines. Had only proceeded a few paces when a sharp rattle of musketry heard down the hill, and on the left of the pickets of the Light Division, where the pickets of the Second Division were stationed. General Codrington at once wheeled his horse's head in the direction of the firing, and in a few moments galloped back to turn out division. The Russians were advancing in force. In the severe action which ensued his gallantry was more than once noticed by Lord Raglan; and when Sir George Brown was obliged to leave for Malta, in consequence of a wound received that day, he was selected to command the Light Division. During the long and dreary winter General Codrington never left his post for a day. He was always to be found ministering to the wants of his men, and sustaining his courage under the most dreadful discouragements. When the new campaign commenced with the spring, General Codrington again became a leading actor in the scene. He superintended the arrangements by which General Shirley so gallantly won the Quarries on the 7th of June; and when the final assault was made on the 8th of September, the Commander-in-chief's opinion was evinced by his selection of him to conduct the attack on the Redan. His general conduct on that occasion elicited some severe opinions, but those most competent to judge approved of his conduct; and on the resignation of General Simpson he was appointed to command our troops in Crimea. Whatever his capacity for military affairs may be, General W. Codrington is undoubtedly a very industrious and painstaking officer, and a favourite with the army.

ELLENBOROUGH, THE RIGHT HON. EDWARD LAW, ESQ., son of a Lord Chief Justice of the King's Bench, grandson of a Bishop of Carlisle, was born on the 8th of September, 1794, and educated at Eton. Having been a member of the House of Commons, he, in 1818, succeeded his father as a peer of the realm; and being imbued with the doctrines of Toryism as then understood, he was entrusted with the Privy Seal of the Ministry of the Duke of Wellington. During the first short-lived Peel Administration, Lord Ellenborough figured as President of the Board of Control, and First Commissioner for Affairs of India; and he again appeared in that position after the Conservative triumph of 1841. The new Ministry, soon after formation, recalled Lord Auckland from the Government of India. Lord Ellenborough had twice acted with reputation as President of the Board of Control; he was considered to possess the confidence of the East India Directors; he had long been connected in public life with the members of the Peel Cabinet; and moreover, enjoyed the advantage of a close intimacy with the Duke of Wellington. These circumstances, with his long experience of public affairs, indicated Lord Ellenborough as the man to fill the vacant post; and having been nominated Governor-General

of India, he arrived in Calcutta at February, 1842. It soon appeared that, notwithstanding his talent and knowledge, Lord Ellenborough was not quite the man for India. He was, indeed, in 1843 voted the thanks of both Houses of Parliament for "the ability and judgment" with which he had supported the military operations in Affghanistan; and his heartiness, good-will, and diligence in the public service were generally admitted. Moreover, he justified his term of vice-royalty by the conquest of Scinde and the reduction of Gwalior. But a cry was raised that his connections were leading him astray. He was charged too with fraternising with the military in such a manner as to disgust the civil members of the Government; of endangering the discipline of the army which he had endeavoured to conciliate by means the less prudent and justifiable; of making showy progresses calculated to excite ridicule; of addressing to the rulers and nations of India proclamations which appeared to sanction idolatry; and of using bombastic language about the celebrated sandal-wood gates of the Temple of Juggernaut when brought back from Ghuznee. The matter was discussed in Parliament; the Duke of Wellington could only defend the affair of the gates of Somnauth by taking Lord Ellenborough's proclamation out of the category of works, subject to European criticism, and designating it as "a song of triumph." The potentates of Leadenhall Street at length arrived at the resolution of exercising their privilege, and, in spite of the remonstrance of Ministers, recalled Lord Ellenborough in April, 1844. On his return he was advanced, in October 1844, to the rank of Earl, and created a Knight Grand Cross of the Bath; and in 1846 he fulfilled the functions of First Lord of the Admiralty, from the date of Lord Derby's withdrawal from the Cabinet to that of Sir R. Peel's expulsion from power. Lord Ellenborough has not, since the catastrophe of the Peel ministry, been in office; but he has taken a conspicuous lead in the debates of the House of Lords, and when, in the spring of 1855, Lord Derby's advent to power was anticipated, Lord Ellenborough was mentioned as the man best qualified to administer the War Department with honour to himself and advantage to the country. Some time after the Coalition Cabinet had been purged of its Muscovite members, Lord Ellenborough submitted to the assembly of which he has been so bright an ornament resolutions to the effect, that the conduct of the war with Russia had occasioned general dissatisfaction, and had led to just complaints, and that it was only through the selection of men for public employment without regard to any other but the public service that the country could hope to prosecute the war successfully and to attain its only legitimate object — a secure and honourable peace. It was on this occasion (the 14th of May, 1855) that so many members of the female aristocracy appeared in the gallery as to elicit from Lord Redcliffe the remark, that the House looked more like a casino than a deliberative assembly. "Never," said the "Times" next day, "was the House of Lords more crowded, never did a more brilliant audience witness

galleries or besiege the bar, never was public curiosity more excited; yet, in spite of all these announcements, of all these assurances, and of the tiptoe avidity of the public, we are constrained to add that the debate in no degree realised these expectations, and the large majority which negatived Lord Ellenborough's motions expressed the opinion of all who listened impartially to the debate. The most brilliant audience in Britain was, indeed, for above an hour suspended between platitudes which no one could contest, and paradoxes which no one could believe; and we suspect that most of those present retired with the melancholy conviction that, although the country may be sorely in want of a powerful War Minister, that heaven-born statesman had not found in the accomplished orator who had commenced the discussion." Lord Ellenborough is, however, a wonderful speaker; in fact, one of the most accomplished orators of the present day. In the House of Lords he is listened to with an interest and attention rarely bestowed, except on those parliamentary personages who, in both Houses of Parliament, have led and ruled their contemporaries by the might of eloquence, and vindicated their claim to pre-eminence in countless intellectual contests.

KINGLAKE, ALEXANDER WILLIAM, Barrister, and author of "Eöthen," the freshest and most remarkable book of travels that has for many years issued from the press, and which, for the vividness of its pictures of Eastern life and manners, deserves to be ranked with "Vathek," and "Anastasius," is the eldest son of William Kinglake, Esq., formerly a solicitor at Taunton, where he was born in 1802. His education commenced in Taunton and at Ottery Mary, was completed at Eton and Trinity College, Cambridge. Having taken his degrees, and chosen the law as his profession, he entered as a student in Lincoln's Inn. Intending to devote himself to Equity practice, he became a pupil of Sir Richard Bethell, and was called to the bar in 1837. He joined the Western Circuit, which he attended for two or three years, until increasing business in the Court of Chancery made it necessary to confine his practice entirely to London. Soon after he was called to the bar, Mr. Kinglake undertook an extensive tour in the East, of which, during his wanderings, he wrote to his friends a series of graphic letters descriptive of his adventures and impressions. On his return he was prevailed upon to revise these communications for the press, a task which he somewhat reluctantly undertook; but on its completion, the manuscript was offered to some of the principal publishers and declined, although nothing was asked for but a share of the profits should any result. Discouraged by the success of these applications, Mr. Kinglake threw his manuscript aside, and allowed it to remain unheeded for several years. A casual circumstance having attracted him to the shop of Mr. Oliver, in Pall Mall, a small volume of travels which that publisher had recently issued became the subject of conversation, in the course of which Mr. Kinglake mentioned his own manuscript

and the way in which it had been received by the publishers to whom it was submitted, and offered to *give* it to Mr. Ollivier if he would accept and print it. Almost immediately on its appearance its merits were recognised by the reviewers, and it passed rapidly through many editions in England, was speedily translated into almost every European language, and was reprinted by hundreds of thousands in America—everywhere achieving the greatest popularity, and forming, in fact, the model on which many subsequent books of travels have been written. Notwithstanding the brilliant success of his first volume, Mr. Kinglake has confined his attention to legal and political pursuits, his only other contribution to literature, of which we are aware, being an article in the “Quarterly Review,” on the political uses and prospects of the Mediterranean, entitled “The French Lake.” To Mr. Kinglake’s cousin, Mr. Serjeant Kinglake, the Recorder of Exeter, the authorship of “Eöthen” is frequently erroneously ascribed.

WOMEN OF THE TIME.

A.

ABDY, MRS. MIRA, a Writer advantageously known to the general readers of periodical literature, is a native of the metropolis. Her girlhood, passed among intellectual friends in the neighbourhood of Russell Square, offered many opportunities for the cultivation of her mind. Of these she availed herself to the utmost; securing those peculiar advantages of a social town-ship which are the best compensations it can offer for the absence of the pure country pleasures that would almost seem to be the inalienable right of childhood. Her gift of song is probably a family endowment, inherited through her mother, whose father, Horace and James Smith, authors of the "Rejected Addresses," exercised no small influence over the early years of their daughter's life; less, perhaps, from any direct encouragement bestowed than by her quick intelligence than by the atmosphere of wit and gaiety which they diffused throughout the family circle. "My recollections," writes Mrs. Abdy, "are identified with my earliest recollections for the good-humoured pleasantry and vivacity which delighted my childish fancy, long ere I was able to estimate fully the wit and gaiety by which they charmed." That the love of poetry was inherent in her nature can hardly be doubted, since she confesses to the sin of rhyming as early as her ninth year. The period of poetical reveries, however, passed away; they gave place to the more active duties of practical life. At an early age she became the wife of the Rev. John Manning Abdy, the second rector of that name who had held the living of the extensive parish of St. John, Southwark. Ever alive to the multifarious duties devolving on the wife of a hard-working, conscientious clergyman, Mrs. Abdy yet found leisure for the cultivation of her talents, and, encouraged by her husband, made her first appearance in print soon after their marriage. Her earliest contributions, both in prose and verse, appeared in the pages of the "New Monthly Magazine," under the initials "M. A." She frequently connected herself, under her own name, with the "Metropolitan," also edited by Campbell the poet, and continued to write for it constantly whilst under his superintendence. In the palmy days of the Annuals, Mrs. Abdy was a frequent and

popular contributor to their pages. As a prose writer she has always exhibited much of that peculiar vein of talent which is displayed in the writings of Miss Austin, and it is to be regretted that it should, in her case, have been confined within the narrow limits of short tales and sketches. Her verses, often bearing reference to events and questions of the day, evince a warm and lively interest in the progress of society and the amelioration of its many evils. "An Appeal on Behalf of Governesses," which constitutes her longest poem, was considered deserving of the first prize offered for literary productions on that subject. Mrs. Abdy's poetical writings, widely scattered abroad during the last quarter of a century, have been collected by their authoress in five small volumes, intended for popular circulation. They present strong evidence of that refinement of taste, combined with a warm Christian spirit, which is ever the endowment of a female mind. This lady, early left a widow, fulfilled ably and judiciously the sole guardianship of an only son who promises to uphold, in the third generation of his family, the reputation won by his forefathers, as able and earnest clergymen of the English Church.

ALBONI, SIGNORA MARIETTA, the most popular Contralto Singer that has aided the performance of Italian Opera in London within the memory of the present generation, was born at Città Castello, in Romagna, on the 10th of March, 1826. The spring of 1851, which heralded the first appearance of Jenny Lind before an English audience, witnessed the début of this magnificent young vocalist at the rival Opera House, in the part of Arsace in "Semiramide." Owing to the circumstance that her fame, imperfectly matured, had not spread to any great extent in this country, her auditors were taken by surprise on discovering in the *débutante* a finished musician, who had evidently graduated in the best schools of musical instruction, and who was, moreover, endowed with a superb contralto voice, embracing a compass of two octaves and a half (from E below C sharp), and free from those imperfections which ordinarily impair the executive power of low female voices. In addition to these charms her dramatic powers were good, and her expressions natural and true; the musical world had not a fault to find with her, but it were a degree of *embonpoint* which rather detracted from her otherwise graceful appearance. But in spite of this slight drawback, Signora Alboni suddenly found herself famous, and continued to sustain in other operas the reputation achieved on her first night. Her representation of the young Cavalier De Gondi in Donizetti's "Marta Rohan" was charming, fresh, *débonnaire*, and full of spirit. The same may be said of her acting as Orsino in "Lucrezia Borgia," which she created a furor of enthusiasm by the *Brindisi*, sung with a heartiness and gaiety which gave a striking originality to her rendering. As Pippo, in "La Gazza Ladra," she was pronounced unrivalled; and in the character of Malcolm, in "La Donna del Lago," was thought to have been unsurpassed since the days of Pisaroni. At the close of 1847 she made her first appearance at

Opéra Italien at Paris, selecting, once more, the part of Arsace, which she sang, as before, in conjunction with Grisi. No sooner Alboni uttered the first notes of the recitative, "Eccomi alfin in Polonia," than the house resounded with applause. Her success lasted to the end of the season, reaching its culminating point in "La Cenerentola." Her performance in this opera was the chief one worthy of record during her second visit to London in 1848. Her third and latest season which she spent here was that of 1849, in which she succeeded Jenny Lind as prima donna of Her Majesty's Theatre; emancipating herself from the limits which nature had pointed out as most suitable for the display of her powers, and consequently impairing, in some measure, their effect. Her performance of the music belonging to the parts of Rosina, Ninetta, Zerlina, and Lucia, in "Don Pasquale," must be acknowledged to have risen frequently to excellence; but the public did not cease to regret that she could not have quitted the ground on which she stood alone to enter a sphere which exacted some sacrifice of the beauty and evenness of her voice, and in which she provoked comparison with those artistes who claimed it as their realm. During the seasons of 1850-51 Mlle. Alboni appeared in Paris, adding to her *répertoire* the part of Fides, which she is reported to have sung charmingly, although failing in dramatic energy which is an essential requisite of the character. She likewise sustained the prominent part in "La Corbeille d'anges," an opera written expressly for her by M. Auber. In 1852, after singing at Madrid and elsewhere, she followed the example of her contemporaries, and visited the United States, eliciting much and deal of quaintly-expressed enthusiasm on her tour. Shortly after her return, in 1853, rumour conveyed to us from Italy the news of Mlle. Alboni's retirement from the stage, consequent on her marriage with Count Pepoli, an Italian nobleman. We had had sufficient instances, however, of recantation in such cases to warrant a hope that the great "contralto" might some day present herself once more, to revive the reputation of her youth. This expectation has been fulfilled by her reappearance in England during the season 1855.

ARNAUD, MADEMOISELLE H., a French Authoress, who is exclusively known in this country by her adopted signature of "Madame Charles Reybaud," has produced many very charming works, distinguished by a pure and delicate tone of sentiment, as well as by high intellectual ability. "Les Anciens Convents de France," one of her later works, has been translated and widely circulated in England; those who have met with it can scarcely fail to appreciate the melancholy charm of these life-histories, so simply introduced to their close within the old convent walls. The dreary, monotonous atmosphere of such a refuge, is here created with a truth and effect that actually oppresses the reader with its influence. Nor is the writer's descriptive powers less successful in summoning before us the relics of that graceful aristocracy whose glory was destroyed by the first French Revolution; shrouding their pride and

their poverty within the narrow circle of the family domain. M^{rs}. Arnaud is equally happy in her picture of life and nature in tropical countries, presented in "Mlle. de Chazeuil," and other of her works. Indeed, there are few which do not afford some individual excellence. For the advantage of those who desire to extend their acquaintance with this lady's writings, it may be well to mention, "Les Deux Rieux," "Marie d'Enambuc," "Les Deux Marguerites," "Gabrielle," "Mézelie," and "Le Dernier Oblat," as especially worthy of attention. She has likewise published the "Château de St. Germain," "Les Aventures d'un Renégat," "Doña Mariana," "Fascination," "Léna," "Lucie," "Misé Brun," "Pierre," "Romans de Court," "Sans Dot," "Espagnoles et Françaises," "Valdepeiras," and other shorter tales and sketches in the Paris *feuilletons*.

B.

BARTHOLOMEW, MRS. ANNIE E., known both as artist and author, was born at Soddon, in Norfolk, during the early part of the present century. She was the daughter of Arnall Fayerman Esq., but was adopted in infancy by her grandfather, the Vicar of East Dereham, the brother of the late Dr. John Thomas, bishop of Rochester and dean of Westminster. Having early displayed a marked taste for art, she adopted the profession of a miniature painter; but subsequently enlarging the sphere of her artistic labours, has become known to the public by fruit pieces and rural figures, in addition to her carefully finished miniatures. In 1825 Miss Fayermann married Mr. Walter Turnbull, the composer of "Deck not with Gems," and other popular songs. In 1828 she became a widow, and some few years later was united to her present husband, Mr. Valentine Bartholomew, the celebrated landscape painter. A short time before her second marriage this lady published a volume of poems, called "The Songs of Azrael." She is likewise the authoress of a play, which was brought out about 1830, under the title of "The Ring, or the Farmer's Daughter;" and also of a farce, called "It's only my Aunt," which was produced at the Marylebone Theatre in 1849, and played there with great success, as well as in the provinces and in America.

BELGIOJOSO, THE PRINCESS CHRISTINE. The history of this lady, a native of Lombardy, affords an instance of female heroism and the strange fluctuations of fortune, such as would have merited a prominent place in the annals of a far more romantic age than the one in which we live. Endowed with high rank, large possessions, and no common share, it is said, of wit and beauty, the Princess Belgiojoso was, during the earlier portion of her life, the object of universal homage and admiration. A leader of fashion, and

stinguished patroness of literature and art, authors, artists, and musicians vied with each other in laying the productions of their arts at her feet, and borrowed from her name honour and éclat. When the scene changed, and the lady emerged from a *lionne* into a heroine. Deeply sensible of the wrongs of her country, and sympathising heartily in the efforts of her countrymen to free themselves from the yoke of their oppressors, she raised a troop of two hundred horse at her own expense, and at the time when Italy was subdued by revolution led them herself against the Austrians. She is reported on this occasion to have displayed a skill and bravery which would have done honour to an experienced soldier. Her act of patriotism, however, for a time proved fatal to the worldly fortunes of the princess, as her property was sequestered by Austria and she herself banished from its dominions. At this juncture she sought an asylum at a farm in Asia Minor, and being utterly destitute, was compelled to labour with her hands for the supply of each day's necessities. This occurred some six years ago. Since then she has devoted her attention to literature, and has contributed successfully to some of the leading journals of Paris and New York. The Sultan of Turkey subsequently granted some tracts of land on the Gulf of Nicomedia for the use of this remarkable woman, and the Italian emigrants attached to her fortunes; and finally, by an edict of grace, the court of Austria annulled its former sentence of banishment and sequestration, leaving her free to revisit her country and to resume the rank from which she had been deposed by her own patriotic zeal and heroism.

BELLOC, MADAME LOUISE, wife of the Director of the French Imperial School of Design, is known for her literary labours and great zeal in promoting the cause of female education in France. With her name must be associated that of Mdlle. Montgolfier, the daughter of the famous aeronaut, who has proved an unwearied partner in her schemes and exertions. After the revolution of the late days Madame Belloc was appointed by the Government of France to assist Lafayette in establishing public libraries; but as this plan encountered various obstacles, and was finally abandoned, she organised, in concert with her friend, a select circulating library, designed to supplant in some measure those reading-rooms which introduced the most dangerous works to the public. The two ladies also combined in editing a monthly journal for the use of families; in the preparation of books, chiefly intended for the young, some of which received the honours of the Académie; and in the task of translating many English and American works into their native language. Madame Belloc and her husband reside in the neighbourhood of Versailles.

BLACKWELL, MISS ELIZABETH, affords the first instance on record, in modern times, of a woman pursuing one of the learned professions with sufficient earnestness to level the countless barriers which defend its dignities from her grasp, and at the same

time to reflect back by her acquirements that honour which she derives from her calling. The renown of "the lady physician" is not confined to America, the land in which the great project of her life was nursed and matured; it has travelled across the Atlantic, and has been discussed amongst us, with admiration often, with sneering contempt sometimes, and with stern disapproval, it may be, now and then. But even those who would desire that women should remain stationary whilst all around them is progressing in light and knowledge, must yield their respect to the marvellous energy displayed by this pioneer of her sex. A closer acquaintance with her sound and reasonable motives might even carry them further, and gain their sympathy for her purpose. It is not generally known that the subject of this notice is an Englishwoman by birth, having first seen the light at Bristol about the year 1821. Her father emigrated to New York whilst his family of nine children were still young; but misfortunes in business overtook him, and at his death the widow and orphans found themselves in somewhat embarrassed circumstances. Elizabeth was at this time seventeen years old, and the succeeding seven years of her life were devoted to instruction in a school which was established by herself and her two elder sisters. The fruits of their combined exertions sufficed to support and educate the other members of the family, to purchase a comfortable homestead, and to smooth away pecuniary difficulties. It was not until 1843 that Miss Blackwell, after much consideration, finally resolved to undertake the study of medicine. She was influenced in this determination, not by a personal taste for and curiosity about its mysteries, for that she entirely disclaims, but first by a desire to open a new field for the exercise of feminine talent and energy hitherto restricted within limits wholly inadequate to their requirements; and secondly by a conviction that she herself and others after her might minister far more tenderly and suitably than men to the necessities of their own sex during periods of illness and suffering. The first step on her self-appointed course was the acquisition of Greek and Latin; for two years she devoted her leisure hours to this object, and then felt that the time had arrived when she must put her hand to the plough and make study the business as well as the pleasure of her life. But although the will was not wanting, the means seemed very difficult of attainment. Fifty medical men, and at least a dozen schools, denied her the advantages she sought; but her firm conviction "that she had a place in the world which she should find sooner or later," was destined to be realised, and her path, although not smooth, was at least practicable. In 1845 she went to North Carolina, where she read medicine under the direction, successively, of two gentlemen distinguished alike by their professional abilities and their superiority to the narrow prejudices of society. When dismissed by them, she gladly availed herself of the advantage offered by Dr. Allen, of Philadelphia, of admission to his private anatomical rooms; for although she shrank with the natural sensitiveness of a woman from these painful details of her career, she

preciated its responsibilities too well to neglect any part of the literary duties it involved. During the time thus occupied Miss Blackwell continued to give lessons in music and languages, defraying in this way the whole expense of her education, amounting to £1000. It happened, fortunately, that she encountered amongst the institutions of America that small element of liberality which befriended her with individuals; and during one summer she resided at the Blockley Hospital, Philadelphia, where she was much encouraged by the kindness of the Principal, and profited by the number and variety of the cases brought under her observation. She was also permitted to attend the requisite lectures at Geneva College, New York; and here she graduated in 1849, receiving with her diploma the heterogeneous designation of "Miss Dr. Blackwell." It is worthy of remark that her thesis on the subject of ship fever was deemed worthy of publication by the faculty. At this point, where most men would have rested from their labours, she started afresh, and sought in England a varied field for observation. She experienced a warm reception from many distinguished fellow-workers, and was welcomed at the various schools and hospitals with unwonted honours. This was, however, by no means the case in Edinburgh, nor to the same extent in Paris, although she resided for some time as a pupil at the excellent Hôpital Maternité, in the Rue du Port Royal, where she concentrated her attention on the diseases of women and children. It was suggested that her attendance at classes might be facilitated if she would adopt masculine attire,—a proceeding to which the French were habituated by the example of more than one distinguished individual; but this suggestion was indignantly rejected by Miss Blackwell, whose varied experiences could never tarnish that feminine delicacy which has distinguished and ever will distinguish her. Before we bid adieu to this fine-spirited and adventurous woman, it may not be *mal-à-propos* to mention that her name has received additional lustre from the literary talents of her sister Anna Blackwell, an authoress of considerable promise, whose works have been republished in England; and that another sister, Emily, has since studied medicine, and obtained a diploma.

BONHEUR, MADEMOISELLE ROSA, an Artist unrivalled amongst her own sex for the minute and spirited delineation of the various forms of animal life, was born at Bordeaux in the year 1822. The daughter of a French artist of some distinction, she is likewise the youngest of a family of children which has afforded several contributors to the stores of contemporary art, although their fame has been somewhat obscured by the superior brilliancy of her own achievements. Enthusiastically devoted from her earliest years to those pursuits which have constituted the chief object of her life, Mdlle. Bonheur has evinced her determination to profit to the utmost by the instructions of her father, who has been her sole adviser in the mechanism of painting, and at the same time proved her desire to gain from a steady contemplation of nature that intimate know-

ledge of its laws, which, to genius like hers, is the best aid and inspiration. As the avocations of her family necessitated a residence in Paris, the indulgence of her own particular tastes in the choice of subjects for study was somewhat difficult of attainment, and it is a matter of surprise, no less than of congratulation, that the influence of external circumstances did not lead her to swerve from that path of her profession to which a natural instinct alone pointed. It was no unaccustomed thing, we learn of Rosa Bonheur, when scarcely past the age of childhood, to start early in the morning for the environs of Paris with her drawing-box on her back, and to return only at night-fall after a long day of hard work and earnest study of rustic scenes and objects. At other times the pencil would be replaced by a large piece of modelling-clay, and with no rules for her guidance beyond those suggested by her own intelligent mind, she would execute animals in relief with a fidelity which gave evidence of such plastic talent as would have conducted her to excellence in sculpture had not her ambition sought other laurels. After a time these rural expeditions were diversified by others less agreeable; to the *abattoirs*, or public slaughter-houses of the capital, which offered models too valuable to be neglected in spite of feminine taste or timidity. It is said to have been in such a scene that the young artist received her first practical encouragement, in the form of a commission for a design to be carried at the head of the procession of the "Bœuf Gras." At the early age of seventeen she entered fairly upon her career, by the exhibition of two pictures, "Chèvres et Moutons" and "Deux Lapins," which went far towards determining her reputation. From that time a succession of admirable and highly finished compositions have continued to issue from her hand, amongst which may be cited the celebrated "Labourage Nivernais," which was completed in 1849, and has been subsequently added to the pictorial attractions of the Luxembourg. It is acknowledged to be a perfect representation of the scene, as well as a marvellous example of artistic finish; each trifling accessory, like the blue plants crushed beneath the team, being as carefully considered and portrayed as the more prominent features of the *payans* and the oxen. The degree of excellence here attained had, it is needless to say, been the result of continued study, in which Mdlle. Bonheur has exhibited of late years no less energy and enterprise than in the days of her childhood. Up to the present time she assiduously frequents the Horse-Market, adopting the masculine garb, which is not ill-suited to the decided character of her face, for the purpose of avoiding remark and enjoying greater freedom for observation. The dealers, with whom she is thus frequently brought in contact, imagine her to be a youth ambitious of a knowledge of horses: an idea which is confirmed when, as is often the case, she exchanges the rôle of spectator for that of purchaser, and mounting the object of her admiration conducts it in person to its destination: an ante-chamber divided only by a partition from her studio, and fitted up as a stable for the convenience of the various animals

vestigated therein. She has recently established a small fold in its immediate vicinity for the accommodation of sheep and cows, and it has been suggested that, in due time, a choice selection of horses and oxen will probably be added to her existing stock of cattle. It is undoubtedly owing in a measure to this conscientious examination of the developments of animal life, that we find such masterpieces of representation as "The Horse Fair," a picture which formed the great attraction of the French Exhibition in London during the season of 1855, and which almost monopolized for a time the attention of artists and connoisseurs. Disinclined to avail herself of the increased facility for imitation which is presented by her subjects in the quieter phases of their existence, Mrs. Bray has evinced in her works generally, and particularly in the one above alluded to, a wonderful power of representing animated action, which characteristically distinguishes her from other eminent cattle-painters of the day, and which endows her pictures as compositions with an inexhaustible interest. Several of this lady's productions are now in process of engraving for the benefit of the English public, whose appreciation of her extraordinary gifts is not inferior to that with which she is regarded in France; a short visit paid by her to this country during the height of her professional popularity afforded an opportunity for some expression of the general feeling, which was not neglected by the representatives of the artistic world.

MRS. ANNA ELIZA BRAY, the authoress of many works distinguished by great literary merit as well as by a degree of antiquarian knowledge rarely found amongst her sex, is the daughter of John Kempe, Esq., a gentleman of ancient family and moderate private fortune. Her early life was spent in Surrey at a short distance from London, and her youthful pleasures and occupations were shared by an only brother, who subsequently became known to the public by his literary and antiquarian writings. Miss Kempe gave early evidence of the possession of unusual abilities, which evinced themselves, before they found their appointed channel, in an ardent love of study and a remarkable success in all that she was induced to undertake. Her talent for dramatic representation was so developed that Downton the actor promised her no small meed of fame and fortune should any adverse fate lead her to turn her attention to the stage. A thorough proficient in all feminine accomplishments, and of the fine arts a really earnest and devoted student, her taste was the means of introducing her to the acquaintance of the late Mr. Stothard the painter, who directed her artistic studies, and to whose accomplished son, Charles Stothard, she was married in 1818. This union was marked by the most perfect congeniality of feeling and interests, the acquirements of the young wife enabling her to be indeed a helpmate to her husband. Soon after their marriage she accompanied him to France, where he completed a series of drawings of the Bayeux Tapestry for the Antiquarian Society, to which he was Historical Draughtsman; and

she afterwards shared his further researches throughout Normandy and Brittany. A series of letters addressed by Mrs. Stothard to her mother during this journey were published on her return with numerous illustrations from the pencils of her husband and herself. In 1820 they made a second tour through the picturesque old towns of Flanders, but even there their brief space of happiness was drawing rapidly to a close. In the same year Mr. Stothard was engaged in executing a drawing from part of a church in Devonshire for his valuable work, "The Monumental Effigies of Great Britain;" when the ladder on which he was standing broke beneath him, and by this fatal accident his family were deprived of an admirable son and husband, and archæological art of an invaluable contributor to its treasures. When he was thus unhappily cut off, the great work which had been received with admiration and gratitude by artists of every class was still incomplete, and his widow, being well acquainted with his plans concerning it, determined to check the indulgence of her grief, and, by completing this monument of his genius, to pay the purest tribute to his memory. The task of arranging papers, selecting subjects from drawings, directing engravers, and superintending the colouring of the prints, on which the beauty of the work depended, was no slight one for a woman: but by the help of her brother, Mr. Kempe, who finished the letter-press, the work was worthily completed. Meanwhile Mrs. Stothard had commenced and finished the "Memoirs" of her late husband, published in 1823, which received high commendation from no less eminent authorities than Southey, Beckford, and Sir Walter Scott. The period of these labours was marked by many afflictions; the death of her infant child; of her father; and the threatened loss of sight consequent on excessive distress of mind, combined with severe application. This last was happily averted, but it was not until two years after she had become resident in Devonshire that her ordinary pursuits could be resumed. The circumstance which fixed her abode at Tavistock was her marriage with the Rev. Edward Atkyns Bray, vicar of that place, the author of theological and other works, and a warm lover of literature. In this beautiful seclusion, which she has seldom quitted to mix in the external world, the greater part of Mrs. Bray's books have been written. In 1826 she published "De Foix," a romance in 3 vols., illustrative of the habits and manners of the fourteenth century. This was succeeded, in 1828, by "The White Hoods," a novel description of the troublous times of civil war between the nobles and citizens of Flanders. Only eight months later appeared "The Protestant," a tale of the reign of Queen Mary. Mrs. Bray's next work, "Fitz Fitzford," a legend of Devonshire, was her first attempt to open out a new path in fiction, by taking local names and traditions as a basis for her imagination to work upon. In her next novel, "The Talba, or the Moor of Portugal," she departed from this plan, but resumed it again in "Warleigh, or the Fatal Oak," and in "The lawny of Trelawne." In 1836 appeared "The Borders of the Tamar and the Tavy," a local descriptive work, which owed its

stance to a suggestion of Robert Southey, who had for some time been a correspondent of its author and an admirer of her talents. Mrs. Bray's fruitful pen next produced "Trials of the Art;" "The Mountains and Lakes of Switzerland;" "Henry de Meroy," a legend of Cornwall and Devon; "Courtenay of Walden;" and "Trials of Domestic Life." A uniform edition of her works, in ten volumes, was published, in 1844, by Messrs. Longman. To this list it only remains to add a beautifully illustrated "Life of Thomas Stothard, R.A." which issued from the press in 1851, and "Peep at the Pixies," a pleasant contribution to the Christmas story-books of the same year.

BREMER, MISS FREDERICA. "If it should so happen," says a lady, in a letter to her friend and translator, Mary Howitt, "that regards me, any one should wish to cast a kind glance behind the curtain which conceals a somewhat eventful life, he may discover that I was born on the banks of the Aura, a river which flows through Abo, and that several of the venerable and learned men of the university were my godfathers. At the age of three years I was removed with my family from my native country of Finland into Sweden, where my father purchased an estate, after he had sold his property in Finland (about that time ceded as a province of Russia). Any one kindly follows me to my new home, I would not trouble him to accompany me from childhood to youth, through the inward mental chaos, and the outward uninteresting and commonplace culture of a family, which every autumn removed in their covered triage from their estate in the country to their house in the capital; and every spring trundled back again from their house in the capital to their country-seat. Nor would I inflict upon him minute sketches of the young daughters, who played on the piano, sang ballads, read novels, drew in black chalk, and looked forward with longing glances to the future, when they hoped to see and do wonderful things. With humility I must confess that I always regarded myself as a heroine. Casting a glance into the family circle, it would be seen that its members collected in the evening in the great drawing-room of their country home, where the works of German poets were read aloud, and those of Schiller made a profound impression on the mind of one young girl in particular. A deeper glance into her soul will show that a heavy reality of sorrow was spreading by degrees a dark cloud over the splendour of her youthful dreams. Like early evening, it came over the path of the young pilgrim of life; and earnestly, but in vain, she endeavoured to escape it. There is a significant picture at the commencement of every mythology. In the beginning there is a bright, and warm, and divine principle, which allies itself to darkness; and from this union of light and darkness, of fire and tears, proceeds a god. I believe that something similar to this takes place in every human being who is born to a deeper life, and something similar took place in her who writes these lines. Looking at her a few years later, it will be seen that a great change has taken place. Her eyes have

long been filled with tears of unspeakable joy; she is like one who has arisen from the grave to a new life. What has caused this change? Have her splendid youthful dreams been accomplished? Is she a heroine? Has she become victorious in beauty or reason? No! the illusions of youth are past,—the season of youth is over. And yet she is again young, for there is freedom in the depth of her soul; the light has penetrated the darkness and illuminated the night; whilst, with her eye fixed upon that light, she has exclaimed with tears of joy, 'Death, where is thy sting? Grave, where is thy victory?' Many a grave since then has been opened to receive those whom she tenderly loved,—many a pang has been felt since then; but the heart throbs joyfully, and the dark night is over. If it be desired to hear anything of my writings, it may be said that they began in the eighth year of my age, when I apostrophised the moon in French verses; and that during the greater part of my youth I continued to write in the same ambitious strain. At the present time, although I stand on the verge of the autumn of my life, I still see the same objects which surrounded me in the early days of my spring; and am still so happy as to possess, out of my dear ones, a beloved mother and sister. The mountains which surround our dwellings, and upon which Gustavus Adolphus assembled his troops before he went as a deliverer to Germany, appear to me no less beautiful than they were in the days of childhood." In this pleasant autobiographical sketch some further facts remain to be added. In the year 1842 the English literary world was agreeably startled by the publication of "The Neighbours,"—a picture of domestic life in Sweden, which strongly recommended itself by its originality to the favour of its readers. Encouraged by the warm reception accorded to this work, its translator, Mrs. Howitt produced, in 1843, "The Home;" and subsequently introduced to our acquaintance, in an English dress, "The Diary," "The H. Family," "The President's Daughters," "Nina," "Brothers and Sisters," "Life in Dalecarlia," and "The Midnight Sun." In 1849 Miss Bremer bade adieu to the two beloved relatives who represented the gay family circle of other days, and realised her long-cherished project of a journey to America, and a careful and prolonged investigation of its various points of interest. Her progress was facilitated by the most cordial and universal hospitality; and although the personal experience tended naturally to tint, *couleur de rose*, her sketches of domestic society, it may be doubted if any previous American traveller of her sex has presented us with more sound and comprehensive views of its great political and social institutions generally, or more glowing and vivid descriptions of the scenery, and moral and physical atmosphere of the Southern States, than she has done. During the course of Miss Bremer's wanderings she addressed a large number of letters to her sister, which formed the nucleus of the work entitled "Homes of the New World," published in 1851. It made its appearance simultaneously in England, the United States, and Sweden, the MS. sheets having been submitted to the hands of her former experienced and careful translator. On her

return from America in 1851, Miss Bremer lingered for some time in England, cementing old friendships and forming new ones; but a fatal illness of her only sister gave her a melancholy summons homeward, and she arrived to find yet another vacancy at her domestic hearth. Since her return to Sweden she has been occupied with another work, and has also devoted herself with increased ardour to those philanthropic objects which may be said to have been present with her through life. Her energies and interests have been specially concentrated on the educational movement having reference to the children of the poorest classes, with whom, it may be remembered, Madame Otto Goldschmidt recently displayed so generous and practical a sympathy. The old Scandinavian land, therefore, owes to these, its daughters, not merely the prestige of their individual gifts, but the promotion of the great fundamental principle of social virtue and order.

BROWN, MISS FRANCES. Few episodes are to be met with in the range of metaphysical history more interesting than the life of a true poetess, who, debarred by an early visitation of Providence from participation in the active duties of the outer world, has picked out for herself a noble vocation in the inner sphere of thought. More eloquent, surely, of the power of mind than the exploits of the world's heroes, is the conquest of knowledge and wisdom by this lonely girl, under circumstances which would have doomed a less finely-constituted temperament to life-long darkness and inactivity. Frances Brown, the seventh child of a family of twelve, was born on the 16th of June, 1818, at the village of Stranorlar, in the parish of Stranorlar, of which her father was the postmaster. The first event of her young life was the permanent loss of sight at the age of fifteen months, owing to a severe attack of small-pox, then very prevalent in the neighbourhood. In consequence of this calamity she did not participate even in the limited advantages of education enjoyed by her brothers and sisters at the village school; but being very early sensible of her own deficiencies she endeavoured to remedy them by inquiries of all who were capable of adding to her stock of information, and by listening attentively to her young companions, as they conned over the portions of the English grammar and dictionary which formed their appointed school-tasks. Her memory being wonderfully retentive, and her perseverance unyielding, she soon obtained an accurate knowledge of the sense of the Bible, and found herself qualified for the full enjoyment of such literature as circumstances placed within her reach. "Susan Grey," "The Negro Servant," "The Gentle Shepherd," Mungo Park's "Travels," and "Robinson Crusoe"—which have become naturalised in all remote country villages—were her first treasures, and supplied subjects of sympathy and food for imagination, until the acquaintance of an acquaintance opened out a new era in her mental history, by the loan of the "Heart of Mid-Lothian," and subsequently the other works of Sir Walter Scott, long passages from which the young enthusiast would repeat to herself in the silence of the

night. Among the many difficulties which impeded her intellectual culture the want of sight was undoubtedly the greatest, so is rendered her wholly dependent on the services of her family, whose condition was such as to admit of but few leisure moments. Frequently would Frances gain time for the reader by the completion of their appointed tasks; habit and necessity having rendered her more ready and active in the little offices of every-day life than might be imagined. The lighter description of reading was thus managed without difficulty; but as it happened, in her thirteenth year, that an ardent taste for history superseded the love of fiction, she had then to conquer the personal disinclination of her young relatives for drier, but more instructive works. Her ordinary resource was to promise as a recompense the recital of some story or novel, which, perhaps, they had formerly read but long ago forgotten; and in this way her memory may be said to have carried its own supplies. These historical studies, which she pursued as thoroughly as lay in her power, necessitated a knowledge of geography, and this also was acquired in due time by the exercise of patience. Her own ingenuity in all these cases necessarily supplied the place of those excellent rules and theories for the education of the blind which might have assisted her materially under more favourable circumstances of locality and position. Simultaneously with this ardent thirst for knowledge grew and strengthened the passionate love of poetry, which is an equally strong element in Miss Brown's nature. Her attempts at versification commenced in her seventh year, and continued uninterruptedly until her fifteenth, the corners of provincial newspapers supplying models, and her miscellaneous reading affording subjects. Then, however, a revolution was effected in her ideas of poetry by Pope's *Homer* and Byron's "*Childe Harold*;" the former inducing her to burn her own manuscripts in disgust, and the latter to resolve against writing for the future. The necessity for expression proving insupportable, she resumed her pen after an interval of some years; and about 1840 was encouraged to further efforts by the publication of three short poems, which she had contributed to the "*Irish Penny Journal*." In 1841, having a number of short lyrics on hand, she sent them to the editor of the "*Athenæum*," requesting in return merely a copy of that journal, which she had long desired to possess. The friendly encouragement of Mr. T. K. Hervey was the means of introducing Miss Brown more fully to the public, and her frequent contributions to the *Journal*, then under his direction, enabled her to procure for herself increased literary advantages. Her first collection of poems—a graceful little volume, entitled "*The Star of Atteghai*"—was published in 1844; and shortly afterwards the author received, through the kind consideration of Sir Robert Peel, some acknowledgment in the shape of a small literary pension amounting to 20*l.* a-year. About this time Miss Brown made her first essay in prose composition, in an article which appeared in "*Fraser's Magazine*;" and she has since contributed tales and essays to "*Chambers's Journal*," "*Hogg's Instructor*," "*Lady*

gazine," the "People's Journal," the "Leisure Hour," etc. Her poems have for the most part appeared in the "Athenæum," but a second collection has succeeded the first, and a juvenile story, called "The Ericksons," has also been added to her published works. In 1847 Frances Brown left her native county, which offered no encouragement to intellectual tastes, and took up her abode for a time in Edinburgh; in 1852 she again removed with a sister, who, until her marriage, acted as her amanuensis, and finally settled in London, for the more convenient prosecution of those literary labours to which her life is necessarily devoted. Some few months ago Lord Lansdowne was so favourably impressed by a little poem from her pen, which he met with in the "Athenæum," that he sent her a substantial testimony of his appreciation of its merits, in the shape of a cheque for 100*l.* It may be hoped that the small pension she now enjoys will, ere long, receive some such modest addition from the Crown as may enable her to cultivate literature for her as the solace of her calamity than as the indispensable and harassing business of her life.

BROWNING, MRS. ELIZABETH BARRETT. A reference to various works which have given lustre to the name of this lady can scarcely be better introduced than by a slight sketch of her personal characteristics and history as afforded in the "Literary Recollections" of Miss Mitford. "My first acquaintance," writes this authoress in her memoirs, "with Elizabeth Barrett commenced fifteen years ago, and she was then certainly one of the most interesting persons I had ever seen. Of a slight, delicate figure, with a shower of dark curls hanging on either side of a most expressive face,—large, tender eyes, shaded with dark lashes,—a smile like a sunbeam, and such a look of youthfulness, that I had some difficulty in persuading a friend, whose carriage we went to Chiswick, that the translator of the 'Prometheus' of Æschylus, the author of the 'Essay on Mind,' was in technical language, 'out.' During my stay in town we met frequently, and after my return to the country we corresponded very regularly; her letters being just what letters ought to be,—her own work put upon paper. The next year was a painful one to herself and all who loved her: she broke a blood-vessel in the lungs. There had been consumption in the family, that disease would have supervened; but, happily, she escaped this fatal English malady. The vessel, however, refused to heal; and after attending her for a year at her father's house in Wimpole Street, Dr. Chambers, on the approach of winter, ordered her to a milder climate. Her eldest brother—a brother in heart and talent worthy such a sister—together with other affectionate relatives, accompanied her to Torquay; and there occurred that fatal event which blighted her bloom of youth, and gave a deeper hue of thought and feeling, especially devotional feeling, to her poetry. Nearly a year passed, and the invalid, still attended by her companions, had derived much benefit from the mild sea-breezes of Devonshire. One fine summer morning, her favourite brother, together with two

other fine young men, his friends, embarked on board a small sailing-vessel for a trip of a few hours. Excellent sailors all and familiar with the coast, they sent back the boatmen, and undertook themselves the management of their little craft. Danger was not dreamt of by any one,—indeed, after the catastrophe no one could divine the cause; but in a few minutes after their embarkation and in sight of their very windows, and just as they were crossing the bar, the boat went down, and all who were in her perished. Even the bodies were never found. This tragedy nearly killed Mrs. Barrett: she was utterly prostrated by the horror and grief and a natural, but most unjust feeling, that she had been in some way the cause of this great misery. It was not until the following year that she could be removed in an invalid carriage, and by journey of twenty miles a-day, to her afflicted family and her London home. On her return began the life which she continued for so many years,—confined to one large and commodious, but darkened chamber, to which only her own family and a few devoted friends were admitted. Reading, meanwhile, almost every book worth reading in almost every language; studying with ever-fresh delight the great classic authors in the original; and giving herself heart and soul to that poetry of which she seemed born to be the priestess. We learn from the source whence the above remarks are derived that Miss Barrett's vocation displayed itself very early in life; for she wrote largely at ten years old, and well at fifteen. Her first important essay in authorship was a translation of the "Prometheus" of Æschylus, published anonymously in 1833; her own mature judgment pronounced this attempt a failure, and it was thereupon replaced in the collected edition of her works by an entirely new version. Five years later appeared "The Seraphim,"—a poem holding, as it were, an intermediate position between an ancient Greek tragedy and a Christian mystery; the idea of which had suggested itself during the progress of her labours on the "Prometheus Bound." With it were associated some miscellaneous poems, a portion of which had already appeared in the pages of periodicals, where they had won (in spite of some obscurity of manner and expression) high appreciation for their poetic beauty and earnest tone of feeling. Though chiefly known to the multitude by these productions, Miss Barrett also wrote many admirable and erudite articles on the Greek Christian Poets, and other subjects, which were considered to afford evidence of unusually keen insight, and extraordinary intellectual attainments. After a long continuance of that seclusive life which has been referred to in the words of her intimate friend, a gradual improvement took place in her state of health; and the beauties and pleasures of the external world, from which she had been debarred for years, once more became accessible to her. About seven years ago she became the wife of Robert Browning, the poet, and immediately after her marriage accompanied him to Pisa. They subsequently removed to Florence, which has continued to be their permanent home, although occasional visits to England have afforded opportunity to Mrs. Browning's friends of rejoicing with her in the

possession of a lovely boy, and a renewed measure of health and strength. The publication in 1850 of her collected poems, in 2 vols., gave a great impetus to her reputation, and obtained very general acknowledgment of her title to rank, in many points of view, as the first female poet of the age. A small number of unpublished poems appeared in this edition, and among them was only "Geraldine's Courtship," which has been cited as one of her finest inspirations. An inspiration it might, indeed, be called, inasmuch as it was written in twelve hours, having been required at the last moment to complete the uniformity of her volumes, and composed in haste to save the packet which was to convey the proofsheets to America. In 1851 appeared "Casa Guidi Windows," a poem, the theme of which was the repeated struggle for liberty which she had opportunities of witnessing from the windows of the Casa Guidi, her own Florentine residence. Although critics have not failed to do full justice to the generous impulse, the imagination, and social and political wisdom of this production, the fantastic and rugged forms in which the ideas are frequently clothed would be likely to render it only partially acceptable. It is probably by such poems as the "Poet's Vow," "Catharina to Innocens," "Bertha in the Lane," "Cowper's Grave," and a host of others which throng upon the memory, that Mrs. Browning will reach the hearts of her readers most closely, and it will be from them, therefore, that she will derive her truest and most enduring renown.

C.

CARLEN, MADAME EMILIE FLYGARE, is a native of Sweden, and may be said to divide with Miss Bremer the realms of imaginative literature in that country, since the Baroness Knorring no longer lives to claim her share of intellectual sway. Madame Carlen, is, however, less familiarly known to the reading public of Great Britain than the authoress of "The Neighbours," owing, in a measure, to the comparatively disadvantageous circumstances under which she has been introduced to their notice. Those of her works which have been produced in an English dress owed it to the chance preservation of anonymous, and, sometimes, indifferently good translations; instead of appearing in regular succession under the auspices of an established literary favourite, powerful enough to secure a patient and favourable hearing for her *protégée*, until she should be accepted on the ground of her own merits. It is said that this lady commenced her career as a writer very early in life, and was led to it by a desire to extend the pecuniary resources of her parents, which were then very limited. She subsequently became the wife of a lawyer, who is himself known as a clever poet; and has continued

to divide her attention between the superintendence of a quiet household in Stockholm, and the composition of novels, unequal in merit, but displaying at times very great inventive talent and certain powers of description, in which she is unrivalled. In *now* are these characteristics more strongly developed than in "The Rose of Tistelön," a translation of which appeared in 1844; a tale of robbery, worked out in a smuggler's lair, it afforded ample opportunity for the introduction of the passion and incident, which ~~soon~~ to spring easily and abundantly from the mind of this ~~author~~. Her chief individuality, however, rests on her forcible ~~specimens~~ of marine painting; the representation of a wild, seafaring life, which constitutes the prominent feature of this work, is ~~wonderfully~~ vivid, and contrasts most effectively with its delicate delineation of female character. Of a less peculiar, but by no means inferior order of talent, is a novel called "Woman's Life," published in England in 1852. Here Madame Carlen presents a distinct picture of elegant social life as she had formerly drawn of its dark contrasts; and proves herself an equally keen observer of the torrents and eddies of human feeling which may surge beneath its calm surface, as of those which convulse the aspect of nature viewed from the wild shores of her native land. As a study of intense passionate caprice, the character of the heroine is admirable and consistent to the end. We are conducted to the result, her restoration to a sounder state of mental health, by a path so gradual, so naturally full of drawbacks, difficulties, and sorrows, as could have been depicted only by one possessed of the insight of genius. Among the other works by this lady which have been circulated in England may be enumerated "The Birthright," "The Magic Goblet," "Ivan or the Skjut's Boy," "The Lovers' Stratagem," "Marie Louise," "Events of the Year," "The Maiden's Tower," and "John;" this list by no means includes the whole of her novels, which are very numerous, and afford evidence that fertility of imagination is one of her most prominent characteristics.

CARPENTER, MRS. MARGARET. Of the various departments of the fine arts in which the honour of womanhood is efficiently supported, none are more ably represented than that of portrait-painting, in which this lady is the champion of her sex. Born at Salisbury at the year 1793, she is the daughter of the late Associate-Academic Alexander Reynolds Geddes, Esq., of the 81st Regiment; known to the artistic world by many portraits and admirable copies of the old masters. When very young, Miss Geddes received ten years' instruction in figure-drawing and painting from a royal master at Salisbury; and, during her abode in the country, had the advantage of studying from the fine collection of pictures at Longleat Castle, the seat of the Earl of Radnor, who evinced a warm interest in her advancement. At his recommendation she took the step which first made her generally known, and sent pictures to the Society of Arts for three successive years. On each occasion she received a public acknowledgment of her talents, and for a study of

boy's head, afterwards purchased by the Marquis of Stafford, the best gold medal was awarded. In 1814 Miss Geddes removed to London, which offered greater facilities in every point of view for the pursuit of her professional exertions, and three years later married Mr. W. H. Carpenter, whose general acquaintance with the fine arts has procured him the appointment of Keeper of the Prints and Drawings at the British Museum. During a considerable part of the century Mrs. Carpenter has been a constant exhibitor at the Royal Academy and British Institution; contributing to their walls portraits and figure studies, which are very highly appreciated, not only for their truth, but for their firmness of touch and brilliancy of colour; qualities which are not generally the most striking characteristics of feminine art. It may be observed, that accidental circumstances have combined with inclination to associate this lady through her husband with the world of art. Her sister was married in 1822 to the Rev. William Collins, R.A., the delineator of a class of subjects in which his pencil will scarcely find a rival; although in his case, as in that of Mrs. Carpenter, the tastes and talents which have rendered the name illustrious are inherited in a measure by the second generation.

CHILD, MRS. LYDIA MARIA, is an American Authoress, whose works had gained very considerable popularity in England in the few years since, but who, in common with others of the same class, has been partially obscured by the glory of later luminaries. This lady, originally Miss Francis, was born at Massachusetts, but spent the chief part of her youth in Maine. The circumstances under which her first literary effort was made are thus related:—One Sunday afternoon, during a visit to her brother, a Unitarian clergyman, Miss Francis took up a number of the "North American Review," in which was eloquently set forth the adaptability of early New England history to the purposes of fiction. She had never then written or dreamed of becoming an authoress; but the spell was upon her; and seizing a pen, she wrote (as it was afterwards printed) the first chapter of "Hobomok, a Story of the Pilgrims," which was completed in six weeks, and published with success in 1824. One year later, and soon after the appearance of her second work, "The Rebels," Miss Francis became the wife of Mr. David Lee Child, and in 1827 undertook the editorship of "The Juvenile Miscellany;" the only monthly periodical for children which was then published in America. During the next six years her pen was busily engaged, and from it issued "The Frugal Housewife," a little book which, although written for the poor of the New World, found the greatest acceptance with different classes in the Old; "The Mother's Book," a manual of education; "The Girl's Book;" and "The Broom," a miscellaneous collection of prose and verse. She also prepared some volumes for "The Ladies' Library," consisting of *Stories of Madame de Staël and Madame Roland, Lady Russell, and Madame Guyon*; "Biographies of Good Wives;" and "The History and Condition of Women." In 1833 Mrs. Child threw herself with

generous enthusiasm into the cause of abolition, and wrote "An Appeal for that Class of Americans called Africans," which excited such bitter feeling against her, that the interests of her next work, "Philothea," a romance of the time of Pericles and Aspasia, suffered in consequence. In 1841 Mr. and Mrs. Child removed from Boston to New York, for the purpose of conducting the "National Anti-Slavery Standard;" and the latter, whilst assisting her husband in his editorial labours, commenced a series of letters in the "Standard" (her own paper), and the "Boston Courier," which were afterwards re-issued in two volumes, under the title of "Letters from New York." The latest work of this writer, with the exception of a little book called "Spring Flowers," is "Fact and Fiction," a collection of prose tales, which appeared in 1846.

CHISHOLM, MRS. CAROLINE, the story of whose life is but a continuous record of brave endeavours for the good of her fellow-creatures, and more especially for the assistance of emigrants, was born at Wootton in Northamptonshire, about the year 1810. Her father, Mr. William Jones, a man of respectable, though not of high extraction, was distinguished by an uprightness of character, and a pure philanthropy of soul, which conduced to the wise education of his children, and materially influenced their tastes and dispositions. A more precocious development of the great principle of life could scarcely be met with than was displayed by the subject of this notice, whose imagination chanced to be early excited by the details of a correspondence maintained between her family and some American settlers. Her first attempt at colonisation, she tells us, took place in her seventh year, by means of a washhand basin, in which she navigated boats of broad beans laden with touchwood dolls; these were generally located in the bed-quilt, whilst the vessels freighted with corn were sent back for the conveyance of their friends. As the full bearing of these experiments could not then be divined, and the only immediate consequence was the frequent overturn of the miniature ocean, they were strongly discouraged, and were afterwards carried on in a dark cellar, lighted only by a rush-light stuck in a teakettle. This dismal scene was the harbinger of many of those ideas which have resulted in so much practical usefulness. Under the direction of a sensible mother, on whom her father's death left her wholly dependent for guidance, the mental powers of the young Caroline grew apace. The energy and thoughtful kindness of her character were exercised for the benefit of the poor and needy of her own neighbourhood, until her marriage with Captain Alexander Chisholm, of the Indian army, which took place in the twentieth year of her age, removed her to a more extended sphere of usefulness. On her arrival at Madras, Mrs. Chisholm's attention was drawn to the neglected and dangerous position of the soldiers' daughters. To remedy rather than to lament an evil has always been her practice; and by the co-operation of the Government and other residents in the Presidency, she established an industrial home or school, in which young girls were sheltered from all evil

and instructed in every kind of practical knowledge. Under her personal supervision the foundress of this institution introduced into it a perfect system of order, in consequence of which it survived her departure, and has continued a permanent and useful record of her judicious method of organisation. After a residence of some years at Madras, Captain Chisholm's health required a temporary change of climate, and he removed his family to South Australia. No sooner were they established there, than Mrs. Chisholm's sympathies were enlisted by the condition of the emigrants, who frequently arrived there both poor and penniless. A band from the Highlands, destitute of clothing, down to a knowledge of the English language, were the objects of her charity; she cheered their desponding hearts by her kindness and sound advice, and lent them money for the purchase of tools, by which they could provide for the necessities of life day by the work of their own hands. But such casual aid, however valuable to individuals, was felt by her to be wholly inadequate to the pressing exigencies of the case. When Captain Chisholm's professional duties recalled him to Madras, it was deemed expedient that his family should remain for a time at Sydney, and his wife devoted all the time that could be spared to her private duties to the schemes of usefulness which she had commenced during her three years' residence in the colony. Here, as at Madras, the protection of her own sex seemed to claim Mrs. Chisholm's earliest efforts. The condition of young women who, on arriving at those shores, found themselves exposed to the dangers and miseries of a homeless and unprotected state, was pitiable in the extreme; and for these destitute beings she proposed to found a plan. As it was only by the assistance of the wealthier classes that this plan could be carried out, she was unwearied in her attempts to interest them by the excellence of the cause itself. Influenced by the sacrifice of personal feeling she had made, before she could obtain from the Governor a small and rudely constructed government building for her use as an emigrant's home, or from the public such funds as might be necessary for its maintenance. To the local authorities, however, belongs the merit of having seconded her efforts. Her appeal was more fully met; further space was added to the forty nine feet square originally granted, and very soon after it was opened one hundred young women were safely housed within its walls. Here Mrs. Chisholm also took up her residence, constituting herself a mother to these friendless beings, and for their sakes detaching herself from the society of her own children, whom she could not constantly retain with her in so crowded an abode. As her plan contemplated a future provision for her *protégées*, she made frequent excursions into the interior of the colony, for the purpose of forming committees, and establishing country homes; taking with her at the same time parties of young women, varying in number from fifteen to thirty, whom she placed in service at the farms on the route. Their travelling expenses were at first borne by herself, and afterwards

refunded; but when the settlers and country people became acquainted with her name and object, they were always eager to supply conveyance as well as food; and Mrs. Chisholm records the fact that her own expenses during seven years' service amounted only to 11. 1s. 6d. At a time when labourers were required in the interior, and there was an excess in Sydney, supported at Government expense, she undertook many journeys of 300 miles into the bush for the purpose of planting families; sharing the hardships of her companions, and performing the duties of leader, adviser, and commissary-general. Mrs. Chisholm also established an office in Sydney, where all persons needing employment could attend from ten till four; and by these various measures has planted 11,000 persons in positions of respectability and comfort. Manifold indeed have been the blessings conferred in her capacity of "the emigrant's friend," since no appeal was ever deemed unworthy of her most careful and kindly consideration. In addition to these labours, Mrs. Chisholm has collected a large body of facts bearing on the history and prospects of settlers in the colony. Her notes, which were sometimes taken down in their houses, sometimes by the roadside, and frequently in ploughed fields with the plough for a table, were published under the title of "Voluntary Information of the People of New South Wales." Early in the year 1845 Captain Chisholm rejoined his wife. He had always sympathised warmly in her work, and now gave her the benefit of his hearty co-operation. But in 1846 it became desirable that they should revisit their native land; and Mrs. Chisholm left Australia, having accepted a public testimonial of one hundred and fifty pounds, which she set aside for the furtherance of her benevolent views. In fact, she returned to England, not to rest from her labours, but to continue them more effectually. She came as the champion of the cause of emigration, and as the unpaid agent of thousands of individuals who hoped by her means to have lost relatives discovered, deserted children restored to them, and grievances of every kind redressed. Possessing no advantages of rank or influence, and with an income scarcely amounting to a competency, Mrs. Chisholm began her contest with Government officials for the rights of her poor clients. She secured attention, and obtained confidence by degrees, as it was discovered that she never made a claim or a charge without having documentary evidence to support it. At length the order was made which consigned two shiploads of children from various workhouses to their parents in Australia, at the expense of Government; and a similar success attended her efforts on behalf of the convicts' wives, who had been promised free transmission, in certain cases of meritorious behaviour on the part of their husbands. Meantime the private commissions were not neglected. By the help of her family Mrs. Chisholm sought out lost relatives; transmitted money, which had been entrusted to her charge for the purpose of enabling members of families to join their absent friends; answered questions, volunteered information, and corresponded with 5000 persons in Ireland alone, belonging, of course, to the lowest orders of society. But the great achievement

Mrs. Chisholm's visit to England was the establishment of the "Family Colonisation Loan Society," intended to promote what had been most unwisely discouraged, the emigration of entire families, and also to supersede the pauper-like system of free passage, by loans to such as would contribute their own savings towards necessary expenses of the voyage. A certain evening in the week was set apart by her for the reception of all who desired information and advice at her modest home at Islington; and to these "group meetings" every class was freely admitted. The books of the society, which Captain Chisholm acted as honorary secretary, soon commenced enough paying subscribers to fill a ship. Vessel after vessel was sent out, each one superior to the last in the nature of its accommodation, but all providing for comfort and propriety in a manner quite unexampled. Having worked out a better system of colonisation, rectified abuses, and excited an active interest for the cause which she had so deeply at heart, Mrs. Chisholm returned in 1854 to her original field of labour, whither her husband had preceded her. She was greeted at Sydney with universal enthusiasm, and recent accounts affirm that a subscription has been set on foot for the benefit of her family, which it was hoped might represent not unworthily the gratitude and esteem with which she is regarded. The philanthropy of this admirable woman has not been a mere amusement of a leisure hour, but the business of her life, in which personal comfort and domestic enjoyment have been wholly sacrificed. Nobly has she fulfilled her engagement, solemnly registered at the commencement of her work, to dedicate all her talents to the God who gave them, and, knowing neither creed nor country, to try and serve all justly and impartially.

CLARKE, MRS. MARY COWDEN. This lady, who has rendered good service, not only to the literary world but to society at large, by her "Complete Concordance to Shakspeare," is the eldest daughter of Mr. Vincent Novello, and one of a family which, in the person of Madame Clara Novello, has contributed a brilliant ornament to the musical profession. She was born in June, 1809, and in 1828 was married to Mr. Charles Cowden Clarke, the friend of Lamb, Keats, Hazlitt, and of Leigh Hunt. A year after her marriage she commenced her minute analysis of our immortal dramatist, which, after sixteen years' assiduous labour, was brought to a successful termination. The reflections which led her to this arduous undertaking may be given in her own words:—"Shakspeare, the most frequently quoted, because the most universal-minded genius that ever lived, of all authors best deserves a complete concordance. To what subject may we not with felicity apply a motto from this greatest of poets? The Divine, commending the efficacy and 'two-fold force of prayer—to be forestalled ere we come to fall, or parried being down;' the Astronomer, supporting his theory by allusions to the 'moist star upon whose influence Neptune's empire stands;' the Naturalist, striving to elucidate a fact respecting the habits of 'the singing masons,' or 'heavy-gaited toads;' the Botanist,

lecturing on the various properties of the small flower within whose infant rind poison hath residence, and medicine power; the Philosopher, speculating upon 'the respect that makes calamity of so long a life;' the Lover, telling his 'whispering tale in a fair lady's ear,' and vowing the winnowed purity and persistive constancy of his heart's dear love.' The musician, orator, soldier, humorist, may all equally adorn their page or emblazon their speech with gems from Shakspeare's work." To furnish a faithful guide to this rich mine of intellectual treasure, has been with Mrs. Cowden Clarke the ambition of a life; how faithfully realised, can be testified by all who have occasion to benefit by her labours. That it has not, however, entirely absorbed her intellectual energies, was proved by the publication, in 1848, of "The Adventures of Kit Bam, Mariner;" in 1851, "The Girlhood of Shakspeare's Heroines;" in 1854, of a novel called "The Iron Cousin," and of various magazine articles, chiefly relating to those masterpieces of dramatic literature, with which the study of many years had thoroughly familiarised her.

CORBAUX, MISS FANNY, a lady distinguished as an Artist and as an investigator into many abstruse points of Biblical History, was born in the year 1812. Her father was English by birth, although he had lived much abroad, and was well known among the scientific men of England and France as a leading statistician and mathematician. He was also a Fellow of the Royal Society, and published several works, among which, the "Dictionnaire des Arbres et des Changes," and the "Doctrine of Compound Interest," were regarded, and the latter still continues to be a standard work of reference among financial and commercial men. Miss Corboux gave evidence of an innate disposition for drawing in her earliest years, attempting to delineate the forms of surrounding objects before she could utter their names, and even familiarising herself in this way with the letters of the alphabet. Her first recollections are associated with the large slate (a favourite toy), on which she freely indulged her natural predilection for design; thus unconsciously commencing her power and taste for art, long before such a contingency as their ever being applied as a means of support could be foreseen. She was still very young when her father lost a comfortable competence, the wreck of what had been a liberal fortune, and found himself, owing to advanced age and broken health, both of mind and body, unsuccessful in his strenuous efforts to retrieve his position. Under these circumstances, his daughter, then in her fifteenth year, was obliged to think seriously of turning her talents to useful account, and no one perhaps ever entered on so responsible and anxious a career, more entirely cut off from every kind of help. Separated by adversity from the independent class, to be grafted upon the totally distinct one of professional industry, she belonged as yet to neither. The only instruction she had received was of that insufficient and unsatisfactory kind, termed "learning to draw" at school, and now her family reverses left her with no means of increasing this small stock of knowledge by private lessons. Chance had not even made

acquainted with any one who could advise her in the selection of style, a course of study, or the theory and manipulation of the art on which depended, not only the immediate resources of the daily, but her own future existence. The young artist was thrown entirely upon herself. The great difficulties and additional labour attending an apprenticeship of this kind may be represented by a little anecdote, which cannot be better given than in Miss Corbaux's own words:—"I tried," she says, "to use colours; but so little I had of painting, that when the well-known coloured print, *Anton de Foix*, was lent me to copy, I remember my extreme anxiety to copy the appearance of the engraving, by imitating its use of shading, in the armour and draperies, with the colour. How soon I sponged out the face, weeping over my disappointment that it could not prevent my colours from being black and muddy, nor make my dots as small as those in the stippled engraving. What with crying and trying, in six weeks of incessant labour I did finish a copy as many inches square." It is a curious circumstance, and one which affords the strongest evidence of her great natural powers, that at the very time when this courageous girl was thus struggling unaided with the technical difficulties of her art, she received the large silver medal of the Society of Arts for an original portrait in miniature, the silver Isis medal for a copy of figures in water-colours, and the silver palette for one of an engraving. These honours were awarded in 1827. The following year, an original composition of figures in water-colours again obtained the silver Isis medal; and a portrait, in miniature, exhibited in 1830, was deemed worthy of the higher acknowledgment of the gold medal. A short time before this last occurrence, Miss Corbaux learned casually that the National Gallery and British Institution were open to students. She lost no time in profiting by the advantages they offered, and in a case like her own, the opportunity of seeing others paint is no less valuable than the acquisition of good models. During the first year of admission to these galleries she made many copies and small studies, and learned a great deal of the resources and management of water-colours; so that, at the age of eighteen, she found herself able to launch fairly into professional life. In 1830 she was made an honorary member of the Society of British Artists, and for a few years exhibited small oil-pictures at its gallery; but being obliged to relinquish this branch of art, Fanny Corbaux joined the New Society of Painters in Water-Colours, and has hardly ever failed to contribute a work of fancy to its annual exhibitions. Her time, however, has been chiefly devoted to portrait painting—a branch of art not adopted from choice, but necessitated by circumstances. To qualify her for those higher departments of imaginative art, to which a strong predilection would have guided her; to carve out a path to excellence, fame, and competence, through the usual course of academic study, technical training, and the precarious chances of exhibition, required time, which, in the earlier periods of her life, could not be spared from immediate necessities; and advances in art-education, from which she was excluded by her sex.

Although every facility for realising both artistic excellence and professional success is gratuitously open to any young man who can produce as his qualification for claiming it an elementary work of reasonable promise, no arrangement, unfortunately, is made in this country for extending them to women; and for want of such advantages the superior walks of imaginative art are rendered inaccessible, whilst that which is left within their reach is rendered doubly difficult of attainment. Nature, certainly, has not denied the elementary qualities of excellence; the fine and correct eye, the delicate sense, feeling for character, refined and often picturesque imagination; the enthusiasm, poetry, love of the art; the patience to overcome difficulties; the ambitious dreams that haunt genius yet unperceived and brighten the hopes of a dim future. But the female student who has these hopes and dreams must learn to suppress them and chain down her aspirations to the limited class of literal matter-of-fact delineations left within her grasp. Portraiture, chiefly personified occasionally by rustic and fancy figures, form the principal resource of those whose powers aim at something beyond flower-fruit, and landscape. The public sees nothing higher than this round of subjects, beautifully executed by the able feminine painter, whose productions grace our Exhibition walls, and it gets accustomed to consider female talent unequal to conceive anything higher and perform it as well. It forgets to ask why "fair artists" are not afforded a chance of becoming also great artists, without sacrifice of their feminine gifts; why "the graceful pencil" is not disciplined to become a powerful pencil, without losing its grace. To Miss Corboux belongs the merit of having removed in one instance the barrier which separated her sister-students from art-knowledge. Finding that there was no regulation more stringent than that of custom to prevent their attendance at the Academy lectures, she obtained the co-operation of some other ladies, and endeavoured by example to smooth the path for less dauntless spirits. She continued to form one of the audience on these occasions, until the practice of reproducing the lectures in the columns of a literary newspaper enabled her to profit by them with less trouble and fatigue. The precedent, however, was established for those who cared to follow it. The youthful struggles through which Miss Corboux became qualified for her professional career, constitute its chief incident. Her first attempts at portrait-painting were sufficiently decided and rapid to remove anxiety for the time present, and hold out fair hope for the future. Her engagements, indeed, were as numerous as could be fulfilled with a due regard to health, and have always resulted from a real appreciation of her talents. Few persons have owed less to personal influence; and after nearly twenty-five years of this unostentatious routine she must take leave of it with the conviction, that the chief blessings of her life are owing not to the help of man, but to the gifts of God, and to the admirable energy with which she has improved them. Having contemplated Miss Corboux under the aspect of an artist, it is time to view her in another capacity, and one which gives her

er claims on our gratitude and respect. Biblical history and criticism may seem an eccentric study for a lady to fix upon in place of recreation; but such choices are generally the joint result of peculiar innate capacity and outward circumstance. Endowed with a thoughtful and inquiring mind, which had been diverted from the ordinary amusements of young people by an early sense of care and responsibility; with a frame and a constitution impaired beyond remedy by premature exertion; this lady resolved to anticipate in the want of an object in after life, by opening sources of interest and occupation for the intellect when the bodily powers should be given way. She selected a department of literature which afforded a preliminary acquaintance with the history, illustrations, and languages of antiquity; but the feeling that there was so much original matter to be worked out in sacred history, and an interest and an impulse to these studies. Their results she has as yet only communicated in the form of papers (contributed to literary societies and periodicals), discussing subjects of Biblical history and criticism, and elucidating many points in Egyptian history immediately connected with Scripture illustration. Among her many valuable series may be cited: letters on the Physical Geography of the Exodus, published in the "Athenæum;" and another set, giving the history of a very remarkable nation, called the "Rephaim" in the Bible, and showing their connexion with the political and monumental history of Egypt, and that of the Exodus, which appeared in the pages of "The Journal of Sacred Literature." The latter investigation has opened quite a new field for historical and chronological research, and the view of the Exodus has been adopted and embodied in their works by more than one learned man. It is earnestly to be hoped that a sufficient measure of time and health may enable Miss Corboux to carry out her design of incorporating these fragmentary writings into a complete work on the remote period of sacred history to which they belong.

COSTELLO, MISS LOUISA STUART, commenced her literary career at an early age by the publication of a volume of poems, which attracted the attention of Thomas Moore, to whom, in 1835, she dedicated her "Specimens of the Early Poetry of France," the work by which she first became generally known. Travel next engaged her attention, and in 1840 appeared "A Summer amongst the Bois and the Vines," in which some of the most interesting parts of Normandy and Brittany, and the banks of the Loire, from Nantes to Orleans, were very fully described. This was succeeded, in 1842, by "A Pilgrimage to Auvergne, from Picardy to Le Velay," a route which traversed the northern and several of the eastern departments of France, till it terminated in the central region of the Monts d'Or. In 1844 a third series of travels, entitled "Béarn and the Pyrenees," carried the tourist across the ancient province of Maine, through Angers, La Rochelle, Bordeaux, and Agen, to the birth-place of Henri Quatre, and the country of the Basques, on the Spanish

frontier, completing a description of the western and south western districts of France. In the interim Miss Costello published in 1841, an historical romance, called "The Queen's Poisoner," which was subsequently changed, in Mr. Bentley's list of standard novels, to that of "The Queen Mother," the most prominent character in it being the well-known Catherine de' Medici. Towards the end of 1844 appeared the "Memoirs of Celebrated Englishwomen," commencing with the Countess of Shrewsbury and closing with Lady Mary Wortley Montague. In 1845 a home excursion resulted in "The Falls, Lakes, and Mountains of North Wales;" and the same year witnessed the publication of "The Rose-garden of Persia," written on a principle similar to that which treated of the early French poetry, consisting of translated specimens and biographical notices of the most remarkable amongst the Persian poets. In 1846 were published the fruits of a journey undertaken in the previous year bearing the title of "A Tour to and from Venice, by the V. A. and the Tyrol;" in 1847 the biography of "Jacques Cartier, a French Argonaut," made its appearance; and in 1848 Miss Costello wrote another work of fiction, called "Clara Fane." Five years elapsed without the production of any further substantive work; she then, in 1853, published the "Memoirs of Mary the Fourth, Duchess of Burgundy." Miss Costello's latest labour was the biography, in the commencement of the present year, of "Anne of Brittany," the dedication of which to her Majesty Queen Victoria was granted by special permission. Over the preceding period of twenty years Miss Costello's contributions to some of the leading periodicals of the day have been both numerous and interesting. As a song-writer, too, she is well known, and there are perhaps few ballads that have attained a wider circulation than "Queen of my Soul."

COUTTS, MISS ANGELA GEORGIANA BURDETT, born April 25th, 1814, is the youngest daughter of the late Sir Francis Burdett, and, by the mother's side, a granddaughter of Thomas Coutts, the banker, to whose enormous wealth she succeeded indirectly. This inheritance, which entitles Miss Coutts to a place among the representative women of her time, was entirely unexpected during her childhood; for the marriage of her grandfather to Miss Mellon, and his gift to her by will of his whole fortune, had apparently diverted it from his family, whose expectations were still further reduced by a union between his widow and the Duke of St. Alban's. The Duchess, however, having no children of her own, justly determined that the fortune derived from her first husband should revert to his family, and therefore adopted as her heiress Miss Angela Burdett, who succeeded, in 1837, to this vast property, burdened only by the condition that she should assume the name and arms of Coutts. The extensive and inestimable power of beneficence towards and her fellow-creatures, which devolved upon her with this bequest, seems to have been recognised by its possessor, whose charities are known to have been extensive. Amongst those of an important character have been the endowment of a bishopric in ~~Adelaide~~

th Australia, and the foundation of a handsome church and schools in London, the first stone of the buildings having been by Miss Coutts herself on the 25th July, 1847.

CROSLAND, MRS. CAMILLA, better known under her maiden name of Miss TOULMIN, was born in Aldermanbury, London, and the daughter of a solicitor, who died during her childhood. A strong love of reading and natural quickness of intellect supplied place of a systematic course of training in the earlier years of life; and when the death of her father, and subsequently of her mother (also a solicitor), threw her entirely upon her own resources, she was enabled to adopt literature as a profession. The first of Miss Toulmin's compositions which appeared in print was a short poem, published in the "Book of Beauty" for 1838. Since that time she has contributed largely to periodicals, among which may be specially mentioned "Chambers's" and the "People's Journal;" she has edited for some years the "Ladies' Companion and Monthly Magazine;" and has published successively the following works:—"Days and Legends illustrative of English Life;" "Poems;" "Partings for Life;" "A Christmas Story;" "Stratagems, a Tale for Young People;" "Toil and Trial, a Story of London Life;" "Lydia, a Woman's Book;" "Stray Leaves for Shady Places;" "Memorable Women;" and "Heldreth, the Daughter." The themes chiefly selected by this authoress are the trials of the poor and the political and social progress of the people. These subjects, which now occupy the attention of many writers, were but little discussed when she commenced her literary career; hence we must attribute to her the merit of having been a pioneer in a righteous cause. In 1847 Miss Toulmin married Mr. Newton Crosland, a merchant of London, and has continued to reside in its environs.

CROWE, MRS. CATHERINE. This lady, by birth Miss EVANS, was born at Borough Green, in the county of Kent. In 1822 she exchanged her maiden name for that which she has since been generally known, on her marriage with Lieutenant-colonel CROWE, of the British army. Her literary career was commenced in 1825, by the publication of "Aristodemus," a tragedy to which high praise has been awarded, although, from the comparative indifference in which dramatic literature is regarded in the present age, it may not have extended as widely as it should have done the reputation of the writer. Mrs. Crowe did not pursue this style of composition, but changed it for a more popular one, and published a novel called "Domestic Rights," which was succeeded by "The Adventures of Captain Hopley." The rapid succession and variety of its incidents secured for this story immediate popularity with a certain class of readers, and offered temptations to the dramatist, which resulted in its reproduction at some of the minor theatres. In 1847 Mrs. Crowe produced a third novel, "Lilly Dawson," the design of which was to portray the gradual expansion of intellect and goodness, through the agency of the affections. She next appeared as the translator

of "The Seeress of Prevorst;" "The History of a German Clairvoyante;" and, probably led by the contemplation of these wonders to the examination of others, which found an answering chord in her own mind, produced, in 1848, "The Night Side of Nature," a history of the supernatural, or rather a collection of those incidents which form the basis for a belief in it, linked together by many skilful and original remarks. A series of tales, founded on various dark and tragical points of human experience, followed, under the title "Light and Darkness, or Mysteries of Life. These, with a pleasant little book for children, called "Pippie's Warning, or Mind your Tempers," and two additional novels, "The Adventures of a Beauty," and "Linny Lockwood," constitute all the works which have proceeded from Mrs. Crowe's pen.

CUSHMAN, MISS CHARLOTTE, a lady who has won a world-wide celebrity by her original impersonation of those dramatic characters requiring great intensity of power and passion, is a native of Boston, Massachusetts. The eldest of five children, left fatherless at an early age, it became desirable that she should cultivate to the utmost a strong talent for music inherited from her mother. The limited means of the latter did not allow her to obtain the best instruction for her daughter; but notwithstanding this drawback, her progress was considerable, and she had already gained some reputation, when the visit of Mrs. Wood, formerly Miss Paton, afterwards the wife of Lord William Lennox, from whom she was divorced, to Boston, introduced her to the notice of this lady at a public concert, in which they both took part. With the generosity which generally characterises true excellence, the established favourite used her utmost to encourage the budding vocalist; pronouncing her to be the finest contralto she had ever heard, and warmly recommending her to turn her attention to dramatic music and the stage. This proposal seemed a fearful one to her family connections, and her descendants as they were of a long line of rigid Presbyterians, with strong views they, for the most part, inherited. But Charlotte was inflexible in her resolution to adopt the course pointed out to her. No doubt the true bent of her genius was even then whispering in her soul, although it needed the force of circumstances to make clearly its faint articulations. After a preparatory course of training her brightest dream was realised. She made her appearance as the Countess, in Mozart's "Nozze di Figaro," with marked success; and a brilliant career seemed opening before her, when the sudden change of climate from Boston to New Orleans, together with excessive practice, and an endeavour to extend her voice from a contralto to an available soprano, destroyed it altogether for all purposes. The buoyant energy which is Miss Cushman's characteristic, supported her through this painful disappointment. She retained her faith in the future, though thick gloom veiled it from her eyes; and confidence in her own powers, though the best field, as it seemed, for their exercise, was closed for ever. The advice of one whose judgment as well as friendship she could not

ided her on adopting the stage as a profession, and remaining in
 Orleans, which was to have been the scene of her vocal tri-
 umphs. She entered vigorously on the study of tragedy, secluding
 herself day after day in a garret, that she might be free from casual
 interruptions. The ambitious part of Lady Macbeth was the one
 which she selected for her *début* as an actress; and the perfect suc-
 cess which attended it fully justified her choice. It is recorded, that
 want of a suitable dress nearly prevented her appearance; that
 last hope rested on an appeal to the first actress of the French
 theatre, who not only lent the article, but exerted all her taste and
 industry in fitting it to the more slender form of her rival. The
 result was at least respectable, and the result was success. After
 a little time, Miss Cushman quitted New Orleans for New York,
 hoping to obtain an engagement at the principal theatre; but her
 reputation was not as yet established, and pecuniary considerations
 forced her to bind herself for three years to one of the minor
 theatres. Scarcely had she established her family with her, and
 entered on her new course of life, than she was attacked by severe
 illness. It was a critical point in her career; and deeply anxious to
 avoid the forfeiture of her engagement, she recommenced her duties
 with nerves unstrung and strength shattered. For a week she acted
 before crowded and approving audiences, supporting a fresh part each
 night; but a violent attack of fever prostrated her completely, and
 at the same juncture the theatre she was connected with caught fire,
 and her whole theatrical wardrobe perished with it. The fine spirit
 which had supported her in many emergencies did not desert her
 now. An interval elapsed, and then she reappeared before the public,
 introducing to their notice a younger sister of her own, Mrs. Merri-
 man, whose teacher she had been, and whom the desertion and
 subsequent death of her husband would have left uncared-for and
 unprotected, but for her own strong and tender love. The sisters
 found favour with the dramatic world, and the peculiar manner in
 which their talents were associated gave an additional interest to
 their acting. Miss Cushman was unwilling to deprive her sister of
 the opportunity of appearing in the principal female parts for which
 her grace and beauty rendered her eligible. She herself adopted,
 therefore, in several instances, the masculine character, and by this
 means was enabled to encourage the more fearful and timid nature
 whom it has been the great object of her life to foster and protect.
 Truly, if she needs an apology for "donning the doublet," her mo-
 tive will be accepted as a sufficient and a touching one. In 1845
 Miss Cushman came over to England; but as the result of this step
 was uncertain, she would not involve others in its risks, and landed
 on our shores solitary, almost friendless. Proposals were made to
 her by various managers, and after some uncertainty she accepted
 an invitation to the Princess's Theatre. One engagement succeeded
 another, and she acted there for eighty-four nights, evincing her varied
 capabilities as Lady Macbeth, Julia in the "Hunchback," Mrs. Haller,
 Matrice, Lady Teazle, Rosalind, and Juliana in the "Honeymoon."
 The warm reception which she met with in this country induced her

sister Susan (Mrs. Merriman) to join her, and they acted together at the Haymarket and in the chief provincial towns of Great Britain; the characters which they especially made their own being those of Romeo and Juliet. Miss Cushman returned to New York in 1849, but has paid us several visits since that; and during the season of 1854 added a fresh laurel to her wreath by a wonderfully vivid and powerful personation of Meg Merrilies. Her sister married Dr. Muspratt, of Liverpool, and continues to reside in that town.

D.

DUDEVANT, MADAME AMANTINE-AUORE, otherwise GEORGES SAND, Novelist, Dramatist, and Social Philosopher, of a royal descent through her paternal ancestor, Maurice, marquis de Saxe, well known to have been the son of Augustus II. king of Poland. The only daughter of this distinguished general was married, in 1739, to Count Arvid Bernard de Horn, once President of the Swedish Council, but afterwards disgraced for interference in political strife. On his death, the widow bestowed her hand on M. Dupin de Franceuil, *fermier-général*, and the fruit of this marriage was an only son, named Maurice, who became a volunteer in 1792 and attained the rank of captain under the Empire. He was killed by a fall from his horse, and left behind him one daughter, Amantine-Aurore-Dupin, the subject of this memoir, born in 1804. She was brought up at the Château de Nohant, situated in one of the fairest valleys in Berri, by her grandmother the Comtesse de Horn, a woman distinguished rather for brilliant wit than profound sentiment, whose mind was completely imbued with the paradoxes of her age, and whose religion was comprised in the philosophy of Jean-Jacques Rousseau. Her theories became, of course, exemplified in the training of the young Aurore, who, at the age of fifteen could ride and dance with ease and grace; could handle a gun, or brand a sword with equal dexterity; but who would certainly have been easier to follow the stag beneath the avenues of Marly, as her grandmother had done in days of yore, than to make the sign of the cross or to follow the avocations ordinarily pursued by young ladies of her own age and rank. That these Amazonian tendencies, however, by no means checked the growth of passionate intellectual tastes. We find a record in a passage from her works, which, if studied with some previous insight into the history of their author, reveals a phase of her outward and inward experiences. "Who is there among us," she says, in her "*Lettres d'un Voyageur*," "who fails to meet with rapture the first book which he devoured or tasted in his youth? How many a time has the dusty cover of an old volume found in some long-forgotten shelf, summoned up the sweet remem-

childhood! How often recalled the verdant plain bathed in the hues of eve, in which it was read for the first time, and the cruel speed with which the deepening twilight obscured those fine pages! And now the lambs are bleating, the sheep are in the field, the cricket chirps loudly on field, on hearth, the time for destruction has arrived! Unhappily, the path is rough and stony, and any a flowing rivulet obstructs the passage. Hasten as you may, your evening meal will have commenced, and the grandmother, invariable on a point of etiquette, will utter a reproach, slight and slender indeed, but more effectual than the severest punishment. Those happy times spent in my own fair valley! Oh, Corinne, Bernardine de St. Pierre, l'Iliade, Millevoye, Atala! Oh, the willows by the stream! and, alas! for my own faded youth!" In her intellectual, as well as her more active amusements, Mademoiselle Dupin was apparently abandoned to the guidance of fate and her own instincts; and there can be little doubt that much of that purity of moral principle, and many of those wild and erroneous theories which developed themselves in after-life, resulted from the restricted course of reading, which biased her feelings and imagination in girlhood. When Aurore had reached the age of fifteen, a malicious friend represented to the Comtesse de Horn that the education of Rousseau's Emile would ill accord with the new tone of thought and manners introduced by the Restoration, and the young lady was accordingly placed in the Convent of the Dames Anglaises at Paris, for the purpose of receiving that religious instruction which had heretofore been entirely neglected. Her ardent imagination was quickly impressed by the poetry of the Roman Catholic faith, she embraced it with her whole soul, and frequently, like Theresa, spent whole hours in ecstasy at the foot of the altar. On the death of her grandmother, to whom she was tenderly attached, heightened this religious ardour, and having quitted the convent to close the eyes of Madame Dupin de Franceuil, she returned to it with a full determination to take the veil. The authority of her family, however, obliged her to rescind this resolution, and, six months later, to give her hand to the Baron Dudevant, a man of mature years, and little calculated in any way to interest the affections of a young wife. He had formerly served in the army, but had abandoned the vocation for that of gentleman-farmer, which was highly congenial to his peculiar tastes. The fortune of his bride, which amounted to 20,000fr., enabled him greatly to extend his agricultural schemes; and having filled his folds with the finest Merinos, improved the quality of his ploughs, and doubled the number of his fields, he was in nowise troubled by the fact that Aurore, with her seventeen summers, her natural vigour of mind and sensibility of character, was leading a monotonous, neglected, and miserable existence. The consolation afforded by two beautiful children supported Madame Dudevant under her troubles for some time, but, wounded even through her natural affections, she sank at length under a severe attack of illness. The physicians of Berri prescribed, as a remedy, the waters of the Pyrenees, and, M. Dude-

vant being still absorbed in the occupations of rustic life, she spent
 alone on her southern pilgrimage. At Bordeaux, where she spent
 some time amongst various old friends of her family, she first saw
 the world in sunny guise, and was taught by the homage of society
 how prominent a part she was fitted to display in life's drama. It
 may be imagined that this initiation tended in no degree to recon-
 cile her to the comfortless home and the unappreciating husband.
 Vague ideas of revolt presented themselves, from time to time, with
 increasing force, notwithstanding her efforts to banish them by the
 sedulous cultivation of poetry, art, and science, and by the society
 of such friends as she could assemble around her. Amongst these
 was Jules Sandeau, a young law-student, who spent a vacation at
 Nohant, and was the first to direct the glance of its mistress to-
 wards that literary horizon which she was destined hereafter to ex-
 tend so greatly. This communion of mind left its traces in the
 heart of the young man, who returned to Paris burdened with the
 weight of a deep but silent attachment. It would seem that feelings
 of doubt and suspicion now aggravated the harsh characteristics of
 M. Dudevant, for their life became insupportable to both; and his
 wife, by the sacrifice of her whole fortune, procured his assent to
 separation. She hastened immediately to Paris, and once more
 entered the familiar precincts of the Couvent des Anglaises; but her
 mind had become too much habituated to stormy agitations to re-
 quiesce quietly in so calm a haven, and she longed for the busy turmoil of
 action and feeling. Mingled, however, with this stronger emotion, there was
 a yearning for the purer idols of departed days, a remorse for the
 betrayal, an acknowledgment of their power. "In the midst of these
 says, "of the fiery pleasures in which thou vainly seekest a refuge,
 the mysterious spirit of religion will seek to reclaim thee. Never
 shalt thou forget the divine sensations connected with this true
 faith! Thou shalt return to it from the caverns of corruption, and
 the voice which was raised to blasphemy shall unconsciously utter
 songs of love and enthusiasm." Madame Dudevant's next resolu-
 tion was to take a little garret in the Quai St. Michel, where to begin
 her struggling with absolute poverty, and forming plans with Jules
 Sandeau, whose worldly circumstances were no better than her own,
 for the supply of each day's necessities. The lady having a little
 skill in painting, accepted some employment offered by a dealer
 vender in ornamenting candlesticks and snuff-boxes; but this was
 some and ill-paid work fatigued without remunerating her. At
 the two aspirants for fortune resolved to seek advice from M. La-
 touche, the editor of "Figaro," on whom, as a native of Berry, they
 themselves, they seemed to have some small claim. He suggested
 literature as a profession, promising them an opening in his own
 publication; and thus originated that curious working partnership
 which so greatly mystified the Parisian press. A series of articles
 in "Figaro" were succeeded by a novel called "Rose et Blanche,"
 to which was appended the semi-real signature of Jules Sandeau.
 The authors having received 400fr. for this manuscript, devoted
 themselves for a time to a life of ease and gaiety, and it was at the

and that Madame Dudevant first outraged decorum by the assumption of male attire, intended to provide for greater independence of action. The proceeds of the work exhausted, Misery again knocked at her door, and the lady was advised to revisit Berri for the purpose of obtaining a legal separation, or at least an alimentary allowance from her husband. Before her departure, she arranged with the student the plan of a novel, certain portions of which were to be completed by each before their next meeting. The student did not fulfil his share of the undertaking; but on her return Madame Dudevant surprised him with the complete manuscript of "Indiana," which was sold for 600fr., and met with a startling success. It was the first book which introduced to the public the name of Georges Sand, for the young man being too honourable to accept a share of the glory he had neglected to earn, refused to permit their literary *nom de plume* to be used in this instance. Finding it impossible to shake his resolution, she contented herself with retaining the second part of the signature, and the discussion occurring on St. George's day, adopted that name as a prefix. After the publication of "Indiana," Georges Sand occupied a position in every respect suited to her rank; it was evident that Fortune had attached herself firmly to her chariot-wheels, and men of the world vied with men of talent in seeking admission to her society. The scene had changed, and with it the actors, as from this time forth Jules Sandeau, the solitary companion of her poverty, disappears from view. The next works which proceeded from her pen were "Valentine," published in the *feuilleton* called the "Revue de Paris," and "Lélia," in the "Revue des Deux Mondes;" which, though containing, like "Indiana," violent attacks on the institution of marriage, and which were therefore severely dealt with by a portion of the press, were extensively read and admired. After her journey through Italy in company with M. Alfred de Musset, Madame Dudevant produced "Le Secrétaire Intime," which was preceded by "André," "La Marquise," "Lavinia," "Métella and Antea;" all of which appeared in the *feuilletons* above mentioned. Between the years 1835-7 she added to this list "Leone-Leoni," "Jacques," "Simon," "Mauprat," "La Dernière Aldini," "Les Citres Mosaïtes," "Pauline," "Un Hiver à Majorque," and "Spion." During this period she instituted a legal process against her husband, for the purpose of regaining the possession of her fortune and the guardianship of her children. In these objects she was successful, as the proceedings revealed a course of neglect and positive ill-treatment on the part of M. Dudevant which, in the opinion of the tribunal by which the case was adjudicated, justified, at least excused, her own abandonment of home-duties. Thus her home once more became her home, and the two children, Maurice and Solange, continued her inseparable companions, even during her frequent visits to Paris and journeys abroad. The beneficial influence exercised on the mind and feelings of Madame Dudevant by the increase of pure domestic happiness, was afterwards evidenced in her exquisite creation, "Consuelo," and in several smaller works re-

markable for the purity and simplicity of their construction. When M. Lamennais established, about 1837, a journal called *"Le Monde,"* intended to defend the rights of labour against the oppression of capital, Madame Dudevant published in it a series of papers called *"Lettres de Murcie,"* which were successively followed by the following novels: *"Horace," "La Petite Fadette," "Le Compagnon du Tour de France," "Consuelo," "Jeanne," "La Comtesse de Randstadt," "Fanchette," "La Mare au Diable," "Le Pêche de M. Antoine," "L'Orco,"* and *"Les Maîtres Sonneurs."* After taking a prominent part during the Revolution of 1848 in the politics of the time, Georges Sand abandoned the career of political and social reformer for that of dramatic literature, and, after one or two comparative failures, achieved a great success in *"François le Champi,"* which was subsequently followed by *"Claudie," "Molière," "Les Vacances de Pandolphe," "Le Mariage de Victorine,"* and *"Le Pressoir,"* and *"Mauprat."* Her plays, previously to their representation in Paris, are usually acted and criticised in a little theatre attached to the Château de Nohant, which is now Madame Dudevant's ordinary abode. An interesting sketch of her present mode of life, which might almost be called patriarchal in its simplicity, has been afforded by a countryman of her own, which, as carrying her history down to the latest epoch, may serve to conclude this short memoir. Her income, we learn, amounts to some ten or twelve thousand francs a-year, and a large portion of it is expended for the benefit of the surrounding poor, who regard her in the light of a personal friend, to whom their troubles and necessities may be fearlessly confided. Her household is pervaded by an atmosphere of calm and freedom, which renders it charmed ground to the guests to whom the domestic circle is generally extended. The hostess herself rarely devotes more than five or six hours to sleep, the greater part of her time being still employed in literary composition. The breakfast-bell rings at eleven; but as Madame Dudevant seldom appears until the meal is partly over, and her daughter has quitted her mother's house for that of a husband, Maurice usually presides. After this meal, the châtelaine, accompanied by her favoured guest, takes a short ramble in a beautiful wood which forms part of her domain, but at the end of half an hour returns to her own apartment, leaving her guests to their own amusements for which ample facilities are provided. At six o'clock, which is the dinner-hour, the party assembles, and Madame Dudevant, though somewhat grave and quiet herself, listens with pleasure to the lively conversation which goes on around her. In the evening the assembly adjourns to the park, where games are instituted, singing parties formed beneath the trees. When out-door amusements are impracticable, the lady of the house places herself at the piano, where she improvises after the manner of her illustrious Liszt; or, it may be, reads aloud some recently-completed novel or comedy. At eleven o'clock books and work are put away, and six minutes, that most popular of diversions in France, help to pass the time till the clock strikes one, when each person betakes himself

his apartment. Occasional dramatic representations, in which Georges Sand herself takes part, vary the quiet routine of this peasant life, which contrasts pleasantly with the feverish scenes of her early history. The autobiography of her life, which has been long looked for, is now in course of publication in the pages of "La Cause:" a strangely varied and melancholy record it must needs be of one who, endowed with splendid genius, and recognising in the depths of her artist soul the true beauty of moral worth, has yet perverted her gift and betrayed her conviction. But as there is, happily, a bright phase in the nature of the woman, so is it with the author. Turning aside from those of her earlier works which are unworthy of her higher instincts, and from those of her later ones which are unworthy of her talent, we shall find among her charming stories of rustic life, and her art-novels, with their vivid pictures of Italian life and scenery, and fine conceptions of character, power and beauty which claim precedence for Georges Sand amongst the remarkable women of her age and country.

E.

EASTLAKE, LADY ELIZABETH, wife of the President of the Royal Academy, achieved, as Miss RIGBY, a considerable literary reputation by a work published in 1841, entitled "Letters from the Shores of the Baltic;" a pleasant and vivid record of a lengthened visit to a sister who had married an Esthonian baron, and had settled on the shores of that sea. Five years later, appeared "Finnish Tales" from the same pen, comprising the three graphic stories of "The Disponent," "The Wolves," and "The Priestess," which had been previously brought out in a distinct form, and had found favour with the public. Lady Eastlake has also been an occasional contributor to the pages of the "Quarterly Review." Two articles by her on "Dress" and "Conversation" have been reprinted, and form a number of "Murray's Home and Colonial Library."

ELLIS, MRS. SARAH. This lady is descended from a family bearing the name of Stickney, belonging to the Society of Friends, among whom she received her early education. She first made her appearance as an author in a series of small volumes intended for the amusement of young people, entitled "The Poetry of Life," &c. In the year 1837 she became the second wife of the Rev. William Ellis, a distinguished missionary to the South Sea Islands, and well known throughout the world as the author of "Polynesian Researches," and other able and interesting works. The peculiar bent of Mrs. Ellis's mind would appear to be eminently didactic, and the principal portion of her writings is devoted to the mental

and moral improvement of her own sex. In 1838 appeared "The Women of England," a work designed to enforce the moral responsibility attaching to them for the use of their "talent" of influence, either for good or ill, exercised on the world in general. In 1840 Mrs. Ellis published "Sons of the Soil," and in 1841 a graphic picture of life in the South of France, entitled "A Summer and Winter in the Pyrenees;" also, "Family Secrets," a series of tales in three volumes. In 1842 she addressed a volume of counsel and advice to "The Daughters of England;" and in the year 1843 two volumes respectively to "The Wives" and the "Mothers of England." She also published a small volume entitled a "Voice from the Vineyard." Mrs. Ellis has contributed many works to imaginative literature, in which the social questions of the day are very frequently discussed and a moral purpose aimed at; among them may be especially mentioned "Pictures of Private Life," which appeared in 1844; "Look to the End;" "Prevention better than Cure;" "Temper and Temperament;" "Social Distinctions;" "The Bennetts Abroad;" "Rawden House," etc. The principal works of Mrs. Ellis have passed through several editions in this country, and have attained a wide circulation throughout America, where their practical character renders them peculiarly acceptable.

EMBURY, MRS. EMMA CATHARINE, the daughter of Dr James Manley, an American physician of eminence, was born in New York, and at an early age contributed to the periodical literature of the day, under the name of "Ianthe." In 1828 she married Mr. Daniel Embury, a banker of Brooklyn, and a person of sufficient taste to appreciate the literary talents of his wife, and to encourage their exercise. A volume of her youthful compositions appeared a short time afterwards under the title of "Guido, and other Poems;" and many graceful lyrics, scattered here and there, tended to confirm her reputation for poetic feeling. Of later years, however, she has been chiefly known as a prose writer, having published "Constance Latimer, or the Blind Girl;" "Pictures of Early Life;" "Nature's Gems, or American Wild Flowers;" "The Walcott Family;" "Glimpses of Home Life," etc. More than a hundred and fifty short tales have likewise issued from her pen, and appeared before the public through various channels. Mrs. Embury has interested herself a good deal in the mental and moral improvement of her sex; she has written well on the subject of female education, and is said to have given evidence of the soundness of her views by the successful education of the three children who compose her family.

EUGÉNIE, EMPRESS OF FRANCE, and Countess-Dowager OF TÈBA, born May 5th, 1826, is the daughter of Donna Maria Manuela Kirkpatrick of Closeburn, Countess-Dowager de Montijo, Countess Miranda, and Duchess of Peraconda; member of the order of Maria Louisa and first lady of honour to the Queen of Spain. The father of this lady had been English-Consul at Malaga at the

tion of her marriage with the Count de Montijos, an officer in the Spanish army, belonging to one of the most ancient of the noble families of Spain. He was connected, more or less closely, with the houses of the Duke de Frias, representative of the ancient Admirals of Castille; of the Duke of Fyars, and others of the highest rank, including the descendants of the Kings of Arragon. The death of this nobleman, which occurred many years ago, left the Countess Montijos a widow, with a fortune adequate to the maintenance of her position, and two daughters, one of whom married the Duke of Alba and Berwick, lineally descended from James II. and Miss Churchill. For Eugénie, the second, a still higher destiny was reserved. In 1851 the Countess Téba, accompanied by her mother, paid a lengthened visit to Paris, and was distinguished at the various entertainments given at the Tuileries by the dignity and elegance of her demeanour, and by great personal beauty, of the aristocratic English rather than the Spanish type. Her mental gifts were proportionably attractive; and she is reported to be naturally *spirituelle*, and her education, partly conducted in England, was very superior to that generally bestowed on Spanish women, who seldom quit the precincts of their native country. Shortly after the opposition of the other Northern Powers had put an end to the idea of a union between the Emperor Louis-Napoleon and the Princess Carola Wasa of Sweden, he apprised the council of ministers of his intended marriage with the daughter of the Countess Montijos; a measure which excited some disapproval among them, and even led to their temporary withdrawal from office. During the short time which intervened between the public announcement of the approaching event and its realisation, the Countess Téba and her mother took up their abode in the palace of the Elysée. The marriage was celebrated at noon on the 29th of January, 1853, at Notre-Dame; and the Emperor and Empress, after making their appearance some hours later on the balcony of the Pavillon de l'Horloge at the Tuileries, to receive the acclamations of the multitude, adjourned to the comparative seclusion of St. Cloud. It is almost unnecessary to allude to the magnificence of the preparations made for the ceremony, as they are sufficiently recent to be fresh in the memory of the reader. However, the one item of 4600 francs, expended in Point d'Alençon lace, will suffice to give an idea of their character. Although a union which should have added to the political importance of the nation might probably have been more immediately acceptable to it, no mark of honour and loyalty was withheld from the Imperial bride. The dotation asked for her of 130,000 francs per annum (the same sum which had been granted to the Duchesse d'Orléans) was eagerly accorded; and the municipal council of Paris voted 300,000 francs for the purchase of a *parure* of diamonds, as a present from the city to the Empress. It may be imagined how much enthusiasm was excited among so impressible a people as the French by the purport of a letter which she addressed to M. Bezet, prefect of the Seine, in reply to this proposal. After warmly thanking the council for their token of regard, she declined the rich gift; alleging that the city was already overburthened, and that the sum in

question would be more usefully employed in the foundation of some charitable institution for the poor and destitute. In accordance with this suggestion, the money was devoted to an establishment for the maintenance and education of sixty young girls from the working-classes of Paris. The life of the Empress Eugénie since her marriage has been comparatively uneventful; made up of the ordinary routine of state etiquette; of migrations to the various royal *maisons-de-plaisance*, varied by an extended progress through France in company with her husband; and a sojourn for the benefit of her health at Biarritz in the Pyrenees, which has been an association for her, having been the favourite summer resort of her family in the days of her girlhood. On the 16th of April, 1854, the Emperor and Empress of the French arrived in England on a short visit to the Queen, during which they proceeded in state to the City, visited the Crystal Palace, etc., their stay terminating on the 21st inst.

F.

FRANKLIN, LADY JANE, must ever remain associated in minds with the hopes and fears that have been for so many years alternately aroused for the courageous men who embarked for the Arctic Regions in 1845 under the command of her husband, Sir John Franklin. The resolute efforts made by his wife to increase the possibility of their rescue have linked her name more closely with that of her lamented husband than the ordinary circumstances of her life could ever have done. The daughter of John Gifford Esq., of Bedford Place, this lady became the second wife of Sir John Franklin on the 5th November, 1826, and in 1836 accompanied him to Van Diemen's Land, on his appointment to the Government of that colony. Nine years later he started on his third and last expedition to the Northern Seas, and it was at the time when serious apprehensions were first entertained respecting the fate of the *Enterprise* and *Terror*, that Lady Franklin's name became familiar to the public. In the spring of 1848 she offered rewards of two and three thousand pounds to any persons discovering or affording relief to the missing party, or making any extraordinary exertions with this object. And later she addressed a moving appeal to the American nation, through the President of the Republic, for active co-operation in the search, which it will be remembered was nobly responded to by Mr. Fillmore on behalf of his country. In April, 1850, a branch expedition in aid of that which had been sent out by Government was determined on and organised by Lady Franklin; 2500*l.* out of the 4000*l.* expended in fitting out the *Prince Albert* having been contributed from her private purse. On the return of this little vessel from its first voyage she succeeded in raising sufficient funds to despatch it a second time.

1851; and it was as a member of this expedition that Lieutenant Colmet met the fate which excited such universal commiseration in England. It may be truly said, that no chance which could be won by her own efforts has been neglected by Lady Franklin. Her whole life during these long, weary years of uncertainty, has been devoted to this good work. She has maintained a voluminous correspondence on the subject with every quarter of the globe; she has travelled from port to port, bidding 'God speed' to those who went forth on their errand of mercy; she has, in fact, helped, by her own unwearied energy, to sustain that of the nation. The deep regret excited by the recent confirmation of its worst fears has been united with a feeling of sympathy for the woman, who has not only *felt* and *suffered*, but has *acted* wisely and well.

FULLARTON, LADY GEORGIANA, formerly LADY GEORGINA LEVESON GOWER, is the second daughter of Earl Granville, who was for some years ambassador at the court of France under the Orleans dynasty. She was married at Paris, in the year 1833, to Captain Alexander Fullarton, eldest son of George Fullarton, Esq., of Westwood, Hampshire, and Ballintoy Castle, Ireland. Her career as an authoress commenced with a novel entitled "Ellen Middleton," published in 1844. This work, a domestic story of the present day, excited great attention in the reading world, and met with a peculiar welcome from that comparatively limited class in which a skilful analysis of feeling is more deeply attractive than an intricacy of plot or the skilful conduct of a story. Simple construction, unexaggerated yet pathetic in tone, the interest is sustained unflaggingly to the last page, although the authoress venturied on the unusual experiment of revealing the main incident of the book in its earliest chapters. Lady Georgiana Fullarton's second work, also a novel, called "Grantley Manor," and bearing on the war of the Crimea, affords some beautiful contrasts of character and great evidence of constructive skill; its successor, "Lady Bird," a tale, published in 1852, after the author's conversion to Catholicism, may be designated that rarely merited epithet a "prose poem;" inspired, by the power of a delicate and earnest imagination, illustrative of the busy warfare of human emotion.

G.

GASKILL, MRS. L. E., the Author of "Mary Barton," is the wife of a minister of the Unitarian persuasion, residing at Manchester, and one of the writers to whom we now look most confidently for the advancement of our imaginative literature, and its bias in a right direction. Her great talent and knowledge of certain phases of life have been conscientiously and powerfully exercised for the remedy of

particular evils in our social system ; and the influence of her representations might probably be traced among the writers as well as readers of the day. Mrs. Gaskell's first work, " Mary Barton," appeared anonymously in 1848, but it needed no support beyond its own merits to secure for it immediate popularity and approval. In this picture of Manchester life among the working classes, the facts of personal observation are presented by the authoress with a frank truth, which makes itself felt as such, and are interwoven in a story of great pathos and power. " The Moorland Cottage," a simple little Christmas book, in which the stereotyped form of self-sacrifice peculiar to works of fiction is abandoned for something nearer nature, followed in 1850. Two years later appeared another novel, called " Ruth," in which we have temptation, error, the harsh dealing of that class of society which acknowledges not the mitigation of circumstances, admits not the expiation of repentance, contrasted with the working of that far purer code of ethics founded on the charity of the Bible. Mrs. Gaskell has likewise published some sketches of life in a village, which were contributed to " Household Words" under the title of " Cranford ;" and quite recently a tale in two volumes, called " North and South," in which she returns to familiar ground,—the manufacturing districts of Yorkshire,—carries her readers through the painful details of a " strike," and enters in detail on the duties and relative position of " master" and " man."

GILLIES, MISS MARGARET, was not educated with a view to a professional life, for her family belonged to a class in which daughters are seldom required to create an independence for themselves ; nevertheless, the genius for which she is now distinguished was manifested from her childhood. She was always drawing : sometimes copying from the pictures or the fine collection of engravings to which she had access in the house of the near relative in Scotland with whom she chiefly resided at that period ; sometimes taking portraits of the numerous visitors, who seldom suspected that they were acting as sitters to the little girl at work with her pencil and paper in a quiet corner of the room. Whatever might be the faults and deficiencies of these early productions, they generally caught the characteristic expression of their subjects. Then, as now, whatever else might fail under her hands, the expression of the faces was right, but then it was often comic and humorous. She is now eminently distinguished for delineating emotions of earnestness and deep pathos. When, after leaving her early home in Scotland, family reasons and domestic circumstances called on her for exertion, Margaret Gillies at once applied herself to the study of painting. She did not happen at first to fall into the hands of a good master, a misfortune which has caused her much regret, and considerably retarded her progress. After some time, however, she became a pupil of Frederick Cruikshank, and devoted herself to miniature painting, in which she made satisfactory progress. In this branch of art she soon acquired a good position in the Royal Academy, which she has steadily maintained. But she has not confined herself exclusively

this branch of her profession. She has also studied oil-painting, first in London, and afterwards, for a short time, in Paris, under Henri Scheffer; enjoying the great advantage of frequenting his studio, and that of his celebrated brother Ary Scheffer. She has exhibited several successful portraits in oils, and her later studies give a fair promise that she may, if she chooses to devote her time to it, attain a high position among painters of fancy or subject-pictures in oils. At present, however, she is best known as a painter in water-colours. She was elected, about three years since, a Lady Member of the Old Society of Painters in Water-colours, and in the three exhibitions of this institution, to which she has been a contributor, her pictures have attracted much attention, and have been generally admired, for the skill of their grouping, their correct drawing, high finish, and graceful draperies; but above all, for the power and depth of their expression. It is as a painter of mind and emotion that Margaret Gillies is chiefly distinguished, and is attaining a growing reputation.

GLYN, MISS ISABELLA, an Actress of great and versatile talent, was born at Edinburgh, May 22d, 1823. The strict Presbyterian views of her family led them very seriously to oppose her inclination for the stage when it first developed itself; but the feeling continued to gather strength, and one or two accidental circumstances tended to foster it. On the occasion of a visit to England, chance threw her among a company of amateurs, who were engaged in getting up a performance for the St. James's Theatre, and she was induced to undertake the leading female character. During a subsequent residence in Paris, under M. Michelot, of the Conservatoire, she commenced her education for the French stage; but the failing health of a near relative necessitating her return home in 1846, she was advised to remain, and to devote herself wholly to the English drama. Miss Glyn's reputation for talent having spread widely in literary circles, she attracted the attention of Mr. Charles Kemble, who volunteered to aid her from time to time in the study of Shakspeare, and interested himself most warmly in her subsequent career. On the 8th November, 1847, Mr. Kemble's influence secured for his pupil a hearing at the Theatre Royal, Manchester. Her success in the part selected, that of Lady Constance in "King John," obtained for her an engagement at the Olympic, where she appeared as Lady Macbeth, and Juliana in the "Honeymoon." On the retirement of Mrs. Warner from Sadler's Wells Theatre, Miss Glyn was invited to fill the vacancy, and opened her series of performances in September, 1848, as Volumnia, in "Coriolanus." The favourable impression made by her in this character was confirmed by her representation of Hermione, Belvidera, and Queen Catherine. Her performance of the last-mentioned part presented certain fine characteristics of the Kemble school, in which she had partially graduated. During the season of 1849 she supported not merely her old characters with increasing effect, but various fresh ones, among which should be especially enumerated those of Margaret of Anjou;

Portia; Isabella, in "Measure for Measure;" Emilia in "Othello;" Cleopatra; and Julia, in the "Hunchback;" which last had been suggested as an experiment, after the admirable conception of the comedy afforded in her acting of the earlier scenes of Antony and Cleopatra. During the third year of her performances Miss Glyn achieved a new triumph in Southern's tragedy of "Isabella" which has been traditionally regarded as the test of the power of a great actress. As Bianca, in "Fazio," she revealed an amount of mental and physical force for which her admirers were even then unprepared; and in 1852 put the crowning point to her professional career by her representation of the part of the Duchess of Malfi in Webster's celebrated play of that name. Miss Glyn's physical organization is peculiarly adapted for the majestic characters of tragedy, and combined as it is with great intellectual energy, has elevated her to a high position in this branch of dramatic art. Her labours have passed exclusively in the study and practice of her profession. The fame which she has won she has earned. Her excellence as an artiste is based on principles, not impulses; and each new character she personates is merely a fresh application of them.

GOLDSCHMIDT, MADAME (*née* JENNY LIND), a Vocalist, whose refinement and originality have procured for her an unprecedented measure of popularity, was born October 21st 1821, in the city of Stockholm, where her father gave instruction in languages and her mother carried on a school for young children. Although surrounded by no external influences likely to have engendered a love of music, she gave evidence of the most passionate feeling for it, even in her earliest years; and, when only three years of age, could remember and sing correctly any melody which she had the opportunity of once hearing. The silver tones of her voice were the accompaniments of all her childish occupations; and in sorrowful joys and sorrows which impressed her susceptible nature found their best utterance. At nine years of age Jenny Lind became a thoughtful girl, whose countenance, though unadorned by beauty, indicated a depth of feeling and intelligence beyond her years. She was then introduced to Madame Lundberg, a favourite actress at the Stockholm Theatre. This lady was charmed and astonished by the young singer, and urged her parents to lose no time in preparing her, by a course of good musical instruction, for the great stage, of which there was little doubt that she would one day become a brilliant ornament. The strong prejudices entertained by her mother against this profession were, at length, overcome by the entreaties of Jenny and the arguments of Madame Lundberg, who extended her kind offices still further, by introducing her to Croelius, an experienced musical teacher of great renown in Stockholm. Struck by the facility with which the young vocalist performed the exercises set before her, and auguring great things for her future career, he took her to Count Pücke, at that time the manager of the Court Theatre; but this interview seemed unlikely at first to terminate favourably for her hopes. The Count, however,

ed to the finished *tournaire* and self-possessed manners of experienced public favourites, looked somewhat contemptuously on the silent and unattractive child, and inquired of Croelius what characters he imagined her capable of sustaining on the stage. Struck, however, by the persistence of the teacher in his prophecies of future eminence, Count Pücke consented to hear her sing, and, awakened like her previous auditors to a perception of her remarkable gifts, no longer hesitated to admit her among the pupils of the Musical Academy. Here her progress was rapid, and she was soon deemed qualified to make her appearance on the stage, where she gained in juvenile parts a popularity as great as that enjoyed in Paris by Léontine Fay and Déjazet, some years previously. Jenny Lind, as for them, vaudevilles were expressly written; the truth of her dramatic conceptions, as well as the originality of her style of acting, secured for her the reputation of a prodigy. Her professional talent, together with the modesty and amiability of her demeanour, procured her admission on terms of intimacy into the higher circles of society, and in many of the principal saloons of Stockholm she was a frequent and a welcome guest. Meanwhile her musical studies were unremittingly pursued, and the foundation laid of her present artistic excellence. So passed the time until her twelfth year, when the sunshine of Jenny's life became overcast. She had outgrown her childish parts without becoming sufficiently mature in age and appearance to sustain more ambitious ones. But a still greater misfortune supervened; the upper notes of her voice lost their silvery sweetness, and the hope of training her as a singer for the Grand Opera was abandoned. She was now seldom seen on the stage, the memory of her triumphs almost passed away, and forbidden to exercise her voice, the only consolation left to the disappointed girl was the continuance of her instrumental and theoretical musical studies; which she devoted herself for the space of four years. It happened towards the close of this period that the fourth act of Meyerbeer's "Robert le Diable" was announced, as a part of the intended performance at a grand concert. The female vocalists of Stockholm having been found unwilling to accept the part of Alice, to whom, in this act of the opera, very little is assigned by the composer, Berg, the Director of the Academy, thought of his former pupil, Jenny Lind. She embraced his proposal with eagerness, though looking forward with nervous agitation to the fulfilment of her task. On the appointed evening she sang the few bars allotted to her, and it almost seemed as though a miracle had been wrought in her favour. Every note of her register had recovered its power and purity, and a torrent of applause followed the execution of the little solo, which had been rejected by so many singers as unworthy of their powers. Great was the surprise and happiness of Jenny Lind when, on the following day, Berg informed her that she was considered qualified to undertake at once the part of Agatha, in Weber's "Frieschütz," to which her hopes and desires for many years had been directed. This character was the one

which had first awakened her sympathies; the laborious study of it had been with her a labour of love; the thought of one day representing it worthily the aim of her professional ambition. Her discouragements and disappointments were all forgotten when the dreams of her youth were at length realised, and she appeared before the public as Agatha with a success which determined her subsequent career, and has ever induced her to regard this character as the keystone of her fame. For a year and a half she continued the star of the Opera of Stockholm, performing in "L'Érymanthe," "Robert le Diable," "La Vestale" of Spontini, and other operas, and labouring meanwhile with indefatigable diligence to remedy certain natural deficiencies in her organ. Always pure and melodious in tone, it was originally wanting in elasticity; she could neither hold her notes to any considerable extent, nor increase and diminish their volume with sufficient effect: but undaunted by difficulties, she worked out her voice as a sculptor labours on a block of stone, and ultimately achieved that brilliant and facile execution which, it is now difficult to believe, was partially denied her by nature. When the young vocalist felt that she had profited to the utmost by the instruction accessible to her in her native city, she was yet sensible that vast improvement might be derived from the study of those great models of her art who are to be met with in other capitals of Europe. The great desire of her soul was to become a pupil of Garcia, esteemed the greatest singing-master in the world; but the difficulty of providing for the expenses of her residence in the French capital, where she would no longer derive her usual income from the Stockholm Opera, for a time prevented the accomplishment of her wish; since her proud spirit recoiled from the idea of dependence on others. Fortunately, an expedient presented itself to her mind, which enabled her to carry out the secretly cherished project. During the recess, when the operatic season had closed, Jenny Lind, accompanied by her father, visited the principal towns of Norway and Sweden; giving concerts to crowded audiences, and amassing by this means a fund adequate to her probable necessities. Having obtained leave of absence from the manager of the Opera, and bidden adieu to her parents, whose avocations did not permit them to accompany her, she started alone for Paris, full of enthusiasm for her art and eager anticipations of successful labour. Her first visit on arriving at her destination was to Garcia, who gave her a kind reception. He listened without a word or gesture to her singing, and when, full of feverish anxiety, she awaited his *dictum*, said calmly, "My good girl, you have no voice, or I should rather say you had a voice, but are now on the point of losing it. Your organ is strained and worn out; and the only advice I can offer is to recommend you not to sing a note for three months; at the end of that time come to me again, and I will do my best for you." These three winter months were spent by Jenny Lind in the deepest retirement. "I lived on my tears and on the recollection of my home," were her own words in reference to this melancholy period of her life. At

expiration of the allotted time she paid her second visit to Garcia, who pronounced her voice to be greatly improved and susceptible of continued cultivation. Although she profited marvelously by the teaching of the great *maestro*, and composed cadences and ornaments which he himself considered worth copying, yet he did not anticipate for his young Swedish pupil any great distinction in the musical world; and Jenny Lind has frequently remarked that, next to herself, Garcia was the person who, of all others, would have been most surprised at her triumphs, had he lived to witness them. About a year after her arrival in Paris, she was introduced by a Swedish composer of some eminence to Meyerbeer, whose discriminating judgment gave him immediate insight into her peculiar excellencies. After a performance at the Opera House, arranged by him for the purpose of testing the power of her flute-voice, he proposed to engage her at once for Berlin; but personal feeling, as well as a promise to the manager at Stockholm, summoned her homewards, and at her reappearance, a short time afterwards, in her native city, she enjoyed the triumphant reward of her persevering efforts. Having received from Meyerbeer an invitation to the opening of the Opera House in Berlin, which was so flattering and advantageous to be declined, Jenny Lind proceeded, in August 1844, to Dresden, where that great composer was busily engaged in concluding his last new opera. Here her time was devoted to the study of her part and that of the German language, with which she was entirely unacquainted; and not even the encouragements of those whose opinion she most respected could render her insensible to the ordeal she was about to undergo in submitting herself to the severe laws of musical criticism in Berlin. The parts she sustained during this visit were those of Vielka, in the "Camp of Silesia," and Norma. With each performance her fame extended more widely, and soon secured for her many brilliant offers of engagements, which were, however, relinquished in favour of her native country. In the summer of 1845 Jenny Lind was invited to the fêtes on the Rhine given by the King of Prussia in honour of the Queen of England; and on that occasion visited Frankfurt and Cologne. During the following winter she sang at Berlin, and subsequently in Vienna, where she appeared for the first time, in April 1846, in the character of Norma. Never had the debut of a prima donna excited such intense interest as did that of the Swedish songstress in this most musical of cities; and never, perhaps, had it been aroused to greater enthusiasm. Mademoiselle Lind first sang before an English audience at Her Majesty's Theatre in the May of 1847, in Meyerbeer's "Robert le Diable." On being dragged on to the stage, as the part of Alice demands, her composure was for a moment shaken by the warm reception awarded her on the strength of her continental reputation; but this emotion was transient, and the musical amateurs and critics whom the occasion had assembled, soon acknowledged, on the strength of their own judgment, that another great artiste had appeared amongst them. The *furor* of delight excited by her vari-

ous representations of Marie in "La Figlia del Reggimento," and in "La Sonnambula;" and, to a lesser degree, in the opera of "Norma" and "I Masnadieri," is within the immediate memory of the reader; but the immense sums offered for boxes during her engagement, the number of hours patiently spent by her devotees before the unopened doors of the Opera House, on the chance of a place in the parterre, and the general insignificance assumed by every other subject in comparison with the one, could scarcely be realized now that the effervescence of feeling has passed away. At the close of the operatic season, the Nightingale appeared on several occasions in the provinces, creating an electrical sensation; and afterwards proceeded by way of Berlin to Sweden, where she passed the winter. The anxious doubts and fears of the English musical world were happily set at rest in the following spring by her re-appearance under Mr. Lumley's management. During this visit she added to her former repertory the characters of Lucia in "Lucia Lammermoor;" Adina in "L'Elisir d'Amore;" Susanna in "Le Nozze di Figaro;" and Elvira in "I Puritani." The unsettled state of the Continent in 1848 probably decided Jenny Lind's continuing in England. During the autumn and winter she undertook an extended provincial tour, sometimes singing in her dramatic characters, but more frequently at concerts and oratorios. Finally, in the succeeding April, she re-appeared in London on a limited number of nights, taking her final farewell of the English stage on the 10th of May, in her original character of Alice. The close of this year found her in Germany; and at Lubeck was concluded the treaty with Barnum, the exhibitor of "Tom Thumb," which resulted in the least dignified scene of her career, namely, a visit to America under his auspices. The terms agreed upon were the payment, by Mr. Barnum, of one thousand dollars, or two hundred pounds, for each of the hundred and fifty concerts at which Mademoiselle Lind was to sing; and also the whole personal expenses of her party. Accompanied by MMs. Benedict and Leitch, with whom distinct engagements had been made, she reached New York in September, 1850, meeting with a very tumultuous reception as every means of exciting the public curiosity had been resorted to by the manager of the enterprise. In pursuance of the agreement she sang in various parts of America; the first tickets for her concerts obtaining, on more than one occasion, such fabulous prices as six hundred dollars, and the admiration excited by her vocal powers being such as to interfere considerably with her personal comfort. In June, 1851, Jenny Lind availed herself of an article in the agreement, which enabled her to conclude her engagement prematurely, and by a sacrifice of some thirty thousand dollars dissolved her partnership with Barnum after the ninety-fifth concert, and continued the series on her own account. Some months afterwards various floating rumours were confirmed of her marriage to M. Otto Goldschmidt, a German pianist, whose graceful and finished style he obtained for him considerable applause in London, at the concert of the Musical Union, in 1849. Madame Goldschmidt retained

Europe in 1852, but during her brief sojourn in England and Germany rejected every proposal for a public appearance. Excepting on the occasion of concerts given at Vienna, Hamburg, &c., she has confined herself strictly to the retirement of private life up to the present time, when her re-appearance in London and the admirable execution of our finest sacred music have revived the general impression of her genius. To define the qualities of this genius, in which each individual might perceive some different charm, would be a rash attempt. Apart from those attractions which are purely vocal, her intensity of feeling, which displays itself in a simple earnestness entirely removed from the passionate fervour of the South, is, perhaps, the key to her influence over the souls of others. This is confirmed by the delicate refinement of her artistic taste, and a certain genial charm which is all her own. These things combine to make up a great gift, which has been not only used for the benefit as well as the pleasure of thousands. During Jenny Lind's visits to England our local charities have benefited to the extent of some eight or ten thousand pounds by her voluntary exertions on their behalf. A like sum was distributed in various cities of America, and a third donation of the same amount has since been placed in the hands of the Swedish Government, to be employed in the foundation of free primary schools in localities where the number is deficient. Chronicled thus in the hearts of future generations, the memory of the benefactress will be fresh and green when, perhaps, only a few vague legends stand between the singer and oblivion.

GORDON, LADY LUCIE DUFF, daughter of Mrs. Austin and wife of Sir Alexander Duff Gordon, a gentleman holding an appointment in the Treasury, has for some years followed in the footsteps of her mother as a very careful translator, and, like her, has introduced some valuable works to the acquaintance of English readers. Among these may be enumerated Niebuhr's "Greek Legends," a little volume published during her girlhood; "The Amber Witch," and "The French in Algiers;" each forming a part of "Murray's Colonial Library;" an abridgment of Fuerbach's "Criminal Trials;" Ranke's "History of Prussia;" "Stella and Annessa," a novel, rendered from the French of Léon de Wailly; "Ferdinand and Maximilian," by Ranke; "The Village Doctor," by the late Comtesse d'Arbouville; and, finally, Moltke's "Russian Campaigns of 1828-9 on the Danube," which appeared during the summer of 1854.

GORE, MRS. CATHERINE GRACE, the most productive of our female writers, and the authoress of some of the most brilliant novels in the language, was born at the close of the last century, and published her first work, "Theresa Marchmont, or the Maid of Honour," about the year 1823, soon after her marriage with Mr. Charles Gore, a gentleman of good family, and at that time holding a commission in the army. This highly-finished and

dramatic little story was written in a week, and gave the earliest evidence of that wonderful fertility of idea and rapidity of execution which has enabled Mrs. Gore not unfrequently to become her own rival in the fields of literary competition. A single volume, comprising two stories, of the times of Louis XIV. and the first French Revolution, entitled "The Lettre de Cachet," was her next work. It made its appearance in 1827; and was succeeded by "Hungarian Tales," a series, which, in the guise of graceful, touching, imaginative narratives, disclosed to our view, almost for the first time, a picture of the national and domestic characteristics of this isolated people. These volumes are memorable, also, as exhibiting the power, nay, the early tendency of Mrs. Gore's mind to form higher and more poetical conceptions of human character than those she has afforded, as the chronicler of fashionable life, with its vices, follies, and amusements. It was in the year 1828 that a clever, sparkling novel, called "Women as they are, or Manners of the Day," introduced her to the reading world as a representative of that peculiar class of fiction; and her pre-eminence in it was confirmed a little later by the publication of "Mothers and Daughters," a tale of 1830. As the individuality of this last novel consists less in the plots than in clear sketches of character (belonging to a particular order); in brilliant maxims of worldly wisdom, and flashes of epigrammatic wit, emitted with a prodigality that perhaps no other writer of the day can afford to imitate. The attempt to analyse her multifarious productions would be a fruitless one. Of "Mothers and Daughters" it will be sufficient to remark, that it has become a standard work, and was the one on which the authoress based her claims on public attention for many years. After writing three volumes of short tales and sketches, called "The Fair of Mayfair," Mrs. Gore took up her abode for a time on the Continent, which may account for a very unusual interval in the appearance of her works. In 1836 she came before the public once more, as the acknowledged author of "Mrs. Armytage, or Female Domination," one of her most successful efforts; and as the anonymous writer of "The Diary of a Desennuyée," which was rather inferior to it in merit; "Stokeshill Place, or the Man of Business;" and a collection of tales under the title of "Marion Raymond" came out in 1837; together with the "Memoirs of a Peeress," edited by Lady Charlotte Bury, with a view of gratify the public in regard to its authorship. This work formed one in a chain of fashionable novels, concerning which extreme interest and curiosity was aroused at the time by the supposition that they were closer transcripts of actual life than could be acknowledged by an unknown author. To this rival though contemporary series Mrs. Gore's works belongs "The Diary of a Desennuyée," already mentioned, and "The Woman of the World," which appeared in 1838, about the same time with the "Heir of Selwood," and the "Rose-Fancier's Manual." The former is distinguished by a more prominent and romantic plot, more earnestness of description—perhaps less piquancy of style—than its predecessors generally.

though many clever glimpses of English and Parisian society are
 interwoven with the story. The botanical work was merely a trans-
 lation from the French, and was not sufficiently practical in its
 details to have become an authority on the subject of rose culture.
 In 1839 we have "The Cabinet Minister;" "Preferment, or My
 Uncle the Earl;" and "The Courtier of the Days of Charles II.;"
 followed by "The Dowager." The year 1841 was a memorable one
 in Mrs. Gore's literary history, inasmuch as it witnessed the pro-
 duction of "Cecil, or the Adventures of a Coxcomb;" which took
 the world by storm; winning the favour of the many by the brilliant
 variety of its narrative, and of the few by those fine allusions and
 touches of social wisdom with which it abounds. The authorship of
 "Cecil" was at first attributed to masculine genius, from the inti-
 mate knowledge of club life which it displayed, and likewise on the
 score of its learning; for the latter, however, Mrs. Gore is said to
 have been indebted to the author of "Vathek." "Cecil, a Peer,"
 the sequel to "Cecil, a Coxcomb," was published a few months
 afterwards, but neither deserved nor secured an equal measure
 of popularity. The pen of this indefatigable writer had, meantime,
 supplied the result of her acquaintance with French society in the
 shape of "Greville, or a Season in Paris;" followed by "The
 Man of Fortune," and "The Lover and the Husband," a free
 translation of Charles de Bernard's powerful story of "Gerfarut."
 In 1842 we have two novels from her pen, called "Fascination"
 and "The Ambassador's Wife," the latter being a picture of things
 as they are, or might be, among the aristocratic classes in Russia;
 and during the following year, "The Banker's Wife," "The
 Money-Lender," "The Birthright, and other Tales," "Modern
 Chivalry," and "The Inundation, a Christmas Story;" succeeded
 by "Agathonia," a romance of the early days of Rhodes. In 1845,
 the author of "Cecil" appeared once more before the public
 with a novel entitled "Self," which scarcely realised the expect-
 ations created by the success of its predecessor. At the same time
 Mrs. Gore continued the series of her acknowledged works by "The
 Queen of Denmark," an historical novel; "The Story of a Royal
 Favourite;" and "The Snow Storm," a Christmas book. These
 were succeeded by "Peers and Parvenus," "Men of Capital," "The
 Debilitate," and "Sketches of English Character," in two volumes,
 collected from "Heads of the People," a periodical work illustrated
 by George Cruikshank and others. Within the last few years she
 has produced "Castles in the Air," "Temptation and Atonement,"
 "The Diamond and the Pearl," "The Dean's Daughter," "Mam-
 mon," etc. To the long catalogue of works published at various
 periods it also remains to add "The Soldier of Lyons," "The
 Hamiltons," "New Year's Day," a tale in one volume; "The
 Valerians," "The Opera," "Pin Money," "Polish Tales," "The
 Popular Member," "Romances of Real Life," and "The Sketch-
 book of Fashion." It has been observed with truth, that Mrs.
 Gore is one of those authors on whom a reader may confidently
 repose. Within the range of her capabilities she has her talent

ever at command, and though one of her novels may be more interesting in its story, or have that story better developed than another, yet beyond such a difference we have little to fear from shortcomings or to hope from exceedings in the perusal of her ~~some~~ writings. Rapid and profuse as has been her expenditure of talent, there is little abatement of her accustomed measure of excellence. The same clearness of conception and vigorous rendering of character, the same happiness of style, remain; and if her somewhat circumscribed views of society tend to repetition, the richness of details amply compensates for the scantiness of the material. That happy quaintness, too, flows on unexhausted, which by a single word changes the current of the reader's thoughts, and running before his foregone conclusions, brings him to another point from that to which the sentence is apparently tending; and she thus keeps alive attention as of old, in that state of mitigated excitement more agreeable to the present generation than intenser emotions, whether of mirth or sadness. Large-minded in every sense of the term, liberal and clear-sighted in her views of life, it is impossible to doubt that, had circumstances not induced Mrs. Gore to devote her talent to the acquirement of present popularity, it might have formed no unimportant agent in the regeneration of contemporary literature, and by its means, of that society which she has contented herself with describing. It must be acknowledged, however, that in all this lady's pictures of fashionable life there is a covert satire that would fain point a moral; but, unhappily, the illustrations are too often endowed with a charm that might substantially neutralise the effects of her warnings. Of Mrs. Gore's domestic life it merely remains to add, that a considerable part of it has been passed abroad; and that the death of her husband, who had long been a confirmed invalid, left her a widow some years since, with two children—a son and a daughter. Miss Gore married recently the Hon. and Rev. Lord John Thynne.

GRISI, SIGNORA GIULIA, who reigned for twenty years in London and Paris the Queen of the Italian lyric drama, scarcely equalled, and never surpassed, by any living artiste, in her representation of its grandest tragic episodes, is the daughter of an officer of Engineers in the service of Napoleon, and was born at Milan, on the 10th of St. Giulia, in 1812. Niece of the celebrated singer, Josephine Grassini, and younger sister of Giuditta Grisi, a *mezzo soprano* of considerable reputation at that time in Italy, the young Giulia seemed born to vocal honours. As a little child, however, she displayed no musical qualifications beyond the possession of a very quick ear, for her voice was affected by a chronic hoarseness of so obstinate a character as to give rise to fears of decline. Great care and attention at length removed these premonitory symptoms; but even then, no promise of her future eminence entered the minds of her parents, who considered that the mantle of Grassini had fallen on Giuditta. The talents of this elder sister had developed themselves early; and at the age of sixteen her reputation as a concert singer was established at Milan.

Two years later, in 1823, she made her *début* on the Vienna stage, in Rossini's "Bianca e Faliero," and afterwards sang successively at the theatres of Milan, Parma, Florence, Genoa, and Venice, where Bellini, then very young, composed for her the part of Romeo, in his opera of "I Montecchi ed i Capuletti;" Giuditta's voice, like that of her aunt, being almost a contralto. Meantime the little Giulia had been sent for instruction, at eight years old, to a convent, in the small town of Gorizia; but although one of the *religieuses*, fascinated by her beauty, took some pains with her musical education, it did not progress with sufficient rapidity to satisfy her relatives, and after a time she was removed. Thenceforward her home was generally with Giuditta, either at Milan, or in those places whither she was called by professional engagements; and it was soon remarked that when the elder sister was practising *solfeggi*, or studying her parts, the younger one would be an attentive listener. In addition to an excellent ear, she possessed the advantage of a quick and retentive memory, and frequently proved that she could sing with wonderful fluency and correctness any difficult passages of vocalisation which she had once heard. The lovely quality of her voice, which had by this time thrown off its original blemishes, also excited much attention; and the affectionate Giuditta, after listening to the improvisations of the little minstrel, would sometimes give utterance to an enthusiastic prophecy that she would be the glory of her race. At Bologna, the elder sister, being closely occupied with her own duties, secured some instruction for her charge from a master of the name of Celli, which formed a safe basis for her solitary studies. She also received some lessons from Madame Boccatelli; and when, by continued exertions on her own part, her musical education was carried to an advanced point, she listened to the encouragement of her friends, and prepared to make her *début* on the stage. Her sister, then prima donna of the Bologna theatre, made all necessary arrangements with the *impresario*, and at the age of seventeen Giulia Grisi made her first appearance before the public, in Rossini's opera of "Zelmira," supporting the contralto part of Emma, for which her voice, afterwards so pure a soprano, was at that time fitted. In the bloom of youth and beauty, full of grace and intelligence, she could scarcely fail to enchant her audience; and that evening was the forerunner of her subsequent success. Giuditta shed tears of joy over the triumph which eclipsed her own; and Rossini predicted a brilliant future for the young vocalist, in whom he could perceive a Rosina, an Elena, a Semiramide, who should assist in the perpetuation of his own masterpieces. So brilliant a *début*, of course, attracted all the managerial eyes of Italy to Giulia Grisi, and Signor Lanari, *impresario* at Florence, hastened to see, and, if possible, secure her for his own theatre. In this design he was successful; and being a specious, scheming man, turned his triumph to still further advantage, by inducing her to bind herself exclusively to his service for a term of six years, at a salary which was below mediocrity. Lanari was resolute, pressing, peremptory, in his solicitations; her father

being at Milan, could not be consulted; the young girl herself was inexperienced; and so the *scrittura* was signed. The opera chosen for her first appearance at Florence was Bellini's "I Montecchi," in which she played Giulietta to her sister's Romeo, exciting throughout the city an enthusiasm truly Italian in its fervour. When the manager had reaped a considerable harvest from his speculations at home, he transferred his *prima donna* to Crivelli, who directed the affairs of La Scala; receiving a large sum in consideration of his services, which the bond enabled him to dispose of at pleasure. The first part undertaken by her at Milan was that of Medora in "Il Corsaro," which was crowned, as usual, with success. Vincenzo Bellini, who was then in that city, engaged in the composition of the "Norma," visited the young actress at the close of the first opera, overwhelmed her with applause and congratulations, intermingling allusions to the part he had in store for her, of the beautiful but unhappy Adalgisa; that of Norma being reserved for the great festival. It was on the 1st of January, 1832, that this opera was represented for the first time; but, strange to say, its first reception was by no means commensurate with its beauty or subsequent popularity. The sublime Pasta and Donzelli, that example to all succeeding Polliones, failed equally in exciting the approval of the audience for the opening scenes; the "Casta Diva" made no impression. Bellini, seated at the piano in the orchestra, trembled with anxiety until the entrance of Adalgisa, and the beautiful tones of her voice aroused some interest in the spectators. "*Deh! con te*," proved the turning point, and the caballetta which followed decided the fate of the opera, which had almost been despaired of. Pasta's magnificent acting, Donzelli's vigorous singing, Bellini's expressive music, Grisi's manifold attractions, all gained their due meed of admiration, and "Norma" was performed forty times during the Carnival. Meantime the heroine of our story, encouraged by Pasta, the object of her young idolatry, drew inspiration from her talents, and vowed to be a great tragedian. "How I should love to play Norma!" she is reported to have said to Bellini. "Wait twenty years, and we shall see," replied the maestro. "I will play Norma in spite of you, and in less than twenty years," she exclaimed, at the close of the first representation; but the composer still smiled incredulously, and muttered, "A poco! a poco!" During this same winter Maria Grisi seconded Pasta in other parts, the most successful being that of Jane Seymour in "Anna Bolena," which wrung from the latter these memorable words, "Tu iras loin! tu prendras ma place! tu seras Pasta!" This season proved to be Giulia's last in her native country, and she closed it in a manner somewhat startling to the theatrical authorities. Her engagement with Lanari was scarcely signed when she became sensible of its injurious bearing on her own prospects; her father's repeated efforts to secure more reasonable terms from his sense of justice were vain; and the young girl, somewhat impetuous in character, resolved, when the Carnival was over at Milan, to take the law into her own hands. The manager had engaged Pasta for twenty extra nights, relying on

co-operation of the younger lady as a matter of course ; she, however, had determined to reclaim her liberty of action, and to leave Milan at once and in secret. Having secured the assistance of the composer Marliani, a warm and devoted friend, who promised to take her across the frontier and provide for her a quick transit through Switzerland to France, she gained her father's assent to the plan. The fugitives started late on a Friday, the opera being closed that night, and arrived safely at Bellinzona ; but the fair Giulia was doomed to encounter the difficulties of a heroine, for it was here discovered that the passports had been left behind. Every moment increased the danger of pursuit and arrest ; it was therefore decided that the lady should make use of a passport in the possession of her maid to cross the frontier, and, once in safety, should await her companions, who had no other resource than to return for the missing documents. Once on her way, however, the fear of Lanari and his myrmidons, whom she only escaped by half an hour, impelled her onwards. She forgot the unfortunate Marliani and the *chambre-de-chambre* altogether ; and after eleven days and nights' solitary journeying through bad roads, and over mountain-passes covered with snow, she arrived in Paris half dead with fatigue and anxiety. But her troubles were now over. Giuditta, who had recently completed her London engagement, and was singing at the *Théâtre Italien*, gave her a delighted welcome, and went at once to Rossini, who, with Robert and Severini, formed a triumvirate for the management of the opera. Remembering her bygone triumphs at Bologna, Rossini granted the adventurous cancatrice not merely a contract, but a positive engagement as *prima donna* ; and this brilliant Parisian season was the grand opening of that public career during which she has, to a certain extent, lived before the eyes of the world. Her first appearance in England took place in April 1834, when she performed the part of Ninetta in "*La Gazza Ladra*," in conjunction with Rubini. The musical world was taken captive. Seldom had so unanimous and immediate an approval been vouchsafed ; and for the twenty years, during which, with two exceptions, she annually traversed the boards of a London opera-house, her return was signalled by the same warm welcome on the part of her audience, and on her own by some perceptible advance in power and mastery over her art. This first season witnessed the partial gratification of that yearning for tragic fame which has been already recorded, since she proved herself a worthy successor to Pasta in the "*Anna Bolena*," that pathetic part which she afterwards conquered thoroughly for her own. The year 1836 was signalised in like manner by her performance of *Norma*, and, consequently, the fulfilment of her prophecy to Bellini. In the following year she afforded an example of gorgeous vocalisation and grand action in the opera of "*Semiramide* ;" it may be also observed, that she made some amends for her former ill-treatment of Marliani, by strenuous efforts for his "*Ildegonda*," the first opera which familiarised England with his name. The season of 1839 was remarkable for the production of "*Lucrezia Borgia*,"

which introduced Mario to our notice, and displayed Madame Grisi in one of her most striking phases, clothed in such dark mysterious beauty as might have befitted a sorceress or a Vittoria Corombona, and contrasting wonderfully with her equally true conception of such parts as Elvira, in "I Puritani." In 1840 she won fresh laurels in "Roberto Devereux," and also in the "Barbiere;" casting former Rosinas into the shade; whilst Mario, as Count Almaviva, gave welcome evidence of his capability to succeed Rubini, who, about the time, bade adieu to the stage. Madame Grisi did not appear in London during the season of 1842; but in the following year compensation was made to the public by the production of "Don Pasquale" and the "Cenerentola," sung by the established favourites. The summer of 1846 was their last appearance on the old familiar ground. Jenny Lind became the attraction of Her Majesty's Theatre, and the principal members of the Italian corps adjourned to Covent Garden. Here the prima donna, (not, as report says, above her jealousies of her sex and profession,) appeared in resplendent voice and looks, exerting her gifts to the utmost, and retaining a staunch and devoted band of admirers. The existing theatrical repertoire was increased in 1848 by the addition of "La Favorita," and during the two following years Madame Grisi added to her range of characters those of Valentina, in "Gli Ugonotti," and Alice, in "Roberto." There are few facts extant in the annals of musical history which offer so fine an example of resolution of mind as the entrance of this lady upon the grand French opera, at the close of a career devoted to the slighter Italian school; and certainly no stronger proof of versatility of talent can be adduced than the success she achieved. The only failure to be recorded was in the part of Fides, in "Le Prophète," which, guided by her usually sound judgment, she quickly abandoned. The announcement of Madame Grisi's intended visit to America in company with Signor Mario, and the retirement from the stage, which, in the case of both artistes, was announced to precede this event, gave a melancholy interest to the eighth season of the Italian Opera House, that of 1854. On the 1st of June the great vocalist commenced her series of farewell performances, which included "Norma," "Lucrezia Borgia," "Don Pasquale," "Les Huguenots," and "La Favorita;" terminating on the 7th of August with the first act of "Norma" and the three first of "Les Huguenots." It was a scene never to be forgotten, and not easy to be described, when that large and brilliant audience, rising simultaneously, and giving vent to their excitement in tears as well as acclamations, took what was supposed to be their last farewell of one who was endeared to them by the habit of years, no less than by her own merits. On the 9th of August the two distinguished artistes sailed for New York, but after completing their professional tour throughout America, were induced to reappear at the Italian Opera in London previous to their final settlement in Florence. To these details of her history it only remains to add, that Giulia Grisi was united, somewhat early in life, to a French gentleman, M. de Melcy; that the marriage was also

...dissolved; and that general report has proclaimed her to be the wife of the accomplished *tenore* who shares in her renunciation the laurels they had long divided.

H.

**HAHN-HAHN, IDA-MARIA-LOUISA-FREDERIKA-GUS-
TAVA, COUNTESS VON**, was born at Tressow, in the duchy of Mecklenburg-Schwerin, in the year 1805. Her father, the Count von Hahn, was an officer in the military service of the Grand Duke; but his personal tastes were so essentially theatrical, that he also assumed the direction of a dramatic corps. This circumstance tended to encourage a love of literature in the mind of his daughter, widening her sphere of education, and associating her with the intellectual as well as the aristocratical society of the day. Subsequent events in her private history assisted the development of her natural capacity for authorship. The marriage which united her, in 1826, to another Count von Hahn, belonging to a collateral branch of her own family, proving an uncongenial one, she determined to sue for a dissolution; and in 1829 a divorce restored her to liberty. The disappointed heart was for a time voiceless, and mental activity applied her with that object in life which, as a happier woman, she might have sought only through the medium of her affections. It has been remarked with justice, by more than one critic, that the works of this lady afford perpetual evidence of a strong necessity for the expression of her inward experiences. It was, no doubt, as the most natural channel for these outpourings, which seem a continuation of her nature, that she devoted herself, at this epoch of her life, exclusively to poetical composition. Three volumes of verse succeeded each other from her pen between the years 1835 and 1837; but from that time her vivid imagination was called into play, and a series of novels, giving an idealised picture of aristocratic life in Germany, were published with marvellous rapidity. The most popular of these are, "The Countess Faustina;" "Ulrich;" "Sigismund Forster;" and "Cecil," a continuation of the last-mentioned work; all of which have been translated into our language and extensively read. The representation of a phase of life, manners, and opinions, which was at that time comparatively new to us, would have invested these tales with great interest for an English reader, even though they had been deficient in brilliant literary merit. But it cannot be denied that they possess many charms, apart from their thoroughly German character. That ever-present sense of individuality, which, in some cases, has been fairly charged against the Countess Hahn-Hahn as an error, adds to the interest and reality of her works of fiction, when, colouring the minds of her characters, she sounds the depths of her own; in painting their

emotions, she has recourse to the storehouse of her own varied memories and experiences. The imagination to supply striking incidents, the skill to interweave them, and graphic powers of description, are never wanting. Their fascinations are manifold, but only excite a deeper regret that they should not be associated with a purer moral tone. The time occupied in the production of these novels was diversified by tours through Switzerland, Spain, France, Italy, and Sweden; particulars of which were subsequently given to the world in works entitled "Beyond the Mountains," "Legs on a Journey," "Reminiscences of France," and "A Northern Tour." The Countess Hahn-Hahn also mixed extensively in society, fixing her home alternately in Berlin and Dresden, and Grödenwald. Thus the current of her life glided on, until the death of a Russian nobleman, to whom she had attached herself with the whole force of her enthusiastic nature, disenchanted her with the world, its pleasures and ambitions, and induced her to seek in religion the hope and consolation which nothing else could impart. Pursued by an uncontrollable restlessness of spirit, she started for the East and traversed Syria and the Holy Land; producing, in 1844, "Oriental Letters;" and finally, having embraced the Roman Catholic faith, tracing the course of her outward and inward pilgrimage in her latest work, "From Babylon to Jerusalem." Although the arguments and conclusions interspersed throughout this book are little calculated to mislead others, they reveal to us the feelings which influenced herself in quitting the simple forms of a church which she appears never to have fully comprehended. Her necessities were, a religion which should interest and occupy her imagination; a shrine whereon she might offer an acceptable sacrifice to those worldly pleasures and luxuries which had become oppressive. This she has found; and the time may not be far distant when an early prediction that the Countess Hahn-Hahn would end her days in a convent shall be realised. Meanwhile we have only to rejoice that a sorrowful and world-weary spirit has found rest, be it what it may.

HALL, MRS. ANNA MARIA. This authoress, who may be classed with her predecessors, Miss Edgeworth and Lady Morgan, as a successful exponent of the virtues and eccentricities of the Irish character, is a native of Wexford, although, by the mother's side, of Swiss extraction. Her maiden name was Fielding, but it is one in which she is wholly unknown to the public; her first literary venture having been made subsequently to her marriage. Although Mrs. Hall's works afford evidence that the scenes and people among whom her early youth was passed made a lasting impression upon her mind and memory, she might almost be said to have become naturalised in England; having quitted her native country at the age of fifteen, to reside with her mother in London, and returned to it, if we mistake not, only in the capacity of a visitor. An acquaintance with Mr. S. C. Hall, in due time resulted in a union, and the literary pursuits of this gentleman had their influence

directing her to the world of letters. Her first work, "Sketches of Irish Character," appeared in 1829, and was marked by some touches of delicate humour, and clear outlines of character. A volume for children, called "Chronicles of a Schoolroom," preceded "The Peacemaker," with which Mrs. Hall made her *début* as a novelist, in 1832. The scene of the story is laid in England during the Protectorate, and Cromwell himself is one of the most prominent actors in it. The chief interest, however, is associated with domestic scenes; and especially with the passages between a lowly Britan damsel and her deformed but generous-hearted lover. Two years later appeared "Tales of Women's Trials," an earnest pleading of the cause of womankind against the oppression of the stronger sex, written in the happiest style of its authoress; and in 1835, "The Outlaw," a novel of the reign of James II., affording the variety of character and incident which such troublous times offer for the benefit of the romance-writer. After the publication of "Uncle Horace," a book which obtained a smaller measure of popularity than its predecessors, Mrs. Hall produced her "Lights and Shadows of Irish Character," a collection of excellent sketches, which may be regarded as a pendant to those which made her literary reputation. A tale called "The Groves of Blarney," which occupies the greater part of the first volume, was dramatised, and brought out at the Adelphi in 1838, with success. "Marian, or a Young Maid's Trials," issued from the press in 1839, and was the forerunner of "Stories of the Irish Peasantry," published in a collected form, after their appearance in "Chambers' Edinburgh Journal." Mrs. Hall's name was soon afterwards associated with her husband's in an illustrated work on Ireland, its scenery, character, etc. In 1845 she added to her works of fiction a novel called "The Whiteboy;" and later a graceful fairy tale, "Midsummer Eve," originally produced in the pages of the "Art-Journal." With the exception of numerous contributions to periodicals, the only literary effort of this authoress which remains to be noticed is a collection of pleasant illustrated sketches of the homes and haunts of genius and virtue in our own little island, which appeared originally under the title of "Pilgrimages to English Shrines," in the "Art-Journal."

HAYES, MISS CATHERINE, a Vocalist of considerable repute, was born in Limerick, about the year 1820. From a comparatively humble station in society, her fine soprano voice and undoubted talent have long since raised her to an equality with those eminent musical artistes on whom the plaudits of the world and the golden gifts of fortune are showered with such boundless liberality. The progressive steps by which this change in her social position was achieved have a peculiar and almost romantic interest. The vocal powers of Miss Hayes, which developed themselves sooner than is ordinarily the case, secured her, from earliest childhood, the reverence and admiration of her young associates. She would often beguile their leisure hours with some thrilling ballad, caught up

she knew not when or how, and embellished with an instinctive talent of which she was wholly unconscious. The fame of this native singing-bird gradually penetrated into higher circles. A lady, who was herself a distinguished amateur, became interested in the gentle, modest girl, who frequently visited her, and profited largely by the superior musical experience of her new friend. The young pupil displayed remarkable flexibility of voice, combined with purity of style and power of expression; but the kind instructress scarcely appreciated the full value of the treasure she had brought to light, until Catherine on one occasion, inspired by more than ordinary enthusiasm for her art, poured forth a brilliant and perfect strain, as much to her own astonishment and delight as to that of her companion. Some little time afterwards a fortunate accident obtained for her a larger auditory and a more powerful patron. She was in the habit of paying occasional visits to an aged relative of her own, residing in the family of the Earl of Limerick, whose town-house adjoined that of the bishop of the diocese; the gardens of both houses extending down to the banks of the Shannon. The young songstress was seated one evening in her favourite resort—an arbour at the water's edge—warbling ballad after ballad and revelling in the solitude which gave her courage to reveal the full compass and power of her voice, when its clear tones arrested the attention of a pleasure-party that happened to be rowing near at hand on the river. Boat after boat dropped silently down the stream; not a sound interrupted her until the prolonged shake—her newest toy—with which she concluded the “Lass o’ Gowrie,” wrung a loud burst of applause from her unseen listeners. Among them was the Bishop of Limerick, who had always shown himself an energetic and constant patron of such musical talent as the neighbourhood afforded; and on this occasion he did not belie his usual character. Catherine Hayes was at once invited to the See house, and became the star of a series of reunions, given principally for her instruction. Delighted with the progress, and interested in the character of his young protégée, Bishop Knox opened a subscription amongst his friends, for the purpose of procuring such an education as might enable her to turn her remarkable gifts to the fullest advantage. The necessary funds were soon collected, and in 1839 Miss Hayes was placed under the care of Signor Sapio, of Dublin, in whose family she resided for three years. During this interval she practised unremittingly, and occasionally sang in public, with such success as to justify her in gradually increasing her terms from five to ten guineas for each appearance. The attainment of proficiency and popularity as a concert-singer continued to be the summit of her ambition, until the visit of Grisi and Mario to Dublin afforded her the opportunity of witnessing their performance in the grand opera of “Norma.” From that evening dated an ardent desire to excel in the lyric drama; every other triumph seemed poor and incomplete in comparison; and at length she obtained the consent of her friends to her departure for Paris, where she studied under Emmanuel Garcia, the master of Malibran and Jenny Lind.

the end of a year and a half her instructor dismissed her, with assurance that he could add no further charm to her voice; and his advice she repaired to Milan, and obtained there, under the protection of Signor Felice Ronconi, that dramatic facility necessary for her intended career. In 1845 she made a brilliant *début* in "Puritani," at the Marseilles Opera-house, and, after additional success, accepted an engagement as prima donna at La Scala. Her first appearance was in the character of Linda di Chamouni; and it was the furor of enthusiasm created by her singing and acting (which a graceful and prepossessing person added a further charm), that she was recalled twelve times before the curtain. From Milan Miss Hayes proceeded, in 1846, to Vienna; thence the following year to Venice; making a kind of triumphal progress through the principal Italian cities. The musical world of London had an opportunity, in 1849, of deciding whether fame had done more than justice to this young step-daughter of England; and the verdict in her favour was satisfactory. An affecting meeting took place at the close of her first performance at Covent Garden, between the prima donna and her earliest patron, the Bishop of Limerick. She had recognised him amongst her audience, and lost no time in presenting herself in his box, where on her knees she ascribed to him, with grateful gratitude, that success of which he had been a delighted witness. In 1851 Miss Hayes left Europe for the New World, and, after visiting the United States, established herself for a time amidst the semi-civilised denizens of California, who evinced their enthusiasm by liberal contributions to her treasury in the shape of nuggets. Tidings received at the close of 1854 speak of her arrival at the Sandwich Islands—a strange field, it would seem, for her exertions, but at any rate one hitherto untraversed by any of her professional sisterhood. She has subsequently extended her tour to Australia and British India. Catherine Hayes has rescued her country from the charge of producing no vocalist capable of interpreting with due effect the higher order of dramatic music. Her pathetic representations of the Linda and the Lucia of Donizetti claim for her an elevated position amongst her compeers; but in belted-singing she may fairly be called unrivalled; and it is surely no deduction from her professional character to say that, whilst in operatic music she is great among many, it is still the genius of her own national music which really distinguishes her.

HERVEY, MRS. ELEONORA LOUISA, a very graceful writer of prose and verse, was the daughter of George Conway Montagu, Esq., of Lackham House, Wilts, a member of a collateral branch of the family of the Dukes of Manchester. The subject of this notice was born in 1811 at Liverpool, which was also the native place of her mother. During the period of girlhood she appeared frequently before the public in the *Annals* and periodicals of the day, as the authoress of many charming little poems, displaying real vigour of thought and pathos of sentiment. The name of Miss E. L. Montagu became thus increasingly known to the reading world; and

it was well prepared for the more complete display of her powers afforded in "The Landgrave," a dramatic poem, published in 1822. Although pronounced by some critics to be, as a whole, deficient in those elements of stage effect which are requisite for successful representation, this poem presented in detail high evidence of dramatic power, as well as of that true poetical sentiment which had been abundantly evidenced in previous compositions. In 1825 Mrs. Montagu became the wife of Mr. Thomas Kibble Hervey, the well-known poet, and for many years editor of the "Athenæum." The works produced by her since that event are, "Margaret Rived," an autobiography, which was published anonymously, but obtained an immediate recognition of its merits; "The Double Claim," a pathetic little story, tracing out the instinctive workings of parental and filial affection; "The Juvenile Calendar, or Zodiac of Flowers," a Christmas-book, illustrated by Doyle, in which the aspects of nature during the months of the year are moralised, or rather poetised, in a series of fanciful fairy legends, each having its allegory and its moral; and finally, "The Pathway of the Fawn," a tale having for its theme the reformation of a dark and selfish nature through the agency of a patient appeal to those common instincts of good which, even when dormant, are seldom utterly quenched.

HOWITT, MRS. MARY, a Poet and Novelist, of whom the female authors of England may justly be proud, was born at Uxtoxeter in the early part of the present century, and is descended by both parents from ancestors of honourable reputation in their day and generation. On her mother's side she is of the family of Wood, the Irish Patentee; whose half-pence, minted under a warrant of George II., afforded exercise for the spleen of Swift in his "Drapier's Letters," and whose son Charles Wood, the grandfather of Mrs. Howitt, first introduced platinum into Europe. Among her progenitors she numbers more than one of the noble army of martyrs who suffered imprisonment "and patiently the spoiling of their goods" in the assertion of their rights of private judgment in matters of religion, at the foundation of the Society of Friends, better known by the designation of Quakers. The early years of her childhood were passed under circumstances well adapted to secure the blessing of a sound mind in a sound body. Her home, in a secluded part of Staffordshire, was surrounded by all the beauties of nature peculiar to a pastoral country, and sufficient near scenery of a more picturesque character to feed and satisfy the strong love of nature she inherited from her parents, and which forms so prevailing a characteristic of the Society in which she was brought up. Her early education, if it did not embody advantages easily attainable in the present day, was liberal for the period at which it was acquired. Possessing an eager thirst for knowledge of every kind, her retired home and the leisure of her parents secured for their children that best part of education, the strict cultivation of the moral principles and the direction of the heart and mind to 'whatsoever is pure, true, lovely, and of good report;'

id their lessons end here: associated with an elder sister, she studied under her father's roof French, Latin, and made some progress in chemistry; and almost by stealth gained a competent knowledge of the forbidden stores of imaginative and dramatic literature—studies strictly forbidden from conscientious scruples, under the general designation of “unprofitable books.” But an ardent mind and eager thirst for information can hardly be content to limit itself to draughts from a single spring. The warm sympathies of youth demanded a wider scope of thought; to know something of humanity under various forms, life under varying aspects, became a positive necessity of her nature. The small libraries of the neighbourhood were laid under contribution to satisfy her craving for books, shared equally by her sister; a period of her life which has been happily shadowed forth in one of her own little books, under the title of “My Own Story.” The love of poetry cherished from childhood, and which so often manifests itself most strongly in the absence of musical cultivation, led her to write verses almost as soon as she could write at all; the stirring ballads of chivalry awoke the strong spirit of song within her. Natural objects, old legends, picturesque points of history, were all made available for metrical illustration, and although up to the date of her marriage Mrs. Howitt did not adventure into print, her writings, handed about in manuscript, fell into the hands of a young poet of kindred mind; an introduction to the writer was sought and obtained, which led to an early union, productive of singular happiness to themselves and of no slight benefit to others. Thus placed by circumstances in a position favourable to the cultivation of her genius, and warmly encouraged by her husband, Mrs. Howitt became an earnest student of the literature of her own country, and made her *début* in authorship in a selection from their united stores of fugitive poetry in the year 1823, in a volume entitled the “Forest Minstrel,” which secured for its authors a warm welcome from the public. In 1827 she published, in conjunction with her husband, a pathetic little poem, entitled “The Desolation of Eyam,” to which was appended a series of the miscellaneous lyrics from her own pen and that of Mr. Howitt, which had been published from time to time in annuals and magazines. This volume enabled them at once to take position among the poets of the age. Mrs. Howitt's next work, which was altogether her own, consisted of a series of powerful dramatic sketches, entitled “The Seven Temptations;” written amid scenes on the banks of the Trent, which had been commemorated by some of the best poetry of Henry Kirke White. In this volume, casting aside for a time the trammels of an outward existence, she entered with enthusiasm into the inner spirit of humanity, and pondered on the various temptations by which the living soul is assailed and too often led captive; describing the strong agony of conscience; painting with lucid colours the war of the flesh and the spirit—ever at issue in man's nature, the unseen, unacknowledged, but ever-present mystery. This work, which won the warm admiration of the thoughtful and poetical minds of the day, was received

by the critical press with less consideration that it would meet with now; for an author may be too much in advance of the age to secure for a work immediate popularity. Somewhat disappointed, but enterprising and energetic, Mrs. Howitt resolved to obey the general requirements of the day. Three-volume novels were then in the ascendant. Historical scenes of past ages had their most successful chroniclers, while the picturesque threatened to become the common-place among us. Life, actual life, pictures of the present day, came next into demand; novels of fashionable life filled a large space in the current literature, and lords and ladies became the professed exponents of the life of their own order. Leaving, therefore, the life of cities to be painted by those best versed in "their most habit of perpetual change," Mrs. Howitt, in her novel of "Wood Leighton," sought to establish an interest in the less fluctuating aspect of country life. The framework of her novel had its origin in the traditions of many worn-out families of the remoter districts of our own northern counties. It met with much success at the time of its first appearance, and has since been reprinted in a cheaper form. Two volumes, respectively of prose and verse, of tales and sketches for children, stamped her at once as one of the most successful writers for youth that this country has ever produced. In the year 1837 the increasing literary avocations of Mr. and Mrs. Howitt led them to exchange their occasional visits to London for a more permanent residence in its neighbourhood: previous to which, however, a life-long wish was gratified by a pedestrian tour in the Scottish Highlands, where they gleaned many a theme for song and story. In the course of that year Mr. and Mrs. Howitt, with their three children, took up their abode at Esher, in Surrey, where they passed several years of tranquil enjoyment, to which they have been accustomed to look back as among the pleasantest they have ever known. Among the beautiful woods and heaths that surrounded their dwelling they watched the seasons and their change, and their plans were planned, and in part executed, many of those living descriptions of life in the country that have added so great a charm to the writings of both. The succeeding works of Mrs. Howitt are too numerous for recapitulation in this place; among them are books for young people, which in interest and applicability to the purposes for which they were designed have not been surpassed by any modern writer for children. Of her poems for young people, two of the most instructive and delightful of the kind ever written are "The Spider and the Fly," and "The Monkey." Nor were her prose stories less acceptable to the little folks to whom they were addressed. We allude more especially to a series of stories, thirteen in number, published at intervals, entitled "Tales for the People and their Children," and addressed more especially to the classes to whom labour of some kind is almost a necessity. The leading object of these books was to uphold the dignity of labour, the importance of self-reliance, and all the advantages of independence, as tending to individual happiness no less than to the common good. To secure to the

children a more liberal education than was attainable in a country village without the sacrifice of the security of home-influence, and to gain the advantage of foreign travel for them all, Mr. and Mrs. Howitt determined to pass a few years abroad, finally settling on Heidelberg as their permanent residence, but visiting successively the various states of Germany and the Tyrol, and in the way making themselves familiar with their literature and social institutions. About this period the works of Miss Bremer fell into the hands of Mrs. Howitt, through the medium of a German translation. Struck with their peculiar tone of thought, and charmed with the pictures of Scandinavian life they presented, she resolved to introduce them to an English audience. New and strange as they felt they would certainly prove; but would their homely details be likely to interest a people grown fastidious in its taste from literary repletion? The question was one of some moment; but Mrs. Howitt had faith in her inspiration, and resolved to make the experiment by translating them on her own account. "The Neighbours" was published, caught the attention of a large body of readers, and at first they were debating on the oddity of the story, both author and translator became famous among us. Encouraged by her success, Mrs. Howitt turned her attention to the acquisition of the language in which they were written, triumphed over its difficulties, and thereafter received in manuscript the successive works of the author; presenting them to an English public with all the freshness of original works. Having been thus fortunate as a pioneer, Mrs. Howitt extended her researches still further a-field, and having acquired the Danish language, translated the beautiful story of the "Improvisatore" of Hans Christian Andersen, and other fictions of no less importance. In 1847 she published a handsome edition of her "Ballads and other Poems," to which was prefixed an excellent notice of the author. At a later period Mrs. Howitt assisted her husband in the compilation of a "History of the Literature and Romance of Northern Europe," in three volumes, including specimens in prose and verse, the latter metrically arranged. Mrs. Howitt edited for three years the "Drawing-Room Scrap-Book," and illustrated by biographical vignettes a series of portraits of the Queens of England. To one of the popular libraries of the day she contributed an original story, entitled the "Heir of West Wayland;" and among her numerous writings for the young may be especially mentioned, "The Children's Year," "Our Cousins in the Moon," and "The Dial of Love." Mrs. Howitt has been a large and anonymous contributor to the periodical literature of the last twenty years; and should a complete edition of her scattered writings be collected, the general reader will not fail to recognise many an old friend, and be enabled to estimate how largely he has been indebted to her industry and intelligence for many of his best hours of enjoyment. A daughter of Mrs. Howitt has appeared before the public, both as an artist and author, and has achieved no ordinary success in both pursuits.

I. J.

ISABELLA II., QUEEN-REGNANT OF SPAIN, was born at Madrid on the 30th of October, 1830. Her father, Ferdinand VII., had been induced by the influence of his wife to issue the Pragmatic Decree, revoking the Salic law; and when his death occurred, in 1833, his eldest daughter, then little more than an infant, was proclaimed Queen, under the regency of her mother, Maria-Christina. This event proved the signal for civil war, as the interest of the late king's brother was supported by great classes of the people. The country was desolated by the struggle between the Carlist and Christino parties, until the Cortes confirmed the claims of Isabella by pronouncing sentence of exile on Don Carlos and his adherents. In 1840, finding it impossible to carry on the government without making concessions to public feeling, for which she was indisposed, the Queen-Regent retired to France, resigning her power into the hands of Espartero, whom she had been previously compelled to summon to the helm of affairs. For the next three years, during which he was able to take a great measure to direct the education and training of the young Queen, she was subjected to purer and better influences than it had yet been her fate to experience; but on the 15th of October, 1843, she was declared by a decree of the Cortes to have attained her majority, and thenceforward took her place among the reigning sovereigns of Europe. Two years later Maria-Christina returned to Madrid, and her restoration to influence was marked by the marriage of Isabella II. to her cousin, Don Francisco d'Assis, the elder son of her maternal uncle, Don Francisco de Paula, which took place on the completion of her sixteenth year. Sacrificing the intrigues of a party whose interests were based on this ungenial union, the young Queen has never known the benefit or influence of domestic happiness. Estrangements and reconciliations have by turns succeeded each other in her married life, and even her maternal hopes she has been doomed to disappointment by the death of her two infant children a short time after their birth. The mental abilities of the Spanish Queen have been frequently pronounced to be excellent, and the following words of a nobleman at Madrid may be quoted as giving an idea of her general character and qualifications:—"The letters written by the young Queen Isabella are the most charming things in the world. So say not only her courtiers, but her enemies; and those who have read them declare, that if her Catholic Majesty were not Queen of Spain she would certainly be a blue-stocking. Although a sovereign, rather because she is a sovereign, Isabella II. is a veritable lioness, not the *lionne* of the fashionable world, but in the true acceptation of the word, partaking the nature and spirit of the king of the forest. If the young Queen should ever lose her crown, she would certainly have defended it sword in hand, for she fences like a lioness, and it is her favourite amusement. The manner in which she

employs her time is this: at three o'clock in the day she rises, then dressed (and her toilette is one of the least important of her occupations), she orders a very elegant light equipage, the gift of her maternal sister of England, and goes out, generally alone. Sometimes, however, she is accompanied by her husband, to his own great despair and terror, as he imagines himself protected by a miracle whenever he re-enters the palace in safety; for the Queen is her own driver, and generally urges on her horses to their utmost speed. She dines at five o'clock, eats very little and very fast; as soon as the repast is finished she practises for some time with the sword, then mounts her horse and takes a ride. These exercises added, she becomes a young and pretty woman; she sings, dances, and, in fact, enjoys every pleasure which belongs to her age and sex. But when one o'clock strikes, Isabella assembles her council, for which she always presides, and the woman gives place to the queen."

JAMESON, MRS. ANNA. Manifold and various as are the phases of a genius which has elevated this authoress to a position amongst the most influential contemporary writers of either sex; powerful and judicious as may be her treatment of the different literary and social topics which from time to time occupy her attention; it is by her ardent enthusiasm for art, and by her elegant and discriminating criticisms on its several branches, that she is pre-eminently characterised. As the daughter of Mr. Murphy, painter extraordinary to the Princess Charlotte, an artist well known during the earlier years of the present century, Mrs. Jameson derived from hereditary sources this strong bias of her mind; which, fostered as it was by the associations of childhood, and matured by a liberal education, enabled her subsequently to diffuse amongst her readers a measure of her own true appreciation of every form of beauty and excellence. The personal connexion of this lady with the world of letters commenced about two years after her marriage with Mr. Jameson, who was then engaged in legal pursuits, and afterwards held (and still holds) an official appointment of some importance in Canada; it is a fact universally known that this union proved less fortunate in its issues than in its promises, and has long been practically though not legally dissolved. In the year 1826 Mrs. Jameson was induced to collect for publication various notes and memoranda made by her in the course of a tour through France and Italy some time previously, which appeared in an anonymous volume, entitled the "Diary of an Ennuyée;" a name bestowed by the publisher, who then knew nothing of its history. The sketches having been written solely as private records of her foreign observations, the authoress, when induced by accidental circumstances to commit them to the public eye, introduced fictitious dates, events, and characters, together with a slight thread of story, with the view of veiling her identity from an audience she was not disposed at that time to encounter in person. Should this disinclination, however, have arisen from doubts of her literary success, all motives for

secrecy were speedily set at rest. The reading world was not slow to estimate at their full value her refined taste, graphic powers of description, and enthusiasm for all that is picturesque in nature and spiritual in art; whilst it was sensible of the unwonted charm possessed by a book of travels which afforded glimpses of the workings of an individual mind of no common order, and presented more fewer scenes and objects which interest the intellect and imagination rather than the many which more particularly attract the eye. The next production of Mrs. Jameson's pen was the "Lives of the Poets," two volumes, published in 1829, and essentially literary in their character. The design of the writer, which originated during an extensive course of reading, was to exhibit in a small compass and under one point of view, many anecdotes of biography and criticism, and many beautiful poetical portraits, scattered through a variety of works, all tending to illustrate the influence which the beauty and virtue of women have exercised over the characters and writings of men of genius. The work was commenced with enthusiasm, was continued under many difficulties, and brought to a premature conclusion, we are told, not from want of materials or of interest in the subject, but because the authoress despaired of her own power to do it justice. Whatever may be her own views in regard to them, the readers of these charming sketches of poetical histories, extending from the days of the old classic poets to modern times, can scarcely fail to consider them as graceful monuments of female genius well employed in the cause and honour of her own sex. "The Loves of the Poets" was followed in 1831 by "Lives of celebrated Female Sovereigns;" and a year later by the "Characteristics of Women;" a work comprising an exquisite and searching analysis of the female characters of Shakspeare, marked by such delicate insight and profound critical power as entitled its author to rank among the best commentators on our great dramatic poet. In the year 1833 appeared a series of biographical notices of the "Beauties of the Court of Charles II.," written for the purpose of illustrating the elaborate copies of their portraits by Sir Peter Lely at Hampton Court, which had been made by Mr. Kneller at the desire of the Princess Charlotte, and which had been left by her death at his own disposal. A new edition of the popular "History of an Ennuyée" having been called for in 1834, Mrs. Jameson was persuaded by her friends to add to it various miscellaneous tales, essays, and criticisms, which were scattered about in manuscript along with some valuable records of recent travels in Germany, conveyed in the long-disused form of dialogue, for the purpose of enabling the writer to discuss without apparent effort questions of social and literary interest no less than of taste and feeling. These volumes, published under the title of "Visits and Sketches at Home and Abroad," obtained a measure of public favour which has continued to increase rather than to decline. They afford an inexhaustible pleasure to all who appreciate Mrs. Jameson's earnest and discriminating comments on "men and things," her characteristic sketches of the eminent of both sexes with vivid

wanderings have brought her in contact; or those valuable records of works of art, which differ from other descriptions of this kind in possessing an interest alike for the ignorant and the learned. The scene of her next book was laid in a very different sphere; for the official duties of her husband having led to her temporary residence at Toronto, she produced in 1838, after her return to England, the fruits of her Transatlantic experiences and observations in the form of "Winter Studies and Summer Impressions in Canada." Here, in juxtaposition with spirited outlines of the state of politics and society in the larger towns, and with novel and minute details of Indian life and habits, gathered during visits to remoter regions, we have excellent chapters on books, pictures, music, women and the social institutions connected with them; in short, a rich measure of those elegant intellectual enjoyments, which to many would have even greater attractions than the practical portions of the book. Two years afterwards Mrs. Jameson came before the world as the translator of two volumes of "Pictures of the Social Life of Germany, as represented in the Dramas of the Princess Amelia of Saxony." Novel as were certainly some of the phases of every-day life in various classes, put forth in this work, it is doubtful if the introduction and notes appended to each drama by the editor do not constitute its principal attraction. In 1842 Mrs. Jameson confirmed the high estimation which she was already held as a sound and popular art-critic by publishing a "Handbook to the Public Galleries of Art in and near London;" being a catalogue of the pictures, accompanied by critical, historical, and biographical notices, with copious indices to facilitate reference. In addition to the conscientious performance of the promises set forth in the title, this "Handbook" comprehends various explanations and definitions of technical expressions in art likely to be of great service to the uninitiated, by translating into ideas what had previously been mere terms; and likewise such histories of the formation of the respective collections as could not fail to endow with fresh interest the treasures enshrined in them. In 1844 appeared a second work of the same nature, namely, a "Companion to the Private Galleries of Art in London," equally valuable and interesting in its characteristics with that which had preceded it; and, following shortly afterwards, a series of biographical notices of the early Italian painters, commencing with Cimabue and ending with Bassano; thus carrying the history of pictorial art in Italy in a continuous narrative to the close of the sixteenth century. In 1846 the same accomplished and indefatigable writer published, in a collected form, a variety of miscellaneous articles, which, as the exponents of her own maturer ideas and cultivated tastes, were not less acceptable than the faithful records of genius departed. In these "Memoirs and Essays," illustrative of art, literature, and social morals, are comprehended papers (which had already appeared in print) on Washington Allston, the Xanthian Marbles, the characteristics of Fanny Kemble's dramatic talent, and other topics of minor importance; whilst among the novelties may be enumerated

a vivid picture of Venice, called "The House of Titian," an admirable essay on "Woman's Mission and Woman's Position," and another "On the relation of Mothers and Governesses," afterwards reprinted in a cheap form. This delicate subject is here handled with great wisdom and fidelity; the duties of the two classes being balanced in a spirit of enlightened justice which renders its wide circulation a matter of real social importance. From the room already afforded of Mrs. Jameson's literary enterprises during the few years which preceded the period at which we now arrive, it will probably be matter of some surprise to the reader to learn that she had been engaged, from time to time since 1842, in the preparation of an important and laborious work, illustrative of "Sacred and Legendary Art," which was anxiously anticipated long before its actual appearance by those interested in the subject, who found it difficult to content themselves with mere catalogues of names or manuals of references. The first portion of the series, brought out in 1848, comprised legends of Scriptural characters, the primitive Fathers, and of those saintly personages who lived, or are supposed to have lived, in the early ages of Christianity; and whose real history, founded on fact or tradition, has been so disguised by poetical embroidery that they have in some sort the air of ideal beings. The second part, which appeared two years afterwards, was entitled "Legends of the Monastic Orders," and treated exclusively of the old religious communities, considered in relation to the revival and development of the fine arts in the thirteenth and fourteenth centuries; whilst the third volume, "Legends of the Madonna," published in 1852, was devoted to a history of that branch of sacred art of which the Virgin Mary was the subject and heroine. In addition to the mass of interesting and curious legendary lore collected in these volumes, they afford minute descriptions, no less than etchings and sketches, skilfully drawn by the authoress, of the finest pictorial illustrations which exist of the different histories touched upon in her work. It is, consequently, equally valuable in setting forth the progress of sacred art, and as elucidating the mysterious symbolical character which, to the uninitiated, frequently obscures its interest. "A Commonplace-book of Thoughts, Memories, and Fancies, Original and Selected," is the last literary work of importance which has been presented by Mrs. Jameson to the public; and its origin can scarcely be better described than in her own words. "For many years," she says, "I have been accustomed to make a memorandum of any thought which might come across me, or any passage in a book, which excited either a sympathetic or an antagonistic feeling. The collection accumulated insensibly from day to day. The volumes on 'Shakspeare's Heroines,' on 'Sacred and Legendary Art,' and various other productions, sprung from seed thus lightly and casually sown, which, I hardly knew how, grew up and expanded into a regular readable form. In allowing a portion of the fragments which remained to go forth to the world in their original form, I have been guided by the wishes of others who deemed it not wholly uninteresting or profitless to trace the

th of an 'inquiring spirit,' even by the little pebbles dropped as
 stigies by the wayside." The volume in question is divided into
 two parts : one bearing on "Ethics and Character," the other on
 Literature and Art;" each affording thoughts and observations of
 great beauty and wisdom. It only now remains to notice, in con-
 clusion, a little book, modest in form and pretension, but pregnant
 of interest and social importance, called "Sisters of Charity Abroad
 and at Home," which was, in fact, the substance of a lecture deli-
 vered by Mrs. Jameson to a female audience, on the 14th of Febru-
 ary, 1855, and has been printed by desire of those who were con-
 vious of the influence it would deservedly exercise on one of the
 greatest questions of the day. This public endeavour made by her
 to emancipate women, or we should rather say Englishwomen, from
 the shackles of prejudice which have hitherto restricted the develop-
 ment of their finest capabilities for happiness, as well as usefulness,
 is but one of a long course of efforts in their service ; her unceasing
 desire having ever been "to free them, not from the high duties to
 which they are born, or the exercise of virtues on which the whole
 frame of social life may be said to depend, but from such trammels
 and disabilities, be they legal or conventional, as are manifestly
 injurious ; shutting them out from the means of redress where they
 are oppressed, or from the means of honest subsistence where they
 are destitute." A spirit of intense sympathy with her own sex does,
 indeed, run like a golden vein throughout the writings of Mrs.
 Jameson, whatever be their subject or aim ; and her reverence for
 the good and great—her pity for the erring among them—her honest
 joy in their successes, and regret for their failures, characterise her
 not less admirably as a woman, than do the brilliant qualities of
 her elevated and enlightened mind as an author.

JEWSBURY, MISS GERALDINE E., a younger sister of the
 late Mrs. Fletcher, was born at Manchester, where her life has been
 chiefly passed. She still continues to reside in that town ; forming
 no unimportant member of the little literary coterie, from which it
 derives so much honour. Miss Jewsbury's abilities were from earliest
 childhood highly estimated by her sister, who prophesied for her a
 career even more successful than her own. Unhappily the autho-
 ress of "The Three Histories" had long been numbered with the
 departed, though not with the forgotten, when the first advance
 was made towards the fame she had foretold, and a general ac-
 knowledgment accorded, of the talent she had fostered and appre-
 ciated in its infancy. The first work which drew renewed attention
 to the family name was "Zoe, or the History of Two Lives," a
 novel which made its appearance in 1845. It is undoubtedly
 marked by power and originality, although its excellence is impaired
 by too constant and visible an effort for the attainment of these
 qualifications. Full of passionate scenes, feverish speculations and
 unrest of every kind, it forms a singular contrast to the pure and
 calm simplicity of tone which distinguishes the latest production
 of this authoress. It would indeed be difficult to imagine that

both could have originated in the same mind, had she not afforded evidence, in intermediate works, of the transition which was taking place in her views of truth and beauty. "The Half Sister," a tale published in 1848, presents the contrast of the beautiful passionate child of genius, the daughter of the South, with the fair and carefully nurtured English sister; so skilfully treated by Madame de Staël in "Corinne;" by Maturin, in his beautiful novel, "Woman;" by Lady Georgiana Fullerton in "Glenary Manor;" and by many other novelists with more or less success. But Miss Jewsbury's phase of the picture was not calculated to suffer by comparison, inasmuch as it possessed many excellent and individual characteristics of its own. After the completion of this work, which greatly enlarged her circle of admirers, she devoted her talents and experience to a description of middle-class life in the manufacturing counties. The story of "Mans Withers" is very gracefully told; and with the unexaggerated scenes and characters of every-day existence, the writer arrests our interest and sympathy more deeply than by her dealing, as in "Zoe," with the startling possibilities of human life. "The History of an Adopted Child," a book for young people, issued from Miss Jewsbury's pen in 1852. Since that time she has produced another novel, entitled "Constance Herbert," inculcating the duty and necessity of self-sacrifice in individual cases, to prevent the extension of hereditary insanity. The distinguishing points of this tale are its admirable simplicity and unity of moral purpose. Purpose, indeed, is one of Miss Jewsbury's characteristics as a writer. All her works have been made the vehicle of expression for particular views and theories having reference to society at large; and even were she less distinguished than she is by the quality of her literary gifts, this fact would entitle her to an honourable place among the notable women of her day.

K.

KAVANAGH, MISS JULIA. From among the list of distinguished female writers to which Ireland has given birth, the name of Miss Kavanagh must not be omitted, although, unlike most of her compatriots, she has devoted her talent less to the description of her own country and its people, than to the embellishment of scenes and traditions connected with the land of her adoption, where the principal part of her life has been spent. Miss Kavanagh was born in the year 1824, at Thurles, in the county of Tipperary, and is descended by both parents from two old Irish families of the county of Limerick; her father, Morgan Kavanagh, and her mother, Sophia Fitzpatrick, bearing names well known and esteemed for many generations among the gentry of that town and the adjacent

g counties. Whilst yet a child, her parents having determined leave their native land for an indefinite period, she accompanied them to England, where, after a brief sojourn in London, they crossed over to the Continent, finally taking up their abode in Paris. In that city she received her education, and gained that minute insight into French life which she has reproduced with so much advantage in many of her works. After remaining in Paris, with the exception of a visit to England of a single season, Miss Kavanagh returned to London in 1844, and in her twentieth year prepared to devote herself henceforward to literature as a profession. Unlike most young writers, who are said invariably to begin with tragedy, Miss Kavanagh made her first adventure in authorship in tales and essays, which found ready acceptance in the literary periodicals of the day; and gathering confidence from success, published in 1847 her first book, a tale for children, entitled "The Three Paths;" to which, in 1848, succeeded the well-known story of "Madeleine," a tale founded on a single fact, told in the simplest language, but embodying all the strength of a holy purpose. This narrative, without any adventitious circumstance connected either with its plan or its production, won a cordial welcome from the public. The story of a peasant-girl of Auvergne devoting her life of labour to amass, grain by grain, sufficient means to build an hospital, had enough of the marvellous in it to secure for it the sympathy of those who, in a patient continuance in well-doing under adverse circumstances, can often recognise the highest species of heroism. Fearful, perhaps, that her readers should tire of the wholesome food of common life, in her next work the authoress struck at once into the very hot-bed of artificial life, giving to the public, in 1850, two volumes, entitled, "Women in France of the Eighteenth century;" containing carefully elaborated cabinet pictures of that galaxy of wit, wisdom, genius, and misfortune among the *belles esprits* and heroines of France, which lends so great a charm to the literary history of that period; names and histories well known to us all, but which, like old friends, are ever welcome, come in whatsoever guise they may. From the perfumed atmosphere of the court and the salon, with its high fashion, brilliant sallies of wit, and maxims of brewed social-life selfishness, Miss Kavanagh next conducts her readers, in her novel of "Nathalie," published in 1851, to the remote apartments of the south of France; makes them familiar with the late-life of the old château; painting its daily routine, its sober quietness, its duties, and its cares, with all the authority of an actual sharer of its unvarying existence; and presenting to the reader pictures of the peopled solitude of a French provincial town, sketched with the firm hand of a ready writer, albeit softened by something of the tender veneration of an antiquary. Her next work, a single volume, entitled "Women of Christianity," issued from the press in 1852, and comprised short biographies of women of different epochs, eminent for works of charity and benevolence, of all creeds, sects, and parties, but all stirred by a common impulse of duty to God and love of their neighbour to labour in the wide field of suffering

humanity for its common good. Miss Kavanagh next appeared as the writer of a domestic novel of the present day, entitled, — "Last Burns," published in 1853. Soon afterwards she left England for a lengthened tour through France, Switzerland, and Italy, from which she has recently returned. Her latest publications are a novel entitled "Grace Lee," in three volumes, and "Rachael Gray," a tale in one volume.

KEMBLE, MRS. FRANCES ANNE, the elder daughter of the late Charles Kemble, and niece of Mrs. Siddons, is distinguished as the inheritress of the dramatic talent of her family, and not less so as the possessor of poetical and intellectual gifts of a very elevated order. She was born in London about the year 1811, and made her first appearance on the stage at Covent Garden Theatre, then under the management of her father, on the 5th of October, 1824. Although the circumstances of her birth associated Fanny Kemble from her infancy with the profession she afterwards adopted, the excitements and triumphs seem to have had no real fascination to her peculiar nature; and it is well known, that it was not until the embarrassed position of her family rendered this sacrifice of inclination in her own opinion a duty,—not, in fact, until six weeks previously to her actual *début*, that her own thoughts or those of her nearest relatives were turned to such an application of her talents. The choice of Juliet as an opening part, dictated by the instincts of the young poetess, whose mind claimed an affinity with all that was passionate and imaginative, was fully justified by her delineation of the character. Its charm, as described by Mrs. Jameson—a thoroughly able critic—consisted not so much in the rendering of any particular point, as in the sustained preservation and gradual development of the individual character. From the first scene in which the actress has but to convey the impression of a gentle, graceful girl, whose passions and energies lie folded up within her like gathered lightning in a summer-cloud—to the last, which is the devoted, despairing woman, she worked up with so powerful an effect—her whole impersonation of Juliet was so purely true that it established her dramatic fame at once, and was eulogised to an extent almost unparalleled. On the 9th of December in the same year, Otway's tragedy of "Venice Preserved" was revived for the purpose of introducing Miss Kemble as Belvidera; and after this experiment, which proved wholly successful, she sustained the parts of the Grecian Daughter, Mrs. Beverley, Portia, Isabella, Lady Townley, Calista, Bianca, Beatrice, Constance, Camilla, Lady Teazle, Donna Sol in Lord Ellesmere's translation of "Hernando," Queen Catherine, Catherine of Cleves, Louise of Savoy, "Francis I," Lady Macbeth, and Julia, in the "Hunchback." Miss Kemble's principle of never rejecting any part which the interests of the management seemed to require at her hands led to her representation of several characters to which, from physical and other causes, she was imperfectly adapted. The only parts known to have been selected by herself are those in which she was

eminently successful; namely, Juliet; Portia; Camiola, in Lessinger's "Maid of Honour;" Bianca, in Milman's "Fazio;" and Julia, in the "Hunchback:" of this last part she was the original representative. The three years during which Fanny Kemble retrieved the fortunes of her family and the glory of Covent Garden, were marked by the production of "Francis I.," a tragedy written by herself at the early age of seventeen, and accepted with favour by the general public on the ground of its dramatic merits, and by critics as displaying sound poetical genius. In the year 1832 she was induced to visit America, whither her fame had preceded her; and, in conjunction with her father, performed with great *éclat* at the principal theatres of the United States. A record of these wanderings, and every minute circumstance attending them, is comprised in a "Journal," from her pen, which, it is understood, was not originally intended for publication, although in the year 1835 it did find its way into print. At this period, Miss Kemble's lot seemed cast for life in America, as she had become the wife of Pearce Butler, Esq., a gentleman of considerable fortune in Philadelphia. But the result of this marriage, which exercised a saddening influence on her after years, is generally known. In 1849 a divorce severed the tie, and restored to her that illustrious name which she has dignified anew by her life and genius. The publication of a drama, entitled "The Star of Seville," in 1837, added justly to her literary reputation; and a volume of poems, brought out seven years later (1842), evolving, in language truly poetical, the high thoughts and pure philosophy of a fine nature developed by the teaching of sorrow, established her claim to rank as one of our true poetesses and earnest writers. Mrs. Fanny Kemble's last book is a memorial of a year passed in Italy under the roof of Mr. Edward Sartoris, the husband of her sister Adelaide; a gentleman known for his artistic tastes and general requirements. This work, entitled "A Year of Consolation," is characterised by that freshness and originality of thought and expression which is an invariable excellence of the authoress; and is remarkable for its distinct pictures of natural scenery. During the last few years Mrs. Kemble has been chiefly engaged in the delivery of Shaksperian Readings, which her poetical discrimination and wonderful command of voice and manner invest with a charm that is now universally recognised.

L.

LEWALD, MADEMOISELLE FANNY, a native and inhabitant of Berlin, occupies a prominent position in the literary circles of Prussia, and has even gained considerable reputation beyond them by talents of a somewhat masculine order. Her career as a writer opened with a novel called "Clementine and Jenny," but the impres-

sion made by it was not sufficiently decided to familiarise English ears with the name of the authoress. Her next work, "*Diogenes*," a novel published anonymously about nine years ago, seems to have achieved one of those immediate successes, rare enough to be regarded as events in the history of publication. This book, to which was attached the name of "Iduna, Countess H. H.," was in fact a parody of the novels of the Countess Hahn-Hahn, but was written with an appearance of good faith, which admitted of a sustained interest apart from the direct aim of the story. Madlle. Lewald's heroine is framed on the plan of the Faustinus Ida Schott, the Sybellas, and other beautiful and aristocratic ladies, who certainly do enlist our sympathies very warmly in the pages of the Countess Hahn-Hahn; albeit we desire for them greater resignation to the people and circumstances around them, and an acknowledgment of other duties and occupations in life, than those attaching to an experience of *la grande passion*. The Countess Diogenes's adventures are related by herself, and consist in a life-long search for the "one congenial spirit," which she seeks even among the Montezuma and forest denizens of the New World, with an ill-success that finally turns her brain, and places her among the incurables of an hospital. The popularity of her model was of course an element in the attention given to Madlle. Lewald's satire, but it was remarkable as bestowed at a time when political affairs and the debates of the Prussian Parliament absorbed the attention of society, and almost put an end to intellectual pursuits. The authorship was attributed to various distinguished men of letters; but in her new work, "*Italienisches Bilderbuch*," translated in 1848 under the title of "*The Italians at Home*," Madlle. Lewald acknowledged her former production, and thus set conjecture at rest. In these volumes of travels, Madlle. Lewald wisely selected the characteristics and social life of the people as the chief subject of her observations, and has therefore presented much fresh and entertaining matter. In 1849 appeared another novel from her pen, "*Prinz Louis Ferdinand*," founded on the life of a member of the Prussian royal family who perished on the battle-field of Saalfeld, in 1806. The unsparing use of well-known individuals in imaginary situations, which is remarkable in this book, must be instanced as a lack of taste in the writer, and in the public who could countenance and permit it. During the season of 1850, Madlle. Lewald spent some months in England, and published her impressions in a volume called "*England and Schottland*," translated in 1854. There is a frank, cordial spirit in her descriptions, and a willingness to remove existing prejudices in herself and others, which make amends for those errors of detail from which, like other passing tourists, the descriptions of this authoress are not altogether exempt.

LOUDON, MRS. JANE, an Authoress extensively known by her valuable botanical manuals, was the daughter of Thomas Webb, Esq., of Ritwell House, near Birmingham. This gentleman having speculated largely in land, and suffered great reverses

came from a sudden change in the aspect of monetary affairs, it became desirable that his daughter should turn her talents to the account, and imaginative literature was the path she first selected for their exercise. In 1827 Miss Webb published a novel entitled "The Mummy," which excited considerable attention, and was certainly remarkable, both in design and execution, as the work of a young and unpractised writer. The scene of this book was laid two hundred years in advance of the present period, and strange to say, it embodied many ideas of scientific progress which have already become facts, although regarded at the time of their appearance as speculations of the wildest and most impracticable character. Among them were included the atmospheric railway, the passage of railroads over houses, the electric telegraph, the winding of clocks, and the suggestion of a steam plough, which attracted the attention of Mr. John Claudius Loudon, the author of numerous works on botany, gardening, agriculture, and architecture, who led to an acquaintance with the authoress, whom he soon afterwards married. From this time Mrs. Loudon abandoned general literature for such of its branches as especially absorbed her husband's attention. She entered actively into all his intellectual pursuits; proved herself an able assistant in various serial works relating to gardening, natural history, and architecture, commenced him about this period; and after his death, which occurred in 1841 at their residence at Bayswater, carefully edited some of his most important works. The volumes by which Mrs. Loudon is individually best known to the public are entitled "The Lady's Flower-Garden;" "The Lady's Country Companion;" "Gardening for Ladies;" and "The Lady's Companion to the Flower-Garden." The last-mentioned work has had a circulation of more than 20,000 copies. She has rendered her writings thoroughly useful to the amateur in search of information, by the clear and practical manner in which it is imparted; and extremely interesting to the general reader by the grace with which her literary tastes and knowledge have enabled her to invest the subject. It may be added that these tastes have descended to Miss Agnes Loudon, the only daughter of the lady, who is the authoress of several children's books, and various tales and sketches. Mrs. Loudon is in the enjoyment of a pension of 100*l.* per annum from the Civil List, granted to her in recognition of the literary services rendered by herself and husband.

LYNN, MISS ELIZA, daughter of the late Rev. James Lynn, D., Vicar of Crosthwaite, Cumberland, is the author of two novels, such, like "Valerius," "The Epicurean," etc., less calculated than their subjects to gratify the general taste, have yet gained with those readers who appreciate great research in conjunction with talent, a reputation higher than is usually accorded to works of a less ambitious character. Miss Lynn was born in the year 1824, and had the misfortune to lose her mother, the daughter of Dr. Goodenough, bishop of Carlisle, when she was little more than six months old. As the youngest of twelve children, she

necessarily became the pet and plaything of the family circle. Her education, although carried on in rather a desultory manner, was strictly a domestic one; and where everybody had knowledge of some kind or other to communicate, her acquirements, if somewhat irregularly attained, were by no means superficial or circumscribed. Dr. Lynn holding church preferment that necessitated a frequent change of residence, her youth was passed alternately at Gad's Hill, Rochester, and at Keswick; the latter place having been considered more emphatically her home. Among the limited society of gifted minds that have made the Lake country classic ground, Miss Lynn first acquired her love of literature. Energetic and active, contemplative but not dreamy, as she approached womanhood, the quiet monotony of a life so secluded weighed heavily on her spirit; and if the question, "What shall I do to be for ever known?" was unasked, it was something near to the heaviness of an unoccupied life that made her regret that her lot had not been cast in a busier scene. That "weight of calm" which has been felt oppressive by so many, became almost insufferable. She longed to see with her own eyes, and hear with her own ears, something of that stir and bustle of life that is the concomitant of great cities. A high authority has asserted that talent suppressed preys on the heart like misfortune: and she yearned for a position where knowledge could be more readily gained, and industry win fruits worthy the gathering. To gratify this strong desire, her family were induced to forego her society for a time, and in 1845 Miss Lynn took up her abode in London, devoting herself, however, less to the charms of its society and social attractions than to the task of making herself acquainted with the rich stores of wisdom and learning gathered up in its public institutions for the benefit of such as could best appreciate them, and in some sense make them their own. Accustomed to live mentally and speculatively in the Past, and to carry back her sympathies to the remote ages of the youth of the world, Miss Lynn commenced her literary career in 1846, by a work of fiction in three volumes, entitled "Azeth the Egyptian;" a story founded on one of the traditions of ancient Egypt; and gathering with unwearied patience scattered and minute details of the "antique world" as have come down to us, skilfully reproduced them in the development of her story, contrasting true faith with the false reasoning and corrupt practices of the Egyptian priesthood; marking with a firm hand the national distinctions of the various tribes and people that made up the *dramatis personæ*, and clothing them with an imagination so vivid that it would almost seem to lie under the spell of their words and potent enchantments! Encouraged by the critical press in the first work, Miss Lynn followed the path she had marked out for herself, and in the year 1848 produced "Amymone," a romance of the days of Pericles; in which poets, philosophers, orators and demi-gods among men, descend from the pedestals on which antiquity has enthroned them, and live before us in the light and life of common day. No longer half mythological personages, too remote

sympathy, their laws, customs, games and usages, come before with the claims of fact and the charm of a fairy tale. With her at fiction, "Realities," purporting to be a story of the present, Miss Lynn concluded her separate works; confining herself to that period to essays, sketches, and stories of limited extent, which have made their appearance in the pages of the various periodicals of the day.

LYTTON, LADY ROSINA BULWER, is the only surviving daughter of the late Francis Wheeler, Esq., of Lizzard Connel, in the county of Limerick, and was married to Sir Edward (then Mr.) Bulwer, on the 29th of August, 1827. A novel, entitled "Cheveley, the Man of Honour," published in 1839, was the first work which brought her prominently before the public. It was succeeded, in 1840, by "The Budget of the Bubble Family," and, two years later, by "Bianca Capello," an historical romance, giving evidence of careful research into contemporary histories of manners and events, and displaying, likewise, a peculiar aptitude (which the authoress has elsewhere displayed in a higher degree) for the production of scenes and characters appertaining to days long since departed. In 1844 Lady Bulwer published a clever picture of modern Italian life, in a novel entitled "Memoirs of a Muscovite;" and subsequently illustrated the age of Louis XV. in that of "The Two Daughters." To this succeeded "Behind the Scenes," and "The School for Husbands, or the Life and Times of Molière." The last-mentioned novel is in many respects admirable, as affording specimens of dialogue sufficiently *spirituelle* to be not unworthy of the illustrious shadows whose names are associated with them; and certainly brilliant enough to have created, under favourable circumstances, a high literary reputation for the authoress.

M.

MARSH, MRS. ANNE. The name of this lady, as the authoress of several of the most charming works of fiction to which the present generation has given birth, is now familiar to her readers, although she has never voluntarily lifted the veil which once shrouded her individuality from the public eye. There is, however, a certain price which must always be paid for fame. Indissolubly connected with the gratitude offered by society to the author who suggests new thoughts, gives language to old ones, or charms away care for a season, is the warm feeling of personal interest, which, sooner or later, wins its own fulfilment. It has now generally transpired that Mrs. Marsh is the fourth daughter of James Caldwell, Esq., a landed proprietor, and recorder of Newcastle-under-Lyne. She was born at his estate in Staffordshire towards

the close of the last century, and under his supervision she received such an education as was calculated to develop her excellent mental qualities. In due time she became the wife of a junior member of the banking firm of Fauntleroy, Graham, Stave and Marsh, and took up her abode near London. The care of a rapidly-increasing family would appear to have absorbed Mrs. Marsh's attention for some years, as it was not until 1834 that she published her first work, "Two Old Men's Tales," a volume remarkable for depth of pathos and a power of description which seconded every impulse of the originating mind. A reputation was soon established for the unknown author, and great anticipations were entertained respecting the future production of the *soi-disant* "old man," whose literary treasures had been so rich in beauty. The "Tales of the Woods and Fields," which appeared in 1836, to a certain extent touching and graceful, might have been accepted with pleasure from the hand of an ordinary writer; but neither these volumes nor the "Triumphs of Time," a collection of tales which succeeded them, were calculated to sustain the impression which had been already created. A few years later Mrs. Marsh completely re-established her literary character, by the publication of "Mount Sorel," perhaps the most finished and artistic of her works. The main-spring of this story is the antagonism of habits, feelings, and opinions between the extremes of the aristocratic and literary parties, as represented by the fathers of the lovers, whose happiness it greatly imperils. Very delicately sketched, and full of individuality, are the characters of the actors; thoroughly picturesque and life-like the situations; and although "Mount Sorel" would scarcely afford passages of equal passion and power with some parts of the "Admiral's Daughter," it is marked by a tone of sustained feeling which arouses every sympathy of the reader. It may be doubted if this excellent novel ever attained the popularity which was awarded to its successor, "Emilia Wyndham;" now so completely a household classic as to require no more than a passing reference. The year of its publication (1846) witnessed Mrs. Marsh's entrance on fresh fields of literary enterprise, as the author of "The Protestant Reformation in France," and "Father Darcy," an historical romance, tracing the early lives of the conspirators implicated in the Gunpowder Plot. In 1847 she produced "Norman Heir," a family history of three generations, in which the gloomy household of an avaricious provincial tradesman of bygone days is very strikingly described. Mrs. Marsh's next work, "Angela," is an example of a tendency to sacrifice the perfection of her tales by a certain indifference or impatience towards their close; nothing, however, can be more harmonious and poetical than the concluding volume, in which the growing attachment of the heroine and her artist-lover fills up the soft picture of a dreamy country life with its living interest. After "Angela" appeared "Mordant Hall," "Lettice Arnold," reprinted from the pages of a periodical; "The Wilmingtons," which supplied the principal character in "Time to

anger;" "Ravenscliffe;" "Castle Avon;" and "Aubrey." The *Heiress of Haughton*, a sequel to this work, terminates, for the present, a series of fictions which entitle this lady to be considered one of the most productive, as well as deservedly popular, novel-writers of the day. Her talents may be characterised as essentially feminine; discarding from the term any element of weakness which might by some few persons be attached to it. Her powers have never been otherwise exercised than in the cause of truth and virtue; and Mrs. Marsh may not have had the less influence for the fact that she has been content to utter the word in season, without constituting herself a censor of the follies and vices of society.

MARTINEAU, MISS HARRIET, the Political Economist *par excellence* of her sex in the present generation, is one of the youngest of eight children, and was born at Norwich on the 12th of June, 1802. Her ancestors, as their name denotes, were of French extraction, and when driven from their country by the Revocation of the Edict of Nantes, settled in this English town, and helped, like others of their fellow-exiles, to enrich and distinguish it by the establishment of the silk manufacture, the mysteries of which had long been familiar to them. The occupation then adopted was handed down through many generations, until it descended to Miss Martineau's father, who was the proprietor of a manufactory, although he did not, unfortunately, belong to the very prosperous order of traders. The education bestowed on this lady in her childhood was of that limited character which, of necessity, sufficed for the daughters of the middle classes at the beginning of the present century. The circle of her outward pleasures and amusements, too, was restricted by delicate health and certain physical deprivations, which have attended her through life. Never, but for a few hours, has she enjoyed the organ of smell, and, consequently, has possessed that of taste only in the most imperfect degree; her sense of hearing was also lost in her youth, and she now looks back to the far-away time when, seated on her little stool in a corner, she was conscious of the voices of those around her, as an experience of some strange, and almost magical world. These circumstances, as tending to isolate her from many of the charms of life, had of course their influence in pointing to the sphere of intellectual pleasures, and in inciting her to carry out the system of self-culture to which her mental powers owe their chief development. She derived both impulse and encouragement in these pursuits, from the close ties of sympathy and affection which bound her to James Martineau, the brother next in age to herself; but any material aid which his superior advantages of education might have qualified him to render, was precluded by frequent separations and professional engagements, and she was left to trace out her own course, and to fit herself for its requirements, alone. The occupation of authorship, at first adopted from inclination, was soon rendered necessary by pecuniary disasters in the family; and Harriet Martineau made herself independent, by literary exertion, some time before her reputation was generally established. In 1828 appeared

her first important work, "Devotional Exercises for the Use of Young People;" and from this time the series of her writings proceeded, without intermission, year after year, until a period of illness necessarily interrupted her labours. It was by no means Miss Martineau's fate to enter on her vocation of authoress with powers matured, experience gained, or theories firmly established; she has been, at the same time, a learner and a teacher, an exponent of the great principle of progress which she has advocated. It happens that her earlier works cannot be considered the masterpieces of her intellect; but they nevertheless constitute no unsteady foundation for them, having been distinguished invariably by vigour and lucidity of style, and a direct moral aim more or less obvious. The years 1824 and 1825 witnessed the production of "Christmas Day," a tale, and a sequel to it called "The Friend." In 1826 appeared "Principle and Practice," and "The Rioters;" and a year later "Mary Campbell," and "The Turn Out," followed by a "Second Principle and Practice," a series of tracts, and a tale called "My Servant Rachel;" in all of which the writer evinces her strong interest and sympathy with the lower classes of society. It has been almost observed that the year 1830, in the course of which Miss Martineau brought forth her "Traditions of Palestine," seems to have been an epoch in her mental history, whence dates a loftier flight in her imagination, and a more elevated tone in her writings. The book in question, which consisted of descriptive sketches of the period at which the redemption of the world's salvation was accomplished; of the scenes and the people that witnessed its fulfilment, and the thoughts and emotions which it kindled among them; was marked by deep religious sentiment in the conception, and equal tenderness and vigour of execution. About the same time the intellectual strength of the authoress was displayed in three prize essays, published by the Association of Unitarian Dissenters, to which she belonged; the texts being "The Faith as Unfolded by many Prophets," "The Faith as Manifested through Israel," and "The Essential Faith of the Universal Church." These, with a tale entitled "Five Years' Youth," and contributions of various kinds to the "Monthly Repository," formed Miss Martineau's literary occupation from 1830-31. Coincident with these labours was the design, so admirably carried out by her during the three following years, of the designation of "Illustrations of Political Economy." Here she accidentally read Mrs. Marcet's "Conversations" on the subject, and she discovered that she had herself unconsciously treated some of the phases of it in the tales called "The Rioters," and "The Turn Out." The reflection that other doctrines of the science were equally susceptible of imaginative illustration, led to the composition of a series of twenty-four stories, the first of which were brought into light through many difficulties and discouragements. They were rejected by the Society for the Diffusion of Useful Knowledge on the ground that facts could not be clothed with advantage in the more attractive garb of fiction, and that it was with the facts in their naked reality, only that the Society alone had a right to deal.

whether or not their rejection by the leading publishers was based on similar difficulty is uncertain; probably they might have preferred an illustration without the principle; but certain it is that the authoress encountered many failures before she met with a publisher sufficiently bold to undertake the enterprise. When the first number appeared, however, it was universally read; the fresh issue at the commencement of each month was anxiously looked for; new editions were repeatedly demanded; and translations followed quickly into French and German. Apart from their professed object, indeed, these tales embodied so many delicate yet powerful delineations of character, such varied and vivid interest in the conduct of their plots, as raised their author to a place amongst imaginative writers of the first class, and offered attractions to readers who would have been content to remain for ever ignorant of the mysteries of political economy. The "Illustrations of Taxation," and "Poor-Law and Paupers," which succeeded, consisted, the former of three tales, the latter of four, written on a similar plan, and were somewhat unequal in merit. In 1835 Miss Martineau visited America, where her writings had secured for her many friends and admirers; and having applied her whole mind to the task of acquainting herself with the institutions and characteristics of the nation, she published in 1837, "Society in America;" a work in which, setting aside all personal detail, she discusses the politics, domestic economy, civilisation, and religion of the United States. The sagacity, open candour, which was brought to bear on this examination, has been acknowledged, in a measure, by Transatlantic critics; although the English authoress never hesitates to bear witness to such discrepancies as she observed between the "principles and the practice" of her country. A "Retrospect of Western Travel," which appeared a year later, comprised those personal experiences of her tour which had been omitted from the more profound work; and included some of the most distinct and characteristic portraiture of the illustrious America which had ever been penned for our information. Shortly afterwards, Miss Martineau contributed to "Knight's Series" a useful little volume, called "How to Observe," addressing herself to all classes; and descended still further from the intellectual heights to which she had in various instances attained, by the compilation of three guides to service, entitled "The Maid-of-All-work," "The Housemaid," "The Lady's Maid," and a fourth called "The Dressmaker," containing technical aid for those who followed that occupation. Her first novel, "Deerbrook," completed in 1839, did not enhance her reputation to the degree that might have been expected from the existing evidence of her imaginative powers; but, probably, "The Hour and the Man," which succeeded it, would have made a stronger impression under the form of a simple biography of its hero, Toussaint l'Ouverture, than it achieved as a work of fiction. It was about this time that Miss Martineau's health became seriously impaired, and after completing a beautiful series of tales for children, entitled "The Playfellow," which included "The Settlers at Home," "The Peasant and the Prince,"

"Feats on the Fiord," and "The Crofton Boys," she was compelled, by rapidly increasing illness, to lay aside for a season the pen which she had wielded so long and so successfully. The offer of a pension of 150*l.*, made by Lord Grey in 1832, was now repeatedly the considerate kindness of Lord Melbourne. But once more it was declined by Miss Martineau, from the feeling that she could not conscientiously share in the proceeds of a system of taxation which had been publicly reprobated in her works. It would be impossible to withhold our respect from this sacrifice to principle, made at a time when literary exertion was becoming impossible; when she was threatened with pecuniary anxieties which this small but certain income would have averted for life. From the summer of 1833 to that of 1844 she was more or less an invalid; after the first few years confined wholly to the sofa, enduring continued suffering only by the help of opiates; susceptible of no outward pleasure, but able of overlooking a beautiful sea-view from the window of her sick-room at Tynemouth, where this period of her life was passed. That it was not unfruitful of pure and deep experience to her, and of a certain kind of wisdom touching and helpful to those who need its suggestions, we have taken in a volume, published at her recovery in 1844, entitled "Life in a Sick-Room." This recovery itself was attended by circumstances which have become a feature in Miss Martineau's history, and were detailed by her in the columns of the "Athenæum." It would appear that at the close of 1853 all hope of re-establishing her health by ordinary means was abandoned by her medical attendant, and, being a believer in mesmerism upon testimony, she determined to make a trial of its curative powers. The effects are represented by herself to have been immediately beneficial, and the result of the experiment a perfect restoration of her mental and physical energies. Of this former fact, at any rate, she gave evidence by the production of "Forest and Game-Law Tales;" three volumes of striking graphic stories, bearing on the character of these laws in ancient and modern times, and their effect on the classes for whom they were especially framed. In addition to these, a single volume called "The Billow and the Rock," proceeded from Miss Martineau's pen, before her expedition to the East, undertaken in 1855 in company with the Rev. James Martineau and a small circle of intimate friends. Her impressions of the scenes she passed through were portrayed with her usual vigour, two years afterwards, in "Modern Life, Past and Present." The effect, however, of her descriptions and ordinarily acute thoughts is impaired by a too speculative infidelity, which prepared her readers, in a measure, for that melancholy display of religious disbelief which is to be met in a subsequent work; a series of "Letters on the Laws of Man's Social Nature and Development," interchanged between herself and Mr. H. G. Atkinson, a mesmerist, and which was published in 1857. Shallow and illogical in reasoning, based, it would seem, solely on a profound faith in her correspondent's infallibility as a teacher (in which faith all higher and purer beliefs are sacrificed), this book

ould injure no one whose judgment was not warped by a similar influence. Happily Miss Martineau is strong only in a good cause, though equally sincere and earnest, for the time being, in a bad one. Those who bear in mind the memory of her repeated efforts for the benefit of her kind, and the echo of her many fine intellectual utterances, can only mourn that this blight should have passed over her later years, and hope that she may yet see cause to acknowledge, as she has done many a time before in connexion with less important principles, that the ground which seemed to her an invulnerable rock was after all but shifting sand. Previous to the publication of the last-mentioned volume Miss Martineau had appeared before the public in a new literary character — that of historian. Her "History of England during the Thirty Years' Peace" has been very generally approved for its vigour and impartiality. With a free and condensed translation of Comte's "Positive Philosophy" the catalogue of Miss Martineau's labours concludes; and, judged by it, she must be acknowledged to have rendered many valuable services to the literature of her country. For some time past she has been leading an active life on her little farm near Ambleside; exciting the envy of local agriculturists by the practical success of her experiments; and controverting the popular fallacy that the higher orders of intelligence, in women especially, are inapplicable to the ordinary affairs of life. At the sociable north-country firesides, at which Miss Martineau often takes her seat, she has been described as a pleasant, genial companion, despite her deafness; full of information and literary anecdote, and emitting from time to time flashes of wit and imagination, and tokens of kindly, and benevolent feelings to all around her.

MORGAN, LADY SYDNEY, a collateral descendant of an ancient Protestant family, which had settled in Connaught during the reign of Queen Elizabeth, was born in Dublin about the year 1743. Her father, Mr. Robert Owenson, was distinguished in his day as the writer of many clever songs for the stage, and likewise as a musical composer of no mean merit; his talents having been highly cultivated, though always tinged with the characteristics of the national school. He has another and a stronger claim to our remembrance as the first friend and patron of the poet Dermody, whom he discovered, in a state of abject poverty, mixing colours for the scene-painters of his theatre. Mr. Owenson, being a near relation of Oliver Goldsmith, is said to have had the honour, at an early period of his life, of being introduced by him into the most eminent dramatic and literary society of the age, and other circumstances tended to foster a passion for the drama and its accessories. This led him into extensive theatrical speculations, which proving unsuccessful, served as an incentive to the exercise of his daughter's talents. Before she had reached the age of fourteen, Sydney Owenson had produced a volume of poems, and soon afterwards showed herself the inheritress of her father's tastes, by arranging twelve of the most pathetic Irish melodies to English words (thus

furnishing the idea which was afterwards fully carried out by Moore). These efforts were succeeded by a volume, called "The Lay of the Irish Harp." Her next work was a novel, entitled "St. Clair, or the Heiress of Desmond," which, like its successor, "The Novice of St. Dominick," achieved some popularity, although drawn entirely from the mental resources of a girl of sixteen wholly unacquainted with the world. In the winter of 1811, after a long visit to a relative, whose estate was situated in the wildest and most classical scenery of Ireland, Miss Owenson published "The Wild Irish Girl," a novel, in which she made use of such experience of the primitive national character as she had gained during her late residence in Sligo, and displayed that comprehensive patriotism which distinguished her through life. The success of this book was extraordinary; within two years it had passed through seven editions in Great Britain, and had obtained for its author a celebrity which few writers of either sex have attained at so early an age. Miss Owenson was at once welcomed into the highest circles of English and Irish society, and thus gained opportunities of observation which increased her powers as a novelist, and expanded her ideas of life. The claims of society seem in no degree to have interrupted her literary career. "Patriotic Sketches," "Ida," and "The Missionary," proceeded in quick succession from her pen. In the year 1811, when on a visit to the Marquess of Abercorn, she became acquainted with Charles Morgan, a physician, the author of "Sketches of the Philosophy of Life and Morals," and a congeniality of tastes led to their union. During the next five years of her life, spent partly at home and partly in Dublin, Lady Morgan contributed to literature two novels, "O'Donnell" and "Florence Macarthy;" and a work in France, containing very vivid and life-like sketches of the country and its social features. A similar record of "Italy" received the testimony of Lord Byron to its truth. In 1827 Lady Morgan embodied another picture of national manners, in a tale called "The O'Briens and O'Flahertys." She afterwards published "The Bachelors of the Boudoir," a collection of sketches; "The Princess," a story founded on the revolution in the Netherlands; "Dramatic Sketches from Real Life;" "The Life and Times of Salvator Rossa;" and lastly, in 1840, "Woman and her Master." In the last-mentioned volumes Lady Morgan (to adopt the language of an elegant critic) has carefully investigated one of the most important branches of social science,—the position which women should occupy in the ordered progress of society. She has sought in the records of the past the guidance for the future. She has subjected the pages of history to a rigorous moral analysis; testing their facts with the skill of a critic, and deducing results with the wisdom of a philosopher. It is greatly to be regretted that this work, which is, in fact, a philosophical history of woman down to the fall of the Roman empire, should not have been extended; but a weakness and subsequent loss of eyesight obliged this indefatigable lady to relinquish her literary labours, although not before she had produced, in comparison

in with her husband, two volumes of sketches, entitled "The Book without a Name." During the ministry of Lord Grey, a pension from the Civil List of 800*l.* was conferred upon Lady Morgan in acknowledgment of the services rendered by her to the world of letters. It might also be regarded as a just compensation for the sacrifices she had made to liberal principles; since, boldly avowed and resolutely supported, they had drawn upon her such violent attacks as few women have been subjected to.

MULOCK, MISS DINAH MARIA, is a name little known beyond the limits of literary circles, albeit that of one who, in her abstract character of authoress, has excited a warm interest in many a household. She was born at Stoke-upon-Trent, Staffordshire, in 1826, and at the age of three-and-twenty published her first novel, "The Ogilvies." It has been justly remarked that, in spite of a tendency to over-dilate upon feelings and play chorus to the narrative, an occasional inadequacy of motive and a colloquial simplicity which sometimes verges on temerity of diction, this is a charming book. It is written with deep earnestness and pervaded by a noble and loving philosophy; whilst, in giving form to her conceptions, the writer evinces at once a subtle imagination, and a perception of minute characteristics which gives to fiction the life-like truth of biography. With its alternations of pathos and quiet humour this work may, indeed, be called remarkable, as the production of one whose life-lore had been so quickly gathered. In 1850 appeared "Olive," a novel, which supported the promise of its predecessor by increased maturity of thought. This was followed, in 1851, by "The Head of the Family," a story of Scottish life in the middle classes; and a Fairy Tale, called "Alice Learmont," which could scarcely be surpassed in poetic grace by any rival records of elfin gambols. Miss Muloch has subsequently published "Agatha's Husband," a novel, and "Avillion and other Tales," in three volumes. She has also written at various times the following books for young people:—"Rhoda's Lessons;" "Coladonti, the Story of a Genius;" "A Hero;" "The Little Lychetts;" and "Bread upon the Waters;" beside many fugitive tales and poems, which, like her more important works, have appeared anonymously.

N.

NIGHTINGALE, MISS FLORENCE. If the aphorism of Hannah More be a sound one, that "the care of the poor is the profession of women," few of the sex have shown a greater aptitude for their calling than the leader of that band of noble ladies who, at the close of 1854, left their native land to devote themselves to the

succour of the afflicted, and to bind up, as far as was in their power, the wounds which war had inflicted. Florence Nightingale, the younger daughter and co-heiress of William Shore Nightingale, Esq. of Embley Park, Hampshire, and Leigh Hurst, Derbyshire, was born at Florence in the year 1823, and received her designation in memory of her birthplace. Her father, who is a member of an old Yorkshire family, formerly bore the name of Shore, and only assumed that of Nightingale on succeeding to the property and estates of a distant relative. He married early in life the daughter of the late William Smith, Esq., Member for Norwich; an ardent labourer for slave emancipation, and a general promoter of every good work. As the child of intellectual no less than of ardent parents, the youth of Florence Nightingale was passed under the circumstances most favourable to the development of her moral and mental life; and that spirit of philanthropy and love of letters which formed part of her natural inheritance were cultivated with the most sedulous attention. Under the guidance of her father she gradually attained proficiency in classics and mathematics, as well as a general acquaintance with science, literature, and art. Nor was the ordinary range of feminine accomplishments omitted from her education as she is a good musician, and can boast of some knowledge of almost all the modern languages; speaking those of France, Italy, and Germany, with scarcely less facility than her native tongue. In the prosecution of her studies she has been an extensive traveller, having visited most of the cities of the Continent, and even penetrated far into Egypt, making friends and acquaintance of every class and creed among whom her lot has been cast, and thus storing up fresh experience of human nature and human life. Endowed with independence and a home embracing all that is rich in art and beautiful in nature; surrounded by affection, and gifted with a heart and mind to appreciate such blessings; Florence Nightingale might fairly say, "The lines have fallen unto me in pleasant places." Why, then, it might be asked, should she forego all the delights of life to dwell among sights and sounds that might appeal the strongest heart? Simply because, whilst gathering up the good things of the outward existence so abundantly showered upon her, and fulfilling the requirements of her station even to the offering of the "mint and the cummin" of a presentation at Court, her tender heart and energetic nature yearned after something even more satisfying than the fruits and flowers of an intellectual life. She had gone into the world; had seen sorrow that might be soothed, vice that might be reformed, misery that might be relieved, and she longed to do something for the afflicted, emphatically called "His brethren," by the great Founder of our faith, who, in His providence, had done so much for herself. From a very early age she evinced a strong sympathy and affection for her kind; as a child she was accustomed to minister to the necessities of the poor and needy around her father's estates, purchasing the privilege by frequent acts of self-denial; and in her youth she became still further their teacher, consoler, and friend. As Miss Nightingale advanced to an age

which admitted of independent action, she frequented and studied the schools, hospitals, and reformatory institutions of London, Edinburgh, and the Continent; gathering up knowledge wherever it might be found. Four years ago, when all Europe seemed keeping holiday in honour of the Great Exhibition, she took up her abode in an institution at Kaiserwerth, on the Rhine, where Protestant Sisters of Mercy are trained for the business of nursing the sick and other offices of charity. For three months she remained in daily and nightly attendance, accumulating the most valuable practical experience, and then returned home to wait patiently until an occasion should arise for its exercise. The strong tendency of her mind to look beyond her own immediate sphere did not long leave her without a definite interest. Her energies were now exerted on behalf of a class which had been too long neglected by the happy and the affluent; sufferers belonging to that order whom the Spaniards pathetically designate as the "blushing poor." Hearing that the Sanatorium for Governesses in Harley Street was languishing for want of systematic management and effectual support, she volunteered to place herself at its head. Leaving the comforts and pleasures of home, Florence Nightingale took up her abode within its walls; devoting all her time and much of her fortune to the practical and permanent re-organisation of that valuable institution. In this case, as in others, she proved her determination to do thoroughly the task she had set herself to execute; and as reforms are not accomplished without labour, or great achievements performed without a vigorous exercise of self-denial, the few friends who were admitted to her presence at this time usually found her in the midst of nurses, prescriptions, letters, accounts, interruptions, and all the multifarious duties of a regular hospital chief. Having remained in Harley Street as long as appeared necessary for the satisfactory working of the institution, in the welfare of which she had taken such deep and active interest, Miss Nightingale returned to the country, to re-establish her own health, and to gather up fresh strength for the next demand that should be made upon her. It came after no long interval, and proved to be of a character infinitely more arduous than any of those which had heretofore presented themselves. A mournful cry of distress had reached us from our wounded brethren in the East, languishing on their beds of pain and sickness, for want of that efficient care and those manifold comforts (in their condition absolute necessities) which the existing system of hospital treatment seemed incapable of affording. Instantly arose an enthusiastic desire to answer it; for England is not ungrateful to her preservers. But something more was wanting than even warm hearts and willing hands. Undisciplined zeal could achieve but little in such an emergency; and, unfortunately, we had none of those "vowed servants of the poor," who form so useful and beautiful a feature of the Catholic Church. A proposition, however, for the immediate institution of a band of female nurses, to be despatched to the seat of war, found favour with the Government and a large mass of the public. It is said to have

emanated originally from Lady Maria Forester, and it was at the request of that lady, seconded by that of Mr. Sidney Herbert, then Secretary-at-War, that Miss Nightingale consented to undertake the management of the expedition, and to place herself at its head. Not a moment was lost in unnecessary delay; she herself had counted the cost, and shrank not from its payment; whilst her parents, scarcely less self-denying, were content to give up their child to so holy a service. A very short time sufficed for preliminary arrangements, and on the 5th of November, 1854, she arrived at Constantinople in the steam-ship *Vectis*, accompanied by Mr. and Mrs. Bracebridge, her valuable coadjutors, and by thirty-seven experienced nurses, many of them volunteers, like herself, from the higher ranks of life. The whole party was speedily established at their new quarters in the barrack-hospital at Scutari, and the occupation awaiting them there was increased in a few hours by the arrival of 600 wounded, sent down after the battle of Inkermann. At such a juncture the services of the nurses were acknowledged by the attendant surgeons to be invaluable; how ardently they were appreciated by the patients themselves, many an individual tribute of gratitude has since proved to us. The details of this labour of love, pursued so unremittingly for many months, have been too widely diffused to need recapitulation here. 'It is well known that, with some very few exceptions, the subordinates have never been found wanting, either in will or power; whilst the strength and energy brought to bear by Miss Nightingale herself on the difficulties of her position have surpassed, like the good she has effected, even the hopeful anticipations of those who knew the extraordinary capabilities of her nature. "Every day," observes a qualified witness, "brought some new complication of misery to be soothed or unravelled by the power ruling in the sisters' tower. Each day had its peculiar trial to one who had taken such a load of responsibility in an untried field, and with a staff of her own sex all new to it. She has frequently been known to stand twenty hours, on the arrival of fresh detachments of sick, apportioning quarters, distributing stores, directing the labours of her corps, assisting at the most painful operations where her presence might soothe or support, and spending hours over men dying of cholera or fever. Indeed the more awful to every sense any particular case might be, the more certainly might be seen her slight form bending over him, administering to his ease by every means in her power, and seldom quitting his side until death had released him. And yet, probably, Miss Nightingale's personal devotion to the cause was, in her own estimation, the least onerous of her duties. The difficulties thrown in her way by the restrictions of *system*, and the prejudices of individuals, will scarcely be forgotten; or the daily contests by which she was compelled to wring from the authorities a scant allowance of the appliances needed in the daily offices of her band, until the co-operation of Mr. Macdonald, the distributor of the "Times Fund," enabled her to lay in stores; to institute separate culinary and washing establishments; and, in short, to introduce comfort and

order into the department over which she presided. The executive strength at her disposal, it may be observed, had been increased early in January by the arrival of Miss Stanley, with fifty more nurses, many of whom were dispersed to different points of the country, where their services were particularly needed. The gradual growth of Miss Nightingale's influence on all who came in contact with her might probably be traced, to a certain extent, in the increased vitality which began to pervade other branches of the hospital establishments, and which finally reorganised satisfactorily the whole aspect of affairs within its walls. When it became apparent that the most important portion of her work at Scutari was achieved, she proceeded to Balaklava, for the purpose of inspecting its hospitals; arriving there on the 4th of May. No sooner were the affairs of the sisters and nurses arranged, new tents built, kitchens erected, and vigorous action instituted, by the help of the authorities, than Florence Nightingale's long-continued exertions told on a frame which had been always delicate; and, completely prostrated by an attack of Crimean fever, she was carried up to the hut-hospital on the heights. At the end of a fortnight the severity of the attack had abated, and a voyage to England was strongly recommended. No persuasions could, however, induce her to proceed further than Scutari, and after quietly remaining here sufficiently long for the comparative re-establishment of her health, she resumed her active duties and ordinary course of life. As the period of Miss Nightingale's return to England and her ordinary sphere of occupation will probably not be very long deferred, it has been suggested that an acceptable testimonial of public gratitude might be offered to her on her arrival, in the shape of a fund for the foundation of a new hospital, to be worked on her own principle of unpaid labour; and, judging from the tenor of her past life, it cannot be doubted that the opportunity of future exertion would be the most congenial recompense for her noble self-devotion. "Miss Nightingale," observes the author of "Scutari and its Hospitals," "is just what you would expect in any other well-bred woman, who may have seen, perhaps, rather more than thirty years of life; her manner and countenance are prepossessing, and this without the possession of positive beauty; it is a face not easily forgotten—pleasing in its smile, with an eye betokening great self-possession, and giving, when she wishes, a quiet look of firm determination to every feature. Her general demeanour is quiet and rather reserved; still, I am much mistaken if she is not gifted with a very lively sense of the ridiculous. In conversation, she speaks on matters of business with a grave earnestness one would not expect from her appearance. She has evidently a mind disciplined to restrain, under the principles of the action of the moment, every feeling which would interfere with it. She has trained herself to command, and learned the value of conciliation towards others and constraint over herself." In conclusion, the same author records his opinion, that Florence Nightingale is the one individual who in this whole war has shown, more than any other, what real energy,

guided by good sense, can do to meet the calls of sudden emergency. The important service rendered by her to her own sex, in breaking down the barrier of prejudice which had crushed many a noble impulse, will surely be exemplified through generations to come, by the healthy activity and increased happiness of many an English woman's life. Towards the close of the last year, her Majesty presented to Miss Nightingale a diamond ornament, adapted to be worn as a decoration, of the most costly and elegant description. This testimony to the Queen's approval of her most valuable and useful efforts was accompanied by an autograph letter of the most cordial and graceful character.

NORTON, THE HON. MRS. CAROLINE ELIZABETH. This distinguished Poetess, to whom a large class of the public have awarded the pre-eminence among female writers of her age, is another link in that chain of hereditary talent which has been associated with the name of Sheridan for the space of a century. The granddaughter of Richard Brinsley and daughter of Thomas Sheridan, she was one of three sisters whom the death of their father left at a very early age to the sole care of their mother, a daughter of Colonel and Lady Elizabeth Callander. The education bestowed upon her was from various circumstances thorough and comprehensive, and the advantage of it may be traced in the energy of thought and perfect lucidity of expression which distinguish most of her works. During the period of childhood, she was for a time domesticated in the family of Lord Kinnaird, and shared with the heir the instructions of a Scotch clergyman who directed his studies. On her return to her mother's residence at Hampton Court, she became a pupil of her brother's tutor, Mr. Walton, in all those branches of education which were not personally superintended by Mrs. Sheridan. It would be difficult to trace the origin of Mrs. Norton's taste and capacity for verse-making, inasmuch as it was almost contemporary with her earliest exercise of the power of speech, and preceded any knowledge on her part of the art of writing. When old enough to wield a pen, her most disastrous calamities were the frequent destruction of her childish manuscripts by her mother, who discouraged the *ars scribendi*, as a profitless occupation of her daughter's time. When it became necessary to take stronger measures for its repression, pen, ink, and paper were withheld; but the little poetess managed to provide food for her passion by levying contributions on the blank pages of her music-books, and so cherished it in secret until her twelfth year, when the ambition of appearing in print was superadded to the promptings of her poetical enthusiasm. It happened about this time that she received from Lady Westmoreland the gift of a book, called "The Dandies' Ball," belonging to a class of works then in great favour with juvenile readers. Caroline Sheridan was seized with a strong desire to produce something of the same kind, and although her seniors would have imagined some acquaintance with society and the ways of the world to have been

necessary preparation for a satire on the follies of the "lordlier ex," she was undeterred by any such consideration, and set to work in earnest. Having written "The Dandies' Rout," and executed designs for the illustrations, she conveyed the copyright to the publisher of the other dandy books, on condition of receiving fifty copies for herself. Some of these were reserved for the select friends of the authoress; but the greater number were bartered with a Richmond bookseller for other publications. Her next great literary effort was the preparation of a volume of poems in conjunction with her sister; but it met with a fate worse than "The Dandies' Rout," for no publisher could be induced to bring it out. Undaunted by the discouragement, she began another poem in the Spenserian stanza, called "Amouivada and Sebastian," which, however, was not completed. It was a kind of Inkle-and-Yarico story, the scene of which was laid in South America; so that the plan had the advantage of adding to the general information of the authoress by involving a study of the history, scenery, manners and customs of that country. These pursuits, though very precious to her heart, by no means rendered the ordinary amusements of youth listasteful. On every half-holiday she was accustomed to aid her brothers and sisters in getting up extempore plays, and took great delight in the details. Tragedies were of course preferred (and chiefly Turkish ones, for the sake of the turban); but as five minutes only were allowed the actors for the improvisation of their speeches, a regular plot or connected chain of incidents was dispensed with. Meantime the period of childhood was passing away, and at seventeen Miss Sheridan composed the poems which afterwards secured for her the fame to which she aspired. "The Sorrows of Rosalie" did not escape the difficulties which obstruct the appearance of all first works, however great their merit. Neither the talent of the production itself, nor the *prestige* which attended the name of the writer, sufficed to procure its publication until 1829, when it appeared with some smaller pieces from her pen. The volume was published anonymously, and without any reference to the youth of the authoress; but the reading world did not fail to recognise in the principal poem great taste, and feeling, and a skilful management of versification; and in the smaller ones, that tenderness and beauty which render this lady's lyrics so generally acceptable. At the age of nineteen, and some little time before the production of the book above alluded to, Miss Sheridan became the wife of the Hon. George Chapple Norton, a son of the late Lord Grantley, who had proposed for her three years before, but had been rejected on account of her youth. It is to be lamented that this union did not prove a happy one, and was therefore partially dissevered some years later. The first work written by Mrs. Norton after her marriage appeared in 1831, and was a poem, entitled "The Undying One," founded on the legend of the "Wandering Jew." It was considered a fulfilment of the promise already given by the authoress, and as such, elevated her to the position she has since held among modern poets. The impulse which originated this poem is stated by herself to have

been derived from her uncle, Mr. Charles Brinsley Sheridan, who encouraged her earlier efforts and incited her to higher achievements. In the year 1840 appeared "The Dream, and other Poems," which called forth the following just remarks on the characteristics of her genius: "This lady," says the "Quarterly Review," "is the Byron of our modern poetesses. She has very much of that intense personal passion by which Byron's poetry is distinguished from the larger grasp and deeper communion with man and nature of Wordsworth. She has also Byron's beautiful intervals of tenderness, his strong practical thought and forcible expression. It is no mere artificial imitation, but a natural parallel." In 1845 Mrs. Norton published "The Child of the Islands," a picture of England and the social condition of its children, designed to remedy in some measure the want of communication between classes, and to impress the imagination of the future ruler of "the island" with a due sense of the wants, trials, and temptations of his humbler fellow-creatures. The subject was not taken up lightly or superficially by this lady: she had previously addressed many letters to "The Times," bearing on philanthropic objects, which, like the poem in question, do honour alike to her talent and feeling. A little volume of juvenile poems, called "Aunt Carry's Ballads," succeeded in 1847, and proved Mrs. Norton's power of adapting her gift very gracefully to the requirements of childhood; whilst her last work, "Stuart of Dunleath," gave unmistakable evidence that a new field was open to her in the fields of literature if she cared to follow it. This novel is characterised by all the eloquence and pathos of the writer: it is only to be regretted that the powers of mind which have thrown so much poetry and grace around the ordinary incidents of life, and have reproduced its beautiful contrasts of light and shade with so thoroughly artistic a touch, should have been exercised on a picture too entirely sad to be true, and rendered doubly painful by the skill with which it is wrought out. In conclusion, it should be remarked that Mrs. Norton is not the only distinguished member of the present generation of her family. Her sister, Lady Dufferin, formerly Mrs. Pryce Blackall, is known as the composer of elegant poems and music, and the fame of Lady Seymour, (now Duchess of Somerset), "the Queen of Beauty" at the Eglintoun Tournament, can scarcely have been from the memory of the reader.

NOVELLO, MISS CLARA-ANASTASIA (COUNTESS GICHELLE), the fourth daughter of Mr. Vincent Novello, an organist and musician who has done good service for his art by an arrangement of Mozart's Masses and other works, was born on the 10th of June, 1818. She gave early evidence of a talent worthy of her name and the sphere in which she was reared, and at nine years of age was placed under the care of Mr. John Robinson, of York, who subjected her to a preparatory course of training in the various branches of musical art. A year later she returned to London, for the purpose of prosecuting her studies under her father's roof; but Mr. Novello had

ing ascertained, on his return from a visit to Mozart's widow at Salzburg, that there was a vacancy in the Conservatoire de Musique at Paris, he obtained permission from M. Choron, the head master, to enter his daughter as a candidate. At the usual examination, her singing of the Agnus Dei, from Mozart's Mass in F, and "The Soldier tired" of Dr. Arne, was such as to secure for her the preference over nineteen other competitors. During her stay at the academy, Clara studied the great writers for the church with extreme ardour, and thus laid the foundation of her own peculiar excellence as an expositor of the grandest school of sacred music. At that time she excited much attention at the public exhibitions of the pupils; although so complete a child that she was generally placed on a stool, in order that her personal dignity should be rather more commensurate with her talent. When this royal establishment was dispersed by the Revolution of 1830, the young English girl left Paris, having previously witnessed sights of horror which brought on a lethargic stupor of many hours' duration. Returning to England in 1833, she made her *début* at the concert of Mrs. Jewell, at Windsor; accepted soon afterwards an engagement for the twelve Ancient Concerts; and in the same season appeared at the Philharmonic. Being then only fourteen years old, she was the youngest singer to whom this honour had been accorded; and it was still further extended by her election as an Associate of the society in 1834. In the course of that year she took a prominent part at the Worcester Musical Festival, and continued to sing at concerts with increasing success. Her youth and personal attractions tended, of course, to heighten the favour shown her by her audience, although the high order of her talents must always have rendered her independent of adventitious circumstances. In 1837 she was strongly advised by Malibran and Rubini to go at once to Italy, and study for the stage; but certain engagements existed which detained her at home for some months, and during that interval she received a pressing request from Mendelssohn to take part in the Leipzig Gewand Haus Concerts, of which he was director. Her vocal efforts on these occasions were pronounced by him to be a real service to the lovers of music, and he described her in a letter to Mr. Alfred Novello, her brother, as a confirmed favourite of the Leipzig public, owing to her clear youthful voice, purity of intonation, and thorough-bred musical feeling. This enthusiasm soon extended to other parts of Germany, and procured for her a most favourable reception from the court and people of Berlin. The late Frederick, king of Prussia who was especially fascinated by her rendering of "I know that my Redeemer liveth"), took a warm interest in her welfare, and on her departure presented her with introductions to his sister, the Empress of Russia, and likewise to the Court of Vienna, where she remained during the spring of 1838. Thence she passed with her family into Italy; but again her intention of preparing for the stage was diverted, by the claims for an active display of her powers at the various musical festivities then celebrating in Milan, in honour of

the Emperor of Austria's coronation as King of Lombardy. A series of engagements at the principal towns of Germany occupied Miss Novello's time and attention during the season of 1838-9. She then presented her royal introduction at St. Petersburg, where she met with great appreciation, and experienced further courtesy from the Empress of Russia on the occasion of the Rhine fêtes given in her honour; at which the English vocalist assisted. Towards the close of 1839 no obstacles interposed to interfere with her meditated period of study; and remembering the kindness of Rossini at the coronation at Milan, she determined to visit him at Bologna, and obtain his advice. This was, that she should wholly relinquish public life for a year, and during that time take lessons of Signor Micheroux, of Milan; study mimica, or stage action; attend the theatre nightly, and give her undivided attention to operatic music. This recommendation was adopted, and Clara Novello made her first appearance on the stage at Padua, in the character of Semiramide. This *début* was successful, and engagements at Bologna, Modena, Genoa, etc., quickly followed. It was discovered that, owing to a misunderstanding of the agents, Miss Novello was looked for both at Rome and Genoa during the Carnival season of 1842. Neither city would yield its claim; and when performing at Fermo, in the Papal territory, during the previous autumn, her passport was stopped as the most effectual means of retaining her services for Rome. This epoch was an important one in her private history; for at Fermo she became acquainted with Count Gigliucci, to whom she was induced to engage herself; the marriage being deferred until her public duties should have terminated. After the settlement of the carnival question, which resulted in her singing for six weeks at both places, Clara Novello returned to England, performed in "Saffo" and other operas at Drury Lane, under Macready's management, and sang at the provincial festivals of 1848. At the conclusion of the Gentlemen's Concerts at Manchester she retired from the profession, but without any public ceremonial; and in the following November became the wife of Count Gigliucci. Some years of quiet domestic happiness followed this union, in which the accomplished artist belonged only to her husband, children, and immediate circle of friends. About four years ago, however, circumstances induced her again to turn her talent to account, and she reappeared under her familiar maiden name in 1850. Displaying the versatility of her powers in operas, oratorios, and concerts, she sang at Rome, Lisbon, Madrid, Düsseldorf, London, and the provinces. In 1854 she concluded an engagement for three years at the Scala, by which her popularity at Milan was, if possible, increased. She also sustained her old reputation nobly at the Worcester and Norwich Festivals, and is now adding to the attractions of miscellaneous concerts.

P.

PARDOE, MISS JULIA, the Authoress of many popular works in History and Fiction, was born at Beverley, in Yorkshire. She was the daughter of a field-officer in the army, whose family was of English extraction; his grandfather having settled in England and purchased the estate of Ombersley, in Worcester, now in possession of the Devonshire family. Miss Pardoe was only six years old when she first gave evidence of that instinctive taste for literary composition which has rendered the chief occupation of her life one of its highest pleasures. At the age of thirteen she produced a volume of poems, and some years later an historical novel of the times of William the Conqueror, called "Lord Morcar of Hereward." Certain symptoms of a consumptive tendency having betrayed themselves about this time, she was ordered to a warmer climate, and spent fifteen months in Portugal, contributing meanwhile to various periodicals. On her return to England, H. R. H. the Princess Augusta, who took a warm interest in the young authoress, commended her to write a book and dedicate it to herself. Miss Pardoe accordingly gathered together the fruits of her recent observations abroad, and embodied them, for the benefit of the public, in two volumes, entitled "Traits and Traditions of Portugal," which passed almost immediately through two editions. This work consists of a series of lively and vigorous sketches of Portuguese habits and manners, and of the writer's own experiences, which were pleasantly extended by her keen spirit of adventure; they are interspersed with anecdotes and novelettes, also bearing on the characteristics of the country and the people. After the publication of two novels, "Speculation," and "The Marquess and the Daventrys," which displayed considerable power, Miss Pardoe undertook a journey to the East, and resided at Constantinople for six months, during which occurred the fearful visitation of cholera which marks the year 1835. The earliest literary result of this sojourn was a work in three volumes, entitled the "City of the Sultan," published in 1836. It met with great success, for the scenes of Oriental life were peculiarly congenial, as subjects of description to Miss Pardoe's somewhat glowing and poetical style of writing; and her fixed resolution to lift the veil which then restricted our practical knowledge of Turkish institutions, even at the risk of personal danger, lent additional interest and individuality to this account of her wanderings. The popularity to which it attained induced the writer, in 1838, to publish "The River and the Desert, or Recollections of the Rhône and the Chartreuse;" comprising letters descriptive of the earlier portion of her Oriental journey. "The Romance of the Harem," a series of Eastern tales connected by a slight thread of narrative, was scarcely less successful; and "The Beauties of the Bosphorus," an illustrated work in one volume, closed the published memorials of this tour. A short time afterwards Miss Pardoe visited Hungary, and

"The City of the Maygar, or Hungary and its Institutions," issued from her pen in 1840. The object of the authoress, as set forth by herself, was to produce a useful and veracious, rather than an amusing book; but the general verdict of the reading world adjudged that the result of her labours supplied as fair a portion of entertaining matter as if it had been guiltless of higher aims. A novel entitled "The Hungarian Castle" preceded Miss Pardoe's first historical work, "Louis the XIV., or the Court of the Seventeenth Century," which appeared in 1847, and included much of the lively and graphic spirit of a French biography. Two other novels, entitled "The Confessions of a Pretty Woman," and "The Fatal Beauties," have been followed by "The Life of Francis I.;" "The Life of Marie de Medicis;" a story called "Reginald Lyb;" which first appeared in the pages of a periodical; and a series of tales, published under the title of "Flies in Amber." Miss Pardoe has lately engaged upon another novel, "The Jealous Wife;" and a child's book has also been added to the voluminous catalogue of her works.

PFEIFFER, MADAME IDA. The wonderful achievements of this lady in the field of travel are acknowledged by the most unquestioned authorities to have cast into shade those of Marco Polo and others whose fame has survived the lapse of centuries, and to have elevated her to the foremost rank amongst the enterprising of her own sex. The powerful interest which attaches to her varied wanderings is excited less, perhaps, by their range—although this includes many a nook and corner comparatively unknown to Europeans—than by the unparalleled manner in which they were conducted. The passionate desire for locomotion, associated with a noble ambition, that of adding, by personal enterprise, to the mass of knowledge, was an element of Madame Pfeiffer's deepest nature: it grew with her growth and strengthened with her strength; and although circumstance, which has crushed the useful energies of many a fine-spirited woman, in her case delayed its gratification, yet the time came at last when, obstacles surmounted, difficulties smoothed away, and dangers disregarded, the desire of her heart was realised by its own fervency. The principal years of Madame Pfeiffer's life were passed at Vienna, where she was born at the close of the last century; they glided tranquilly by in the occupations of domestic life and the education of her two sons; narrow means, in addition to these home duties, affording but slight scope for the indulgence of her master-passion. Still it smouldered in her heart; a trifling sum was laid aside each year, and when the death of her husband and the establishment in life of her sons—one as an artist, the other as a government official,—uprooted the foundations of her domestic happiness, she started on her first important journey. The savings of twenty years formed a fund sufficient to enable her, with economy, to traverse Turkey, Palestine, and Egypt, which she did in 1842; publishing her diary in the form of two small volumes, which have reached a second edi-

on. Her next wanderings, in 1845, were to Scandinavia and Ireland, of which she likewise wrote a valuable and interesting account; and on the 1st of May, 1846, at the age of fifty-one, she left Vienna on her first tour round the world. At Hamburg she was joined by Count Berchthold, a gentleman of somewhat advanced age, who had proposed himself as her travelling companion, but from whom she subsequently parted company, finding that his mental and physical energy were unequal to compete with her own. Together, however, they landed in Brazil, and made many excursions on foot, visiting all that was note-worthy, and luxuriating in the splendour of the vegetable and insect life of the country; specimens of which they assiduously collected. One of these excursions was marked by their first serious adventure; an attack made upon them for the purposes of plunder by a stalwart negro armed with a lasso and long knife. Their only means of defence consisted of two parasols and a clasp-knife carried by Madame Pfeiffer; the chief brunt of the combat was borne by herself, and although twice wounded in the arm, she had retaliated upon her adversary, when the arrival of two horsemen relieved them from their perilous position. This incident made but a slight impression on the lady; her wounds bound up, she was ready to pursue her wanderings, and as her companion's progress was arrested by a slight injury received in the affray, she prosecuted alone her intention of visiting the Puri, or Indian aborigines of this country, who live scattered about its extensive forests. Mounted on a mule accompanied by a guide, and protected by a double-barrelled pistol, she crossed these immense solitudes; now galloping for her life on a track some fifty paces wide, between a blazing forest and a thicket of brushwood also in flames; now making a slow and painful progress on foot through untrodden wastes, wading through the vegetable web, or clambering over the trunks of fallen trees; but ever and anon rewarded for all her toil by the aspect of some forest garden, where exquisite parasites formed a gorgeous carpet and draped the giant trees; their brilliant blossoms peering like gay jewels from the dark green leaves; where rippling streams refreshed the overheated atmosphere, and bright-plumaged birds peopled the air. At length the wigwams of a native encampment were reached, and the favour of their occupants conciliated by Madame Pfeiffer's never-failing tact. Although as far removed from civilisation as savages could well be, in this case at least they exercised the virtue of hospitality. Their unwonted guest received by gestures the compliment of an invitation to their monkey and parrot hunt, in which she joined, and afterwards to a liberal portion of this game roasted with maize and roots, of which she partook with a good appetite. The best quarters were placed at her disposal for the night, the national dances performed for her amusement, and a friendly dismissal given her when she desired it. Her original idea of crossing the Continent from Rio to the Pacific was abandoned, in consequence of its disorganised condition; our tourist, therefore, left Brazil in a sailing vessel (selected as the

most economical mode of transit), doubled Cape Horn, and after a brief sojourn at Chili again set sail for China via Tahiti. During this voyage she suffered severely from illness, and having a sovereign contempt for drugs, prescribed for herself salt-water baths in a cask, by which means she was restored to health, and enabled to make the most of her stay at Tahiti. This island was then so full of French troops that Madame Pfeiffer wandered from door to door, vainly seeking accommodation, until she succeeded in obtaining, only at a high rent, an allotment of floor measuring six feet by four, in a room already occupied by four persons, and entirely destitute of furniture. To personal comfort, however, she has always proved herself indifferent, provided only the means of observation were afforded her; and as the humble character of her lodging by no means prevented free access to the court circle, she has been enabled to give many interesting details of Queen Pomare's private life in her four-roomed house, in the enjoyment of a French pension, and daily dinner at the governor's table; also of her appearance at a ball in a blue velvet blouse, the gift of Louis-Philippe, with artificial flowers in her hair and ears, and the unwonted adornments of shoes and stockings, which her brother-potentate had not omitted to provide. Having a fortnight's leave of absence from her ship, the unwearied German lady made the tour of the island on foot, a most laborious undertaking, owing to the great number of streams and sandbeds through which it was necessary to wade. At the close of her furlough she had satisfactorily acquainted herself with Tahitian society and scenery, and was ready to advance another step on her self-appointed course. She reached China in safety, but appears to have been in some danger at Canton, owing to the prejudice which exists there against the English, and especially against females, in consequence of an ancient prediction that the Celestial Empire would be subdued by a woman. Passing thence to Calcutta, she travelled overland to Bombay, braving the mysterious dangers of Thuggism and the fearful jolting of the ox-carts, in which, as the cheapest conveyance, her journey was for the most part accomplished. Sometimes she would stop for a day, to share the pleasures and diversions of a tiger-hunt, or to avail herself of the magnificence of the hospitality of a rajah or British resident; but never deterred from her onward course by the luxuries of life or the enjoyments of civilised society. After a short stay at Bombay, she left it in a steamship bound for Bassora, which was so fearfully overruled that she was glad to take refuge under the captain's dining-table on the quarter-deck, and in this miserable lair did she pass through and surmount a bad attack of fever. From Bagdad she accompanied a caravan to Mosul, travelling, as she herself expresses it, like the poorest Arab. With her little trunk, and a cloak and cushion slung on either side of her mule, the bare ground for a bed, and dry bread and milk her simple fare, she traversed dry deserts and steppes for a fortnight, being half the time in a motion. From Mosul she despatched her diary and other notes of her pilgrimage to Europe, for the most dangerous part of it was yet

come; and however fearless in spirit, reason assured her that success and safety were alike uncertain. Happily, however, after many startling adventures and hair-breadth escapes from robbers and the treachery of the solitary guide, whom her resolution held in check, she achieved the wonderful passage of the Koordish Mountains, and reached a haven of rest in the shape of the missionary station at Oroomiah. Thence she continued her journey through Persia, and returning homewards by way of Russia, Constantinople, and Athens, reached Vienna on the 4th of November, 1848. Two years later appeared a vigorous and graphic description of this tour, which has since been republished in England. In May, 1851, Madame Pfeiffer arrived in London, where, unfortunately, her claims to admiration and respect were at that time little known; and, taking with her the small sum of one hundred pounds granted by the Austrian government, set sail for the Cape of Good Hope, intending a second time to make the circuit of the world. Her immediate object was to penetrate the Continent of Africa in the direction of the recently discovered Lake Ngami, but the expense of travelling in the colony proved to be so enormous that she was obliged to content herself with a few rambles, and the execution of her second plan, that of exploring the Sunda Islands. In the beginning of 1852 she found herself at Sarawak, whence she penetrated into the interior of Borneo, and inspected the gold and diamond mines of Sandak. She afterwards visited Java and Sumatra, where she exposed herself fearlessly among the Cannibal tribes of the Batacks, hitherto generally avoided by Europeans. Their gestures were at first threatening, but her calm and quiet bearing disarmed their wrath, and even won their respect; since none but a superhuman being, they asserted, would have ventured amongst them with no other protection than her apparent weakness. Madame Pfeiffer remained among the savage tribes long enough to become thoroughly acquainted with their habits, and penetrated some distance further than any preceding travellers. After visiting the Moluccas, she accepted a free passage which was offered her to California; and on quitting that execrable gold land, as she styles it, she sailed down the western coast of America, visited the source of the Amazon, crossed the Andes, beheld the snow-capped peaks of Chimborazo and Cotapaxi, and afterwards all that North America has to show of the grand and beautiful. Once more our tourist set foot in London, towards the close of 1854. She subsequently prepared and published her notes of this journey, which cedes in interest and enterprise to none which have preceded it; having been performed with no other companion than an occasional guide, and under the heavy disadvantage of limited means. Although not a scientific traveller, according to the requirements of this enlightened age, Madame Pfeiffer advances the cause of knowledge by faithful records of all that comes within the sphere of her intelligent observation; she takes bearings and distances, makes meteorological observations, and contributes largely to the science of entomology. In conclusion, it may be well to

quote a few lines from a letter of her own to a friend, as correcting any erroneous idea of her womanly character which might have arisen from these details of more than feminine achievements. "I smile," she says, "when I think of the many who, knowing me only through my travels, fancy that my character, manners, even my figure and movements, are more like those of a man than a woman. How falsely do they judge me! But you, who know me, know that those who expect to find me six feet high, with a tall imposing gait, and a dagger and pistol in my belt, discover in me the very reverse; and that in every-day life I am plainer, quieter, and more reserved than thousands of my own sex who have never left the seclusion of their native villages."

PLEYEL, MADAME MARIE, a pupil of Kalkbrenner, and the queen of female pianistes, was born in Paris, and at an early age became the wife of M. Camille Pleyel, head of the well-known firm of pianoforte-makers in that city. Her life is understood to have been clouded by domestic misfortune, and for years her established home has been in the environs of Brussels, where she has resided with her father and only child, a little girl, who is said to emulate the early promise given by her mother, and afterwards so abundantly fulfilled. Endowed with great natural gifts, possessing an extensive knowledge of languages and general literature, Madame Pleyel's requirements are not, as is too often the case, limited to that branch of the arts which she has adopted as a profession. A highly cultivated nature of course finds expression in that language which is individually most congenial to it. We may therefore, to a certain extent trace the source of that exquisite variety of meaning, and poetry of feeling, which, added to a mechanical power almost boundless in extent, entitles this lady to the eulogistic remark of Liszt, that she was not only great amongst female pianistes, but great amongst the greatest artistes of the world. Madame Pleyel became first personally known to the English musical world in 1846, and the appreciation she has with has induced her to repeat her visit on several occasions—her latest appearance in public having taken place under the auspices of M. Jullien in the winter of 1854.

R.

RACHEL, MADEMOISELLE. The early history of this great actress forms a startling and romantic contrast to the fame and prosperity won later in life, by her remarkable tragic powers. The second daughter of a Jew hawker, named Félix, she was born on the 24th of March, 1820, at the little Swiss village of Muns, during one of the various professional pilgrimages made by her parents. In ten years the family pursued their wanderings, with but slight intermission.

through Switzerland and Germany; hastening (occasionally without the means of procuring the ordinary necessities of life) to the different fairs, which offered a market for their merchandise. The industry and exertions of the mother, Esther Haya, at length secured a humble but more permanent shelter at Lyons, which for a time became their home. M. Félix gave lessons in German when pupils happened to be attainable; Sarah, the eldest child, sang at the various cafés to the accompaniment of an old guitar; and little Rachel went from table to table collecting the small guerdon, which formed the sisters' contribution to the general expenses. In the year 1830, the family removed to Paris, and there continued for a time the same course of life; the only variation consisting in the fact that Rachel, by virtue of her increasing age and stature, took a more prominent part in the vocal entertainments, and sang with her sister at the places of public resort on the Boulevards. It is said to have been on one of these occasions that the poor little wandering minstrels arrested the attention of M. Choron, the founder of the Royal Institution for the study of sacred music. Influenced partly by commiseration for their evident poverty, and partly perhaps by a perception of undeveloped power expressed in the look and bearing of the younger sister, he made arrangements at once for including them among his pupils, and charged himself unhesitatingly with the future fortunes of Rachel Félix, whose Jewish appellation he discarded for that of Elisa, (the diminutive of her second name, Elizabeth), considering it better befitting the semi-sacred vocation to which it was then thought her life might be devoted with advantage. After a short experiment, however, M. Choron discovered that the sonorous organ of his *protégée* was better suited for declamatory than for musical expression, and he transferred her as a scholar to M. St. Aulaire, who enjoyed a high reputation as a dramatic instructor. In the present instance it fell to his lot to impart the very first elements of knowledge, so thoroughly uncultivated was that intellectual soil, destined hereafter to produce an abundant and brilliant harvest. For four years the instructor laboured conscientiously to implant in the mind of his pupil a true conception of great classical characters, such as Hermione, Iphigenie, Marie Stuart; endeavouring, meantime, to repress her own preference for the Dorinea, Philamintes, and Lisettes of Molière; parts for which she was disqualified by those very characteristics which render her a perfect personification of the tragic muse. It happened at one of the representations, half public, half private, by which M. St. Aulaire tested the capabilities of his pupils, that Mademoiselle Elisa, as she was then called, sustained the part of Hermione by the desire of her master, and of the Soubrette in "Le Philosophe marié," by her own. The admirable character of her performance in "Andromaque" excited the notice and warm approval of certain theatrical dignitaries who chanced to be present; and through their good offices she was admitted to the Conservatoire, and in October, 1836, joined the class conducted by Michelot. Her studies were shortly interrupted by the offer of an engagement at 3000 francs

a-year, from the manager of the Gymnase; and on the 24th of April 1837, she made her *début* under the name which she has since made famous, in a piece entitled "La Vendéenne," written by M. Paul Duport expressly for the display of her powers. Although the chroniclers of dramatic events differ widely in their estimate of the success which attended this effort, it would appear to have made little or no sensation. The "Vendéenne" was withdrawn, and Madlle. Rachel did not appear prominently before the public until the 17th of June, 1838, when she acted Camille in "Les Horaces" at the Théâtre Français, her engagements at the Gymnase having been cancelled. For some time previously she had studied under Samson, the veteran actor and author. Delighted with her physical gifts, he placed the experience of years at her disposal, and received his best reward in her success. The Parisian critics were startled by the exhibition of a tragic genius, equal to the finest inspirations of a Raucourt or a Duchesnois; combined with an originality in the manner of its development which made them ponder for a moment over their verdict, although it afterwards confirmed and strengthened it immeasurably. It was evident, from the first moment, that Mademoiselle Rachel disdained the mannerisms of her predecessors. The time-honoured etiquette of Tragedy was not for her. When she advanced before her audience, it was with a majesty peculiar to herself, rather than to the stage. When she opened her lips it was not to declaim, but to speak. To speak, indeed, with a concentrated power infinitely more thrilling than the volumes of sound which had heretofore commonly represented the fiercer passions of the soul. During the winter of 1838 she acted, in addition to the part which made her reputation, those of Emilie in "Cinna;" Hermione; Amenaïde in "Tancrède;" Eriphile in "Iphigénie;" and Aubé and Monime in "Mithridate." To these, which formed her original *répertoire*, she added the Roxane of Bajazet, which, with the Pauline in "Polyeucte," and the "Phèdre," may be numbered among her most wonderful impersonations in the classic drama. With every fresh representation her power over the public seemed to increase; and the life of the young Jewess has been described as a continued ovation, in which all classes combined to do her honour. The most practical evidence of her popularity is the fact that her theatrical income, which was originally fixed at 4000 francs, mounted in two years to twenty thousand, and at the present day may be calculated at between three and four hundred thousand, including the proceeds of the foreign tours which the six months' annual *engagement* given by the Théâtre Français enable her to make. The first of the periodical visits which made her known to an English audience took place in 1840; the limited round of characters in which she played having been selected from Racine and Corneille. Mademoiselle Rachel has, however, gradually formed a distinct *répertoire*, from the works of the modern school of dramatic writers, and has of late years become familiar to us as Mademoiselle de Belle Isle, Diane, Louise de Liguierolles, Adrienne Lecouvreur, Lady Tartuffe, and other parts, in which she has been more or less successful. This

lady must, however, be regarded as the interpreter of the genius of a past age, rather than of that in which she lives, which has comparatively small hold on her sympathies. Various instances of caprice and premature discouragement, by which the interests of authors have been sacrificed to an extent involving her in frequent litigation, have proved her assistance to be sometimes less advantageous than would be imagined from the extent of her genius. Among the members of her family for whom Mademoiselle Rachel's influence has obtained an opening in her own profession, is a brother, M. Raphael Félix, who proves himself a creditable adjutant to his sister in some of her finest characters. It must be attributed as a merit to one who has been frequently accused of sharing the common failing of her tribe, avarice, that her own good fortune should have been reflected on all her immediate relatives; the father receiving as his portion a superb country-house at Montmorency, with an income of 12,000 francs, whilst his children are all equally far removed from the poverty which formed their first experience of life. Mademoiselle Rachel is now at Havannah.

S.

SEDGWICK, MISS CATHARINE MARIA, an American Prose-writer, justly esteemed for the high moral tone as well as the literary merits of her works, was born at Stockbridge, Massachusetts. Her father, the Hon. Theodore Sedgwick, was formerly Speaker of the House of Representatives, afterwards a member of Congress, and at the time of his death filled the office of judge in the Supreme Court of the State in which he lived. Miss Sedgwick's first work was originally designed for a religious tract, but finding that it had expanded beyond the limits suitable for such a purpose she published it in 1822, in the form of "The New England Tale." Encouraged by the success which attended this effort of her pen, she soon afterwards produced a novel, entitled "Redwood," which was republished in England, and translated into French and Italian; and in 1827 gave to the world her third work, called "Hope Leslie, or Early Times in America," which is said to have surpassed in popularity any novel written by an American, with the exception, perhaps, of the early works of Cooper. In 1830, Miss Sedgwick published "Clarence, a Tale of our own Times;" in 1832, "Le Bossu;" in 1835, "The Linwoods;" and a collection of short tales contributed to various periodicals. During the next three years she sustained her reputation by the tales of "The Poor Rich Man and the Rich Poor Man;" "Live and let Live;" "Means and Ends," and one or two volumes for children. In 1840 appeared her "Letters from Abroad to Kindred at Home," and not long afterwards she recorded the brief but touching histories of "Lucretia and Margaret Davidson," in two graceful and kindly biographies. It has been

remarked by a critic of her own land, that Miss Sedgwick's mind inclines towards cheerful views of life. There seems to be implanted in her heart a love of goodness and of the beautiful, which turns naturally towards serenity and joy, as flowers lean towards the sun. It is manifest that, though possessing great refinement herself, her sympathies are not confined to a coterie or class, but are called forth by every manifestation of virtue, even in the most humble circumstances, and that she looks with kind regard upon the gleams of a better nature which occasionally break forth amid prevailing clouds and gloom.

SELLON, MISS LYDIA. At a time when the capacity of women for useful exertion in spheres more extended than the limits of their own homes is becoming generally recognised, it behoves us to accord full meed of praise to those who not only discovered this important principle before it became apparent to the great mass of society, but who gave an early impulse to its development by their personal examples. Among such ladies the subject of this notice deserves a prominent place, although, from the unobtrusive character of her labours, and the somewhat remote neighbourhood to which they have been for the most part confined, she would probably have failed to become a subject of interest or inquiry with the public at large, but for certain religious discussions, in which her course of life and mode of thinking have been closely and severely canvassed. The immediate cause of her noble self-devotion to the service of the poor and necessitous is said to have been the stirring appeal put forth some years ago by the Bishop of Exeter, for help in the formation of new districts in certain portions of his diocese, and for active co-operation in the endeavour to rescue thousands who were then living in a state of complete spiritual ignorance. This startling exposition of the neglected condition of the poor in one portion, at least, of her own civilised country, would appear to have made a very deep impression on the mind of Miss Sellon, a lady of some considerable fortune, and the daughter of an officer in the royal navy. Actuated by feelings of pure philanthropy, which, amidst the avocations and amusements of ordinary life, had previously found but imperfect scope, she speedily adopted the resolution of living in a measure apart from the world, and employing her property and energies for the furtherance of charitable objects. Having communicated these intentions to her father, and received his cordial approval, she fixed her residence in Devonport, where her proffered aid was thankfully accepted by the overtasked ministers of the Church. The first work which devolved on Miss Sellon in her new path of life was the establishment of schools, and with the view of obtaining scholars, she traversed the narrow lanes and alleys of the town with indefatigable zeal; inquiring of the children whom she met if they would like to be taught, and when the answer was favourable, at once seeking the approval of the parents. In this manner a beginning was made, and the small number who at first profited by her instruction gradually expanded

three hundred children, constituting an infant and two industrial schools; which, of course, shed a very beneficial influence on the neighbourhood in which they are situated. The most remarkable enterprise, however, which was achieved by Miss Sellon in the earlier period of her career, was that of civilising a band of wild, turbulent boys who worked in the Government Dockyard, and on whom a very zealous clergyman had vainly endeavoured to make some impression. Undeterred by the discouragement of those whom he consulted on the feasibility of her scheme, the lady resolved on attempting it, and accordingly addressed herself to these boys in her usual manner on an occasion on which they were all collected. Six of the number were at once prevailed upon to become her pupils, and regularly attended her school-room when their work was over for the day; nay, so entirely did they appreciate the advantages derived from their teacher's instructions, that they positively refused to invite the attendance of their companions, preferring to retain her services for themselves exclusively. One evening, however, when Miss Sellon was quietly engaged with her half-dozen scholars, she was startled by the tumultuous entrance of thirty unruly boys, all exclaiming that they came to be taught. With great difficulty some degree of order was instituted, and the new-comers were enrolled as members of the school. Since that time it has gradually increased, and about a year after its establishment numbered one hundred names on its books; whilst there was an average attendance of forty or fifty boys, who each evening abandoned their amusements to learn reading and writing from the master whom Miss Sellon had engaged, and to receive moral and religious instruction from herself. Meantime this lady's example had borne abundant fruits in the way of imitation. "First one," she says, "and then another joined me in my work; they asked me to receive them under my roof, and expressed their desire of aiding me in my labours, and living with me apart from the world. I asked them no questions, but simply bade them welcome in the name of Him whom we equally desired to serve." Thus originated that first community of Protestant Sisters of Mercy, of which Miss Sellon is the head, subject to the visitorial control of the Bishop of Exeter. The society is composed of three Orders, or Rules: one consisting of those who live in community, working among the poor, and engaged in active, laborious life; the second of those who from sickness or other causes are unable to undertake this work, but who wish to live a calm life, engaged in reading, prayer, and quiet occupations; the third order embracing those married and single ladies who live in the world, but who might desire to belong to the community, and to assist the work in various ways. Bound by no pledge beyond a promise of obedience to the Superior, the Sisters are free to abandon their vocation at will, but are bound, as members of the society, to conform to such rules as have been instituted for its direction; amongst which are included the adoption of a peculiar garb, and the possession of property in common. In addition to the duties involved in constant and devoted ministration to the temporal and

spiritual wants of the poor in Plymouth and Devonport, and in the management of the educational institutions founded by Miss Sellon, the Sisters of Mercy have undertaken the entire charge and support of a large number of orphan children, whose "home" is beneath their own roof, and who furnish a striking testimony to the value of their exertions. About four years since various public charges were brought against Miss Sellon and the sisterhood, of a strong bias to the doctrines of the Roman Catholic Church, and a systematic imitation of its practices. At the desire of the Bishop of the diocese, whose credit was closely involved in that of an institution encouraged and fostered by himself, the Superior responded to the assertions of her assailants by a pamphlet published in 1852, in which she had occasion to correct many misstatements, based on vague rumour, which had swelled the catalogue of her imputed errors. Other points in her conduct which had been attacked she defends by a reference to the injunctions of Holy Writ, and the Canons of the Church of England, to which she asserts her earnest and immovable attachment. That an institution which as yet is without parallel in the Protestant Church should have borrowed some characteristics from the models which gave birth to it, is scarcely surprising; and if Miss Sellon's personal feelings lead her to attach to certain forms an importance which is denied them by others, she has given such practical evidence of the purest Christianity as must secure universal respect for, if not sympathy with, her convictions.

SIGOURNEY, MRS. LYDIA HUNTLY, may be said to occupy among the authors of her own country a similar position to that so gracefully filled by Mrs. Hemans in the realms of English literature: for, although scarcely gifted with equal power or facility of expression, she has drawn her favourite themes from the same beautiful fountain of domestic loves and feelings; whilst the ceaseless aim of both has alike been to purify and elevate. Lydia Huntly was born at Norwich, Connecticut, in the year 1791, and was the only child of parents belonging to the intermediate classes of society. The absence of any childish companions, by whom her mind could have been directed to the ordinary amusements and interests of youth, tended to encourage the growth of a talent for poetry which developed itself almost in infancy. At eight years of age she was accustomed to versify her ideas and impressions upon a tolerably orthodox system. She was fortunate enough, early in life, to meet with a powerful and appreciating friend in Mr. Wadsworth, of Hartford, who may claim the merit of having rescued from comparative obscurity a mind capable of affording the purest pleasure to thousands. A volume of miscellaneous pieces, in prose and verse, introduced Miss Huntly to the public in 1815; four years later she married Mr. Charles Sigourney, a merchant of Hartford; but this union proved no obstacle to the prosecution of her literary plans, as the congenial tastes of this gentleman led him to encourage most strongly the cultivation of her peculiar endowments. In 1829 Mrs. Sigourney produced a descriptive poem, in five cantos, entitled

Traits of the Aborigines of America, which affords frequent evidence of vigour, as well as of her own especial tenderness of spirit. This was succeeded, in 1824, by a prose "Sketch of Connecticut forty years since;" and during the ensuing fourteen years, by "A Collection of Prose Tales," a volume of "Sketches," another of "Minor Poems," "Zinzendorf," "Letters to Mothers," "Letters to Young Ladies," and "Poetry for Children." In 1840 Mrs. Sigourney visited Europe, devoting one summer to England and Scotland, and on her return to America published a charming record in prose and verse of her various wanderings, which is familiar to us under the name of "Pleasant Memories of Pleasant Lands." She has subsequently published "Pocahontas," the most carefully finished of her long poems, and several other works of less importance; supporting, by her productive powers, the extended reputation which she had achieved in earlier life.

SINCLAIR, MISS CATHARINE, sixth daughter of the late Right Hon. Sir John Sinclair, Bart., and of the Hon. Diana, daughter of Lord Macdonald of the Isles, was born in Charlotte Square, Edinburgh, on the 17th of April, 1800. The name which this lady has still further distinguished by her pen was rendered peculiarly memorable in the last generation, by the great benefits which the energy and capacity of her father enabled him to confer on society at large, as well as on his own country. To Sir John Sinclair (characterised by a contemporary as the most indefatigable man in Europe) must be accorded the honour of originating that improved system in farming, which substituted fine fleece for coarse wool, and gave to England two ears of wheat, where one had grown before. Enterprising and resolute, he tested his theories by his practice, using the result of his experience for the common good. It is recorded of him, that so early as his sixteenth year the young baronet was accustomed to detail many plans of projected improvements on his own estates, which included a sixth part of Caithness, and being frequently met by the old conservative proprietors with the half-jesting inquiry, if he could carry a road over the "impracticable hill of Ben Chielt," determined to give a lasting proof of the power of will. He examined the impregnable mountain in person; marked out a road with great engineering skill; appointed 1260 labourers to meet him early one morning; set them simultaneously to work; and before night a sheep track, six miles in length, which had been hardly passable for travellers, was rendered perfectly easy for carriages. This anecdote, unimportant in itself, shows the energy of character which enabled Sir John Sinclair to perform in a life-time that which would ordinarily be considered the work of many. Although a detail of his labours would here be impossible, an idea of their value may be derived from a *résumé* of his career, quoted from an interesting little memoir by his daughter Catharine. "A private gentleman, born in a remote part of the United Kingdom, he became, purely through his zeal for the good of the community, one of the most conspicuous, and one of the most honoured men of his

age. Besides receiving diplomas from twenty-five learned and scientific societies on the Continent, he had a vote of thanks for his national services decreed separately to him, by twenty-two counties in Great Britain. Testimonials were publicly presented to him on five different occasions; he became the confidential friend of Pitt, Perceval, Lord Melville, and all the leading statesmen of his time; he served in Parliament during thirty years; and was distinguished by having frequent intercourse and correspondence with George III., who created him a privy-councillor; as well as by the esteem of William IV., who caused a letter to be written on Sir John's decease, expressing his own sympathy with the family on the loss of so distinguished a patriot." It will readily be believed, that a household governed by so ardent and practical a "head," included no inactive members within its circle; and accordingly, at fourteen years of age, Catharine Sinclair (the sixth daughter in a family of thirteen) was regularly installed as her father's secretary, writing from dictation five or six hours daily for many years. During this period little leisure remained for original composition, but, nevertheless, the deep interest felt by her in the education of a nephew led to the composition of two little volumes for children, called, "Charles Seymour," and "The Lives of the Cæsars." Her career as an authoress commenced in earnest on the death of her father, in 1795, the blank created in her life by this event necessitating fresh occupation. The immediate success of her first novel, "Modern Accomplishments," led to the production, during the next year, of a second volume, entitled "Modern Society;" both being intended to illustrate in narrative the effect of a sound religious training on the female character, as contrasted with the result of a more worldly and superficial system. The popularity of these works is attested by the fact that 12,000 copies are now in circulation. They were quickly succeeded by "Hill and Valley," a lively and entertaining record of a tour through Wales; and again by two volumes, entitled "Scotland and the Scotch," also of a descriptive character, but copiously interspersed with anecdotes and traits of Scottish families and character. "Holiday House," published in 1839, depicts the merry days of her own childhood; its circle of playmates and companions, its adventures and experiences. A severe family affliction, in the illness and death of a younger sister, led to the next work of a strictly serious character which had issued from Miss Sinclair's pen. "The Journey of Life" was written during her attendance on this beloved relative, and records for the benefit of others, those consolations which were her own support in the time of trial. "The Business of Life" was afterwards written, to afford as distinct a view as might be practicable in a small compass of the life of our Saviour on earth, illustrated by select passages from different authors. Her subsequent writings consist of various novels relating to fashionable life, which, under the titles of "Sir Edward Graham," "Modern Flirtations," "Lord and Lady Harcourt," and "Beatrice," have been republished in a cheap form, and extensively read, both in England and America. A story, con-

led "Cross-Purposes," and a volume of gatherings styled "The Kaleidoscope of Anecdotes and Aphorisms," both recently published, form the latest contributions of this lady to the literature of the day. Her attention has been for some little time increasingly absorbed by the superintendence of a charitable institution for the widows of officers in the army; a charge which was entrusted to her, together with a large income, by a lady, whose partiality originated solely in a knowledge of her writings, although it was subsequently matured by personal intercourse. This responsibility, interesting and valuable to one whose philanthropy is individual no less than hereditary, has of course the signal disadvantage of withdrawing her mind from those pursuits to which Miss Sinclair attributes much of the happiness of a very happy life. This life, we should observe, has been chiefly passed in her native city, amidst a large and attached circle of relatives and friends. Her family home having always been a constant and favourite resort of the literary and scientific society which Edinburgh affords, her acquaintance with the more eminent of her countrymen has been extensive and intimate; whilst the three months annually devoted to those relatives who are resident in London, (among them her brother, the Venerable Archdeacon of Kensington,) have likewise established Miss Sinclair as an acknowledged and esteemed member of the literary coteries of the metropolis.

SOMERVILLE, MRS. MARY, the most profoundly scientific lady of the age, was born in Scotland, some years before the close of the last century. The earlier period of her life was passed at a school at Musselburgh, about six miles from Edinburgh, where she was distinguished only for the gentleness and unpretending character of her manners, giving no indications of those talents which have since rendered her so eminent. It is understood that her first marriage, with an officer of the royal navy, became the means of developing the latent powers of her mind, as this gentleman took great delight in initiating her into the mysteries of mathematics and general science; being no doubt encouraged by the discovery of her wonderful aptitude for such pursuits. It is understood that the first work of Mrs. Somerville was undertaken by the advice of Lord Brougham. This was a summary of the "*Mécanique Céleste*" of Laplace, which she prepared for the "Library of Useful Knowledge," under the title of "Mechanism of the Heavens." This work, however, having been found too voluminous for the Society's publications, it was issued in a distinct form in the year 1831. To this succeeded "*The Connexion of the Physical Sciences*," in 1834; and a better idea of the admirable characteristics of this work can scarcely be given than by an extract from the "Quarterly Review:"—"This volume, though unassuming in form and pretensions, is so original in design and perfect in execution, as fully to merit the success of eight editions, each carefully embodying all of augmentation that science had intermediately received. Though rich in works on particular sciences, and richer still in those eminent discoveries

which establish the relation between them ; yet had we not before, in English, a book professedly undertaking to expound those connexions, which form the greatest attainment of present science and the most assured augury of higher knowledge beyond. Mrs. Somerville held this conception steadily before her, and admirably fulfilled it. Her work, indeed, is a true Kosmos in the nature of its design, and in the multitude of materials collected and condensed into the history it affords of the physical phenomena of the universe." The latest work of this accomplished lady is her *Physical Geography*, published in 1848, comprising the history of the earth in its whole material organisation, and, consequently, embracing all those branches of scientific inquiry to which she has, at various times, directed the capacity of her remarkable mind. The depth of Mrs. Somerville's knowledge, and the exalted nature of her reasoning powers, can scarcely be more infallibly tested than by the noble moral tone of her writings, which distinguish her from too many of those inquirers in science who have penetrated too far, or not far enough, into its mysteries. In 1835 Mrs. Somerville was elected an honorary member of the Royal Astronomical Society. During the course of a long life she has received many well-merited acknowledgments of her literary services, among which is a grant of 300*l.* a-year from the Civil List, which, it is to be hoped, she may continue to enjoy many years longer.

STOWE, MRS. HARRIET BEECHER. It is a curious fact, that a cause so important as the abolition of slavery, which has occupied the lives and energies of many good and great men, should not be, as it undoubtedly is, represented in our minds by the name of a woman, and one whose influence is to be wholly referred to a simple record of the facts she had witnessed. She was not the first, indeed, by whom many a stubborn truth in connexion with the subject had been addressed to the world ; but society often yields slow and unwilling audience to the appeal of reason ; and Mrs. Stowe, with the double instinct of a woman and a genius, felt that she must hew out a path for her story to those deeper feelings which make the whole world kin. The wisdom of her expedient may be tested by its success. The simple details of this lady's domestic life form a fitting and pleasant opening chapter to her great work. One of a family of twelve, which, out of ten survivors, has given to literature eight authors of more or less repute, Mrs. Stowe had the advantage of intellectual companionship and strict moral training from her infancy. Her father, Dr. Lyman Beecher, was born in New England some few years before the American Revolution. Placed at birth in the lower grades of society, he became early sensible of the impulse which was to guide him upwards ; but, content to avail himself of his opportunity, he patiently followed his father's craft—that of a blacksmith—until its proceeds enabled him to commence with prudence his collegiate studies at Yale, Newhaven. He had then scarcely attained to the full measure of his fame as a pulpit orator. He

first charge was at Litchfield, Connecticut; but having published
 six sermons on temperance, which were widely diffused throughout
 Europe as well as America, and become in this way universally
 known, he was invited to the most influential Presbyterian Church
 in Boston, of which he continued to be the pastor until 1832, when
 his presence seemed to be more needed elsewhere. The necessity
 of facilitating education for the ministry had long been under con-
 sideration with the Presbyterian body, and existing deficiencies
 were at length remedied by the establishment of a theological semi-
 nary in the immediate neighbourhood of Cincinnati, which was to
 be conducted partly on industrial principles. It was felt that a
 self-made man of powerful energies, no less than sound religious
 opinions, was required to preside over the institution; and, by
 common consent, Dr. Beecher was requested to fill the office of
 Principal. In order that the narrative of her father's history might
 be uninterrupted, the birth of the young Harriet at Litchfield has
 not been recorded, or the quiet course of her childhood, sheltered
 within the circle of pure and unworldly influences. At the age of
 fifteen we find her sharing the pleasures and pains of tuition with
 her eldest sister, Catherine Esther Beecher; who, as a prominent
 figure in this fine family group, deserves especial mention. Some
 circumstances in her private history having induced this lady in
 her youth to relinquish the thought of a purely domestic life, she
 interested herself actively in the advancement of her own country-
 women, and in 1822 opened a school at Hartford, which soon
 numbered a hundred and fifty pupils. She devoted herself with
 conscientious ardour to this charge, and being a woman of con-
 siderable grasp of mind, was able to perceive and remedy the
 drawbacks in existing systems of female education. Feeling the
 want of good text-books on certain subjects, she prepared three, on
 Arithmetic, Theology, and Moral Philosophy, for the use of her
 pupils; but their value introduced them into a wider circulation.
 For about five years before the family removed from Boston, Harriet
 Beecher was associated with her sister in the labours of this esta-
 blishment, and that, actuated as they both were by high motives, it was
 a good and strengthening discipline, there is every reason to believe.
 Miss Beecher's health having given way under her exertions, she
 was compelled to seek once more the retirement of home, and ac-
 companied her relatives to their new resting-place, a pretty village,
 called Walnut Hills, in the environs of Cincinnati. With them went
 also Harriet, at that time about twenty years of age, and remarkable
 even then for her quiet depth of character. Again the sisters re-
 sumed their former employment, but only for a time. Miss Beecher's
 energies were soon concentrated on the organisation of a scheme
 for the education of all the children in America, by the combined
 efforts of its women. After maturing her plan, she wrote, travelled,
 laboured, and pleaded for it, and has, indeed, devoted her very life
 to the furtherance of this noble object. Meantime the younger
 sister had married the Rev. Calvin E. Stowe, a man of considerable
 learning, and Professor of Biblical History in the Lane Seminary,

over which her father presided. He had previously graduated at Bowdoin College, Maine, taken his theological degree at Andover, and filled a professorial chair at Dartmouth College, New Hampshire. At the time of this union the bride was about one-and-twenty, and for seventeen years her life seems to have flowed on in its ordinary course. Fortune had but slightly diverted it from its original channel, and might have been supposed to have no very startling contrasts in reserve; yet the fame of this quiet Professor's lady was hereafter to be world-wide, and herself to become an object of interest and curiosity to thousands of enthusiastic admirers. During the earlier periods of her married life, Mrs. Stowe occasionally revealed herself as an author in the periodical literature of the day; contributing short tales and sketches, afterwards collected under the titles of "The May-flower," and "Two Ways of Spending the Sabbath," and which were chiefly remarkable for their high moral purpose. The assistance of a distant relative who resides in her household, is said to have relieved Mrs. Stowe from the ordinary domestic cares and duties; thus enabling her to devote herself to the congenial task of educating her children, and to spare some portion of her life for the consideration of that enormous social evil which laid its fearful examples of misery at her very door. She herself had frequently received, and instructed with her own children, hapless children and orphans of escaped slaves, for whom no refuge or schools existed; and not seldom did the wretched victims of cruelty themselves seek in her husband's house that shelter and assistance which were never denied them. At a few feet from Mrs. Stowe's residence was the underground railway running through Walnut Hills, which her tale has rendered famous, and which was chiefly used by certain Quakers and Abolitionists, who had formed themselves into an association for the aid of fugitive slaves. And so it happened, that often in the dead of night she heard the rattle of the wagon which was conveying some miserable outcast from one friendly state to another, and close upon it the quick tramp of horses, giving notice that the pursuers were at hand. Whilst the experience of each hour thus outraged and aroused Mrs. Stowe's feelings as a Christian and a woman, her husband was busily engaged in collecting statistics on the subject; and when the Abolitionist Society, which met at Philadelphia in 1833, agitated the length and breadth of the great Continent by its reports, it found most zealous disciples in them, and, indeed, in all the inmates of Lane Seminary. The President of the Anti-slavery Convention having much influence at the newly-established college, introduced into it the reports and addresses of the society. The pupils, prepared as it were by the teaching of enlightened men, accepted the new doctrine with enthusiasm; those who were themselves slave-owners giving their liberty, and others displaying their good will to the class by preaching to the coloured population of Cincinnati, and forming Sunday and evening schools. Warm opposition, however, was offered to this movement; slave-owners urged on the mob to violence; and as

some time Lane Seminary, as well as the houses of Dr. Beecher and Professor Stowe, were in imminent danger of being burned or pulled down. The Principal having vainly endeavoured, from prudential motives, to arrest the course of Abolitionist discussions among the young men, the Board of Trustees interfered and absolutely forbade them. The answer to this mandate was, the withdrawal of the students *en masse*; and after persevering for several years in their attempts to raise the fallen academy, Dr. Beecher retired, and Professor Stowe accepted the chair of Biblical Literature in the Theological Seminary at Andover, Massachusetts. It was in the same year, 1850, that his wife, having acquainted herself thoroughly with the workings of slavery, and suffered through her warm sympathies with every class of its victims, published in the "Washington National Era" that plain unvarnished tale, of which every succeeding number gathered fresh strength and fame. When the weekly publication was completed, its re-issue was demanded. Edition after edition was produced, and absorbed with equal rapidity; and the notice afterwards accorded to the work in England was only the shadow of that which attended its appearance in America. Translations of it were quickly made into various European languages, and the immediate extent of its circulation may be pronounced to have been entirely unparalleled. In 1852 she produced the "Key to Uncle Tom's Cabin"—a statement of those individual occurrences on which the incidents of her book were founded; and as they rested either on her own evidence, or that of some member of her family, the charge of exaggeration which had been vaguely brought against her was too fully rebutted. At the beginning of 1853, Mrs. Stowe yielded to the many pressing invitations which had been addressed to her from various parts of England, and reached Liverpool on the 11th of April, accompanied by her husband, her brother, the Rev. Charles Beecher, and one or two other friends. They proceeded first to Scotland, visiting on the route all that was worthy of notice in nature and art; occasionally attending meetings on the slavery and other questions, but avoiding as far as possible those public testimonials of respect which it was sometimes desired to offer them. During her stay in London, Mrs. Stowe received at Stafford House an address from the ladies of England, which was read by Lord Shaftesbury; and many other tokens were offered of interest and sympathy in the cause she has so deeply at heart. Early in June of the same year the travellers quitted England, proceeded through Paris to Switzerland, returning by way of the Rhine, and on the 7th of September re-embarked on their homeward voyage. In 1854 appeared an account of these European experiences, in the form of letters, and bearing the title of "Sunny Memories of Foreign Lands." Mrs. Stowe's great literary reputation, of course, invested this work with considerable interest, which, however, was scarcely sustained by its intrinsic merits. As a pleasant, genial record of her intercourse with English society, it has a certain charm; but the book which can be considered a worthy successor to "Uncle Tom's Cabin" has yet to be written. We would gladly

think that the authoress may even now be engaged upon it, in the seclusion of her quiet Transatlantic home.

STRICKLAND, MISS AGNES. If the present age has been fertile in the production of works of sentiment and imagination from the pens of its female writers, there have not been found wanting among them equally skilful labourers in the less flowery fields of antiquarian and historical research. In awarding to Miss Strickland the first place in this honourable band, the opinion of society at large would certainly be represented. Agnes Strickland, one of a family of eight children, is the third daughter of Thomas Strickland, Esq., of Reydon Hall, Suffolk, where her family has been settled for something less than half a century. The branch to which she belongs represents the third line derived from the Stricklands of Sizergh Castle, Westmoreland, and originally possessed considerable landed property in the district of Cotton Hill Furness, Lancashire. The attachment of Sir Thomas Strickland, of Sizergh, to the royal house of Stuart, both as Cavalier and Jacobite, has taken its place in history; nor were his kindred of the Lancashire dales less loyal, as the loss of two or three far estates in 1716, by William Francis Strickland, can certify. Miss Agnes Strickland herself is the third of her race who, by personal gifts or the interest of association, has rendered the combination of name remarkable. In the reign of Henry VIII., Agnes Strickland, of Sizergh, married Sir Henry Curwen, of Workington Castle. Her son was the knight who received Mary Queen of Scots at her ill-fated landing on his paternal domain; and her daughter marrying a worthy London citizen, Camden by name, became the mother of the venerated historian. The second Agnes Strickland, daughter of an immediate ancestor of the Reydon Hall family, married, about 1630, Francis Sandys, the eldest son of the Archbishop of York. To the influence of George Sandys, a younger brother, owing the conversion to Protestantism of that branch of the family to which our authoress belongs. Its various members have continued from the middle of the seventeenth century firm adherents of the Reformed Church. Born thus of an old historic race, and nurtured in its lore, the minds of Agnes Strickland and her sisters received in earliest childhood a strong bias towards those studies in which they afterwards distinguished themselves, and the desultory nature of their education was by no means calculated to check it. The constant sufferings endured by the head of the family from hereditary gout cast a shadow over the young lives of his children, who remember their father only as the inhabitant of a sick chamber, or confined to his arm-chair during intervals of comparative ease. A good scholar himself, it was Mr. Strickland's earnest desire that his daughters should be proficient in those branches of study which his individual taste led him to regard as important. The practice of reading aloud to him by turns during the day, and occasionally part of the night, his favourite works of

history, genealogy, and topography, opened to them branches of knowledge in which they soon learned to delight. The ambition of the father to make them algebraists and mathematicians was by no means so willingly responded to; and whenever a certain quarto, containing a fine old engraving of the blind Professor Sanderlerson, was seen on papa's reading-table, a sudden dispersion of the young daughters used to take place. As the mother, in this one instance, was accustomed to take part with the rebels, they all, with the exception of Elizabeth, the eldest, escaped a taste of this fearful quarto; and the spectacle of its solitary victim as she sat working out the problems on her slate, was one that excited the heartfelt commiseration of her sisters. In course of time Agnes, willing to make a compromise, devoted her attention to the Latin Dialogues of the famous Jacobite Scotch "dominie Ruddiman," which had been one of the school-books of her grandfather, and was carefully stowed away among other treasures contained in the old library. She made considerable progress in learning these dialogues by rote, but this method of becoming a Latin scholar was discountenanced by Mr. Strickland as irregular; although it was scarcely more so than other departments of the Reydon educational system, which, it may be remarked, was carried out entirely under his own supervision, by the aid of a resident governess. Thus passed away the period of childhood with these young girls. They had no interests or associations beyond the limits of their secluded home, situated on the sea-coast of Suffolk, a mile from the nearest village, two or three from any town, one hundred and three miles from London, and which in snowy winters is nearly isolated from every habitation but the farm-house of the tenant of its lands. They had no companions or visitors of their own age, and were perforce compelled to be all in all to each other; neither had they any gaieties or amusements beyond those afforded by their gardens and woodlands, or by the pet animals which inhabited them. In fact they were seldom seen without the limits of their own domain, excepting at the old grey village church, where they attended divine service and instructed their Sunday-school. Although from Mr. Strickland's infirm state of health his death could at no time have excited surprise, yet the blow fell most suddenly on his helpless family. Advantage was taken of the inexperience of his widow and children, for the two sons were at that time mere boys under the care of Dr. E. Valpy, of Norwich. Great losses of personal property ensued, and the landed estates which remained, proved, under the management of ladies, a source of much trouble and little profit. It was under these circumstances that the Misses Strickland determined to turn their abilities to account, and they were led to choose literature as a profession, by the circumstances of their peculiar education, extensive library, quiet residence, and especially by a love of the pursuit, which had already sought and found expression. They first obtained facility of style by writing for those who were but little younger than themselves. Their juvenile compositions, among which may be

especially mentioned the first volume of the "Juvenile Forget-Me-Not," found universal favour, and many have since become standard works of the kind. Frequent contributions to the *Annals* and periodicals also tended, in the dawn of their career, to make known the names of Agnes, Catherine Parr, Susannah, and Jane Margaret Strickland; and were earnest of their subsequent success in authorship. Reserving the achievements of the other members of this interesting family group for discussion hereafter, it may be well to concentrate our attention for a time on the third daughter. The literary genius of Agnes Strickland manifested itself at an unusually early age in poetry, the natural language of a warm heart and vivid imagination; but this propensity was discouraged by her father, who feared that it might divert her from more solid pursuits. She indulged, however, by stealth, in the forbidden pleasure, and at twelve years of age had perpetrated many pages of a romantic and historical chronicle in rhyme, called "The Red Rose," intended to commemorate the rise and fall of the House of Lancaster. A conspicuous place would probably have been assigned in it to her own ancestor, Sir Thomas Strickland, who bore the banner of St. George at Agincourt, if her sybilline leaves had not been discovered, and treated with such contemptuous criticism by her father, that she tore them into a thousand pieces, abjured rhyming, and applied her energies to the manufacture of a hearthrug. But poetic impulses are not so easily quenched. After an interval of three years she began to versify once more, and in due time produced a poem in four cantos, which was published under the title of "Worcester Field, or the Cavalier." It was eulogised by no meaner authority than Thomas Campbell, as the best poem of the class which had appeared since the publication of Sir Walter Scott's poetical works. "Worcester Field," however, like "Demetrius," a tale of modern Greece, which succeeded it, is comparatively little known at the present day, having been out of print for many years. Agnes Strickland's first acquaintance with the great world of London took place on the occasion of certain visits paid to a wealthy relative, who lived in one of the solemn law squares, the chief attraction of which was its proximity to the British Museum. She soon learned to avail herself of its rich intellectual stores, and the facility with which she and her eldest sister learned at this era to read chronicles and manuscripts in French and Italian, became of the utmost use in the collection of those materials which afterwards enriched the historical biographies so well known to the world. Meanwhile Miss Strickland's permanent abode continued to be the quiet seclusion of Reydon, where she resided, and still continues to reside, with her widowed mother and the two sisters who have retained their maiden name. Here were written the manifold poetical and prose sketches contributed to fugitive literature; part of which have been lately reprinted under the title of "Historic Scenes," with a portrait of the authoress attached to them. Various admirable books for young people also issued from her pen in quick succession. Among them are "Stories from History;" "Illustrations

British Children;" "Alda, the British Captive," a touching story of ancient Rome; and "The Rival Crusoes," the joint production of herself and her sister Elizabeth; all of which have passed through many editions, and have obtained a large share of popularity. In 1835 Miss Strickland added greatly to her reputation by a work in 3 vols. called "The Pilgrims of Walsingham," constructed on the plan of the old "Canterbury Pilgrimage." The disguised pilgrims are all historical personages, including Henry VIII., Catherine of Arragon, Charles Brandon, the Princess Mary, Wolsey, &c.; and the thread of narrative connecting the different stories is carefully and delicately sustained. The characteristics of the tales related on the route are various; some being full of grace and touches of elegant humour, as that of Don Froila and his Ten Daughters; whilst the illustrations of history are marked by the familiar reality which lends so keen an interest to Miss Strickland's writings. It is to be regretted, for the sake of those who love romance wearing the perfect semblance of truth, that a gem so polished as the "Pilgrims of Walsingham" should not have been reprinted in one of those numerous series which it would be well calculated to adorn. We now approach the period at which Agnes and Elizabeth Strickland entered, with powers fully matured, and patient resolution of no common order, on their great literary undertaking, "The Lives of the Queens of England from the Norman Conquest." We have already noticed that their minds had been early imbued with family and historical traditions; and they afterwards took great delight in eliciting fresh facts, and in confirming the truth of such as were already in their possession, by a careful study of the documentary evidence in the British Museum. The idea of compiling these historical biographies thus occurred to them; and it happened, singularly enough, that the charter-chest of Sizergh Castle afforded many new and important particulars connected with several queens; entering more especially into the lives of Catherine Parr, Jane Seymour, and Mary Beatrice of Modena. After long and careful preparation, the first volume of "The Queens" issued from the press in 1840, and the public were not slow to appreciate the result of those unwearied and discriminating labours, which had enabled the writers to gather up minute details of domestic no less than the important events of regal life, and by this means to clothe the quaint effigies of remote ages with the light, warmth, and vitality of actual existence. The work proceeded at intervals with increasing success, and long before the appearance, in 1851, of the last volume, which carried the series down to the accession of the Hanoverian family, it had become one of the most popular standard works which had enriched the literature of England for many years. The name of one sister only is known in connexion with it, as the elder Miss Strickland has by choice eschewed the honours of professed authorship. The work has been shared between them, but the active researches which have been carried into the documentary storehouses of France, as well as England, have been chiefly prosecuted by the lady with whose

name we are familiar. Agnes and Elizabeth Strickland are at present engaged in completing the "Lives of the Queens of Scotland and English Princesses connected with the Royal Succession of Great Britain," which forms a necessary adjunct to the "Lives of the British Queens." Five volumes of this second historical series are already published, and have passed through second editions. The most important portion of the work is the biography of Mary Stuart, whose innocence Miss Agnes Strickland has demonstrated from incontestable evidence, recently discovered in the State Paper Office, Westminster, and among the royal records contained in the General Register Office, Edinburgh. Having now conducted two members of this remarkable sisterhood to the latest era in their career, it is time to recur to those who were casually alluded to in the opening of this notice. Jane Margaret Strickland, who continues to form one of the diminished family-circle at Reydon Hall, made her *début* in literature as a contributor to the earlier *Juvenile Annals*. She subsequently produced many popular books for children, and wrote extensively in religious publications, with a view to the elevation of the working-classes, with whose peculiar necessities she had become practically acquainted in the course of her charitable ministrations. The greater part of her time, however, for some years past, has been devoted to the composition of a family "History of Rome," the first volume of which was published in 1854, by Messrs. Hall and Virtue. This work, embracing, as it will do, "Ancient Rome" in its stages of conquest, civilization, literature, and art; the private biographies of every remarkable man who swayed its destinies; and the history of the early Christian Church, its apostles, teachers, martyrs, and authors; cannot fail to become an important boon to those charged with the task of education. The chances of life early removed two of the Misses Strickland to a very different sphere from that in which they had been brought up. Catherine, on her union with Lieutenant Traill of the 21st Royal North British Fusiliers, embarked with her husband for Canada, and was afterwards followed by her sister Susannah, who had married John Dunbar Moodie, Esq., of the same regiment. Both these ladies have continued to reside in the land of their adoption, but have sent across the Atlantic welcome proof of their existence and possession of the family heritage of talent. Mrs. Traill is the authoress of a charming volume of observation and experience, called "The Backwoods of America, by the Wife of an Emigrant;" it is marked by the same sweet, hopeful spirit, which is one of her strongest personal characteristics. She has since published the "Canadian Crusoes," and is at present engaged on "A Guide to Female Emigrants," which seems likely to prove of the highest utility to settlers. Mrs. Moodie is likewise well known as a writer, and her romances, founded on the sterner view of human nature, are said to be much appreciated by her American readers. Two novels, "Mark Hurdlestone" and "Flora Lindsay," have lately been reprinted in England, but the work which has attained the widest circulation here is, "Roughing it in the Bush;" a history of

her personal adventures during the earlier period of her residence in the colony. Mr. Moodie has held for many years the appointment of sheriff of Belville, one of considerable emolument and importance. Those difficulties and personal inconveniences which are inseparable from the commencement of a settler's career, and to which Mrs. Moodie alludes, have therefore long since passed away. It only now remains to speak of another sister, the wife of the Rev. Richard Gwyllym, incumbent of Ulverston and rural dean of Furness. Her works are comprised in most efficient co-operation with her husband in his labours for the benefit of the district under his care. Of the two sons of the Strickland family, the elder settled in Canada, and is known in England as Major Strickland, the author of an agreeable work lately published, called "Twenty-seven Years in Canada West." The younger brother has long commanded the Scotia, East-Indiaman, and is no less indefatigable than the other members of his family in the performance of the work which belongs to his appointed lot in life.

SUTHERLAND, HARRIET ELIZABETH GEORGIANA, DUCHESS OF, and Mistress of the Robes to the Queen, may be regarded as the present representative of the female aristocracy of Great Britain, by virtue of her office—the highest in the State available for women—and of those accidental advantages which are combined in her person to an unusual extent. As the daughter of George, third Earl of Carlisle, she was by birth a member of one of the oldest families in England; and by her marriage with the Duke of Sutherland, a nobleman of immense wealth and influence, was endowed with the leading position in the world of fashion, for which her brilliant personal qualifications peculiarly fitted her. Apart from the graceful performance of social duties, there is one feature in the Duchess of Sutherland's career which deserves notice, namely, her support, in 1853, of the popular movement against the slave-trade. The meeting held at Stafford House under her auspices, which resulted in the well-known address from the ladies of England to those of America, has been alluded to more particularly elsewhere. It may be sufficient to add, that she is now in her fiftieth year, and has been so fortunate in her domestic relations and the alliances of her family, as to ensure that degree of posthumous fame which is honourably conferred by the records of the Peerage.

T.

THORNEYCROFT, MRS. MARY, the daughter as well as the wife of a Sculptor, has been for many years favourably known to the public by her contributions to a branch of art seldom adopted as a

profession by ladies, and therefore rarely followed up by them to the point of success. The favourable circumstances by which she has been surrounded through life, developing a strong, natural talent for sculpture, have enabled her to vindicate the power of her sex to excel in it by the production of some imaginative compositions, and many excellent busts and portrait statues. Mrs. Thorneycroft, the daughter of Mr. John Francis, was born in 1814 at Thornham, in Norfolk; for it was not until her father was verging towards middle life that he determined to cultivate his taste for modelling, and settled in London for the purpose, first of studying, and afterwards of turning his knowledge to account. From an early age the subject of this notice sought her childish pleasures and amusements in his studio, and during the period of girlhood persevered, through all discouragement, in neglecting the ordinary round of feminine occupations to carry on her favourite experiments with the clay. This "waste of time," as it was then called, resulted in increasing manual facility, and about twenty years ago she became an exhibitor, sending heads and busts to the Royal Academy. She had previously made her first essay in poetic composition by a figure of "Penelope," and a group, representing "Ulysses and his Dog;" but the work which was the first to attract the attention of the public was a life-sized statue, called the "Flower Girl." In the year 1840 Miss Francis became the wife of Mr. Thorneycroft, who had been a pupil of her father, and, assisted by his practical advice and encouragement, she worked on with increased ardour. In 1842 she accompanied him on an extended tour through Italy, and during the winter spent in Rome derived great advantage from visits to, and companionship with, Thorwaldsen and Gibson, whose attention was drawn to Mrs. Thorneycroft by the models of "Sappho" and a "Sleeping Child," executed during her stay in that city. The latter work, indeed, made so favourable an impression on Mr. Gibson's mind, that when asked by the Queen who was best fitted to model the portraits of the royal children, he referred at once to its author. On her return to England in 1843, Mrs. Thorneycroft received Her Majesty's command to execute a statue of the Princess Alice, and performed her task so satisfactorily, that commissions were given to her for statues of the Princess Royal, Prince of Wales, and Prince Alfred. This series, designed by the artist in the character of the four seasons, has become very generally known, having been exhibited at the Royal Academy, and afterwards engraved. The patronage of the Queen has followed this lady throughout her entire career, and up to the latest moment, as she has very recently received commissions to complete two other statues of members of the royal family. In this particular department of her art Mr. Thorneycroft is acknowledged by her brother-artists to be highly successful. The aptitude of a woman and a mother enables her to apprehend with peculiar truth the exquisite and varying graces of childhood; whilst her mechanical dexterity in embodying and realising them is not found deficient. Her latest work, "A Girl Skipping," was seen to advantage in the recent Paris Exhibition.

and has been described as a simple and faithful transcript from Nature, full of grace and elegance, both in idea and execution.

TROLLOPE, MRS. FRANCES, one of the most prolific writers of the present day, was born about the year 1787. During a considerable period of her married life she resided at Harrow, but in 1829 circumstances induced her to visit America, and after three years' residence at Cincinnati, which was varied by occasional wanderings to other parts of the United States, she produced the work, entitled "Domestic Manners of the Americans," which formed her first introduction to the English public. Although Mrs. Trollope commenced her career as an authoress comparatively late in life, she had no sooner entered upon it than her position was established. The novelty of her subject, (for at that time it had scarcely been touched upon by English tourists,) the piquante character of the sketches and anecdotes with which the book was interspersed, and to which her shrewd and vigorous style of relation was peculiarly adapted, obtained for it a large circulation and immediate popularity. The nature of the remarks rendered them highly unacceptable to those whom they concerned; but there is little doubt that Mrs. Trollope's picture of their social habits, albeit somewhat exaggerated, was not without its good effect in removing those superficial blemishes which detract from the real dignity of the American character. Having further embodied her views and impressions in the form of a novel called "The Refugee in America," the authoress turned her attention to other subjects. In 1838 she published a tale in three volumes, called "The Abbess;" and one year later a second retrospect of travel, under the title of "Belgium and Western Germany in 1838." These experiences, which, so far as the lady herself was concerned, appear to have been much more satisfactory than her previous ones, afforded enough of salient points to confirm her reputation as a clever and amusing writer. In 1836 appeared "The Adventures of Jonathan Jefferson Whitlew," a novel, representing the condition of the black and coloured races in the Southern States, and revealing that characteristic of Mrs. Trollope's talent which may be traced in all her works; namely, great skill and power in anatomising the more painful and repulsive phases of human character. During the same year she appeared again as a traveller, in a book entitled "Paris and the Parisians in 1836." "The Vicar of Wrexhill," which succeeded this work, established the fact of her power as a novelist; and, much as she has written since, it may be doubted if her reputation has any firmer basis to rest upon. But although the talent displayed in this tale is unquestionable, the taste which could select a Tartuffe for a hero, and in his person hold up a whole religious sect to obloquy, must be regarded as at least doubtful, and certainly unfeminine. In 1838 our authoress, having produced another novel, entitled "Tremordyn Cliff," resumed the thread of her personal adventures in two volumes, entitled "Vienna and the Austrians;" her observations affording matter that could always be read with

pleasure, although she is seldom sufficiently free from prejudice to be accepted as an authority on important topics. This sojourn in Austria also afforded material for a novel called "The Romance of Vienna," which gave a new and curious picture of the "war of castes," which is said to be carried on there most unsparingly. The productions of Mrs. Trollope's pen in 1839 were "The Widow Barnaby," an amusing but coarse description of the career of a vulgar, scheming, husband-hunting widow; "Michael Armstrong, or the Factory Boy," a picture of the evils connected with the manufacturing system; and, "One Fault," a domestic story, illustrating very powerfully the effect of that species of ill-temper which arises from pride and morbid sensitiveness. This book contains sketches of life and character more agreeable than those generally selected for representation by the authoress, and is also to be commended as having a direct moral purpose. In 1840 appeared "The Widow Married," a continuation of the "Widow Barnaby," collected from the pages of the "New Monthly Magazine;" a series having intervened under the title of "The Barnabys in America," "The Blue Belles of England," and "Charles Chesterfield, or the Adventures of a Youth of Genius," were brought out in 1841; and the following year witnessed the appearance of one of Mrs. Trollope's cleverest productions, "The Ward of Thorpe Combe," which however scarcely achieved its due measure of popularity. The meeting of a large circle of distant relatives, who have been assembled from far and near by the eccentric owner of Thorpe Combe, that he might select an heir from among them, is pleasantly and very vividly described. The quiet manœuvres by which a certain damsel, the least important of the candidates, attracts his choice to herself, and the management by which she afterwards gratifies her own selfishness without sacrificing appearances, by no means outrage the probabilities of ordinary life. After the publication of this book the authoress abandoned fiction for a time, and embodied the experiences of another continental journey in two volumes, entitled "A Visit to Italy." In 1843 we find Mrs. Trollope resuming her ordinary occupations; for several novels successively issued from her pen in that and the following year; among them "The Robertses on their Travels;" "Hargreave, or the Adventures of a Man of Fashion;" "Jessie Philips, a tale of the New Poor Law;" "The Attractive Man;" and "The Laurringtons, or Superior People," one of her most successful pieces of social satire. With "Young Love," a tale which appeared in 1844, Mrs. Trollope's literary labours concluded for a time; but she has since added to the works already mentioned novels called "Petticoat Government;" "Father Eustace;" "Uncle Walter;" and the "The Clever Woman," made up for the most part of the old elements of unprincipled manœuvring women, selfish and worldly churchmen, etc.; and conducted to their *dénouement* by the machinery of art and deceit. Mrs. Trollope, who has been long a widow, disappeared some years since from the English literary circles, having fixed her permanent abode at Florence. Her son, Mr. Adolphus Trollope, has contributed several pleasant works

to literature, in the shape of "Travels" in the less frequented parts of France, and has also written novels descriptive of Irish life.

V.

VIARDOT, MADAME PAULINE, whose vocal triumphs have been achieved under the far-famed name of her family, was the daughter of the great tenor, Emmanuel Garcia, and sister of Malibran and Manuel Garcia, Professor of Singing at the Conservatoire. Her mother, formerly Joaquina Sitchés, had in her day won bright laurels on the Madrid stage, under the name of Brianés, and some portion of her nationality has descended to her daughter. Pauline Garcia was born in Paris, on the 18th of July, 1821, and may almost be said to have commenced life as a prodigy. At four years of age she spoke, in her childish way, four languages, and three years later was capable of playing the pianoforte accompaniments for the pupils to whom her father gave lessons. After sharing the family migrations, first to England, and afterwards to New York and Mexico, she returned with them to Europe in 1828, and thenceforward her education was continued at Brussels. In consequence of her manual facility, the career of a pianiste was at first marked out for her, and she became one of Liszt's most accomplished pupils; but as her voice matured this design was abandoned. It is singular that Mdlle. Garcia, a member of that family to whom the inhabitants of every country in Europe resorted for vocal instruction, should herself have profited little by the circumstances of her birth; but if the inheritance of their talent be excepted, such was the fact. Her father died in 1832, before her voice was fixed; her sister was so constantly absent on professional tours, that she had only two opportunities of witnessing her performances on the stage; whilst her brother's residence in Paris deprived her of the advantage of his assistance. Her studies were, therefore, directed by her own tastes and the counsels of her mother, and included various branches of the arts: in her youth, indeed, she devoted nearly as much attention to drawing and painting as to music and singing. Her first appearance at the London Opera House, which took place in 1839, in the character of Desdemona, was the step which fairly launched her into the world of song. Her voice, like that of her sister, combined the two registers of soprano and contralto, embracing a compass of three octaves. It was pure and mellow, though not of the most powerful order, and more flexible, if possible, than the wonderful organ of Malibran, whilst the originality of her cadences and her fine bursts of dramatic passion impressed her auditors with the conviction that a new genius had risen up amongst them. At the close of this season she joined the Italian operatic company, then acting at the Odéon,

in Paris, and there obtained an equally full acknowledgment of her talents, in the characters of Amenaïde in "Tancredi," La Cenerentola, Arsace, and Rosina, which, with that of Desdemona, composed her *répertoire*. In April, 1840, she married M. Louis Viardot, Homme-de-lettres and Director of the Italian Opera (which post he resigned on his marriage), and the following year reappeared in England, singing with Mario in Cimarosa's opera, "Gli Orazi ed in Curiazi," and quite confirming the impression of her dramatic genius by her conception of the part of Orazia. The state of Madame Viardot's health, which was too delicate to support any great strain upon it, rendered it expedient for her at this juncture to decline the offers of the Académie Royale de Musique, and to pass some little time in travelling. She therefore visited her mother's native country, singing occasionally at Madrid and Granada; and after this tour, was sufficiently restored to pass another season in Paris. Her next engagement was for two successive years at Vienna; and when Rubini formed the musical troupe for St. Petersburg, he selected her for his prima donna. In conjunction with Alboni and Castellan, she remained for three brilliant seasons at that capital, and was only driven from it by the rigour of the climate. She subsequently appeared at the Berlin Opera House; and when Jenny Lind quitted the German Opera, Madame Viardot-Garcia proved herself an able successor in the *répertoire*, which she extended in a manner which could have been accomplished by few artistes but herself. She sustained at various times the parts of Desdemona, Cenerentola, Rosina, Camilla in "Gli Orazi," Arsace, Norma, Ninetta, Amina, Romeo, Lucia, Maria de Rohan, Leonora in "La Favorita," Zerlina, and Donna Anna. In "Roberto" she doubled in one night the parts of the Princess and Alice, and took the German critics by storm in the "Iphigenia" of Gluck, and "La Juive" of Halévy. In the year 1848 she appeared once more in London, forming one of the Covent Garden company, and took her stand at once as a truly great *artiste*. Her name is associated with the first performance of "Les Huguenots," in which she took the part of Valentine: but it is scarcely so completely her own as that of Fides in "Le Prophète," represented the following season: an impersonation so lofty and so exquisitely true, as to be considered by many persons unequalled by anything to be met with on the lyric stage at the present day. From the catalogue of Madame Viardot's vocal *chefs-d'œuvre* must not be omitted her own peculiar Spanish songs: second only in their thrilling effect to that produced by the national melodies of the Swedish songstress.

THE END.

BIOGRAPHY.

The Life of William Etty, R.A. With Extracts from his Diaries and Correspondence. By ALEXANDER GILCHRIST, of the Middle Temple, Barrister-at-Law. Two volumes, post 8vo, 21s. cloth.

Life and Times of Madame de Stael. By Miss MARIA NORRIS. Post 8vo, 9s. cloth.

Turner and his Works: A Biography, illustrated by Examples from his Pictures and a Critical Examination of his Principles and Practice. By JOHN BURNET, F.R.S. The Memoir by PETER CUNNINGHAM. With Plates. Demy 4to, 31s. 6d.; Autograph proofs (only 25 printed), folio, £5 5s.

Rembrandt and his Works; with a Critical Examination into his Principles and Practice. By JOHN BURNET, F.R.S. Fifteen Plates, 4to, 31s. 6d.; Artist's Autograph Proofs, imperial 4to, £5 5s. (only 50 printed).

BIOGRAPHY—*Continued.*]

My Life and Acts in Hungary: Being a Personal Narrative of his Career in connection with the Revolution. By ARTHUR GÖRGNY, Commander-in-Chief of the Hungarian Army. Two volumes post 8vo, 21s.

Men of the Time: or, Biographical Sketches of Eminent Living Characters—Authors, Architects, Artists, Composers, Capitalists, Dramatists, Divines, Discoverers, Engineers, Journalists, Men of Science, Ministers, Monarchs, Novelists, Painters, Philanthropists, Poets, Politicians, Savans, Sculptors, Statesmen, Travellers, Voyagers, Warriors. With Biographies of Celebrated Women. Greatly Enlarged Edition. With Several Hundred additional Memoirs, small 8vo, 944 pp., 12s. 6d. cloth.

Southey's Life of Nelson. Illustrated by DUNCAN, BIRKET FOSTER, and others. Crown 8vo, 6s.

Memorable Women; the Story of their Lives. By Mrs. NEWTON CROSLAND. Illustrated by B. FOSTER. Fcp. 8vo, 6s.

"One of those works about women which a woman only can write. We cannot imagine a more delightful, strengthening, and elevating exercise for a youthful female, than the perusal of such a volume as this of '*Memorable Women.*'"—*Morning Advertiser.*

The Boyhood of Great Men as an Example to Youth. By JOHN G. EDGAR. With Cuts by B. FOSTER. Third Edition, 3s. 6d. cloth; 4s. gilt edges.

"It would have been a matter of regret to see such a book badly executed. That regret we are spared, for this little volume is simply and well done. The biographies are numerous and brief, but not too short to be amusing; and as thousands of boys thirst for greatness, which is acquired by ones and tens, there will be thousands glad to read a book like this."—*Examiner.*

Footprints of Famous Men; or, Biography for Boys. By J. G. EDGAR. Cuts by FOSTER. Second Edition, 3s. 6d. cloth; 4s. gilt edges.

"A very useful and agreeable volume. It is useful, as biography is always an important ally to history; and it is useful, because it gives another blow to the waning idea, that any eminence has ever been attained without severe labour."—*Standard.*

BOOKS OF TRAVEL, &c.

A Ramble through Normandy; or, Scenes, Characters, and Incidents in a Sketching Excursion through Calvados. By **GEORGE M. MUSGRAVE, M.A.** Post 8vo, with numerous Illustrations, 10s. 6d. cloth.

"As perfect a compendium of useful knowledge in connection with Literature, Science, and the Arts, as it is necessary everybody should have acquaintance with. It is, in short, a little volume which will save the trouble of hunting through many books of more pretension, and supply off-hand what, without it, would require much time and trouble."—*Times*.

The Beauty of the Heavens. One Hundred and Four Coloured Plates, representing the principal Astronomical Phenomena; and an Elementary Lecture, expressly adapted for Family Instruction and Entertainment. By CHARLES F. BLUNT. New Edition, 4to, cloth, 28s.

DICTIONARIES.

Webster's Quarto Dictionary, unabridged ; containing all the Words in the English Language, with their Etymologies and Derivations. By NOAH WEBSTER, LL.D. Revised by Professor GOODRICH. With Pronouncing Vocabularies of Scripture, Classical, and Geographical Names. New Edition, carefully printed in a large 4to volume, 31s. 6d. cloth ; 42s. calf.

*. * *The only complete work.* All the octavo editions are Abridgments.

"All young persons should have a standard Dictionary at their elbow ; and while you are about it, get the best : that dictionary is Noah Webster's, the great work unabridged. If you are too poor, save the amount from off your back, to put it into your head."

"We can have no hesitation in giving it as our opinion, that this is the most elaborate and successful undertaking of the kind which has ever appeared."—*Times*.

"The veteran Webster's work is the best and most useful Dictionary of the English Language ever published. Every page attests the learning and talent, the sound judgment and nice discrimination, the great industry, profound research, and surprising perseverance of the author. It is a very manifest improvement on Todd's Johnson, and contains many thousand more words than that or any other English Dictionary hitherto published."—*Examiner*.

Webster's Octavo Dictionary. Abridged from the above.
Cloth, 7s. 6d.

Webster's Smaller Dictionary. Condensed by CHARLES ROBSON, crown 8vo, 5s. cloth.

Webster's Pocket Dictionary. 32mo, 3s. 6d.

Miniature French Dictionary, in French and English, English and French : comprising all the words in general use. The remarkably comprehensive nature and compact size of this little Dictionary admirably fit it for the student and tourist. Neatly bound in roan, 4s. ; morocco, gilt edges, 5s. 6d.

Sharpe's Diamond Dictionary of the English Language. A very small volume, beautifully printed in a clear and legible type. Roan, neat, 2s. 6d. ; morocco, 3s. 6d.

JUVENILE WORKS.

CAPTAIN REID'S BOOKS OF ADVENTURE FOR BOYS.

The Bush Boys; or, the History and Adventures of a Cape Farmer and his Family in the Wild Karoos of Southern Africa. By CAPTAIN MAYNE REID, Author of "The Boy Hunters," "The Young Voyageurs," &c. With Twelve Illustrations. Fcp. 7s. cloth.

The Desert Home; or, English Family Robinson. With numerous Illustrations by W. HARVEY. Fifth Edition, cloth, 7s.; with coloured plates, 10s. 6d.

The Boy Hunters; or, Adventures in Search of a White Buffalo. With numerous Plates by HARVEY. Fourth Edition, cloth. 7s.; coloured, 10s. 6d.

The Young Voyageurs; or, Adventures in the Far Countries of the Far North. Plates by HARVEY. Second Edition, cloth, 7s.; with coloured plates, 10s. 6d.

The Forest Exiles; or, Perils of a Peruvian Family amid the Wilds of the Amazon. With Twelve Plates. Second Edition, 7s. cloth; with coloured plates, 10s. 6d.

"As a writer of books for boys, commend us above all men living to Captain Mayne Reid! Wherever his new book goes this new year, there will be abundant delight for hours of reading, and plenty to talk of by the evening fire. Toils and adventures, dangers, darings and sufferings are narrated in the most vivid manner—thoroughly fascinating the mind of the reader, and retaining it in fixed and eager attention till a crisis of some kind is reached. Take our word for it, boy friends, if you become Captain Mayne Reid's 'boy readers' on our recommendation, you will thank us for it with all your hearts, and praise the book more enthusiastically than we have done."—*Nonconformist*.

The Boy's Own Book: A complete Encyclopædia of all the Diversions—Athletic, Scientific, and Recreative—of Boyhood and Youth. With several hundred Woodcuts. New Edition, greatly enlarged and improved. Handsomely bound, 8s. 6d.

The Little Boy's Own Book, an Abridgment of "The Boy's own Book" for Little Boys. 3s. 6d. neatly bound.

JUVENILE WORKS—Continued.]

MR. H. MAYHEW'S BOOKS OF SCIENCE FOR BOYS.

The Wonders of Science; or, Young Humphry Davy (the Cornish Apothecary's Boy, who taught himself Natural Philosophy, and eventually became President of the Royal Society). **The Life of a Wonderful Boy, written for Boys.** By HENRY MAYHEW, Author of "The Peasant-Boy Philosopher," &c. With Illustrations by JOHN GILBERT. Second Edition. Fcp., 6s. cloth.

"A better hero for a boy's book Mr. Mayhew could not have found, and no writer would have treated the story more successfully than he has done. We have long been in want of a 'young people's author,' and we seem to have the right man in the right place in the person of Mr. Mayhew."—*Athenæum*.

The Story of the Peasant-Boy Philosopher; or, "A Child gathering Pebbles on the Sea-shore." Founded on the Life of Ferguson the Shepherd-boy Astronomer, and showing how a Poor Lad made himself acquainted with the Principles of Natural Science. By HENRY MAYHEW, Author of "London Labour and the London Poor." With Eight Illustrations by JOHN GILBERT, and numerous Drawings printed in the text. Second Edition, 6s. cloth.

"Told with the grace and feeling of Goldsmith, and by one who has that knowledge of science which Goldsmith lacked. It is as if Brewster and poor 'Goldy' had combined to produce this instructive and beautifully told tale."—*Era*.

MR. J. G. EDGAR'S BOOKS FOR BOYS.

The Boyhood of Great Men as an Example to Youth. By J. G. EDGAR. With Cuts by B. FOSTER. Third Edition, 3s. 6d. cloth; with gilt edges, 4s.

HENRY MAYHEW'S NEW WEEKLY PERIODICAL ON LONDON AND THE LONDONERS.

Now Publishing in Monthly Parts, Price One Shilling, and in Weekly Numbers, Price Threepence,

THE GREAT WORLD OF LONDON.

BY HENRY MAYHEW,

Author of "London Labour and the London Poor."

Assuredly the history and character of the Great Metropolis, in the nineteenth century, is still an unwritten book. There are many clever and learned works on London—regarding it as a vast mass of bricks and mortar—a kind of civic "natural curiosity"—but none as yet viewing it as a huge human "vicarium," wherein one learns the habits of the many "odd-fish" collected within it.

Of London Scenes, and London Society—of London contemplated *morally* rather than physically—as the great centre of human emotion—the scene of countless daily struggles, failures and successes, as well as of the wildest passions and the keenest misery; of London, where the very best and the very worst types of civilised society are found to prevail—with its prodigious wealth and enormous commerce—the choice learning, profound science, and high art of some of its people, existing in close companionship, as it were, with the most acute want, and ingrained vice, and brutal ignorance of others—the sweet Christian charity of many, raising palatial hospitals and asylums for the indigent and afflicted, and the bitter stony-heartedness of not a few, grinding, like the Ogre in the story, the bones of their work-people to make their bread;—these, as we have said, are phenomena hardly yet numbered among our literary records, but are matters the chronicles of which surely may be included among the "*desiderata*" of the Great Library of the British Museum.

It is the aspiration of the writer of the work here announced, that he may be able, in some measure, to supply the biblical deficiency, and present to the public such a word-picture of the Great Metropolis as it exists at the present time, that those who are familiar with the scenes and characters described may be pleased with the book for its mere truth, while those who have never visited the places and the people may yet have some ideal sense of them, and so find a picturesque charm in the very peculiarities of the subjects themselves.

"THE GREAT WORLD OF LONDON"

Will be divided into, and described under the following Heads:—

Legal London—Medical London—Religious London—Commercial London—Shop London—Literary London—Theatrical London—Fashionable London—Political London—"Genteel London"—Military London—Nautical London—Market London—Working London—Serving London—Locomotive London—Street London—Fast London—Poor London—Criminal London—Exhibition London—Musical and Artistic London—Eating and Drinking London—Scholastic London—Foreigners' London—Refuge London—Suburban London—Ancient London—General View of London, &c., &c.

BOOKS REDUCED IN PRICE.
